This article looks at how the concept of communicative urban planning and participation takes form in city officials' discourses in new construction projects in Helsinki and Amsterdam. I examine and question the planner's role as a communication broker (Burt 2005) or a mediator (Forester 1989). I aim to integrate communication research and urban planning theory as a tool to dissect the participatory quality of new construction projects.

Research questions explored in this article are:

- 1) How are communicative urban planning and citizen participation conceptualised in urban planners' discourses in urban brownfield construction projects?
- 2) Can communication brokerage and the mediation of an urban planner advance participatory communication? Does it pose pitfalls?

The article has a double function. Firstly, it examines what kinds of discourses city officials produce of communicative urban planning and participation in new construction projects. By analysing participation discourses, I aim to identify difficulties and current issues city officials report facing in citizen participation. Secondly, I examine how city officials possibly see themselves as mediators in the task to actualise participatory planning (and communication). A goal is to locate gaps and structural holes in communication and produce knowledge on how participatory communication is conceptualised by the municipality. The paper takes a critical view on

participation and asks, what do we really talk about when we talk about participation in urban planning.

The case neighbourhoods are Jätkäsaari and Kalasatama in Helsinki and Zeeburgereiland in Amsterdam, all three of which are previously uninhabited 'urban brownfields', situated by the sea, previous harbour areas and are situated close to the city center. All three neighbourhoods are to be built densely to meet the demands of a growing city. The data consists of 22 expert interviews with key architects, interaction specialists and project leaders in Helsinki and Amsterdam. This article strives to contribute to theory on participatory urban planning and urban communications research, bringing urban planning and communications research closer together.

Title: Proximity journalism - Do journalists pick up the GPS signal from citizens'

Session Type: Individual submission

Authors:

Name: Inês Aroso

Email: inaroso(at) gmail.com

Country: PT (Portugal)

Affiliation: UTAD e LabCom (Portugal)

Abstract: The media have been expanding the spaces for which the public is invited to contribute, through comments, sending photographs, videos or texts. In addition, the media have focused on the use of social networks such as Twitter, Facebook, Instagram, Youtube and Snapchat, with the aim of increasing the audience, on the one hand, and strengthening links with it, on the other.

This transformation of audiences into communities is particularly relevant in the context of regional and proximity information. In fact, proximity journalism has always had the participation of the public as its driving force. Therefore, the full use of the internet and social networks would seem obvious and fundamental for the revitalization of local information, whose value is so often questioned in this era of information globalization. But is this really being put into practice?

In this investigation, it will be sought to know this. The question is: how are the multiple channels for interactivity, opened by technologies, being used by the regional media and its journalists and by the public? In order to obtain answers, an investigation will be carried out focusing on the Portuguese reality, in particular on five regional media with a presence on the Internet. This study will cross three aspects: (1) analysis of the permanent or occasional spaces dedicated to the participation of the public in these media; (2) analysis of citizens' participation in social media sites and networks and possible feedback from them; (3) interviews with journalists of these media.

In the end, the aim is to realize two things: what is the true role of citizens and journalists in the proximity information and what can be done to enhance the social, individual and cultural capacities of these local media on a global platform.

Title: End Stigma/End HIV-AIDS: A Forum Theatre Intervention Using Participatory Communication Methods

Session Type: Individual submission

Authors:

Name: Robert Huesca

Email: rhuesca(at) trinity.edu

Country: US (United States)

Affiliation: Trinity University

Abstract: This study reports the findings from a three-year project aimed at reducing stigma surrounding HIV-AIDS testing and treatment in San Antonio, Texas, U.S.A. The project used participatory communication theories and methods both to develop Forum Theatre performances and to guide community dialogues focused on stigmatizing experiences surrounding HIV-AIDS testing and treatment.

Within the health care community devoted to testing and treating HIV-AIDS, stigma is considered the greatest social impediment to progress in combatting this illness. Because of the stigma surrounding HIV-AIDS, people avoid getting tested and often fail to seek or fall out of treatment after diagnosis.

Advancements in science have resulted in treatment regimens that are so effective that an end to the HIV-AIDS epidemic is completely feasible today. Single-pill treatments with minimal side effects are highly effective at reducing the viral loads of HIV-positive individuals to “undetectable” levels. Once an individual’s viral load is suppressed to undetectable levels, HIV cannot be transmitted, even through condomless sex and sharing of injection needles. The challenge facing health workers today is not effective treatments, but impediments to testing and care.

This study will provide a detailed description and analysis of how participatory communication approaches contributed to the development of the Forum Theatre performances and discussions with community members in San Antonio, Texas in the summer of 2018. Forum Theatre is a performance theory that emerged in the 1960s in Brazil and was based on many of the same theoretical presuppositions underpinning the dialogic communication approaches used by Paolo Freire (Boal, 2008). Forum Theatre productions present social problems by drawing on the experiences of people suffering from the issue. Performances are followed by discussions with audiences—conceptualized as “spect-actors”—who are invited to take the stage in repeated performances immediately following the community discussion. Spect-actors are invited to stop the action in the repeated performances, replace actors from the original play, and change the scripted behaviors to alter outcomes and generate responses to the problems.

In this project, 33 individuals in the at-risk or HIV-positive population were interviewed regarding their experiences with HIV-AIDS testing and treatment. Stigmatizing experiences were coded and analyzed and served as the preliminary step toward creating two performances that were staged in eight different venues in the summer of 2018. Audience discussions and spect-actor performances were documented in field notes and audio recordings. Interview transcripts, field notes, and audio recordings of the discussions and performances serve as the basis for this description and analysis. Findings from this research contribute to both the literature on Forum Theatre and participatory communication for social change. First, this study demonstrates the utility of systematic

interviewing in crafting the Forum Theatre performances. Previous research calls for the participation of affected populations in the crafting of performances, but fails to provide much guidance on how this might be done systematically. Second, the performances affirmed the value of participatory communication in theatre as audiences developed multiple, creative interventions to confront stigma at the individual, institutional, and community levels.

Title: Understanding the role of communication in expanding social capital and empowering communities for international development

Session Type: Individual submission

Authors:

Name: Renee Botta

Email: renee.botta(at) du.edu

Country: US (United States)

Affiliation: University of Denver

Name: Cavin Otieno Opiyo

Email: cavin.otieno(at) gmail.com

Country: KE (Kenya)

Affiliation: Strathmore University

Abstract: Building social capital is an underlying assumption for community development work that increases health outcomes. Social capital is “the actual and potential resource that is embedded in, available through, derived from social networks of relationships” and is something that exists among individuals and organizations, which emerges from connections between entities and is further developed through trust, mutual understanding, and mutual actions, based on shared norms and values. Most research assumes social capital is a one-way proposition, flowing from NGOs to communities. We need to consider whether NGOs simply utilize existing social capital within communities or if they actually build social capital as is assumed. Another important question is how much pre-existing social capital is necessary for NGOs to successfully work with communities. When it comes to health outcomes, communities with higher existing social capital are well-placed for better outcomes because research has shown it is linked to increased diffusion of healthy behaviors, increased collective efficacy, increased access to services through social organizations that ensure access, and increased psycho-social processes among individuals living in communities with increased social capital. Islam and Morgan (2012) found that local NGOs’ communication and knowledge-sharing practices strengthened linking capacities with outside agents, and improved critical awareness among beneficiaries about their needs.

This study seeks to examine the role of communication in building, enriching and/or draining social capital in communities, as well as perceptions of social capital’s influence on improving and sustaining outcomes. The authors conducted in-depth interviews with Kenyan staff at NGOs working in Kenya and their beneficiaries in Kenya. The beneficiaries also completed a social capital questionnaire and network analysis map. Initial results suggest social capital may be two-way in that NGOs build social capital in some communities, relying on pre-existing social capital for better outcomes, however, communities also create social capital for NGOs. A two-way framework for social capital reveals a supply and demand conceptualization. The supply-side focuses on building the capacity of NGOs to meaningfully engage with local stakeholders, whereas the demand-side focuses on leveraging the existing capacity of the community to effectively engage practitioners. Practitioners have long voiced frustration and blamed project failure on stakeholders who do not have the capacity and skills to effectively engage. These skills are important to enable the community to effectively demand or utilize participation spaces. As a Kenyan staff member from an

international NGO said, “It goes both ways. There are some communities that are empowered enough to demand and to say what they want and I guess this is where organizations shy away from community participatory processes and processes that build community social capital because then they start to demand and say what they want as opposed to docile quiet communities that you can push around.” Another Kenyan staff member reiterated this, adding, “the more social capital they have, the more they are able to influence the organizations.” We are building a framework to understand how a two-way approach to social capital is mutually beneficial in facilitating community empowerment and sustaining outcomes.

Title: When the chant fades and media agenda shifts: re-centering decoloniality and the South African academia.

Session Type: Individual submission

Authors:

Name: Toks Oyedemi

Email: toyedemi(at) gmail.com

Country: ZA (South Africa)

Affiliation: Department of Communication, Media and Information Studies, University of Limpopo South Africa

Abstract: The equitable participation of various groups in the education sector has been the driving thrust of the communication for social change activism among the youth in South Africa. In 2015 a revolutionary wave of student protest swept across South Africa clamoring for social change in the tertiary education sector and demanding the decolonization of the South African universities. The student protests influenced national and international student movements demanding a decolonized academe. The protest inspired series of news report, debate shows and media coverage that dominated the media agenda in 2015 and 2016. For about two years the discourse of decolonization of university dominated the South African media agenda. TV shows provided public debates on the issue (cf the SABC The Big Debate - <https://www.youtube.com/watch?v=hFIp9h4znyc>), there were radio phone-in talk shows, newspaper cover stories and the social media platforms were virtual domains of debates about the decolonization discourse. Subsequently, series of social and academic discourses emerged about decolonization of South African academia with a broader demand for social change in the tertiary education sector. However, two years after, the student chants have faded and media agenda has shifted, there is a return to 'normalcy' as many universities continue to function as usual. Although some of the students' demands were met, many issues around a decolonized academy are largely ignored.

This paper aims to re-center, re-focus and demand that the need to decolonize South African academe remains a critical priority towards equitable involvement of various groups and the participation of the cultural groups once marginalized. But to achieve this, what should South African academe decolonize from? This paper engages this question through a critical, theoretical, and intellectual discourse of coloniality in order to rethink the academia in South Africa. Drawing from Anibal Quijano's critical discourse of coloniality of power this paper (re)visits the nature of coloniality, explores approaches to decolonization and situates these understandings to the academia in postcolonial South Africa. A polycentric approach to decolonization is supported with a goal of a broader social change in education. Amongst various approaches and theoretical propositions about the decolonization of South African academia, the thesis here proposes confronting three core elements of the matrix of coloniality- racialization, hegemonic Eurocentrism and economic coloniality of the capitalist system- with a goal of social change in the tertiary education sector and the active participation of the once marginalized group.

Title: The Politics of Participation in Cultural Policy Making

Session Type: Individual submission

Authors:

Name: Elysia Lechelt

Email: meektl(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Name: Malaika Cunningham

Email: memec(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: Malaika Cunningham, PhD Candidate

Elysia Lechelt, PhD Candidate

School of Media and Communication

University of Leeds

Participatory policy-making initiatives like participatory budgeting and citizen assemblies have long been heralded as a way of increasing and deepening democratic engagement (Davis and Ostrom 1991; Pateman 2012). In the UK, this has been especially apparent within the social care and health sectors (Needham and Carr 2009), where projects like NHS Citizen have attempted a co-productive approach that ensures ‘the people delivering and planning services and those using them are equal partners in the design, delivery and review of services’. This comes at a time when public spaces which provide space for political discourse and democratic engagement, such as youth centres, libraries, museums and community centres, are depoliticised or so drastically underfunded that they are forced to close (Fenton, 2018). Furthermore, the neoliberal view of democracy, which essentially casts citizens as consumers (Brown 2016), still rules the political imaginary. In this context, these co-produced initiatives hint at a route to more democratically inclusive policy practices; however, more work needs to be done with regard to how these policy strategies are being adopted and to what extent they move policy development forward in democratic and just ways.

Our paper investigates how participatory policy-making has been extended to contemporary cultural policy and the impact of these strategies on democratic engagement. Using Leeds, a middle city in the UK, as our case study we explore how the city’s most recent ‘co-produced’ cultural plan (2017/2018) engages with notions of an ideal democratic space. More specifically, we look at both the strategies development processes as well as the outcome, that is the plan itself, and question how these empirical practices foster or restrict an ideal democratic space.

Our study presents a new theoretical framework which details 4 key elements necessary for meaningful democratic engagement: inclusivity; listening; a focus on the common good & political efficacy. This framework has been constructed through an in-depth review of the literature surrounding the concepts of participatory and deliberative democracy (Pateman 2012; Elster 1998; Arstein 1969). By applying this to a discourse analysis of the city’s cultural strategy, alongside

interviews with the stakeholders involved in its creation, we are able to evaluate the ways in which this specific form of participatory policymaking succeeds and fails in encouraging local democratic engagement. It is our hope that that our overreaching research may contribute to broader discussions around cultural policy and the democratic issues and opportunities of participatory policymaking more broadly (Jancovich & Bianchini 2013; Hesmondhalgh 2017; Tommarchi, Hansen & Bianchini 2018).

Title: [Panel] Role and place of media and communication in progressive social change, Panel Description

Session Type: Panel Submission

Authors:

Name: Srinivas Melkote

Email: melkote(at) bgsu.edu

Country: US (United States)

Affiliation: School of Media and Communication Bowling Green State University

Abstract: Moderator: Srinivas Melkote, School of Media and Communication, Bowling Green State University, USA, <melkote(at) bgsu.edu>

This panel will address theoretical and applied research pertaining to the role and place of media and communication, including participatory approaches, in progressive social change. This complements this year's IAMCR Conference theme of communication and human dignity.

Collectively, the papers in the panel will address many relevant questions and themes such as

- The widening inequality among people and countries and the damaging effects of neoliberal economic and social policies on progressive social change. How could development communication play a useful role to address and counter inequality and injustice in development and social change?
- How did neoliberalism's biases lead to the logic of a financial emergency that was imposed on impoverished places such as Flint City in the state of Michigan in the US, which affected the material conditions (such as the drinking water infrastructures) of its residents' capacity and capability of leading a healthy and meaningful life? How and why did the instrumental freedoms enjoyed by the residents get overrun and submerged beneath the image of Flint as being financially derelict?
- What are the challenges to a deeper understanding of social change processes such as modernization and dependency, and communication processes such as the participatory approaches in progressive change? Such approaches have evolved on a linear and chronological timeline and do not address the complexities of social change. On the other hand, complexity theory helps provide an alternative theoretical understanding of this complex dynamics that is constituted by ongoing entropy and instability - conditions that result in the emergence of varying patterns and structures as the system evolves and organizes itself around something new.
- What is the role of creativity within development and social change initiatives? How could innovative techniques such as Creative Aerobics be used in developing innovative and impactful communication messages to advance progressive social change?
- What are the meanings and implications of terms such as 'inclusion' and 'diversity' that are bandied about in different spheres including the academy? How are these goals related to the right to voice and visibility? How are the experiences and ideas of vulnerable groups such as immigrant students in an American university setting represented by inclusion and diversity drives? What is the extent of support provided to vulnerable groups that support individual expression and social participation based on dignity, equality, respect and fair play?

Title: Devcom in an Era of Neoliberalism: A Critical Analysis (Video presentation)

Session Type: Panel Submission

Authors:

Name: Srinivas Melkote

Email: melkote(at) bgsu.edu

Country: US (United States)

Affiliation: School of Media and Communication Bowling Green State University

Abstract: To provide a context, I will briefly discuss critical development literature and concerns on widening inequality among people and countries, especially the damaging effects of neoliberal economic and social policies on progressive social change. Could development communication play a useful role to address and counter inequality and injustice in development and social change? I will then attempt to identify challenges/alternatives to neoliberalism by examining movements encompassing activist and radical social and political action for progressive change and attempt to distill communicative actions they have employed to achieve social justice outcomes. Finally, I will present a conceptual/operational framework for directed change anchored in communicative actions that address and counter inequality and injustice in directed change. A new avatar for devcom will be described within this new framework.

Id: 19918

Title: Flint City, United States: Infrastructure as Media of Freedom, and Technologies of "Ressentiment"

Session Type: Panel Submission

Authors:

Name: Clayton Rosati

Email: crosati(at) bgsu.edu

Country: US (United States)

Affiliation: School of Media and Communication Bowling Green State University

Abstract: In this essay I explore how neoliberalism's double impulse towards overt austerity and covert resentment unfold across the geographies of Flint's water infrastructure and material conditions of possibility for leading a meaningful life in the city. These conditions of possibility are the technologies of and literal groundwork for what development scholars like Nobel Prize-winning economist, Amartya Sen (e.g., 2000), often call "capabilities," or "instrumental freedoms." This geography of infrastructure communicates and composes capabilities and were used in a communicative struggle over the notion of necessary "instrumental freedoms" themselves, which became overrun and submerged beneath the image of Flint (and other Michigan cities) as being financially derelict. The essay draws on a critical reading of Amartya Sen's "capabilities approach" to poverty in the so-called developing world and advocate its application to impoverished places in developed nations to understand, in this case, key forms of invisibility imposed as a component of neoliberal austerity policies. In doing this, I explore geographies of resentment, or "imaginary revenge," in the context of the Flint crisis, which based on the logic of "financial emergency" allowed for the production of toxic forms of invisibility.

Title: Voice and visibility in the academy: How inclusive are the diversity initiatives in American universities' (Video presentation)

Session Type: Panel Submission

Authors:

Name: Yasmin Gopal

Email: yasmin.gopal(at) gmail.com

Country: US (United States)

Affiliation: Grand Valley State University

Abstract: “Inclusion” is a much-banded term and its use in academe is notable, paired with another popular term: Diversity. But what does inclusion mean to academics in the post-secondary system, and how do we encounter it in our institutions, and more specifically in our classes? Also, how do these goals of inclusion and diversity translate as the right to voice and visibility? How are the lived realities, aspirations and rights of groups such as immigrant students and non-traditional learners* represented by inclusion and diversity drives in American university settings? What is the extent of support provided to vulnerable groups such that their individual expression and social participation based on the ideals of dignity, equality, respect and fair play are affirmed?

As an individual of color and a female professor at a state university in the mid-west who has been fortunate enough to escape the negative aspects of these identity markers, I wrestle with these questions as I learn to adjust in an environment, which, while being short on diversity, professes to and strives toward more equitable treatment of “Others.” My focus is not my own survival in the system but how I encounter other “othered entities” and adjust my own expectations of their capabilities as students in our academic unit. The focus of this paper is not just on the communicative abilities of students who may be new immigrants from other countries where English is not the language of communication, but also on students who are the first in their families to enter the halls of post-secondary academe sans the elan of their peers who have been groomed to “do school”. This paper will attempt to find some answers to the questions raised above by looking behind the façade of inclusion and diversity initiatives at an American University. It will also examine how we, as academics, give expression to these initiatives and create spaces for “the Other” to express their identities.

Email: michelle.kasprzak(at) m-iti.org

Country: PT (Portugal)

Affiliation: Madeira Interactive Technologies Institute; University of Porto

Name: António Coelho

Email: acoelho(at) fe.up.pt

Country: PT (Portugal)

Affiliation: University of Porto

Abstract: This paper analyses empirical work undertaken by the authors in Câmara de Lobos, a town at the remote edge of Europe. In the 90's, many children from this town became known as the "kids of the cardboard boxes", as they were forced to beg in the larger city of Funchal and frequently used shoeboxes to collect their earnings. The children were often denied meals if they failed to meet their daily quota, and they were vulnerable to exploitation due to their desperate circumstances. This issue became a painful memory across the island of Madeira. Several years later, artist António Rodrigues was commissioned to make a piece of public art and chose to honor the "kids of the cardboard boxes". Subsequently, the piece never saw the light of day, and to this day is still being stored in a parking garage. The authors sought to talk with the community, find this hidden sculpture and learn more about both the social issue and the sculpture itself. In May 2018, the sculpture was found and filmed with a 360-degree camera. Baía Reis created a short 360-degree video documentary asking the viewer to explore the storage space through virtual reality (VR) goggles. After the public release of this VR piece, it was heavily covered in Madeiran media. Pressure from journalists and some members of the community caused city council officials to promise to bring the sculpture back out into the public. Drawing on rapid ethnographic methods (Millen, 2000), this research was approached as a kind of analytical reportage, with the researchers acting as translators or cultural brokers between the culture under study and the reader (Anderson, 1992). This approach proved to be effective in obtaining a reasonable understanding of the aforementioned issue given the significant time pressures and limited time in the field (Millen, 2000). Thus, researchers acted as facilitators between the community, the artist, the regional media, and the political stakeholders, enabling them to engage in a comprehensive dialogue. The analysis of the empirical work references key studies in the field such as studies on the feelings of immersion and presence (Heeter, 1992; Slater and Wilbur 1997; Kim and Biocca, 1997; Witmer and Singer, 1998), immersive media (De La Peña et al., 2010; Aronson-Rath et al., 2015; Owen, 2015;

Speir, 2015, Jones, 2017), social and cultural awareness (Quappe and Cantatore, 2005; Rakotonirainy et al., 2009), and 360-degree video and empathy (Bandura, 1997; Kumano et al., 2011; Jackson et al., 2015; Archer and Finger, 2015; Hill, 2016; Swant, 2016; Chirico et al., 2017). Dissecting this empirical case will take on two strands, looking at what the role is of immersive media (XR) in contributing to addressing taboo subjects in small communities, and what circumstances enable the use of XR to encourage positive attitude change and open dialog around taboo issues. Considering that XR encompasses both potentialities and limitations (Bailenson, 2018), the main goal of this article is to analyze and reflect on the potential of using XR for pro-social attitude change.

Name: Jharna Brahma

Email: reachjharna(at) gmail.com

Country: IN (India)

Affiliation: University of Hyderabad

Abstract: Jana Sanskriti Centre for Theatre of the Oppressed was set up over three decades ago as a pioneering initiative in the eastern Indian state of West Bengal for development of the individual self, the community, and to bring about wider social change using a form of theatre designed and made famous by the Brazilian theatre activist and scholar, Augusto Boal. In the last thirty years, Jana Sanskriti (JS) has engaged communities in rural West Bengal, especially in the Sunderbans area (South and North 24 Parganas districts), to address critical issues like child marriage, domestic violence, child trafficking, maternal and child health, and alcoholism.

This paper examines this as a case of a participatory communication initiative for social change. With about 30 theatre teams reaching out to an approximate audience of 200,000, Jana Sanskriti is easily one of the largest such operations anywhere in the world. Our team conducted a participatory evaluation research approach, adopting methods such as participant observation of village-level performances, focus group discussions and in-depth interviews with organizational representatives, grassroots activists, performers, and community members.

Using theatre of the oppressed or 'forum theatre', JS uses the methodology of repeated creative engagement to not only initiate public discussions and foster critical thinking among the people of the area, but also to promote community-led actions on the ground.

Inspired by Paulo Freire's landmark work on education, Pedagogy of the Oppressed (1968), the JS initiative in a State long ruled by a Communist government, promotes critical thinking among people by engaging them in plays, and thereby, attempting to bring about transformative changes in society and the polity. This type of theatre activity involves the players in well-designed and structured games that sensitize them to basic human communication and enable the creation of a

community-based forum for initiating dialogue, deliberation, and instigate the Freirian reflection-action-reflection cycle.

The performative strategy of this pioneering theatre group seeks to flatten the hierarchy between the actors and the audience and encourages audience members to enact different courses of action based on their own life experiences and definitions of the situation. This process empowers otherwise marginalized members of the community to speak up and question dominant narratives and ideologies. Theatre of the Oppressed as practised by Jana Sanskriti interrogates hegemonic social structures and helps trigger a process of collective resolution of problems.

Title: Who are the contemporary activists represented on Portuguese TV news and what are they fighting for'

Session Type: Individual submission

Authors:

Name: Naíde Muller

Email: naide0muller(at) gmail.com

Country: PT (Portugal)

Affiliation: Catholic University of Portugal

Abstract: In the history of liberal democracy, and hence of the democratic state, social movements have been considered as the fundamental intermediaries for civic participation. In European history they are directly related to the emergence of an open and active "public sphere". It has been under the pressure of social movements of various kinds that the system of representation has been constituted. Along with freedom of conscience, discourse, industry, religious belief and the press, free association emerged as an invention that began to build institutions and practices that recognize collective identities (Della Porta, 2015: 768-770). Recently, significant social changes have taken place because contemporary social movements can become organized globally and are no longer limited to their places of action (Kunsch and Kunsch, 2007: 10).

Recognizing that an active civil society and a free press and internet are very important hallmarks of liberal or representative democracies, it should not be denied that the Internet is increasingly presenting itself as a specific territory for public intervention and political and civic participation, particularly among young people. However, this "emancipatory, democratic and participatory role" also brings risks and challenges, particularly regarding the balance between the traditional and "virtual" forms of activism and its different publics (Campos et al., 2016:42-43). Online activism has been criticized for not being followed or complemented by forms of offline participation, and often rejected as clicativism or slacktivism (Gladwell, 2011; Halupka, 2014; Karpf, 2010; Morozov, 2009; Shulman, 2009).

Despite the increase penetration of the internet, television continues to be the privileged mean for the majority of citizens in Portugal to have access to information (Burnay and Ribeiro, 2016: 6). Portugal follows a European trend since television remains the most common medium used by European citizens (Eurobarometer Standard survey - 88). However, media discourses do not reflect the plurality of perspectives existing in society, significantly affecting the exercise of democracy and distorting the integration of social diversity (Morais e Sousa, 2011:4-13). Taking into account this central role that television continues to play as a source of news for the majority of the population, our study aims to uncover how activism has been portrayed on the Portuguese free to air TV stations.

A content analysis of the news dealing with the concepts of "activism" and "activists" aired on the four Portuguese free-to air-channels in 2017 will be presented allowing a better understanding of what movements and what causes the Portuguese television information exhibits as activists. During 2017 the four free-to-air television channels (RTP1, RTP2, SIC, TVI) broadcast 3607 news

programs and 263, only 7%, of these contained references to the concepts of “activism” and “activists”. The largest representation concerns to activist movements defending international causes. These references are related to manifestations around the world anti Donald Trump decisions regarding human rights, they refer to mobilizations against various political tensions in Europe related to the reception of refugees and the conflict in Syria and to other causes anti-racism, xenophobia and discrimination of various kinds, climate change and environmental and animal rights.

Title: Chinese 'female force' Professional working women's negotiated identities through mediated discourses in an English reading group: rewarding learning, work-life integration, and networked workplace

Session Type: Individual submission

Authors:

Name: Zhen Chen

Email: zhen.chen(at) xjtlu.edu.cn

Country: CN (China)

Affiliation: Xi'an Jiaotong-Liverpool University

Name: La-mei Chen

Email: rachaelchen2009(at) hotmail.com

Country: CN (China)

Affiliation: Independent Scholar

Abstract: This paper focuses on the reading group of professional working women in Call Centres in multinational corporations (MNC) in Dalian China under the discourse of 'female force' (nvzi li) popularised on Chinese social media. In particular, we aim to examine how female professional workers manage and construct their emerging middle-class identities through participation of and in the mediated discourses fostered around an English reading group, executed both online and offline. We conduct participant observation of offline reading group activities, in-depth interviews, and discourse analysis of mediated group discussions and posts on social media (WeChat) to locate the complex participation processes and practices of these Chinese working women.

This paper sits at the complex intersections of class, nation, and gender both at home and workplace for Chinese working women, under the changing neoliberal globalisation process after China's 40 years of opening-up reform. The investigation takes place in Dalian's Software Park, established when the first outsourcing wave hit the northeast shore of China 20 years ago. The companies investigated are home to a number of aspirational working women who are tech savvy and culturally aware, representing more than 60% of the workforce. However, they have to work on either day or overnight shifts to cater for the time differences of North American and European markets in call centres. By drawing on modern identity theories and contextualising Chinese philosophy, this paper examines how traditional Chinese ethics and values negotiate with neoliberal thoughts with a unique demographic in China. To be specific, this paper looks at how the Daoist concept of 'change' works hand-in-hand with Confucius values on familial relationship and expectations of women (Hall & Ames, 1998), in addition to the feminist empowerment captured by neoliberalism and consumerism.

Previous literature has considered how people engage with traditional reading (for example, romance reading practices of females), however, less attention has been paid to why they read, for example, the broader social and cultural factors in a social media age. In addition, in media and communication studies, there is an 'entertainment turn' where scholars tend to over-celebrate the role popular media consumption can play in shaping people's everyday life. This is particularly

evident in recent fan studies on various media consumption practices in entertainment industries (see Fung, 2009; Gao, 2016; Jenkins, 2004; Yang, 2009). By contrast, this paper presents a novel and nuanced reading practice of working female readers, by going back to the everyday working and domestic experiences in a corporate context in China, taking into account the wider political economy of call centre franchisation, and the individual level characteristics of uniquely positioned working women with various social and corporate roles and expectations in a patriarchal society. In doing so, we argue that, if analysed critically, such corporate driven 'empowerment feminist reading' or 'female force' is used as a marketing campaign for organisational purposes. However, Chinese female workers did benefit from such practices as part of their middle-class identity work despite their identity negotiations and struggles in everyday encounters.

Title: Observations on Context, Infrastructure, Maoism and Communications

Session Type: Individual submission

Authors:

Name: Pradip Thomas

Email: pradip.thomas(at) uq.edu.au

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: This presentation focusses on the provisioning of infrastructure in CSC projects and the need to factor in context. Drawing from infrastructure studies and political economy, it will deal with the provisioning of infrastructure as a reason of State and the manner of such provisionings that are, at least in the case of India, based on minimal participation. It has been argued that infrastructure needs to be seen as a 'relational concept' and that the use of infrastructure involves learning processes – be it the use of highways and the use of mobile phones – the question as to how infrastructures contribute to and becomes the basis for 'meaningful participation' remains an interesting and intriguing concern given that arguably, the factoring in of context will play an important role in how individuals and communities engage with infrastructure. Infrastructures certainly bind, but they can also divide and it can be used to control and manage populations. In other words, infrastructures are contested.

This presentation will take as its point of departure one such contestation – the anti-infrastructural stance taken by Maoists in India. While Maoist struggles represent the extreme Left in India, they typically work with indigenous communities who remain among the most marginalized in India. Maoists, as part of their strategy against the State have taken an anti-developmental stance and have targeted the destruction of government infrastructure including telecommunications. Their struggle is against the developmental model that has been imposed and the circulation of dominant modes of communications that are supportive of this model. While it is important to not romanticise Maoism, it is nevertheless important to understand the State's failure to recognise the specificity of indigenous contexts as a factor motivating such struggles. The fact that indigenous lands continue to be expropriated and given over to mining interests underlie the seriousness of the situation. Moreover, the Indian government's imposition of large scale infrastructural projects such as the Unique Identity project without proper consultation and its scant respect for privacy reflects a creeping authoritarianism.

The key objective of this presentation is to make a case for theorists and practitioners of communication for social change to take context seriously.

Title: Rescuing Participation: A Critique on the Dark Participation Concept

Session Type: Individual submission

Authors:

Name: Nico Carpentier

Email: nico.carpentier(at) fsv.cuni.cz

Country: CZ (Czech Republic)

Affiliation: Charles University

Abstract: This theoretical reflection revisits the contemporary discussions on dark participation (e.g., Quandt, 2018). In this reflection, the notion of participation will be defined as object of political-ideological struggle (Carpentier, 2011), which is waged in many different locations, including academia. This political-ideological approach to participation will allow mapping out the different key significations of participation, including the structural difference between procedural and substantive participation. This will be combined with an analysis of the ways that the concept of participation has been translated into media practice in three distinct waves: The community media movement of the 1970s and 1980s, the mainstream television talk shows of the 1990s, and the web 2.0 and social media of the 2000s and 2010s. Through this conceptual and historical contextualisation, driven by Laclau and Mouffe's (1985) discourse theory and Braudel's (1958) *longue durée* approach, a more qualified approach towards the contemporary uses and abuses in the media field (e.g., "fake news") can be taken, asking hard questions to the dark participation approach. These questions relate to the similarities with elitist-democratic models, to the appropriateness of conceptually disconnecting participation from a democratic culture, and to the social desirability of (over)emphasizing the risks and costs of popular participation.

Country: IR (Iran, Islamic Republic Of)

Affiliation: Allameh Tabataba'i University

Abstract: ABSTRACT

Development projects are not implementable without using communication tools, and in addition to mass media, using participatory communication tools in development is common today. Theatre-based participatory communication methods, in which social capabilities of theatre in its applied form serve a central role, are among the mentioned tools and have evolved into a strategy for empowerment of the oppressed in many parts of the globe. With a relative focus on different traditional theatrical forms, this article reviews the evolution of development communication theory and introduces participatory communication methods based on theatre. Then, citing the theories presented by Paulo Freire on Pedagogy of the Oppressed and Augusto Boal's work on Theatre for the Oppressed, which led to the establishment of participatory theatre, the article explains the research conducted using the Delphi method. In this research, 6 questions were designed based on the main question of the research and the answers of 19 respondents were recorded during two rounds of profound interviews. After the first round of interview, the answers were processed, documented and summarized in order to get to an overall view of the situation and the results were presented to the respondents in the second round of interviews. Hence, an indirect dialogue was established between the respondents. All of the respondents were among professionals or experienced people in the related field. The final purpose was to gain an understanding of the communicative possibilities of participatory theatre and its effects on development in Iran.

Title: Voice as Silencing: Algorithmic Visibility, Recognition Costs and the Rise of Ordinary Authoritarian Voices in Brazil

Session Type: Individual submission

Authors:

Name: João Carlos Magalhães

Email: j.c.vieira-magalhaes(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics (LSE)

Abstract: In light of the global resurgence and consolidation of undemocratic social movements and governments, scholars have started to think of the relationship between datafication and authoritarianism.

They have discussed how states can use dataveillance and advanced machine learning to engender social conformity and persecute opponents; have investigated the ways in which leaders and propagandists employ datafied platforms' direct speech and targeting techniques to sow confusion and hate; and have looked into how far-right micro-celebrities exploit the 'attention economy' to radicalize its audiences.

In dialogue with this growing scholarship, this paper explores the relationship between datafication and authoritarianism, but at the level of 'ordinary' citizens – i.e., individuals who are not part of political organisations and do not see themselves as 'activists'.

Its empirical context is the Brazilian political crisis. It has began in 2013, with massive democratic protests against a corrupt political elite, and evolved in 2018 into an unprecedented support for violent illiberalism, embodied in the figure of the country's new president, Jair Bolsonaro.

The paper is based on 47 in-depth interviews with “ordinary” Brazilian users who have used Facebook to participate politically during the crisis. Drawing on social practice theory and recognition theory, the paper argues that these users' imaginaries of the platform's algorithmic visibility regime appear to make possible a new form of civic disrespect. I name it 'recognition costs'. It involves the conscious necessity by users to act disrespectfully toward themselves (through e.g., self-obfuscation and self-silencing) and others (through, e.g., offensive, simplified and opportunistic political discourse) to control their visibility and the likelihood of having their voice recognised and/or not misrecognised. Being heard on Facebook, they think, entails multiple forms of silencing.

All interviewees reported adjusting, in different ways, their Facebook presence to these visibility rules, the paper demonstrates. As a result, they ended up articulating civic voices that carried, to a greater or lesser degree, elements of authoritarianism – most of them, without even realising that their civic practices are antithetical to the democratic ethos. Worryingly, users from economic, racial and ideological minorities appeared to be more susceptible to these pressures.

The paper ends with a pessimistic reflection on the possibility of resisting this order, and on how 'recognition costs' may (and may not) illuminate the Brazilian crisis.

Title: Activism, citizen participation and communication strategies for the defence of the public space: analysis of three processes in Malaga

Session Type: Individual submission

Authors:

Name: Isabel Ruiz-Mora

Email: isabelruiz(at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga

Name: Florencio Cabello Fernandez-Delgado

Email: fcabello(at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga

Abstract: In recent decades, “the emergence of the networked public sphere” (Benkler, 2015) has resulted in a transformation of citizen practices of discussion, organization and action. The possibilities offered by Internet-based social action enable individual and collective synergies committed to demands of environmental and social justice. In Spain, the example of the “indignados” M15 movement has been profusely analyzed and “the study of its gestation and explosion” (Toret, 2015) has provided abundant evidence to support the abovementioned possibilities.

The realm of political and social intervention is thus marked by new social spaces of interaction, new publics, new knowledge production and a new technological context. All these elements entail the need for a constant adaptation to the new mechanisms of relation and action defined by the virtual environment in which they occur (Olmedo-Salar, 2012).

In spite of the relevance of the virtual dimension, the interweaving of media and territories is key to understand how technological platforms contribute to create “a coreography of assembly as a process of symbolic construction of public space which facilitates and guides the physical assembling” (Gerbaudo, 2012). Along this line, Toret (2015) has defended the need to adopt “a multilayer perspective” allowing to take good notice of “the multilayer synchronization of the collective behaviour”, not just online but also offline. In the case of M15, this synchronization generated “a technologically structured contagion” defined as follows: “A network of people and collective identities mediated by various digital devices and linked to the concrete experience of the squares and the nomadic appropriation of urban space produce a collective subjectivity in continuous transformation” (idem).

This research explores these aspects to analyse 3 participative processes started by citizens in Malaga with the purpose of defend public space, local environment and city welfare. These are the resistance of the social space La Casa Invisible (during 2018) and the citizens’ platforms Bosque Urbano Malaga (2016) and Defendamos Nuestro Horizonte (2016). This study is part of a research project funded by the University of Malaga (PPIT.UMA.B1.2017/25).

The objectives followed are:

- Examine how citizens set up communication strategies to defend public spaces when they do not participate in the debate about the issues they are affected.
- Evaluate the value given by citizens to their own participation when they are involved in communicative actions related to the public sphere.

The methodology follows a qualitative approach to investigate the origins, goals, strategies and ways of doing (emphasizing the communicative dimension) of each movement through the experiences and opinions of the main actors. We have conducted in depth interviews and focus groups with them.

This paper will present the initial results focused on the main motivations and expectations of citizens, the technological mediations considered adequate and effective to promote participation and achieve their main purposes, as well as the limits and possibilities for improvement detected.

Title: Women united against Bolsonaro - theoretical reflections on female civil participation in the 2018 Brazilian presidential election

Session Type: Individual submission

Authors:

Name: Raquel Evangelista

Email: raquel.evangelista(at) ucp.br

Country: BR (Brazil)

Affiliation: Universidade Católica de Petrópolis

Abstract: The discussion about the political participation of feminists in politics in general and in the historically defined context of Brazilian politics, in particular, needs to face a set of questions that goes far beyond the feminism discussion. Although, women have achieved some right conquests in the two last decades in Brazil, none of these gains seems to have been strong enough to broaden the foundations of the movement or facilitate the incorporation of issues raised by the movement on the political agenda.

We already can affirm that one of the strongest demonstration against the civilizational setbacks represented by the candidacy of Jair Bolsonaro as president did not come from his political adversaries. They came from women from different parts of Brazil (even with antagonistic political positions among them), organized in a Facebook group called United Women Against Bolsonaro, which in less than a week added 1.1 million people.

Considering that context, what are the possibilities of a representative democracy to assimilate the new social subjects arising from that movement? The female voice is just part of an empowering, awareness-driven discourse for consumer-citizen initiatives or is it part of a media-staged scenario? Those questions lead to the main objective of this paper: to identify the role played by a specific group of women gathered through the Facebook page in terms of political participation. As specific objectives, we intend to characterize the creation and development of the page, as well to make a briefly analysis about its dynamic of participation in the electoral process.

To achieve them, we adopted a netnographic research with a significant qualitative approach. We defend that online ethnography refers to a number of related online research methods that adapt to the study of the communities and cultures created through computer-mediated social interaction. Prominent among these ethnographic approaches is "netnography" (Kozinets, 2010). As modifications of the term ethnography, online ethnography and virtual ethnography designate online fieldwork that follows from the conception of ethnography as an adaptable method. These methods tend to leave most of the specifics of the adaptation to the individual researcher. Referring to common ethnographic procedures, Kozinets (2010) and Bowler (2010) recommend the following methodological stages and procedures for netnographic studies: 1) *entrée* - formulation of research questions and identification of appropriate online community for a study; 2) data collection; 3) analysis - classification, coding analysis and contextualization of communicative acts. They constitute the method of our research.

Our third phase is significantly based on the theoretical proposes of Putnam (1993); Baldassari (2007); Timoteo (2013); Rentschler (2014); Dahl (2015); França et al. (2015). From their contributions three categories of analysis raised up: attitude, subjective norm and perceived behavioral control. Results indicates that the attitude towards participation in feminist movements

positively influences the intention of participation in the feminist movements online; the subjective norm also influences positively the intention of participation in feminist movements online; and, finally, there is a small level of perceived behavioral control.

Title: Transformations of antagonism into agonism: Community Media as a Participatory Contact Zone for Youth in the Divided Cyprus

Session Type: Individual submission

Authors:

Name: Derya Yuksek

Email: Derya.Yuksek(at) vub.ac.be

Country: CY (Cyprus)

Affiliation: Vrije Universiteit Brussel

Abstract: This doctoral research examines the participatory-democratic dimensions of community media in relationship with conflict transformation, building on Mouffe's (2000) theory of agonistic pluralism. Focusing on the context of Cyprus conflict and the discursive antagonisms embedded in the education and media systems across the ethno-politically divided island, this inquiry is made through a research intervention that defines community media content production as a participatory contact zone (Torre, 2010) with the aim of exploring how these potentially maximalist participatory processes, characterized by co-decision making and collaboration, may support transformations of antagonism into agonism, by studying both the possibilities and limits, and the realizations and failures of a series of community media workshops organized with mixed groups of Greek Cypriot and Turkish Cypriot teenagers.

Methodologically, the research was conducted in four stages. In the first stage, existing conflict transformation projects in the Cypriot educational field were mapped, and two selected cases were studied for a detailed understanding of the context, in which the intervention would then take place. The second stage involved an ethnography of the community media training and production workshops, organized with 3 clusters of a total of 24 participants, followed by in-depth interviews with the participants in the third stage. The final stage covered a reception study (Staiger, 2005) of the multimedia content produced at the workshops, revolving around 13 focus group interviews with Cypriot stakeholders.

Findings, based on qualitative content analysis (Saldana, 2009) of the collected data, indicate that the teenagers' participation in community media content production processes took the form of self-organization and self-representation, realized at varying intensities, given a set of supporting and limiting factors. In this shared symbolic space, three pillars and different degrees of transformation were identified, distinguished with an awareness of difference and confrontation against a homogeneous view of self, where interactions with the "other" are characterized by non-violence, dialogue, and teamwork, and categorizations of "us" are diversified and expanded, leading to alliances based on and advocating respect for difference. The participatory intensity of community media production process, along with the embodied knowledges, are found to support these transformations by fostering critical thinking, free self-expression and collaborative action on shared grounds, while giving space for conflicts, which were handled via democratic means with the use of self-introduced decision-making tools. Reception study findings further highlighted the mediating function of community media productions, which present the participatory contact zone

to the outside world, promoting a culture of non-violence and participation, and exemplifying possible forms of conflictual co-existence.

Title: Welcome blankets, pussyhats and knit-ins: media participation, imaginative practice and affective care in craftivism

Session Type: Individual submission

Authors:

Name: Kaarina Nikunen

Email: kaarina.nikunen(at) tuni.fi

Country: FI (Finland)

Affiliation: University of Tampere, Journalism Research Centre

Abstract: The paper explores political participation of craftivism on social media. Craftivism refers to a combination of craft and political activism, in context of humanitarian aid work (blankets, aid-bunnies), as well as in protest movements (knit graffiti, banners, pussyhats). While craftivism has a long history from suffragettes' banners to political quilts, it has gained recent popularity through digital technologies and social media that bring together new communities of craftivists. This paper explores the formations, interactions and sensibilities of political action that emerge through craftivism. Drawing on theorizations of solidarity of dissonance and imaginative practice (Malkki 2015) it discusses how craftivist movement may expand practices of political participation and the space of appearance (Arendt 1998/1958; Butler 2015).

It is argued that craftivism exemplifies participation (Carpentier 2012) that is mobilized and enhanced through media but extends beyond media, in political protests as well as in the materialities of everyday life. Craftivism entails practices that are considered relevant for social solidarity: interaction with the society, self-realization, and participation that takes on horizontal, processual structure. Craftivism also expands political participation, with intimacy, care and affect, in ways that challenge traditional ideas of what is considered to be political. However, it also entails many contradictions of social media participation with individualistic and short-term approaches. Does it provide for social change or operate as a tool of personal growth for mostly white middle-class women?

The empirical case study explores Welcome blankets -project, that brought together hundreds of knitters to make blankets that together would equal the length of the proposed border wall dividing the United States and Mexico. Blankets were sent with personal notes of welcome and stories of immigration to the Smart Museum of Art in Chicago for an exhibition before they were distributed to refugees through networks of NGOs. By knitting together on social media the members sought to create a critical political space for helping refugees and challenge the oppressive anti-immigrant politics of the US. The project intertwined with feminist movement through Women's march and #metoo campaign.

The case study explores with virtual ethnography and interviews, the implications of the project and the ways in which the participants discuss their activism and imaginative politics of knitting in their everyday lives; how they weave together local action and global struggles; how different performative and material forms are used to do politics and claim membership in society. It also critically explores how social media infrastructure shapes the forms and sensibilities of participation and their social reach.

Title: Representation, voice and social change in fair trade movements: toward new theoretical and empirical directions

Session Type: Individual submission

Authors:

Name: Maria Touri

Email: mt141(at) le.ac.uk

Country: GB (United Kingdom)

Affiliation: School of Media, Communication and Sociology, University of Leicester

Abstract: The article engages with questions of representation, communication and social change in Alternative Food Networks (AFNs), focusing on fair trade movements as the archetypal model. Representation and communication is an integral component of fair trade movements whose social change remit is constructed around narratives that are intended to build solidarity between consumers in the North and food growers in the South. Despite numerous critiques around its perniciousness, representation in fair trade remains undertheorized, while its temporal implications for the Southern farmers remain unexplored.

Drawing on theories of communication for development and social change the article offers a new theorisation of fair trade representations as an issue of social change, development and well-being for the Southern food growers. Representation is explained as the product of an economic-deterministic understanding of development and social change, which is designed to elicit income generation in the Global South through the purchases of benevolent consumers, while excluding the voices of the farmers. This exclusion is further theorised through the concept of voice and the social subordination of marginalised communities. To put the theory into practice, the article goes on to explore the temporal implications of representation in fair trade movements for the Southern farmers. An innovative participatory research approach was employed, which involved engaging with a community of South Indian farmers and explored how these communities experience representation as an output and a process. Using storytelling and participatory video techniques, the study facilitated a farmer- consumer communication that was built on farmers' own videos and text-based stories and the reactions of consumers in the UK. The data presented in this article was collected through focus groups with the farmers, a collaborative video making project led by the farmers, and focus groups with consumers in the UK.

The findings reveal how farmers' participation in the discursive constructions of themselves can prove empowering by eliciting internal dialogic communication processes that can lead to action and social change by fulfilling their need to have their voices heard primarily by their own local community. Moreover, the findings reiterate the need for development scholars to encourage more active understanding of marginalised communities' priorities, to achieve social change. Through the participatory storytelling experiment, the article also aims to emphasize the material dimension of voice that is pertinent to enhancing actual social change, but which remains largely unaddressed in communication for development and social change debates (see Downing, 2016, Quarry and Ramirez, 2009).

Title: Jóvenes y tecnologías digitales. Diagnóstico del uso y apropiación de plataformas digitales en la zona conurbada del sur de Tamaulipas

Session Type: Individual submission

Authors:

Name: César Bárcenas

Email: cesarbarcenascurtis(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Tamaulipas

Name: María Consuelo Lemus

Email: consuelo.lemuspool(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Tamaulipas

Abstract: Las interacciones con las herramientas digitales aparentemente han hecho posible la participación de la sociedad en general en los procesos de producción, edición y distribución de información y contenidos. El discurso de la cultura participativa señala que el consumidor se convierte al mismo tiempo en creador activo con capacidad para contribuir y compartir múltiples visiones del mundo en el que vive.

En este trabajo, a diferencia de la visión de la cultura participativa se propone la noción de cultura colaborativa, la cuál se comprende como una serie de actividades que surgen de manera espontánea y que emerge de un grupo social de manera voluntaria transmitiendo una serie de experiencias, inclinaciones o persuasiones no coercitivas a partir del gusto, interés y entusiasmo por algo en particular. En este caso, la cultura colaborativa se comprende como parte de un proceso donde a partir de la realización de una acción que surge de un interés personal, en un entorno digital, se hace extensiva a un grupo social y/o toda una comunidad en un mismo espacio-tiempo de forma descentralizada. Por lo tanto, al ser parte de una cultura colaborativa se generan nuevas oportunidades y cambian las expectativas sobre la forma de abordar una serie de actividades, como el trabajo, el aprendizaje, la política, el consumo, y su participación en el mercado.

A partir de este contexto, se elaboró un diseño metodológico cuantitativo, que tiene la finalidad de generar un diagnóstico de los diversos usos y apropiaciones que las plataformas digitales tienen entre una parte de la generación de jóvenes de la región noreste de México. En este caso se trata de una descripción de las experiencias más significativas de apropiación tecnológica con fines de participación social, innovación, colaboración y producción de contenidos digitales, lo que incluye: a) Los perfiles de uso y apropiación de las plataformas digitales más preponderantes en la zona conurbada del sur de Tamaulipas b) Las habilidades digitales, comunicativas y de participación que se desarrollan en los diversos perfiles de uso de las plataformas digitales.

A partir de este análisis se pone a discusión la noción de cultura participativa como uno de los preceptos teóricos que ha caracterizado los estudios de los usos y prácticas en un entorno digital. Finalmente, se pretende discutir este enfoque teórico a partir de analizar las prácticas de

participación de un grupo de jóvenes en un contexto digital, por lo que en determinado momento más bien se están construyendo relaciones de corte colaborativo a través de las siguientes prácticas:

- Colaborar mediante el trabajo en conjunto con otros para producir y compartir información a través de proyectos como Wikipedia.
- Crear mediante la producción y el intercambio de contenido mediático y a través de plataformas como Youtube y Flickr.
- Conectar a través de las redes sociales, como Facebook y Twitter, o a través de comunidades, como clanes de juegos o fandoms.

Title: El documental interactivo y transmedia como motor de cambio e impacto en su entorno

Session Type: Individual submission

Authors:

Name: Jorge Vázquez-Herrero

Email: jorgevazquezh(at) gmail.com

Country: ES (Spain)

Affiliation: Universidade de Santiago de Compostela

Abstract: El documental interactivo es uno de los formatos más representativos de la evolución de las narrativas digitales en la red. Con el paso de los años ha incorporado diferentes recursos y tecnologías que lo han caracterizado como una forma híbrida. Sin embargo, al margen del desarrollo tecnológico, su papel como generador de cambio social también apunta a una evolución que se ve representada en el contexto iberoamericano.

Más allá de la búsqueda de una interacción que permita seleccionar, navegar y compartir, el documental interactivo ha emprendido la búsqueda de la participación a modo de co-creación o cómo involucrar al público en la construcción y en el impacto del proyecto a su vez. Además de una concepción abierta de la producción, la proximidad toma valor como factor para la representación y transformación social, bien sea por la propia actividad generada en torno al proyecto como por su divulgación y puesta en debate.

A partir de la definición de documental interactivo (Aston y Gaudenzi, 2012; Nash, 2012; Gifreu, 2013), nos centramos en los enfoques participativos como con anterioridad han hecho Cortés-Selva y Pérez-Escolar (2016), Ortuño y Villaplana (2017) o Vázquez-Herrero y Moreno (2017). El documental interactivo se sitúa ante la necesidad de conectar la representación con el diálogo, la participación y la co-creación (Nash, 2017); esta última considerada una vía para el diálogo en procesos de cambio (Rose, 2017).

En esta investigación se analizan las estrategias de 10 documentales interactivos y transmedia de origen iberoamericano, tomados de una base de datos elaborada por el autor con 524 proyectos de todo el mundo producidos entre 2010 y 2018. El objetivo principal es identificar sus características como formato generador de cambio social, que se abordará a través del estudio exploratorio-descriptivo.

Los resultados destacan el potencial del documental interactivo en los países iberoamericanos, frente a la hegemonía de Francia, Estados Unidos y Canadá como principales productores del formato. La muestra, en la que destacan casos como Proyecto Quipu o Mujeres en venta, refleja el impacto social en su entorno más próximo como elemento de denuncia, de debate, de movilización y de acción.

Title: Enter Subaltern voices: Presenting 'right to participate' as an identity construct in WhatsApp groups in Kenya.

Session Type: Individual submission

Authors:

Name: Gloria Ooko

Email: glooko15(at) gmail.com

Country: KE (Kenya)

Affiliation: University of the Witwatersrand

Abstract: A key ingredient of maximalist participation is the power equilibrium among “privileged” subject positions and the “non privileged” subject positions in a participatory process. This is the ingredient that has been missing in legacy media and political participatory processes in Africa, where governments tend to subjugate ordinary citizens’ voices hence denying them their inalienable right to political participation. Online media and spaces are, to some extent seen as reprieve from government control and surveillance since the very technology through certain affordances provide means through which users can resist surveillance. They provide platforms to the previously marginalised subalterns for inclusion in political discourse. WhatsApp, through its group formation affordance, has made the political public sphere more inclusive and is an effective tool for grassroots mobilization for political participation in Eastern Africa (See Omanga 2019; Brunotti, 2019). However, what is the nature and quality of this participation given the multiplicity of identities involved in the process of participation? Does the inclusion of the subaltern subject position translate into their ‘right to participate’? If so, how does the newly found Subaltern right relate to the rights of the previously privileged hegemonic subject positions? What is the role of material technology against the social-cultural context of the phenomenon under study? Through the analysis of some of the findings of my ongoing PhD study, this paper will respond to these questions. Data was collected through Focus Group Discussions and interviews with purposively selected members of two political WhatsApp groups in rural Western Kenya namely: Kabula Forward and East Asembo Development Forum. Data was analysed through a discursive material analysis guided by a contextual re-reading of Laclau & Mouffe’s theory and community media theory in an attempt to explain the unique digital subjectivity patterns emerging from a specific context.

Abstract: This presentation focuses on the creation and application of an analytical framework, developed in order to understand the role of communication and agency in connecting young people at risk of social exclusion with adult education opportunities. The research underpinning it was part of an EU funded project Adult Education as a Means to Active Participatory Citizenship (EduMAP), which investigated the role of adult education in cultivating active participatory citizenship, broadly understood as social, economic and political engagement.

As the only communication researchers in a large project team, our job was to lead and design qualitative research on the communicative aspects of adult education (AE). We used a communicative ecologies approach to answer our main research question:

How can communication inside of and around Adult Education programmes be improved, in order to,

>Reach out to and connect effectively with young people at risk of social exclusion?

>Enhance interaction and learners' engagement?

>Enhance engagement and collaboration within the AE organisation and with relevant external agents?

Data on communication practices was collected through interviews and focus groups with policy-makers, AE practitioners and learners in 40 AE programmes in 20 countries, involving 712 respondents. This was supplemented with communicative ecology mapping with selected groups of young people at risk of social exclusion in seven EU countries and Turkey, involving 91 additional respondents. As the data was analysed, compared and contrasted it quickly became apparent that context was essential for understanding the many different practices and experiences of communication, and that it would be useful to develop an analytical framework for organising research findings and drawing conclusions across diverse settings.

At this point we developed the Communicative Ecologies and Assemblages Analytical Framework which consists of five key components - Goals, Social, Information, Media and Agency. In this presentation we will present the framework and share some of the key research findings from the communication research in the EduMAP project. Cutting across the rich variety of GP cases we

studied, the five components of the framework can be shown to highlight essential considerations for better connecting young people with suitable AE opportunities to make a difference for their lives:

- >the capacity to aspire and construct goals;
- >access to social networks and hubs;
- >access to relevant content and information;
- >access and use of relevant media and platforms; and
- >information and communication competences and literacies (agency).

In particular, we will discuss the role of agency, and the relevance of the notion of ‘distributed agency’ for educational activities that seek to engage with those who are most excluded in society. Young people’s agency to communicate and access information can be understood as being distributed among various platforms, channels and other human and non-human actors involved in communicative processes. This distributed view of agency places the analytical focus on the agents and relationships established with various other agents, resources and tools. In this presentation, we will discuss the implications of this theoretical stance for practice and research in participatory communication and communication for social change, linking to previous work on distributed and collective agency.

Title: [Panel] Civic Participation and The Right to and Rites of the City, Panel description

Session Type: Panel Submission

Authors:

Name: Susan Drucker

Email: susan.j.drucker(at) hofstra.edu

Country: US (United States)

Affiliation: Hofstra University

Abstract: The 21st century has been dubbed the urban century. This is the century in which hundreds of millions of people migrated from their homes in rural areas to ever larger more crowded cities. It is a period marked by resettlement, recentralization, gentrification, and a return to the inner core after decades of suburban sprawl. It is an era of urban sprawl with the growth of megacities. It is the first century in which the majority of people will live in urban areas with over three billion residents in cities representing a demographic transformation on an unprecedented scale.

Not all cities are created equal. Over half of the world's 3.9 billion urban dwellers reside in small settlements with fewer than 500,000 inhabitants, many living in slums. Simultaneously, 28 megacities with 10 million inhabitants or more continue to proliferate. Conflict and inequality is inherent to urban life. Concerns for the rise of cities led to the 2016 United Nations run Habitat III meeting in Quito, Ecuador at which a New Urban Agenda was adopted.

Cities are global, smart, connected, inclusive, livable, green, sustainable, mega and communicative. Much has been written about "The Right to the City", yet, conceptually, it has been defined in varied and sometimes vague ways. Henri Lefebvre, "La droite à la ville" published in 1968 framed the right as a human right and international principle. David Harvey defined it as "far more than the individual liberty to access urban resources: it is a right to change ourselves by changing the city. It is, moreover, a common rather than an individual right since this transformation inevitably depends upon the exercise of a collective power to reshape the processes of urbanization." Harvey asserted it was one of the most precious yet most neglected of our human rights. The Right to The City Alliance (RTC) associates the concept with urban justice, racial justice and democracy. Cees Hamelink has argued a key element of the 'right to the city' should be the 'right to a communicative city.'

Participating in the life of a city involves rites as well. While much attention is paid to civil rights, neglected are urban civil rites of community participation, observation and interaction. Rites and rituals of urban participation are equally important to the communicative city.

In an age of growing cities and technologized cities this panel will explore the right to the city, urban participation, the rites of the city and urban equality and disparities.

Affiliation: Urban Communication Foundation

Abstract: There are many forms of urban participation and many forms of interaction. The street is a playground, thoroughfare of memory and medium of communication. While active, purposeful communicative behavior has been the focus of study, it can be more passive rites of city life which shape the relationship one has with their community.

Denizens of the city can engage with place and people in diverse ways. One such city dweller is the flâneur who observes, describes and analyzes art, architecture, and social rituals of the city. Baudelaire identified the flâneur as “having a key role in understanding, participating in and portraying the city. “ Flânerie, the act of strolling, remains very much alive and significant as a ritual form of urban participation. The detached urban explorer enters into a dialectic relationship with the city as both observer and participant.

The flâneur and flâneuse stroll and linger while others engage in a rite of loitering, lingering more aimlessly. This urban rite may violate a law prohibiting remaining in a given location without a clear purpose for an extended period of time. Loitering is defined as lingering or "hanging around" in a public place, particularly without discernable purpose. Loitering has been criminalized when associated with posing a “possible threat to persons or property in the vicinity.” Loitering has been associated with idleness and a rise in criminal behavior. Idleness in the city has been related to the commission of crimes. Yet "hanging out" can serve an important social and observational function, may be the condition precedent to other forms of social engagement or may be a form participation in the city in and of itself. Yet, laws against loitering abound and may result in fines and/or imprisonment resulting in legal challenges as a violation of people’s rights in the city.

The purposeful and seemingly aimless rituals of everyday city life are increasingly subject to surveillance. In a technological age urban spaces, both private and public, are filled with surveillance cameras, facial recognition systems and other forms of data collection. Mass data collection has become the norm, the city has become a panopticon. Sensors capable of harvesting location, spending and even health information are now ubiquitous. This data collection confronts personal privacy

‘Smart city’ initiatives are used to promote and brand cities with the allure of improved convenience and security at the cost to personal privacy. Legitimate data collection for improved services and security may require sacrificing a degree of privacy. The conflicts between enhanced efficiency and privacy invasion raise significant issues for individual privacy rights in the city.

This paper will explore informal rites of participation in the city and some of the associated, often contested, human rights.

Title: Playing in the streets: About collective joy in the City

Session Type: Panel Submission

Authors:

Name: Cees Hamelink

Email: cjhamelink(at) gmail.com

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: Humans have a long history of collective joy; earlier generations celebrated with elaborate preparations festive rituals. To make living in mega-cities possible city dwellers should remember their capability of deeply satisfying forms of collective joy. Play is an important feature in the lives of most animals. In ritual, and musical performance: humans can achieve “temporarily ...the transformative power of community”(Robert Bellah). However, playing needs a relaxed playing field. In the paper the author will reflect on the question how cities can become relaxed playing fields.

Abstract: The international literature speaks to the many determinants of health disparities that disproportionately affect a range of populations, including women, individuals with low socioeconomic status, ethnic and racial minorities, immigrants, individuals who identify as LGBT, and those living with a disability. In many cases these disparities are associated with discrimination against people whom self-identify (or are assumed to identify) with one or more of the foregoing populations. The healthcare setting is frequently identified as a locus where both discrimination is likely to occur but also where interventions can prove most effective. In Greece, the local healthcare system in Athens has had to grapple with enormous challenges related to the refugee crisis affecting many European countries in recent years, but also a chronic economic crisis that began in 2010 (as in most of Europe). In this paper, drawing on data collected through semi-structured interviews administered face-to-face with healthcare administrators and healthcare providers in four (4) major hospitals of Athens, Greece (N=24), in-depth interview data from hospital patients (N=20), hospital administration data pertaining to formal complaints filed by healthcare users, but also an analysis of relevant local laws, we provide insight regarding discrimination in the healthcare setting, identify contributing factors, but also best practices. We conclude with a discussion about how initiatives to fight discrimination in hospital settings not only provide disadvantaged healthcare users (e.g., individuals who are poor, individuals of minority background, such as those who identify as Roma, refugees) equal access to the city's healthcare resources, but are also given a path to claim a right to the (or their) city.

Abstract: David Henry defines the “right to the city” as a “common” rather than “individual” right since this “transformation” (the right to change ourselves by changing the city) depends on a “collective power to reshape the processes of urbanization”. The City Alliance (RTC) associates the concept with urban justice. Cees Hamelink argues that a key element of the “right to the city” should be the “right to a communicative city”. Mindful of expert advice to regard the “right to the city” as a collective enterprise to reshape urbanization, associated with urban justice, and embedded in communicative rights, we propose a presentation on the role of media, specifically newspapers, in advancing the “right to the city”, with a specific focus on cross-national coverage of urban relocation.

Whether “urban relocation” is viewed as urban displacement, gentrification, or through some other perspective, newspaper can play a major role in framing public policy perspectives. Leading newspapers are still read by the well educated and by political and economic elites, and they are notorious agenda-setters for other media platforms such as television, radio, and the internet. It is therefore worthwhile to explore a cross-national study of leading newspapers in different countries in order to investigate how closely newspapers “mirror” the interests of traditional elites or those of society’s more “vulnerable” residents regarding the issue of urban relocation.

Using community structure theory, which expects coverage of critical issues to be strongly associated with demographics of communities (e.g., cities, countries) where media are located (Pollock, 2007, 2013, 2015), a community structure analysis compared cross-national coverage of urban relocation with variations in national-level demographics from 16 leading newspapers worldwide, one newspaper per country, examining all relevant articles of 250+ words over eleven years (09/12/05 to 08/21/16). The resulting 152 articles were coded for “prominence” (placement, headline size, article length, presence of graphics) and “direction” (“government responsibility”, “society responsibility” or “balanced/neutral” coverage of urban relocation), then combined into sensitive, composite “Media Vector” scores for each newspaper. Thirteen of 16 newspapers (81.25%) emphasized government responsibility to address the disruptions of urban relocation.

In sum, the more vulnerable the citizens of a nation, the more robustly media emphasized government responsibility to reduce the inequalities generated by the disruption of urban relocation. This proposed presentation on cross-national coverage of urban relocation addresses empirically the concerns of scholars and activists regarding collective action to reshape urbanization, urban justice, and communicative context. Newspapers need not be forces for social control. They can function effectively as vibrant promoters of social change and urban justice.

Title: The urban soundscape and the location of emotions: Emotional Geography through Smartphone Use

Session Type: Individual submission

Authors:

Name: Angeliki Gazi

Email: angelikigazi(at) gmail.com

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology

Abstract: This paper investigates people's emotions to place when sounds enter urban space and enhance the character of the city soundscape. Concepts and notions from the field of acoustic communication are combined with ethnography in order to trigger new types of discussions regarding sound in urban space.

The paper discusses the way in which mobile technology can transform the urban space of disconnected flows into a "peripatetic computer" of interpersonal contact through which hybrid technological environments locate emotions.

An Android application was designed and developed for users to record their affective state at each point in the route. The application provided both visual and auditory feedback and was perceived as usable and satisfying, as ascertained through the SUS and USE questionnaires. The affective response was encoded as sets of values corresponding to Russell's circumplex model of emotions (Russell 2003; Russell & Pratt 1980), which describes affect in terms of pleasure and arousal. The affective response of the users has been aggregated and displayed as a color-coded layer on top of Google Maps. Thus, a snapshot of the affective impact of the soundscape of various locations in Limassol is provided. This snapshot will be constantly updated as more users provide data, thus increasing the accuracy of the visualization and ensuring that the information displayed remains up to date. Additionally, focus groups after the soundwalks provided further insights into the meaning of place as a function of the soundscape.

The paper is divided in three sections. The first section provides an overview of the concepts of sound and emotions, and particularly the theoretical constructs of soundscapes and emotional geographies; the second section describes the mobile application that was developed as a means of recording the users' emotional responses to specific sites during their walk in the city of Limassol; in the third and final section, conclusions are presented based on the quantitative analysis of data from the mobile application and qualitative analysis of focus groups after each soundwalk.

Using the case of the city centre of Limassol, Cyprus, the study traces such sound components which exist in urban everyday life, points them out and examines the way people give meaning to their place through them. Ultimately, this investigation aims to contribute to the methods and techniques of mapping of emotional responses elicited by urban soundscapes as a step leading to the definition of [a theoretical concept] that could be tentatively called emotional geography.

Key words: soundscape, emotions, emotional geography, smartphone use

Abstract: Recent years have seen a plateauing of maternal health indicators with various initiatives having little impact. Deeply entrenched in social norm, women's health issues need multilevel inputs beyond health systems strengthening. It is increasingly recognized that participatory communications can play a catalytic role; by engaging dialogue around issues it sparks “critical consciousness,” which consequently enables the shift from reflection to action (Freire, 1970). In this context our study explores how community media influences beliefs and deep seated social norms.

Through our intervention study in the remote hill communities of rural India, we examine a community radios design of norm based radio programs on maternal health and consequently it's effect on the community. Conducted in a phasic manner we firstly analyzed norms surrounding maternal health issues of women. Subsequently a message matrix was developed involving women and other stakeholder about local maternal health issues and social norms surrounding them. Next, Social network analysis of credible health information sources was used to develop radio program scripts focusing on community issues and practices by select stakeholders. A twelve part radio series was developed and broadcasted over a year by Henvalvani Community Radio. Lastly we examined the effect of the radio program series using mixed methods.

We argue that two mechanisms account for the effects of the community radio series. The community media based participatory communications, cocooned in trust and faith, not only provides new information but also persuades individuals to accept it. By enabling listeners to know and better understand what others know, want and do, community media builds individual and collective learning's, that facilitate coordination at two levels. At the micro level it increases individual comprehension and resolve towards women health issues and support for gender equality. At the macro level, the networking around issues increased synergy and collective decisiveness for shifting normative beliefs and practices, consequently leading to building social capital around social norms. We believe it is within this juxtaposition of community dialogue with social capital in Community Media based communications lie the microcosms of shifts in social norms in communities.

Email: jessica(at) videovolunteers.org

Country: IN (India)

Affiliation: Video Volunteers

Abstract: Community media is a participatory medium with immense potential of strengthening community communications and amplifying people's voice for their empowerment. One such initiative – Video Volunteers (VV) uses participatory video and works towards providing disadvantaged communities with journalistic, critical thinking and creative skills they need for catalyzing change in their communities. It strives to build people's capacities to articulate and share their perspectives on the local issues that really matter to them.

This study, based on a qualitative research, sought to map VV impacts in not only remote communities but also in the lives of its local media producers, termed as Community Correspondents (CCs). For an in-depth analysis of VV, study tools included content analysis of a longitudinal sample of impact videos produced, narratives of community correspondents using the Most Significant Change Technique (MSCT) and key informant interviews. It profiled the community correspondents, responsible for spearheading change, and evaluated their social context and VV's role to gain holistic insights into bringing significant changes in their lives. Through the multifold analysis, the present research revealed a number of inter-related factors enabling a gradual change in perceptions and practices of CCs, thereby enhancing potentials of CCs to bring about social change within their communities. The context factors highlighted correspondents' conservative societies, media-dark environments, vulnerability to conflicts and family circumstances. A mix of communication processes and community mobilization helped in

influencing CCs functioning and influencing change in the community. These included primary issue videos and their features; characteristics, network and skills of the correspondents; community processes initiated for the mobilization of stakeholders, organizational credibility and support to CCs along with the negotiation of multiple challenges at the personal and community level they faced and needed to negotiate. Finally, it is the autonomy of the Video Volunteers due to which the organization is able to provide an enabling environment for the functioning of the correspondents. Through their extensive training programs and consistency of support, Video Volunteers imparts communication and technical skills to the CCs, also sensitizing them towards prevailing social and development issues during the process. Subsequently, they have been able to defy social and gender roles within the personal sphere of their lives.

Acting as a springboard for disadvantaged populations' participation and mobilization, Video Volunteers advocates for collective action. VV uses innovative mechanisms and multifarious activities for center staging issues of marginalized people and snowballing processes of change in their communities. Dominance of relevant ideas rising from the ground level has worked well and promises to create long-term, sustainable impacts.

Title: [Panel] Global Perspectives on NGO and Non-Profit Communications for Social Change,
Panel Description

Session Type: Panel Submission

Authors:

Name: Giuliana Sorce

Email: giuliana.sorce(at) uni-tuebingen.de

Country: DE (Germany)

Affiliation: Eberhard Karls University Tübingen

Abstract: With respect to social justice-based organizing, non-governmental organizations (NGOs) and non-profit organizations (NPOs) around the globe do important work on issues such as gender rights, migration, climate change, or press freedom, to name a few. Such organizations and their members often fulfill important arbitrator roles in democratization and equity-based efforts, while enabling input from civil society and creating participatory opportunities that could otherwise be circumvented.

Oftentimes, research on NGO and NPO communication practices seeks to illuminate how specific organizations have engaged publics and stakeholders through public relations campaigns and issue management. While this line of inquiry is worthwhile, it only pays marginal attention to the participatory media practices often employed by such organizations to foster community engagement. Communications practices such as public awareness strategies, participatory online media initiatives, and civil society involvement are crucial elements to the success of NGO and NPO organizing. Therefore, analyzing specific participatory communication patterns and media uses via successful social justice campaigning provides crucial insights that may become useful across sociopolitical contexts.

In this panel, researchers from across the globe will present their insights on NGO and NPO communications for social change on an array of issues (labor rights, freedom of information, gender representation, environmentalism, international development), from a variety of methodological perspectives (data mining, ethnography, political economy, narrative analysis) and within various geopolitical contexts (Indonesia, South Africa, China, Spain, the Netherlands, USA). Taken together, the panel presentations discuss the role of media and communication in mobilizing publics while paying close attention to the participatory opportunities in NGO communications for social change.

The specific goals of this panel, then, are threefold. First, this panel hopes to enrich our current understandings of NGO communications for social change with respect to specific strategies that engage publics and stakeholders. Second, this panel hopes to highlight the role of NGO media products in creating identification with—and mobilizing for—social issues. Lastly, on a theoretical level, this panel introduces various frameworks to study mediated NGO mobilization tactics, ranging from media ecologies over cultural efficacy and capacity building to participatory communication.

Thus, this panel hopes to provide attendees with tangible examples of NGO organizing, present an overview of similarities and differences in public engagement strategies, and introduce various methods suitable to studying participatory communication practices in the NGO context.

Country: TW (Taiwan)

Affiliation: National Taiwan Ocean University

Abstract: Environmental non-governmental organizations (ENGOS) constitute an important part of an emerging civil society. The recent advent of new media platforms has impacted on many ENGOS around the world (Saxton & Guo, 2014; Li, Tang, & Lo, 2018). Research still needs to address, however, to what extent these new media will be integrated into ENGOS' organizational activities depends on government affiliation, government work experiences, and regulatory environment. The proposed study aims to provide a first attempt to integrate both Resource Mobilization Theory and Social Capital Theory to explore the role of emerging media platforms (such as the Internet, mobile and social media, digital realities, among others) for ENGOS promoting climate communication for social change in the United States. This study employs MAXQDA text mining software to analyze texts from over 45,963 ENGOS's websites (selected from the GuideStar's Directory of Charities and Non-Profit Organizations) to identify major words, phrases, and themes that link to the impacts of emerging technologies on ENGOS' resource mobilization and capacity-building strategies. We have identified similar emphasis on the mobilization of cultural, human, material, moral, and social organizational (Edwards & McCarthy, 2004, cited in Corte, 2013, p. 29). However, the emphasis on what types of social capital to mobilize depends on the size, mission, and donor characteristics of ENGOS in the sample. It is suggested that ENGOS offer more participatory opportunities for civil society involvement in NGO decision-making processes.

Title: Visible and invisible communication: The integration of social media in Dutch NGOs' communication ecosystem

Session Type: Panel Submission

Authors:

Name: Delia Dumitrica

Email: dumitrica(at) eshcc.eur.nl

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam

Abstract: Although NGOs fulfill an important civic role, they often face difficulties in their daily efforts towards their goals. Thanks to their rapid popularization, social media have been praised for their 'equalizer potential', promising to provide NGOs with more power and access to resources, more visibility and mobilization power, and more organizational autonomy (Danyi & Chaudhri, 2018; Kenix, 2008; Ryan, 2003). However, most empirical research focuses on social media adoption, with little attention to the communicative ecosystem within which these technologies are integrated. Recent scholarship calls for treating social media adoption in relation to the organization's strategy, its governance, and its wider environment (Danyi & Chaudhri, 2018; Nah & Saxton, 2013). Responding to this call, this paper argues for a holistic approach to the integration of digital technologies in the daily practices of NGOs. Drawing from the related field of collective action, it first conceptualizes the idea of communication as an ecosystem (Bastos, Mercea & Charpentier, 2015; Mattoni, 2017; Mattoni & Treré, 2014). The paper then illustrates this approach by means of an empirical study of the integration of social media by Dutch NGOs. Data comes from 10 in-depth interviews with representatives of a diverse sample, including NGOs of various sizes and with various goals (e.g. democracy, refugees, environment, LGBT rights, etc.). This allows for a comparison of the communication ecosystems across different organizations. The in-depth interviews bring forth the interplay between visible (e.g. website, Facebook page, etc.) and invisible forms of communication (e.g. relations with politicians, face to face lobbying, etc.) within these organizations. The undergoing analysis suggests that the integration of social media into an organization's communication ecosystem is always in flux, constantly shaped and re-shaped by both organization- and context-specific factors.

Title: Spanish NGOs' criteria of cultural efficacy in communicating for social change

Session Type: Panel Submission

Authors:

Name: Eloisa Nos-Aldas

Email: aldas(at) uji.es

Country: ES (Spain)

Affiliation: Jaume I University

Name: Allesandra Farne

Email: farne(at) uji.es

Country: ES (Spain)

Affiliation: Jaume I University

Abstract: NGOs play an important role in international development and communication for social change. Our theoretical apparatus applies organizational and strategic communication combined with participatory communication and social movements' theories (Jasper, 2010; Kaplún, 1988; Tufte, 2017) to understand the production and evaluation criteria for an effective advocacy communication in Spain. We understand the role of NGOs in development communication and international relations and cooperations as imperative (Nos Aldás, 2019; Nos Aldás et al., 2012). Based in discourse analysis focusing on the consequences of symbolic and cultural violence to overcome the root causes of inequality, we examine the necessary "cultural" efficacy of a transformative communication with political aims in the NGO context.

Our findings point at models and experiences to reframe traditional charity frames into social justice narratives (Darnton & Kirk, 2011; DevReporter, 2016) as well as protest scenarios based on indignation and nonviolence to engage citizens (Pinazo & Nos Aldás, 2016). This particularly applies to participatory NGO communications strategies for social change-based initiatives around migration rights and the so-called "refugee crisis." Our preliminary results indicate that an effective communication for social change should incorporate alternative frames based on social economy and hospitality.

Title: Civil society activism and public service broadcasting: The case of Indonesia

Session Type: Panel Submission

Authors:

Name: Masduki Masduki

Email: masadink(at) yahoo.co.id

Country: ID (Indonesia)

Affiliation: Universitas Islam Indonesia

Abstract: The transformation of media systems in new democracies (e.g. Eastern Europe, Middle East and North Africa, South and Southeast Asia) is commonly understood as resulting from the political democratization promoted by civil society advocates after the collapse of tyrannical ideologies in the 1980s and 1990s. This paper traces the institutions and actions of civil society organizations in Indonesia to promote a democratic media system over the last 15 years, focusing particularly on the social media activism for the renovation of Indonesia's former state-owned channels (Radio and Television of the Republic of Indonesia or RRI and TVRI) into public driven channels. Also, this paper examines both the successes and failures of the activism in the promotion of a true public service broadcasting (PSB) system in the country. For this study, I choose two civil society organizations (CSOs) which have had key roles in PSB advocacy, namely the Indonesian Press and Broadcasting Society (in 2000s), and the Clearing House of Public Broadcasting (in 2010s). Drawing from extensive study of relevant documents and semi-structured interviews, this paper found that these two CSOs, with funding support from international aid agencies, have served as 'campaigners and legal drafters' in mainstreaming media reform, influencing policymakers to change RRI/TVRI from state to public broadcasters. However, as in most former repressive states in Asia, initiatives have been limited to formal policy formation, with limited public awareness campaigns and control of policy execution. With little civil society pressure for implementing the Broadcasting Act of 32/2002 and amidst high political intervention over the past 15 years, the change of RRI/TVRI as PSB providers into a true public-oriented media has been very slow. This paper attempts to map out NGO activism in the media policy reform in post-authoritarian societies and to add previous scholarship in this area (e.g. Jakubowicz, 1996; Heath, 1999; Renni, 2003; Reljic, 2004; Tangkitvanich, 2008; Im, 2011, Abbott, 2016). This paper further addresses future models of civil society activism in policy design for public service media, particularly in framing broadcasting as public good.

Title: Examining participatory communication and civil society engagement via NGO media activism in South Africa

Session Type: Panel Submission

Authors:

Name: Giuliana Sorce

Email: giuliana.sorce(at) uni-tuebingen.de

Country: DE (Germany)

Affiliation: Eberhard Karls University Tübingen

Abstract: Within the context of the Global South, South Africa is one of the nations with an active non-governmental (NGO) culture. In the area of media and communication advocacy, there is one NGO that has done impactful organizing and lobbying for civil society. Media Monitoring Africa (MMA) is a Johannesburg-based NGO that articulates its mission statement via a “Theory of Change” infographic, which includes media monitoring and research as the foundation for their interventions and lobbying efforts. Their specific activist strategies seek to simultaneously engage structural elements (policy and industry) as well as representational elements (media content and reporting) in order to facilitate a more democratic media system that centers the interests of civil society by holding the powerful accountable. Based in an institutional ethnography (Smith, 2006) comprised of focus groups, in-depth interviews, as well as textual analysis of organizational documents, this study examines MMA’s participatory practices and social change-based communications initiatives among its four core target groups—civil society, stakeholders in the mediascape (including the public broadcaster, commercial/private media houses, and independent entities), other NGOs and activist groups, as well as regulatory bodies. The study finds that MMA’s activist initiatives across the four groups are split between interventionist and participatory practices. For interactions with media consumers in South Africa’s civil society, their interventionist strategies are based on educational media tools, such as online games and digital infographics. On the other hand, participatory strategies to engage civil society include both online and offline practices, such as Twitter polls and protest events. The interventionist initiatives geared towards the public broadcaster and commercial media include complaints processes that call out inequitable media structures or content, as well as mandate breaches. At the same time, MMA offers participatory initiatives to those same stakeholders, including cooperation in the form of training and development initiatives. These were developed to help media professionals identify pertinent reporting issues and train them to do their job with more accountability and integrity. Beyond media production houses, MMA has also curated good relationships with other NGOs and activist groups, which include participatory practices such as cross-NGO sponsorship of events and resource-sharing. Conversely, MMA also offers interventions during coalitional meetings to help adjust cross-issue participatory strategies. With respect to regulatory bodies, MMA has adopted an interventionist role through the filing of complaints and lawsuits while also curating beneficial relationships with regulators to allow for feedback from the public. What becomes clear from this analysis is that MMA’s two-folded NGO communications and practices strategies continuously foster input, feedback, and participation from civil society. As such, a core value of MMA’s participatory NGO culture is to aid in democratizing the South African mediascape, which includes

media that engage in critical reporting and offer a multitude of opinions, while remaining free from government or capitalist intervention and encouraging continuous feedback from civil society.

Title: Engaging digital maps: citizens' uneven potential to effect change vs. the legitimization of an error-prone image of the world.

Session Type: Individual submission

Authors:

Name: Matthew Hanchard

Email: matthew.hanchard(at) glasgow.ac.uk

Country: GB (United Kingdom)

Affiliation: Research Associate, University of Glasgow

Abstract: Digital media technologies provide new opportunities for citizen's voices to be heard, and for individuals to effect change. However, those opportunities are marred by inequality and the collaborative legitimization of automated expert knowledges over those of individuals. This paper draws on research about people's engagement with digital maps (e.g. Google Maps) in three contexts: buying a house, gaining orientation to a new University, and leisure-walking in rural areas. It grounds its argument within findings from a scoping survey (N+), 35 semi-structured interviews, and 3 x focus groups. In doing so, the paper demonstrates that (in UK at least) people often draw on digital maps as media resources that provide legitimacy, at times allowing people to effect change in official state records e.g. drawing on Google StreetView imagery to highlight and request amendment to errors in Ordnance Survey mappings. On the surface, this might appear to represent an emancipatory potential, where individual citizens can effect change in a state record by engaging with a digital media technology. Furthermore, it could suggest that hierarchical power-relations of state-subject are giving way to a new horizontally organised form of networked individualism (e.g. Castells' notion of a 'network society'). However, as a counterpoint, this paper demonstrates that algorithmically generated expert knowledges often override individual's voices. For example, the research demonstrates that an insurance broker's premium is raised for people living near a retail car park because the postcode is attributed with a high rate of car theft. Despite being aware of the error and being able to visualise and communicate it via a digital map, people are powerless to effect any change to their insurer's premium. That is, the insurer's expert knowledge overrides that of individual citizens. In turn, rather than arguing for any emerging emancipation, the paper goes on to highlight an inequality. It notes that this continues in the uneven distribution of knowledges require to amend digital maps, and the complexity of meanings that different individuals ascribe to doing so. Furthermore, it highlights an emerging inequality where a narrow set of individuals and organisations draw on digital media technologies (such as digital maps) to inform and persuade others, and thus to strategically curate their knowledges and practices (e.g. which house they buy, which route they take between two sites). The paper also notes, with digital maps at least, that a potential consensus may be emerging between platforms (e.g. between Land registry and Google Maps), partly facilitated by citizen's contributions – an echo-chamber of cross-legitimation. Furthermore, that this is currently leading to the construction and legitimization of a single and apparently veracious representation of the world that is entirely at odds with individual's identification of errors. Overall, the paper argues that media and communications research could look to practice theory as a useful framework for making sense of the opportunities and challenges that feature in individual's engagement with digital media technologies, and the processes that lie behind their increased or diminished agency as citizens as a result.

Abstract: There are CONCEPTUAL DISCUSSIONS about how to understand participation and there is also a debate about which are the most appropriate METHODOLOGICAL APPROACHES (Carpentier, 2016). These two themes intersect in this presentation.

OUR MAIN GOALS are the following:

1. Considering the context in which participation takes places, we will show how certain online platforms interact with youth practices. We will analyse the relationships between TV, social networks and YouTube as the framework where institutions and culture industries try to control the fans participatory processes.
2. Focusing on the fan presence in the community, we will analyse the role played by two fundamental dimensions when defining participation: on the one hand, interaction, established through social networks; on the other, the commitment to specific values presented through their productions on the Internet.

From a THEORETICAL STARTING POINT, we approach participation considering the public presence of fans in communities, where people interact and communicate mediated by multimodal texts. Fans, cultural industries, and public institutions generate these texts (Carpentier, 2011; Dijck, Poell, & Waal, 2018). From this perspective, there are tensions between the fan practices that they carry out as consumers or creators (Hills, 2002). In this context, participants interact online and offline. We assume that there are common interests, practices and shared values among those who participate (Duffett, 2017; Melucci, Keane, & Mier, 1989). The concept of civic imagination (Jenkins, Shresthova, Gamber-Thompson, Kligler-Vilenchik, & Zimmerman, 2016), inspires this work, showing how to imagine innovative spaces and places, from the tension of the fans' practices.

To achieve the before mentioned objectives WE ANALYSE FAN COMMUNITIES in Spain organised around the break-through television programme “Operation Triunfo 2018” using the traditional television network and broadcast through a YouTube channel, organised as a reality show created by Spanish television. This programme is markedly present on the social networks Twitter and YouTube, which contribute to the formation of fan communities around it. Our analysis combines “BIG DATA” (Kitchin, 2014) and “SMALL DATA” (Boellstorff, 2012; Pink, Horst, Hjorth, Lewis, & Tacchi, 2015). This combination enables account to be taken of the context and circumstances in which the practices to be observed, analysed and interpreted take place.

SOME OF THE RESULTS obtained will be aimed at CRITICAL DISCUSSION OF THE CONCEPT OF PARTICIPATION. The following points are of note: 1) Platforms guide the relationships that teenage and adolescent fans have with their idols. If we start with the public media and cultural industries, we find that there is a circular process of interaction, organised to encourage contact with fans, which forms part of a monetisation process. 2) Fans navigate in online and offline circumstances, and physical contact plays a relevant role when initiating new forms of relationship and establishing community commitments. 3) The mechanisms generated by the cultural industries, in terms of projecting certain different values – for example cultural or sexual diversity - contribute to the construction of the fan community. 4) Certain audiovisual products which teenagers generate in the network may be relevant in propagating civic commitment.

Title: Do creation skills contribute to adolescents' civic engagement'

Session Type: Individual submission

Authors:

Name: Eun-mee Kim

Email: eunmee(at) snu.ac.kr

Country: KR (Korea, Republic Of)

Abstract: This study starts from the discussion on the participatory culture that youth's enthusiastic involvement in online content creation has a potential to lead to citizen participation. It first explores the pathways from creation skills, creation activities and civic engagement, and examines the moderating role of information skills in order to explain what abilities are required in the relationships between content creation and civic engagement based on media literacy literature. Further, this study investigates the detailed pathways of content creation by dividing content into entertainment, pro-social and political content.

This study conducted a face-to-face survey of 1200 adolescents in South Korea using a multi-stage stratified random sampling method. As a result of path analyses, first, this study found that content creation activities cannot be directly related to civic engagement. Political content creation showed a strong relation to civic engagement, but entertainment content showed a negative relation. In addition, creation skills also showed a negative relation to civic engagement. These results are in contrast to optimistic expectations about youth who are active in creation activities and savvy to create content.

Second, this study found that adolescents with higher creation skills are likely to create entertainment content and pro-social content. However, the relationship between creation skills and political content creation was the opposite. Adolescents who are skillful at uploading and sharing messages, photos and videos are not only interested in entertainment content creation, but are also active in pro-social content creation that gives help and advice to others, but they are less interested in political content creation. This supports the argument that the area of content creation should be examined separately.

In addition, this study attempted to multi-group analysis dividing groups by the level of information skills, assuming that the ability to understand and evaluated message will be critical in the paths of creation skills, creation activities and civic engagement. We found that there was a significant difference in several paths depending on information skills. First, the negative relationship between creation skills and political content creation appeared only in the group with low information skills. Also, the positive relationship between pro-social content creation and civic engagement appeared only in the group with high information skills. The results suggest that content skills and content creation activities may have impact on civic engagement when equipped with information skills. On the other hand, this study found the relationship between political content creation and civic

engagement was significantly stronger in the low information skills group compared to the high information skills group, and the interpretation was suggested.

In conclusion, this study suggests a theoretical implication that the relations between content creation skills, content creation activities and civic engagement are not simple, unlike other optimistic literature discussed. The findings also contribute to understanding the roles and limitations of content creation skills and the importance of information skills. Therefore, this study discusses practical implications in relation to adolescents' content creation and civic engagement.

Name: Kulveen Trehan

Email: kulvin_78(at) rediffmail.com

Country: IN (India)

Affiliation: Guru Gobind Singh Indraprastha University , New Delhi , India

Abstract: Social networking sites (SNS) have emerged as a sphere for debate and discussion in the Indian Sub-continent. Besides mass conversations, SNS are innovative tools to inform and mobilize communities for engagement through advocacy. Citizens and civic groups are using a plethora of platforms, such as Twitter and Facebook to engage. In 2017, Oxford dictionary coined the term youthquake(a significant cultural, political, or social change arising from the actions or influence of young people) after studies on how millennials (born 1980 – 2000) view activism as a part of their overall identity, a way to socialize and relate to others. Therefore, non-profit organizations (NPOs) have increased their presence on social media as a means for people to come together to solve common problems, implements solutions and new forms of engagement intrinsically linked to the growing power of technology (Lovejoy and Saxton, 2012; Özdemir, 2012; Saxton and Waters, 2014). In recent times, there has been an increase in menstrual activism on social media that attempts to address the issue of menstrual equity i.e. equal access to menstrual hygiene products, and education about reproductive health across the globe. Of late, in the last 3 years, various campaigns across South Africa, Australia, Malaysia, Mauritius, and India have been prolific in abolishing the blood tax. At present, less than 15 countries have zero taxation policy on menstrual hygiene products. The United Nations has declared menstruation a matter of public health, gender equality and human rights. Menstrual products are a basic necessity, essential to women throughout their lifetimes. Social Media has opened new virtual platforms for not only challenging and eradicating stereotypes around it but also giving newer democratic participation tools to influence policy changes. The present study aims to explore the new wave of period activism on SNS vis-à-vis menstruation in the current cultural and political landscape in India. It is a case study of #LahuKaLagaan (Blood Tax) by She Says, an NPO, against indiscriminate tax policy on menstrual hygiene products introduced by the Indian government under its new taxation policy in 2015.

Mixed research methods were adopted for the purpose of analyzing the case. A qualitative framing analysis of their Twitter handle was done based on Snow and Benford's Framing Analysis (1988) from April 2017 to July 2018, to identify frames present in their tweets along with in-depth interviews with their representatives. Examples of core framing and frame alignment processes

were identified and illustrated through posts texts and shared content within posts. Core framing and alignment processes were determined to be an efficacious theoretical framework for understanding how NPO's use strategic messaging. The goals may be varied, to engage and motivate followers, broaden their base of support, recruiting new followers, attempting to legitimize messages among a diverse constituency, transforming frames as circumstances call for other emphases and other tangible outcomes like in this case a tax policy change. The research opens avenues for the new brand of communicators of social action networks for seizing the power of strategic message framing to achieve their goals.

Title: Information and communication technologies for the development of young people. A study in Mexican organizations.

Session Type: Individual submission

Authors:

Name: Rebeca Padilla

Email: rebecapadilla.uaa(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Aguascalientes

Abstract: Although the strategic potential of information and communication technologies (ICT) to promote social and human development has been pointed out (WSIS, 2018), the results have not been as expected (Heeks, 2010). In Mexico, a public policy to increase access and equipment has prevailed. Technological centers have also been opened in marginalized communities, however, little attention has been paid to the needs and cultural context of users.

This paper presents the experience of a research project, which based its theoretical framework on the concept of development (Sen, 2000), Klein's (2013) choice framework and the premises of Tufte and Mefalopulos's (2009) participatory communication methodology. The proposal was to incorporate the participation of users through the reflection of their experiences, problems and needs to choose how to take better advantage of the possibilities offered by ICT.

How to strengthen the capacity of government and civil society organizations to support vulnerable youth through the use of ICT?, was the main research question. Unlike other research and interventions of ICT for development, this study focused on organizations and not on individuals to expand the reach of digital literacy and on the problems faced by young people in Mexico due to the lack of education and employment opportunities, as well as the increase of violence and organized crime.

A mixed methodology was implemented. First, an online survey applied to 208 Mexican organizations allowed a diagnosis of the characteristics of their work towards vulnerable young people and their conditions of access, use and appropriation of ICT to accomplish it. In a second stage, a participatory methodology was carried out through a three-day workshop in which six organizations in four different cities and regions of the country participated.

The results show that in Mexico the use of ICT in organizations with social development objectives is common, however, they are used mainly for administrative and dissemination purposes and less optimized to attend their target population, establish collaborative networks and seek funding. The participatory methodology provided a space to offer knowledge about the use of ICT for social development, not in a vertical manner, but through a dialogue to discuss the viability of the trends according to the context of each organization. The research identified that there are preconditions that are required for the optimal use of ICT and the main senses in which they can contribute significantly to the work of these organizations.

Based on these findings, an analytical framework that systematizes and describes levels and dimensions of ICT use was structured to contribute to generate diagnoses, public policies and a better planning of their employment at an organizational level. The organizations involved in the study concluded that the main role of researchers is to systematize and synthesize useful knowledge for them to work on solutions through the use of ICT according to each context.

Title: Political activism of Mexican filmmakers in the global public sphere

Session Type: Individual submission

Authors:

Name: Dorismilda Flores-Márquez

Email: dorixfm(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad De La Salle Bajío

Abstract: Citizen participation in the global age is increasingly complex. On the one hand, the changing logics of the global public sphere expand the scope of the public expression, which in turn evidence a local-global tension. On the other hand, the global public sphere implies a number of inequities that affect the conditions for participation of citizens. In this way, some citizens—and especially activists—are very visible, while others are less visible or even are made invisible. This work focuses on a special type of visible citizens: the worldwide recognized filmmakers. In this way, the paper explores the activist public expression practices of cultural figures in the global public sphere, by focusing on the acceptance speeches of three Mexican filmmakers: Alfonso Cuarón, Guillermo del Toro and Alejandro G. Iñárritu, who have won a number of international film awards in the recent years. As many celebrities, they have positioned political topics in their acceptance speeches.

The theoretical framework discusses the links among global public sphere, participation, media and celebrity activism (Bringel, 2017; Carpentier, 2016; Fraser & Honneth, 2003; Fraser, 2014; Freedman, 2017; Pleyers, 2015; Ristovska, 2017), by articulating contributions from communication for social change, participatory communication studies, sociology of social movements, and political philosophy.

The study is based on discourse analysis of their Oscar and Golden Globe acceptance speeches, in order to identify the ways of positioning themselves, their interlocutors, and the topics as well. The preliminary findings let identify a critical position of these three filmmakers, as world citizens, face to the Mexican and American presidents. They address political issues, as migration and freedom, echoing the claims of Mexican migrant communities and human rights activists as well. Although they are visible and privileged actors, there is a discursive connection with non-privileged communities and their concerns.

The study contributes to the discussion about different ways of participation in the global public sphere.

Affiliation: Renmin University of China

Abstract: The practice of citizen journalism has turned to be a worldwide phenomenon. Its significance is self-evident. From snapshots taken on the spot to carefully executed political uprising, the impact of citizen journalism could be seen almost anywhere in the world. User-generated news and commentaries foster political learning and stimulate political participation, which further cultivate democratic citizenship (Kaufhold, Valenzuela, & De Zúñiga, 2010). As does professional journalism, citizen journalism is powerful in shaping people's perceptions of the social reality, influencing their attitudes towards social institutions and issues and even changing their political behaviors. Most existing studies on citizen journalism basically fall into three major categories: descriptive studies on the practice of citizen journalism, the effects of citizen journalism on people, politics and the society in general and professional media's adaptation of citizen journalism to their existing content production process.

The extant literature on citizen journalism misses a major component ---- the factors that shape the content of citizen journalism, which is a major concern of media sociology scholars. The situation is similar to that of the "traditional" mass communication research. In tradition, mass communication scholars focus their attention on media effects research, while overlooking the content; yet, it is the content that influences people, and a better understanding of how the content is takes such a shape can help paint a more complete picture of the entire communication process (Shoemaker, 2007, personal communication).

Prior literature has shed light on the discussion of influences on the content of citizen journalism. For instance, contents generated by ordinary people are mainly popular culture-oriented while selection and production of informational news remain privileges of professionals (Jönsson & Örnebring, 2011; Örnebring, 2008), which partially implies that popular culture possibly influences the content of citizen journalism. Nevertheless, the citizen journalism literature lacks a systematic

and integrative approach comparable to Shoemaker and Reese (1996). Shoemaker and Reese (1996) propose a model in analyzing the hierarchy of influences on the content of journalism. They divide these factors into five levels: individual, routines, organizational, social institutions and social systems.

Yet, the model proposed by Shoemaker and Reese does not naturally applies to citizen journalism because the practitioners of citizen journalism are ordinary citizens, who are unlikely to be bound by professional and media-organizational rules and routines. However, Shoemaker and Reese's model also sheds light on the practice of citizen journalism because citizen journalists, when producing news content, are nested in multiple layers of social structures such as communities and nation-states, and have to interact with various types of social institutions such as government and public relations agencies. As such, traditional notions of media in media sociology research can be possibly re-conceptualized to incorporate new forms of journalism (Antony & Thomas, 2010) and explain the new media configurations (Reese & Shoemaker, 2016). Therefore, the primary purpose of the piece is to propose a hierarchical model of factors influencing the content of citizen journalism by synthesizing the existing research on the topic, which can help guide future research on the topic.

Title: The use of environmental civic tech as data activism in China: thinking about the mechanism of connection in deliberative system

Session Type: Individual submission

Authors:

Name: Yu Sun

Email: yu_sun(at) zju.edu.cn

Country: CN (China)

Affiliation: Zhejiang University

Abstract: In recent years, civic tech (data tools) has been emerging in China, with a focus on structuring civic feedback and enhance public participation. This paper discusses how data activism by the use of civic tech in environmental protection might empower Chinese citizens to participate in the creations of solutions for environmental issues. It attempts to understand the significance of data activism around the use of environmental civic tech in China by rethinking the notion of deliberative system in the datafied society. Specifically, it studies the process of datafication enabled by affordances of Bluemap, a mobile app innovated to facilitate environmental public participation. The aim of the study is to explore how it might connect the expression of public opinion in the informal public sphere with the decision-making in the formal political sphere, thus supporting citizens to engage in collaborative environmental governance.

Milan (2016) describes the nature of data activism “more about constructing a ‘politics of connections’ than it is about constructing its own composite action system ” (p.11). She sees it as a “point of articulation”(p.11-12), bridging the boundaries of different action spaces. Building upon Milan’s (2016) theoretical explanation of the notion of data activism, this paper further develops the idea of ‘politics of connections’ in the Chinese context, attempting to understand the dynamics of data activism around the use of civic tech in China. More specifically, the study borrows the idea of “politics of connections” to rethink Mansbridge’s concept of deliberative system (1999), aiming to understand the significance of data activism by the process of datafication for the deliberative system and the public sphere.

According to Mansbridge’s systemic view, the deliberative system includes three main domains for discursive participation on a continuum. The continuum ranges from the formal decision-making within parliamentary settings and public assemblies, through debates and conversations taking place among political parties, government officials, interest groups and media, to informal talk among ordinary citizens and social movement actors. In the whole deliberative system, each component is independent but also interconnected, whether they take place in institutional forums or social arenas. Although Mansbridge stresses the complementary importance of each element in the deliberative system, she does not further explore the mechanism of connection between the formal political sphere and the informal public sphere in the notion of deliberative system. Therefore, to further develop this notion, this paper thinks about the politics of connections in the deliberative system in the era of big data by investigating the public potentials of civic tech in China.

Title: Indigenising Research Education: Participatory culture-centred strategies used in the Kalahari

Session Type: Individual submission

Authors:

Name: Lauren Dyll

Email: dyll(at) ukzn.ac.za

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal

Abstract: South African tertiary education institutions are responding to the call for the ‘decolonisation’ and ‘Africanisation’ of curriculum and research. While the transformative agenda of these calls is valuable, it is dangerous when discourses and practices of decolonisation reinstate dualisms and essentialisms. In addition, this transformative agenda is contradicted by regulatory regimes in academia that impose stringent ‘research engagement rules’, as well as the “pervasive consultancy culture” and “NGO-ization of the university”. This paper will provide reasons as to why the idea of ‘indigenising’ education may be more beneficial to both (student) researchers and (often indigenous) research participants. Indigenisation differs in that it does not impose exclusionary values. Rather, it can offer a set of participatory, culture-centred methods that allow both indigenous and non-indigenous researchers to become skilled in conducting research with indigenous communities. It is imperative that researchers adopt strategies that recognise research participants’ local, cultural, and spiritual expressions in order to make contextual sense of data. Indigenised research methods are geared around discovery, rather than appropriation and persuasion. The paper will present some of these instructional methods that highlight i) articulating contemporary indigenous concerns by centring landscapes, images, languages, spirituality and metaphors (specifically through development narratives, photo elicitation, grassroots comics), ii) autoethnography and reflexivity as methodological tools, and the iii) co-construction of knowledge and participatory perceptions. Field research conducted with the !Khomani Bushmen of the Northern Cape, South Africa, will illustrate the discussion.

Title: The feasibility of the participatory approach within CSR initiatives: A South African perspective

Session Type: Individual submission

Authors:

Name: Louise Bezuidenhout

Email: louise.bezuidenhout(at) nwu.ac.za

Country: ZA (South Africa)

Affiliation: North-West University, South Africa

Abstract: Worldwide there is an increased awareness of the significance of corporate social responsibility (CSR) in the quest towards sustainable development. This implies that CSR should not only be practice to the advantage of the organization but that business should focus on the concept of sustainability towards empowerment because of widespread evidence regarding the benefits for both business and society. There is also global pressure on businesses to adhere to guidelines pertaining to sustainability such as the sustainable development goals of the United Nations.

In South Africa, this demand on business to seek sustainability is further reflected in guidelines developed by the South African Bureau of Standards (SABS) and the King Reports on Corporate Governance for South Africa (King III & King IV). In these reports, clear guiding principle are stipulated for business on how they should contribute to sustainable development. It is argued that sustainability should be viewed as a central management objective to specify how companies should contribute to the empowerment of society at large, cater for the needs of a wider range of stakeholders, take action on sustainability issues and needs, and make a wider and sustainable impact on society. CSR initiatives aimed at sustainable development may aid organizations in realizing this objective.

Communication within the CSR context, aimed at sustainable development, should be seated within the theoretical field of development communication. Within this field, the participatory approach is viewed as the normative and current paradigm, aimed at facilitating change geared towards empowerment and ultimately, sustainable development. Thus, if business ought to contribute to empowerment towards sustainable development through their CSR initiatives, their CSR communication should be guided by the participatory approach. However, the utilization of the participatory approach in business within CSR initiatives is often perceived and as unfeasible, given the corporate context.

The aim of this paper is to evaluate the perceptions of senior communication practitioners in various South African organizations, responsible for CSR communication, about the feasibility of the participatory approach within their CSR initiatives, aimed at sustainable development. A qualitative research approach will be followed with semi-structured interviews being conducted with ten communication practitioners. The interview schedule will be constructed according to the current theory pertaining to the four constructs of the participatory approach namely dialogue, cultural identity, participation and empowerment. The data will be analyzed through qualitative content analysis. After the analysis, the four constructs will be re-conceptualized to make them more feasible within the business context of CSR.

This paper would therefore present the perceptions of communication practitioners on the feasibility of the participatory approach within CSR initiatives. It would also present a re-conceptualization of the constructs of the participatory approach, as perceived to be relevant for business.

Abstract: La firma de los Acuerdos de Paz entre el gobierno colombiano y las FARC a finales de 2016 plantea una serie de retos para la construcción de una paz local sostenible en el país. A pesar de que el proceso de paz redujo la intensidad de las confrontaciones armadas, han comenzado a surgir nuevas conflictividades, ocasionadas por nuevos actores, en parte de los municipios donde las FARC se han desmovilizado; algunas de ellas asociadas al uso del territorio y de los recursos naturales.

La construcción de paz desde lo local significa reconsiderar hacia qué y hacia quién se están orientando los esfuerzos de transformación (Richmond, 2011), diseñando colectivamente una paz “situada” en el territorio. Para ello es necesario fomentar una comunicación dialógica (Mefalopulos, 2007) que genere confianza, asegure el entendimiento mutuo y favorezca la búsqueda de distintas alternativas, con el fin de trazar un itinerario de cambio social y convivencia pacífica con identidad cultural propia.

El Video Participativo como herramienta metodológica de investigación social colectiva favorece el desarrollo de procesos reflexivos (Rodríguez, 2001, 2011) que ponen el foco en “cómo nos representamos” más que en los hechos históricos diacrónicamente narrados (Montero y Moreno, 2014). Este enfoque, que apuesta por la construcción colectiva de una imagen emancipada de narrativas convencionales, permite explorar otras narraciones, otros actores y otras subalternidades del territorio normalmente silenciadas en los discursos dominantes.

Desde esta perspectiva ha comenzado a andar el proyecto “Escuela, territorio y posconflicto: construyendo una cultura de paz en el Sur de Tolima”. Este proyecto, co-investigado con maestros, maestras y organizaciones de cuatro regiones del Sur de Tolima (Chaparral, Planadas, Rioblanco y Ataco), utilizará el Video Participativo para explorar, nombrar (y así visibilizar) proyectos de futuro y aspiraciones comunitarias que, desde una mirada problematizada de la realidad, permitan co-crear iniciativas de paz sostenidas por una red ciudadana, dando así forma a procesos de construcción colectiva de memorias del pasado y, sobre todo, de memorias del territorio con sentido de futuro.

Title: From 'smart cities' to co-intelligent territories: the participatory gap

Session Type: Individual submission

Authors:

Name: Ana Duarte Melo

Email: anamelo(at) ics.uminho.pt

Country: PT (Portugal)

Affiliation: Universidade do Minho

Abstract: A communicational approach to the concept of co-intelligence (Atlee, 2017; Stremtan, 2008) associated with territorial management is the focus of this proposal that intends to establish argumentation and a critical reflection on how participatory communication contributes to territorial sustainability (Giovanella, 2014; Tufte, 2017).

Based on multiple interpretations of smart territories, including the “smart city” concept (Dameri, 2013; Rizzon et al., 2017; Tedim, 2016), we will argue that technological oriented models, namely urban planning norms or indicators to establish city rankings — heavily digital centred, frequently top-down implemented through macro structures—, became “disputed rights and contested truths” in line with the conference’s theme. Although having a disciplining role (Vanolo, 2014) they lack the sensitivity to take into account territorial idiosyncrasies, that is, the diverse knowledge networks that constitute the cultural identities that structure and conceptualize territories.

We will discuss the role of territorial communication beyond its traditional contribution in promoting a positive territorial image and/or in the construction of competitive territorial identities (Kavaratzis & Kalandides, 2015), analysing its structuring role through participative practices in the collective, collaborative and cooperative frame of territories. We will also highlight its relevance as a support for the design of smarter public policies, anchored in leadership visions, but also in the expectations of its recipients, and as driver for a more demanding, more involved and therefore more sustainable citizenship, according to the emerging perspective of participatory sustainability as a contemporary paradigm.

Abstract: Development induced displacement and resettlement is inevitable across the developing nations and is estimated to impact 15 million people annually (Cerna,2008). The problems associated with displacement and resettlements are multidimensional and mostly impact the poor and marginalized groups of people. The basic principles of resettlement, according to UN Human Rights legislation is that all potentially affected groups and people, including women, as well as the various stakeholders have the right to relevant information, full consultation and participation throughout the process (UN, 2007). In reality, most resettlement projects are implemented without planning, consultation or participation with the people. The risks involved in resettlement include – unemployment, marginalization; food insecurity, a decline in health; increased morbidity; loss of access to common property resources; social disarticulation; and risks to host populations (Cernea 2000).

Women, particularly the female-headed households become more impoverished after resettlement due to unemployment and lack of safety & security. Development-induced displacement and resettlement disrupts lives, livelihoods, societal networks and is a major factor in weakening the already heavily disadvantaged position of women (Terminsky, 2013). The Perumbakkam, resettlement site on the suburbs of Chennai city in India, considered to be Asia's largest resettlement site with over 25,000 housing units estimated to house more than 100000 inhabitants is no different in terms of the recovery and restoration of lives and livelihoods of people. The resettlement site, has made people especially women vulnerable to economic, social, safety & security threats. Unemployment has escalated the crime rates in the resettlement site further restricting women's movements and socialisation. Information and communication are very important when people are uprooted from their homes and resettled elsewhere.

Communication for Development interventions when implemented through the solution-based framework can provide the much-needed respite for many issues and problems faced by women in resettlement site. This paper presents as case studies the results of communication for development interventions used in the resettlement site as part of an action research using the participatory framework. The communication for development interventions in this pilot project used visual ethnography skill set and tool kit to understand the problems, to identify the needs and to find solutions to issues faced by women in the resettlement site. The participatory framework ensured participation of the women in all the three interventions discussed in this paper. The digital story intervention using the positive deviance framework helped women to recover from the trauma of resettlement and motivated them to take up community leadership. The ICT intervention through a mobile application helped women bridge the information & knowledge gap and also helped in socialisation. The social media intervention through skills development workshops enabled women to make their presence on social media platforms for sharing their struggles, success stories and to market their handmade products. The paper also discusses the many issues and challenges faced on the field when implementing the media interventions. Participatory media interventions using solution-based framework such as these can have a life defining impact on women in resettlement site. These interventions not only helped in alleviating problems women faced but also acted as a tool for empowering the poor and marginalised women in resettlement sites.

Abstract: In the development sector, and in communication and social change in particular, there is a growing optimism that innovation, participatory design, and social entrepreneurship can more effectively address entrenched development challenges, offering new perspectives on participatory theory. Innovation Labs, Hackathons, Design Thinking and Human Centred Design have been promoted by private foundations, and enthusiastically adopted by traditional government donors and UN Agencies. This groundswell was evident at a 2018 practitioner-focused conference (the 'Social and Behaviour Change Communication Summit), where 'innovation', and 'design' featured prominently on every day of the 5-day programme, including one workshop entitled 'How would Freire Design?'.

However, this paper questions the assumption that ideas of design and innovation as approaches to development are 'new' as they are imported into the Global South by development agencies and philanthropies. Instead it is important to pay attention to the ways that local actors are active in their engagement with these ideas and trends. Local actors may variously welcome ideas such as innovation, social entrepreneurship and approaches such as human-centred-design, repurpose such approaches for their own interests and contexts, or resist such approaches.

This paper focuses on the case of a Malawian NGO, the Creative Centre for Community Mobilisation (CRECCOM) which, through adopting the 'design learning' approach suggested by a Northern-based partner, gained legitimacy around its own long-held concept of 'Tepetepe'. In Chichewa, Tepetepe means 'flexible', and in practice means engaging with and connecting interdependent decision-making people within a village, facilitating ongoing participatory communication, collecting feedback and sense-making in ways that offers stakeholders both choice and agency towards positive change.

This chapter describes CRECCOM's concept and practice of 'Tepetepe', in conjunction with their use – both practical and political – of 'design-learning'. We outline an agenda for further research

on the implications of the growing interest in innovation, design and social entrepreneurship informed approaches to understand how they are working in practice to complement, supplement, offer an alternative to, or render invisible indigenous and endogenous approaches to participation.

Title: Political Participation as constitutive practice

Session Type: Individual submission

Authors:

Name: Peter Lunt

Email: pl108(at) le.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leicester

Abstract: In media and communication, particularly in the study of politics and media, there has been a growing recognition of the importance, but also the challenges, of creating the conditions for effective and sustained political participation (Bennett and Segerberg, 2013). It is recognised that participation, while it might be of value for its own sake, is potentially of great public value if it is established as part of politics, as, for example, in deliberative theory (Habermas, 1990; 1998). In this sense participation potentially helps to overcome the twin dangers of the proliferation of rights claims for ever increasing forms of identity (Dagger, 1997) and of the alienation of increasing professionalization of politics (Craig, 2016). Two approaches to our field have helped us to understand, however, that the form that political participation takes makes a difference to its potential to enliven and legitimate politics. Carpentier (2011), distinguishes between minimalist and maximalist forms of participation and Bennett (2012) distinguishes individual from collective forms of participation. In this paper, I offer an alternative way of distinguishing forms of political participation that emphasise the importance of participation as social practice and provides an account of political autonomy that does not collapse into isolated individualism. This account is based on the work of Goffman (1959, 1967) that provides an interactionist account of maximalist participation and an account of individual participation political autonomy realized through social interaction as constituting political subjectivity.

Title: Participation in policy development: A case study on Participatory Action Research for Policy Development (PAR4-P) within smart cities

Session Type: Individual submission

Authors:

Name: Willemien Laenens

Email: willemien.laenens(at) vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT Vrije Universiteit Brussel

Abstract: Although much research on participation and participatory processes for policy making have been conducted, true and effective participation of stakeholders within decision-making remains difficult and raises challenges in terms of power relations, inclusivity and more (Baiocchi & Ganuza, 2016). Participatory Action Research for Policy Development (PAR4-P), stemming from Participatory Action Research (PAR), is an approach aiming for such effective and bottom-up participation within decision-making (Mariën, Donders, Vanhaeght & Walravens, 2017).

In this paper, we will specifically look into this approach by first conducting a critical in-depth literature review on the concept of participation and its many critiques in order to identify possible challenges when realizing a participatory process within decision-making. Second, a critical revision of the PAR4-P approach and its supposed benefits is realized. This paper entails a case study wherein the PAR4-P approach is tested and evaluated within the context of smart cities. Smart cities support the participation of all stakeholders of the quadruple helix within policy making (Hollands, 2008) and therefore make a perfect first case study to test and improve the PAR4-P approach. The case study covers the involvement of the quadruple helix via the PAR4-P approach to discuss and develop bottom-up policies and actions with regard to mobility in the Brussels-Capital Region.

The paper describes the difficulties and opportunities of conducting participatory processes for policy development within a smart city context. It presents how the PAR4-P approach within smart cities differs from the original approach and which factors caused this change. On the basis of the results of the literature review and the case study, the paper outlines how future Participatory Action Research for Policy Development (PAR4-P) approaches can (better) deal with participatory challenges in decision making within a smart city context. Some additional recommendations for strengthening the original PAR4-P approach are also advised.

Title: Rise and fall of journalists' participatory potential after the Arab uprisings

Session Type: Individual submission

Authors:

Name: Hanan Badr

Email: hanan.badr(at) fu-berlin.de

Country: DE (Germany)

Affiliation: Freie Universität Berlin

Abstract: What does participatory potential mean in authoritarian non-Western contexts? Research triggered by the Arab uprisings in 2011 highlighted the popular empowerment of marginalized citizens through technology (Abdulla 2011, Khamis & Vaughn 2013, Alaimo 2013). However, literature overemphasized the role of social media in the interpretation of forcing open the public sphere, neglecting the role of real activist networks, real power asymmetries and politics, as well as classic media organizations on the ground. In addition, the glow of the 'Arab Spring' has faded, as events turned gloomy and uncertain. Summer 2013 in Egypt was a turning point, where research fell back to the hypothesis of enduring authoritarian as a strong power centre learned how to contain the public sphere. The liberation technology hypothesis (Diamond 2010) does not hold up against the increased de-politicization processes in Egypt after 2013. Focusing only on the online media, without its interactions with society and politics, cannot offer answers on vital questions on media functions in transformation.

Against this background, this paper scrutinizes the participatory potential of challengers in an authoritarian context by not looking at social media, but at the communicative and political repertoires as manifested through journalism. This paper connects the concept power asymmetry (dominant power centre, marginalized peripheries) with the concept participation, by investigating the structure and agency constellations in Egypt, which was marked by alternate radical shifts from massive opening into tight closing of the public sphere.

Focusing on the journalism's syndicate crisis in 2016, this paper analyzes the journalists' double participatory potential, as citizens and as journalists, within constrained public spheres. In 2016, the police raided the headquarters of the Journalists' syndicate in Cairo to arrest two oppositional journalists holding a sit-in challenging the regime (on its decision to let go of two Red Sea islands to Saudi Arabia). Raiding the syndicate was unprecedented action in Egypt's history that triggered strong contested discourses among the journalistic community on the meaning and purpose of participation, as well as the boundaries between the political and the professional roles for journalists.

Methodologically the paper includes a MaxQDA-supported qualitative content analysis (Kuckartz 2016) of the newspaper coverage of three newspapers: state newspaper Al-Ahram (N=49), private medium Al-Masry Al-Youm (N=100) and alternative medium Al-Badil (N=64). I also conducted interviews with key actors in the crisis to shed light on the inner dynamics.

Results show that Internet activism cannot replace real protests. The discourses polarized the journalistic views on journalists' participation in politics. An activist discourse mobilized against the police framing the syndicate as the "siege of the house of freedoms". The two non-state newspapers verbalized demands as presidential apology, resignation of minister of interior and the release of the fellow journalists. On the other hand, loyalist journalists from state and private media counter-

mobilized the opposition through numerous meetings and rallies orchestrated especially by various state media in so-called "journalistic family gatherings". The discourses reveal divided loyalties towards either patriotism or the profession in an authoritarian context. This paper hopes to offer a context-sensitive theoretical conceptualization of the meaning and limits of participation in authoritarian contexts.

Title: Hacia un modelo de asociación de la comunicación pública y la sostenibilidad social desde el enfoque del desarrollo mediático

Session Type: Individual submission

Authors:

Name: Salvador De León

Email: salvador.deleonv(at) edu.uaa.mx

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Aguascalientes

Name: Alejandro García-Macías

Email: agarciam(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Aguascalientes

Abstract: En este trabajo se formulan las bases para el diseño de un instrumento que permita la evaluación de las condiciones de la comunicación pública que guardan relación con el desarrollo social sostenible en una entidad federativa de México (Aguascalientes), y se presentan resultados preliminares de su pilotaje. El supuesto de partida es que la calidad de la comunicación pública, considerada como el ámbito de la interacción de los actores sociales en el espacio público (Demers & Lavigne, 2007), es un elemento favorecedor para que las personas alcancen un mejor bienestar.

El objetivo central consiste en la formulación de un modelo que permita asociar la calidad en la comunicación pública de una entidad federativa de México con la medición de la iniciativa Better Life Index (BLI) promovida por la OCDE (INEGI, n.d.). La iniciativa BLI cuenta con 35 indicadores que en México son aplicados a las 32 entidades federativas para medir el nivel de bienestar. La comunicación pública se operacionaliza tomando en cuenta el conjunto de indicadores de desarrollo mediático del Programa Internacional para el Desarrollo de la Comunicación (PIDC-UNESCO, 2008, p. V), y las formulaciones teórico-metodológicas de la comunicación pública (Lavigne, 2008). A los resultados se aplican diferentes pruebas de análisis multivariado

Elegimos a Aguascalientes en función de que cuenta con un valor de 0.760 en el Índice de Desarrollo Humano (IDH) del PNUD (De la Torre García, 2015) el cual se encuentra por encima de la media nacional mexicana que es de 0.746, ubicándose como la novena entidad federativa mejor evaluada. En una segunda etapa, la cual se encuentra en proceso, se realiza la misma medición para Chiapas, la entidad que tiene el IDH más bajo de toda la república mexicana, con valor de 0.667, que es coincidente con algunos países de África subsahariana como Gabón, con el objetivo de contrastar los datos e identificar si la hipótesis de la asociación buscada se mantiene.

El modelo resultante permitiría evaluar el papel que juega la comunicación pública en el alcance del bienestar social, con la finalidad de otorgar base empírica para la elaboración de políticas públicas que utilicen estrategias comunicativas en el desarrollo social sostenible.

Title: Izindaba Zokudla: conversations about food

Session Type: Individual submission

Authors:

Name: Mariekie Burger

Email: mburger(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: The Izindaba Zokudla grouping in Soweto, Johannesburg, South Africa, is an informal group of urban farmers striving to address inequality in the food system by forming an open learning community. It is a multi-stakeholder initiative consisting of urban subsistence farmers, co-operative farmers, business sector, government sector, public sector groups, academics, environmentalists, activists, consumers, and any member of the public that is interested. Together the stakeholders seek to change the local food system to ensure food security.

One of the problems often experienced by open multi-stakeholder communities is that stakeholders are voluntary involved – they ‘come and go’ at will. As this may result in discontinuity, the communication between stakeholders are paramount. This project describes the communication amongst the estimated 2000 stakeholders living in a poverty-stricken area of Johannesburg. More specifically, this project theorises public self-expression for activism and group identity building by analyzing a community blog site of the Izindaba Zokudla group. Preliminary findings of the project indicates different forms of public self-expression, a range of reasons for self-expression, and a definitive value found in self-expression in the blog entries.

The blog entries contain stories about the hardship, trauma, poverty, inequality, but also the joys of farming, working the land, and creating income opportunities. Through storytelling many emergent urban farmers in Soweto find markets and opportunities to sustain themselves financially. The blog site forms part of the evolving online presence of the group. They seek to expand their online presence by pooling resources with a number of activist, educational and other groupings.

These findings are reflected upon by drawing on the different epistemological differences of both institutionalized development communication and revolutionary social change. In so doing, this project seeks to develop an online and offline communication model for open multi-stakeholder development projects in the global south.

Title: Shouting in a Whisper: Social Change and Participation in Qatar

Session Type: Individual submission

Authors:

Name: Denielle Emans

Email: djemans(at) vcu.edu

Country: QA (Qatar)

Affiliation: Virginia Commonwealth University in Qatar

Abstract: Over the past twenty years, Qatar's international workforce has expanded alongside its built environment, with foreign workers now comprising 65.2% of the total population (United Nations, 2017). However, many of the country's low-income workers do not read or speak the two primary languages of the country's leading governmental and private agencies, Arabic and English (Gardner et al., 2013). Language is not only an essential cultural tool needed for communication and social cohesion (Everett, 2012), but linguistic barriers can distance foreign workers from public discourse and contribute to socio-cultural marginalization (Lan Lo, 2014).

According to scholars like Thomas (2014), improving communication deficits should involve increasing media access and engaging communities in contemporary discourse. Focusing on communication rights, in particular, can stimulate further discussion and action to occur around advancing the rights of people to have their voices heard (Thomas & van de Fliert, 2015; CRIS Campaign, 2005; Universal Nations, 1948). However, in the complex development space of Qatar, legal obstacles and fear of reprisal are impediments to foreign workers speaking out and "seeking redress for violations and exploitative conditions" (United States Department of State, 2017).

As the labor migration cycle continues to operate in Qatar and throughout the region, this qualitative study seeks to uncover new pathways to social change through semi-structured interviews with community development leaders in the capital city of Doha. Findings reveal a distinct fragility around the notion of participation itself, with many small-scale programs siloed and disconnected in order to protect practitioners and participants alike. These grassroots efforts are rarely seen in news media and other mainstream information channels, with self-censorship highlighted as a key strategy for navigating the community development space. This paper speculates on these findings and offers a critical reflection on the potentials for participatory processes and power redistribution in a context where socio-political restrictions remain a significant limitation to social change.

Title: Shooting Cameras for Peace! Critical reflections on the dialectic between product and process in a participatory photography peace building project in Colombia (Video presentation)

Session Type: Video Submission

Authors:

Name: Alexander Fattal

Email: alfattal(at) gmail.com

Country: US (United States)

Affiliation: Penn State

Abstract: For seven years, between 2002 and 2009, Shooting Cameras for Peace, a Colombian non-profit organization, conducted photography workshops with youth in a community called El Progreso, an informal settlement southwest of Bogotá. Most of the students had arrived to the hilly outskirts of the metropolis with their families, displaced by the conflict raging in the countryside or in search of economic mobility given the ongoing economic crisis in rural Colombia. This paper charts the changing definition of “participation” in that project, as Shooting Cameras for Peace evolved from the author’s personal initiative to a Colombian non-profit, to a more localized participatory action project affiliated with the National University.

Shooting Cameras for Peace’s shifting emphasis on the pedagogical process versus the artistic products emerging from the workshops provides fertile ground for reflecting on the meaning of a signifier often floating between the perspectives of different actors: students, parents, community leaders, staff, and donors. Through an analysis of the organization’s seven-year history — based on interviews, participant observation, the photographic archive of 10,000 images, and interviews with relevant actors — this video presentation will rethink the ethics of participation in the context of urban violence and economic marginalization in Colombia.

I will argue for a dialectical ideal in weighing process and product in collaborative media projects. My reflections will be recorded over the students’ images and a mock-up of the forthcoming bilingual book *Shooting Cameras for Peace: Youth, Photography and the Colombian Armed Conflict* // *Disparando Cámaras para la Paz: Juventud, Fotografía y el Conflicto Armado Colombiano* (Harvard University Press, in press).

Title: Queering Public Spaces: An analysis of political logics of participation at Cinema Queer Film Festival in Sweden

Session Type: Individual submission

Authors:

Name: Siddharth Chadha

Email: siddharth.chadha(at) im.uu.se

Country: SE (Sweden)

Affiliation: Uppsala University

Abstract: Participation is a widely used concept in variety of fields, including media and communication studies, however, the varied use of its meaning lends itself to be described as a floating signifier (Chadha 2017) – a signifier that is open to contestation and re-articulation. Building upon the work within democratic theory of participation (Pateman 1973, Arnstien 1969, Verba & Nie 1972), this paper argues for a deepened understanding of democratic participation beyond its widely used connotation as citizens role in public activities. Taking inspiration from the work of Carpentier, who defines participation as equalization power positions in formal and informal decision-making processes (2012), the research uses a discourse theory (Laclau & Mouffe 1985) framework to understand participation and identity politics within media processes. The paper reports on the findings of a research conducted at the Cinema Queer Film Festival (CQF), Stockholm conducted in 2017 and 2018. The research uses a discourse theoretical reading of qualitative methods, including participant observation, visual data gathering, informal interviews to understand the political logics of participation within the CQF. Using a logics approach to social analysis (Griggs, Glynos & Howarth 2016), the paper analyzes that participation occurs at three levels in course of the festival – 1/ as an organizational process articulated through its internally dominant voices and actors, 2/ a communicative tool that speaks back to the mainstream hetero-normative culture, and 3/ as a democratic claim to material (eg. public parks, schools) & non-material (festivals, media platforms) spaces. At each level, the meaning of participation gets attached to a different set of socio-political norms and practices which the Queer Film Festival is striving to either sustain or challenge. Using this analysis, the paper explores the conditions within which participation, through its varied meaning at each of the distinct levels outlined above, emerges as an articulation of the LGBTQIA+ struggle in Sweden, therefore producing transformative effects in society.

Abstract: In much of the popular rhetoric surrounding web 2.0, participatory journalism fosters new combinations of professional, participatory and technological intermediation which have the capacity to erode established sender–receiver relationships and disrupt the monopoly of well-rooted functions of professional journalism, namely agenda setting, framing and gatekeeping (Goode, 2009; Peters & Witschge, 2014). Gatekeeping in particular, is taking a “participative” form as analytics and metrics identifying audience preferences and dislikes, are increasingly shaping newsworthiness (Philips, 2015). In contrast to traditional professional practices, which systematically subordinated users’ wishes to journalists’ professional judgment and ‘gut feeling’ (Schultz, 2007), the audience turn in journalism (Anderson, 2011) has designated both traffic (clicks and time spent on a news story) and engagement metrics (audience comments and social media shares) as important measures of newsworthiness (Peter, 2015; Tandoc & Vos, 2016).

Although audience responsiveness has been framed as a democratic advancement over older professional models (Anderson, 2011; Kreiss & Brennen, 2016), the practices of measurable journalism (Carlsson, 2018) on one hand, and the vagaries of participation (Anderson & Revers, 2018) on the other, raise important questions regarding users’ contribution in reforming journalism. Notwithstanding much research (Vu, 2014; Tandoc & Thomas 2015) pointing to the growing influence of audience analytics in newsrooms, there has been limited empirical work looking at the preferences of audiences when interacting with news.

Utilizing a bricolage of gatekeeping, participation and news values theories and drawing on a quantitative analysis of 420 news stories, the study attempts to shed light on which news values trigger more audience participation in below the line comment fields. Data is collected from four media outlets in Greece corresponding to different formats (legacy, tabloid, web native and alternative). In particular, the study poses the following the research questions: a) What news values can predict an effect on the number of comments? and b) Are there significant differences in the news values of the most commented items among different types of media? To answer these questions, and considering that the coding of the news values is not exclusive, the study will use cluster analysis. The data is currently being analysed. The study contributes to the broader discussion of whether user participation contradicts traditional professional wisdom exemplified in negative news, human interest stories, controversy, conflict, national stories and well-known persons

Title: Latin America (1959-2011): Mobilising and communicating dissent

Session Type: Individual submission

Authors:

Name: Jorge Saavedra

Email: jsu21(at) cam.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Cambridge

Abstract: During and after the mobilizations that hit different regions of the world in 2011, two key questions emerged from the media and communications field: the role of communicative and media practices in contentious processes (Barassi, 2015; Castells, 2012; Juris, 2012); and how, and if, these practices could allow movements and organizations ‘to endure, build capacity, and effect social change in various places at particular moments in time’ (Fenton, 2016: 23). Relevant to be observed by research based in particular sites of mobilisation, these questions also unveiled a lack of knowledge on the ways in which communicative and media practices have been understood by social movements in the past; and to what extent these practices have contributed to the kind of post-mobilisation politics that activists have aimed for (Saavedra, 2018).

In order to address this gap from a particular site, this presentation overviews five decades of activism in Latin America (1959-2011), as a time span that goes from struggles for democratisation to military dictatorship, and from democratic transition to mobilisation against neoliberal policies (Garretón, 2002). Taking Chile as a prototypical case of the region, and based on the revision of material (texts, audios, videos, etc.) created within salient mobilizations in the aforementioned periods; and interviews with relevant informants and activists involved in media and communications, this presentation will give precise information of a) the origins, rationale and aims of communicative and media practices; b) the relationship between aims and practices in each period; c) the place technology and the political economy of the media occupy in these practices; d) and the outcome of communicative and media practices in helping grassroots activism and movements to endure, build capacity, and effect concrete social change beyond particular waves of contention.

The presentation, ultimately, expects to be a contribution in three ways. First, by providing a wide and deep map illustrating the context, rationale, practices, aims, and challenges of communicative and media practices of social movements in five decades. Secondly, by giving an informed and useful account of the imbrication between media and communications, grassroots politics and democratization processes before 2011. And thirdly, by exhibiting a case that could serve as reference for research and researchers around the globe willing to understand the nature of communicative and media practices in past movements, as well as their contribution for democratising processes.

Title: Becoming an Activist: Defining the Role of Social Media in Individuals' Civic Engagement

Session Type: Individual submission

Authors:

Name: Maria Bakardjieva

Email: bakardji(at) ucalgary.ca

Country: CA (Canada)

Affiliation: University of Calgary

Abstract: The growing sociological and communication-studies literature investigating the role of social media in civic engagement and political participation typically takes activists and activist organizations as its starting point. Studies of this kind aim to assess the utility of social media for achieving the goals pursued by such actors. In political science, a common approach to questions of civic and political engagement is to try to determine the demographic and/or psychological characteristics of individuals who become involved in political organization and action. Measures of social media use have been recently included in those inventories as another variable related to individuals' engagement.

This study breaks with both these conventions and focuses on the process of becoming engaged from a phenomenological perspective as it unfolds in the case of ordinary citizens who do not qualify as activists at the starting point. Its theoretical premises include concepts from social constructivism as it has been applied to collective action and social movements, radical-democratic theories of citizenship and multi-sited ethnography. The research problematizes the concepts 'activist' and 'activism' and distinguishes a variety of modes and degrees of civic engagement. It asks what place/s social media occupy on the activation trajectory that brings an individual citizen from a state of relative disengagement and passivity to a particular degree of involvement in civic and political causes, collectives and actions.

The empirical material used stems from several case studies of protest mobilizations conducted in Bulgaria and Canada that include over 40 in-depth interviews with participants in these events. The goal is to map out the dynamics that propelled individuals central to the mobilizations from their private everyday worlds to the roles of leaders and drivers of collective action targeting political and social issues. The analysis identifies the various turns and stations that these individual activation trajectories have in common; it pinpoints the ways in which social media become enmeshed in the process; and it account for the differences produced by the distinct material and cultural ecologies within which these trajectories take shape. The individual activation trajectories manifested across the various cases are organized in a typology that offers a nuanced understanding of activism and its gestation. Along with that, the study illustrates a systematic and grounded approach to the assessment of the role of social media as catalysis of civic mobilization.

Title: Mujeres migrantes detrás de cámaras: el video participativo como instrumento del empoderamiento femenino

Session Type: Individual submission

Authors:

Name: María Hernández

Email: mariajose.hernandez(at) iberopuebla.mx

Country: MX (Mexico)

Affiliation: Universidad Ibero Puebla

Abstract: El presente trabajo discute la funcionalidad del video como una herramienta que contiene una gama de técnicas y procesos en los que las personas pueden adquirir poder, confianza y autoestima (Hernández, 2017). En ocasiones se cree que el video dará voz de manera automática a las comunidades vulnerables. Sin embargo, el empoderamiento implica un proceso más amplio, por lo cual debe cuidarse de no caer en una visión idealizada. De acuerdo con Gumucio (2004) los procesos de cambio social, necesitan de diálogos interculturales para dar voz a los pensamientos de una comunidad y ser partícipes activos en su desarrollo social. Para Protz (1991), un elemento fundamental para facilitar los procesos de toma de decisiones, basados en los propios intereses de comunidades vulnerables, es la producción del video participativo.

Si bien organizaciones internacionales se han encargado de usar el video participativo como una metodología para la auto-representación y el empoderamiento en comunidades marginadas, muy pocos se han encargado de analizar la creación, la proyección, los alcances y las limitaciones del video participativo que se convierten, en una herramienta de comunicación para el empoderamiento de mujeres migrantes, que se reconocen como parte de una comunidad a través del proceso dialógico que conlleva el realizar una grabación de video.

En el presente trabajo, describo la experiencia que han tenido las mujeres migrantes de la comunidad Chila de la Sal, al querer utilizar el video como herramienta de empoderamiento femenino, al participar en procesos de diálogo para narrar las prácticas locales en las que se ven involucradas y hacerse visibles ante el fenómeno de la migración. Dichas mujeres han sufrido discriminación y violencia y han visto en la herramienta del video la manera idónea, para registrar desde su voz, su vida y la nostalgia que sienten por su pasado y por su comunidad.

Palabras clave: Mujeres migrantes, mujeres migrantes de la sierra mixteca, migración, empoderamiento femenino, video participativo

Title: Civic Imagination and Affective Publics: online civic engagement, participatory politics and (e)utopian imagination in Ethiopia

Session Type: Individual submission

Authors:

Name: Azeb Madebo

Email: Madebo(at) usc.edu

Country: US (United States)

Affiliation: University of Southern California, Annenberg School for Communication and Journalism

Abstract: Research on ICTs and participatory politics has pointed to the ways in which technological advances like mobile telephony and increased internet access have transformative potentials through their capacity to facilitate change in the social, economic, and political conditions of those living in underdeveloped contexts. Political landscapes and traditional modes of mobilization and assembly have been altered by the emergence of digitally networked public spheres, the spread of new media technologies and affordances of internet-based communication technologies.

Avoiding techno-determinism, or perspectives that perceive new technologies as neutral tools that drive socio-political and economic change, researchers have considered how ICTs are appropriated and adapted by different cultures, communities, and individuals in nuanced ways and how local political economies and conditions affect the adoption and adaptation of ICTs. Works like Bruce Mutsaers's (ed) 2016 *Digital Activism in the Social Media* and Gagliardone's 2016 *The politics of technology in Africa* show that while the introduction of new media technologies into developing contexts can help facilitate civic engagement in unprecedented ways, civic participation and social change are inextricably tied to local conditions, desires, cultures and political economies. Scholars like Ethan Zuckerman (2015) consider and complicate how civic populations take up creative modes of participation in highly censored media and political landscapes like China and Tunisia through the use of commercial media platforms. Henry Jenkins and those contributing in *By Any Media Necessary* (2016) show the ways in which today's youth use new mechanisms to assert their voice and promote political change outside of established political institutions by taking up new modes of civic participation.

This project adds to this academic discourse by taking into consideration the nuanced and particular circumstances under which Ethiopian civilians and diaspora members use internet-based communication technologies to participate in politics and call for change in their homeland. ICTs and tactical use of social media platforms play important roles in facilitating discourses, civic imagination, participation, and change in states like Ethiopia – where government regimes and stakeholders have regularly curtailed and regulated the access and use of internet technologies by civil society. The author borrows and expands on literature regarding civic imagination, civic engagement, utopianism, and digital activism to analyze the ways in which participatory politics came to catalyze significant changes within Ethiopian and Horn of Africa politics in the contemporary moment. The author discourse analyzes the #EthiopianDream social media campaign

of 2013; considers the 2015-2018 protests for human rights and political reform that mobilized both diasporic and local participation; and thinks through the ways in which participatory eutopian desiring and imagination can lead to desired changes in regions where participatory politics and civic engagement are censored and limited. The author advances theories of civic imagination and eutopian desiring as necessary for the activation of assemblages and civic engagement aimed at socio-political change-making. While technology isn't utopian in its capacity to solve our problems, it does have its affordances – especially in contexts where governmental overboard censorship and surveillance is all too common.

Title: Comunicación participativa y economía social como modelo de territorio solidario

Session Type: Individual submission

Authors:

Name: Liza Adriana Higuera

Email: lizahiguera(at) gmail.com

Country: pe

Affiliation: Piura University

Abstract: Esta ponencia, se deriva del proyecto: Validación participativa del modelo de territorio solidario en tres campus de la Universidad Cooperativa de Colombia, como contribución al desarrollo socio económico local y la paz, desde el enfoque de la economía social y solidaria. En la implementación del proyecto una de las problemáticas que emergen parten de la pregunta: ¿Cómo favorecer la apropiación del conocimiento y el fortalecimiento de las redes de economía social y solidaria desde prácticas de comunicación participativa? En ese sentido, se observa la necesidad de visibilizar experiencias significativas de las organizaciones aliadas externas del proyecto en la sede Bogotá vinculados al proceso del proyecto territorios solidarios de la Universidad Cooperativa de Colombia.

Con esta presentación, se busca mostrar el grado de empoderamiento de las comunidades en la implementación de herramientas comunicativas como plataforma democrática para la movilización social frente al rol protagónico de las organizaciones en el fortalecimiento de las redes de mercados solidarios en las comunidades locales.

A partir de la metodología investigación acción y el enfoque de la comunicación participativa, se realizaron historias de vida y entrevistas semiestructuradas, que dieron cuenta del fortalecimiento de las capacidades al compartir el conocimiento y la relevancia de la comunicación en la promoción del consumo de productos locales, el comercio justo y la soberanía alimentaria. Así mismo, se evidenciaron el aumento del índice de confianza y el desarrollo de habilidades como asociatividad y liderazgo.

Los principales aportes de la creación de herramientas comunicativas desde productos generados en la radio, las piezas audiovisuales y cortos documentales y el material didáctico impreso y en digital contribuyeron a establecer un vínculo entre la comunidad (productores, distribuidores) y los consumidores, como garantía para la sostenibilidad de los mercados.

Por último, la participación de las comunidades en las labores de producción y difusión de contenidos les brindó la oportunidad de integrarse a nuevos nodos y redes de economía solidaria, a través de convenios y alianzas estratégicas con otras organizaciones del sector.

Title: Exploring alternative media strategies for change in a post-conflict Colombia

Session Type: Individual submission

Authors:

Name: Benjamin De La Pava Velez

Email: bdelapava(at) gmail.com

Country: CO (Colombia)

Affiliation: Universidad Jorge Tadeo Lozano

Abstract: This project looks to inquire about the logics and media practices of alternative media outlets in Colombia after the signing of the peace treaty between the former armed group FARC and the Colombian state. This treaty and the plebiscitum that followed has received vastly different reception in and outside Colombia. While there are some early studies about how the media played a pivotal role in swaying public opinion in Colombia towards negative attitudes of this historical achievement, at the moment of the plebiscitum and the presidential elections of 2018, we have very little information of how alternative media have reacted and adapted to this hostile post-conflict media and public environment. Through a participatory qualitative design with several alternative media outlets, this exploratory research project finds itself embedded in a juncture of uncertainty for many both in the media and outside of it. This is because the majority of the six points agreed in the treaty have lost their legal footing or find themselves in limbo, and with a conservative majority congress that is against the peace accord, the rest are not looking up. Thus, many of the programs to foster peace are at a standstill, communities and ex-combatants left adrift wondering how to move forward. In this sense, many NGOs and alternative media outlets are looking how to keep the subject alive in the public's mind so that those most affected are neither forgotten nor left behind. Some, go even further, aiming to bring the message of the communities back to the cities and to those in power. The first question of this project then looks to answer the role of alternative media in a divided country towards a sustainable peace. Second, what can be the impact of the communicative strategies implemented by these media outlets in fostering greater reparation in and between communities, ex-combatants and other actors of the conflict? Finally, this project wishes to highlight the practices that provide insight into the possibilities different types of media provide to effect change for peace.

Email: mcuartas(at) culturacaribe.org
Country: CO (Colombia)
Affiliation: Museo del Caribe

Abstract: La idea del museo entendido como medio ya ha sido planteada en diversas ocasiones (Hodge & D'Souza, 1979; Lumley, 1988; Parry, 2007) asumiendo las exposiciones como su lenguaje específico (ICOM, 1992), sin embargo es en los últimos veinte años que la comunicación ha tomado un papel protagónico en la manera como los museos entienden su misión y abordan su relación con las audiencias (Hooper Greenhill, 1999; Kidd, 2016). Durante el mismo período, en Colombia la concepción de museo, centro de ciencia y la política para la comunicación de la ciencia han migrado desde una orientación de divulgación, a un enfoque de participación ciudadana. Como actores del Sistema de Apropiación Social de la Ciencia Tecnología e Innovación (ASCTI) se han incorporado más recientemente los museos y centros de ciencia, al hacerse cada vez más conscientes de sus posibilidades como espacios para el encuentro entre ciudadanos diversos, recuperación de la memoria y contacto con la ciencia y las TIC. Dentro de este panorama, el Museo del Caribe, ha trabajado desde 2014 en la elaboración de una estrategia metodológica itinerante para la ASC que hace énfasis en la apropiación del conocimiento con comunidades rurales del Caribe colombiano. La estrategia, de carácter participativo, ha sido diseñada desde una perspectiva educomunicativa, que no sólo hace énfasis en el papel del museo como medio, sino que reconoce la necesidad de vincular activamente a las audiencias en la creación de contenidos. Tras realizar un acercamiento en territorio y la implementación de los primeros diseños hemos identificado tres tensiones para discutir de cara a la implementación de la propuesta en territorio: 1) Promover un espacio para voces diversas vs. la preocupación del museo por la legitimización de los discursos, 2) la creación de contenidos para un mundo digital vs condiciones rurales de baja conectividad y herramientas TIC, 3) participación cultural vs. participación ciudadana. El abordaje de estas tensiones no sólo supone la posibilidad de asumir el papel del museo como medio que empodere a sus audiencias, sino que reta nociones de poder, legitimidad y participación, obligando a alejar esta

última de una concepción de consumo cultural (Morrone, 2006), y en cambio contribuir a reforzar el papel del museo como espacio para la participación ciudadana.

Title: Keynote Address: Liberating Pedagogy in Participatory Communication: Exploring the Legacy of Paulo Freire

Session Type: Individual submission

Authors:

Name: Thomas Tufte

Email: T.Tufte(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Loughborough

Abstract: In 2006 I co-edited a large anthology on 50 years of history and development of Communication for Social Change. It was based on a global call for relevant publications, receiving more than 1200 submissions, and with the help of an international advisory board, it resulted in the selection of 200 articles and excerpts of articles in what became a very large book (over 1000 pages!). It revealed some key points about the field: the fundamental connection between participatory communication and communication for social change; the strong Latin American contribution (over 40% of the entries); and the very strong inspiration from Paulo Freire in many of the entries (Gumucio-Dagron and Tufte 2006. Spanish version: 2008). These features spark questions relevant for this IAMCR Section such as: what elements of Freire's thinking and practice made him so seminal? And today, almost 15 years later - following financial crisis, digital media developments, Arab Springs and other uprisings, and with significant political changes – what is the legacy of Paulo Freire in the field of participatory communication?

This presentation will do three things: firstly, it will introduce Paulo Freire, the history and development of his trajectory and his key concepts, mapping the circulation of his ideas, and with emphasis upon the field of participatory communication. Secondly, it will assess the current Brazilian controversy around the legacy of Freire, and finally, it will critically assess the international, contemporary applicability of his ideas.

Title: Public Service Media (PSM) in the age of platform society: from PSM to 'convivial' Public Service Platforms.

Session Type: Individual submission

Authors:

Name: Tiziano Bonini

Email: tiziano.bonini-(at) unisi.it

Country: IT (Italy)

Affiliation: Associate professor in Media Studies at DISPOC, University of Siena

Abstract: The aim of this paper is to analyse contemporary public service media (PSM) under the frame of critical political economy of the media and discuss the future of PSM in the age of digital platforms. I will start analysing the evolution of the debate on public service media values, paying particular attention to the paradigm change envisioned by Bardoel & Lowe in 2007. In the age of platformization of culture (Nieborg & Poell, 2018) and broader process of platformization of society (van Dijck et al 2018), PSMs are facing a new turn in their history and a further semantic extension of the boundaries of their meaning is needed: from Public Service Media to Public Service Platforms (PSP). Building on the definitions of media provided by JD Peters (2015), I propose to extend the definition of media to digital platforms as well. If platforms are media, then public service media can be platforms, too.

In the last section, I try to sketch the distinctions between profit-oriented and public service platforms and how the latter must be designed to embody the traditional public values of the PSMs. To answer this question, I go back to the work of the controversial Austrian scholar Ivan Illich, arguing that the design of PSP should incorporate the dimension of "conviviality" (Illich 1973): public service platforms should work as 'convivial tools'. I conclude by trying to envision how the concept of conviviality could be embedded in the practical design of new Public service digital platforms and I propose five principles that could inspire the contemporary design of 'convivial' platforms: symmetry of power, hackability, openness, decentralization and independence.

Title: The implementation of indigenous communication rights in Taiwan: A case study of Taiwan Indigenous Television

Session Type: Individual submission

Authors:

Name: Yu-Chao Huang

Email: yc-(at) mail.ndhu.edu.tw

Country: TW (Taiwan)

Affiliation: National Dong Hwa University

Abstract: This study aims to assess the implementation of indigenous communication rights in Taiwan by analyzing the policy and the production of Taiwan Indigenous Television (TITV). The former investigates the relations and interactions among policy stakeholders involved in the policy making, while the latter examines the content and genres of TITV programs. The current analysis indicates a crucial role played by political interference and pooling resources in Taiwan's indigenous communication environment.

Since the Universal Declaration of Human Rights passed by United Nations in 1947, the freedom of opinion and expression addressed within has been conceived as the foundation of communication rights in the modern era. In 2003 and 2005 respectively, International Telecommunication Union organized the World Summit on the Information Society and then stated four key principles of communication rights: freedom, inclusiveness, diversity and participation. However, indigenous communication rights had not been specifically proposed until United Nations Declaration on the Rights of Indigenous Peoples in 2007, almost 60 years after the human rights declaration.

Similarly, indigenous (communication) right has sparked the public attention for more than 30 years in Taiwan, and finally has been legitimized in the recent decade. In 2005, the Taiwan Indigenous Peoples Basic Law passed, mandating that government shall set up broadcasting media dedicated exclusively to indigenous peoples in order to protect their communication rights, and therefore TITV was launched in the same year. However, the transition from laws to practice has been hindered by the lack of a national indigenous communication policy and accountability system according to the previous analyses. As the policy making process involves numerous governmental and social sectors (policy stakeholders), this study first applies the policy network analysis, emphasizing the relations between those sectors in terms of policy outcomes to examine how stakeholders' interactions influence the development process of TITV. Additionally, as indigenous cultural diversity and media representations are the core concepts of indigenous communication rights, this study also adopts the content analysis and in-depth interviews to examine how TITV programs constitute the nature of communication subjectivity of indigenous peoples.

The results show that political interference and pooling resources in TITV have hampered the indigenous media independence and diversity, suggesting that to build a New Zealand-like bicultural system and to employ new technologies such as over-the-top (OTT) service or social media for cultural heritage and language revitalization could be helpful for implementing

indigenous communication rights. Some theoretical and practical implications are also discussed to improve the current indigenous communication environment.

Title: Estonian and Russian speaking audiences' opinion on media credibility and on the value of public service broadcasting in 2010-2019.

Session Type: Individual submission

Authors:

Name: Andres Jõesaar

Email: andres.joesaar-(at) tlu.ee

Country: EE (Estonia)

Affiliation: Associate professor

Abstract: In times of information overload and misinformation, ensuring adequate public awareness in democratic societies has become increasingly intricate. The success of social media has challenged traditional media, including public-service media. As a result of Estonia's geopolitical location and applied media policy, it is a special challenge to connect Estonian and Russian-speaking communities in a common information field. The aim of this paper is to analyze the changes of opinions of Estonian and Russian-speaking communities on the importance and credibility (trustworthiness) of different information sources in 2010-2019. Another important focus of the study is to explore the satisfaction of the two communities with the content and activities of the Estonian Public Broadcasting. Thirdly, this work analyses the impact of the launch of Russian-language public service television channel ETV+ on the viewing time of (Russian state) TV channels among the Russian-speaking audience in Estonia.

For finding answers to all these questions data from four comprehensive media consumption and audience satisfaction surveys (2010, 2014, 2017 and 2019; n=1000), yearly television audience surveys and statistics from institutional credibility monitoring is used.

Title: Evolution of political influence on the Lithuanian national radio and television

Session Type: Individual submission

Authors:

Name: Deimantas Jastramskis

Email: d.jastramskis-(at) gmail.com

Country: LT (Lithuania)

Affiliation: Vilnius University

Abstract: The Lithuanian national radio and television (LRT) was established by the Lithuanian Parliament immediately after the restoration of state independence in 1990. LRT was designed as state owned public company whose general director and Council were appointed by the Lithuanian Parliament. The model of direct influence of government coalitions on the LRT management was replaced by a model of balanced political influence in 2000, when two thirds of seats in the LRT Council were divided between the representatives that are since then delegated by three sides: the governing coalition, opposition of the Parliament and the President. The remaining third of the seats in the LRT Council was left for the representatives of non-governmental organizations.

Notwithstanding the lack of direct control on the LRT management, government coalitions could continue its exertion of political power on the LRT through the financial leverages. The main source of the LRT finances – allocations from the state budget – has been changing every year, as they were dependent on the political will of the ruling coalitions of the Lithuanian Parliament. However, since 2015 funding of the LRT has been related to the revenues of the state and municipalities' budgets (1.5 percent from the income tax and 1.3 percent from the excise revenues) (Republic of Lithuania Law on the National Radio and Television, 2016). Therefore the LRT has become more independent from the political subjects.

The aim of this paper is to analyse the legal regulation of management and financing of the LRT and to find out how the political influence on the LRT has been changing between the 1990 and 2018. The paper also explores what political and economic circumstances were decisive in the policy process regarding the change of conditions for the independence of the LRT. The study is based on the document analysis of relevant legislative acts, transcripts of sittings of Lithuanian Parliament, the annual reports of the LRT and regulatory institutions.

The paper claims that conditions for the independence of LRT from the political subjects were only partially created during the 28 years of the Lithuanian statehood. First, the model of formation of the LRT council (when majority of its members are representatives of the Parliament and the President) does not decouple the LRT management from the concrete political conjuncture and from the possible political coalitions in the LRT council. Second, although new financing model of the LRT (when allocations are related to the revenues of the state and municipalities' budgets) contributed to the greater independence from politicians, however, the amount of the LRT funding is not sufficient to take out the LRT from the level of the least financed public service media in the European Union (EBU Media Intelligence Service, 2017).

Title: Going digital, CBC/Radio-Canada's transformation.

Session Type: Individual submission

Authors:

Name: Aime-Jules Bizimana

Email: aime-jules.bizimana-(at) uqo.ca

Country: CA (Canada)

Affiliation: Université du Québec en Outaouais (UQO)

Name: Oumar Kane

Email: kane.oumar-(at) uqam.ca

Country: CA (Canada)

Affiliation: Université du Québec à Montréal (UQAM)

Abstract: In several countries, public broadcasters have to deal with an identity crisis linked to a particular context that concerns the general evolution of the media but also their own evolution in the digital world. The purpose of this paper is to analyze the recent evolution of the Canadian public broadcaster CBC / Radio-Canada. Its mandate is defined through the Broadcasting Act, it aims to promote Canadian cultural expression and national identity. Our reflection on the evolution of public broadcasters is based on the importance of the very notion of public service that relates to the public interest and the common good.

Our paper seeks to answer the following research question: How is CBC / Radio-Canada negotiating its transformation in the digital age? This involves evaluating various initiatives put in place by CBC / Radio-Canada across the country in relation to its specific mandate in the Canadian media ecosystem. We will address the issues of creativity, accessibility, and diversity as well as the tension between public service and commodification. Our analysis will be based on the following theoretical constructs: the role of the public service media (Chevalier, 2012, Blumler, 1992, Tremblay, 1986); political economy of communication (Mosco, 2017, 1996); the theory of cultural industries (Bouquillon, Miège and Moeglin, 2013, Tremblay and Lacroix 1991, Flichy 1991) and the convergence of the media industries (Jenkins 2003, Gordon 2003). This proposal is part of a SSHRC-funded research project on "Public Service Media in the Internet Age" (Tremblay, Kane and Bizimana, 2014-2019).

Title: Globalization, Deregulation and Public Service Broadcasting in Cameroon

Session Type: Individual submission

Authors:

Name: Gideon Tehwui Lambiv

Email: tehwei-(at) msn.com

Country: CM (Cameroon)

Affiliation: School of Mass Communication - University of Yaounde 2

Abstract: In April 2000 a new phenomenon became a reality in the broadcast media in Cameroon, – the deregulation of broadcasting. A number of internal and external factors led to this decision, which officially brought an end to the state broadcaster's monopoly: As a prelude to this development, Cameroonians already had access to other sources of broadcasts thanks to the initiative of some nationals who dared into an activity that was then not authorised, and to the opportunities offered by globalization that commercially and technological bypassed government restriction. The existence of other broadcasters implied that things were no longer going to be the same again for the state broadcaster, the Cameroon Radio Television, CRTV. But how could this be ascertained or proven?

The principal research issue that this study set out to investigate was how globalization and deregulation affected public service broadcasting in Cameroon. We sought to know what the role and performance of the public service broadcaster were, and whether these have changed because of the new liberalized framework. After tracing the development of broadcasting in Cameroon wherein the public service broadcaster was the main and only actor, we then looked at the new situation where others have come in. In the process, we consulted relevant documents and interviewed the key players.

We found out that the public service broadcaster in Cameroon, CRTV lost a significant share of its urban audience and advertisement to private broadcasters, particularly within the first years of liberalization when its urban audience share dropped to 40%, while private broadcasters had 38.5%. After some changes in the areas of programmes, programming and technology, amongst others, its audience share has increased by 20%, three years into liberalization. Given that the state broadcaster must now take into consideration the fact that there are other players in the media landscape, notably regulators and private challengers, its role and performance have been affected accordingly. All of this would not have been possible before without deregulation.

Title: Public Open Space ' Public Service Media as Platform(s)

Session Type: Individual submission

Authors:

Name: Barbara Thomass

Email: Barbara.Thomass-(at) rub.de

Country: DE (Germany)

Affiliation: University of Bochum Institute for Media Studies Germany

Abstract: At present the debate about public service media centers around the notion of platform. The societal value of the institution of public service broadcasting has to move on into the digital world, if it wants to defend its legitimacy and its service to society. The hitherto national scope of the public service media can be no longer limited in this frame under the conditions of a digitized mediascape. Should public service media become platforms, should they cooperate on platforms, what are the chances for platforms with a public service orientation, can they build a counter weight to the platform economy of big US-American based platforms as Amazon, Google, Apple etc.? The notion which became key for these considerations is „Public Open Space“.

The contribution discusses the suggestions, options and chances for a public open space beyond the background of three concepts: One is the needs of a democratic discourse which is characterized by what Pfetsch et al. (2018) call a “dissonant public sphere”. This is caused by negative developments in social media where excitement, hate speech, fake news and disorientation gain more attraction than a serious debate. The second one is the democratic deficit within the EU within the concept of European public spheres. A critical review of the state of European public spheres reveals that there is a lack of European public discourse which could feed democratic deliberation. A third concept to be interrogated refers to the platform economy. The logics of platforms and the effects of communication platforms for the public discourse are discussed.

Several suggestions for a public open space of a European dimension are under discussion. These are European Public Information & Communication (EPIC) Space (Sarikakis 2019), European Public open space (EPOS) (Thomass 2017) or Platform Europe (Hillje 2019). These suggestions will be discussed with respect to their answers to the challenges resulting from “dissonant public sphere”, the deficits of European public spheres and the platform economy. The contribution presents as a result the essential characteristics which derive from this analysis and elaborates the possibilities for a European platform orientated to the values of public service media.

Title: Policies for Gender Equality in Public Service Media: What Switzerland can learn from other European Countries

Session Type: Individual submission

Authors:

Name: Corinne Schweizer

Email: c.schweizer-(at) ikmz.uzh.ch

Country: CH (Switzerland)

Abstract: In 2018, the government of Switzerland renewed the license of its public service broadcaster, the Swiss Broadcasting Corporation (SRG), and it drafted a new Act on Electronic Media (AeM) to replace the Act on Radio and TV. Both documents contain several rules of representation: The SRG must contribute to the cohesion between linguistic and cultural regions, to the integration of migrants, and it must address the life experiences of young people. What these documents do not include, however, are provisions for the equal representation of gender. Despite several studies concluding that women are underrepresented in media content, and among journalists and managers in Swiss media organizations (see e.g. Wyss & Keel 2010, Hungerbühler & Valsangiacomo 2014).

Knowing the painful history of women's rights in Switzerland – women's suffrage was introduced in 1971, and gender equality is a constitutional right since 1981 – the lack of provisions for gender equality does not come as a surprise. Furthermore, scholars (see e.g. Sarikakis 2012, Padovani 2018) also indicate that gender equality is generally rarely addressed in media policy making, as well as in media policy research. Nevertheless, according to Padovani, Ross and Gallagher (2017: 237) such policies are a necessary component to reach a gender-equal media landscape. Therefore, this contribution asks the following research question: Which (self-) regulatory measures are being used in Europe to achieve gender equality in the organization and content of public service broadcasting?

To answer this question, we recently conducted a document analysis of regulatory documents, reports, and studies, including documents we received from equal opportunities officers of public service broadcasters. Our findings show that countries resp. organizations employ a variety of policies and measures: In Austria, Ireland, and the UK e.g. gender equality is part of broadcasting acts or licenses. BR, ZDF, BBC, and TG4 e.g. created internal guidelines. TG4, in 2018 and 2019, only shows films with a female lead, resp. directed by women. We will discuss what Switzerland can learn from other countries, and we will also dissect the soon-to-be-published report of the Swiss government concerning the feminist critiques in the public consultation of the draft AeM.

Title: AN ANALYSIS OF THE BRAZILIAN PUBLIC BROADCASTING SYSTEM THROUGH THE CIRCUIT OF CULTURE: THE EMPRESA BRASIL DE COMUNICAÇÃO (EBC)

Session Type: Individual submission

Authors:

Name: Ana Luiza Fleck Saibro

Email: anaflecksaiibro-(at) gmail.com

Abstract: The 1988 Brazilian Constitution establishes the existence of a mixed form of broadcasting services. In addition to the private-commercial system, a kind of state-owned and-controlled system, which supplies the needs for government's institutional communication, and a public communication system, to be managed by autonomous organizations, was created. The company to run public radio and television channels, Empresa Brasil de Comunicação (EBC) (Brazilian Communications Company), was only created many years later, in 2007, due to political disinterest and successive obstructive manoeuvres from commercial broadcasters. Although its regulation provides for a series of mechanisms to ensure compliance with the principles in line with public communication, EBC has not yet become a truly social and cultural relevant public institution.

It is possible to identify economic, political, cultural and regulatory factors associated with the non-consolidation of the EBC as the manager of the public communications system. In order to investigate all the dimensions of this process, we propose to apply the circuit of the culture, developed by Paul du Gay, Stuart Hall, Linda James, Hugh MacKay and Keith Negus (1997) to analyse the Sony Walkman. It is found to be a useful tool for the analysis of moments of the same phenomenon or of a cultural artefact. Emphasizing the processes of production, representation, consumption, regulation and identity, and the interrelated articulations between them within the EBC, this article presents a circuit adequate to our object of analysis.

The analysis showed that the context in which the creation and the operation of the company took place, that is, its production, was strongly influenced by traditional structures of power, which subjected the EBC to pressures and constraints of political and economic nature; the regulation of the company reflected this environment and the institutional model and the organizational design according to which it was structured negatively influenced its degree of editorial and managerial autonomy in relation to the federal government. The impacts over the institutional identity of the company, whether government-oriented or public, and over its representation, since its television and radio contents still show a profile very similar to those produced by the private media as well as to those of government communication.

Finally, questionable political options caused the failure of the public television network project to be coordinated by the EBC, with a negative impact on the reception (consumption) of public

programmes, and, therefore, the noncompliance with the principle of universality of access associated with public broadcasting service.

This scenario showed a picture of complete lack of distinction between the notions of public and government service, with the company in permanent symbiosis with governments in power. The recent decisions taken by the new Brazilian right wing President administration towards EBC do not allow to foresee a better future for the company in the long run.

Abstract: In her report "Rethinking Public Service Broadcasting's Place in International Media Development", Susan Abbott (2016) notes that despite pronouncements that public service broadcasting (PSB) is an obsolete, ineffective and costly form of media, media developers and donors are taking a second look at PSB. Ironically, while PSB is currently being challenged everywhere, also in mature PSB countries, the increasing challenges of the current private media landscape have prompted international donors to turn to public service models as paths to independent media and journalism and as a building block for robust, diverse, and democratic media systems. In addition, "imitative transformations" (Splichal 2001) of mature, Western PSB frameworks may not always be fit for different contexts. So how do development organizations frame the ideal and praxis of PSB in different contexts and projects?

This pilot study examines several different types of organisations supporting PSB in the context of media development. It seeks to gain both a longitudinal and comparative understanding of the framing of PSB in key media development reports produced by these organisations in the last 10 years. It addresses the following main research questions: 1) To what extent and in which ways has the framing of PSB changed during a period of time characterised by an intensification of the ideological and practical challenges confronting PSB? 2) To what extent do the framing and discourses on PSB vary depending on the type of organisations and the national/regional context being addressed?

While the thematic categories to be used for the analysis will be worked-out inductively, based on a preliminary review of the literature and guided by our research interests we expect that the analysis will shed light on:

How media development organizations define PSB:

- What elements of its normative ideal/public purpose are emphasized and which ones are downplayed (e.g., political independence, cultural diversity, social cohesion, accountability etc)?
- What elements of the institutional design of PSB organisations are emphasized and which ones are downplayed (e.g., public funding, governance system, auditing etc.)

How media development organizations justify support for the PSB model, and what are the concrete measures by which they propose to do it:

- What role is assigned to PSB in the wider media development endeavours of these organisations, and how central that role is?
- What specific challenges/problems are PSB invoked as a solution to?
- Which PSB organisations are discussed in these reports as benchmarks/best-practice case-studies, and why?

The study will discuss the potential implications of prevailing discourses on PSB in media development reports for the actual implementation of media development programs, particularly in relation to efforts to strengthening PSB institutions.

Abstract: Public Service Media faces growing challenges all over Europe. Political discourses lay on economical arguments to threaten PSM permanence. In an era of no radio electric restrictions, high levels of competence and expensive audience attraction procedures the significance of the public is rewritten. Convergence forced television to relocate itself as a multiplatform online distribution media (Creeber&Hills, 2007). Public television becomes Public Service Media (PSM) and undergoes constant debate about its role in the digital age (Syvertsen&Aslama, 2007; D'Arma&Steeimers, 2010; Hoffman et al, 2015).

This paper analyses the articulation of Public Service from a singular case of study: the Spanish' regional television À Punt Media (APM). This represents a unique case of PSM in the European scenario. As a new-recovered media, it confronts several challenges: it was the second public broadcaster being closed after Greek PBS, and also the only public media kept absent for more than four years. When recovered it faced a technological, narrative and audience complete restructured scenarios. Besides, APM reborn as the result of political confrontation used as an electoral promise and highly inspected by parties and private media. To all these is added an obvious social disaffection, as the result of the political parallelism of the former PBS. In this context, we explore the articulation for Public Service of APM. We analyse three main areas: programming of content, interaction with audiences and technology innovation. The methodology combines different techniques, based on interviews with the managers of this project, content analysis of programming and social media, and a period of non-participant observation.

The results identify the main hits and miss of APM for the achievement of the public service and reflect one of the main contradictions PSM must face. That is, a growing pressure of innovation and development (social media, interactivity, multiplatform, transmedia, work requalification, etc.), while maintaining or even reducing the assigned budgets. APM's status as the most recent European PSM allows to calibrate the sense of the public in the digital era, and to extrapolate the results to contribute to the debate of the role of PSM.

Title: PSB, Local Content and the Politics of Participation in Southern Africa

Session Type: Individual submission

Authors:

Name: Viola Milton

Email: miltovc-(at) unisa.ac.za

Country: ZA (South Africa)

Affiliation: University of South Africa

Name: Winston Mano

Email: manow-(at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: This paper attempts to (re)define local content in Southern African broadcasting praxis and policy against the concepts "voice" and "listening". The aim of this paper is to reconstruct public interest theory and its concomitant concept, "local content", according to the life worlds of public service television audiences. We will attempt to (re)define local content in Southern African broadcasting praxis and policy from a Participation Studies perspective with a focus on three interrelated issues. First, we will explore the complex political and cultural exchanges occurring between the African local and the African Diaspora. Here, the concept "multiple acculturation" will be advanced to define what "diasporic local" might mean from an Afrology perspective. Next, the paper looks at the intersection of local and local diasporic cultures and its resulting effects. Finally, a border studies analysis will be applied to theorise around an Afrology of local content in PSB and the possible implications thereof for both local and diasporic local identities. Using the South African Broadcasting Corporation (SABC) and the Zimbabwean Broadcasting Corporation (ZBC) as case studies, the paper relies on public narratives about public broadcasting and their sense-making of social reality in relation to public service broadcasting in Southern Africa to explore what "public interest" and "local content" mean (or might mean) in a postcolonial media environment. Focusing on voices from the ground and through the lens of an African-centered approach to participatory media policy negotiation, we will theorise what local content might look like in a (diasporic) Southern African context. We have argued elsewhere that Afrology, in our view, is not simply about the "Africanisation" of broadcasting and have begun to theorise a vision for broadcasting in the post-colonial Southern African context that is connected to creativity in the diaspora. In this paper, we intend to build on that theorisation through a focus on "local content" that is broader and inclusive of creativity outside geographic borders. If, as we argued previously Afrology positions audiences at the center of broadcasting, how then should local content delivery be theorised in a context where "local" is not necessarily tied to geographic boundaries? What would a participatory local content policy look like that takes cognisance of the diverse needs of Africa's dispersed audiences?

Email: jc.miguel-(at) ehu.eus

Country: ES (Spain)

Affiliation: University of the Basque Country

Abstract: Public service media (PSM) have long held a central place in many media systems, particularly in Europe. In recent decades, technological transformations, processes of liberalisation/deregulation and the economic crisis have all combined to pose a complex challenge for PSM systems. Starting from the important role played by public media and the complexity of the transformation processes they are currently facing, this paper presents a bibliometric analysis of research conducted in the field in recent years.

Our analysis covers PSM-related research articles indexed in the SCOPUS and WEB of KNOWLEDGE databases between 2000 and 2016. The sample was gathered using a search for a range of expressions referring directly to public service media. Of the 1266 references analysed, a final total of 403 were selected for the database used in the study. Our basic criterion for including articles was that the research subject under study should be public service media. We therefore excluded any articles where PSM was secondary or simply formed part of a sample of research into other phenomena.

This work provides an overview of progress in this study area in recent years, showing the main advances in the themes most often addressed and the subjects and geographical areas where major research gaps still exist. Our analysis covered a number of variables, of which the most important were the different theme areas analysed in the studies and the geographical area to which they refer. In terms of subject, the largest group comprised works analysing the contents of PSM (32%). The second-largest set consisted of general analyses of the situation of public service media, covering a range of aspects (19%). Other subjects included the technological challenges facing public service media (14%); their systems of governance (14%); economic aspects—mostly financing channels—(9%); and history of PSM (5%). As regards the geographical area considered, unsurprisingly these studies focus primarily on European PSM (65%), with other regions coming well behind: the

Americas (14%); Oceania (6%), Asia (5%) and Africa 3%. Our analysis of the publications also reveals a significant increase in the number of studies conducted on the subject in recent years; more than half of all the articles analysed throughout the period (2000-2016) were published between 2013 and 2016.

Title: Public Service Broadcasting from a Media Development Perspective: An Exploration of the Promise vs. Reality of PSBs in Post-Communist Europe

Session Type: Individual submission

Authors:

Name: Susan Abbott

Email: susanabbott1-(at) gmail.com

Country: US (United States)

Affiliation: University of Westminster

Abstract: As noted in the Center for International Media Assistance publication, Rethinking Public Service Broadcasting, despite pronouncements going back more than 20 years that PSB is an obsolete, ineffective, and costly form of media, PSB has endured as a means of providing news, entertainment, and information to millions of people around the world. This paper will consider and debate how and why media development should re-think the role of PSB/PSM in terms of media development priorities.

The paper will first offer an assessment and critiques of the current state of play regarding public service media in a media development context. It will then consider the complicated and politicized nature of transforming state media with a comparative look at Hungary, Macedonia and Serbia. The paper will draw on recent publications related to efforts of transforming formerly state media into public service media, including the DW Akademie's "In the Service of the Public - Functions and Transformation of Media in Developing Countries," the CIMA publication "Rethinking Public Service Broadcasting's Place in International Media Development," and the BBC Media Action report on "Public service media in divided societies: Relic or renaissance?" I will also feature in-depth interviews with experts on the subject of PSB reform in Hungary, Macedonia and Serbia.

The paper will consider how the lack of political will or outright contempt for liberal norms, laws, policies and customs around freedom of expression has stifled progress or compliance with EU standards and policies in the areas of public service broadcasting, pluralism and diversity.

Moreover, I will also discuss in my paper how and why widespread fragility and lack of sustainability of independent media in the region, particularly among those that are entirely or primarily funded by donors, begs the question of why public service media as an institution and as a major form of institutional reform hasn't received more attention and serious investment.

Title: PSM competing in the changing TV environment: transforming VOD players from a catch-up service to a central destination. The case of the BBC iPlayer

Session Type: Individual submission

Authors:

Name: Maria Michalis

Email: M.Michalis-(at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: university of westminster

Abstract: Television is experiencing major transformations, notably internationalisation, platformisation and growing on-demand consumption (see Evens and Donders 2018, Lotz 2018, Lobato 2019, Johnson 2019). PSM feel the need to respond in order to remain relevant to the societies they serve.

After setting out the main changes in the television industry, this paper examines how PSM respond to the rising popularity of Video-On-Demand (VOD) consumption and the increasing attraction of Subscription VOD (SVOD) from global players like Amazon Prime and Netflix. It does so through a case study of the BBC iPlayer.

The BBC has led innovation in UK online distribution. It was at the forefront launched the iPlayer as a catch-up service for its linear TV channels in 2007. At the same time, the BBC's commercial arm was planning with other main PSM (ITV, C4) to launch a joint video on-demand platform where audiences would be able to find in one place most of the UK-originating content. The Competition Commission blocked this so-called Kangaroo venture in 2009 on the grounds that it would stifle the nascent VOD market. As a result, the VOD market in Britain is fragmented, with each PSM organisation having its own catch-up player.

All PSM catch-up players have continually developed their functionalities. In May 2018, the BBC approved plans to have more content on the iPlayer and for longer. The BBC explained that it was responding to market developments: the shift to on-demand consumption and intensifying competition from global SVOD players. In November 2018, Ofcom opined that the suggested proposals constituted material changes to the service and as such required a public interest test to assess whether their public value outweighed potential adverse market effects. As a result, there is currently a public consultation underway inviting comments to the BBC proposals, which will feed into the process.

The aim of this paper is to assess the response of a big and well-established PSM organisation – the BBC – to market developments, and examine in particular how the BBC conceptualises its catch-up service and its further development, and what rationale and discourses it uses. The discussion goes at the heart of PSM values. The evolution of PSM VOD players is about how audiences find and consume domestically funded and relevant to their societies content. As viewing is shifting online, without PSM players, the only alternative is to rely on commercial super-aggregators and their algorithms (Michalis 2018). This scenario raises serious questions about the prominence, findability

and cost of access to PSM content whilst the gatekeeping role of such aggregators risks adversely affecting industry revenue and by extension domestic content creation.

Abstract: The text analyzes the Public Service Media (PSM) in Latin America. It takes, as main references, the experiences and the historical and social matrices of Brazil and Mexico, major countries of the region in population, economy, and cultural identities. Brazil and Mexico currently live different expectations regarding PSM. In Mexico, president Andrés Manuel Lopez Obrador recently gave hope to citizens on strengthening the Public-Service broadcasting system in the country — one that has increased in the number of broadcasters and accountability practices. In Brazil, there has been a reduction of regional PSM experiences, with the closing of important initiatives, such as the Piratini Foundation and the permanent threat of closure or governmentalization of Public Communications organizations.

If, on the one hand both countries have different expectations, on the other, the doubts that exist in both Brazil and in Mexico about the viability and sustainability of PSM experiences can be linked to common historical and social matrices. The research conducted for this paper demonstrates: a) The difficulties to understanding the concept of Public by the government and citizens and even by some social sectors interested in having access to strong PSM. b) The low confidence rate in public institutions and the reduced degree of social trust also limits capacity to building and consolidating PSM practices. c) This fact also has a dramatic impact on the audiences, because it is difficult for them to understand the arrange of experiences regarding the importance of PSM in their lives, and to participate in practices of accountability and media literacy.

The changes in the PSM scenario in both contexts – such as reforms in the regulatory panorama, modifications in procedures and even dissolution of accountability instruments – have been noted between 2016 and 2018. With the comparison of this transition in Brazil and Mexico, we intend to analyze how structural (history; regulations; culture; etc.) and contextual (sociopolitical) factors may influence on strengthening the development of PSM in Latin American countries. We have approached this study by conducting a comparative, a normative and a documentation revision and analysis to identify how changes are affecting PSM institutions during this period, such as Radio Educación in Mexico and Empresa Brasil de Comunicação (EBC) in Brazil. We have also built analytical categories from empirical observation and interviews with the ombudsmen (defensores or ouvidores).

From our preliminary results, we conclude that not only the development of content production structures and initiatives is essential to contribute to the understanding and formulating actions related to PSM in Latin America, such as building mechanisms of citizen participation. But it is also the implementation of content placement and access practices into intercultural dialogues with different social organizations and individuals — especially with the minority groups.

Title: That Obscure Object of Desire: Political dispute over PSM governance in Spain in times of economic, social and political crisis (2012-2019). The case of RTVE.

Session Type: Individual submission

Authors:

Name: Ana Fernández Viso

Email: ana.fernandez.viso-(at) uab.cat

Country: ES (Spain)

Affiliation: Autonomous University of Barcelona (UAB)

Abstract: The State intervention in the media systems of Southern European democracies has been characterized by a logic of clientelism and instrumentalization of public service media (PSM), as concluded, among other authors, by Hallin & Mancini (2004) and checked for the past decade by D'Arma (2019), Fernández Viso & Fernández Alonso (2019) and Iosifidis & Papathanassopoulos (2019) for the cases of Italy, Spain and Greece, respectively. In a context of a widespread preference for television as a source of information and a highly polarized media system, the Spanish national public service broadcaster -Radiotelevisión Española (RTVE-) still plays a significant role in forming public opinion in Spain. It is not a surprise, thus, that the governance of RTVE has been an object of political dispute and control for the past four decades, even after a substantial legislative reform aimed at increasing its autonomy and independence was passed in 2006, after 25 years of complaints and denounces of political interference.

Act 7/2006 shifted RTVE's governance system in 2006 from a governmentalized model to a parliamentary one, leading to what both professionals and scholars in Spain consider to be one of the periods of its greatest editorial independence. Six years later, however, the conservative government of the Partido Popular (PP) formed after the general elections of November 2011 passed by decree a counter-reform that enabled an absolute parliamentary majority to appoint the members of RTVE's Board and its Chair. Highly politicized editorial appointments and numerous complaints of political manipulation followed this legislative change.

Once the PP had lost its absolute majority in the June 2016 elections, the then three main opposition parties (the socialist PSOE, the centre-right Ciudadanos and the left-wing Podemos) successfully pushed forward a new legislative amendment in September 2017 to reinstate the parliamentary governance model in RTVE. Yet, Act 5/2017 requires the political parties to reach a consensus on the regulation and the procedure to select the eligible candidates to the governing bodies of RTVE by public competition. This proved to be extremely difficult for the following months. Eventually, the new socialist government that came to power in June 2018 after winning a motion of censure against the government of PP has approved by decree that regulation, has dismissed the members of RTVE's Board and its Chair and appointed an Interim Sole Administrator for RTVE in July 2018.

The purpose of this communication is to analyze the political resistance to change regarding the governance of RTVE, in the context of the economic and social crisis that broke out in 2008 in Spain and of the increasing political tensions with the Catalan nationalism since 2012. We will examine the legislative changes affecting the governance model of RTVE since 2006, the

appointments made to the governing bodies and key senior editorial positions and the complaints and reports about political interference. The analysis of these elements will allow us to draw a series of conclusions about the persistent dynamics of political interference in PSM in Spain.

Title: Paradigm Change and Value Risk of AI News: the Perspective of NLP

Session Type: Individual submission

Authors:

Name: Changfeng Chen

Email: fengchen5266-(at) vip.163.com

Country: CN (China)

Affiliation: Tsinghua University, Beijing, China

Name: Wen Shi

Email: shiwenmile-(at) 163.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: Natural Language Processing (NLP), an important technology of artificial intelligence, is being used in news production in Natural Language Understanding (NLU) and Natural Language Generation (NLG) instead of patterned news production of primary AI. How is NLU and NLG used for news production and what is the journalism paradigm going to be? What kind of challenges does AI news value face in NLU and NLG? What kind of conflict does it have with the publicity of the media and public media? Breaking the barriers of journalism studies and computer science, this paper will research the news paradigm change caused by NLP through analyzing news algorithmic logic, and reflect on the news value risk of algorithm and explore the news value criterion in the AI era.

NLG's leading news writing program has powerful logic processing ability, which can imitate human logic and emotions to automatically generate narrative strategies, determine the narrative focus and detail of news, and choose different rhetoric to describe different scenarios. But it carries the risk of "naturalizing" the value of news. In the process of computational linguistics, vocabulary is "de-valued" through vectorization, and social meaning behind the linguistic symbols may become illusory. The NLG algorithm's judgment on the value of news does not depend on the judgment of the social connotation of the language symbol, but on the recognition of the text feature. The value of the news is then "naturally" in the textual features of the material. Measuring whether a particular fact can become the standard of journalism is a quantitative way of objectivism.

NLU enables computers to understand the textual meaning and deep intent of human natural language, and to map from text to meaning and intent. NLU emphasizes to present the relationships between entities through a systematic representation of information so that to identify the logic and intent behind the natural language of users. When it is used in news, it can be made into AI news chat bots, such as Facebook's Messenger and Quartz. Its trend is to personalize news writing, which can meet the different expectations of users for news events. The robots can actively ask questions and get to know users opinions about news events. Based on the background of users' interests and habits, it could generate text based on a specific perspective. The NLU allows robots to infer the meaning and intent of the user's expression, and to produce personalized news instantly. The news that users is not interested in could be ignored so that provider presents a "private" news value. Under the logic of this algorithm, there is no objective criterion for judging news value. The news value could be defined by consumers of news. Since consumer's interest could be the only standard

for measuring the value of news, news providing would become commoditized private information services which is the opposite of the publicity of the media and public media.

Title: Conquering and Entertaining: Fauda and the Complexities of Turning an Ongoing Asymmetrical Conflict into a Television Drama Series.

Session Type: Individual submission

Authors:

Name: Nahuel Ribke

Email: nahuerib(at) gmail.com

Country: IL (Israel)

Affiliation: Seminar Hakibutzim College Communication Department

Abstract: Since its release in February 2015, television drama/action series Fauda has attracted enormous public attention and debate, first in Israel and then abroad, following its global release on Netflix. The story of an Israeli undercover unit chasing an infamous Palestinian terrorist, the series was praised for its 'realistic' depiction of the conflict and empathetic portrayal of the opposing sides, as well as for the frenetic rhythm and suspense of the plot. On the other hand, the series has faced criticism for downplaying and obscuring the realities of the Israeli occupation, focusing on a cat and mouse thriller rather than the hardships incurred by a civilian population under military control. Based on a qualitative analysis of media coverage in Israel and abroad, this article analyzes the complex relationship between an ongoing asymmetrical conflict and its representation in fictional television entertainment.

Title: The Many Faces of The Other in Guillermo del Toro's *The Shape of Water*

Session Type: Individual submission

Authors:

Name: Claudia Bucciferro

Email: cbgpt(at) rit.edu

Country: US (United States)

Affiliation: Rochester Institute of Technology

Abstract: Directed by Mexican filmmaker Guillermo del Toro, *The Shape of Water* (La Forma del Agua) premiered within the context of a U.S. news landscape that prominently covered two topics: increased tensions regarding immigration through the US-Mexico border and the insidious presence of gender inequality in Hollywood. Presenting a fantastic tale set in the 1960s, the movie does not directly reference current events, yet it offers an incisive commentary that addresses these and other prominent issues. Upon its release, it went on to garner critical acclaim and some of the most coveted 2018 Academy Awards, including Best Director and Best Motion Picture of the Year.

On the surface, the movie is a spin on the old tale of *Beauty and the Beast*: there is a young woman, a masculine creature, and an incipient relationship between the two. Yet the story goes into other directions: The creature has been found in Latin America and is construed as a monster by the US military, which keeps it in a secret facility where the young woman works as a cleaner. She is unable to speak and uses sign language to communicate—a characteristic that positions her within the narrative in specific ways. Her two friends are an African American woman who also works as a cleaner and an older white male who is gay—so they are both marginalized because of their identities. Through these characters, the story engages in a multi-layered exploration of how otherness is constructed and upheld in society, in connection with existing power dynamics. Aspects such as boundary-crossing, voice, and agency appear prominently, and hegemonic notions of masculinity and embodiment are addressed through the actions of a man who initially seems like an authority figure, but who intimidates and abuses others throughout the story. As in other of Guillermo del Toro's films, such as *Pan's Labyrinth* (El Laberinto del Fauno), the concept of the monster becomes a metaphorical device for investigating larger social issues, vis-à-vis the overarching questions of what it means to be human and how human dignity can be either violated or strengthened.

Using Cultural Studies as a theoretical framework and employing qualitative text analysis as a methodology, this paper argues that *The Shape of Water* is fundamentally about otherness and agency, analyzing the way they are represented and re-framed throughout the narrative. Considering how the main characters are defined along intersections of gender, race, class, sexual orientation, and national origin, the paper discusses how the cinematic text comments on and reflects struggles for recognition and empowerment within American society.

Title: Reterritorializing the home: (im)material discourses of belonging in Utopia

Session Type: Individual submission

Authors:

Name: Tonny Krijnen

Email: krijnen(at) eshcc.eur.nl

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam

Abstract: Cultural globalization is a quintessential part of contemporary, everyday life. In general, Morley (2001) argues, accounts on globalization are celebratory. Globalization, in terms of transnational mobility, traveling to other countries, is only attainable for a small elite. The majority encounters globalization through their TV screens. The home increasingly becomes a phantasmagorical place: “to the extent that electronic media of various kinds allow the intrusion of distant events into the space of domesticity.” (Morley, 2001; p. 428). This intrusion of the private sphere, of the home, raises anxieties and result in attempts as reterritorialisation, attempts to redefine the home, one’s place in society, in an increasingly deterritorialized world (Appadurai, 1996).

Indeed, the desire to reterritorialize seems to increase in contemporary, Western societies. Conservative, right winged, populist parties have gained position. Simultaneously, tv-shows increasingly carry nationalist signs such as “I love ...[my country]”, The great [country-name] bake-off”. This study investigates how TV-programmes with a ‘nationalist odour’ create space for their audiences to meet their desires to reterritorialize. The primary research question then is: How do reterritorialisation strategies manifest in the Dutch TV-programme Utopia?

Utopia is a reality TV-show, designed by John de Mol. January 2013, 15 candidates entered Utopia’s terrain. Next to a large, rather shabby shed, there were no facilities (such as sewers, fresh water, electricity) available. The candidates’ aim was, as the title suggests, to create a new society. Currently, Utopia’s second seasons is broadcasted on Dutch TV. An average, the show draws about 550,000 per day (11% market share). Though the aim is to build a new society, the show centralizes on Dutch society: candidates represent a variety of societal groups in terms of age, ethnicity, gender and region (audible in spoken dialects and verbal expressions of regionality). The show therefore makes for an excellent case to investigate reterritorialisation.

A total of 21 episodes (1 till 31 May 2015) was subjected to a Foucauldian discourse analysis (Foucault, 1976). During this period a so-called lock down takes place: candidates decide to go back to basic and leave all luxury goods (including their beds) behind to re-assess their purpose and aims. All episodes were viewed three times and relevant scenes were transcribed. Relevant scenes encompassed material and immaterial articulations of the ideal society, community and feelings of belonging. Strategies used to formulate discourses on reterritorialization are unravelled. Which boundaries were policed, which ideas were heard and which were ignored? Finally, the subject positions, which candidates were taken seriously, had a voice in the discourses were analysed? (Foucault, 1976; Tonkiss, 1998).

Results show 3 strategies. The first one is embedded in the programme, the second concerns the material organization of life in Utopia, while the third strategy encompasses the immaterial organization. The three strategies show how the candidates fail to redesign life/society.

Simultaneously, the concepts of home, belonging and identity are continuously rearticulated in the programme. It is this failure, and the recognition thereof that proffer the audiences space for reterritorialization.

Title: Popular culture and human dignity: Scopophilia and sexualized objectification of women in South African hip-hop culture

Session Type: Individual submission

Authors:

Name: Toks Oyedemi

Email: toyedemi(at) gmail.com

Country: ZA (South Africa)

Affiliation: Department of Communication, Media and Information Studies, University of Limpopo South Africa

Name: Ntebaleng Mpetsi

Email: ntebalengmpetsi(at) gmail.com

Country: ZA (South Africa)

Affiliation: Department of Communication, Media and Information Studies, University of Limpopo South Africa

Abstract: The discourse of human dignity draws attention to the representation of various groups in the media. This paper examines the representation of women in popular culture through a study of hip-hop culture in South Africa. In many hip-hop music videos women's value is reduced to sensuous display of sexuality. As a result visual pleasure is created through the (re)presentation of women as eager and willing sexualized objects. This study assesses the techniques and ways women are sexualized in South African hip-hop videos, and how their presentation endeavors to create visual pleasure for those that consume these videos. Four critical elements were adopted from Laura Mulvey's seminal theoretical discourse about the positioning of women in narrative cinema to study the gender representation and sexual presentation of women in two popular South African hip-hop music videos. These four elements are (a) scopophilia (the gaze), (b) objects and objectification process of women, which includes the use of objects to enhance the objectification of women and how the feminine body is juxtaposed with objects in a direct objectification of the body. (c) gender division of labour; the positioning of the male characters are studied in relation to the female characters in order to situate the location and dominance of power in music video, and lastly (d) language of the patriarchal order, but this study focuses on the technical language, the camera language used in the presentation of women in these videos. These elements coupled with critical textual analysis reveal that appealing to the male gaze, objectification processes, gender power asymmetry and camera techniques are ways of presenting a sexualized spectacle of women. The goal is to re-write the cultural script that demean the human dignity of women, confront patriarchal cultural order, provide education that highlights the equality of gender, recognize the agency of women that perform, and examine why they perform, in this representation, and acknowledge how women have also challenged this stereotypical narrative in cultural expressions. These have been the objects of critical feminist analysis of popular culture.

Title: 'Ottoman Detectives at Work': Different Roles of the Past in Turkish Historical Dramas

Session Type: Individual submission

Authors:

Name: Aysegul Kesirli Unur

Email: aysegulkesirli(at) yahoo.com

Country: TR (Turkey)

Affiliation: Istanbul Bilgi University

Abstract: Beginning from the early years of TV broadcasting, historical dramas preserved their popularity among Turkish TV series. When devoted filmmakers of Turkish cinema were invited to play pioneering roles in producing local TV series in the 1970s they found their inspiration in classical novels written in the late Ottoman period, making screen adaptations and creating historical dramas. From the 1980s onwards, historical dramas focused on political struggles in the Ottoman Empire and/or the national victories during the War of Independence. As they aimed to make the audiences appreciate significant moments in the nation's history by recreating the past on TV they frequently found themselves in the middle of heated debates regarding their ideological positioning and/or accuracy of depicting historical events.

Parallel to the political and social changes in the 2000s, Turkey did not only find itself being exposed to a new phase of nation building process but also the transformation of Turkish economy changed many things in the production and distribution of Turkish TV series. On the one hand, local formations of globally circulating genres such as soap operas, police procedurals and sitcoms started to be practiced more vigorously. On the other hand, popularity of Turkish TV series gradually increased worldwide, especially in the Middle Eastern and South American regions. Historical dramas got influenced by these changing dynamics in different ways. Together with the rising political polarization in the country diffusion of soap opera and/or action adventure conventions into historical dramas exhilarated debates surrounding their accuracy of depicting historical events in the local context. In the global context, the same diffusion helped spreading the popularity of Turkish historical dramas which tell intriguing stories in the mise-en-scene of the Ottoman era.

Many studies have conducted on popular historical dramas such as *Muhteşem Yüzyıl* (Magnificent Century, 2012-2014) and *Diriliş: Ertuğrul* (Resurrection: Ertuğrul, 2014-) by approaching the production and reception of these series from a political communication perspective (Carney 2013; Carney 2014; Carney 2018; Arsan 2014) and/or questioning their worldwide popularity (Tüzün and Sen 2014; Yesil 2015). This paper intends to build upon these studies by relating the current political discussion about historical dramas in Turkey with the wider debates surrounding global TV flows (Bielby and Harrington 2008; Straubhaar 2007; Mikos and Perrotta 2012; Weissmann 2014). With a particular focus on *Filinta* (Flintlock, 2014-2016), a hybrid of historical drama and police procedural similar to *Ripper Street* (2012-) and *Copper* (2012), the paper places the series in the intersection of various local and global discourses (Mittel 2001) and is mainly interested in the simultaneous usage of 'Ottoman past' as a convention, marketing tool and commentary on current political events at different levels. In this way, the paper intends to question the meanings behind the multiple forms of the past (De Groot 2016) circulating in popular imaginaries in the local and global context.

Affiliation: Ghent University

Abstract: Visual content is a crucial aspect of everyday social media, in particular on platforms explicitly framed around the visual such as Instagram and Snapchat (Highfield & Leaver, 2016). These social media are not only facilitating the sharing of visual content online, but are also making digital communication an important aspect of the identity construction of youth. Moreover, they establish a space where young people can develop and reflect upon their sexuality, intimacy and gendered self-identity (Bond, 2010). Young people make important negotiations on which information they want to share online with others and which not. This is resulting in a self-presentation that is performative, but also visual (Hand, 2012). Due to this visual sharing culture, personal images are becoming part of a multidimensional ‘gaze’ (Ibrahim, 2012) by parents, peers and society in general. It is thus interesting to explore the link between sexuality and technology as it is crucial in the understanding of visual intimacy online. Although the debate surrounding youth, sexuality and social media is dominated by the deviancy discourse where young people are constructed as victims without agency (Döring, 2014; Thiel-Stern, 2009), it is important that young people need to be understood as experts in understanding their everyday lives online.

Therefore, we studied the specific understandings young people themselves have on visual intimacy online. While there has been a considerable amount of research, policy and public debate on how we can control or limit young people’s online participations for intimacy and sexuality (Hasinoff, 2015), there still is need for a better understanding on how young people can have a good intimate and sexual live with all these digital media. We did an in-depth qualitative research of moral understandings in everyday life contexts and conducted semi-structured individual interviews (N=25) with young people between the 14 and 18 years old in Flanders. We used narrative interviewing techniques and creativity activities to provide the participants a safe environment where they can openly talk about digital intimacy in relation to gendered, sexual, ethnic or religious

identities. Finally, this paper analyzed the interviews using a grounded theory approach (Charmaz, 2006).

Title: Dystopian Borderlands and Rooted Futurities in the Nepantlerx sci-fi film 'Sleep Dealer'

Session Type: Individual submission

Authors:

Name: Luz Ruiz Martinez

Email: Luz.RuizMartinez(at) colorado.edu

Country: US (United States)

Affiliation: University of Colorado Boulder

Abstract: In seeking to address this year's IAMCR's conference theme “Communication, Technology, and Human Dignity: Disputed Rights, Contested Truths,” this essay examines the dystopian borderlands sci-fi film *Sleep Dealer* developed by Peruvian-American film-maker and artist Alex Rivera. High-tech surveillance, virtual reality sweatshops, and body modifications are connected to issues like access to natural resources, labor practices, workers bodies, and resistance through the film's main character. Rural to urban migration flows are also depicted in the movie by connecting a small Mexican town located in Oaxaca, México with the cities of Tijuana and San Diego on the northern US/México border. Produced in 2008, the futuristic scenarios of the film ominously speak to the situation currently unfolding in the US/Mexico border regions. The current US president's vision of a new border wall, thousands of migrants fleeing Central America trying to reach the United States, and a rise in white nationalism, along with technological developments increasingly used for warfare, corporate control, and surveillance are some of the real and current events that profoundly resonate with the film.

Drawing from Mesoamerican indigenous knowledge perspectives and Indigenous scholarship, along with Walter D. Mignolo's “Border Gnosis” and Chicana scholar Gloria Anzaldúa's “Nepantlerxs,” a decolonial reading is applied to understand the film's engagement with themes of struggles over natural resources, media appropriation/hacking, surveillance, reflections of love/sexuality/intimacy in a networked, virtual, and high-tech world, and the seeking of dignity in a global neo-colonial economic and social system. In this vein, I argue that *Sleep Dealer* is a strong ‘Nepantlero’ Chicana sci-fi film, pointing to the limits of a global economy of dispossession, while summoning ancestral knowledges that help root and steer to a present/future where harmonious relationships to natural resources and our bodies can be imagined.

Title: Humor in Collective Action: The 2017 Romanian Anti-Corruption Protests

Session Type: Individual submission

Authors:

Name: Delia Dumitrica

Email: dumitrica(at) eshcc.eur.nl

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam

Abstract: On the night of January 31, 2017, as news of the Romanian government's plans to decriminalize corruption transpired, citizens across the country spontaneously took to the streets. Throughout February, protesters kept gathering in front of government buildings and in public squares, marking the beginning of an anti-corruption social movement. The scale of mobilization – and its international coverage – took the government by surprise, eventually halting their plans. This paper focuses on one of the striking features of these early protests: the widespread use of humor in the posters that citizens brought with them to the squares. It asks: what does humor do in the context of these protesters? Informed by discourse analysis principles, a sample of approx. 100 posters is analyzed in terms of content (signification, source of humor) and performativity (what the posters 'do'). Preliminary findings suggest humor became a 'weapon of resistance' against a government perceived as not only corrupt, but also intent on undermining democracy from within. Posters poking fun at the arrogance of the political party in power brought together a medley of referents, from Marvel superheroes and Game of Thrones to regional stereotypes and international political events such as U.S. president Donald Trump and the terrorist attack on Charlie Hebdo. Yet, the humorous appropriation of such referents was also a 'strategy of distinction': it drew firm boundaries between protesters and an (allegedly) immoral and arrogant political party in power, but it also positioned the former as middle-class subjects speaking to an international audience. While these humorous posters are an expression of individual creativity, their co-presence in the public squares transforms them into a strategic and coherent discourse challenging the powerful Romanian political elite and their supporters.

Title: The actor prepared: Training and the logic of celebrity.

Session Type: Individual submission

Authors:

Name: Barry King

Email: barry.king(at) aut.ac.nz

Country: NZ (New Zealand)

Affiliation: AUT University

Abstract: In this presentation, I will examine the semiotic impact of the relationship between celebrity as a market attuned expression of popularity and the theories of the good performance found in the literature of actor and performer training. I will argue that the mass diffusion of celebrities as role models and exemplars of success has transformed the formation of popular identities or personae as a side effect of the new emphasis given to the body as a medium for the expression of character.

Comparing different systems of training as the production of exemplary docile bodies, I contend that the celebrity once a romantic figure outside of society is being reformulated as one who succeeds within it through a process of interpersonal competition. This context, the primary goal of self-presentation is not solely, as in Goffman's influential theory of self-presentation, to create a favourable impression in others but rather to ensure that one is a winner in Darwinian struggle to survive in precarious labour markets.

The impact of the market for acting labour, marked by steep inequalities of reward, employment opportunities, created a situation in which whatever the apparent doctrinal differences underlying actor training, the use of actors in cinema, theatre and television has succumbed to a logic of equifinality based on presence: if it sells, it works. This standard of appreciation has led to the development of an operational aesthetics as the dominant form of appreciation of acting and performance; an aesthetic mode that is a tribute to the power of Hollywood as a global production centre.

These circumstances mean that actors rather than being regarded as skilled professional performers are required if they are to practice their craft to become celebrities that replay the themes of popular television genres such as talk shows, reality television and soap operas and in general, a broader culture of performance associated with striving for material and social success. Since the basis of distinction rests on the psycho-physical properties of the person/performer what has emerged is a form of celebrity based on a physiocracy, the rule of nature as exemplified and codified in the cultivated body. Just as owners of land use their legal title to engage in capitalist exchange relations so actors and other performers sell their psycho-physical assets through a process of self-harvesting. The different modes and trajectories of accumulation and how these structure actor training will be analyzed.

Title: "Everybody needs to post a selfie every once in a while": Exploring Young Women's Self-Representation Practices on Instagram

Session Type: Individual submission

Authors:

Abstract: Over the past years, Instagram has grown widely in popularity worldwide, having reached in 2018 over one billion monthly active users (Constine 2018). Instagram has become an essential part of many young people's daily lives and central to contemporary visual cultures. The creation and sharing of self-representations is a central and unavoidable part of these social media practices (Enli & Thumim 2012, 88). Young women are amongst the predominant active users of Instagram (WeAreSocial, 2018), and the demographic stereotypically associated with online self-representation and selfie-taking (Burns 2015). Relying on user-generated content of a diverse user base, these self-representations allow for a large degree of individual variation – both in terms of who represents themselves and in the strategies of representation used. Self-representation on Instagram thus carries the potential to contribute to a broadening of the scope of public visibility to a wider variety of women and femininities, often underrepresented in popular media (Tiidenberg 2018).

Yet, popular discussions about Instagram self-representation often fall into overly-simplified discourses, optimistically praising self-representation on Instagram as empowering (e.g. Fleischaue 2014; McCarthy 2013), or dismissing it as shallow, and mundane (e.g. Bloomingdale 2015; Oyler 2017).

Following a feminist media studies perspective, this paper focus on the lived experiences of young women using Instagram, recognising the complexities of their self-representation practices. This paper aims to question how young women understand and construct their own self-representation practices on Instagram, exploring the tensions present in their discourses. It also explores how they negotiate broader socio-cultural, photographic, and social media conventions in these practices. This research is based on an on-going series of in-depth interviews with a theoretical sample of female “ordinary” Instagram users (i.e. not celebrities or Insta-famous users), ages 18–35. These interviews are combined with a sustained observation of the participants' feeds and self-representations.

Our findings illustrate how young women can reflexively present their self-representation practices in nuanced ways, as rooted on a series of complex negotiations. While self-representation can be experienced as an empowering practice, offering positive validation, it is nonetheless frequently accompanied by a general sense of devaluation (Burns 2015), leaving users to negotiate the often

gendered, negative popular culture stereotypes on selfie-taking, and developing their own porous distinctions between what they see as acceptable or unacceptable strategies of self-representation. For these participants, self-representation is thus understood as a negotiation between, on the one hand, personal preferences and discourses of authenticity (Warfield 2017), and, on the other, engagements with popular photographic conventions and Instagrammable aesthetics (Manovich 2017). Laborious strategies to create Instagrammable content and gain positive feedback, rooted on the awareness of an underlying social media logic of popularity (Van Dijck & Poell 2013), conflicts with the cultural dismissal of this desire for validation as negative “attention-seeking” behaviour. As Instagram becomes embedded in our everyday experience, it becomes important to critically explore how young women are engaging with and making sense of these multi-layered self-representation practices, which are deeply intertwined with broader questions of gender representation politics, yet are often dismissed as superficial and trivial.

Title: Cosmetic Conurbations: A comparative study on aesthetic medical tourism and the popular culture between Brazil and South Korea

Session Type: Individual submission

Authors:

Name: Janice Wong

Email: kakajan(at) gmail.com

Country: HK (Hong Kong)

Affiliation: The Chinese University of Hong Kong

Abstract: Globalization has often been painted as a process of westernization or US imperialism in which drivers such as military power, technology and economics have led to one-way cultural flows. Commentators outside of the globalization studies have often oversimplified the importance of culture, history, or even ethnicity in their understanding of globalization. This study is a preliminary study of the global economic flows of “aesthetic medical tourism” (e.g. cosmetic surgery) and how such economic flows may relate to existing government policies, local popular cultural and media flows. These two cultural flows have figured prominently in media studies of globalization. Using Brazil and Korea as a comparative case study, we attempt to explore and contrast the historical development of aesthetic medicine in both countries, their popular culture development and the history of beauty standards in Brazil and Korea. By examining the differences between aesthetic and non-aesthetic medical tourism and by comparing the historical, political, cultural and economic dynamics of aesthetic medical industry in Brazil and Korea, this study finds some evidence that suggests the global popularity of cultural exports of the popular culture including Telenovelas and Korean Dramas may have contributed to the success of the export of regional beauty standards and aesthetic medical tourism in a way that is not driven by crude notions of neo-liberal economic utility. Brazil and Korea’s cultural industry, mainly represented by Telenovelas and Korean Dramas which created by Brazil government and Korean Wave contribute media influence to their imported countries. We have seen that the well explored cultural flows of Telenovela and Hallyu dramas with their regionalized, hybridized South-North, and ethnic logics can in turn influence more “concrete” economic flows and unlike non-aesthetic medical tourism, they are protected from competing directly on a flat global marketplace and are protected by different aesthetic standards relating to their different regional histories and their popular culture. This study also revealed that consumers are agents that employ beauty in order to improve their own economic situation. Consumers may not be blind followers of beauty trends and are able to adopt cultural resources that suit their, sometimes economic, purpose.

Title: Cartesian Anxiety in Game Studies: Subjects, Player, and Critics

Session Type: Individual submission

Authors:

Name: Gerald Voorhees

Email: gerald.voorhees(at) uwaterloo.ca

Country: CA (Canada)

Affiliation: University of Waterloo

Abstract: This paper employs Jacques Lacan's theory of the subject to analyze both the discourses of gaming publics and the rhetoric of inquiry in game studies. In the scholarly discourse of game studies and the public discourse surrounding the release of *No Man's Sky* (2016) we can see the same drama playing out: the vacillation between a sense of certainty about how the subject is master of their own universe and the doubt that threatens to undo this edifice, the concern that the player is simply an aspect of a universe within which they are insignificant. I argue that in both of these discourse formations key conversations can be described in terms that map to Lacan's (1977) figure of the split subject, the incommensurability of the ego and the unconscious. In particular, I trace the presence of what Richard Bernstein (1983) calls "Cartesian Anxiety" through these discourses and identify how this anxiety contributes to toxicity and stagnation in both game cultures and game studies.

I begin with a discussion of controversy around the 2016 game *No Man's Sky*, which was both widely panned and praised by critics and players alike, and argue that the polarizing discourse is the result of Cartesian Anxiety, a discord arising from the inability to recognize and accept the hail of the split subject. To wit, the public controversy that pits the desire for open world play against the desire for greater narrative and ludic structure is only one manifestation of the same irresolvable tension, and *No Man's Sky* managed to stimulate but not satisfy both of these impulses. Turning to the rhetoric of inquiry in the field of game studies, I argue that the concept of Cartesian Anxiety helps explain the entrenchment of various positions that center either players or games. I advocate for an approach that is oriented to gameplay, the economy of relations, enticements, and incitements circulating between players and games. Such an approach, informed by Lacan's model of the split subject, would enable game studies to mitigate the problem of Cartesian Anxiety.

Title: How to inquire into identity narratives. The case of Patrick Jane in the Mentalist.

Session Type: Individual submission

Authors:

Name: Joke Hermes

Email: joke.hermes(at) inholland.nl

Country: NL (Netherlands)

Affiliation: Inholland University

Abstract: Television crime drama, including the police procedural, are a rich hunting ground for reconstructing the many ways in which identity is constructed - especially when one is interested in gender and race and in dominant constructions of femininity and masculinity. Non-normative gay and trans identities e.g. are decidedly harder to find. This paper will focus on an enormously popular police procedural of the first decade-and-a-half of this century to contrast two different ways of inquiring into identity narratives. Using the tools of aesthetic and narrative analysis, it will offer both a 'suspicious' and an 'appreciative' strategy. Recently danah boyd (2018) suggested that media literacy training seems mostly to have resulted in suspicion. Deconstructivist approaches could be seen to contribute to an unrelenting quest to uncover conspiracies and the ways in which as viewers we are manipulated to understand the world in particular ways. Rita Felski (2015) earlier offered a similar argument for literary criticism and suggests we find ways to do forms of appreciative inquiry. This paper will take a closer look at the protagonist of *The Mentalist* (CBS 2008-2015) who is an interestingly anomalous figure in one of the most popular television genres. He could be read as a feminine man: he is afraid of guns, a coward and a bit of a flirt, and he uses 'reading people', a typically feminine strategy, to solve crimes. The combination of the three can be read as a clever ploy. Narrative development in addition suggests that when his erstwhile boss Teresa Lisbon and he come to be in a relationship in the last season, the identity narrative shifts to a conventional one, reversing Lisbon and Jane's roles and positions. Against such a suspicious reading, Jane can be read as a feminist man and a statement against one-dimensional thinking about gender. It will become clear that any reading depends on the choices made by the viewer/interpreter and that rather than outright support a particular interpretative strategy, we need to develop a vocabulary to discuss how we choose and judge the frames, ideologies and identities we discern. Making appreciative strategies available, it is argued, will greatly enhance critical practice. Even more importantly, it will help build the empowering citizenship value of media literacy training and of everyday media use.

Title: Reconsidering the inspirational supercrip: a holistic case study on the representation of 'inspirational supercrips' in the Flemish reality television program 'Over Winnaars'

Session Type: Individual submission

Authors:

Name: Susan Vertoont

Email: susan.vertoont(at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University

Abstract: Research by disability scholars indicate that representations of disability in popular culture are dominated by so-called 'supercrip narratives', i.e. narratives of 'remarkable' people with disabilities, who, against all odds and through astounding endeavor, triumph over the 'tragedy' of their condition (Hartnett, 2000). These personal stories are often referred to as 'inspirational' in popular media texts. However, most disability scholars fiercely criticize these representations for reinforcing an ableist ideology. An ideology that constructs disability as a medical and individual 'defect', which should be cured or overcome by willpower and perseverance in order for one to be accepted by society. Consequently, the notion of 'inspiration' became negatively connoted within Disability Studies, because these stories mainly seem to inspire the individualization of disability and evoke feelings of pity, compassion and charity towards people with disabilities.

Nevertheless, a select body of audience research (Berger, 2008; Kama, 2004) reveal more empowering readings by disabled audiences than the critical theorizations by disability scholars, which are mainly based on textual analyses. In accordance with Chrisman (2011), these empowering readings make us question if Disability Studies should reconsider 'inspiration' as a possible tool for emancipation and social change. Recently, Schalk (2016) also questioned the outright dismissal of all supercrip narratives by disability scholars as ableist and invaluable. She argues that, this way, entire genres of popular culture, which generally have large audiences, are being disregarded by the field. Therefore, Schalk (2016, p. 71) suggests to theorize the supercrip as 'a collection of narrative types created by different mechanisms which vary by medium and genre'. If we ought to apply the supercrip as a tool for critical analysis, we will 'be better able to differentiate and understand the production, consumption and appeal of supercrip narratives in popular and mainstream media'.

Drawing on the abovementioned theoretical reconsiderations of the notions of 'inspiration' by Chrisman (2011) and 'the supercrip' by Schalk (2016), this study aims to contribute to the understandings of the social and cultural constructedness of 'disability as inspiration' in supercrip narratives. In order to do so, the case of 'Over Winnaars' [About Winners], a Flemish reality television program, will be examined in a holistic manner. The format of 'Over Winnaars' can be defined as a 'supercrip narrative', since its baseline is to help five 'unfortunate' people overcome their disability and make the impossible possible. In each of the five episodes, another disabled participant is 'granted' the unique possibility to make their dream come true with the help of a nondisabled host. E.g. in episode 1 Hannelore climbs the Machu Picchu (Peru) with two leg prostheses; in episode 3 Peter, who has cystic fibrosis and diabetes, cycles to the top of the Mauna

Kea (Hawaii). By analyzing the text, interrogating the audiences (by means of focus groups with people with and without disabilities) and interviewing the producers of 'Over Winnaars', we aim to acquire more insights in how supercrip narratives are produced and what meanings audiences attribute to these 'inspiring' television texts.

Title: Marketable News: The Buzz Around A Garbage Fire

Session Type: Individual submission

Authors:

Name: Nikhil Thomas Titus

Email: nikhil.titus(at) gmail.com

Country: US (United States)

Affiliation: University of PittsburghUniversity of Pittsburgh, Department of English

Abstract: When a garbage dump catches fire, the initial reporting around the issue appears to take on trans-scalar dimensions – area, population, economics, colonization, technology, and globalization are consistently inferred in analysis. The Deonar dumping ground was established by the British administration in 1927; then at the edge, now at the heart of the ever-expanding Mumbai city. In 2016, the Deonar dumping ground caught fire and smoke bellowed deep into residential and business centers of the city. News channels began reporting that the trail of smoke was photographed by NASA satellites —a national embarrassment. A 'world-class' city like Mumbai had caught the attention of the international community but through an unfortunate and untimely event. Within a few hours, people begin to complain of throat itches and various other ailments. Doctors warn that the toxic fumes could have long-lasting effects and adversely impact the mental health of those breathing the air.

Media reports seem to fault the city administration and the general lack of civic consciousness when it comes to waste disposal; there seems to be some camaraderie building between those who earn their living picking through the trash and those who generate it. Often, it is not through proactive campaigning or political mobilization or sensitization workshops that ideological and class divides can be bridged —the smog over Mumbai produces a medium through which its citizens establish intimacies. But trans-scalar associations produce genuinely inconvenient trajectories that contest hegemonic frameworks. It suggests that technology and our mediated relationship with things lacks an adequate model of imaging —not just representation, but the image as an intersection of matter and thinking— because of which we are compelled to disavow multidimensional analysis in order to accommodate revenue models, production formats, technologies, and legal frameworks. A complex web of government regulation and market collusion make seeing a critical dimension in formulations of illegality that reorder the mediated images and analysis, and constrain them to prescribed models of signification. The irresistible impulse to produce marketability around an event eventually takes hold and narrows the scope of technologies, resulting in familiar and reassuring imaginations.

Title: The narrative representation of Asperger, Depression and Anti Social Disorder on Anglo-Saxon dramedy coming-of-age TV series: Atypical, My Mad Fat Diary and The End of The F***ing World.

Session Type: Individual submission

Authors:

Name: Marta Lopera-Mármol

Country: ES (Spain)

Affiliation: Pompeu Fabra University

Abstract: This research aims to explore through a comparative analysis what is the current representation of Asperger syndrome, depression and antisocial personality disorder in British-American dramedy and coming-of-age television series: My Mad Fat Diary (Channel E4, 2013-2015), Atypical (Netflix, 2017-) and The End of the F***ing World (Channel E4 and Netflix, 2017-). These specific productions are chosen due to its influence on young impressed audiences (Becattini, E. 2018: 207) and the vision of the positive and negative aspects of the illnesses.

The theoretical framework shows that, in the past twenty years, the depiction of mental illnesses on television series has usually been through minor subplots. A wide range of academic articles from both the medical and communication fields have considered on-screen narrative portrayals to be negative, lacking diversity of gender and race, inaccurate with the clinical reality, disassociated from social reality and therefore perpetuating stereotypes about mental illnesses and health policies (Harper, S. 2009). Characters are shown as incompetent in social, work, political and economic aspects, unemployed or incapable of either getting or holding down a job, unproductive, isolated, dangerous, victimized, isolated or incapable of living meaningful lives (Pirkis et. al. 2006). Furthermore, these characters are often referred with pejorative language such as crazy, nuts, mad, psycho, etc. (Pirkis et. al. 2006) and are shown receiving unethical, unscrupulous and wicked treatments such as straitjackets, locked up in cells that resemble prisons or electroshock. All these narratives are emphasized aesthetically by the use of discordant music, scene juxtapositions, atmospheric lighting, unconventional shots, monologues, scrawls or drawings on images, etc. However, results in recent years show that there has been a conscious attempt to shift the representation of mental illness and bet for better depictions to combat old stereotypes. To do so, characters that suffer from mental illness are the main focus of the stories, three-dimensional and

presented as real, raw and complex. In some cases, they become role models in order to normalize mental health issues. Their everyday challenges are presented as difficult but with positive outcomes. In addition, new forms of therapy and treatments are explored, like group, one-on-one, family or art psychological/psychiatric therapy. Nevertheless, medication is still the go-to “most effective” treatment when showing the recovery of a patient, provoking what Harper (2009: 103) defines as the narrative pattern of “equilibrium-breakdown-recovery” and consequently provoking a “pharmacologization” phenomena.

In conclusion, the depiction of mental illnesses and characters that suffer from it is far from its first representation but still inaccurate from its clinical reality. The positive framing they receive often end up too sugar-coated which sadly leads to erroneous portrayals and generates an idea that having a mental illness might not be as hard as it is. Thus, there is a need for better regulation on film and television industries with the collaboration of the medical sector in order to create a faultless portrayal, especially since the coming-of-age genre is a potential tool for edutainment.

Title: Unreliable creations: technologies and the imagination of apocalypse in Hollywood films

Session Type: Individual submission

Authors:

Name: Marina Frid

Email: marina_frid(at) yahoo.com.br

Country: BR (Brazil)

Affiliation: Graduate Program in Communication and Culture, Federal University of Rio de Janeiro (UFRJ)

Abstract: This paper analyzes an ensemble of science fiction films that imagine “end of the world” and “post-apocalyptic” scenarios. The purpose is to examine exchanges between films in the group and their interpretations of religious and scientific themes. To understand the meanings of representations of doomsday, its imminence and aftermath, in popular culture, I submit the ensemble of films to a textual analysis (McKee, 2003). Hence, the study considers audiovisual materials as texts to explore recurrences and transformations connecting films within the selected group. Most titles in the ensemble were picked from the larger sample of a research project on time travel fictions in Hollywood cinema from 1960 to 2016 (Frid, 2018). In this work, I approach the following films: *The time machine* (1960), *2001: a space odyssey* (1968), the original series of *Planet of the apes* (1968–1973), *The terminator* and three of its sequels (1984–2009), *The matrix* (1997), and *Interstellar* (2014). The theoretical framework of the analysis involves works on speculative and time travel fictions, the concept of “nature” in Western culture, apocalypticism, and religious symbolism in media and popular culture (Jameson, 2005; Wittenberg, 2013; Haraway, 2016; Danowski and Viveiros de Castro, 2016; Szendy, 2015; Landes, 2000; Kozlovic, 2004). The investigation of the material points to three interrelated topics that structure the paper. First, the focus turns to the perspectives of films on the concept of “evolution” and the imagination of non-human futures. Then, the work explores the portrayal of interspecies relationships and the reflection of films on the definition of humanity. Finally, the paper discusses the reproduction of modern Western ideals of control over nature and technology in Hollywood cinema. In the ensemble, the “end of the world” is the collapse of humans as a result of their own doings. The paper argues that the examined films are like myths that combine religious and scientific elements to speculate about the limits of modern-contemporary societies.

Title: Humor and political satire on Brazilian Broadcast TV: "Tá no ar" comedy show and its repercussion on Twitter (Video presentation)

Session Type: Video Submission

Authors:

Name: Roberto Tietzmann
Email: Rtietz(at) gmail.com
Country: BR (Brazil)
Affiliation: PUCRS

Name: Paula Puhl
Email: paularpuhl(at) gmail.com
Country: BR (Brazil)
Affiliation: PUCRS

Abstract: The 2018 Brazilian presidential election was a hotly disputed one. Voters polarized their choices between a customs-conservative right and a liberal left, giving victory to the right-wing candidate Jair Bolsonaro. This polarization has percolated through the mass media, spreading to social networks and continues to stir up debates between supporters on both sides.

In this video communication, the authors question how a debate could be induced by broadcast television and carried forward in social networks. The chosen focus was Rede Globo's comedy series "Tá No Ar: a TV na TV," with a satirical stance on the Bolsonaro presidency. The show, in its sixth season, uses metalinguistic humor on communication, criticism on societal mores and parodies on various broadcasters. The observation will focus on the 1/15/2019 episode that included satires about military coups, restrictions on individual freedoms and conservatism in general, a repertoire often advocated by the new government. Specifically, the analysis deals with the online repercussion on Twitter within the four days before and after the broadcast.

The contemporary context of media consumption in Brazil points to the continued relevance of television, present in 97.3% of households in a population of 208 million inhabitants, and Rede Globo reaching 98.3% of the Brazilian municipalities (Grupo de Mídia de SP, 2018). For Lopes (2003), Brazilian television presents a diverse repertoire that represents different social classes, generations, sex, race, religions, and regions using forms of communication that are available to all, thus promoting discourses and interpretations that are often not consensual but they ultimately inspire identities. The second most frequent communication device became the smartphone with Internet access, present in 78.3% of individuals over ten years of age (IBGE, 2016). The most frequent activities online are conversations and the sharing of content in social networks. These data suggest the consolidation of a relationship pattern with television media: a continuous presence of the smartphone as a dialogue channel and a second screen at hand.

Our methodological strategy consists of: a) collection of Twitter postings linked to the show; b) compilation of related news publications and comments; c) creation of data visualizations from the show's content; d) creation of data visualizations from the online collections; f) cross-visualization and elaboration of video-based explanations.

A preliminary analysis of the collections suggests that: the topics of the debate are forgotten in three days, replaced by new themes; open television continues to be capable of agenda-setting; the repercussions on praise and criticism are tied to distinct thematic networks on the right and left.

Title: Stop and Stare! We are Dignified Freaks: A Discussion of Reality Television

Session Type: Individual submission

Authors:

Name: Sandra Pitcher

Email: [pitcher\(at\)ukzn.ac.za](mailto:pitcher(at)ukzn.ac.za)

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal Pietermaritzburg South Africa

Abstract: For centuries, humans have been fascinated by tales of the absurd, odd, and unusual. From Gorgons and mermaids, to bearded ladies and elephant men, society has marvelled at those who deviate from physical and mental norms. Such fascinations seemed to peak during the 19th century when showmen, like PT Barnum, bought and exhibited those deemed too different and macabre for ‘normal’ society. However, as science and medicine progressed, and the protection of human rights became more important, freak shows and travelling sideshows dwindled (Nicholas & Chambers, 2016). “People with disabilities started to be viewed as [...] having various genetic and endocrine disorders (Bogdan, 1995: 30), rather than deformities to be ogled. And those who were termed ‘exotic’ were no longer unusual as more people began to travel, and diasporic communities flourished in big cities. Yet, society’s fascination with the unusual has not gone away, and research has argued that freak discourse remains intact, embedded in more contemporary disciplines such as genetics, zoos, embryology, taxidermy, celebrity culture, and academia (Thomson, 1996).

As Thomson (1996: 1-2) points out, humans have a “seemingly insatiable desire to gawk” and a “profound disquiet [stirs] in the human soul by bodies that stray from what is typical and predictable”. While academic work on literature (including film studies) are littered with analysis of the ‘other’ and grotesque, none appear to have plotted the role that freak discourse plays in creating narrative, especially in relation to reality television. Some contemporary work in television studies has hinted at how talk shows (see Dennett, 1996) and medical documentaries (see Clark & Myser, 1996) contain aspects of freak discourse, but there is little research that has linked freak discourse to popular 21st century television. I argue in this paper that reality TV mirrors the same discourses used by freak shows in the late 19th century to attract audiences and drive their narratives, falling back on many of the techniques, described by historians and academics, used by old-fashioned sideshows and circuses. Like freak shows, reality television is “about spectacle: it is a place where human deviance is enhanced, dressed, coiffed, and propped up for the entertainment of paying audiences” (Bogdan, 1996: 325).

Therefore, this paper applies Thompson’s (1996) work on freak discourse, arguing that it is not only those programmes which deal with the so-called grotesque, but that most shows hinged on faux-reality follow this narrative formula. The paper ends with a discussion of various case studies to highlight how these narratives mirror Bogdan’s (1996, 1988, 1987) assessment of conventional freak show narratives, concluding that society is no more civilised than it has ever been, and that human dignity is often belittled for the sake of popular entertainment.

Title: White genocide and the marketing of minority victims

Session Type: Individual submission

Authors:

Name: Nicky Falkof

Email: Nicky.falkof(at) wits.ac.za

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand

Abstract: This paper discusses South African iterations of the myth of white genocide, a powerful instance of both ‘fake news’ and conspiracy theory that is increasingly popular within the burgeoning and transnational networks of right wing white extremists. Globally the idea of white genocide is often used to claim that migration, multiculturalism, desegregation and resistance to inequality actually equate to a targeted attack on white people and their cultures. In the context of South Africa fears about the alleged genocide are expressed within an ongoing panic about farm murders, often-brutal killings that take place in isolated rural areas and that are imagined, against all available evidence, to solely target white people and to happen in higher numbers than other murders in this violent country.

The paper focuses on two self-proclaimed ‘civil rights groups’ that propagate its narrative. The first is Red October, spearheaded in 2013 by Afrikaans pop stars Steve Hofmeyr and Sunette Bridges. The second is AfriForum, the Afrikaner pressure group that has been the highest profile campaigner about farm murders. Both groups have been prolific users of digital and social media and have courted press attention with various stunts and sensational statements. Both frame themselves as protectors of the ‘minority rights’ of white Afrikaners, who are, despite the change in regime that accompanied the end of apartheid, still disproportionality economically privileged in comparison to the country’s majority.

The paper analyses these groups’ websites and videos that leaders and supporters have posted on YouTube in order to isolate the rhetorical strategies that they employ to entrench ideas about white victimhood and minority status, with the intention of gaining global attention and support for Afrikaners who they believe are unfairly victimised in South Africa. The paper draws on historical literature to consider the longstanding bases for anxieties about white people in South Africa as a special category of victim in need of special protections. It employs a discourse analytical approach to reveal tactics of minoritisation, the elision of personhood with property, an ongoing tussle over language and symbols and the creation of convenient folk devils. Overall, it shows how groups like Red October and AfriForum use the modality and accessibility of social media to weaponise and marketise long-standing white South African fears in order to support the ideological project of white supremacy.

Title: Joburg without Joburg: Sex, Race, Class, Distinction and the Black South African Romcom

Session Type: Individual submission

Authors:

Name: Pier Paolo Frassinelli

Email: pierpaolof(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: For South African cinema, 2015 and 2016 were the years of the romcom. In 2016, the highest grossing film was Jaco Smit's Afrikaans-language romantic comedy *Vir Altyd*, which made over 15 million rands at theatres. It was followed by Thabang Moleya's Johannesburg-set romcom *Happiness Is a Four-Letter Word*, which made an also impressive 13.2 million rands. Fourth place was occupied by Adze Ughah's *Mrs Right Guy*, which reached over four million rands at the box office by rehearsing one of the genre's standard plots. The year before Akin Omotoso had directed *Tell Me Sweet Something*, another romantic comedy set in Johannesburg's hipster hangout of Maboneng, which was one of the few "black" South African films since 1994 to gross almost three million rands. South African audiences, commentators concluded, had had enough of highbrow, socially engaged films and were turning to genre flicks.

In the words of South African journalist Lindiwe Sithole, "it seems that South Africans are leaning towards the lighter offerings." The producer of *Mrs Right Guy*, Dumi Gumbe adds, "South African audiences are getting tired of [...] issue driven films. I think that post-94 we have been making a lot of gangster film-type movies, as well as AIDS-driven films – Yesterday comes to mind. So, I think that as an industry, a film industry, we are maturing as well. We are getting off our soapbox and we are saying 'we should start making lighter fare: more romantic, more love stories.' And I think the audiences are responding quite well to those kinds of films."

In this presentation, I want to discuss three "black" romantic comedies set in Johannesburg (or, as locals say, Joburg): Akin Omotoso's *Tell me Sweet Something*, Adze Ughah's *Mrs Right Guy* and Thabang Moleya's *Happiness Is a Four-Letter Word*. In my discussion, I want to look at how these films represent different versions of urban black middle and upper class lifestyles and aspirations. In particular, I want to explore what the films reveal about the convergence sex, race, class and cultural capital. I argue that these romcoms' representation of Joburg challenges discourses of African backwardness. The point though, is what gets erased in the process: how the visual and filmic rendition of Johannesburg as a glamorised African global city obliterates conflicts, dislocations and contradictions rooted in the history of colonialism and apartheid and reproduced by present social and spatial inequalities.

The research and interpretive methodology of this paper is interdisciplinary. It combines film analysis with social theory and urban studies.

Title: Television series: a bibliometric analysis

Session Type: Individual submission

Authors:

Name: Juan Quevedo

Email: juan.martin(at) unir.net

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja

Name: Francisco Segado-Boj

Email: francisco.segado(at) unir.net

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja

Name: Erika Fernández-Gómez

Email: erika.fernandez(at) unir.net

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja

Abstract: Audiovisual fiction plays a central role on contemporary television (Cascajosa, 2016). Series are the main format on television programming (Barlovento Comunicación, 2017), but also are a popular content on digital and new media. Television series are already the favorite content to watch online (Garza, 2017), as well as a key issue in the promotion of streaming platforms such as Netflix (Fernández-Gómez and Martín-Quevedo, 2018).

Television is also one of the main research topics in the Communication field (Montero-Díaz, Cobo, Gutiérrez-Salcedo, Segado-Boj and Herrera-Viedma, 2018: 85). Research on concrete aspects of this general topic have been approached through systematic reviews or bibliometrics, such as television advertising and sexism (Navarro-Beltrá and Martín-Llaguno, 2013), social television (Segado, Grandío and Fernández-Gómez, 2015), or TV news (Robinson, Zeng and Holbert, 2018; Schaap, Renckstorf and Wester, 1998). Yet, despite the relevance television series play on the medium, research about the format itself has still not been analyzed.

This paper introduces the first bibliometric analysis of the scientific literature on television series published by journals indexed by Scopus in the Social Sciences category from 2009 to 2018 (n=725). It analyzes the bibliographic features of scientific documents to draw the evolution of a research on TV series and to detect future research trends in the field. An analysis of descriptive features is combined with a co-citation and a co-word analysis to map the intellectual and conceptual structure of the field.

Results show a growing production on the subject, from 30 papers in 2009 to 103 in 2018. Yet, the field still lacks maturity. Authors lack continuity, as most of them use to publish only one paper about this topic, and even the most productive authors have published 5 articles. Production also lack author collaboration. USA, Spain and United Kingdom –where researchers don't collaborate

with colleagues from other countries- are the most productive countries and also the most cited together with Australia. The main sources in which these works are published are Television and New Media, Feminist Media Studies –gender studies constitute one of the most important research trend in TV series- Continuum, Communication and Society and El Profesional de la Información. The analysis of keywords co-occurrences show three clusters of terms that tend to appear together: media studies, media effects (relation of the media with several social issues, like behavior, health issues and gender) and media in the United States, which highlights the importance of this country as the main TV series factory and its effects in media. Co-citation analysis shows a similar landscape: a cluster about gender studies, with works by Laura Mulvey and others; other about transmedia and popular culture, supported by references to Henry Jenkins; and other about television and culture, with works by Warick Frost and John Fiske.

Title: How do native sustainable fashion brands communicate? The case of Latitude

Session Type: Individual submission

Authors:

Name: Silvia Blas Riesgo

Email: sblasriesgo(at) gmail.com

Country: ES (Spain)

Affiliation: Universidad de Navarra

Name: Mónica Codina Blasco

Email: mcodina(at) unav.es

Country: ES (Spain)

Affiliation: Universidad de Navarra

Abstract: The impact of the human being on the environment is a source of concern and debate. The increase of pollution, the decline of natural resources, and the visible risks for the human health and well-being have made the environmental issues and the sustainable development a global concern for individuals, industries, and institutions. The implications are not only environmental but moreover economic, social, and cultural (Klein, 2014).

The fashion industry has been pointed out as one of the most environmental pollutants, due to their extensive use of water, chemicals, and CO2 emissions, and it has also been accounted among the sectors with worst working conditions (Rinaldi & Testa, 2015; Farley & Hill, 2014). Hence, sustainable fashion has gained significant interest among marketers, society, and scholars in recent years (Henninger et al., 2016; Joergerns, 2006). The purpose of this research is to analyze how native sustainable fashion brands differentiate themselves from the already established actors in the market. Native brands communicate their commitment with the environment and society holistically, they embrace sustainability in all their actions, from their business model to their interactions with the consumers (Rudrajeet & Gander, 2018; Baldassarre & Campo, 2016). Thus, sustainability is their DNA and its main value proposition.

To further understand how native sustainable fashion brands communicate, in this paper we will expose the case of Latitude. Latitude was first born in 2014 as a pioneer project of sustainable fashion in Spain, working as a provider and advisor for other brands. In 2018 it was launched as an independent fashion brand. Their aim is to reshape the fashion market, currently dominated by the so-called Fast Fashion, which implies high volumes of garments consumption and discards. To do so, they have developed a sustainable production chain which begins with sustainable raw materials, 70% natural fibers and the rest recycled materials, and ends with fully transparent communication, to the point that they encourage the consumers to only buy what they need and no more.

Furthermore, Latitude has collaborated in the creation of a social atelier called “Ellas lo bordan”. In this atelier women at risk of exclusion, that is, women who have been victims of all kind of abuses and have children to raise on their own, are part in the sewing process of garments. The aim is to help further these women to feel empowered and regain a role in society through their work.

Title: Hiding in Plain Sight: Spies and Queers in Early Espionage Film

Session Type: Individual submission

Authors:

Name: Randal Rogers

Email: randal.rogers(at) uregina.ca

Country: CA (Canada)

Affiliation: University of Regina

Abstract: Recent history has seen numerous examples of queer characters in espionage film and television: *The Girl with the Dragon Tattoo* (2009, 2011); *J. Edgar* (2011); *Tinker Tailor Soldier Spy* (2011); *Skyfall* (2012); *Imitation Game* (2014); *Kingsman: The Secret Service* (2014); *Turn: Washington's Spies* (2014-); *London Spy* (2015); *The Night Manager* (2016); *Berlin Station* (2016-); *Manhunt* (2017-); *McMafia* (2017-); *A Very English Scandal* (2018). In fact, the espionage genre has a long history of critically negotiating queer femininities and masculinities, in part due to its popular status. The James Bond franchise and *Austin Powers* are perhaps the most well-known. Less recognized is their relationship in the early history of film. For this presentation I will explore films from Hitchcock's *Secret Agent* (1936) to Frankenheimer's *Seven Days in May* (1964) to suggest that the relationship between queer 'subjects' and espionage is not coincidental but is a structural component of the genre. From early research findings I have discovered that queer characters are present in the genre from at least the time of the *Secret Agent*. I ask: has espionage historically provided a space where queer figuration could exist as a form of inclusion in film and history? With perceived shared personality traits: covering, passing, duplicity, deflection, secrecy, and with a penchant for treason and sabotage, this paper explores how the rhetorical proximities of spies and queer subjects have been mobilized in the espionage genre since its inception.

Double agency has served spies and queer people in history. However, this is not only a story of the historical recuperation of lost identities. Apart from characters, I also ask if queer spaces, times, and aesthetic strategies appear in the spy genre? And to what effects? Drawing on recent work by Heather Love ('looking backwards'), Nishant Shahani ('retrosexualities'), Lorenzo Bernini ('anti-social theory'), Natasha Hurley ('pre-queer circulations'), Amy Villarejo ('ethereality'), I ask how the contradictory logic of looking backwards at pre-queer circulations points to ways that minoritarian subjects and figuration reveal hidden queer relations in history while also transforming contemporary approaches to history and popular media. Spying and queer figuration are related in the espionage genre. Looking at early espionage films tell us a great deal about how their relation undergirds the genre and the histories it represents.

Title: [Panel] Intersectional Interventions in Popular Culture: From the theoretical reformulation of aesthetics to transnational illustrations of contemporary negotiations, Panel description

Session Type: Panel Submission

Authors:

Name: Angharad Valdivia

Email: valdivia(at) illinois.edu

Country: US (United States)

Affiliation: Institute of Communications Research, University of Illinois

Abstract: Mainstream popular culture seeks to incorporate a broad range of narratives in order to attract an ever-increasing segment of the global audience. Among the many pressures incumbent upon contemporary mainstream popular culture, such as established television networks, industrial film production, and cultural producers and distributors at large, are the undeniable diversity of the global population and therefore their audiences as well as constituent demands placed by collective groups for representation and inclusion in production. Another source of pressure is the rise of cable alternative networks such as Netflix as sites of cultural production and distribution at a global level, which, in turn, circulate a range of global origin cultural texts that resonate at different levels with populations with a wide range of migratory histories and therefore national affiliations. These changes compel us to re-examine the theorization of aesthetics as representative of the transformations in neoliberal capitalism. This panel convenes scholars whose work addresses the theoretical, production, representation, and audience components of contemporary popular culture as it reacts, attempts to coopt, and tries to profit from these changes. Negotiations and tensions arise: from effort to theorize popular culture in general and the museum in particular as sites of contestation for the definition of aesthetics and the anesthetization of everyday life as Cameron McCarthy's presentation examines; from promises about racial inclusivity in production and representation made and not fulfilled—as illustrated by Isabel Molina-Guzman's research on the reboot of the program *Charmed*; from the resignification of Medellín, Colombia and the many layers of unsatisfiable narratives in which gender plays a central role of difference; from the reiteration of a white, male upper middle class foregrounding in the rebooting of *Will & Grace* despite the much more inclusive queer representation in non-network television; and from the transnational reviews of a major film, that reveal critics' different optics as well as a near absence of consideration of biopolitics in the interpretation of *Roma*. Together these presentations explore a global terrain of popular culture foregrounding contested narratives about the presence or exclusion of the everyday, which, in turn, has implications for gender, racial and ethnic, class, and national diversity in the production of the popular, representations, of difference, and the audiences that these texts target as well as the demands audiences make on producers. Our global reach includes theorists from throughout the world in Cameron McCarthy's work [the UK, Barbados, and India], a focus on Colombia in the work of Cepeda, pan-Latinidad and Latin America, especially Mexico in the work of Valdivia, and a rich engagement with a complex intersectional range of difference in the work of Molina-Guzman and Christian. Together these presentations urge us to reconsider the terrain of the global popular in light of contemporary issue of difference.

Title: The Charmed Politics of Reboots in the Post-Racial TV Era

Session Type: Panel Submission

Authors:

Name: Isabel Molina-Guzman

Email: imolina(at) illinois.edu

Country: US (United States)

Affiliation: Latina Latino Studies

Abstract: In 2017 the CW network announced the reboot of one of its most popular programs Charmed (1998-2006). The announcement was met with protest by fans who objected to some of the program's announced changes and some of the original cast members who objected to not being invited to participate in the rebooted show. Once the casting was completed in early 2008, the rebooted show (2018-2019) was met with another round of protest when the producers claims to an Afro-Latina reboot of the program failed to materialize. While the characters (not the actors) are developed as Latinas and one of the characters is cast as "Afro-Latina," there is only one actor who identifies as Latina and the Afro-Latina character is played by a Black British actor.

First, this paper explores the casting controversies surrounding the Charmed reboot as a provocative case for studying the limitations of colorblind casting in contemporary television production. As I have argued elsewhere (2018), the deployment of colorblindness whether it be in the casting or writing of television programs is part of an ideological mechanism that contributes to the reproduction of inequality and ultimately reifies whiteness. The use of colorblindness is evidenced in colorblind and multicultural ensemble casting practices and the development of characters of color devoid of ethnic and racial specificity – strategies that use racial difference to erase racial specificity, engage performances of ethnicity in order to homogenize culture, and make queerness visible without subjectivity.

Second, this paper examines the writing and character development in Charmed to think through how the contemporary genre of reboots and remakes reinforces whiteness and the continuing white privilege of the U.S. entertainment industries. Similar to other reboots and remakes both on television and film, the producers of Charmed use a diverse cast to create the appearance that the world on the screens appears radically diverse and inclusive. But the structural conditions of televisual production in all its forms remains embedded in racial, sexual, and gender inequality. To that point, the Charmed reboot lack diversity in its writer's room with no Latina/o writers or producers currently working on the show. And while the lesbian sexuality of one its characters, Mel Vera played by Melonie Diaz, is a core component of the character's development, there is little else in the textual or visual content of the show that substantially incorporates the ethnic and racial identities of the characters. Thus, similar to the incorporation of ethnicity and race in contemporary television, the show decontextualizes the visual ethnic and racial difference of the characters to produce a superficial sense of multicultural inclusion.

Title: Roma: Transnational and Intersectional Interpretations

Session Type: Panel Submission

Authors:

Name: Angharad Valdivia

Email: valdivia(at) illinois.edu

Country: US (United States)

Affiliation: Institute of Communications Research, University of Illinois

Abstract: Alfonso Cuarón's *Roma* (2018) was released simultaneously for theater and internet streaming services such as Netflix in December, 2018. The black and white, Spanish and Mixtec, no major star, Mexican movie has garnered many awards and is nominated both for Best Film and Best Foreign film in the 2019 Academy Awards. This presentation explores the wide rift between US reviews of the film, such as those by Richard Brody in *The New Yorker* and Manohla Dargis in *The New York Times* and those by a range of Latina/o critics and websites. Moreover, the presentation explores the absence of intersectional gender analysis among all of the reviewers. Whether they hate the film, as Brody does, or praise it as a masterpiece, as Dargis asserts, US reviews of *Roma* focus on formal, editing, and historical accuracy as their standards of measurement. However Latin American and Latina/o audiences also respond to the film in relation to situational identification and recognitions. As a response to the missing visceral connection to the film demonstrated by US mainstream press reviewers such as Brody and Dargis and to the fact that there is nearly no ethnic representation among film critics from the mainstream US press, *remezcla.com* created a forum for Latina/o reviewers who focused much more on the granular memory generated by the film's set design by Alfonso Caballero as well as the complex role of Cleo, the domestic worker whose watchful eye guides us through this movie. This presentation also explores intersectional gendered elements as they seem to fall out of both group of movie critics, in particular the biopolitics so present in the movie yet rendered invisible in reviews.

Title: The Persistent Normativity of Will & Grace and Broadcast TV

Session Type: Panel Submission

Authors:

Name: Ayman Jean Christian

Email: aymar.jean(at) northwestern.edu

Country: US (United States)

Affiliation: Communication Studies, Northwestern University

Abstract: The whiteness and gayness of Will & Grace (1998-2006) was characteristic of the time it emerged on broadcast TV, as networks wrestled with more competition and attempted to reach specific target audiences. Will & Grace is the product of a decades-long campaign, documented by scholars like Katherine Sender, to make the “gay market,” and argue that gay people – and gay men, particularly – were a desirable target demographic for advertisers because we were wealthy, consumerist, and unburdened by children. If only gay people were visible, we could show our worth, tied inextricably to financial and cultural capital. The other gay-led shows such as Queer as Folk, and many of those that followed, confirmed this stereotype. The original Will & Grace's whiteness might be charitably ascribed to the trend at the time of using urban and suburban wealthy white characters to lure back the white audiences who had shifted to cable throughout the 1990s, but the reboot in 2017 emerged at a time when intersectional cable/streaming representations like Pose and Orange Is The New Black were en vogue. Twenty years later, the reboot shows us how little changed in the network TV ecosystem and how the gay market remains wedded to white homonormativity, despite the emergence of queer and trans people of color as series regulars on some, mostly cable and streaming, channels.

Title: A Masculinist Narrative that "Fails to Satisfy": Maluma, Feminist Memes, and the Specter of Pablo Escobar

Session Type: Panel Submission

Authors:

Name: Maria Elena Cepeda

Email: mcepeda(at) williams.edu

Country: US (United States)

Affiliation: Latina/o Studies, Williams College

Abstract: Since 2012, twenty-four year old Medellín, Colombia native Juan Luis Londoño Arias – better known by his stage name Maluma – has emerged as a dominant force in the transnational reggaetón industry. Marked by his “Pretty Boy/Dirty Boy” image, for many reggaetón fans he has come to embody an extension of the genre’s traditional reliance on overtly sexist lyrics and imagery in tandem with its newer shift towards a seemingly less politicized and “whitened” regime of representation. Within this underlying context, my presentation analyzes the figure of Maluma and potential interpretations of his music and persona through the lens of what Henry Jenkins characterizes as media narratives that “fail to satisfy.” The first of these unsatisfactory narratives considers the Medellín reggaetonero as a self-styled macho colombiano whose discursively violent lyrics are quite literally haunted by the specter of the city’s best-known hypermasculine local son, Pablo Escobar, and the global media discourses still attached to the dramatically violent period during the 1980s and 90s marked by the rise and spectacular fall of the narcotics kingpin. Indeed, the seemingly overnight growth of Medellín’s burgeoning reggaetón industry in recent years might be optimistically read as a positive counter to this masculinist narrative. The second of these unsatisfactory narratives, or the emergence on social media of a popular series of “feminist Maluma” memes by twenty-three year-old Veracruz, Mexico native Elena, illustrates how female music fans grapple with problematic media narratives in an attempt to express alternative discourses that ultimately re-semanticize Maluma and his gender politics. By focusing on Maluma’s emergence from the Medellín reggaetón industry within the context of the Pablo Escobar narrative haunting the city, as well as the creation of the “feminist Maluma” memes, this presentation underscores the ongoing impact of historic media discourses on current cultural production, as well as the centrality of gender in the creation and contestation of such musical narratives.

Name: Reinald Besalú

Email: reinald.besalu(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: Resilience has gained major prominence in the post-recession era: in a broad range of texts, from policy documents to self-help books, citizens are encouraged (and expected) to 'bounce back' from adversity and use difficulties to better themselves (Gill and Orgard, 2018; Jensen, 2016). Thus, in the context of austerity policies, resilience, combined with other concepts such as entrepreneurship and flexibility, has become a key concept in contemporary neoliberalism (Boltanski and Chiapello, 2017; Evans and Reid, 2014; Harrison, 2013) and has been used to blame the most vulnerable groups for their own vulnerability and to justify welfare cutbacks (Jensen, 2016).

This paper contributes to current research on 'resilience' by analysing how Spanish audiences respond to contemporary popular culture narratives that foster neoliberal definitions of this concept. To fulfil this aim, we have carried out a two-stage analysis. First, we qualitatively analysed a sample of popular culture texts widely consumed in Spain from 2008 to 2014. The sample included a broad range of genres, such as television series, reality TV programmes, videogames, advertisements and celebrity news. Second, we held 8 focus groups made up of a total of 64 participants. The composition of the groups took gender and class into account in order to identify how social groups that had been affected by the economic crisis differently responded to popular culture narratives that promoted values such as resilience, entrepreneurship, flexibility and adaptability. The topics proposed to the focus group participants to structure the discussion drew upon the results of the textual analysis.

Our research shows that almost all the participants, regardless of their gender and class, viewed difficulties as an opportunity for betterment, reinvention and self-knowledge, mixing together the values of resilience (a trait traditionally related to the working-class, Alonso et al., 2011; Jensen, 2016) and entrepreneurship (a key concept in neoliberalism, Rose, 1998). In this context, individualized responses to precariousness and downward social mobility were prioritized, as

opposed to calling for structural changes through collective actions. Moreover, a new model of ‘bad citizen’ emerged: the rigid, resigned individual who refuses to change to change, a figure that connects with the stereotype of ‘Spanish workers as immobile, slow and left behind by progress’ (Fernández Rodríguez and Martínez Lucio, 2012: 326). Thus, difficulties (such as the economic crisis) were seen as an opportunity to transform Spanish citizens into flexible, entrepreneurial individuals. Nevertheless, when reflecting on their own experiences, several participants expressed a feeling of guilt for not being able to follow this ideal fostered by media narratives and not having the will and energy to change their lives radically and reinvent themselves, i.e. to become ‘entrepreneurs of themselves’. Working-class participants were the ones that felt most pressure to justify their life choices and tried to deflect accusations of being ‘bad citizens’ because they were not resilient enough. Thus, resilience, in its neoliberal sense, is not only a key value found in contemporary popular culture but has also become a ‘common-sense’ concept that serves to deflect critiques of inequality and social injustice.

Title: Timeless Masculinity: A qualitative inquiry into the gendered ideologies of an annual music poll radio program.

Session Type: Individual submission

Authors:

Name: Frederik Dhaenens

Email: frederik.dhaenens(at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University

Abstract: Each New Year's Eve, public broadcast radio station Studio Brussel – a popular Flemish Dutch-speaking radio station that plays pop, rock and alternative music genres– airs the annual radio show 'De Tijdloze Honderd' ('The Timeless Hundred'). Organized for the first time in 1987, the program presents the hundred best songs of all times, based on a station-organized listener's poll. The program is a household name of Studio Brussel. It allows the station to create and sell compilation albums with songs from the poll and to boost media attention. Each year, national news media report on notable newcomers and scrutinize which artists and songs climbed in the polls and which ones disappeared. Yet, in response to the 30th edition in 2017, a few journalists and Rosa VZW – a civil society organization focused on archiving and fostering knowledge on gender and feminism– actively called out the underrepresentation of women in the music poll. In a move to persuade audiences of voting for women, Rosa VZW took various initiatives to promote female artists (e.g., Aretha Franklin, Amy Winehouse). Even though it resulted in having 14 songs by female artists or bands with female members in the 31st edition, it cannot be ignored that the list of popular pop and rock songs remains dominated by men or, put differently, by a particular configuration of masculinity. To fully understand how this configuration of masculinity affects the selection of artists and songs, this paper reports on a study that discerns, describes and interprets the gendered ideologies of this particular music poll.

Concretely, I will conduct a textual analysis of ten polls that were aired throughout the history of the radio program, trace which songs and artists have been considered essential, and uncover the gendered meanings of these songs and artists. Second, I will relate these observations to a broader context of gender disparity in the music industry and gendered practices of music production (Whiteley, 2000), gendered discourses on music genres (Leonard, 2007) and gendered practices of music consumption (Dibben, 2002). Third, I will inquire to what extent the regional context of this poll affects the selection of songs, acknowledging, first, that the poll is governed by a radio station with a carefully curated image and, second, that these polls are articulations of both an individual and collective memory (Van Dijck, 2006). To this end, I will also analyse the mediated public debate (e.g., news reports, published opinion contributions) revolving around the preselected polls. Based on these analyses, I will argue that most of the gendered ideologies that underlie the creation of these polls work to reiterate a timeless masculinity, despite the initiatives that aim to challenge this musical hegemony and the presence of women and non-hegemonic masculine artists and songs in the polls.

Title: Theatre and drag identity: a comparative study of gender performance tradition in Manipur and in New Zealand.

Session Type: Individual submission

Authors:

Name: Suzania Brahmacharimayum

Email: suzania.sharma(at) gmail.com

Country: NZ (New Zealand)

Affiliation: Auckland University of Technology

Abstract: What is notable about drag performances, is that given the challenge they make to the hetero-normative values of society, they are obliged to construct an identity career, often under the condition of stigmatization. (Goffman, (1963) The extent to which drag performers in Western and Eastern theatre traditions, exemplified by case studies drawn from New Zealand and Manipur, draw on the traditions of performance for support is the key focus of this presentation. How do factors such as styles of performance, peer support, public attitudes and conceptions of selfhood work for or against creating a haven for “transgressive” gender identities?

In approaching such questions an important distinction can be drawn between performances occurring in fused societies and performance in complex, defused, modernised societies. In the latter, the various elements of performance multi-dimensional and do not follow fixed ritual patterns. Dramatic performances are required to address competing definitions of social “reality”. (Alexander, 2004). So, for example, the performance practices of Manipuri theatre, the dress and cosmetic codes adopted by Nupi Manbi (effeminate males) are proscribed by religious rules as well as theatrical traditions. This, indicates a fusion of ritual practices and provides Manipuri transgender performers with a protective screen, as long as they stay within the confines of the theatre. In New Zealand by contrast drag has emerged as a niche theatrical style that signals a discontinuity with religious practices but asserts the right to acceptance within the context of “normal” street behaviour and comportment.

Utilizing a comparative ethnographic methodology, this presentation will explore how issues of gender identity are “managed” by cross-dressers in Manipuri and New Zealand and how the experiential connection between self-identity and performance identities vary across the different social contexts and theatrical traditions.

Title: The slow death of the Olympic Games: imminent or greatly exaggerated'

Session Type: Individual submission

Authors:

Name: Garry Whannel

Email: garry.whannel(at) me.com

Country: GB (United Kingdom)

Affiliation: University of Bedfordshire, UK

Abstract: This paper examines a paradox – the Olympic Games is a hugely successful global media spectacle, yet there is declining interest in hosting it. Is the IOC business model still viable? The broad theoretical perspective of this analysis is derived from the “unholy alliance” model for the relations of sport, media and sponsor (Whannel 1986, 1992). The methods include analysis of income and expenditure based on IOC sources, tracking of bidding cities, monitoring of problematic issues for the Olympics.

Relevant literature: From 1964, the Olympic Games has been transformed by television, (see Tomlinson and Whannel 1984, Larson et al 1993, de Moragas Spa et al 1995). This process has made the games a global spectacle (Billings 2008; Daddario, Gina 1998; Rowe 2019). It became of great interest to sponsors. (Barney et al 1992; Giannoulakis and Stotlar 2008). This paper draws on the forensic analyses of Olympic finances by Preuss (2019). Technological innovations have always been closely linked to sports mega events (Real 1996). Digitalisation and the resultant rise of social media have become a big factor in the sport media terrain (Creedon 2014, Widholm 2016, Whannel 2014). As the guardian of the Olympic movement, the IOC has had to come to terms with the challenge this may pose to its established business model (Barney et al 2002).

The business model: The enormous success of the Olympic Games between 1984 and the present has been based on a business model driven by media technology. Between 1960-90 television grew in range to the point it could deliver high quality live pictures around the world. The audience appeal of the combination of uncertainty, spectacle, and elite level competition between national and individuals delivered a global television audience with huge appeal to advertisers and sponsors.

The IOC, as an unrepresentative, unaccountable not-for-profit private club, retains tight control of this financial model. But digitalisation and social media interactivity threatens the model forged with network television. Faced with reluctance of cities to bid for the games, it has to confront image problems: drugs, corruption, and escalating costs. The games does have a USP, but it also has an image problem. There is a need for a new business model but can the Olympics reinvent itself ?

Title: The Ivy League: Binkie Beaumont, Noel Coward and Ivor Novello

Session Type: Individual submission

Authors:

Name: Deborah Philips

Email: d.philips(at) brighton.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Brighton

Abstract: The Ivy League: Binkie Beaumont, Noël Coward and Ivor Novello

The Ivy Restaurant in West Street in central London was from its opening in 1917, and remains still, a centre for theatrical meetings. The Ivy is located in the heart of London's Theatreland, close to Shaftesbury Avenue and at one end of St Martin's Lane, both lined with theatres, but it is off the main streets, in a corner opposite the small Ambassadors' Theatre; it occupies a space that is both in the centre of the West End and discreetly detached from it.

In the post-war period, the theatrical triumvirate of and 'Binkie' (Hugh) Beaumont, the impresario, regularly dined there. Beaumont, Coward, and Novello were extraordinarily powerful figures in the theatre of the post-war period, and popular public icons. They, and many of those who dined with them at the Ivy, were also prominent gay men in a period in which homosexuality was both illegal and demonised; they were eminent theatrical men at a moment when the West End of London was of particular interest to the press and the Metropolitan police. This paper discusses London's West End and theatre as liminal spaces in which a queer culture could find some sanctuary in the hostile environment of post-war Britain.

Title: Can "Who I Am" Be a "Sidenote": Claimed and Implied Bisexual Identity in Brooklyn Nine-Nine and The Good Place

Session Type: Individual submission

Authors:

Name: Teresa Caprioglio

Email: tcaprio2(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: Bisexual identity on television lives in implication. San Filippo (2013) characterizes represented bisexuality as “(in)visible” in tension with binary constructions of sexuality and of gender (p. 16). There is often no “coming out as bi” moment afforded them—rather, they simply appear with differently gendered partners, or say that they’re “flexible,” or “love men and women,” focusing on behaviors rather than identity terminology. In television (as in life), bisexual individuals are often perceived as indecisive, recategorized as homo- or heterosexual depending on the gender of their partner, or pathologized as hypersexual if single and dating around (Bower, Gurevitch, and Mathieson, 2002; George, 1999; Morgenstern, 2004).

Brooklyn Nine-nine's season 5 episode “Game Night” upends this traditionally unnamed but marked mode of representation when Rosa Diaz (played by out bisexual actress Stephanie Beatriz) comes out to the show's eponymous police squad and to her parents. Rather than following the longtime model set by cult classics like *Doctor Who* and *Xena: Warrior Princess*, critical darlings like *Orange Is the New Black* and *This Is Us*, and teen dramas like *The O.C.* and *Pretty Little Liars*, Brooklyn Nine-Nine chooses to center the moment of self-identification as bisexual in as many words. Stating clearly and finally that she is bisexual, Rosa joins a small group of vocally—not just visibly—bisexual characters who claim that identity in words, thus “bisexualizing” themselves (to appropriate Judith Butler's (2011) “girling” (p. 177) as a form of performed, claimed identity). This constructed but centralized identity becomes a focal point for the episode, as well as a statement by the series itself.

The Good Place, by contrast, builds its lead Eleanor Shellstrop's bisexual identity (as played by Kristen Bell) by rereading some of the by-now familiar tropes. She expresses interest in both women and men, is often bawdy and marked as promiscuous in her past, and does not openly claim a sexual identity marker. However, both Eleanor's implied bisexuality and Rosa's explicit coming-out have generally received similarly positive reviews from critics invested in queer storytelling (Hogan, 2017; Klein, 2018; Steiner, 2018; Weekes, 2017), although *The Good Place*, particularly, is not without detractors (Fleenor, 2018). This is generally attributed to the well-roundedness of the characters, who are not reduced to stereotypes by their sexuality but presented as complex and developed individuals. Through discourse analysis of the characters as represented, I seek to define the strategies of bisexual representation in Brooklyn Nine-nine and *The Good Place*, with the hope of identifying critically successful approaches for the nuanced portrayal and acknowledgement of bisexual characters. However, within this study I anticipate also deconstructing reproductions and reifications of existing discourses of bisexuality that coexist with or contradict the ‘revolutionary’ moves that both series are making in their representations.

Title: Reinforcing Whiteness and Social Class: A Textual Analysis of Netflix's Made in Mexico

Session Type: Individual submission

Authors:

Name: Melissa Santillana

Email: melissa.santillana(at) utexas.edu

Country: US (United States)

Affiliation: University of Texas at Austin

Abstract: When President Donald Trump announced his bid for Republican presidential candidacy back in 2015, he did so by attacking the entire population of America's South neighboring country. The incendiary remarks: "They're bring drugs. They're bringing crime. They're rapists. And some, I assume, are good people," are now engraved in Mexican memory. Aside from the political and economical repercussions the speech generated, including talks about dissolving important international trade agreements, there were also some popular cultural responses. The topic of this study is the highly criticized new reality show produced by Netflix, Made in Mexico, and the not so-subtle ways in which it depicts whiteness and social class in an effort to distance the Mexican elite from the recent narrative that portrays Mexicans as criminals, drug lords, and rapists. The show, which follows the luxurious lives of nine wealthy socialites living in Mexico City, is a direct response to Trump's racist statements. During promotional efforts, cast members mentioned the show will break down cultural barriers and show the world "who Mexicans really are." There are also explicit mentions to Trump's speech and his "bad hombre" rhetoric on the show. Although the intention might appear as a positive way to showcase Mexican culture and values, the results were far from that. The show premiered in September 2018, and soon after reviews from major international news outlets started calling out the reality show for its whitewashing of Mexican society. (New York Times, Chicago Tribune, The Daily Dot, Refinery 29, Remezcla). This study will add to the literature of television representations in Mexico and the long history of underrepresented minorities. In 2011, a study conducted by the National Council for Discrimination Prevention found that 64.6% of the Mexican population identify themselves as dark-skinned, and that 54.8% agree people are insulted based on their skin color (CONAPRED). Yet the vast majority of media representations in TV Azteca and Televisa –the two most prominent networks in Mexico– are comprised of white Mexicans (Sánchez Pérez). This study intends to answer three questions central to the literature of race and social class representations: 1) How is Mexican racial identity and social class being depicted on Netflix's Made in Mexico? 2) What cultural elements are the characters of Netflix's Made in Mexico deploying to reinforce their socio-cultural status? 3) How are the characters from Made in Mexico making distinctions between their way of life and that of the rest of the Mexican society to repeal the notion of Mexicans as criminals? A textual analysis was employed to examine key episodes of the first season. The show borrows elements from folk culture and enters the terrains of the popular like the trajineras of Xochimilco only as historical sites, and as sources of culture that need to be explained to foreign audiences. I argue Made in Mexico deploys representations of social class and race as signifiers of distinction and otherness.

Title: The teenager's construction of the Gamer Identity: from a gender and sociocultural perspective

Session Type: Individual submission

Authors:

Name: Júlia Vilasís-Pamos

Email: julia.vilasis(at) upf.edu

Country: ES (Spain)

Affiliation: Pompeu Fabra University

Name: Fernanda Pires de Sá

Email: fernanda.pires(at) upf.edu

Abstract: This article presents the results of the initial phase of an ongoing project that investigates the ways students articulated the construction of gamer identity through their day-to-day interaction with their colleagues at school. This study takes into account the dichotomy of schools' sociodemographic characteristics within Barcelona neighborhoods and their fundings (private-public), as well as gender relations. This first exploratory analysis is done with teens between the age of 11 and 16 years from two different centers. One public school part of a district characterized as having a lower income level and an educational level under the city's average. Another, double-funded school (public and private) situated in a district characterized as having an income and education level higher than the Barcelona average.

As there is a growing body of research on games that contribute to the consolidation of gamer as a social and cultural category (Grove, Courtois & Van Looy, 2015; Muriel, 2018), we take Barcelona as a socially stratified city (Subirats, 2011) to detect how gender and socio-economic characteristics permeate the teens' discourse when defining gamer identity. We chose to look at teenagers from an Active User perspective (Egenfeldt-Nielsen et al., 2013), as, at this period, teens are most motivated to construct identities, to forge new social groupings, and to negotiate alternatives to given cultural meanings (Livingstone, 2002).

A triangulation of qualitative methods was employed. In this initial phase, four focus groups, four semi-structured interviews, and a survey were implemented for discovering games' access, preferences, and consumption habits.

Our preliminary results on the public school point that there is a gamer association with "escapism", "addiction" and "entertainment" that can be related to the neighborhood social context. In contrast, participants from the double-funded school associated the gamer identity with game capital, which includes a professionalization process, particularly related to gamer-youtubers. In both cases, girls tend to reflect negatively about being identified as "a gamer", in particular towards their female peers. These discriminative assertions emphasize the discourse of the classic "hardcore gamer" (Muriel, 2018) whereby gaming is considered a male practice. Besides, there is a stigma found between the girls in public school when talking about playing. They do not talk or know that other female peers also play. While in the double-funded school, the majority of girls know that playing is a common practice, despite not actually playing with their female peers.

In summary, these preliminary results reveal that the construction of a gamer identity by teens is deep-rooted in mediatic discourses of popular products like video games. This is because those discourses reproduce certain stereotypes grounded on heteronormativity perspective (Butler, 2007) of cultural products. Also, it demonstrates that certain game practices become explicit in the teens' discourse; while others remain more silenced because of socio-demographic and gender inequalities rooted in contemporary society. This ongoing research will expand the school sample and methodology by implementing “gaming interviews” (Shaw, 2015) to better understand the studied phenomenon.

Title: Babylon Berlin ' Berlin as mediated city in TV drama series

Session Type: Individual submission

Authors:

Name: Lothar Mikos

Email: l.mikos(at) filmuniversitaet.de

Country: DE (Germany)

Affiliation: Filmuniversität Babelsberg

Abstract: Berlin has become an important location and space for national and international contemporary drama series, as well as an important mediated historical space. Meanwhile Berlin is a production hot spot in Germany that attract national and international productions. While political decisions, economic development and direct and indirect funding also have an impact on this development, the increasing importance of Berlin as a production site and location goes hand in hand with an increasing mediated imagination of the city as a televisual space.

For instance, the Roaring Twenties are central to the narrative of the television series “Babylon Berlin” (GER 2017-, ARD/Sky), based on the bestselling novels by Volker Kutscher and built around the character of Gereon Rath, who investigates in an exciting world metropolis with drugs, sexual emancipation, arts, and murder at a time in which the Nazi Regime appears at the horizon. The series “Weissensee” (GER 2010-, ARD/Arte), “Deutschland 83” (GER 2015, RTL), and “Deutschland 86” (GER 2018, Amazon Prime Video) draw much more directly on the context of the Cold War in a divided Germany, playing with notions of “Ostalgie” and “Westalgie”, the specific variations of German post-Wall nostalgia. Other productions such as “The Team” and “The Team II” (an Austrian, Belgian, Danish, German, Swiss co-production 2015 and 2018), “Homeland” (USA 2011-; Showtime), “Sense8” (USA 2015-; Netflix), “Dogs of Berlin (GER 2018, Netflix), “Beat” (GER 2018, Amazon Prime Video), “Berlin Station”(USA/GER 2016-, Epix), and “Counterpart” (USA/GER 2017-, Starz) use Berlin among other places as sceneries for their stories that deal with international terrorism, espionage, human trafficking and drug distribution.

The numerous Berlin-based and Berlin-produced television series indicate that for both German and international series, Berlin has been turned into a commodity that adds production value to a television show. Yet, the existing circulating images of Berlin as an imagined place determine which images can be successfully used and communicated to a broader transnational audience. International film and television series often do not exceed stereotypical images of Berlin as a signifier of the Nazi regime or as signifier of the Cold War era. At the same time, many domestic productions use Berlin as simply an interchangeable backdrop against which the action takes place. Berlin in the 21st century is a city where history accretes, layer by layer. “The unique nature of Berlin is its complex history and how this has played upon its current position” (Gittus 2002: 112). Berlin as a mediated space is able to represent 20th century history such as the Nazi regime and the Cold War as well as current themes of the new millennium. Based on interviews with directors and location managers the paper will outline the (mediated) image of Berlin that attract not only production companies but also viewers from all over the world.

Title: Popular Culture and the Formation of Identity and Subjectivity.

Session Type: Individual submission

Authors:

Name: John Benson

Email: J.Benson(at) latrobe.edu.au

Country: AU (Australia)

Affiliation: Dept of Journalism and Strategic Communication La Trobe University Bundoora,
Victoria Australia

Abstract: Across mainstream media culture a “psychological discourse” has emerged as a significant element of most popular media forms which may be deployed to achieve a variety of critical, political, narrative and audience engagement goals.

Like other powerful discursive formations, this psychological discourse assumes many guises. Recently, for example, in news and current affairs programs, several national political leaders had their psychological sanity and leadership capacity challenged. At the other end of the popular entertainment spectrum, the celebrity psychologist provides therapy for the most intimate of personal issues and trauma- before a live audience. Moreover, in other formats celebrity psychologists act as consultants and actively counsel those who might be brave enough to participate in “Married at First Sight” or “reality style” programs.

At the heart of this appeal is contemporary culture’s concern with the nature of identity. The true self or the real self has become the promised focus, which will be interrogated and revealed by modern popular culture. Are the subjects and participants of these events/programs who they really suggest they are? Perhaps more problematically, and echoing the legitimizing power of the media, is the implied statement of participants - “If I appear on television, I will have an identity! It will validate my existence!”

Despite the fact new technology provides us with the most vivid means of transcending time and space, we still crave access to the intimate private self of the other and ourselves. The centrality of the private self, in the private world, which emerged with the advent of the popular novel and biography and earlier with the diary, provides the persistent narrative attraction in these new media. Perhaps the “selfie” and constant visual evidence of the minutiae of our existence as documented by these images is, in part, the modern visual derivative of these earlier media forms.

In this sense popular culture armed with the discourses of the psychological has found the perfect device to promise what it cannot deliver but relentlessly pursue.

But these programs lock directly into other discourses of competitiveness and individuality so that success or failure is often played out as evidence of personal resilience or vulnerability.

One problem, however, with this trend, is that it locates “a valued existence” in the totally private world of the self and the glitter of the media sophists and positions the individual outside of the political structures and entrenched power in which they are embedded.

Often these programs seem insulated from a social or historical context so that individual success is based on personality traits and attractiveness. In *Undercover Boss* for example, a wage increase comes from a boss going “undercover” and appreciating work and effort rather than the concept of a right to a fair wage and conditions. In this way these programs become intimately linked to the management of subjectivity and identity.

These issues will be explored at this conference and draws on the work of Foucault, Brooks and others.

Title: 1, 2, 3, 4, 5 a gogó: pop, avant-garde and TV in late sixties Mexico

Session Type: Individual submission

Authors:

Name: Daniel Escoto

Email: dannyescoto(at) gmail.com

Country: MX (Mexico)

Affiliation: Independent

Abstract: 1, 2, 3, 4, 5 a gogó was a short-lived rock culture TV show usually mentioned in passing when it comes to chronicle Mexico City's pop experiences in the late sixties, specifically in the vibrant pre-Olympic atmosphere of 1968. The production team included multi-camera director Fernando Ge, writer José Agustín as scriptwriter and theatre director Alexandro Jodorowsky and showman Alfonso Arau as hosts. The latter three were, each in his own right, influential figures in different fields of Mexican arts and creativity.

On January, 1968, when 1, 2, 3, 4, 5 a gogó was first aired, 23-year old José Agustín already thrived as part of the Mexican cultural star system. He was one of the leading authors of an emerging literary generation who had among its obsessions rock music, the budding new youth lingo related to counterculture, and the lifestyle and mores of middle-class urban youth. Chilean-born Jodorowsky had a well-publicised reputation of provocateur: his avant-garde stagings, which often featured crude violence towards the body, usually involved a virulent critique of contemporary society; also, he diversified across the languages of science-fiction and comic art. Arau, active in stage and screen since the previous decade, had originally built a career as a comedian and tap dancer, later on ventured into mimicry (as disciple of Marcel Marceau in Paris), and had started participating in high-brow and experimental theatre and cinema.

All three had complex positions in regard of the destabilisation of what Andreas Huyssen has coined "the Great Divide" —the socio-historical construct that culture and arts are separated in upper and lower strata. The sixties are one of the turning points in which the politics of these apparent frontiers were heatedly renegotiated. At first sight, it would appear that José Agustín and Jodorowsky were, in a way, expanding their efforts towards a more commercial domain, whereas Arau was, like other major figures of popular culture (such as actress and singer Julissa, part of Carlos Fuentes's circle) interested in joining the intense collaborative spirit that prevailed among the intelligentsia and the artistic circles (as studied by Rita Eder, Álvaro Vázquez Mantecón, et al.).

The joint forces of the three characters in this mainstream media experience left an interesting study case for anyone who explores the intersections between multiple modes of cultural production — rock and pop, literature, performing arts, mass media and showbusiness— in the period. I am particularly interested in approaching 1, 2, 3, 4, 5 a gogó as a paradigmatic moment in the late sixties in which the borders of Mexican "high" and "low" culture were challenged.

Title: Representing public service and security threats in 'Bodyguard' (BBC, 2018)

Session Type: Individual submission

Authors:

Name: Katy Parry

Email: k.j.parry(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: The opening episodes of BBC1's *Bodyguard* (2018) broke records for a drama debut, with a consolidated figure of 10.4 million viewers once 'catch-up viewers' were included: the highest launch figure for any new drama across all UK channels since 2006 (bbc.co.uk). The series finale was the most-watched episode of any drama since records began in 2002, with over 17 million viewers, and the series has since become the BBC's most successful box-set via the i-player streaming service. As a political thriller, the programme counted scheming politicians, terrorists, criminal gangs, security services, police and war veterans among its main characters. The series, and the mediated discourse surrounding its success, speaks to the significance of political thrillers in the understanding of political or intelligence worlds for audiences who might otherwise count themselves as politically uninterested (Tenenboim-Weinblatt 2009). Indeed, this fictional drama was used to boost real-life police recruitment, with tweets from Counter Terrorism Policing UK account timed to accompany the series finale. I combine narrative analysis of the television drama with selective analysis of media coverage that sheds light on how the fictional veteran activists became confused with their real-life peaceful counterparts in media reviews. The key protagonists are defined by the nature of their public service – whether as former soldiers, police or politicians. But how does the drama convey their 'public service' to the nation at this historic moment? How are the dramatic twists in the portrayal of character motivations employed to create ambiguities about the way in which different forms of service are valued? Of particular interest here is the way in which lead character David Budd's post traumatic stress disorder (PTSD), following his experiences as a soldier in Afghanistan, is deployed as a dramatic device to convey not only his own fractured psyche but to signal the multiplicity of potential threats faced by the security state.

The themes of homeland security and political violence have been much discussed in the US drama context (Tasker 2012; Castonguay 2015), with less attention to UK dramas, although *Spooks* would be the exception here (Oldham 2017; Korte 2018). Drawing upon insights from securitization studies, this paper notes the performative nature of the security logic in televisual images and looks at how the value of some forms of 'public service' are legitimized over others.

Title: Brazilian Television Drama in a Bolsonaro Era: Rights, Truths, Regression

Session Type: Individual submission

Authors:

Name: Niall Brennan

Email: nbrennan(at) fairfield.edu

Country: US (United States)

Affiliation: Fairfield University

Abstract: Since the introduction of television to Brazil and its subsequent “territories of fictionality” (Borelli, 2001: 34) invoked from European, American and other generic terrains, many scholars have attested to the capacity of Brazilian television drama to symbolically reflect the country’s modern social-political trajectory (La Pastina & Straubhaar, 2005; Lopez, 1995; Martín-Barbero, 1993, 1995; Mattelart & Mattelart, 1990; Ortiz, 1988; Rêgo & La Pastina, 2007; Straubhaar, 1985; Tufte, 2000). However, scholarship concerned with Brazilian television has also focused on how during Brazil’s military dictatorship (1964 – 1985), telenovelas and other dramatic serials drew in audiences and authorities while circumnavigating the latter’s censorship and political-moral codes (Napolitano, 2001; Porto, 2011). In the landscape of Brazilian television drama, primarily populated by telenovelas, the mini-series is noteworthy not only for its post redemocratized appearance but also for its retrospective and contemporary gazes on authoritarian Brazilian regimes, delivered through Brazil’s most popular medium (Brennan, 2015; Freire Lobo, 2000). Furthermore, the Brazilian television industry, primarily Globo, has been widely understood as backing the political paradigms of Brazil that most successfully ensure the former’s cultural and institutional success (Amaral & Guimarães, 1994; Guimarães & Amaral, 1998; Porto, 2011, 2012). This paper traces the production of recent and current Brazilian television mini-series regarding their alignment with rapid political change in the Brazilian government and in popular sentiment. It asks, what was the nature of Brazilian television drama, namely the mini-series, during the socialist Partido Trabalhador’s (PT) tenure? How has the nature of Brazilian television drama changed in anticipation of, and during, swift political and ideological change to a right-wing government? What are the characteristics of Brazilian television drama today, in a Bolsonaro era, given the Brazilian television industry’s historical migration towards political and popularly-received hegemony? And, what can we anticipate of the nature of Brazilian television drama going forward? The results of this paper find that contemporary Brazilian television drama, driven by Globo, reflects Bolsonaro-era values in which fundamentalist Christianity, patriarchy, procreation and heteronormative values, evidenced in the narratives, plots and characterizations of contemporary mini-series productions, stand in stark contrast to PT-era productions’ narratives and themes. In conclusion, this paper argues that not only does contemporary Brazilian television drama, and in particular, Globo’s dramas, reflect the sentiment of Brazil’s current political hegemony, but it also argues that the apparatus of Brazilian television drama continues to attempt to sway the ‘masses’ in historically consistent ways that have already been seen.

Title: Populist Ideological Entrepreneurs and Remix Culture: Alex Jones as Celebrity Populist or Populist Celebrity'

Session Type: Individual submission

Authors:

Name: Hilde Van den Bulck

Email: hvd26(at) drexel.edu

Country: US (United States)

Affiliation: Drexel University

Name: Aaron Hyzen

Email: aaron.hyzen(at) student.uantwerpen.be

Country: BE (Belgium)

Affiliation: University of Antwerp

Abstract: This contribution analyses the nexus between populism, ideological entrepreneurs and popular culture through the case of US radio show host and 'most paranoid man in America' Alex Jones and his infowars.com. It looks at the phenomenon of Jones and Infowars as a mix of a message based in (mostly Falls Flag) conspiracy theories and pseudo-science-meets-popular-culture phantasy, a business model appealing to his target audience of paranoiacs, and the persona of Jones as mediated celebrity and populist spectacle. It relates the ultimate rise of Jones from the margins to the mainstream as the result, first, to the political, cultural and social specifics of US society. Second, it analyses the role of media and digital platforms and, especially, of remix culture, in the success of Jones as an ideological entrepreneur.

Theoretically, the paper is based in the combined literature on political communication, ideology and popular culture, focusing on the idea of political pundits as ideological entrepreneurs (North, 1981, 1990), new and social media expressions as key ideological intermediaries and notions of the relative power of various counter cultures (Manovich, 2007).

Empirically, it studies the case of Alex Jones through a guided sample of his streamed and multi-platform distributed radio and television show and of remix culture's (Cheliotis & Yew, 2009) parodies hereof. We analyse the basic ingredients for his success as an ideological entrepreneur. As Wartzel (2017) summarises:

his wildly successful libertarian- and conspiracy-news juggernaut: Take a kernel of truth, warp it and its context in a funhouse mirror, and set it against a heavy backdrop of conspiracy, while raising the stakes with a generous dose of fear. The strategy has made Jones — a stocky central Texan with a penchant for clamorous outbursts, fanciful digressions, and meandering stream-of-consciousness monologues — a celebrity. It's also made Infowars — his broad kingdom of media properties, including a website, webstore, and four-hour daily broadcast — a required part of the far-right's media diet. Wartzel, 2017b)

We further analyse the characteristics of his audience, both the believers that follow a dominant decoding and those parodying and mocking Jones. The latter type of visitors is attracted to Jones the exuberant performer rather than the message and, thus, part of his fame comes from parodies, meme culture and remixes We argue that these are ironic spectators who do not necessarily believe in and

even oppose Jones' ideas but enjoy the entertainment of his rants and outbursts and like making fun of his man's man performances. While critical of his message, this third type of audience in fact strengthened Jones' celebrity status and, implicitly or explicitly, endorsed him as a popular culture 'innocent wacko' performer rather than an alt-right ideological entrepreneur. Overall, we evaluate if Jones' efforts as ideological entrepreneur effectively pushed his counter-hegemonic ideology from the fringes to the mainstream.

Title: Making the Post-Apocalypse Great Again: Doomsday Prepping and the Politics of Patriarchy on American Television

Session Type: Individual submission

Authors:

Name: Carlen Lavigne

Email: carlen.lavigne(at) rdc.ab.ca

Country: CA (Canada)

Affiliation: Red Deer College

Abstract: The themes of white hetero male hypermasculinity that suffuse dominant Western culture have also been explicitly associated with cowboy imagery, military narratives, and doomsday survivalism (Lavigne; Faludi; Schlatter); post-apocalyptic television combines all of these elements. Though post-apocalyptic narratives are hardly new, the glut of such television programs on American networks in the early twenty-first-century is notable—programs like *Jeremiah* (Showtime, 2002-04), *Jericho* (CBS, 2006-08), *The Walking Dead* (AMC, 2010-), *The Last Ship* (TNT, 2014-18), *Wayward Pines* (Fox, 2015-16), and *Revolution* (NBC, 2012-14) have all remixed colonial wild west stereotypes, militarized images of hypermasculinity, and gritty survivalist tropes in order to create stories congruent with a particularly conservative mode of patriarchal representation.

Building on the author's previous research, this paper summarizes recent trends in post-apocalyptic American genre television, acknowledging (limited) challenges presented by some recent series such as *The 100* (The CW, 2014-), *Into the Badlands* (AMC, 2015-), *Z Nation* (Syfy, 2014-19), and *The Last Man on Earth* (Fox, 2015-18). It further relates the themes in this science fiction subgenre to recent developments in American politics, particularly the renewed rise of populist, masculinist, heteronormative and white supremacist movements (Faludi; Osnos; Schlatter). Considering the origins of such narratives, the demographics to which they appeal, and the stereotypes they encourage helps construct a window to a particular moment in American (and world) history. While the relationship between a society and its popular cultures is inherently cyclical (Slotkin 8; Mittell 270), pinpointing a precise moment in post-apocalyptic television's evolution helps to situate it as a hegemonic tool that may serve to exacerbate or encourage "alt-right" attitudes toward marginalized groups.

Title: Globalized Nostalgia and the Politics of Place: Popular Culture in post-crash Galicia, Spain

Session Type: Individual submission

Authors:

Name: Christina Ceisel

Email: cceisel(at) fullerton.edu

Country: US (United States)

Affiliation: California State University Fullerton

Abstract: Popular culture took a populist turn globally in the wake of the 2008 financial crisis, as government agencies and local producers invested in artisanal products and practices to strengthen their positions in the neoliberal global market. Artisanal practices, local culture, and history are mobilized to signal difference, and therefore value. As such, a new “structure of feeling” (Williams, 1977) that I term globalized nostalgia, emerged.

In this paper, I explore how globalized nostalgia operated within the nation of Galicia, the region of northwest Spain, during this period. There, cultural performances of the nation became central to neoliberal development. I conducted fieldwork in Galicia between 2010 and 2014, participating in and observing local festivals, foodways, and tourism initiatives. I argue that performances of Galician nationalism rely on authenticity and heritage as a means of differentiation. Historical ties to Celtic settlement, the Camino de Santiago, and heritage practices are to construct a brand identity, attract tourism, and solicit European Union funding.

As space is made valuable through a re-entrenchment of a primordial sense of belonging, belief in an “essence” of an area can quickly slide into chauvinism. The reification of these categories masks the countervailing axes of hybridity and diaspora, which challenge appeals to a pure, primordial past. These tensions are not unique to Galicia, but they exemplify the ways in which many localities have sought to negotiate between a celebration of heritage and culture and the demands of the global neoliberal economy in the post-crash era. The political stakes of unproblematic celebrations of heritage and authenticity have become clear. In the last few years, fascist politics rooted in primordial nationalism have gained legitimacy across the globe.

Thus, I conclude that we need a politics of place that conceptualizes the local in a way that meets the challenges of global flows, and ultimately find hope for such a cultural politics within elements of contemporary Galician nationalism. Realigning the countervailing poles of authenticity+heritage and hybridity+diaspora by reconciling authenticity+hybridity, and heritage+diaspora would open spaces to develop a sense of the local that challenges the far right while accommodating the realities of our historical present.

Title: Liminal characters in advertising. A thematic analysis of Digi brand's TV commercials in Romania.

Session Type: Individual submission

Authors:

Name: Andreea Dragan

Email: dragan.georgiana-andreea(at) fjsc.ro

Country: RO (Romania)

Affiliation: University of Bucharest

Abstract: Key words:

liminality, advertising, telecommunication industry, liminal character, thematic analysis

Abstract:

Liminality is a key concept in anthropology that was first introduced by the ethnologist Arnold van Gennep in 1909 and later theorized in his work “Les rites de passage” (1960). The concept of liminality, as van Gennep presents it, refers to the state of being “in between” during the rituals of passage. In other words, liminality describes a state of being, which goes beyond the usual categories and therefore it forms a category in itself: “the in between category”. van Gennep considered that the passage rituals involved three stages: separation, threshold and aggregation. The middle stage (threshold) is the one that defines the concept of liminality, as it appears in a ritual.

This research aims to apply the concept of liminality in popular culture field, more specific, to analyze the presence of liminal characters in Romanian commercials from telecommunication industry. The relationship between liminality and advertising was a subject of interest for many other researchers. For example, Zhao and Belk (2006) analyzed China's advertising from the perspective of a liminal space of social transformation in the context of transition from communism to consumerism.

The main research question of this paper is: what are the main characteristics of the liminal characters that are portrayed in Romanian advertisements? In addition, this research aims to identify the main themes that appear in this particular type of commercials. The sample includes 10 commercials of DIGI brand — a Hungarian company that provides telecommunication services in Romania, ads aired between 2015 and 2017 on main TV stations in Romania. The main character identified in the sample is the convict — a liminal ‘hero’ by definition, a person imprisoned, being in a liminal space (the prison) and time (his penalty). In order to answer to this research questions, this paper uses a qualitative methodology — the thematic analysis. I choose this research method, as it offered me flexibility, adaptability, and it has the power of generating unexpected insights.

The main findings show that, in the particular case of the analyzed sample, the convict — the main character of the commercials of Digi brand — is clearly a liminal figure, part of the jailbirds’ category. More than that, I identified the ritual process and it’s all there stages clearly illustrated in the 10 commercials. The main theme of this particular sample is the opulence in prison — as a critique to the political Romanian class, in particular, but also to the society, in general. The ads

reflect the political context in Romania during a period when media presented many cases of corrupt politicians that were imprisoned.

Title: Watching Black Panther in Brazil: recognition and cultural critique

Session Type: Individual submission

Authors:

Name: Marcio Serelle

Email: marcio.serelle(at) gmail.com

Country: BR (Brazil)

Affiliation: Pontifical Catholic University of Minas Gerais

Name: Ercio Sena Cardoso

Email: erciosena(at) gmail.com

Country: BR (Brazil)

Affiliation: Pontifical Catholic University of Minas Gerais

Abstract: Black Panther (2018), an American superhero blockbuster, directed by Ryan Coogler and produced by Marvel Studios, was debated beyond the critical circuit which usually deals with this kind of entertainment movie. It was due to the politics of recognition operated in it, regarding the fictional representation of black identity. As Slavoj Žižek pointed out, "the movie was enthusiastically received across the political spectrum" and, for the left wing, it was hailed as "the first big Hollywood assertion of black power". Some Black Panther's reviews established articulations between pop culture and political and social aspects, referring, inclusive, to philosophers as Frantz Fanon. They suggested links between the movie and pan-Africanists theories, and identified, in female characters, the recall "of the new generation of female activists rising in Africa", as wrote Jonathan Gray for The New Republic magazine.

In Brazil, Black Panther was also received with enthusiasm, and its criticism was crossed by the politics of recognition, as developed in Axel Honneth's study *The Struggle for Recognition*. The black superhero character was celebrated as a positive identity representation in popular culture, which would contribute to strengthening the self-esteem of black youth. This paper, based on the theory of recognition, intends to study the reception of Black Panther in Brazilian cultural critique. It investigates how the issue of group identity became a value for the criticism and how it was debated concerning the context of Brazilian society.

Articulated to a symbolic order, as discussed by Nancy Fraser, the politics of recognition can act on popular culture and its representations, which circulate in our daily life and, according to Roger Silverstone, are implicated in how we strengthen (or not) our social esteem. Fictional characters, like those of Black Panther, although belonging to autonomous worlds, open possibilities for audiences to experience identities through them. In the scope of cultural critique, recognition gained, in the last decade, centrality as a perspective of analysis, and becomes a key to read media texts like Black Panther.

The corpus analyzed in this paper is constituted by reviews from the main Brazilian newspapers (printed and online versions) and cinema blogs. This paper investigates mainly two points in those texts: 1) filmic aspects that were privileged in the analyzes and how they were related, by the

critics, to recognition issues; 2) the Brazilian “reading” of Black Panther, in which the film narrative was interpreted in the light of our social and cultural issues. Paper results point to an intricate relationship between representation in the fictional work and representativeness, regarding the demand for participatory parity, in film industry, and, in general, in society. Some reviews also criticized the way in which the film discusses the question through exclusively Anglo-Saxon currents of thought, thus moving away from formation aspects of other black population in the Americas. The liberal order of that fictitious society was also criticized, since it would eventually affirm values that were predetermined by white people and their institutions.

Title: Cool Patriot---the Symbiosis of Soft Power Policy and Hip-Hop Show in China

Session Type: Individual submission

Authors:

Name: yuhui tai

Email: tai.yuhui(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chiao Tung University

Abstract: Internet and entertainment are the key to the contemporary cultural industry. The network-made variety show has also become the front line of China's Internet industry. The fierce competition and the Chinese government's emphasis on soft power policy allowing Iqiyi company obtain a valid reason for producing a Hip-Hop program. The program [The Rap of China] has become the most prominent cultural phenomenon in China in 2017. But in January 2018, the sex scandal of the champion PG ONE set off the Chinese government's purge of hip-hop culture. Through the text analysis of the first season [The Rap of China] and the second season [China New Shuo Chang], this research aims to analyze how hip hop Internet program has transformed in China. What has changed in the definition of "hip-hop with Chinese characteristics"? How does the show swing between "rebellious" and "patriotism"? How does the border shift from the first season to the second season? There are four main findings in this study: First, the terminology of the music genre has changed from "hip-hop" to "Shuo Chang". By renaming, canceling the association of music with its Western roots, and localize it by relating to another Chinese music genre. Second, the content of the first season was based on the principle of avoiding disputes. However, in the second season, it actively promoted the "Chinese style" Shuo Chang which has elements from Chinese culture and Chinese Communist Party. Third, hip-hop music was cool because of its rebellious attitude, especially the criticism about racial, class, social inequality. Nevertheless, the program gives "coolness" new definition that wearing tidal suits, behave nice, be positive and patriotic. Fourth, the second season creates the image to the world that there is no social controversies and the CCP is a popular regime by focusing on the participation of competitors from Xinjiang, Taiwan, overseas Chinese and foreigners. But when "hip-hop" was redefined to "Shuo Chang", the rebellion was replaced by positive energy, and the program that won the blushing attention with cool looks could not avoid deconstructing itself.

Title: Food making, surveillanced affect and image of home in DouYin

Session Type: Individual submission

Authors:

Name: 奕楠 李

Email: jenniferyn(at) bupt.edu.cn

Country: CN (China)

Affiliation: Beijing University of Posts and Telecommunications

Name: 佩 黄

Email: huangpei(at) bupt.edu.cn

Country: CN (China)

Affiliation: Beijing University of Posts and Telecommunications

Abstract: This article focuses on understanding one of those complicated ways in which individual uses social media surveillance technique to generate short video contents that have vast impact on people's daily socialization and entertainment. Food making and image of home in DouYin, a Chinese short video social media platform, has been chosen as the research object. DouYin attracts a great number of younger users to create and post short videos, occasionally with artistic filters and always set to music. Under the Chinese context, food making has been tightly linked with local culture, family ties and socialization. Therefore, sharing food making or good food in social media has become a way to assist individuals in self-revealing through me-centered messaging (Hodkinson 2007; Livingstone 2008; Lundby 2008) and the performers' telemediated presence (Bolter and Grusin 1999; Bolter et al. 2013). However, DouYin is also a highly surveillanced environment with algorithm operating to make an optimal content choice that can attract most attention. Surveillance practices have transformed our ways of seeing, watching, and being seen (Gangneux 2014). The everyday uses of surveillance techniques not only produce subjugation (Albrechtslund 2008) but also offer places and means for forming identities and subjectivities. Under this presumption, this article wants to analyze DouYin short videos to see how surveillance shape individuals self-expression and how individuals invest affect to make videos. A Topic called Your Memorable Flavor of Home during Spring Festival inviting individuals to create content about local food is chosen to be the case study. Visual elements in video contents will be analyzed and calculated, interviews with staff from DouYin and individual content creators will be conducted to see how the surveillanced environment provide technical skills for individuals, how individuals learn and sort out affective elements and use them, how they perform, edit and using family members to make food so as to make an attracting home image. Studies of this case intends to revealing how surveillance work to discipline users' content creating behavior, and putting forward the assumption that affect labor invested under discipline can also invoke productivity.

Title: Cross-cultural analysis on narrative aspects in three version of scripted television format Los misterios de Laura (Spain, US and Italy)

Session Type: Individual submission

Authors:

Name: Isabel Villegas-Simón

Email: isamarvillegas(at) gmail.com

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: This research carries on a case study based on Spanish scripted television format Los misterios de Laura and its adaptations in US and Italy. In particular, it explores how the narrative construction varies in each version in regard to issues of audiovisual representation and the relationship between fictions and cultural identity. The main objective of this study is to identify the differences and similarities in the narrative aspects of the three versions and to understand. To do so, this study proposes a qualitative analysis model that analyses the premise, the plots and the narrative conflicts of each version and compares them. In addition, the examination of the text is complemented by the analysis of the production context. Results show that the main similarities in the plots are linked with the characters who act them out and with the narrative beginning that is stated. However, the narrative development is different in almost all the plots. More similarities between Spanish and US version plots exist in the multi-episodic plots. Nevertheless, the Spanish version is characterized by a stronger link between the multi-episodic plots and the labour sphere of the characters, while in the US version they are more related to the friendly relationships between them. Regarding the episodic plots, it stands out that Spanish and Italian versions are more similar between them, since in both cases the episodic plots are mostly about family issues. In the crime plot that develops in all episodes of the three versions, it is observed that in the US version the crime is more procedural, while in the Spanish and Italian versions it is based on “whodunit” style. On the other hand, labour and family conflicts present more similarities between three versions, while there are more differences in the conflicts that affect to the personal and loving sphere of the main characters. In general, the analysis unveils that the main similarities between the three studied versions are the result of maintaining the traits that define the original television format. At the same time, the differences are explained by factors related to the chosen narrative approach for each case, the resources and production context and the traditional television conventions of each country. To conclude, a connection between the global and the local regarding the adaptation of the television formats is observed, where global is related to the practices and the commercial logic of television, and local is connected to the inequality between the television industries and the persistence in using cultural identity production mechanisms in television texts.

Title: Social media as technologies of micro-celebrity (hyper)sexualisation: Disruption of post-colonial continuities through sexual 'explicitness'

Session Type: Individual submission

Authors:

Name: David Katiambo

Email: dkatiambo(at) gmail.com

Country: KE (Kenya)

Affiliation: Technical University of Kenya

Name: Claudia Onsare

Email: claudioronsare(at) gmail.com

Country: KE (Kenya)

Affiliation: Technical University of Kenya

Abstract: Although Kenya is among several African countries with Christian ethic conservatism on women sexuality, affordances of digital technologies are enabling (hyper)sexualised female micro-celebrities to challenging this conservatism. Social media technologies have made it possible for average women to self-present their sexuality, create personas, initiate relations and friendship illusions with sizeable audiences in ways similar to traditional celebrities. The central argument in this presentation is that (hyper)sexualised female micro-celebrities in social media are disrupting patriarchal post-colonial continuities by reigniting women agency. Despite sexualization being blamed for objectifying women, it retains double meanings in negotiations of power relations. I pay attention to the hypersexualization that defy simple binary division into sexualization that empowers and sexualization that is objectifying. Hypersexualization by social media micro-celebrities can be seen as critical knowledge production creating a liberating prospective memory. Adopting Michel Foucault concept of "biopower", the creation of 'docile bodies', I argue that social media affordances provide opportunities for resistance in the post-feminism era. Through online ethnographic study of two leading Kenyan micro-celebrities, I trace how they are, on one hand struggling against the discourse of decency and respectability used to silence women, and on the other, creating post-feminist discourses of resistance to patriarchy. I argue against the assumption that hypersexualization is in the interest of men, proposing that non-objectifying sexuality can re-construct the prospective memory of women in patriarchal societies. In particular, I describe how micro-celebrities are trivializing and disrupting the old masculine public sphere and replacing it with a feminized private public sphere.

Title: The 'transitional' network for DIY music careers: From Taiwan through East Asia

Session Type: Individual submission

Authors:

Name: Miaoju Jian

Email: mjjian(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chung Cheng University

Abstract: In the digital age of music post-industry or entrepreneurship in the 'new' music industry, there is an emerged 'transitional' network within Taiwan and the East Asian indie music scene. Since the rise of the Internet technologies, many more independent musicians and bands have pursued their DIY music careers locally and trans-locally without the intermediary of the traditional music industry (Haynes & Marshall, 2018; Hracs, 2012; Sargent, 2009). With the intention of transiting from the amateur indie bands to the professional bands, the rising indie music networks from Taiwan through East Asia, across Japan, Hong Kong, South Korea, and China, have also envisioned a growing regional Indie music economy. Indie musicians create their music labels on SNSs of bandcamp, soundcloud, and YouTube channels, promote their music products and events, sale tickets, as well as interacting with their fans on the Internet without signing to a big record company. These bottom-up and regional networks are crucial to their music distribution and promotion.

By examining the Taiwan-based Independent bands and musicians, such as Sunset Rollercoaster, No Party For Cao Dong, and Hom Shen Hao, this article has depicted the 'transitional network' within the local and East-Asian indie music scene through the lens of the ethnographic fieldwork. On the one hand, this 'transitional network' was derived by the sub-cultural capital around a few active indie musicians and promoters. They successfully mobilized the bonded cultural and social capital around their music and image through the online social media. Then the connection transited from online to offline and bridged the networks to expand towards broader audiences from local, East-Asia, and then globally. However, when those indie bands expressed a desire to be recognized by the international fans and having tours abroad, they faced more or less the ambivalent challenges of embracing the global Mando-pop audiences and/or the global indie music audiences.

On the other hand, Taiwan's indie bands that successfully started their music careers and moved towards a transnational music market are still limited to just a few. Most of the creative laborers or creative aspirants within the indie music scene are still live in a way of the semi-professional and the semi-amateur lifestyles, and stay in the so-called 'gig economy' (Morgan & Nelligan, 2018). This article argues the multiple meanings and challenges of the transitional network which are now stirring a new independent music economy that spans from Taiwan to the East Asian regions.

Title: Cheering for the Queerly Masculine: Hollywood Superheroes Reimagined in Fan Videos on Chinese Barrage Video Websites

Session Type: Individual submission

Authors:

Name: Jingyi Gu

Email: jingyig2(at) illinois.edu

Country: US (United States)

Affiliation: Institute of Communications Research, University of Illinois at Urbana-Champaign

Abstract: Chinese fan culture has burgeoned in recent years - particularly under the influence of Japanese and American popular culture. Among the fan practices performed by the Chinese fans of Hollywood superhero films, making fan videos that centering on queer interpretations of the original films gain wide popularity. This type of fan activity locates itself in a new media form known as barrage video, which features the streaming of users' comments across the screen, superimposed on the video content. Fan vidders actively upload fan videos to barrage video websites for sharing their queer readings and interacting with other fans. In this research, taking two fan videos, "It's Definitely Not the Avengers" and "[Stucky/Evanstan] Fifty Shades of Grey Official Trailer (Humor)", as examples, I first look at both the narrative and formal elements of these two videos, focusing on how Chinese superhero fans, largely female, interpret and recount relationships between Hollywood male superhero characters in a queer way. In the second part, I approach the barrage comments attached to these two videos from a qualitative textual analysis perspective. Through analyzing these comments, I investigate the social reasons and self-motivations behind fans' active engagement with barrage videos through making, viewing, and commenting. Building on scholars' previous research about fan works (slash fictions and Japanese Yaoi novels) that focus on romantic and sexual relationships between same-sex fictional characters, I examine how gender norms and heteronormativity are contested and negotiated in these fan-made barrage videos. To address the female dominance in this type of fan practices, I borrow theoretical lenses from queer theorists including Eve Sedgwick and Michael Warner to argue that queer imaginations can also serve as an alternative outlet for heterosexual females to counter the repression of their sexualities. Considering fan videos extreme popularity on Chinese barrage video websites, I probe how the anonymous and participatory features of these platforms nurture the formation of this subculture community.

Abstract: Representations of disability have traditionally been underexplored by media studies in comparison to other axes of identity, such as gender, race or sexuality. It were mostly disability scholars (a.o. Barnes 1991, Longmore, 2003, Norden, 1994) who have made critical examinations of disability representations in popular media. These analyses often apply a – what Hagood (2017)

calls – ‘sociotextual approach’, i.e. a textual analysis based on the social model of disability. Although these analyses are very useful for destabilizing ableist ideologies and stereotypical assumptions about disability, they often make positive or negative evaluations of disability media texts, ‘without taking into account the broader context of media production, consumption, interpretation and cultural impact’ (Ellcessor, Hagood & Kirkpatrick, 2017).

According to Ellcessor et al. (2017) a productive interdisciplinary approach that brings together insights from media studies and disability studies is lacking, in order to really move our understandings of disability and media forward. Supporting this plea, two researchers from Ghent University, one with a background in media studies and one in disability studies, decided to cooperate and share their insights and perspectives, to examine a new Flemish television drama series, entitled ‘Tytgat Chocolat’. Tytgat Chocolat is a noteworthy case, because most of the main roles in this primetime television program are played by actors with intellectual disabilities.

In order to acquire more insights into the construction and representation of Tytgat Chocolat’s characters with intellectual disabilities, the researchers came up with a new analytic method, currently called ‘collective textual analysis’. As in media studies, this method considers ‘meaning’ as something which does not just reside within media texts and is passively adopted by all viewers similarly, but which is ‘negotiated’ by its readers and adapted to specific contexts, needs and pleasures. It also applies media studies’ definition of ‘textual analysis’ as ‘an educated guess at some of the most likely interpretations that might be made of that text’ (McKee, 2003). From disability studies, this method incorporates the understanding of intellectual disabilities as socially constructed, and the disciplines’ emphasis upon lived experience of persons with disabilities as an epistemological basis for making claims (Ellcessor et al., 2017).

Concretely, with this new method, researchers labeled with and without intellectual disabilities can analyze media texts collectively, thereby combining and equally valuing experiential knowledge as well as academic knowledge from different contexts and disciplines. For this specific study, which was conducted by six researchers who gathered every Wednesday afternoon in February and March 2018, scenes of the series were divided into different themes and subsequently assessed on recognizability. As a result, a model was developed for interpreting television texts on (intellectual) disabilities in relation to specific personal and socio-cultural contexts. The model incorporates possible hegemonic as well as resistant meanings of media texts. During a paper presentation we would like to reflect upon the strengths and weaknesses of the applied method, and also elucidate the model we developed based on this specific case

Title: Visual Aesthetic of the Urban Poor (Video presentation)

Session Type: Video Submission

Authors:

Name: Aayushi Bengani

Email: aayushibengani(at) ymail.com

Country: IN (India)

Affiliation: Tata Institute of Social Sciences (TISS), Mumbai

Abstract: Slums in Mumbai are a rebuke to the grand narrative of the city. Absorbing migrant labour from all across the country, these settlements tend to become habitats of multi-ethnic organisation, nourishing multifaceted identities and relations. The hitherto dominant imagination of the slum as a space of disorder and decay has given way to a popular social imaginary that sees it as a space of community, enterprise and creativity (Jones, 2015). Perceived as a world free of state control, these spaces are often understood as a repository of culture and authenticity, making for a much more interesting city within the city (Dovey & King, 2012).

The beauty, sought by Benjamin in the ugliness of the torn-up landscape and people of Marseille and Naples, does not just continue to signify but hold the soul and the future of the city (Jeffries, 2015). It isn't about mere physical beauty of shape, size, colour of the desolate universe of the poor, but "the wickedness, the ruggedness, the smelliness of the living room reappearing on the street and the street migrating into the living room" that has become a general object of aesthetic contemplation and visual pleasure (Jeffries, 2015).

As popular representations of the slum continue to capitalize on the exceptionality of both the unknown and the mundane (Durr & Jaffe, 2012), the resultant explosion of attention and intervention afforded to it has turned the slum into "a theatre of inflammatory rhetoric, thuggery and spectacle" (Hansen, 2001). The continuous production of the slum suggests that it has been thoroughly commodified, ritualized and aestheticized, and serves as a site of redemption of the industrial metropolis (Sorkin, 1992). Following Debord (2002), it is, thus, argued that it is the spectacle of the slum that is imagined, circulated and acted upon (Jones, 2015).

Much of the published literature on the relationship between aesthetics and urban poverty is within the frameworks of authenticity and ethics and art and politics, with a focus on the aesthetics of the slum (Jones, 2012). The research, thereby, calls for an imperative to go beyond the conventional frameworks of representation and aesthetization and look instead at the slum as an aesthetic within the theoretical framework of spectacle. It, therefore, draws on Debord's (1955) framework of psychogeography to study the hyper visibilized and spectacularized urban space of Mumbai.

Within the psychogeographical framework of derive, the research uses the lens of Mumbai Paused, a visual document of the city's marginalized spaces on Instagram, to make sense of the division of city into, as Debord (1955) puts it, "zones of different psychic atmospheres". The video presentation draws connection between the city, poverty and aesthetics with the help of visuals and sounds put together in a documentary style. It challenges the popular cultural understandings of the

urban experience of poverty from the realm of spectacle. Pursuing the method of derive, it holds potential to reflect on and innovate the pedagogy of studying urban marginality and geography.

Affiliation: University of Kentucky

Abstract: In June 2016, Duncun Jones's Warcraft made its debut in theatres across the globe. The much-anticipated blockbuster met with scorching reviews by critics and was declared "a death of 1,000 cuts" by its director in reference to its abysmal box office performance, which collected \$46 million in its first month in North America. This would-be debacle, however, was salvaged by its performance in China, where it pocketed \$220 (more than half of the global box revenue), a country that happens to host the majority of WoW players.

The hybrid practice of producing movies based off on video game content/characters represents an emerging trend of the entertainment industry in monetizing the "performance of narrative, affect and identity of avatars" (Kerr, 2017; Owen, 2017). How this attempt of integrating "playing" (in video games) and "performing" (in movies) actualizes among fans/players, however, varies vastly, as shown in the mixed fortunes of past game-derived movies, Warcraft being one of them. The Warcraft screening provides such an ideal case for this line of interrogation.

Our overall purpose is to investigate how individual experiences in the game world affect their view outcomes and personal evaluations of the movie. We are interested in finding out how mode of gameplay is related to appreciation of movie content and specific movie characters; how prior perceptions/identifications with specific characters affect enjoyment of the movie; how performance in the movie corresponds to or runs counter to individual expectations; and how watching the movie has impacted their subsequent game play experience. As a way to maximize richness of descriptions and depth of data, we resorted to semi-structured in-depth interviews approach in gathering the data. We designed a set of questions for gathering player/fan perspectives, mainly comprising inquiries into topical lines to answer the questions we raised above. Informants (n=70) were recruited from multiple cities across China, and interviews were recorded and transcribed for further analysis.

Our findings are presented along four main areas of concentration are: 1. How prior gameplay experience affects movie enjoyment in terms of both plots and characters; 2. What commonalities and differences they see from the game characters and the movie characters; 3. Which single character they identify the most in the game and in the movie respectively, and what changes they would make in the movie with that character; 4. How playing the game differs from watching the

movie, and how the two experiences related to each other. Results indicate that players' previous game experience determines their movie enjoyment from relating to story narratives to character identification, and nostalgia plays a big role in one's decision to cinema-going. Group play (e.g., Guilds affiliation and play pals) is an important driver into the mode of movie-seeing, which subsequently affects peer discussions of the theater experience. We also looked in depth at two types of special audience: those who went to the theater more than once, and those who went to the movie but had no gameplay experience.

Title: The "Greek crisis" in Europe: Race, Class and Politics

Session Type: Individual submission

Authors:

Name: Yiannis Mylonas

Email: ymylonas(at) hse.ru

Country: RU (Russian Federation)

Affiliation: National Research University Higher School of Economics

Abstract: As is generally known, the latest major economic crisis of global proportions started in the USA with the credit crunch of 2007-8. Ten years later, in 2018, critics note that the crisis is not yet resolved, with a new – and potentially more serious – one pending. Along with the economic crisis, a broader and multifaceted crisis with political, ecological and social dimensions is advancing, with capitalism being the root cause of it.

The study of the media is one important dimension in the analysis of the crisis, its politics, and its culture. In today's liberal democratic states, it is through the mass media that the policies predicated to alleviate the crisis are publicly explained and legitimised in order to be applied. Studies have shown that the media heavily relied on the official version of the crisis, as articulated by the leading politicians of the most influential states, as well as by technocrats and economists. In the Eurozone crisis context, the media heavily relied on cultural and class stereotypes to explain the causes of the crisis. In this regard, Greece, the Eurozone crisis' epicentre, was mercilessly targeted by mainstream media, and received highly negative, and largely misleading, publicity over its crisis. The spectacular bashing of the Greek people, and especially its working class, paved the way for austerity to unleash an unprecedented assault on the Greek citizens' social, political and human rights while plundering public and private wealth under the pretext of repaying the debt. At a public level, austerity took on a punitive form for appeasing the "hard-working Europeans".

Simultaneously, austerity was also presented as not just rightful, but also, most significantly, the only available policy doctrine to overcome the crisis. The iteration of racist and classist stereotypes by the mass media has been integral to the public legitimization of austerity.

A political economy analysis of the capitalist crisis and austerity offers a systemic understanding of the matter, beyond the hegemonic culturalist and moralist frames constructing the crisis, its causes, and its solutions. It also exposes the propagandistic character of the public construction of the crisis and austerity, which creates a public consensus on neoliberal reforms and their effects on society and democracy, presenting them as necessary and as without an alternative, while blaming the poor and the working class who are those that are struck by the crisis and austerity the most.

This study of the Greek crisis publicity in the EU is based on the analysis of newspapers, journals, as well as news and lifestyle websites from the EU countries of Greece, Denmark, and Germany, which represent main center-periphery dichotomies in the EU. The study focuses on conservative and liberal media because they represent the most dominant voices in the national public spheres of Europe, iterating and reproducing the prevailing crisis' explanations. The analysis is based on three interrelated themes: race, class and neoliberal/technocratic politics. These main themes are further developed through the relevant critical theoretical advances and are analytically disclosed through discourse analysis perspectives.

Title: Associated Press and the Political Economy of Attention

Session Type: Individual submission

Authors:

Name: Lee Artz

Email: artz(at) purdue.edu

Country: US (United States)

Affiliation: Purdue University Northwest

Abstract: Global news agencies remain the primary producers of news and information for the world. The largest news agency Associated Press (AP) has some 250 news bureaus in 120 countries, with a net income of almost \$200 million. Yet, despite its size and reach, AP may be the least investigated news media organization. Indeed, AP is seldom mentioned or else appears as background in media studies of news framing, agenda setting, and political economies of the media industry.

This contribution provides the first political economy case study of the structure, functions, and cultural effects of AP to offer some initial observations on global news agencies and their impact on communication and citizenship. To illustrate, a content analysis (sources, frames, contexts) of AP coverage of the Saudi-US war on Yemen is included with the case study. Findings reveal that AP content relies on normative journalistic frames comprised of “legitimate” sources, ideological identifiers, and selective omissions. Evidence also shows that AP copy shortens messages, emphasizes spectacle, and privileges “breaking” news over news context and consequence. Further, as a vital part of a transnational media political economy dedicated to overwhelming human attention and selling news as commodities, AP releases are routinely limited to sensationalist headlines, sound bites, and heavily dramatized events for global sales and distribution.

AP’s drive to attract more attention crushes the news. The result has been more news clutter, more news stimulation, and more transnationally hegemonic news frames. As the primary news producer and distributor on four continents, AP thus contributes to reducing public discourse and promoting transnational corporate interests.

Title: Lost in Translation' Public Policy Input and the 2017 Net Neutrality Repeal

Session Type: Individual submission

Authors:

Name: Pawel Popiel

Email: ppopiel(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: Although independent regulatory agencies overseeing communications are shielded from some of the political pressures that other political institutions face, they have obligations to the public interest and, thus, to the public. Addressing media problems, many of which have to do with exclusion and inequality, requires a fair and representative process. A growing strand of scholarship examines the politics underlying media policy formation, including the dynamics between various stakeholders and the role of public participation in policymaking (Brown & Blevins, 2008; Freedman, 2008; Gangadharan, 2009; Van den Bulck, 2012). Rather than focusing on policy outcomes, such analyses prioritize questions about opportunities for input, and fairness and legitimacy of the process that yields policies that should serve the public interest. This paper builds on this work by examining the role of the public in media policymaking through the lens of the Federal Communications Commission's (FCC) 2017 repeal of net neutrality regulation in the United States.

Although the legal and administrative rules contouring policymaking at the FCC define a space for public input, asymmetrical power dynamics between policy stakeholders, particularly in favor of industry elites, curtail both public participation and influence. Nevertheless, notable historical instances of media reform efforts suggest that, despite these asymmetries, in critical junctures the public has exercised influence over media policy issues (e.g. Horwitz, 1997; McChesney, 2004; Pickard, 2014). Against this historical context, drawing on news reports and government documents related to the 2017 repeal, the case study sheds light on both the structural and actively political limits on public influence on the policy process. To provide a partial explanation for why public input was largely ignored in this proceeding, this paper invokes and develops the concept of "translation," a discursive practice by political and civil society actors that involves engaging, soliciting, and amplifying public input in the policy sphere (Gangadharan, 2013).

By shedding light on the deeply embedded vulnerabilities of the policymaking process to capture, the study emphasizes the need for structurally sound and resilient regulatory processes as key to the legitimacy of the policy decisions they yield. The case also serves as a reminder that, despite requests for expert input, technocratic language, and purported objectivity, the policy process is fundamentally political, and efforts to mask that are a political decision. Ultimately, while media policy scholarship often focuses on problematic policy outcomes, such as impoverished public journalism or growing media consolidation, too little falls on barriers to public participation in policymaking processes as well as ones specific to various, especially marginalized publics (Perlman, 2015). Yet a fairer, more robust, more representative, and more pluralistic system for

public participation in policy debates impacting the quality of social and political discourse remains essential to more egalitarian media policy.

Title: From Europe with Love' The Dutch and British Press on Noam Chomsky

Session Type: Individual submission

Authors:

Name: Tabe Bergman

Email: Tabe.Bergman(at) xjtlu.edu.cn

Country: CN (China)

Affiliation: Xi'an Jiaotong-Liverpool University

Abstract: The linguist Noam Chomsky is the most-cited social scientist alive. Much of his scholarly and public recognition stems not from his linguistic work, but his political writings. Half a century ago, in 1969, Chomsky published his first political book and became a prominent American dissident. To date about twenty books assess Chomsky's life, career and politics. They fall into two categories. The largest one consists of explanations and defenses of Chomsky's work by authors who support his analyses. These works contain some critical remarks, but aim to promote Chomsky's reputation and spread his views (e.g. Edgley 2000, 2015; Otero 1994; McGilvray 2005, 2013; Rai 1995; Salkie 2014; Smith and Allott 2016).

Barsky's biographies (1997, 2007) are the best-known books in this category. For all their merits, they are flawed in that they present Chomsky's positions and version of events, often without conducting appropriate fact checks (Shalom 1997). The other, smaller category consists of books by Chomsky's political opponents. These works are flawed because of the frequent distortions of Chomsky's views and a lack of factual basis for the criticisms (e.g. Collier and Horowitz 2004; Knight 2016; Sampson 1979).

No books or other research that discuss Chomsky's politics have systematically investigated the media reception of his work, with one exception. Yet many authors make statements on the media's treatment of Chomsky's political writings (e.g. Barsky 2007: 52). Chomsky's supporters have tended to adopt his perspective on the topic: the American media have almost completely ignored him, and when they do pay attention, they harshly criticize him, whereas many foreign media have paid him more (positive) attention. Chomsky-supporter Sperlich (2006: 10) argues on the basis of one example that European media have also been dismissive.

Thus the characteristics of the media reception of Chomsky's political work are contested. The only systematic analysis shows that the version advanced by Chomsky and his supporters is flawed. It establishes that until 1975 five mainstream American newspapers, especially the New York Times, frequently discussed Chomsky's political writings, and that their commentary from 1969 to now has quite frequently been quite positive (Author, 2017).

By way of a content and discourse analysis of the commentary on Chomsky from 1969 until 2019 in British newspapers (The Guardian and The Times) and Dutch newspapers (de Volkskrant and NRC Handelsblad), this paper examines the volume of attention given to Chomsky in the British and Dutch press. Furthermore, it identifies differences in the volume of coverage over time and between the two countries; it assesses the value of the media's main points of praise for and criticism of Chomsky's political writings; and it infers the newspapers' own ideological limitations from their commentary on Chomsky's political writings. Thereby the paper adds an important case study to the literature on the coverage of dissidence (Gans 1979; Gitlin 1980; Hallin 1989;

Tuchman 1972). The paper finds that the New York Times covered Chomsky more extensively and positively than its British and Dutch counterparts.

Title: Transportation and Smart City Imaginaries: A Critical Analysis of Proposals for the USDOT Smart City Challenge

Session Type: Individual submission

Authors:

Name: oscar gandy, jr.

Email: oscar.gandy(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Name: Selena Nemorin

Email: s.nemorin(at) ucl.ac.uk

Country: GB (United Kingdom)

Affiliation: University College London

Abstract: Scholarly attention to the development of “smart cities” around the globe has been focused on the nature of these cities, as well as visions of the futures that these developments would provide for individuals, communities and institutions (Gabrys, 2014; Hollands, 2015; Zook, 2017). Much of the research about these information-intensive projects has been focused on the description of these cities in terms of their primary socioeconomic goals and on the influential roles in their development being played by globally active information technology firms (Kitchin, 2014; Wiig, 2015; Rossi, 2016).

An important, but under-explored focus of this research has been an examination of how local and regional governments have envisioned these projects (Chourabi et al, 2012; Kitchin et al, 2015). This paper responds to that challenge through an analysis of proposals submitted by 78 American cities to the U.S. Department of Transportation’s (USDOT) Smart City Challenge.

The analysis begins with an identification of the kinds of descriptive frames that have been relied upon by the applicants to justify their selection as finalists and ultimately winners of this competition. While there are many different frames and points of emphasis that a participant city might choose, we selected a subset identified within the critical literature as being focused on the likely impact of these projects on the underclass (Li et.al, 2018; Vanolo, 2014).

Among those frames, we emphasize those focused on population subgroups defined by age, race and minority status, as well as their identification as disabled, disadvantaged or underserved. Because this literature also stresses the importance of decisions regarding the use of transaction-generated information, as well as that derived from the analysis of social media, the association of these frames with references to privacy and trust are also included.

In an attempt to identify the socioeconomic and political factors that both predict and explain the special character of these proposals, we examine the correlations between references to the terms that serve as anchors of our analytical frames, and measures of the racial and economic status of these cities, or regions in which they are located. Structural measures, such as the proportion of

African Americans, levels of poverty and economic distress, and the extent of racial and economic inequality within these areas emerged as the best predictors of the frames being used within these proposals. Because these proposals necessarily reflect the policy agendas of the USDOT, including those related to civil rights and environmental justice, a comparative analysis of the changes made in the initial frames used by the seven finalists is developed.

We conclude with recommendations for the kinds of research and analysis that should be pursued to extend our understanding of the factors that shape these designs for the future of cities and the well-being of those who will make their homes within them.

Title: Cracking under pressure: current trends in the global advertising industry

Session Type: Individual submission

Authors:

Name: John Sinclair

Email: j.sinclair(at) unimelb.edu.au

Country: AU (Australia)

Affiliation: Honorary Professorial Fellow, School of Culture and Communication, University of Melbourne

Abstract: In the golden age of mass media, the world-wide advertising industry was composed of a stable, interrelated triumvirate of corporate interests: the advertisers, who were the prime movers; the advertising agencies, who brokered media time and space, and created advertisements on behalf of their advertiser clients; and the media, who had organised their assets so as to derive maximum benefit from their command over audiences. In the social media age, these institutional arrangements have been subjected to fundamental challenges – ‘disruption’ is the buzzword – notably by the rise of digital advertising, and the dominance of Google and Facebook as the major architects and beneficiaries of this shift. Because advertisers can now buy space directly from these and other digital platforms, advertising agencies now find themselves ‘disintermediated’: they are the middle-men who have been cut out. At the global level, where the advertising industry, and marketing communications in general, has for decades been organised under a handful of holding groups, there has been a proactive response as these behemoths have launched themselves into ‘ad-tech’, buying up companies with the highly technical skills and services now required to place and manage advertising in the age of the algorithm. However, as this paper will outline, the advertising industry as we have known it is facing other pressures, quite apart from their struggle to stake their claim in the ad-tech landscape. Given the shift in balance towards the technical rather than the more traditional creative side of the advertising business, the agencies find themselves in competition with the global management consultancies, who have now enabled themselves to offer advertising services to their established lists of corporate clients. On another front, over the last decade, there has emerged a trend for major advertisers to confront the agencies on their own turf by bringing at least some of their advertising functions ‘in-house’. In general, these clients have continued to retain their external agencies, but are motivated to save on costs and maintain control over their brands by setting up their own internal creative agencies. Finally, there has been one other ongoing and serious challenge to the comfortable manufacturing-marketing-media relationship of decades past, and this has been an entirely self-inflicted ‘own goal’. Since 2015, there have been revelations that the agencies had been taking hidden commissions from media owners, and/or buying advertising space in bulk and selling it to their clients at an undisclosed margin. These practices have resulted in a crisis of trust between clients and agencies, and exposed the fiction that advertising agencies serve as ‘agents’ of their clients. With this foundational relationship having been undermined in such a way, fissures are appearing in the elaborate edifices that the global holding companies have built over past decades.

Title: Anthropocenic Global Capitalism: Conflicts and Crises of Time

Session Type: Individual submission

Authors:

Name: Wayne Hope

Email: wayne.hope(at) aut.ac.nz

Country: NZ (New Zealand)

Affiliation: Auckland University of Technology

Abstract: Evidence from geology, climatology, atmospheric chemistry, geochemistry and oceanography suggest that the earth has experienced a historic step-change in the relationship between human species and the natural world. In Anthropocenic terms human action and earth dynamics have converged; they can no longer be seen as disparate entities. Human inhabitants of the planet have perpetrated, and are facing, unprecedented environmental shifts. They include – biodiversity loss, anthropogenic climate change and disruptions to the carbon cycle and nitrogen cycle. In a warmer world and an impoverished biosphere multiple risks emerge: melting ice flows, rising ocean acidity, extreme weather events, damage to agriculture and unequal social suffering. Most centrally, it is now evident, in retrospect, that the switch from organic surface energy to an underground fossil energy has intertwined the time of earth with the time of human history. The convergence of these different kinds of historical time was prefigured by the externalisation and instrumentalisation of nature as a resource for humanity.

Understanding the capitalist relations of power involved here requires that we re- rethink industrial capitalism in the historical context of a world system built upon unequal socio-ecological exchange between core and periphery. From a critical political economy perspective contemporary global capitalism has intensified the anthropogenic feedback loops associated with CO2 emissions and climate change and universalised organisational frameworks of profit extraction and socio-ecological destruction. However, this is not a smooth, seamless operation. I will argue that anthropogenic global capitalism is riven by time conflicts associated with the earth system and capitalism along with those associated with climate change and greenhouse tipping point scenarios. On the basis of these insights I will further argue that three trajectories of crisis can be derived from anthropocenic global capitalism. Inherent to each extrapolation of crisis is a specific kind of intra-epistemic time conflict. These are- reflexivities of panic versus chronologies of disintegration (time reckoning), continuist versus catastrophic futures (temporality) and catastrophe for all versus catastrophe for some (coevalness). I conclude by assessing the efficacy and popular resonance of these conflicting crisis scenarios.

Title: Digital Labor: concepts, theories, and an ethnographic study of Chinese IT programmers.

Session Type: Individual submission

Authors:

Name: Fei Huang

Email: huangf18(at) mails.tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University

Abstract: The development of information technology has supported the establishment of informational economy system, triggering the production mode to shift from Fordism to post-Fordism. During this process, what should not be neglected is the mass group of digital labors who sustained this big digital system, and they have, together with information commodities, becoming significant parts that constructed the global information value chain. IT programmers consist one type of digital labors.

This paper will study how transformations in the attributes of work have taken place through the process of digitalization, through revisiting key theories and concepts, including Karl Marx's labor theory of value, and Smythe's audience commodity, as well as a critical evaluation of the social context.

This paper also includes a case study on the programmers, who are the key players in the IT industry. The labor process and characteristics of the bottom level programmers in China will be studied, through the application of Karl Marx's labor theory of value, with the methods of network ethnography and content analysis. It is discovered that the other side of the flexibility of work is instability, and the surplus value created by the programmers are absorbed in a hierarchical way by the industry value chain, also this programmers group have shown a worship of digital skills online.

The theoretical study and case study will both be meaningful in understanding this dialectical issue: does technology bring people freedom, or on the contrary, it brings people alienation? Taking the perspective from political economy, we have to admit there is alienation happening in the area of labor and work, in the arena where capital is trying to expand itself and to communicate all areas of things. There are two paths that may drive us to another version of future: one is the strengthening of social welfare system, such as universal basic income for digital labor; the other is the promotion of dot-communism which turns the digital world as real commons that is owned by all.

Title: The Environmental Costs of 'Platform Accumulation': Contributions to the Political Economy of Streaming Infrastructure

Session Type: Individual submission

Authors:

Name: Vincent Manzerolle

Email: vmanzero(at) uwindsor.ca

Country: CA (Canada)

Affiliation: Department of Communication, Media and Film University of Windsor

Name: Leslie Meier

Email: l.meier(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: School of Media and Communication University of Leeds

Abstract: The popularisation of streaming media has given rise to new methods of promoting and recommending video content (via algorithms), and encouraged notable shifts in the sites (via mobile phone, laptop) and modes ('binge-viewing') of consumption. Similar to many traditional media industries, online video services are financed largely through advertising revenue, with subscription fees playing an important role for some. Within this new media ecosystem, however, digital 'platforms' (e.g., YouTube, Amazon) serve as central mechanisms of capital accumulation and key levers of power. Crucially, video hosting services (and myriad other platforms) are supported by cloud computing platforms and server farms typified by Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform. The focus of this paper is this seemingly invisible infrastructure that powers modern streaming practices. We examine the political economy of the data server and the cloud computing sector, focusing on: the ways this internet infrastructure governs the power relations between 'old' and 'new' media industries; the environmental implications of reliance on resource-intensive data centres and server farms; and what the modes of capital accumulation characteristic of streaming media reveal about mutations in contemporary capitalism more broadly. In this era of high-def streamable video content and video advertisements, wherein services ranging from Netflix to YouTube to BBC iPlayer offer massive video catalogues to users, the infrastructure that drives the smooth functioning of on-demand, 'always on' content is playing a defining role in the digitalisation of the media industries.

Building on Harvey's concept of 'flexible accumulation' (1989), we develop the notion of 'platform accumulation' to conceptualise the changes that have accompanied the rise of platforms and the streaming infrastructure that underpins them - shifts we understand as an acceleration and intensification of earlier post-Fordist reconfigurations of capitalist systems of production and consumption. Under platform accumulation, cloud/server infrastructure enables the storing of data about user behaviour, the harnessing of 'network effects', and the ability to provide digital content when requested and to 'push' content - the sources of platforms' power and profitability. The energy demands and ecological costs tied to the need to increase content storage, serve up content with the lowest latency possible, and meet peak demand are typically far removed from the imaginary of everyday consumers, as are the role of data servers and cloud platforms in the digital

media environment. Our critical analysis brings together research on internet-distributed television (Lotz 2017), media infrastructures (Parks and Starosielski 2015), and the environmental impacts of media (Starosielski and Walker 2016) in order to explain and evaluate the implications of the digitalisation of video content.

Title: Alt.Latino and the Subversion of Public Radio

Session Type: Individual submission

Authors:

Name: Christopher Chavez

Email: cchavez4(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: As NPR, the flagship public radio network in the US, approaches its 50-year anniversary, the network is facing an uncertain future. The average NPR listener is 65 years old, which means that the network is pursuing an audience that is older and whiter while the population at large skews younger and more ethnically diverse. In an effort to change course, NPR is looking at digital technology as a way for NPR to maintain its relevance. Specifically, NPR has invested heavily in podcasting as a way to deliver narrowcast, personal media to different segments of the American public. Using a case study of NPR's podcast Alt.Latino, we examine the industrial conditions that enable counter-hegemonic discourses to occur on public radio podcasting. Launched on July, 2012, Alt.Latino showcases Latino music from across the globe. In doing so, the show traverses a number of boundaries, blending not only politics and culture, Spanish and English, but also multiple music genres in an effort to tell a story. I ground this study in Critical Media Industry Studies, an approach that focuses on the economic goals and logics by which large-scale media industries operate, while accounting for the ways in which individual cultural workers negotiate and sometimes subvert the constraints imposed by institutional interests.

Title: Digital Disruption: Rethinking the State of the Video Game Industry Structure

Session Type: Individual submission

Authors:

Name: Randy Nichols

Email: rjnic(at) uw.edu

Country: US (United States)

Affiliation: University of Washington Tacoma

Abstract: For much of the video game industry's history, the structure of the industry has been relatively stable, with a small number of companies maintaining oligopoly control over the industry. These companies maintained their control through the creation of hardware - typically consoles - and by serving as the gate-keeping publishers of software for those consoles (Williams, 2002). While there was some change in the companies involved, the industry remained relatively stable for more than twenty years. However, over the last five years, this stability has been disrupted via new technological platforms, particularly the rise of smart phones, and methods of digital distribution. As Nichols (2014) noted, the game industry can be viewed as the result of the interplay between game audiences, the policy and regulatory environment, and the methods of production and interrelationships within the industry. As such, a change in one of those areas tends to require a change in another. Digital distribution, particularly tied to smart phones and other mobile devices, has not only allowed new companies - often, though not always, global giants - like Apple and Google to become key players in the industry. Crucially, such changes result in significant differences across global markets, presenting opportunities for new markets even as they exploit significant labor and environmental differences. (Nichols, 2013; Zackariasson & Wilson, 2012). Building on Kerr's (2017) analysis of the changing games industry, this study examines the current state of the video game industry, focusing on the changes in the major players, platforms of play, and emerging audiences in order to discuss the problems posed by the new industrial formation and the challenges it poses to competition, policy makers, and audiences.

Title: Cultural politics of the creative economy in Canada: A case study of 'Creative Canada'

Session Type: Individual submission

Authors:

Name: Taeyoung Kim

Email: tka49(at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: Nowadays, the term creative economy has become a mainstream development policy framework in many countries, expecting to restructure their economies to post-industrial ones. In that sense, restructuring their economies to post-industrial ones, expecting the convergence of culture and technologies in the digital era (Hesmondhalgh & Pratt, 2005; Flew, 2012; Newsinger, 2015). Despite its growing use in development policies, however, both definitions and efficiencies are in question and criticized by scholars (Kong, 2014; Banks, 2017). Moreover, the creative economy is criticized by instrumentalizing and exploiting cultural goods and services for economic imperatives, which coincides with neoliberal doctrines (Throsby, 2010). That being said, this study is based on preassumption that the meanings and implementations of this term are dependent on distinctive institutional and national dynamics (Fung, 2017). If so, it becomes too complex to explain the rise of the creative economy with neoliberal tenets.

In this regard, this paper examines the Canadian federal government's initiative called 'Creative Canada' as a case study. By analyzing governmental reports and its relation to existing cultural programs managed by provincial governments, it investigates the meanings of the creative economy in the Canadian context. Based on the analysis, it finds that the Canadian case of the Creative Economy reflects the path dependency of the nation's cultural policies. The distinctive nature of Canadian cultural policies and its industries invite a different interpretation of this neoliberal instrumentalist idea. While the case of Creative Canada shows off the Canadian state's distinctive implementation of the creative economy, its findings also counter some skepticisms of the state's roles in the era of globalization and the neo-liberalization of global markets.

Title: The Global Internet: An "Incoherent Empire"

Session Type: Individual submission

Authors:

Name: Jack Qiu

Email: jacklqiu(at) gmail.com

Country: HK (Hong Kong)

Affiliation: the Chinese University of Hong Kong

Abstract: What constitutes the global Internet? How did it begin, under what circumstances, with what politico-economic and spatial patterns -- in not only the Silicon Valley but also the former Eastern Bloc and the developing world -- which to this day continue shaping this planetary media system, the largest of its kind that humanity has come to possess? Building on a forthcoming chapter by the author, this paper provides a panoramic discussion and critical reflection on the structural and historical patterns of the global Internet from several anchor points: infrastructure, labor, geography, culture, governance, and models and practices of alternative development.

The beginning of the Internet is often traced to the ARPANET of the US military-industrial complex, an understanding that justifies the narrow view of the Internet as a project of global capitalism and Pax Americana. This paper, however, contends that this conventional wisdom is partial and does not hold up to scrutiny if we consider recent volumes on the Internet's non-US origins in Chile (Medina, 2011), China (Wang, 2014), and the Soviet Union (Peters, 2017); if we examine internal contestations against imperialism within the US at the very heart of the Silicon Valley (Hu, 2015), and the repetitive failures of US military and civilian projects since the Vietnam War (Edwards, 1996; Pellow and Park, 2002; Greenfield, 2017).

Drawing on a new body of global literature and the author's field research and action research in Asia, this paper takes a materialistic approach to assess the contemporary complexities of the Internet: the Northern infrastructural biases vis-a-vis the phenomenal technological diffusion especially in the Global South; deterritorialized space of information and capital flows vis-à-vis resurgent nationalisms and fundamentalisms; the tempo of rapid consumption set by corporate giants vis-a-vis incessant social movements for environmental justice and labor sustainability; the authoritarian tendencies toward centralized surveillance platforms vis-a-vis multi-stakeholder democratic decision-making frameworks from WSIS and Marco Civil to platform cooperativism. The global Internet faces numerous structural contradictions. Probably the only way to summarize the current situation is to borrow Michael Mann's phrase: the global Internet today is an "incoherent empire" (2003).

In sum, the main arguments of this paper are that (a) it is excessively simplistic to see the global Internet as an instrument of neoliberal capitalism; (b) in reality, the global Internet is better understood through the many crises it faces and helps to precipitate, be they consumerist and environmental or nationalist and geopolitical; and (c) the global Internet is the site of many struggles and the tool of many movements for social justice, equality, sustainability and a better world.

Title: How Governments Privatize ' The Sell-Off of the East German Press in 1990/1991

Session Type: Individual submission

Authors:

Name: Mandy Tröger

Email: Mandy.Troeger(at) ifkw.lmu.de

Country: DE (Germany)

Affiliation: Ludwig Maximilian University of Munich

Abstract: Based on extensive archival research, this paper looks at the privatization of the East German press and shifting ownership patterns. The leading question is in how far the democratic potential that existed in the moment of revolutionary change in 1989/1990 found its institutional and/or political implementation in the post-socialist East German press. Contrary to current research (Haller, Puder and Schlevoigt 1995; Schneider 1992, 2002), it takes a political economy perspective in analyzing the tensions between the normative role news media hold in a democratic society and the imperatives of a newly developing, or rather established expanding Western market economy.

Next to issues of sales and distribution, the acquisition of newspapers became a major battle field among different (Western) interest groups. In particular financially strong West German publishers secured their future market shares, as early as spring 1990, by means of preliminary joint venture agreements primarily with the fourteen former regional papers (Bezirkszeitungen) of the Socialist Unity Party (SED) – privileged, mass-circulating papers with quasi-monopoly positions in their respective regions. When in August 1990, the privatization of these papers fell to the public administrative body and trust agency Treuhandgesellschaft (THA), it merely followed these pre-established joint ventures and did not, as was the initial reform goal, break their monopoly structures. The THA thereby enabled centralized newspaper monopolies, once established under a political dictatorship, to continue for market reasons. This resulted in a dying of newly established local papers and a highly concentrated press market. This happened with the full knowledge of the federal government that gave lip-service to the importance of a free local press but did nothing to protect or support it.

While the archives of the THA are still closed, this paper gives first archival glimpses into the struggle of local press initiatives and their consistent plea against dominant market practices of the former SED regional papers, the disinterest of the THA and the compliance of the federal government in it.

Title: End of empire' Communication surveillance, imperialism, anti-imperialism and sub-imperialism in the post-Snowden era

Session Type: Individual submission

Authors:

Name: Jane Duncan

Email: jduncan(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: In his historic account of intelligence liaison between the major imperial superpowers, Adam Svendsen argued that after the huge costs of having engaged in two world wars, the United Kingdom (UK) pursued an 'end of empire' approach, withdrawing from direct control of their former colonies (Svendsen 2012). In its colonial phase of imperial expansion, the UK preferred to under-develop the intelligence capacities of its colonies, to prevent them from becoming a threat to its interests. However, as it withdrew, the UK assisted its dominions to form intelligence agencies, while keeping them under close scrutiny. Intelligence liaison became the preferred method of continuing to exercise global influence (O'Brien 2011: 16-72; Svendsen 2012). Possibly the most significant intelligence liaison network is the Five Eyes network of countries, which was formed by the United States (US) and the UK in the wake of the Second World War.

In the wake of former National Security Agency (NSA) contractor Edward Snowden's revelations about mass communication surveillance abuses in the Five Eyes countries and beyond, the Five Eyes network is being challenged by a new global bloc of countries with a greater orientation towards the global South, BRICS (Brazil, Russia, India, China and South Africa). While mainly an emerging trading bloc, BRICS has attempted to position itself as an alternative to the dominant surveillance relationships of the Anglosphere, aspiring to protect their citizens from unwarranted surveillance by these superpowers, and offer new models of human rights-based internet governance (Thussu 2015: 242).

Svendsen's argument raises some questions. In the wake of Snowden's revelations, to what extent do contemporary surveillance relationships suggest that empires have indeed ended, or to what extent is surveillance being used to perpetuate imperialist relationships, including colonial ones? To the extent that they do, can the realignment of global power towards the BRICS alliance provide countries that have been at the receiving end of imperial power with an alternative, progressive pole of attraction that charts a different path on surveillance? Using documents leaked by Snowden, the whistleblower site Wikileaks and international non-governmental organisation Privacy International's Surveillance Industry Index, as well as insights from investigative journalists on signals intelligence, this paper suggests some answers. These questions matter because, if dragnet surveillance is perpetuating unequal global relations and exacerbating global insecurity, then we really do need to question Five Eyes claims that such surveillance is necessary to ensure global prosperity and security (Five Eyes Ministerial 2018).

Title: Silencing Dissent: Precarious Condition of Digital Workers in India and Communication Policies in IT-ITES Companies

Session Type: Individual submission

Authors:

Name: Rianka Roy

Email: rianka.roy(at) gmail.com

Country: IN (India)

Affiliation: School of Media, Communication and Culture, Jadavpur University, Kolkata

Abstract: This paper studies the precarious condition of workers of the Information Technology (IT) and IT enabled service (ITES) industries in India. It argues that communication policies in Indian IT-ITES companies are responsible for the perpetuation of workers' exploitation. The codes of virtual and non-virtual communication insist on non-disclosure and limited political involvement. In order to prevent dissent, these companies use their codes of conduct to silence their workers.

India is a major supplier of labor to global digital companies. However, compared to their counterparts in developed countries, Indian IT workers receive abnormally low wages (Agarwal). The unpredictable nature of digital work, the high rate of labor redundancy in project-based assignments and the looming threat of automation add to the persistent problems of arbitrary termination, mass retrenchment, disputable payment structure, and absence of health-care policies. These nearly-dispensable workers cannot protest against various unfair policies without violating non-disclosure agreements and risking their jobs. The policies even come with incomprehensible clauses and jargon, so that the employees do not get their full implications until it is too late.

The Government of India glorifies IT jobs, and generously supports these companies with land and infrastructure. However, in several Indian states IT workers are not allowed to unionize. Very recently these workers have begun to form online groups, like Forum for IT Employees (FITE) and Union for IT & Enabled Services (UNITES). Their bid to achieve the status of trade unions has met partial success. Members of these groups, who are still employed, cannot risk their jobs by speaking out against organizational atrocities. In his case study of two German companies, Infineon and Siemens, Sidney Rothstein claims that workers in tech-companies devise means that protect them from "challenging market conditions" even though liberalization robs workers of their power resources (2). My research, however, indicates that Indian IT workers have little success in dissent, because workers in developing countries face more insecure situations than their first-world colleagues.

Digital communication has minimized face-to-face interaction. The globally scattered workforce does not depend on geographical proximity. Besides, the shuffling of staff in project-based work in this industry reduces the scope for community-building. The companies also monitor internet and intranet communication of their workers. As a result, online communication of dissenting workers' groups also remains under surveillance.

The paper analyses the communication policies of the three major Indian IT companies—Tata Consultancy Services, Wipro and Infosys. It examines how these companies with their strict

censure of workers' virtual and non-virtual interaction infringe on the latter's right to communicate. The paper uses data collected from a questionnaire-based survey and interviews of Indian tech-employees. Empirical observations from visits to these companies also support this qualitative study.

Title: The Extended Audiovisual: dynamics of regulation and supply in Argentina.

Session Type: Individual submission

Authors:

Name: Santiago Marino

Email: sgomarino(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de Quilmes-Defensoría del Público de Servicios de Comunicación audiovisual

Abstract: The present work is framed in the theme "Power, policy and medical regulation" and presents an analysis of the changes in the regulatory framework and the dynamics of the Extended Audiovisual market (EA) in Argentina. The objective is to systematize current policies for the sector and the forms of production / distribution / commercialization of the different players in the convergent context and strongly concentrated in the structure of the property.

In the first place, the theoretical and methodological elements that frame the research are presented. Second, there is the proposal to think about the concept of EA. The actions implemented in the area of regulation during the management of Mauricio Macri (2015-2019) are systematized below. Finally, identify the EA market forms and remember the question regarding the configuration of the competitive market.

In a process in which communication systems have become increasingly important for the organization of the aspect of daily life, their system undergoes a series of transformations for communication and another for regulatory dilemmas in Latin American countries -more than ten years of the "turn to the left" - experiencing the changes in politics that affect communication policies, their markets and the way in which the right of the audiences is addressed.

The paper addresses the question: How do EA offers fit into Argentina's current regulatory framework? And continues in is the palette available another element in the transition or all that there will be in the Argentine market used to pay to receive audiovisual content? The communication system is a focus in the sense of the notion "communication policies" understood as the result of a dynamic process in the sense of the interaction between the different actors, the integration and the development of communication. The regulation and configuration of media systems (Califano, 2015).

The configuration of the EA is understood from the emergence and expansion of technologies that break inertia and forms of productive organization and consumption in different cultural industries (Marino, 2016). It is integrated by the Film, Television (open and payment, analogue and digital) sectors and online audiovisual content distribution services.

In methodological terms, the list of reforms to the normative plexus of the EA is presented from the assumption of Mauricio Macri to the present. The mechanism or institutional instrument and the actor involved in the decision will be identified. In this way there will be inputs to describe the regulation. Then the players of the market and the configuration of an offer will be identified with leaders who dominate their original sectors and advance - groping - to other spaces -the convergents- in which they try to domesticate behaviors of the audiences. And in those who run into the difficulty of seeing mature business models.

Title: The Political Economy of Live Streaming: Exploring Live Interactions and 'Platform Capitalism' in Live Streaming Platforms in China.

Session Type: Individual submission

Authors:

Name: Yuanbo Qiu

Email: yqiu9748(at) gmail.com

Country: AU (Australia)

Affiliation: The University of Sydney

Abstract: Watching online videos is a major category of entertainment nowadays, and in recent years new forms of video platforms—user-generated live streaming platforms such as Twitch, YouTube Live, and Douyu have rapidly gained popularity. These platforms allow individual users to live stream their real-time activities including singing, gaming or talk show. Furthermore, audiences can interact with broadcasters by commenting and through donations (Nascimento, 2014). These real-time reciprocal practices facilitate new ways of interaction (Kaytoue et al, 2012; Smith et al, 2013).

To date, researches on streaming have explored how interactive technologies facilitate live interactions (Baruah, 2012; Kaytoue, Silva, Cerf, Meira Jr, & Raïssi, 2012; Shamma, Kennedy, & Churchill, 2012; Summa, 2011; Weisz et al., 2007), the democratic potential of this new mode of broadcasting and interaction (David, Kirton, & Millward, 2017; Gehl, 2014; Martini, 2018; van Ditmarsch, 2013), and politics within live streaming (Witkowski, 2011; Zhang & Hjorth, 2017; Zou, 2018). However, there are few systematic researches on the political economic background of live-streaming in China. In China where live streaming industries are booming, donations from audiences which was initially only a way to support streamers, has emerged as a major revenue generation method for platforms. Rather than merely focusing on advertising revenue, platforms extract and analyse user data to develop multiple strategies to lure donations. Key stakeholders including streaming platforms and agent companies are increasingly monopolizing the industries, commodifying donations, and ultimately shaping streaming practice and live interactions. The complex relationships between talent agencies, regulators and the power structure in live streaming industries of China calls for closer analysis, especially in light of the trend for platforms to influence the broader democratic and pluralistic potential of live streaming practices.

Thus, this article asks the following questions:

- 1.How is live streaming and the practice of donations being commodified in Chinese media industries and socio-cultural contexts?
- 2.What are the relationships between different agencies, regulation and power structures that can affect streaming practice and live interaction?

Drawing on the political economic perspective, this paper reviews the concept of 'platform capitalism' (Srnicek, 2017) to understand the transition of live streaming industries in China, particularly the tendency for streaming platforms and agent companies to expand rapidly, as well as incorporating more and more streamers who were previously independent amateur broadcasters.

This research draws on in-depth interview with streamers and people from different agencies including streaming platforms, agent companies, and government departments in order to explore the complex interrelationships between the power structures in live streaming industries of China. Moreover, the research draws on the additional resources of governmental policies, industrial reports, and other relevant legal documents.

Title: The Business Model of Hybrid News Enterprises

Session Type: Individual submission

Authors:

Name: Sergio Sparviero

Email: sergio.sparviero(at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg

Abstract: According to the Pew Research Center (2014) 308 non-profit news organizations emerged in the United States between 2005 and 2012. Among these are national, local and hyperlocal news enterprises that are hybrids, because they have common characteristics with commercial, public and alternative news media. In fact, they are partially financed from commercial revenue, driven by a public interest mission, and critical of commercial and public institutions from which they are independent. Many scholars attach great significance to the emergence of these news media focussed on public affairs and investigative reporting (e.g. Almiron-Roig, 2011; Benson & Powers, 2011; McChesney, 2016; Pickard, 2014) as they represent a (partial) solution to the crisis of the commercial news model, and the consequent under-production of high quality public affairs and investigative reporting needed by democracy (Benson, 2017).

The contribution to knowledge of this paper is twofold: first, it aims at showing the effectiveness of applying a new methodology to the study of news media organizations, in particular, with a focus on non-profits. This methodology requires the use of the Social Enterprise Model Canvas (Sparviero, 2019), a Business Model Canvas (Osterwalder & Pigneur, 2010) designed to understand Social Enterprises. The latter were used as model for the establishment of the low-profit limited liability (L3C) fiscal status, and they are hybrids because they represent the intersection of non-profit organizations partially financed by commercial revenue and for-profit organizations with social priorities. Second, using the SEMC and secondary data from the organizations themselves and existing analyses (e.g. in Columbia Journalism, Journalism Research News, PEW Research, Nieman Lab, the Poynter) the paper presents the business model of two hybrid news organizations and success stories: ProPublica and the Texas Tribune. The use of the SEMC on these two organizations allows for uncovering two different business model's archetypes of non-profit news media.

Abstract: The competitive terrain of internet-distributed television has disrupted existing audiovisual policy regimes and introduced new sites in which firms exert power and produce noncompetitive marketplaces. This panel addresses shifts in the power relationships and emerging policy concerns and challenges related to what Larkin (2013) terms “the architecture for [media] circulation.” Key issues to be addressed include competition effects, governance, and marketplace access implications of internet-distributed video services. We also consider the intersecting issues for cultural and consumer policy. Together, the four papers provide critical analysis of practices emerging in a rapidly evolving field. The transnational reach of many devices and content services and the national or regional (EU) organizations of regulatory regimes challenges our ability to identify policy approaches and solutions for these issues, and this panel connects scholars from

North America, Europe, and Australia in order to explore these issues in multiple political economic contexts.

Internet-distributed television has disrupted existing audiovisual markets and policy regimes, introducing new sites in which firms exert power and produce non-competitive marketplaces. Although media “infrastructure” is commonly conceived of as the facilities such as wires, roads, and mechanisms of video delivery, the complicated and opaque technological relations that support app availability, navigation interfaces, and terms of service and end user licensing agreements are also components of the comprehensive infrastructure required to access internet-distributed video. In this sense, software becomes an essential infrastructure for video distribution, in a context where “platform-based services acquire characteristics of infrastructure, while both new and existing infrastructures are built or reorganized on the logic of platforms” (Plantin et al 2018: 293).

The papers identify and define new operations of power that raise significant social, political, economic and legal questions. They also aim to establish a starting point for policy considerations. They are grounded in analysis of existing practices of industry players, institutions and audiences about which there have been growing concerns and calls for policy action. Technological infrastructures and the corporate relations connecting them have significant power in determining how users access internet-distributed video, what they access, how they are guided to content, and what remains inaccessible. While techno-industrial substrates of video delivery are not new considerations for audiovisual policy, the arrival of internet-distributed video has introduced new technological capabilities that challenge existing policy frameworks and regulatory solutions. Previous distribution technologies—broadcast, cable, and satellite—offered relatively standardized transmission. A consequence of the apparently enhanced choice internet distribution enables is that there are many more sites where entities such as device makers, app makers and related marketplaces, and Internet services providers can exert power that exacerbates inequalities.

Title: Android TV: Competition and Control in Smart TV Platforms

Session Type: Panel Submission

Authors:

Name: Ramon Lobato

Email: ramon.lobato(at) rmit.edu.au

Country: AU (Australia)

Affiliation: RMIT University, Melbourne

Abstract: This paper approaches the question of infrastructure power through a case study of Google's smart TV platform, Android TV. 'Smart TV platform' is an industry term used to refer to the operating system of a smart TV or connected device, which controls elements including the home screen, app store, recommendations, and search engine. The leading smart TV platform is Google's Android, which commands a 40% share of the global connected TV software market (IHS Markit 2018). This 40% market share includes not only devices running Android OS (the open-source mobile/tablet OS that is used on millions of mobile phones and generic streaming boxes, especially those manufactured in China) but also the newer Android TV platform, a version of Android custom-built for smart TVs. Android TV is now the platform of choice for TV manufacturers including Philips, Sony, and Sharp. It is also being widely adopted by pay-TV operators for use in their set-top boxes.

This paper asks: what are the implications of Google's infrastructure power in television markets, and how is this power realised at the level of platform design, integration, and interoperability? Focusing on Android TV, the paper will explore how the Android TV interface aligns with Google's wider commercial ambitions and how this is realized through selective preinstallation of apps, search bias, and discoverability. I then draw on recent research in television, software and communication policy studies to identify the policy challenges faced by what Krämer and Schnurr (2018: 516) describe as "discriminatory practices at the OS layer".

Conceptually, the paper aims to demonstrate how the classical concerns of media distribution research – such as cultural gatekeeping, access to culture, and political economy of distribution (Williams 1974, Garnham 1990) – are both enduring and evolving in the age of smart TVs and Internet of Things. A key argument animating this case study is that television research can benefit by moving its gaze 'down the stack' towards the uncharted territory of hardware and software integration.

Abstract: Internet-distributed video and its affordance of non-linear distribution expand the intermediary interventions of electronic and interactive programme guides (EPGs and IPGs) and decentralize distribution in comparison with the linear schedule that remains typical of broadcast, cable, and satellite distribution. This decentralization of viewing choice allocates infrastructural power to entities such as device makers and portal services that have not exerted such power over television in the past and has reconfigured the power of those that organize content. While scholarship has analysed the agenda-setting and gatekeeping power of legacy media companies, the role of device makers and portal services in relation to these media powers is poorly understood and the conditions of their agreements are often obscured from public view. This paper examines how emerging industrial practices surrounding video navigation interfaces reconfigure encoding power, suggests how these practices can be systematically examined, and proposes policy goals and regulatory mechanisms in response.

Title: Power Dynamics Between Online Audiences and Television Distribution Platforms: Who Is Disrupting Who'

Session Type: Panel Submission

Authors:

Name: Eleonora Mazzoli

Email: e.mazzoli(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics

Abstract: To cut or not to cut? This is the question that many viewers are asking themselves nowadays. With 'cord-cutting,' I am referring to those viewers who are 'cutting the cord' of traditional television cable or a satellite video subscriptions in favour of Over-The-Top (OTT) alternatives, accessed through a broadband connection in the form of streamed or downloaded content. Mainstream discourse around this phenomenon often presents one-dimensional interpretations of cord cutters as a fringe audience, overstating the force of its change. This paper advances a more complex and nuanced position, conceptualising cord-cutting as symptomatic of a larger redefinition of television as an institution, an industry and a techno-cultural form.

In their attempt to circumvent the established television systems and their institutional and governance frameworks, cord-cutters are embracing the revolution promised by those internet platforms that claim to free them from spatio-temporal constraints and enable them to control and personalise their televisual experiences. However, by doing so, cord-cutters are entering (and altering) a complex power interplay that is shaping both the economic environment in which the innovation and competition of today's online television industry takes place, as well as its driving set of principles. The Internet, at its dawn, was created as an "anti-television" (Sandvig 2015), a network based on a common set of values, a non-profit ideology and sharing philosophy which ideologically appealed to the 'cord-cutting revolution'. However, ongoing developments of the Internet network are transforming it into a global mass entertainment medium, "the Internet of Entertainment" (Noam 2017), which is centrally organised, operated by commercial providers and driven by private interests. This evolution is partially influenced by a series of industry strategies implemented to recapture the growing ranks of cord-cutting audiences. Triple- or double-play bundling offers, cross-platform distribution strategies like "TV Everywhere" (also known as authenticated streaming or VOD service); horizontal and vertical integrations are just some of the strategies implemented by existing players to recapture these audiences.

In this context, this paper has a twofold goal. On the one hand it aims to culturally and theoretically frame the television cord-cutting trend, conceptualizing it as a burgeoning counter-public whose 'symbolic power' (Bourdieu 1990; Couldry 2003) is re-shaping the socio-technical construction of television and prompting television networks to further invest in Internet-distributed services. On the other hand, the paper critically addresses how these dynamics of resistance and resilience between cord-cutters and television distribution platforms reveal a mutually transforming effect that has political economic implications for the evolution of the online media ecosystem. Indeed, within this multi-layered system, gateways and nodes of control are multiplying, raising fundamental

questions on the gatekeeping role of Internet platforms and calling for potential policy interventions (Barzilai-Nahon 2008; Laidlaw 2010).

Abstract: The economics of media has fundamentally changed over the past five years. Whereas broadcasting and also newspaper publishing markets were previously two-sided markets, largely working on the basis of supply and demand, platforms have added multiple layers to these two-sided markets. Amazon, Google and Facebook have created platform ecosystems in which they dictate what is offered on what conditions. They do not only act as intermediaries, but occupy a multitude of gatekeeping functions and are in control of customer relationships, with data being a crucial currency in their platform ecosystems. The issue of platformization as well as the consequences of this development for legacy media has provoked considerable attention in communication sciences, legal studies, and economics. Admittedly, there is some platform hype or mania, but the dominance of some of these super platforms in markets such as search, social media, and e-commerce should not be underestimated either. Given the power of platforms, several scholars and also numerous media companies have called for more European regulation of platforms (e.g. Evens & Donders, 2018; Srnicek, 2017). Not all platforms are the same, however. There are notable differences between AT&T / Time Warner (post merger), Amazon and Netflix. Platforms can behave in pro-competitive, but also in anti-competitive manners. The main research question of this paper is to assess which platform policies the European Commission has developed over the last couple of years and whether its policies are taking into account the differences in platform power. We, first, elaborate a definition of platform power against the background of media markets and identify critical loci of power. We, secondly, analyse the European Commission's initiatives to deal with platforms. On the basis of a qualitative document analysis, we scrutinize (1) the inclusion of platform issues in existing regulatory frameworks such as the Audiovisual Media Services directive and the GDPR; (2) the development of platform-specific rules such as guidelines ensuring fair trading practices and transparency in P2B (platform-to-business) relations; and (3) the treatment of platforms in competition policy. Our main finding is that the European Commission adopts superficial rules on protection of minors on the one hand and old recipes of ex post behavioral remedies in case 'something goes wrong' on the other. This will most likely not suffice, from both an economic and more societal point of view, to overcome the structural deficiencies of some platforms.

Abstract: The outputs of the cultural industries are not goods like the rest, since "they administer visions of the world and, therefore, are inseparable from a reflection on their reception conditions". This maxim of Wolton (2004) serves as a conceptual anchor to address, in the environment of analytical proposals linked to corporations, their capital, media power and cultural industries, how some of the transformations that, in these decades of the new century, have occurred in the media environment.

To do this, using the methodology of "case study" and non-participant observation, as well as the epistemic foundation of the Political Economy of Communication (PEC) (Mosco, 1996) and a thorough bibliographic review, the case of the Spanish Telefónica is addressed, with the objective to analyze whether the transformation of the company into a content company (although also as an optical fiber and data provider) has been a wise decision, considering that its competitors Vodafone and Orange have partially demarcated this strategy, or if, on the other hand, Telefónica has enough elements to become a global player, or at least a regional player, as the great Spanish-speaking provider.

To that end, they will be tracked from the first interests of Telefónica to acquire their own content with the creation of its subsidiary Admira (1995) and its change of name by Admira Media in 2001, until the creation of Telefónica Studios, dedicated to producing films and series for its television channels in Spain and Latin America, and the acquisition of 56% of Canal + in 2014 from the Prisa group, and the fact that it became, more recently, a large platform for sports content, thanks to having taken control of the best packages of the Spanish Football League and the Champions League.

In addition, this paper makes a leap in terms of critical and prospective judgment, which gives it a plus of specific weight and that arises in these terms: the profound transformation of Telefónica, under the Movistar brand, made it a formidable competitor in the Spanish market, but also in Latin America. It seems, however, that today, the drift of the company can tend more to the classic activity of online video store, with its 110 million mobile customers across the Atlantic.

Its strategy is to allocate an amount of seventy million euros per year to produce content. That is to say, they have a plan, in 2019, that would allow them to produce a dozen series per year, being able to make a premiere a month. For all this, in 2018 Movistar launched the series, through its Movistar TV platform and the mobile application Movistar Play, present in a dozen countries. But in that market is not alone, if the competition in Spain is strong, in Latin America you will not only meet with Netflix, but also with AT & T / Direct TV / HBO; Viacom / Paramount, and the next Disney video store, among others.

Key words: Media management, Communication structure, Telefónica

Title: You Say Free Market Economics, I Say Financialization

Session Type: Panel Submission

Authors:

Name: Aeron Davis

Email: aeron.davis(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: For four decades, economic policy-makers have proclaimed the virtues of free markets and neoclassical economics. Politicians of center left and right have advocated policies which shrink the state, deregulate markets and international trade, free up corporations, release business ‘wealth creators’, and inhibit unions and others that stand in their way. Opposing them, critics have denounced the growing hegemony of neoliberalism and its social and economic consequences. As this paper argues, although both policy-maker and critical discourse has focused on free market logic, underneath, the more profound transformation of the economy has been financialization. This took place long before the financial crisis of 2007-08 and continues to reshape national economies in less visible but very significant ways.

The case study chosen is the UK economy. The paper briefly demonstrates the figures behind the growth of big finance and financialization in the UK and elsewhere. It then turns to the cultures and communicative networks that emerged historically behind it. It draws on two parallel studies: one on 30 top CEOs (FTSE 100 leaders) and one on 25 past government ministers and civil servants operating in the main economic departments of government (the Treasury and Department of Trade and Industry (DTI)). The studies combine elite interviews, demographic audits of such figures, and content analysis of public statements, to flesh out an account of how both business and political leaders produced a very financialized version of neoliberalism. So, while ministers and business leaders publicly talked about freeing up markets, the mechanisms and practices they adopted delivered financialization.

In the case of government policy-making, during the 1980s a majority of ministers in charge of reshaping the Treasury and DTI had backgrounds and experiences in finance rather than industry. In subsequent years, a majority of top civil servants in these ministries came from and moved through international financial networks. Between them, rather than free up industries, markets and the economy, they put it more under the control of the international financial sector. In the case of CEOs, over several decades, an increasing number of top business leaders have come from finance and accounting, regardless of the specific industry sector they work in. Publicly they have regularly supported free market policies and those political parties which advocate them. Privately, they have lobbied for policies that put the interests of international investors over those of companies, employees and communities. Thus, in both cases, while public debate has focused on liberated, state-free economies, private elite networks have ensured that economic management and influence has been transferred instead to big finance. In effect, critical communication scholars need to focus more of their attention here.

Title: The (Un)visible: Wealthy Business Leaders in Public Policy Making

Session Type: Panel Submission

Authors:

Name: Anu Kantola

Email: anu.kantola(at) helsinki.fi

Country: FI (Finland)

Affiliation: Faculty of Social Sciences, University of Helsinki

Abstract: The wealthiest classes in society have recently become a subject of interest by virtue of the fact that they have distanced themselves economically from the rest. This paper is based on a study exploring the societal role of the wealthiest 0.1 percent in Finland and explores how wealthy business executives belonging to the 0.1 percent participate in political and public life. Drawing from a network analysis of business lobbies and 32 semi-structured interviews among wealthy business leaders, the paper explores how the top income business leaders participate in political advocacy and public affairs.

Overall, the results suggest that wealthy business executives play a prominent role in political advocacy: as they are prominent on the boards of business lobbies and industry associations, they hold key positions in formal advocacy. These wealthy executives also have favourable access to policymakers: they mingle informally with policymakers and tend to feel confident that their voice is being heard and that access to policymakers is granted when needed. At the same time, these executives are often reluctant to engage in public dialogue and are fearful of the dire consequences that could ensue from publicity. They tend to maintain strong levels of privacy, to the extent that they are unwilling to use social media, or if they do, usage is highly controlled. Many of them recounted unpleasant examples of media, journalism and publicity, and most refrained from using social media.

Overall, the wealthiest business executives make up a crucial part of the networks of the power elite – the leading decision makers in economic and political institutions. These power elite members appear to work in ways that are effective, though hidden from public view. In particular, wealthy business executives refrain from public expressions of political or societal views, although they hold strong views on politics, which they advocate through business lobbies, their advocacy groups as well as among informal elite networks comprised of economic and political elites.

The paper thus contends that public participation should be examined in its social and political context and should probe the questions of who participates and with what consequences. In an ideal democracy, while all citizens should have equal influence on government policy, this research demonstrates that policymakers may respond exclusively to the preferences of the affluent, whose participation remains hidden. Thus, the paper opens up a new realm of research on the need to examine the role of public participation and its true influence on policymaking in other countries and contexts.

Title: Media, Financial Crises and Public Understanding of the Economy

Session Type: Panel Submission

Authors:

Name: Mike Berry

Email: berrym1(at) cardiff.ac.uk

Country: GB (United Kingdom)

Affiliation: JOMEC, Cardiff University

Abstract: When the British banking system was rescued in October 2008 there was much talk of a 'crisis of capitalism' and even newspapers such as the Financial Times featured articles advising readers to brush up on their Karl Marx. Yet a decade on from the crisis both Wall Street and the City of London have escaped major systemic reform and remain vulnerable to a repeat of the events of 2008. Meanwhile, a banking crisis with roots in excessive leverage and speculation rapidly metamorphosed into a fiscal crisis of the state leading to the introduction of austerity policies. These have helped drive political polarization and the growth of right-wing populist parties some of which espouse openly racist and/or anti-democratic policies.

This paper has two purposes. One will be to analyse the role of economic and financial journalism in influencing public knowledge and attitudes towards both the banking crisis and the subsequent rise in sovereign debt. As will be demonstrated, media reporting of the banking crisis told a pared back story focused on greed, risk taking and the need to restrict bonuses. Far reaching reforms to the sector were rarely raised and the City was routinely presented as a national asset with few voices questioning whether having such a large finance sector might have negative effects on other parts of the economy. Audience research showed many people struggled to understand reporting of the crisis, but what they had picked up - such as the view that the part-nationalisations had been the 'only option' or that the most important issue was to deal with bankers' bonuses - closely reflected media accounts.

The ability of economic journalism to influence public beliefs and attitudes could also be seen in relation to the rise in the UK deficit. Here, news accounts narrated a dramatic story of a country facing interest rate rises, abandonment by international creditors and even national bankruptcy - with the corollary that sharp cuts to the welfare state were unavoidable. Such views were again reflected in audience research. Although many participants resisted media calls for cuts to core elements of the welfare state such as the NHS or education, the message that the rise in the deficit had created an economic emergency was widely accepted. Furthermore, media accounts which demonised immigrants and welfare claimants whilst alleging widespread 'waste' in public spending helped to smooth acceptance of austerity policies by convincing people that cuts would fall on unpopular stigmatised groups and not impact 'frontline' services.

The second aim of the paper will be to reflect on what these results say about media influence, public understanding of the economy and the potential of public service broadcasting to foster a more informed debate on the economy. Particular attention will be focused on how the BBC might

help dispel some of the widespread misunderstandings about the contours of public spending and the relationships between debt, deficits, public investment and economic growth.

Id: 20336

Title: Invisible Power: Is Communication the Blindspot of Money and Finance'

Session Type: Panel Submission

Authors:

Name: Peter Thompson

Email: Peter.Thompson(at) vuw.ac.nz

Country: NZ (New Zealand)

Affiliation: School of English, Film, Theatre and Media Studies, Victoria University of Wellington

Abstract: The primary aim of this paper is to outline the potential value of a communicative framework in understanding forms of money and finance. Both liberal and critical political economy recognise the central role played by monetary forms in capitalist society. Political economy of communication scholars have naturally emphasised the influence of financialization and the relentless demand for increased profitability on the media sector. Seminal scholars such as Dallas Smythe and Robert Babe have respectively noted that communication was a 'blindspot' of Marxist theory and economics more generally. This paper suggests there is a further blindspot within both political economy and communication studies itself in respect to the communicative aspects of money and finance.

Marx recognised that monetary forms and capital more generally. On the M-C-M' circuit, money structures class relations by enabling the extraction of surplus value from alienated labour. On the M-M' circuit, money forms also give rise to financial activities including the issuance of credit and securitization of debt. However, the Marxist framework (particularly the labour theory of value) does not adequately explain the origins of money forms or the creation of fictitious asset values.

The symbolic ontology of money and monetary transactions has been recognised by economic sociologists and anthropologists. However, particularly in the case of micro-level ethnographies, broader questions of how money is implicated in structural power is often overlooked. There is therefore a structure-agency tension between cultural accounts of monetary plurality and agency (e.g. Zelizer's insistence on multiple money practices and earmarks irreducible to social structure) versus structural political economic accounts of money as a power structure (e.g. Fine and Lapavistas).

Some sociologists (e.g. Parsons, Habermas, Luhmann) have considered money as a communicative form in a systemic, functionalist sense. However, the approach taken here emphasises the communicative aspects of the social relations underpinning monetary forms and draws on the work of Rotman, Ganssman, Kaplan, Schwartz, Goux and Bryan & Rafferty in focusing on the shared codes and semiotic processes of equivalence and reflexivity involved in monetary and financial transactions.

The article therefore proposes a form of cultural political economy foregrounding the constitutive, reflexive communication processes in monetary and financial processes. This will then be deployed to analyse and contrast examples of state-backed/private credit-based money systems (regular currencies) with examples of community-based micro-credit systems (e.g. Grameen), local

currencies (e.g. the Bristol Pound) and crypto-currencies (e.g. Bitcoin). In doing so the paper will highlight the invisible power-relations implicit in monetary forms and identify potential forms of co-option and resistance.

Id: 20337

Title: [Panel] Elite (Re)Definitions of the 'Economic' in Public Discourse, Panel Description

Session Type: Panel Submission

Authors:

Name: Aeron Davis

Email: aeron.davis(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: This panel aims to provide new perspectives on media political economy by investigating how elites define and construct notions of the economic and financial. Panellists look at elite (re)definitions of all things 'economic' in both public discourse and less visible elite networks. Thus, the panel investigates how those in power define and redefine public and network perceptions of the economy and its component parts. The ability to determine what economies and markets are, their shape, health, practices and means of evaluation, has clear implications for economic policy and regulation. It is also deeply implicated in the rise of inequalities within and between societies and the ever-growing gap between the super-rich and the rest.

Each of these papers investigates these processes of elite definition, redefinition and mis-definition in alternative economic and financial settings. In each case all is not quite what it seems. On the one hand, visible public discourse redefines and mis-defines economic matters to the benefit of particular elite beneficiaries. Public pronouncements deflect attention from private elite lobbying and quite different practices. Powerful elites gain more from working invisible networks of political decision-makers and institutional regulators. On the other hand, agents within elite networks compete to determine how healthy economies and markets function, the key tools and technologies of measurement and evaluation, and the most appropriate regulatory instruments. Those who gain definitional hegemony also gain crucial market and capital advantages, not just over other elites but also over wider publics.

Each paper is based on solid empirical studies of sites and networks where elites have been instrumental in (re/mis) defining the economic. Each uses multiple methods to gain key insights into these visible and invisible processes. Anu Kantola, uses a mix of network analysis and elite interviews to investigate how business elites (the 0.1%) in Finland attempt to influence policy-makers. Her paper suggests that invisible modes of influence via private networks are frequently more effective than public pronouncements as many corporate power-brokers prefer to remain out of the public eye. Mike Berry analyses the construction and consumption of economic journalism in Britain in the wake of the Global Financial Crisis of 2007-08. Using a mix of content analysis and audience research he demonstrates how media redefinitions of the causes of the financial crisis helped to then justify economic austerity to publics.

Aeron Davis argues that, for several decades, while policy-makers and their critics have focused on free markets and neoliberalism, economies have been reshaped more by big finance and financialization. He draws on elite demographic data and some 60 elite interviews with government ministers, civil servants and top CEOs to show how and why this shift took place. Peter Thompson

deconstructs the definitional power of financial elites as they construct and define values in state-backed and private, micro credit systems. He makes use of a cultural political economy framework to analyse case studies which illustrate the power-relations and distributive practices in money creation systems

Title: Sharing or enclosing' 'analysis of the Platform Journalism of China by looking at news reversal on social media WeChat

Session Type: Individual submission

Authors:

Name: Zhiyan Wang

Email: lingdi214(at) aliyun.com

Country: CN (China)

Affiliation: Beijing Foreign Studies University

Abstract: China is seeing the “Internet plus” economy advocated by Chinese government. Emerging technology companies represented Alibaba and Tencet in China find the way to take the huge market share and are changing the landscape of the society. Platform system represented by five Chinese internet companies nicknamed as “big five” is leading the platformization of the global society (Jose Van Dijck, 2018) .

Economy of scale and sharability represent the essential doctrine of platforms. The obscure notion of sharing “is merely a new quality of the digital economy: platform capitalism” (Sascha Lobo, 2010). For most platforms, success is not the result of the free play of supply and demand but of specific algorithms supposedly simulating the market mechanism (Sebastian Olma, 2014).

A noticeable phenomenon is the platformization of journalism currently. The platform brings the news production and news dissemination together and dictates both the business model of the company and the ubiquitous news influence over the society.

The paper intends to look at the most prominent social network of China: WeChat, to analyze if the internet business model advocated by Chinese government as “embodying the internet spirit” could facilitate the building of the public sphere, step up the participation in a civil society, and being disruptive of the old order and inequity. In China, government always plays a crucial role in journalistic industry. For instance, the government ruled that people should not forward the self-made current political news on WeChat (News Tribune, 2016).

WeChat is owned by Chinese internet giant Tencent and boasts 700 million monthly active users, and is the dominant messaging service in China (Data tracker Quest Mobile). As more than 62% Americans obtain news through social media like Facebook (Emily Bell, Taylor Owen, 2017), in China, WeChat is the most commonly used platform press for people to get the news. Chinese scholars believe the original journalistic industry of triangle of “public-legacy press-government” has been replaced by the longer chain of “public-platform press-legacy press-government” (Wan xiaoguang, 2017).

WeChat establishes an overpowering social network by sharing news articles through instant communication, forwarding, liking and it’s moments. Journalism then has been reshaped and taken on new characteristics. News reversal is a phenomenon usually seen on platform press, which refers to the dramatic inversion to the opposite narrative of the original news report. The paper would take an up-to-date case of the news reversal, hoping to decode how news reversal happens, what is the dynamics between news reversal and the platform press, and how the news reversal reflects and affects the society.

Methods of literature analysis, text analysis, focal interview and case study will be adopted to help answer the research questions. A 10-member focal group, all WeChat users, will be interviewed to ask about the participants' news consumption and the comment on the news event.

The possible finding of the research is that sharing platform press WeChat is actually enclosing territory to secure the profit, while the sharing nature of seeking equity has been lost.

Title: The Mexican Film Industry 2000-2018. Resurgence or assimilation'

Session Type: Individual submission

Authors:

Name: Rodrigo Gómez

Email: rgomez(at) correo.cua.uam.mx

Country: MX (Mexico)

Affiliation: Universidad Autónoma Metropolitana

Abstract: This paper presents the structure, development and performance of the Mexican film industry (MFI) during the first seven teen years of the twenty-one century. It addresses the markets and the most salient companies that control them (Televisa, Cinépolis and Hollywood majors). In addition, the study looks at the participation of the Government, which is involved in the development and growth of the industry through cultural policies set in place to support the film industry. The primary goal of this research is to analyze the Mexican film industry in the context of the dominance of the free market logic's and dynamics, particularly under free trade agreements (NAFTA and USMCAN) as well as new scenarios of digital platforms. The discussion of the research address the issues of the performance of the MFI as an assimilated market of US Film industry or as the resurgence of a National Industry that was almost vanished during the 90. In other to discuss this issue the paper analyzed production and exhibition empirical data as well as economic figures from 2000 to 2017 under the guidelines of the political economy of cinema.

Id: 20531

Title: Is reader-revenue revolution really here? A comparative analysis of newspapers reader payments in an attention economy

Session Type: Individual submission

Authors:

Name: Merja Myllylahti

Email: myllyme(at) gmail.com

Country: NZ (New Zealand)

Affiliation: AUT

Abstract: The dominance of Google and Facebook in the major Western digital advertising markets has forced news companies to increase their investments on audience monetisation (ACCC, 2019; Hindman, 2018; Author, 2018a; Winseck, 2018). In the context of the political economy of attention, this paper investigates whether news publishers income models have been revolutionised from advertising to reader-supported model. Houston believes that “the reader-revenue revolution is a reality” and suggests that readers have aided news companies to overthrow “tyranny of old ad-only business models” (Houston, 2018). Similarly, the International News Media Association (INMA) observes that disruption in the digital advertising markets has changed the “revenue mix in our industry from its historical equilibrium to one where audience revenue plays a larger role” (Lindsay, 2017, p.9). Additionally, Newman reports that focus on reader revenue means “a huge change of focus for the industry” (Newman, 2019, p.5). However, some recent studies contradict the reader-revenue revolution rhetoric by showing that advertising has remained a “critical part of online revenue” (Nicholls et al., 2018).

This paper examines to which extent reader-revenue revolution is happening. In political science, revolution proposes a sudden change from one constitution to another and this paper investigates to which extent the claim of reader-revenue revolution is valid (Houston, 2018). The paper utilises quantitative data from media companies financial documents and announcements as well as from the relevant previous studies (Author, 2014). First, the paper compares digital subscriptions numbers of the Wall Street Journal, The New York Times, the Financial Times, The Times and The Australian in a six year period from 2012 to 2018 to assess revenue from implemented reader payments as well as digital advertising. Secondly, the paper examines voluntary reader memberships and donations to explore if these are aiding news publishers such as The Guardian to move into audience-supported model.

Preliminary findings of the paper propose that newspapers digital subscriptions have substantially increased in a six-year period from 2012 to 2018, and their digital earnings have grown accordingly. The paper offers some evidence that news publishers are moving away from advertising based to reader based revenue model, but it contests the view of the emergence of the reader-revenue revolution.

News companies reliance of monetisation of readers attention has benefits and pitfalls. Benson believes that the “upside” of digital subscriptions is that readers pay money “for something they really want or need”, but the downside is that “subscriber funded news caters to relatively high-income, high-education elites” (2019, p.146). Newman agrees that “the rise of paywalls is shutting more people off from quality news and making the internet harder to navigate” which can lead to news avoidance (Newman, 2019, p.6). As Hindman asserts in his book “the digital attention

economy increasingly shapes public life... and ultimately which news and democratic information citizens see" (Hindman, 2018, p.5). Earlier academic studies have found that digital subscriptions, paywalls, may restrict the public's access to certain news and information whereas voluntary reader payments are normally supporting non-profit or digital media outlets which offer content for free to the public (Author, 2018b). Increases in reader payments, both in involuntary or voluntary, have societal consequences which require further investigation.

Title: Significant Achievements in EU Creative Industries' A review of Juncker Commission's Policy Performance

Session Type: Individual submission

Authors:

Name: Natalia Ferrer Roca

Email: natalia.ferrer(at) udg.edu

Country: ES (Spain)

Affiliation: Universitat de Girona

Name: Carmina Crusafon Baqués

Email: carmina.crusafon(at) uab.cat

Abstract: Cultural and creative industries are a strategic sector for the European Union. They represent the third largest employer in the EU; contribute significantly to investment, innovation and creation of jobs; provide positive spill over effects in other sectors, such as digital, technology and tourism; strengthen the image of Europe and the European way of life abroad; facilitate exports; and they are a stepping stone to preserve the cultural and linguistic diversity of Europe, strengthen European identities and sustain social cohesion (European Commission, 2018: 1).

The EU has different programmes to promote and support this sector . Among them, the Creative Europe programme plays a central role. It was born in 2014 – under the presidency of Jean-Claude Juncker – when it brought together three already existing programmes – MEDIA, Culture and MEDIA Mundus – in order to create a “single comprehensive instrument to increase efficiency, more effectively seize the opportunities of the digital shift and address market fragmentation” (Kern, Le Gall & Pletosu, 2018: 2). It has been for the first-time evaluated mid-term by the European Commission (2018). Based on an external and independent assessment, the main purpose was to determine the progress in its implementation, as well as outline “its achievements while addressing its main shortcomings” (European Commission, 2018: 1).

Attempting to analyse European media policies is not an easy task because, as previous scholarly work concluded, there is “no single competent authority...; no single law with which European media sectors need to comply; no unified actor interests; and no shared objective underlying European media policy” (Donders, Loisen & Pauwels, 2014: 5). Indeed, it is a multi-level and multi-stakeholder environment sustained by a diversity of actors and legal instruments that have a range of “intangible interests of an economic, social, ideological and cultural nature” (idib.: 9). Consequently, the approach taken in this paper is institutional political economy as it allows to understand “the relationships of power, control of resources, and interplay of interests” (Thompson, 2011: 1).

The European elections are approaching and, thus, in some months’ time (May 2019) Juncker’s 5-year mandate will end. Drawing on findings derived from review of academic literature and secondary data, archival research and policy analysis, this research aims to evaluate the Juncker Commission’s performance in relation to the Creative Europe programme: what has been done and

what has not been done. Moreover, this research will also provide an agenda of pending issues that the next elected European Commission's president should not overlook.

Title: Economía y políticas de comunicación en Argentina: desregulación y concentración de los medios en el período 2015-2018

Session Type: Individual submission

Authors:

Name: Guillermo Mastrini

Email: gmastrini(at) yahoo.com.ar

Country: AR (Argentina)

Affiliation: Universidad Nacional de Quilmes

Name: Martín Becerra

Email: aracabecerra(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de Quilmes

Abstract: La discusión sobre los medios en Argentina suele mezclar los efectos fulminantes sobre la economía de los medios tradicionales que provoca la crisis global del sector, con particularidades de la cultura mediática nacional y la valoración de las políticas y reglas de juego cambiantes dispuestas por los últimos gobiernos, en particular los de Cristina Fernández de Kirchner (2007-2011 y 2011-2015) y Mauricio Macri (2015-presente).

Fruto de la combinación variable de esos tres factores es que surgen dos certezas: casi nada es hoy como era en el pasado en cuanto al panorama de los medios argentinos y, muy probablemente, casi nada será mañana como es hoy. Ni las rutinas productivas, ni la relación con los públicos que crea(ba) hábitos que Eliseo Verón categorizó como “contratos de lectura”, ni los niveles y características de empleo, ni los dispositivos de edición, distribución y uso/consumo, ni la influencia cultural en sentido amplio conservan las regularidades que distinguieron la institucionalidad mediática durante todo el siglo XX y el inicio de este siglo.

La crisis global provocada por la digitalización y emergencia de plataformas en red de distribución de contenidos y el rol iconoclasta de conglomerados como Facebook y Google con su poder devastador para la lógica con la que se organizaban los negocios de los medios, suelen estar hoy en el debate. En cambio, se habla menos del ingrediente local que combina la idiosincrasia peculiar con las políticas públicas en un sector que en la Argentina es muy dependiente de las reglas de juego que marca el Estado.

Si se observa el mapa de medios al final del segundo gobierno de Fernández de Kirchner en diciembre de 2015 con el que fue troquelando su sucesor Macri hasta fines de 2018, se advertirá que no todos los cambios son fruto de la crisis global, ni son exclusiva responsabilidad de la tradicional estructuración mediática nacional o consecuencia directa de las políticas.

Pese al carácter liberal de su discurso, el gobierno de Macri tuvo una activa intervención en materia de políticas de comunicación, con numerosos decretos que eliminaron las restricciones a la concentración dispuestas por la ley audiovisual de 2009. Macri dio un giro de 180 grados en

políticas de comunicación respecto del kirchnerismo. Abandonó el discurso de la democratización de los medios y lo reemplazó por el desarrollo del mercado y la necesidad de atraer inversiones. Con el tiempo, incluyó la promoción de la convergencia como concepto orientador de una mayor eficiencia en sector que de acuerdo a su diagnóstico se encontraba “atrasado”. Sin embargo, los sucesivos parches tampoco alcanzaron a diseñar un marco normativo realmente “convergente”. La política de Macri en el sector se aparta de la senda trazada por países con legislaciones acordes a la convergencia tecnológica como Reino Unido o México.

El objetivo de la ponencia es mostrar los resultados de una investigación en la que relacionamos los cambios en las políticas públicas durante los últimos años con las modificaciones en la estructura de propiedad del sistema mediático y de telecomunicaciones, con un incremento de la concentración hasta alcanzar un nivel inédito no sólo en Argentina sino en toda Latinoamérica.

Title: The Effect of the Financialization Period of 1983-2003 on the Formation of Today's Pro-AKP Media

Session Type: Individual submission

Authors:

Name: Banu Dağtaş

Email: banudagtas(at) gmail.com

Country: TR (Turkey)

Affiliation: Anadolu University Department of Journalism

Abstract: Media freedom is related to both government rule and the structure of media ownership. Today approximately 90 percent of Turkish media support the authoritarian AKP government that has been in power since 2003. Both the government rule (pressure on media and some anti-terror laws) and the existing media structure are comprehensively undermining diversity of expression. This study focuses particularly on how the financialization period of 1983-2003 led for the formation of the present pro-AKP government profile of the major media in Turkey.

Neo-liberal policies were introduced in Turkey in 1980 with the “Decisions of January 24” (eight months before the military coup of “September 12, 1980” which implemented heavy pressures and tortures on the labor movements and leftists) opening the way for a rapid expansion of advertising revenues; fast growing corporatization; cartel agreements on distribution and advertisements; and anti-syndical reconciliation between two leading conglomerates (Doğan-Sabah Groups) .

At the same time, over the period 1983-2003, the financial sector became an important source of subsidises for media organisations with every ‘big player’ in the media sector owning at least one of bank, in addition to investments in key industrial and financial sectors such as energy, construction, and insurance. With the financial crisis of 2001, these media companies went into bankruptcy and their media revenues were concentrated in the hands of the ‘autonomus’ governmental fund the TMSF- Savings Deposit Insurance Fund - which was supportive of the AKP. It is argued here that this transfer of media revenues was the main driver behind the formation of a pro-AKP media .

Three major media groups -Sabah, Çukurova and Uzan- all had their revenues transferred to the TMSF. The other big group (one of the two main conglomerates)- Doğan Group has been keep alive up to 2018 primarily with continuous downsizing, as a result of government pressures. The depth and diversity of the journalism has been further damaged by the nearly five thousand journalistic job losses that followed the 2001 financial crash.

This paper explores how the political and economic dynamics that gathered momentum over the liberalisation and financialization period of 1983-2000, and the transformation of the media sphere they set in motion, paved the way for the centralisation of economic control over the media effected in the wake of the 2001 financial crisis, and led the formation of the present, almost univocal, pro-AKP government profile of the major media in Turkey today.

Title: Cross-Media ownership in Indian Vernacular Media: An exploration in Diversity and Plurality

Session Type: Individual submission

Authors:

Name: Anuradha Bhattacharjee

Email: banuradha17(at) gmail.com

Country: IN (India)

Affiliation: Centre for the Study of Developing Societies, Delhi

Abstract: This research presents a data-driven picture of the cross-media ownership concentration in 13 Indian language media using numerical data from Audit Bureau of Circulation of India (ABC) for Newspaper, Broadcast Audience Research Council (BARC) – for television and Radio Audience Measurement (RAM) for Radio. The paper attempts to lay bare the emerging cross-media monopolies across languages, regions and genres for use in formulating appropriate policy and regulation or at least media literacy amongst the consumers of media.

Diversity in India is enshrined in the 8th Schedule of the Constitution, which recognizes 22 languages within the country. English was retained as one of the two official language. As per Census 2011, the average literacy rate in India stands at 74.04%. It is lower for women and for rural areas – both of which are important bastions for democracy. A quick study reveals that the literacy agnostic electronic media is present only in 12 of the 22 vernacular languages. The two-language education policy ensures that an average Indian, at best, uses any two of the numerous languages to access media.

Though plurality and diversity are two different concepts and much debated, their link to and impact on public interest sees consensus from all. Pluralism is considered not as an objective but as a means to achieve democratic values (Valcke et al. 2009). Asymmetries of power, revaluing of dissent and right to contest—create an interesting basis for discussing the value of media pluralism in contemporary media policy (Karppinen 2012). Plurality can be defined as a state of society in which members of diverse ethnic, racial, religious, or social groups maintain an autonomous participation for the development of their traditional culture or special interests within the confines of a common civilisation. Diversity, on the other hand, simply means variety. The diversity in India in terms of language, food, and even media is well known. This paper examines the extent of ownership plurality in media in furthering media literacy amongst audiences.

The measurement of plurality and diversity in media industry has been one of the basic exercises for the policy makers in Europe. Since the 1990s, EU member states have been assessing pluralism in their internal media markets (European Commission 1992a). The media plurality monitor (MPM), as an auditing tool for the purpose, is a result of this continuous struggle. It highlights areas of current and potential risk and allows the member states to compare and address the situation from responses adopted elsewhere.

Kiran Prasad (2015) observes that media pluralism indicators such as ownership and control, media types and genres, cultural, political and geographic diversity have been recognized in principle, but India does not have a comprehensive media policy on media pluralism. As media infrastructure continues to expand post 2000 in a complex digital landscape, media ownership concentration in the vernacular media will assume significance as regulations may be needed for providing access to under- served communities. The risks to media pluralism in India lie mainly in the increasing media commercialization (TRAI 2013) and no restrictions on cross-media holdings (TRAI, 2014), which this paper attempts to measure.

Title: Circle the Square: Brand and Disney's Corporate Identity in the Platform Economy

Session Type: Individual submission

Authors:

Name: Brent Cowley

Email: brentcowley07(at) gmail.com

Country: US (United States)

Affiliation: University of Oregon

Name: Maxwell Foxman

Email: mfoxman(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: For years The Walt Disney Company has invested and expanded into new media, companies, products and other entertainment markets, but their support for Circle with Disney, a platform explicitly regulating Internet use, represents a further encroachment into consumers' homes. The device wirelessly pairs all internet-connected devices, permitting adults to monitor internet usage (including websites, software and/or games) in order to filter or censor social media, gambling, dating, mature and other explicit or malicious content, all while tied to the Disney brand. This paper will explore Circle with Disney as a unique case analyzing how media brand and identity are implemented in the platformization of cultural production (Nieborg & Poell, 2018) in which the "penetration of economic, governmental, and infrastructural extensions of digital platforms into the web and app ecosystems" has fundamentally affected "the operations of the culture industries (p. 2)." This mixture of technical, economic and social factors surrounding the device allows it to extend, censor and limit content, while adhering to the Disney corporation's family-oriented brand.

This paper will first perform a "platform analysis" (van Dijck, 2013) of Circle with Disney in order to map and critically appraise the technology, users and usage, content and cultural form, ownership governance, and business model. This approach particularly highlights that appropriation of popular studios, implementation novel technology, and the sanitization of current properties (i.e. self-censorship) is an effort to maintain a more family-friendly and conservative image that not only allows the company to remain viable, but also validates the political economic advantages of aligning with the Circle device. The MyCircle app, for example, strategically favors Disney operated applications, but the company's alliance with the product also reinforces more conservative values for those interested in the product.

To understand the impact of such findings, first we will track the best uses of the device from consumers' perspectives through extensive exploration of public online forums (such as Reddit) and product reviews (such as Amazon and Best Buy). Additionally, a survey and semi-structured interviews with users about their impressions of "Disney," the company's influence on Circle, and the importance of exclusive Disney-oriented content offered through the device, will be performed. These interviews will offer insights into the consumers' culture, demography of users, the device's most popular uses, and finally its relationship to other compatible platforms.

Preliminary findings from surveys and interviews conducted have correlated strong consumer connections to the device as a result of Disney's association with the product. One owner of Circle with Disney emphasized that, "knowing it was a Disney product influenced [their] decision... because [they] trust the [Disney] brand."

Circle with Disney is non-existent, thus far, within scholarly research. Analyzing the product will elucidate Disney's relatively inchoate entrance into the platforms as a mode of cultural production and platformization of cultural production. However, with the growth of interconnected "smart devices" in the home, and particularly those associated with hallmark brands (Amazon, Google, Apple, etc.), research into how the nature of brand identity, corporate structure and the extension of platforms into physical space is more relevant than ever before.

Title: Beyond Surveillance Capitalism: Labor and Environment

Session Type: Individual submission

Authors:

Name: Richard Maxwell

Email: rmax(at) nyc.rr.com

Country: US (United States)

Affiliation: Queens College - CUNY

Abstract: The point of departure for this paper is the new tome, *Surveillance Capitalism*, by Shoshana Zuboff. Critics praise its revelations about the scale of behavioral surveillance that Facebook, Google and others carry out to maximize their control over a “behavioral surplus.” Zuboff details how these corporations pillage our personal data like imperialists robbing the Third World of natural resources. Evgeny Morozov issued a useful counter to the critics’ enthusiasm in a February 2019 *Baffler* article, noting that Zuboff’s “surveillance capitalism” “emphasizes the former at the expense of the latter.” Morozov also notices a “minor genealogical inconvenience for Zuboff” in that the term surveillance capitalism “had been previously used—and in a far more critical manner—” in an important essay by John Bellamy Foster and Robert McChesney.

My paper will address Morozov’s and Foster and McChesney’s concerns in more depth. But I also want to take the opportunity to examine two aspects of surveillance capitalism that have yet to be part of these inquiries. The problems of surveillance labor and the ecological costs of digital surveillance systems.

The problem of surveillance labor has been recognized in surveillance planning since the 1780s when Jeremy Bentham conceived the panopticon, a key advantage of which was keeping surveillance workers from feeling empathy for prisoners they were watching (Bentham, “Letter VI”). As Bentham put it, control over the under keepers anticipates a “prisoner...appealing to [their] humanity.” When I researched analog personal data collection by marketing researchers in the 1990s, I confirmed that ethical concerns among some surveillance workers were inevitable and, at some point, could conflict with the system. The human interface with surveillance subjects has proven to be an unstable means for collecting personal data, as Edward Snowden’s political and ethical awakening demonstrates.

In the 1990s, the CIA and NSA funded the “birds of a feather” project with grants to computer-scientists at Stanford who would eventually develop the algorithms that were key to Google’s system for capturing personal data, or as their grant put it: “query optimization of very complex queries that are described using the ‘query flocks’ approach” (Nesbit 2017). What the CIA and NSA got in the bargain was a surveillance system that eliminated the human interface, a form of labor substitution potentially saving huge transactional and operational costs. And without human surveillance workers doing the spying, the ethical dilemma could be removed. With a dumb algorithm in charge, there’s no one to think morally about the surveillance subject’s humanity at the point of data collection.

The problem of the environmental impact of data collection is also in need of further exploration in the study of surveillance capitalism. In 2006, the NSA's Fort Meade headquarters—the largest user of electricity in Maryland—overloaded the system, causing outages. It's been a problem for years. Its massive facility near Bluffdale, Utah uses 1.7 million gallons of water daily and consumes 65 megawatts of electricity, with massive surges and power outages that destroyed equipment and delayed its completion until 2014 (Maxwell and Miller 2015).

Title: Ready, Fire, Aim: Bringing the Digital Duopoly'Google and Facebook'to Heel (and Why Platforms are Not Publishers or Destroying the Media)

Session Type: Individual submission

Authors:

Name: Dwayne Winseck

Email: dwayne_winseck(at) carleton.ca

Country: CA (Canada)

Affiliation: School of Journalism and Communication, Carleton University, Ottawa, Canada

Abstract: Public inquiries around the world are casting a critical eye on the economic and political power that global digital platforms such as Google, Facebook, Amazon, Microsoft and Netflix have accrued, and their potential impact on the sustainability of commercial journalism, the media industries, data protection and privacy, open markets democratic institutions and people's daily lives (ACCC, 2018; ETHI, 2018; UK DCMS, 2018; UK DCMS & IGC, 2018; UK ICO, 2018; US, 2018). The "International Grand Committee" convened by the UK House of Commons after the Facebook/Cambridge Analytica data breach exemplifies the point. Scholarly scrutiny of "digital dominance" is also mounting while calls to regulate the internet behemoths as publishers/media companies are finding a receptive audience (Bell & Owen, 2017; Flew, 2018; Gillespie, 2018; Hesmondhalgh, 2018; Khan, 2017; Moore & Tambini, 2018; Napoli & Caplan, 2017; Stucke, 2018). Furthermore, the clout of the mostly US-based internet giants' continues to grow amidst the shift from the desktop internet to the mobile internet, as they vertically integrate up and down the internet stack, and leverage their control over technical interfaces and protocols to dominate multisided markets (Nieborg & Helmond, 2018; Srinicek, 2017).

While the need to bring the internet behemoths under proper regulatory control is urgent, and the potential for stricter line of business restrictions or to break them up altogether should be seriously contemplated, two weaknesses compromise the case: First, while the internet giants' sky-high market capitalization, revenue and market share is often presented as if ironclad proof of the digital duopolies' command over the media and digital economy, such claims trade on the "fallacy of big numbers" with little sense of how those numbers fit within a larger whole. Indeed, while the global market capitalization for the internet giants puts them amongst the world's largest corporations, a closer look at their revenues, tangible assets and the size of their workforces reveals a very different image. Thus, while Google's 2017 global revenue was \$110.9 billion (Facebook's \$47B), AT&T's revenue was \$168 billion in the US alone (including Time Warner)! While Google and Facebook's had a combined market share of 71% of the \$88 billion US online advertising market, their share of the \$210 billion in advertising spending across all media is under a third. Their combined share of the total \$970 billion US media economy even less: 7%. They do not dominate the entire media economy (Canadian figures are similar). Second, the choir of calls to treat internet platforms as publishers/media firms obscures a potentially better analogy between them and banks. For instance, like banks, Google and Facebook are repositories of a major source of wealth: data. Perhaps, like banks, they should have fiduciary obligations to safeguard people's wealth/data/privacy? Furthermore, perhaps platforms should undergo regulated audits? This would open up their "black boxes" to reveal the critical infrastructure and algorithms that increasingly underpin the economy,

society and people's lives. Lastly, just as multinational banks create regulated national branches wherever they operate, perhaps Facebook and Google should be required to do the same?

Title: The Political Economy of Peer Production

Session Type: Individual submission

Authors:

Name: Benjamin Birkinbine

Email: bbirkinbine(at) unr.edu

Country: US (United States)

Affiliation: University of Nevada, Reno

Abstract: The labor of peer producers has been described by some commentators as heralding the rise of ‘info-communism,’ but it can also be seen as part of a broader shift towards a ‘new spirit of capitalism,’ which values creativity at the expense of wage equality in the workplace. Whether people are working online without realizing it (‘digital labor’), or weakening traditional labor safety nets (‘sharing economy’), or are being co-opted by firms during hackathons (‘open innovation’), the end result is the same: prosumers creating value gratis is a boon for firms. In this paper, I interrogate the intersection of peer production and capitalism to develop a critical political economy of peer production. To do so, I contextualize the rise of peer production within broader structural changes occurring within capitalism and evaluate the extent to which peer production contradicts, or reinforces, these global economic trends. For example, I draw from Marx’s investigation of labor processes to compare and contrast the cooperative labor of industrial production and more recent forms of commons-based peer production. Furthermore, I draw from more recent theories of commons value circuits to position peer production as dialectically situated between capital and the commons, which highlights the ways in which communities of peer producers intersect with circuits of capital accumulation. As empirical evidence, I discuss numerous examples of peer production communities and the ways they either willingly interface with capitalist firms or the ways in which the value from their peer production activities is unwillingly extracted by capitalist firms. The overall goal of this survey is to develop a critical political economy of peer production that can be used for at least two purposes: 1) as an analytical tool for understanding the ways in which communities of peer producers intersect with capital accumulation circuits, but also 2) to call for a form of commons praxis, which would preserve the value created by communities of peer production and prevent its exploitation by capital or the state.

Title: Digitally oriented capitalism: a critical analysis of social stratification and power relations in the digital space

Session Type: Individual submission

Authors:

Name: Dmitrii Gavra

Email: dgavra(at) mail.ru

Country: RU (Russian Federation)

Affiliation: St-Petersburg State University

Name: Vladislav Dekalov

Email: andavior(at) gmail.com

Country: RU (Russian Federation)

Affiliation: St-Petersburg State University

Abstract: The paper deals with the social stratification transformation generated by extension of digital space and its invasion to other spaces of the social system (particularly, political and media ones). To analyze the Internet as a realm where new formats of power relations appear, the authors use a critical media theory approach. It considers the relationship between WWW users as a relationship between subjects and objects of the digital space.

Communication technologies provide new sources and new practices of digital power, thus shaping an updated version of the capitalist system. There is a multitude of researchers analyzing it. Among them M. Castells, T. Terranova, M. Hardt and A. Negri, P. Virno, N. Dyer-Witheford, C. Fuchs, D. Chandler, K.-X. Faucher, Y.M. Boutang, J. Dean, T.G. Smith. Following their works, authors develop the concept of exploiting attention digitally oriented capitalism actualizing it on three levels of the digital space (hardware, software and communicative one/wetware).

The authors conceptualize power in digital space as a power: 1) attracting and retaining Internet user's attention on a digital segment; 2) attaching users to some kind of symbolic structures; 3) inspire users trust in this structures; 4) and stimulating digital labor (i.e. everyday, voluntary, and unpaid digital prosumerism). We regard monetary equivalent (real and potential) of this power as digital capital. The authors claim that digital capital is the most important component of power to be invested and used by a digital actor. To capitalize digital power this actor has to fulfill essential functions to perpetuate his position in digital space stratification. These functions determine different social roles of the actor. On a communicative level, a subject can be a "traffic monopolist", a part of a "communicative elite", or a representative of a "digital brand".

Digital subjects are becoming influential power actors capable to compete with media for their audiences and with politicians for their public. Conversely, media- and political actors apply new practices trying to attract Internet users' attention to a certain digital segment, introduce rituals and behavioral patterns, build a reputable digital brand and exploit digital labor of retained audience.

The authors analyze relations between all these actors on the following areas of intersection: political and media- spaces, digital and political spaces, digital and media- spaces. Area of all three spaces intersection, which generates very complex configurations and ambiguous subjects' constellations is considered in details. The media and journalists interact with the audience. Political actors apply power practices to the political public. Digital prosumers are influenced and moreover

managed by the winners in the competition for their attention, attachment, trust, and labor power. All these subjects being digitalized have to coexist and flexibly convert different types of capital. In the last part of the article, the authors discuss various empirical methods for 1) identifying digital power actors and their influence to Internet audience; 2) evaluating of mutual influence of digital, media and political power actors presenting on the Internet. In particular, one of the promising areas is the use of mathematical models and Big data analysis.

Title: Journalism as collective practice: towards a political economy of digital-first news production and workplace reorganisation in Australian media

Session Type: Individual submission

Authors:

Name: Penny O'Donnell

Email: penny.odonnell(at) sydney.edu.au

Country: AU (Australia)

Affiliation: Degree Director, Master of Media Practice Senior Lecturer in International Media and Journalism Department of Media and Communications, School of Letters Arts and Media The University of Sydney, NSW, Australia 2006

Abstract: Australian journalists have a long history of organising for decent pay and working conditions in the belief that a strong workforce is the best guarantee of quality news that serves the public interest. Yet, labour relations are a neglected theme in journalism scholarship, and we have limited understanding of how organised journalists' intervene in workplace reorganisation processes to exert their autonomy, co-opt managerial imperatives, or restrain further commodification of their labour.

This paper addresses that gap by examining some of the political economy aspects of journalism's digital transformation. Tim Marjoribanks' (2000) relational model of new technology and workplace reorganisation theoretically frames the study. The model proposes that control over technological innovation in the workplace, and associated shifts in workplace relations, are dependent on the balance of power between labour, business, and the state, which in turn is context-specific. This proposition is tested through an investigation of the relationship between technological innovation and workplace reorganisation at Australia's two major media companies, Fairfax Media and News Corp Australia, following the shift to digital-first news production in mid-2012.

The paper argues while the two media companies were the key protagonists in this key moment of digital transformation of the Australian news media, their change objectives were constrained by the newspaper industry's vertiginous decline and intense competition with the tech giants. Conversely, union representation ensured the journalistic workforce had a voice in the change process with management, but membership decline and occupational change undermined this role, while also driving demands for union revitalisation and new approaches to labour relations. Further, unprecedented volatility in Australian politics, including five changes of Prime Minister since 2010, as well as legislative and policy changes relating to the regulation of work, has added further complexity to these power dynamics by keeping the issues of trade unions, insecure work and wage stagnation on the political agenda, along with media reforms.

Overall, the paper identifies that an analysis of the interaction of workplace relations and technological innovation within the broader institutional and societal context over time makes an important contribution to our understanding of the digital transformation of news media.

Keywords: political economy, journalism as collective practice, technological innovation, workplace reorganisation, commodification of labour, Australian journalists, union representation, power dynamics.

Title: Manufacturing Consent in the Digital Era: Disinformation, Government Propaganda and the 2017 elections in Kenya

Session Type: Individual submission

Authors:

Name: Jacinta Maweu

Email: mwendejacinta(at) yahoo.co.nz

Country: KE (Kenya)

Affiliation: University of Nairobi, Kenya

Abstract: This paper examines how the government used new media technologies to spread massive political propaganda and disinformation aimed at manipulating public opinion on key electoral issues in the 2017 general elections in Kenya. In the run up to the elections, the Uhuru Kenyatta administration and his Jubilee political party launched mega propaganda campaigns dubbed #JubileeDelivers and #GOKDelivers. The Presidential Delivery Unit (PDU) created an official website (www.delivery.go.ke) to publicize this extensive propaganda and created Twitter and Facebook pages as well as videos on YouTube. The public was also fed with numerous broadcast and print media political adverts on the government's achievements contrary to the Elections Act. In March, 2018 details emerged of the claims by Cambridge Analytica that it engineered a digital propaganda campaign that painted Uhuru Kenyatta in positive light while smearing the image of his main rival, Raila Odinga behind the scenes. Harris Media LLC, a far-right American digital media company also associated with Jubilee is believed to have created two propaganda websites (www.uhuruforus.com) showcasing President Uhuru Kenyatta's accomplishments and the (www.therealraila.com) which was deliberately meant to cause harm to Raila Odinga the person, incite and promote hate speech through fabricated lies.

The Kenyatta administration is also said to have deployed armies of "opinion shapers" to spread government views, drive particular agendas, and counter government critics on social media. Such online disinformation campaigns can create a fabrication of grassroots support for government policies on social media leading to the government essentially endorsing itself. By creating the false perception that most citizens stand with them, the government is able to manufacture consent on the need to advance antidemocratic changes to laws and institutions without a proper debate. For instance, there were attempts to intimidate the Judiciary after the annulment of the August Presidential election results, to change the electoral laws in favour of the incumbent, to demonize the opposition, clamp down on media and journalists perceived to be critical of the government and to justify police brutality on those who demonstrated against the election outcome.

Using Herman and Chomsky's propaganda model, this paper examines the extent to which the government can be said to have used new media to manufacture consent on key electoral issues including the outcome of the 2017 elections in Kenya. Data will be collected through interviews with political analysts, and purposefully selected members of the public to establish the impact of government disinformation and Propaganda campaigns. A textual analysis of the various messages spread through Twitter, Facebook, WhatsApp and YouTube will also be done to establish the form and content of the propaganda messages. The Key research question will be: To what extent can

new media technologies be said to have facilitated the manufacturing of consent among voters through the use of half-truths, falsehoods, disinformation, misinformation and ‘conspiracy’ theories in the 2017 elections in Kenya?

Key Words: Propaganda Model, disinformation, Kenya, social media, elections

Title: From 'Internet Addiction' to 'Creative Cultural Industry': The Ideological Reconstruction of Video Games in People's Daily

Session Type: Individual submission

Authors:

Name: Menglu Lyu

Email: menglu.lyu(at) siu.edu

Country: US (United States)

Affiliation: Southern Illinois University Carbondale

Abstract: Cultural industry is regarded as a new frontier of China's economic growth after the 2008 global economic crisis. Video games, particularly PC games and online games, had a striking development in China in the last decade. It was defined as an important part of "creative cultural industry" in 2009, and got much support from the state. However, before it became a favorite of state policy, video games got a negative assessment in public opinions and media reports. Such negative discourse contradicts state plans and hence must be attenuated if the state wants to promote video game industry.

This paper studies the ideological reconstruction of video games in People's Daily, the most important party organ and the mouth piece of Chinese central government. I accept Althusser's (2009) analysis of ideological state apparatuses (ISA), and treat People's Daily as an ISA of the Chinese state. By critical discourse analysis and sociohistorical analysis, I aim to unveil how the discourse of video games has been reconstructed since 2009, and how the new discourse legitimizes video games according to the state's goal of economic and national development.

Video games in China are a contested space shaped by various stakeholders, including the state, the game industry, the public, and the player. As a result, as Zhang (2013) points out, it is always dragged by two contradictory cultural discourses. One is pathological that reflects a moral panic over youth Internet addiction, while the other is productive that focuses on the contribution of video games in growing a commodity-based capitalist economy and a national high-tech industry. However, Zhang doesn't elaborate on the discourses in terms of their logic and their correlation to different stakeholders, nor pay attention to the transformation of discourse in state owned media. Few other scholars have discussed these contesting discourses.

I used "video games" as the keyword to search the online database of People's Daily in the period of 1980 - 2018. I analyzed the themes and trends of all news reports I got. Then by typical-case sampling, I chose 10 news reports from the periods before and after 2009 respectively, and did detailed analysis on them.

My finding is that, the discourse before 2009 was mainly around Internet addiction, pathological players, and other harm of video games. After 2009, in line with socioeconomic situation and changing state policies, the emphasis of new discourse shifts from those negative assessments to the great contribution and potential of video games in driving economic growth and cultural revitalization, and in expanding China's international influence.

It is noticeable that the players who were once the focus of the pathological discourse, are almost omitted in the development discourse. It implies that economic and national development weighs down individual development, becoming the top priority of video game policies. Besides, the analysis of the ideological reconstruction shows a way in which the state, as one of the stakeholders, exerts its influence on video game industry. It can be seen as a stepping-stone for future studies that address the political economy of China's video game industry.

Title: Knowledge-Based Economies and Highly Qualified Migrations in Latin America

Session Type: Individual submission

Authors:

Name: Francesco Maniglio

Email: franmgl(at) gmail.com

Country: EC (Ecuador)

Affiliation: Universidad Técnica de Manabí

Abstract: Since the 1990s, labor markets in the central countries have been extending their recruitment fields into other countries to meet their growing demand for qualified workers, creating an international competition situation. Using the Marxian dependency theory, highly qualified worker international migratory flows are here claimed to account for the consolidation of a specific geography, which involves inclusion as a form of dominion in the development of knowledge-based economies. Social formations arising from qualified migrations bring to the fore both the issue of international division of labor and knowledge, and the contradiction between dependency and the development of knowledge-based economy agendas. Innovation, science and technology policies in central countries continually demand foreign qualified workers. Moreover, their human capital recruitment and retention policies reinforce the political and economic dependency of non-central countries

Title: Using the Master's Tools: Social Media Advertising and the Rideshare Drivers United Organizing Campaign

Session Type: Individual submission

Authors:

Name: Brian Dolber

Email: bdolber(at) csusm.edu

Country: US (United States)

Affiliation: California State University San Marcos

Abstract: The rise of the so-called “gig economy” highlights how evolving modes of production enabled by mobile ICTs and algorithmic management challenge the classic wage-labor relationship and the legal infrastructure that has governed it. These phenomena have worked to expand what autonomist Marxists call “the social factory,” where “labor is deterritorialized, dispersed, and decentralized” (Gill & Pratt, 2008, 7). Such transformations pose problems for traditional trade union organizing which, reflective of its Fordist origins, depends on face-to-face relationships developed on the shop floor and picket line. In addition, the legal changes that have taken place as part of this emerging regime disincentive established unions in the United States from committing resources to developing new organizing models.

This raises the question: might gig workers use the corporate-owned, commercially-funded digital infrastructure that is central to the social factory’s expansion to organize democratically?

As part of an action research study funded by the Media Inequality and Change Center (MIC) at University of Pennsylvania, I worked alongside Rideshare Drivers United- Los Angeles, an emerging organization of Uber and Lyft drivers in the Los Angeles area, to understand the usefulness of social media advertising as a tool for building a democratic worker organization. Between October 2018 and January 2019, we spent \$4000 on Facebook ads targeted to rideshare drivers. Clicking on the ad brought drivers to the organization’s website, where they could become a member, take a survey, and schedule to have a phone call with a volunteer organizer. Organizing calls were made using an app created by an RDU volunteer.

Over the course of the study, RDU, founded in 2015, grew from approximately 1000 members to 2400 members. As more members learned about RDU through social media and contacted the organization, volunteers identified potential core organizers. Activists were recruited to make phone calls and then take on growing responsibilities within the campaign. The organizing drive resulted in a rally of 150 drivers outside of California Governor Gavin Newsom’s office on January 30, 2019, the largest protest of gig workers in the United States to date.

While the app-based strategy was essential to the campaign’s success, RDU organizers consistently emphasized the importance of utilizing these tools in order, ultimately, to build face-to-face relationships. Such an approach need not celebrate social media’s supposedly democratizing impact (Shirky, 2009). Rather, this empirical study suggests that such strategies might help transform relations throughout the social factory by centralizing the dialectical relationship between labor and

communications systems, while highlighting the challenges posed by the lack of institutional organizing support.

Title: The Cost of Satire' Censoring Netflix.

Session Type: Individual submission

Authors:

Name: Joe Khalil

Email: jkhalil(at) northwestern.edu

Country: QA (Qatar)

Affiliation: Northwestern University Qatar

Abstract: In December 2018, Netflix removed access to an episode of its news-comedy show Patriot Act with Hasan Minhaj in Saudi Arabia. In that episode, the comedian blasts the Kingdom and its crown prince using satire. Operating at the legal request of Saudi regulators, Netflix complied but the episode remained accessible on multiple legal and illegal platforms. This Saudi decision was followed by a statement from the public prosecutor that harshly warns the producers or distributors of satirical content online. These decisions reveal how a state's concern with a specific genre has prompted an extensive cyber crackdown. As a genre, satire is not only meant to be humorous but to offer strong constructive socio-political critique for the benefit of the society as a whole. Between 1991-2005, Saudi state-owned television broadcast a highly popular satirical show, Tash Ma Tash (Fizz or not). Over the years, the show has adapted to specific changes within Saudi society commenting on various contentious issues, addressing women's status, the problems of the public sector and religious extremism. This show inspired several young Saudi comedians to establish their own YouTube channels to produce monologues, songs, sketches which were shared across social platforms. These developments renew questions regarding the reach of global media companies, their exercise of censorship, and their ability to circumvent nation-state regulatory systems. Of course, there are precedents with satellite television (e.g. Star TV), the internet (e.g. Google), and of course social media (e.g. Facebook). However, these cases also raise new questions regarding the legal status of streaming platforms, the reclamation of nation-state control over media, and precarious conditions of independent producers. Using a combination of institutional analysis and case studies, the paper examines the context, dynamics and implications of these decisions on global media streaming platforms and on local independent media producers.

Abstract: This paper, located at the juncture of historical political economy and “new cinema history” (Maltby, Biltereyst, and Meers 2019), focuses on the local distribution and exhibition networks of cities set in two distinct social-political contexts - Ghent and Antwerp in Belgium and Brno in Czechoslovakia during the early 1950s. While in Czechoslovakia distribution and exhibition was regulated by the state and served to ideological purposes of forming a model of a “new viewer” (Skopal 2012), the Belgium experience was that of an open market, with non-compulsory censorship (Biltereyst and Meers 2014). By comparing the cinema programs of the three comparably-sized cities, we investigate how the two different political systems (state-led socialism vs. free-market capitalism) impacted upon patterns of exhibition and distribution and from this whether distinctive patterns of film taste can be identified. We look into questions on the relation between national cinema policies, local business strategies and film popularity. What were the differences in terms of the exhibition and circulation of films within the three cities? What about differences in popularity of films according to genre, origin, etc.? How popular were Hollywood and other kinds of films (cf. US cultural imperialism thesis)?

This historical and political-economic paper is based on a comparative analysis (Sedgwick, Pafort-Overduin, and Boter 2012) of systematically constructed large-scale datasets on film venues (title, location, exhibitor,...) and film programmes (film title, origin, producer,...) in the three cities in 1952 and on data coming from official publications, trade journals and other secondary sources in

the two countries. These rich sources also allow us to make comparisons between the cinema cultures of the three cities, including the vintages and countries of origin of films in circulation, the pattern in which films were diffused in the respective city locations and the statistics of popularity.

Title: Algorithmic Exploitation in "Sharing Economy": A Study of Labor Control Mechanism in Didi Chuxing

Session Type: Individual submission

Authors:

Name: Chen Zhang
Email: zhangc.94(at) foxmail.com
Country: CN (China)
Affiliation: Peking University

Abstract: Taking advantages of government's dual-innovation policy, assisted by information integration and cloud computing technology, China has witnessed a steep rise and penetration of the "sharing economy". And Didi Chuxing, which bought Uber's China division in August 2016, is now the world's largest ride-hailing platform. Such unicorn company presents tremendous opportunities for those who embrace new technology and business models, but has also caused issues as it often obscures workers' role by the usage of a set of labor control mechanisms. This study will focus on the platform's exploitation and manipulation on Didi's registered-drivers under the background of the "sharing economy" from the perspective of Political Economy of Communications.

The Internet has begun a political-economic transition toward what Dan Schiller calls "digital capitalism". And "digital labor", as Karl Marx's labor theory's further developed, is a crucial foundation of discussions within the realm of the political economy on this topic. In 2013, Sandoval Marisol extends its concepts to include those who are producing computer technologies, electronic equipment and media technologies. I also want to expand the extension of "digital labor" and bring the group of Didi drivers into this category. Meanwhile, with the development of Sharing Economy, many researches observe such platforms. In 2015, Alex Rosenblat and Luke Stark argued that the information and power asymmetries produced by the Uber applications are fundamental to its ability to structure soft control over its workers through its technological design. Mark Graham also analyzed that algorithmic mechanisms have a dark side, digital work signals a global race to the bottom. However, current foreign researches on "sharing travel" mainly focus on the economic model or hidden control of the Uber, Didi Chuxing is often neglected, even if it is, the impact of such platforms on labor markets and its control mechanisms are insufficient. So, This study will focus on this Chinese technological company, especially its series of algorithmic mechanisms, such as system dispatch, dynamic pricing adjustment, evaluation mechanism and other "hidden exploitation" on drivers, expecting it will be an illuminating exploration.

The methods this research adapts will include Case Studies, Interviews and Field Investigations. Last year, in the process of my internship and interchanges with Didi's internal staffs, I had done some Case Studies on its platform structures and corporate operations. This year from March to May, I'm planning to interview 10 different types of Didi's registered-drivers, staying with them under way as a passenger to get the first-hand materials of their working patterns, labor intensity, income, etc. As for the arrangement of text structure, the first part will illustrate the evolution of the concept of the "sharing economy" and the development of Didi Chuxing. The second part is the main part, outlines how Didi's algorithms systems exploit and manipulate the driver, including the dispatch system, the evaluation mechanism, the reward and punishment regulation, etc. The final part both shows the driver's resistance in the face of dual pressure from passengers or capital and summarizes the contents.

Title: Connecting giants: Wanghong-facilitated synergy between social media and e-commerce platforms in China

Session Type: Individual submission

Authors:

Name: Xiaofei Han

Email: xiaofeihan(at) cmail.carleton.ca

Country: CA (Canada)

Affiliation: Carleton University

Abstract: The term influencer, defined as the vocational, sustained, and highly branded social media stars, increasingly embeds a model - or various models - of business that targets key individuals who exerts influence over a large pool of potential consumers (Abiding, 2008). Against the backdrop of the booming e-commerce and social media platforms' aggressive commodification in China, business model of a particular type of influencers - or by its vernacular term in Chinese, Wanghong (short for Wangluo Hongren: "people who got popular on the internet") - the so-called e-commerce Wanghong as well as their incubators is on the rise. Value chain of e-commerce Wanghong starts from gathering followers at the upstream on social media platforms such as Weibo (a Twitter-esque service in China) through Wanghong's self-branding, following the standards imposed by Wanghong incubators; and then Wanghong incubators launch online stores for established Wanghong on e-commerce platforms, mostly common and notably Taobao (the most popular e-commerce platform owned by Alibaba Group, the Chinese and global e-commerce giant), and Wanghong will direct followers into their e-commerce stores on the platform and transform them into consumers there.

Focusing on this emergent value chain, this paper argues that Wanghong and Wanghong incubators have facilitated a synergistic ecosystem which both the social media and e-commerce platforms benefit from and thus assertively promote. Through a case study of the industrial leader of e-commerce Wanghong incubators, Hangzhou Ruhnn Holding, and its close collaborations with both Weibo and Alibaba Group respectively, this paper unfolds two trends of Wanghong value chain in Chinese market. Firstly, e-commerce Wanghong are being highly institutionalized in Chinese market, given the dominant role of Wanghong incubators in imposing industrial, homogenous standards on Wanghong through trainings provided to recruited Wanghong regarding self-branding techniques, content production at social media as well as supply chain management and e-commerce store operations. Secondly, Wanghong and Wanghong incubators have become a critical intermediary that facilitates the synergistic ecosystem between social media and e-commerce platforms, ultimately serving Alibaba's transition toward "social commerce" and the intensified commodification of Weibo aimed by the two internet companies. Such synergy has created new sites for monetizing netizens' online interactions and has contributed to the aggressively blurring boundaries between mundane social interactions and consumptions promoted by dominant players in Chinese internet.

Building on the concept of economic synergy and its social implications proposed by Janet Wasko and Nathan Vaughan, this paper showcases how two powerful platforms, Weibo and Taobao

among many others, have together coalesced to create an informal business ecosystem in which Wanghong and Wanghong incubators serve as the key vehicle to adapt to the flexible production system of post-Fordism. Such informal yet profound business networks tend to be overlooked in current studies of the political economy of Chinese internet platforms that traditionally focuses on issues such as ownership structure, market concentration, and financialization, etc. It also provides a systematic and nuanced analysis of the monetization of contemporary Wanghong group in connection with the broader trend of the commercial development of Chinese internet, which is rarely found in the literature of Chinese internet celebrity studies.

Title: [Panel] It never went away: the state and political economy, Panel description

Session Type: Panel Submission

Authors:

Name: Des Freedman

Email: d.freedman(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: The state remains a critical actor in communications systems the world over, from cosmopolitan western democracies to closed and censorious authoritarian regimes. Far from evacuating power to private bodies and withering away, many states promote and facilitate corporate concentrations of power; far from being entirely ‘hollowed out’, many states continue to preside over extensive surveillance and security regimes; far from retreating from imperial ambitions, many states are engaged in expansionist adventures and regional conflicts; far from abandoning ideological projects, states are vigorous participants in battles to police both physical borders and symbolic battles.

This panel examines a range of theoretical debates and empirical case studies that highlight the intense, if volatile, relationship between the state and communications. Des Freedman considers why there are significant gaps in media and communications theory with respect to the state and focuses on the multiple roles that states continue to play. Joanna Redden tackles the specific ways in which the British state has used data-gathering to surveil and control different populations, producing a sense of citizens as ‘risks’ and not autonomous actors. Milly Williamson and Gholam Khiabany discuss how the state uses racism as a crucial source of division and investigate ‘official’ discourses in relation to recent events in Western Europe and the US. Finally, Joan Pedro brings the debate home by reflecting on the political struggles between Catalan nationalism and the Spanish authorities and asking whether the former is a nation without a state while the latter constitutes a state without a nation. The discussant, David Hesmondhalgh, author of *The Cultural Industries*, will conclude by assessing how these debates relate to tensions and contradictions within the contemporary cultural industries.

Title: State. Power. Media.

Session Type: Panel Submission

Authors:

Name: Des Freedman

Email: d.freedman(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: The state has virtually been theorised out of existence. Globalization, outsourcing of public services, deregulation, digitalization and financialization have contributed to a situation in which, as Susan Strange once wrote, the “domain of state authority in society and economy is shrinking”. For some, the very idea of a body that is able to coordinate vital areas of public life summons up either images of conspiracy and smoke-filled rooms or of authoritarian regimes far beyond the ‘complex’ power regimes of the West. This paper seeks to distinguish between the territorial concept of the nation-state and the critical notion of the state as an ‘instrument’ of class power that pervades societies across the world. It considers key theories of the state in relation to their application to contemporary communications environments and aims to grasp the implications of continuing state influence for the exercise of media power and control.

It attempts to highlight the operation of the state in both visible forms (for example surveillance, regulation, and censorship) and less visible forms (for example in its organisation of national representations of ‘desirable’ and ‘undesirable’ social groups) where it acts in concert with like-minded political actors). It analyses the state’s multiple roles as police officer, policy maker, entrepreneur, ideologue and co-conspirator with respect to media systems and institutions. At a time when globalization is under particular stress, an understanding of the resilience and creativity of different kinds of states in different kinds of conditions is essential if we are to make sense of contemporary developments in politics communications. Despite what many scholars have described as conditions of ‘statelessness’, it is not possible to argue that the state has somehow ‘returned’ or is on ‘retreat’ because it never meaningfully went away. Indeed, neoliberalism has transformed the role of the state and its relationship to other social forces requiring us to pay even more attention to the reconfigured state in evaluating the political economy of communications.

Title: State policy and the articulation of racism

Session Type: Panel Submission

Authors:

Name: Milly Williamson

Email: m.williamson(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Name: Gholam Khiabany

Email: g.khiabany(at) gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: The election of Trump, Brexit, and the electoral gains of right wing ‘populist’ political parties across Europe have given weight to the perception of racism as an expression of ‘popular sentiment’. A significant number of political and journalistic commentaries on these developments have lamented the opportunism of various political parties that are said to be exploiting popular racism for electoral gain. However, public responses to the Windrush scandal in Britain, the travel ban against citizens of five Muslim majority countries by the US administration, the recent scandal of children being separated from their parents at the US border, and anti-immigration laws that have become common across Europe (together with other examples of contemporary racisms) clearly warn against such interpretation. Instead, such instances suggest that the state and political establishment as a whole have been, and remain, central in paving the way for the emergence and articulation of racism and xenophobia. The history of racism is indeed also the history of state policy on race relations.

The paper pays particular attention to the state as both the apparatus for the production of racism and an institution that relies on racism for legitimising its growing authoritarian character and for quelling the growth of the very intersectional and broad social movements that are necessary to challenge racism. Rather than conceiving of racism as a product of ideology first and foremost, it explores the links between the contemporary national and international crisis of capitalism and connects the historical roots of racism to contemporary configurations of politics, the state and the media in the production of today’s racist ideologies.

Title: State, nation and propaganda in the Catalan conflict

Session Type: Panel Submission

Authors:

Name: Joan Pedro

Email: joan.pedro(at) slu.edu

Country: ES (Spain)

Affiliation: Saint Louis University, Madrid

Abstract: This paper will analyse the role of the state and the nation in the production of propaganda to promote both the territorial unity of Spain and the independence of Catalonia. It will look into structural conflicts and its interconnections with cultural and direct violence from the perspective of Peace Studies (Galtung, 1969; Galtung & Fischer, 2013). The starting point of the paper is that the independence block considers Catalonia a nation in search of a State and that the unionist block attempts to create a nation for the Spanish State (Tortosa, 1996). The research will show that this contradiction has important structural and cultural dimensions. It will argue that a fundamental aspect of the conflict is the social unrest generated by the structural conditions created by both blocks through the imposition of neoliberalism and austerity policies, as well as by engaging in corruption. These policies and practices were first responded by the 15-M movement, which did not pursue the objective of independence nor focused on the territorial unity of Spain, but instead promoted equality for all and democratisation in all territories. However, as both governments continued with the agenda of austerity, the two blocks embraced the long-standing propaganda technique of diverting attention, by substituting the independence/unity axis for the focus on inequality and authoritarianism. Both central and peripheral nationalism have been intensified to hide structural conflicts. The Spanish state and the media have been used to construct the idea of a nation. The Catalan government has instrumented the Autonomic media and used its governmental power with the aim of creating a nation-State. Both base their strategy on inventing 'imagined communities' (Anderson, 2006) in which a monolithic block with positive characteristics ('us') is confronted with another monolithic block with negative characteristics ('them'). At the peak of the conflict the Spanish state used the police to repress the independence movement, which has advocated for peaceful mobilisation, but has, nevertheless, engaged in some episodes of direct violence.

The paper argues that it is in the interest of the middle and working classes of Spain and Catalonia to join in non-violent action to reverse the structural conflicts and build positive peace. Progressive forces can create a new block by engaging in a culture of peace that changes the axis from independence/unity back again to austerity/anti-austerity and democracy/ authoritarianism. Alliances along these lines can be reached by combining the democratic defence of souverainism (the right to decide) and a project to make the Spanish state more democratic, equal and plurinational.

Title: The fragility of communication policies in Brazil and Argentina

Session Type: Individual submission

Authors:

Name: Anderson Andreato

Email: anderson.andreato(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal Fluminense / Fluminense Federal University

Abstract: Martin-Barbero (2004) argues that television is very strong in Latin American media culture. It still influences a large part of society, making it clear that public broadcasting policies are essential to ensure that there are spaces available to represent the continent's vast diversity and plurality.

However, the laws in this field cannot be permanent. In this context, changes in the political sphere mean that the public service broadcasting sector is vulnerable to interference from different administrations, both in terms of content production and the approval of budgets. Such types of interference are detrimental to society because communications should be open and free from political ideologies.

This paper aims to understand the fragility of communication policies in Brazil and Argentina as a consequence of changes in government administrations and their political tendencies. I intend to analyse this by evaluating to extent to which these communication policies are being presented as Government or State policies.

If the State plays the role of devising communication policies – which are defined by Ramos (2010 apud Geraldes, 2012) as “normative procedures that, once underway in a given democratic institutional environment, aim at the well-being of the population” – it is also necessary to develop regulatory environments in order to avoid flawed practices.

Albornoz (2010) suggests that conducting a comparative study of the different media policies in different states and nations may offer an interesting contribution to knowledge as long as the specificities of each of them are taken into account. In the context of this paper, I aim to contrast the realities of Brazil and Argentina, following recent changes in government. In 2016, both countries were marked by immediate interference in the media sphere, with the countries' administrations promoting several changes that affected public communication, demonstrating that these are strategic and sensitive areas.

Regarding a feeling of policy discontinuity in Brazil, Pieranti (2017) warns that the future administrations should consider that their policies should not belong to individual governments, but, rather to the State. In Argentina, on the other hand, Segura (2018) mentions other problematic issues. There is a strong incentive to commercial exploration whilst the state-sponsored media becomes increasingly more irrelevant and the allocation of public resources aim to benefit the interests of economic elites over the interests of the citizens.

Many factors demonstrate that public service communications are going in the same direction in Brazil and Argentina. This may reveal the deep interconnection between the media system and the public system in both countries, as Aires and Santos (2017) suggest. In these authors' view, this context makes it easier for communication policies to be seen as “battlefields

between public and private actors and media practitioners as the power dynamics of negotiation are often asymmetrical”.

Title: The Data Commons and the Political Economy of Artificial Intelligence

Session Type: Individual submission

Authors:

Name: Pieter Verdegem

Email: p.verdegem(at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: This paper explores the potential of the data commons in the context of Artificial Intelligence (AI). One of the challenges in creating AI systems that advance the public good is the monopolistic power of companies developing them. The success of AI is based on learning algorithms for which data produced by users of digital services is a vital resource (Broussard 2018). Ownership of and access to that data, however, is limited to the owners of platforms. This paper investigates the potential of alternative structures for data ownership and access so that the benefits of AI systems can be shared widely.

We now live in a culture of AI (Elliott 2019). While AI is around for a while, the combination of increased computing power, new developments in machine learning and better performing algorithms, and the availability of large datasets, has led to much talk about its impact on the way we live and work. AI can both lead to a new area of shared prosperity but also to a dystopian future. We need to understand AI systems, how they are developed and what their impact is, so that we can make sure AI will benefit society at large. In this context, we need to be aware that AI simultaneously refers to technical approaches (machine learning), social practices (classification systems, developed by humans) and industrial infrastructures (datasets that are the source of knowledge and prediction) (Crawford 2018).

In this paper I particularly focus on the ownership of and access to data upon which AI systems are built. A political economy approach is needed if we want to understand the politics and power of AI systems and their developers. I will explore the potential of the data commons – building on earlier work on the digital commons (Murdock 2011) – as an alternative structure to deal with the monopolistic power of AI companies around data. While mainly being used by the open data movement and research on data science and computational social science, the data commons might be a promising venue for rethinking how AI systems and infrastructures should look like. It can be a useful way to think about alternative business models, engaging people and organisations with a different set of motivations, and thereby contributing to AI innovations that are there for advancing the public good.

Title: China's Pursuit of Soft Power: the Case of the Film Industry

Session Type: Individual submission

Authors:

Name: yanling yang

Email: y.yang5(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University London

Abstract: This paper explores the role of film in China's drive to enhance its soft power. As many commentators have pointed out, while it is difficult to measure the effectiveness of soft power initiatives, it is possible to evaluate the usefulness of existing soft power indexes.

Following interviews with film experts aiming to understand their views on the current soft power indexes, I analysed the secondary data includes academic debates on the issue of soft power evaluation and existing influential soft power indexes to assess the outcome of China's practice in using film as an instrument of projecting soft power. The measurement of these indexes covers the period from 2001, when the document Implementation Rules of Going-Out Project (Trial) was issued by Chinese government, to 2018, the most recent year for which data is available.

Based on the thorough analysis from both interviews and secondary data, this paper will contribute to debate and analysis around soft power in two main ways. First of all, by focusing on film industry it addresses an under-developed areas in the existing research on the soft power strategies employed by the world's leading authoritarian regime.

Secondly, it addresses the practical issues raised by the feasibility of measuring soft power, issues that currently remain unresolved in both academic research and policy making. The importance of the analysis not only lies in the fact that the evaluation of film as an instrument of soft power has not been sufficiently documented and thoroughly analyzed, but also due to it suggesting the global presence of films as indicators to evaluate the potential of nation's soft power. As a result, the findings of this paper will make contributions to the research on soft power from both theoretical and practical perspectives.

Title: With Crisis Comes Opportunity: Imagining a Post-Capitalist Future for Journalism

Session Type: Individual submission

Authors:

Name: Victor Pickard

Email: vpickard(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: Commercial Journalism is facing an existential threat by structural shifts in digital economics, especially the collapse of their advertising revenue model. Much of the blame for journalism's recent decline has focused on the role of platforms such as Facebook and Google, which devour the lion's share of digital advertising revenue. Journalism in general, and local news in particular, is increasingly threatened by this duopoly, which takes a combined 85 percent of all new U.S. digital advertising revenue growth, leaving only scraps for news publishers. According to one study, these two companies now control 73 percent of the total online advertising market. Meanwhile, institutions that provide quality news and information—the same struggling news organizations that are expected to help fact check fake news—are further weakened.

While many argue that Facebook should be treated as a media company and held to relevant legal ramifications—as well as norms of social responsibility—Mark Zuckerberg has long refused to even acknowledge that Facebook is anything more than a technology company. This problem deserves close public scrutiny, but history shows us that expecting good corporate behavior simply by shaming information monopolies is a dubious proposition at best.

However, beyond the threat of platform monopolies is a more fundamental problem. The commercial model for journalism can no longer support even minimal levels of news and information, let alone the robust media system that a healthy democratic society requires. My analysis will move beyond the critique of monopoly power to consider systemic market failure, as well as solutions for sustaining public service journalism. I will conclude by discussing proposals that range from platforms being compelled to fund a journalism trust to reinventing a new public media system for the digital age.

Title: Claiming Rights to Recapture Voice in Food Politics

Session Type: Individual submission

Authors:

Name: Alana Mann

Email: alana.mann(at) sydney.edu.au

Country: AU (Australia)

Affiliation: University of Sydney

Abstract: Modern foodscapes are fundamentally undemocratic spaces where producers and consumers have virtually no voice or meaningful participation, and only an illusion of choice. They are dictated by Big Food – the agribusinesses, multinational food and beverage companies, and life science corporations that control supply chains. These include mega-merged companies like Bayer-Monsanto which employs a range of emotionally-powerful discourses which frame the world as being food-scarce and itself as the noble saviour to justify its predatory behaviour to political elites and the general public at the expense of human and planetary health. In this paper I apply the concepts of voice and value as central tenets of resistance against the corporate capture of our food system. Examining the discursive power of language and collective rights to food and communication in contemporary food politics, I propose that building a food system based on principles including food justice, food sovereignty, and food democracy demands voices not only be heard but recognised, for – after scholars including Nick Coudry and Nancy Fraser - there is no evidence that voice has been heard and had an impact without recognition. The Campaign for Communication Rights in the Information Society (the CRIS Campaign) offers insight into how communication policy can be framed globally and be used to mobilise constituencies across borders. I draw parallels between this and the global movement for food sovereignty, which promotes the right to food. I argue that the right to food and the right to communicate reflect a shared desire to reclaim voice by contesting a neoliberal food system that seeks to systematically disable voice. Both rights frames provide the CRIS and food sovereignty campaigns with salience in international arenas where human rights frameworks exist. Both sets of rights are based on ideals of participatory democracy in that they assert that all citizens must be included in every governance process that affects them. I claim that the MacBride Commissions’ call for the “right to hear and be heard, to inform and be informed” captures the voice claims that are inextricably linked to the right to food, but acknowledge that in each case “even were it enforced [the right to communicate/the right to food], it does not address structural inequality embedded with for instance capitalism and its drive to constantly expand its terrain of control”, as noted by CRIS Campaign director Séan ó Siochrú. As a way forward I compare how the organisational capacities of the Association for Progressive Communications (APC) and the peasant farmers’ movement La Via Campesina have connected and coordinated civil society efforts in pursuing each set of rights. By providing centrality and a clear hub and spoke structure with the APC at the centre, and strong horizontal ties between individual actors and advocacy groups, the communication rights movement was able to accommodate the shift to later debates on Internet governance. A comparable flexibility and scope, coupled with organisational know-how, has similarly sustained the food sovereignty movement as the most influential civil society voice in global food politics.

Title: [Panel] The India Media Economy: Platforms, Transactions and Markets, Panel Description

Session Type: Panel Submission

Authors:

Name: Adrian Athique

Email: athique(at) protonmail.com

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: In India's expanding media economy, platform business models necessarily interact with existing modalities of market exchange. These markets operate at different levels of 'the stack'. In the communication layer, value is extracted through the sale of hardware, software subscriptions, data packs and other forms of access rents. In the distribution layer, value is extracted through content subscriptions, pay-per-view offerings, user-generated content and the bulk of the world's advertising revenues. In the transactional layer, value is extracted from various forms of piece work, user-tracking, data mining and the aggregation of commissions exercised over peer-to-peer exchanges. As such, the affordances of the digital - as a medium of record, as a medium of distribution and as a medium of transactions - have all been progressively developed towards the present nexus of micro-payments, data mining and peer-to-peer market systems.

In recent years, the transactional layer has become favoured as the primary site of extractivism, operationalised through various exchange platforms, and designed to systematically extract value from social economies that were hitherto operating outside of the formal economic order. In India, this includes the aggregation of informal markets for 'services' as well as the formalisation of grey economies. In all these instances, we see useful exemplars of the expansion of a 'mediated economy' through which an increasing number of economic exchanges are aggregated within portals that allow for value capture at the transactional level. What is more insidious, perhaps, is the simultaneous processes through which everyday interaction and sociability are marketised through P2P communication platforms. With all this in mind, this panel considers how a markets-based approach might help us to comprehend the convergence of distinctive forms of market logic within India's emerging platform economies.

Title: Going Cashless: Digital Transactions in India

Session Type: Panel Submission

Authors:

Name: Adrian Athique

Email: athique(at) protonmail.com

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: Much has been happening to money over the course of the ‘crash decade’ that began in 2008. A critical component of the global response has been the creation of different forms and modalities of electronic money on a breathtaking scale. This ‘great digitisation’ ranges from the vast currency debasements of central banks via quantitative easing to the hyper-volatile fashion for crypto-currencies, which found a large market in India. As part of this larger datafication of money, India made a dramatic intervention on 8th November 2016, when Prime Minister Narendra Modi announced that the 85% of the Rupee currency notes in circulation would be ‘demonetised’ within hours, and made worthless within two weeks unless deposited into the banking system.

On 9th November 2016, virtually every newspaper in India was carrying full front page advertisements for providers of digital ‘mobile wallet’ services, the leading platform being PayTM. The simultaneity of demonetization and the proposed solution offered by mobile wallets caused many to insinuate that the Government of India must have some stake in these providers, with the meme ‘PayToModi’ going into circulation. This unsubstantiated assertion nonetheless established that the two phenomena were by no means circumstantial, something that was quickly confirmed as the official rationale for demonetization quickly shifted from flushing ‘black money’ (where it obviously failed) to the drive towards a ‘cashless society’ (posited as an unqualified good in its own right).

Digital transactions are, in India as much as elsewhere, an absolutely central component of ‘Platform Economies’, ‘Smart Cities’ and ‘Digital Society’ more broadly. Despite this fact, relatively little attention has been given to the implications of the virtualization of money, a phenomenon that has accelerated exponentially over the past decade. In the developed world, money has established itself over several decades, typically in a context of welfare economics, credit culture and universal banking. In India, where the vast bulk of economic activity operates in cash, electricity is unreliable, and where half the population had no bank accounts or mobile phones, the decision to undertake this ‘great leap forward’ immediately engendered a crisis in which millions went hungry and unpaid, large numbers died and the growth of the entire economy lost momentum.

At one level, therefore, the demonetization debacle can be seen as an example of autocratic hubris amidst the realities of highly uneven economic development. From the outside, the immediate enthusiasm of foreign commentators as this grand gesture was enacted usefully illustrated some of the ways in which ‘Digital India’ operates as a laboratory for technocratic interventions in the economies of the Global South. This paper provides a succinct account of the push for digital

transactions as a central infrastructure of the 'Digital India' vision. Given the centrality of money to the operation of each and every social transaction, this paper also emphasizes the cultural, social and political dynamics of a transactional economy, and the broader import of digital money for scholars in media and communications.

Title: Market Matters in the Indian Media Economy

Session Type: Panel Submission

Authors:

Name: Vibodh Parthasarathi

Email: vibodhp(at) yahoo.com

Country: IN (India)

Affiliation: Jamia Millia Islamia

Abstract: The word ‘market’ is highly conspicuous in media scholarship on India over the last 25 years. Paradoxically, the ‘market idea’ has gone severely under-theorised in this otherwise expanding scholarship. My presentation reflects on the methodological and ontological pathways that might allow us to grasp the ‘market idea’ in the context of media markets on India.

I begin by scrutinising approaches to the idea of ‘the market’ by evaluating conventional neo-classical and unorthodox, especially institutional, variants of understanding markets. I then delineate the peculiarities of media markets in India, as commercial, legal, and political entities—drawing attention to the role of linguistic geographies and extra-market forces in the construction of such markets. The second part of my talk proposes a fresh conceptualisation of ‘markets’—peculiar to the study of the media. The bedrock of my configuration lies in the idea of the “media economy”—a concept proposed with my collaborator, Adrian Athique—that captures the varied commercial and social transactions entailing the media as a constellation of markets. I propose three levels of analysis constituting what is commonly called “media markets”: the macrological level (as a market of markets), the mesological level (a grouping of market spaces), and the micrological level (the marketplace for goods and services).

Through this presentation, I want to catalyse discussions at two inter-related levels. Firstly, I want to lay out the role of the media in spawning a system of cascading markets around their evolving operations. Secondly, I want to instigate a reflection on disciplinarity in the field of communications: that is, a plea to make sociological studies of the media more ‘economistic’, and to ensure conventional “business studies” becomes more ‘culturally’ informed. Businesses, after all, operate within markets that are constituted through a larger constellation of social, cultural and political dynamics. By this double emphasis, I seek to engage with the problematic of subject-definition in marking the boundaries of media studies on India at a time where media markets are increasingly integrated, not only with each other but with other economic domains.

Title: The Networked Media Economy and the Indian Gilded Age

Session Type: Panel Submission

Authors:

Name: Scott Fitzgerald

Email: s.fitzgerald(at) curtin.edu.au

Country: AU (Australia)

Affiliation: Curtin University

Abstract: For the past decade a common suggestion from academics, politicians and commentators is that Indian capitalism is beginning to resemble the US Gilded Age (Sinha 2011; Gandhi and Walton 2012; Walton 2017; Crabtree 2018). This comparison with the nineteenth-century American robber barons emerges because of the rapid development of a range of Indian billionaires (Ambani, Mittal, Adani) who are particularly associated with so-called rent-thick sectors, including infrastructure, telecommunication and media. Rather than innovative, productivity-enhancing Schumpeterian rents, these sectors are argued to be characterised by extractive rents, which achieve returns above those of 'fully competitive markets' via political patronage, preferential access to state-controlled resources and monopolistic market power.

Although concentration ratios in the network media economy were lowered by privatisation and liberalisation in the 1990s, today some Indian regulators are concerned about rising concentration in the rapidly expanding telecommunications and digital media sectors, as major industrial groups enter these markets and pursue merger and acquisition strategies. For instance, in late 2015 Reliance Industries, India's largest business group by market capitalisation and second largest by revenue, entered the telecom industry via its subsidiary Reliance Jio and prompted substantial consolidation, as smaller firms exited or merged with other firms and Jio emerged as the third largest operator.

Drawing on data analysis based on the Centre for Monitoring the Indian Economy's PROWESS database (e.g. Bhattacharjee & Agrawal 2018; Smith 2015) and detailed industry reports (KPMG, Ernst & Young), this paper reassesses the insights offered by Fernand Braudel's analysis of capitalism for a political economy of the media and cultural industries. From the perspective offered by Braudel's distinction between capitalism and the market economy, capitalists only assent to competitive market relations when other avenues to profit-making are blocked. They instead prefer the exceptional profits of the antimarket, the intentionally opaque zones where Braudel argues 'the great predators roam and the law of the jungle operates'.

The media and cultural industries' organisational structure has long been characterised by the tendency towards oligopoly, if not monopoly, due to specific socio-economic characteristics and political considerations. Nonetheless, according to the Braudelian perspective, recent developments in these sectors associated with politically-patronised corporate expansion, financialisation and vertically integrated concentration have reinforced the inherently anti-competitive context in which the majority of the global media operate. In reviewing such ongoing changes in the Indian media, the paper provides a broader conception of competition based on classical political economy's

notion of real competition(Shaikh 2016),which problematises the divide between ‘economic life’, ‘fully competitive market economy’, and capitalism.

Title: Infrastructure and Platform Anxieties in India

Session Type: Panel Submission

Authors:

Name: Pradip Thomas

Email: pradip.thomas(at) uq.edu.au

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: I would like to in this presentation explore some aspects and anxieties related to the transactional economy in India by highlighting some examples - the nation-wide connectivity project Digital India (DI) along with what would seem to be consolidations in the e-commerce economy, the sociality of Whatsapp 'lynchings' and cartographic anxieties related to Google Maps. These examples are by no means exhaustive although they do provide insights into the nature of the transactional economy in India and the anxieties of the State in the context of its role as buyer and seller, arbiter and shaper, regulator and controller of the digital, an entity that is both invested in and investor in this economy. In spite of investments in projects geared towards the expansion of the digital footprint in India across many levels, it is clear that the State is not in a position to control or curb disruptive socialities on platforms that thrive on connectivities and socialities such as Whatsapp and Facebook. Such anxieties are arguably overshadowed and compounded by India's lack of preparedness and inability to compete with these global platforms and fundamentally by a lack of comprehensive policies supportive of the transactional economy.

While political parties use platforms for sectarian political purposes, and governments have attempted to regulate platform content, with the exception of the regulator (TRAI's) involvement in Facebook's failed ambitions to dominate mobile access to the internet through the Free Basics initiative, the government of India has until recently, largely been unable and for that matter unwilling to resist the disruptive consequences of the big three partly because it has invested in harnessing its disruptive potential for the advancement of its own electoral politics and its commitment to shaping the Indian economy into a transactional economy. Whether or not its attempts to curb the appetite of Amazon and Walmart in e-Retail will result in a level playing field remains to be seen although the attempts to regulate seem to be motivated by the need to support a favoured government MNC Reliance Retail.

As this paper discusses, there are massive gaps between the government's vision of the transactional economy and its actual operationalisations. Cash remains the preferred mode of payment and the wide-spread distrust of the security of such systems has contributed to the uneven development of the transactional economy in India that is in itself a reflection of existing divides in society. How governments in India respond to the challenges posed by digital disruptions through balancing the need for participation, equity, regulation, sovereignty and control will be of critical importance to India's ambitions to become a modern nation-state fueled by the transactional economy. However, the instrumentalist nature of this project and multiple divides in society in India seem guaranteed to ensure that the transactional economy is bound develop unevenly across the nation.

Title: The changing role of mainstream Indian media in Modi's social media era

Session Type: Panel Submission

Authors:

Name: Usha Rodrigues

Email: usha.rodrigues(at) deakin.edu.au

Country: AU (Australia)

Affiliation: Deakin University

Abstract: The 2014 national election was dubbed India's first 'social media election'. The 2019 election is likely to be dubbed as the 'WhatsApp' election. India has changed in the past decade. The telephone density and wireless subscription have reached nearly 90%, according to Telecom Regulatory Authority of India (TRAI.gov.in 2019) Nearly 500 million Indians have access to the internet, while 300 million Indians use Facebook and 200 million use WhatsApp, a chat app that is used on mobile phones. The aspiring class is increasingly connected to the world via their mobile phones. Across the world, politicians have realised the power of being able to communicate directly with people through such mobile technology, particularly bypassing the interrogation by the mainstream media.

Indian Prime Minister Narendra Modi is known for his use of media platforms when communicating with voters, whether through social media or using the government funded public service broadcasters. Modi keeps his followers abreast of his daily activities using various social networking platforms. He incessantly uses these platforms to push his 'Digital India' agenda, advertising initiatives such as the 'Clean India' campaign and launching various prime ministerial funding schemes for small businesses and digital payment system. Around half-way through his tenure as the 15th prime minister of India, he announced a radical government policy to reduce black money by scraping more than 85% of the Indian currency in circulation. Once again, he shunned the mainstream media, giving one interview during these two months to a chosen news outlet, but incessantly and directly communicating with his followers. He addressed public rallies, posted tweets and used the public service broadcasters.

The strategy of marginalising the mainstream media in India, which is one of the largest news media industries in the world, has left journalists scrambling to cover Modi's articulations on other platforms. Using case studies of Modi's use of Twitter for 'Clean India' campaign in 2015-16, the demonetisation process in 2016-17 and the recent 2019 national election, this paper will present an analysis of Modi's use of social media strategy, his followers, detractors and the mainstream response to this strategy on the micro-blogging site. The paper will examine Modi's agenda building strategy on social media and consider the changing role of the mainstream media in India in the new, hybrid media system (Chadwick 2013). We will consider whether the media's coverage of politics in India is increasingly guided by the 'political logic' rather than the 'media logic', as has often been the case in the free press world (Stromback and Esser, 2014). The use of social media platforms, particularly WhatsApp, Facebook and Twitter, by all political parties including the main opposition, Indian National Congress Party, in the 2018-19 elections raises critical issues about the mainstream media's role in the largest democracy.

Title: Who and where is the civil society in internet regulation'

Session Type: Individual submission

Authors:

Name: Elsa Silva

Email: elsa.silva(at) ics.uminho.pt

Country: PT (Portugal)

Affiliation: Centre for Communication and Society Studies, University of Minho, Portugal

Abstract: Communication policies and regulatory strategies are a fundamental axis in contemporary society, considering the pervasive nature of the global communication network in daily life. The internet is directly involved in matters of fundamental rights, such as the right to communication and information, freedom of association and the right to freedom of expression. Increasingly, other issues such as the right to privacy, the importance of digital memory and network neutrality have been defined, while other rights consolidated in the pre-digital age, in particular intellectual property rights, are constantly being challenged. Internet governance has been developed through a multi-stakeholder model, which has received little critical attention and has not been sufficiently examined for its development promises (Carr, 2015, Padovani and Pavan, 2007). Multi-stakeholderism is thus a process that needs to be closely monitored because its benefits are not inherent to the process, but rather a construction that depends on the practices and dynamics of the actors involved. Considering the growing commercialization of the digital era, civil society faces increasing power imbalances in the process. Although being a loci recurrently quoted in the literature, it has yet to produce more than marginal results (West, 2017) and needs to be carefully analyzed to assess its true contribution and potential in the process. This communication aims to analyze participation of civil society actors in Portugal, assessing their legal status, their resources, their mission, the strategies (formal or informal, via petitions and / or dissemination actions and / or forms of activism) and liaison with other civil society actors (internally and externally). This study, in which semi-directive interviews with civil society actors will be performed, will allow to know in a systematic way the mechanisms of participation and the actors that seek to influence the governance of the Internet.

Title: The Onward March of Ecological Crisis and Economic Inequalities and Mediated Communication : Towards an Integrated Analysis

Session Type: Individual submission

Authors:

Name: Paschal Preston

Email: paschal.preston(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Name: Trish MORGAN

Email: trish.morgan(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: This IAMCR conference's theme resonates with the 70th anniversary of the Universal Declaration of Human Rights, a global milestone centred around the premise that 'everyone had the right to live in dignity'. The Call document notes how communication systems now play a major role in the realisation or failure of such goals, whilst fundamental communication-related rights are under 'increasing pressure and threat', not least due to the onward march of corporate (often monopolistic) control over communication networks, services. It also draws attention to the 'backdrop of rapidly widening inequalities of income and wealth' both within countries and between different areas of the world, with an 'escalating volume of migrations driven by political and environmental as well as economic pressures' forming one 'visible manifestation' of these trends.

This paper seeks to go a step further, however. The authors examine how these key unfolding trends pose urgent threats not only to the achievement of universal 'dignity', but to the very survival of the modern, global, political and economic system. In sum, they argue that the unfolding ecological crisis requires not only much more urgent attention than hitherto in the political economy of communication, but that its analysis must be integrally linked to engagement with unfolding forms of economic inequality, insecurity and precarity.

Thus this paper is concerned with two key global challenges central to the UN's SDGs : ecological crisis and growing economic inequalities and their implications for critical political economy of communication field. To date, these challenges have been largely treated separately in the research literature, notwithstanding certain exceptions, including work on region-specific cases, whilst the same applies to media discourse and representation. Thus this paper explores how both of these pressing challenges have to be considered as dynamically interlinked and cumulative key features of our time.

We argue that both the study and mediated communication of sustainable development and social change issues require an urgent refresh of conceptual and ideational frameworks. We draw on historical and material frameworks to move beyond certain flaws in prevailing perspectives and

studies of ‘crisis’. We explore and expand on the link between economic inequality and climate change, with specific attention to the core regions of the capitalist system. We outline how the analysis of news media, and mediated communication in general, must embrace a new paradigm, one more attuned to the deep, interdependent and global nature of contemporary capitalism. We indicate how most of the prevailing theories fail to make the requisite links or to recognise the pressing dimensions of economic interdependence that transcends narrow national cultural frames or borders.

This paper is informed, in part, by original empirical findings from two research projects: one concerns news media treatment of climate change; the other exploring how news media in four countries engage with economic inequality. The aim is to provide a materially grounded perspective on the adequacy of mediated communication and public discourse concerning these two interlinked issues that are foundational challenges to the realisation of SDGs and the achievement of ‘universal dignity’.

Title: The Spotification of global radio system

Session Type: Individual submission

Authors:

Name: Ignacio Gallego

Email: jgalleg(at) hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid

Abstract: Spotify started its operations in 2006, thirteen years later the swedish company is the platform leader in the global audio market. During the last years, and specially in the beginning of the 2019, the evolution of the platform and the acquisitions policies reveals a clear evolution from a music platform to an audio content platform. Recently, February 6th 2019, Spotify has bought Gimlet Media and Anchor, two of the biggest business of the podcasting american sector. Quoting Daniel Ek (company CEO): “Based on radio industry data, we believe it is a safe assumption that, over time, more than 20% of all Spotify listening will be non-music content. This means the potential to grow much faster with more original programming — and to differentiate Spotify by playing to what makes us unique — all with the goal of becoming the world’s number one audio platform.” (newsroom.spotify.com, 2019)

At the same time, in the 2018 Spotify report, published before the company debut in the New York Stock Exchange market, established the importance of the global advertising market and the non-music content business (spotify, 2018). Even, they presented in Europe an audience report in 2016 where we can read sentences as “Spotify is the third largest ‘radio station’ for younger target groups” (TNS, 2015)

Considering these facts, the previous Spotify (Vonderau, 2017; Fleischer & Snickars, 2017; Erickson et. al, 2019) and podcasting research (Gallego, 2012; Bonini, 2015; Berry, 2015) and with the framework of the political economy of the cultural industries this communication tackles the evolution of the platform in the different markets, acquisition strategies, corporate structure and financing. It also pays special attention to the company’s last strategies and developments in relation to different partners in a diversity of sectors. We will see how Spotify is not limited to the music sector. In fact, Spotify’s policies, in terms of corporate alliances, bring it close to the technological sector, the media and different consumer goods. And, specifically, how this global platform strategies are a new challenge for the traditional radio markets: the market of the distribution, the contents and audiences, and the advertising market.

Title: DISCOURSES ON AI IN EUROPE: REINFORCING THE IDEOLOGICAL HEGEMONY OF CAPITALISM'

Session Type: Individual submission

Authors:

Name: Benedetta Brevini

Email: benedetta.brevini(at) sydney.edu.au

Country: AU (Australia)

Affiliation: THE UNIVERSITY OF SYDNEY

Abstract: 2018 was a crucial year in Europe for the advancement of national and EU strategies on Artificial Intelligence. On the 7th of December, the European Commission and the Member States published a Coordinated action plan on the development of AI in the EU. The EU plan followed the publication in the same year of national strategic reports on AI by France, Germany and Britain, competing to becoming “leaders” in artificial intelligence (AI), with each country committing millions of euros.

This paper investigates how Artificial Intelligence is discursively constructed by national and EU AI strategy reports published by France, Germany, Britain and the EU.

Scholars in political economy of communication have showed how discourses around digital technologies have historically been constructed as modern myths (Mosco, 2004) with major references to utopian worlds and possibilities. Is AI ideologically portrayed in a way that becomes a critical element in the reformulation of the ideological hegemony of capitalism?

Are current discourses on AI starting to reshape certain central conceptions of the capabilities of humans and machines embedded in social institutions?

Title: Party Colonization and Newspaper Advertising in the Kurdistan Region in Iraq (2014-2018)

Session Type: Individual submission

Authors:

Name: jiyen Faris

Email: jiyen.faris(at) uantwerpen.be

Country: BE (Belgium)

Affiliation: University of Antwerp

Name: Pieter Maesele

Email: pieter.maesele(at) uantwerpen.be

Country: BE (Belgium)

Affiliation: University of Antwerp

Abstract: The aim of this paper is to examine if and how journalism is controlled through advertising in a transitional democracy such as the Kurdistan Region of Iraq. Previous research has shown that news media can be captured by governments through state advertising and announcements, the principle being that the more the government allocates its advertisements to a particular newspaper, the more it has control over that newspaper's content (Moritz Eberl et al. 2018, Yanatma 2016; Yesil 2018). While existing research has generally focused only on the role of state advertising as a means of governmental control, this paper will expand this to include other social actors, such as private companies, political parties and non-governmental organizations.

Given the complexity of the advertising market in a non-transparent media market environment, there exists no reliable source of information about newspaper circulations, media subsidies, and advertising revenues. Such information is routinely hidden, either by government administrations or by media owners.

For that reason, a quantitative content analysis was conducted on the advertisements and announcements in six major weekly and daily newspapers between 2014 and 2018. A diverse selection of newspapers was made, covering both newspapers that identify themselves as party organs (Kurdistan Nwe, Hawler, and Evro) and as independent (Rudaw, Hawlati, and Awene). The content analysis measured how much advertising space (in square centimeters) is allocated to which organization or social actor.

The findings indicate that advertisements are to a large extent allocated to party newspapers, while independent newspapers obtain little advertising, leading to a lack of financial viability. This paper concludes by reflecting on the implications of these results for media diversity and pluralism in the media system of the Kurdistan region of Iraq.

Title: Activism and Digital Capitalism

Session Type: Individual submission

Authors:

Name: Padmaja Shaw

Email: padmajashaw(at) gmail.com

Country: IN (India)

Affiliation: Department of Communication and Journalism, Osmania University

Abstract: Oxfam report on global inequality titled “Reward Work, Not Wealth” released in January 2019 shows that India’s top 10 per cent hold 77.4 per cent of the country’s total wealth, while the bottom 60 per cent own merely 4.8 per cent.

Given the extreme inequalities, declining employment opportunities and severe farm crisis, the last few years have seen the resurgence of social movements around old causes and around newer social fissures that have emerged.

While India has been posting 5+ per cent GDP growth over several years, it has been a straggler in social development indices of health, education and gender.

In what has been characterised as a dual economy that has highly developed urban centres and rural periphery that continues to be frozen in a primitive time warp. India boasts of 1,131 million mobile subscribers (May 2018) of whom 38 per cent are smart phone users. At 241 million (19% of the population), India’s Facebook user-base has surpassed that of the United States in actual numbers. This spurt in mobile use has made internet accessible on a large scale, deeply transformed the politics of the country.

The political impact of access to Facebook, Instagram, WhatsApp, and internet in general, is still a matter of research, much of which focuses on Big Data mining the global corporations do and their possible active intervention in the political process.

In their book *Digital Objects and Digital Subjects* (2019), David Chandler and Christian Fuchs quote David Harvey’s caution against ideologically fetishizing Big Data, “It is counter-productive if not counter-revolutionary. It creates a fetish fog – a vast distraction – between political activism and the urban realities, pleasures and travails of daily life that need to be addressed.”

Political struggles and activism attempt to re-define hegemonic power and its current signifiers (Laclau and Mouffe 1985) through “discursive articulation”. They sometimes also result in broader coalitions of plural political interests that come together to challenge power. The last few years in India saw a new political process articulating itself through broad coalitions of students, farmers, industrial workers and state employees.

The expanded access to social media has also expanded the reach of the “million mutinies” that have broken out on a variety of fronts in India. This paper proposes to look at some of the major social media campaigns conducted over the Internet/social media in India in the last few years. The paper will also collate and critically look at the campaign sites that act as intermediaries for activists.

Title: [Panel] Resisting Precarity and Exploitation in Media Industries, Panel description

Session Type: Panel Submission

Authors:

Name: Ergin Bulut

Email: ebulut(at) ku.edu.tr

Country: TR (Turkey)

Affiliation: Koç University

Abstract: This panel challenges the perception that media work--glamorized, precarious, individualized, and intensely competitive--is too difficult a terrain to organise. Drawing on political economy of communication, ethnographic research, and textual analysis, the panelists provide different case studies to demonstrate that workers in media and communication industries are finding new ways to collectively organise. Specifically, media workers employed in the digital game industry, digital journalism, TV series production, and content moderation have chosen to either unionize to counter precarious work or are in the initial levels of organizing against exploitative work. Jamie Woodcock examines the unionization experience of video game workers. Drawing on ethnographic research and interviews, Woodcock considers the lessons that can be learned from Game Workers Unite in the UK. Nicole Cohen and Greig de Peuter investigate why and how a growing number of digital journalists in the US and Canada are organizing their newsrooms. Drawing on interviews, Cohen and de Peuter reveal strategies of self-organization that at times challenge union doxa, particularly around communication practices. Sarah Roberts seeks to explore the initial stages of unionization in dark corners of digital media: content moderation. Roberts explores how workers in a fragmented industry by design seek alternative ways of work and existence. Finally, Ergin Bulut will discuss how workers and performers in Turkey's transnational TV series industry have unionized for purposes of legal recomposition. Bulut's presentation is a call for de-westernizing creative industry studies and expanding the definition of precarity to encompass law and the body.

Title: "We Need Chemotherapy for the Sector': Recomposition of Turkish TV Series Workers Against Precarity

Session Type: Panel Submission

Authors:

Name: Ergin Bulut

Email: ebulut(at) ku.edu.tr

Country: TR (Turkey)

Affiliation: Koç University

Abstract: Turkey's transnational TV series (dizi) industry has created more buzz as *The Protector* (2018) made its debut on Netflix. This was the first time that a Turkish show met the global Netflix audience but Turkish series have for some time been travelling in the Middle East, the Balkans, and even Latin America. For instance, over 200 million people in 43 countries watched the iconic *The Magnificent Century* (2011-2014), rendering visible Turkish series' global counter-flows. In 2008, the export revenues were around 100,000 dollars whereas they have now gone beyond 300 million dollars, placing Turkey in the top five countries selling TV series abroad. Global fans name their kids after famous actors and actresses. Stars' perfume franchises travel across the Middle East. Fans visit glamorous mansions by the Bosphorus, creating a "TV series tourism." To capitalize on the economic and cultural boom, Istanbul Chamber of Commerce is now drafting "2019 Istanbul Film Action Plan" as revealed during MIPCOM in Cannes.

Turkish television screens are indeed glamorous. Making considerable amounts of money, stars invest in Istanbul's gentrified areas. Yet, glamor and money is unevenly redistributed. Labor is so intensive that workplace accidents, cerebral hemorrhage and even deaths occur in sets. Yet, workers are not helpless and this article examines how TV series workers and performers resist precarity and reform their labor conditions through unions. In conversation with the recent scholarly interest in the politics of unions in media and creative industries (de Peuter and Cohen 2015; Coles 2016; Neilson 2018), I document how the highly politicized rating system has accelerated the precarization of TV series workers. Then, I map the action repertoire of two unions: Cinema and Television Union (founded in 2015, representing workers behind the camera) and Performers Union (founded in 2011, representing performers in theater, cinema, and voiceover).

It's in the spirit of a workers' inquiry from below (Brophy 2017; Woodcock 2016) that I investigate how TV workers are both unevenly put to work and reconstitute themselves as a counter-force in Istanbul as an emerging media capital beyond the Global North (Curtin 2003). My specific goal in this presentation is to demonstrate these unions' various recombination strategies against capital, and make a call for an expanded image of precarity that takes law and the body into consideration. In that regard, this present work is an engaged effort to de-westernize creative labor studies and capture the multifaceted materiality of unionization in non-Western contexts (Alacovska and Gill 2019).

Title: Union Organizing in Digital Journalism: Catalysts and Strategies

Session Type: Panel Submission

Authors:

Name: Nicole Cohen

Email: nicole.cohen(at) utoronto.ca

Country: CA (Canada)

Affiliation: University of Toronto

Name: Greig de Peuter

Email: depeuter.greig(at) gmail.com

Country: CA (Canada)

Affiliation: Wilfrid Laurier University

Abstract: This presentation contributes to the political economy of communication's tradition of researching workers' organizations as collective agents of struggle against capitalist exploitation and managerial power in the media and communication industries (Mattelart and Siegelau 1983; Mosco and McKercher 2008; Banks 2010; Brophy 2017). Reflecting organized labour's embattled conditions under neoliberalism, journalists' unions in legacy media in the US and Canada have tended to adopt a defensive stance in recent years, fighting to protect existing members amid routine layoffs, newsroom closures, technological transformations, and mergers and acquisitions. In this climate, organizing has not been the unions' highest priority. At the same time, the new generation of digital-first newsrooms appear to be improbable organizing terrain, where unions might anticipate not only the union aversion familiar to white-collar professional work but also a do-what-you-love (whatever the hardship) sensibility and a post-financial crisis millennial cohort acculturated to precarity. And so, it caught many by surprise when in 2015 journalists at the news website Gawker announced they were unionizing, inaugurating what some commentators have labeled a "wave" of unionization in digital newsrooms in the US and Canada. Since 2015, journalists have unionized at 38 newsrooms, mostly digital outlets such as VICE, Vox, and Huffington Post, but also legacy media, including The Los Angeles Times, The Chicago Tribune, and The New Yorker.

Drawing on collective action theory (Kelly 1998; McAleve 2016; Holgate 2018) and 44 interviews with union staff and journalists leading the unionization campaigns, our presentation surveys why and how these media workers organize. In terms of catalysts, journalists are unionizing in response to pressurized working conditions, precarious employment, and a lack of management transparency. Beyond bread-and-butter issues, however, our research reveals that journalists also see unionization as a way to protect editorial integrity and enhance social equity in their newsrooms. Inequalities rooted in class, gender, and race motivated several campaigns. In terms of strategies, we identify dimensions of the union drives that have contributed to their success, including journalists' access to unions with an organizing agenda, a high level of worker self-organization, and cross-shop solidarity. Digital media workers, we highlight, are strategically positioned to leverage counter-publicity: By using work-required skills in graphic design, their perpetual immersion in social media, and general media-savviness, digital media workers have frequently secured union

recognition in record time and used social media to pressure those CEOs who mounted anti-union campaigns.

The digital media union movement reaffirms labour's capacity to fight back against capital's efforts to wield technologies to intensify exploitation and weaken labour, and shows how an "old" form of collective organizing is being adopted and adapted in a "new", digital media milieu.

Title: Unorganized by Design': Commercial Content Moderators as a Stratified, Globally Dispersed Mission-Critical Workforce and Opportunities Beyond

Session Type: Panel Submission

Authors:

Name: Sarah T. Roberts

Email: sarah.roberts(at) ucla.edu

Country: US (United States)

Affiliation: UCLA

Abstract: In the past eighteen months, U.S.-based social media firms – erstwhile economic darlings and cultural causes célèbres over prior years – have found themselves in a position of defense. In particular, several of these firms, American in origin but with a profound global reach and impact, have been at pains to explain to an increasingly skeptical press and a hostile public how they might better safeguard user online experience from harm and manipulation, among a host of other negative outcomes now attributed to these firms and their platforms. Breaking with past practices, Google and Facebook both responded during this period to criticisms by touting, for the first time, its own human employees acting as platform gatekeepers and screeners: the commercial content moderators. This represented something of a sea change in the corporate posture: not only were Google and Facebook both going public for the first time about their reliance upon these workers and their labor, but the firms themselves were pinning hopes of increasing public trust and staving off regulation directly in relation to the numbers of workers it now acknowledged they had in these roles. Further, each company announced plans to increase exponentially the number of workers in the coming months (Glaser 2018). When tallied, the number equaled a planned workforce of roughly 30,000 – for Google and Facebook alone.

Simple math makes it clear: people working in some capacity as low-status, low-wage professional adjudicators of user-generated social media material over all mainstream social media platforms – the legion that has come to be known as commercial content moderators – are an important globalized workforce whose total likely edges toward 100,000 conservatively (Roberts 2016; Roberts 2017). Academic research, journalistic investigative reports and documentary films have convincingly established that the job is, at best, unpleasant, and at worse, may cause long-lasting deleterious psychological effects just now being perceived and of which the full scope has yet to be determined (Solon 2017). Nevertheless, industry stratification and worker invisibility (even to each other), has precluded meaningful solidarity-building that is key to labor organizing. It all prompts the inevitable question: if commercial content moderators and their work are the mission-critical safeguards of the lucrative social media industry's platforms, products and userbase, what safeguards exist for the moderators themselves?

In this presentation, we will provide an overview of and update to the current state of commercial content moderation work and workers: who and where in the world they are, for whom they labor, and what – if any – protections they are afforded (and what precludes them). Drawing on almost a decade of empirical research mapping the industry and its workers, the presenter will elucidate the contours of this fractured-by-design globalized labor force and describe both the challenges posed to worker organizing, as well as opportunities in and inspiration from new forms of collective action witnessed in the organized response/resistance to the so-called gig economy (Graham and

Woodcock 2018), intervention upon other novel forms of labor devaluation (Irani and Silberman 2013), and their context of platform capitalism (Srnicek 2016).

Title: Evolving inequalities of power and wealth in the music and audio-visual sectors in Ireland

Session Type: Individual submission

Authors:

Name: Jim Rogers

Email: jim.rogers(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: Innovations in the sphere of communications technologies have periodically emerged to challenge and change established power relations in copyright-based industries, perhaps music in particular. However, as some recent studies have shown, the response strategies employed by the most significant transnational companies operating across the music (and related) sectors to evolving technological change have proven successful in bolstering and sustaining their established market dominance. In fact, these ‘response strategies’ have involved extending and expanding their activities in areas where they previously held ‘relatively’ limited interests, not least in the case of the broader audio-visual sector (film, TV, advertising and other).

Drawing primarily upon a recent (2018-19) empirical study which focused on contemporary developments in the domain of post-production in the Irish context, this paper is primarily concerned with how such organizational restructuring on the part of major music labels has carried severe implications for indigenous, non-corporate producers of both music and audio-visual content in the Irish context. Here, we must consider the wider implications of the concept of copyright for the music and audio-visual sectors. Intellectual property rights (IPRs) lie at the heart of the corporate restructuring described in this paper, and ownership and control of music copyrights have facilitated a ‘global’ takeover of a ‘local’ post-production sector. As such, the local political-economy of the audio-visual sector has been transformed in the context of evolving global music industry strategies for the exploitation of music rights.

As such, the paper highlights fundamental contradictions that have emerged between the key potentials commonly associated with recent technological innovations in the domain of music, and the outcome of these same technological processes in this area in terms of access to markets (for producers) and access to content (for consumers).

The paper ultimately highlights diminishing opportunities for indigenous, non-corporate actors operating in the music and audio-visual domains, and demonstrates how the technological, organizational and legal changes outlined in the empirical study are taking place against the backdrop of widening inequalities of wealth and power across the music and audio-visual sectors in Ireland.

Title: Debates sobre la regulación de Servicios audiovisuales en Internet. Abordaje conceptual, rol de organismos internacionales y casos nacionales

Session Type: Individual submission

Authors:

Name: Ana Bizberge

Email: anabizberge(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad de Buenos Aires

Abstract: Este trabajo propone una discusión sobre los desafíos regulatorios que se presentan en la configuración del sistema audiovisual frente al surgimiento y proliferación de nuevos jugadores que ofrecen servicios audiovisuales a través de Internet. Para ello se realiza un desarrollo conceptual sobre los principales cambios que atraviesa el sector, para luego avanzar en el análisis del modo en que los organismos internacionales de orden técnico y económico (OMC, OCDE y UIT) y aquellos con preocupaciones culturales (UNESCO y Relatorías de Libertad de Expresión de ONU y OEA) han incluido en sus agendas la problemática de los nuevos actores surgidos de Internet. Por último se estudian casos de distintos países (la perspectiva europea, norteamericana y el abordaje de países latinoamericanos) prestando atención a sus modos de intervención.

La perspectiva de análisis parte de la mirada crítica de los estudios de economía política de la comunicación, con un abordaje metodológico basado en la revisión de investigaciones que dan cuenta de los cambios introducidos por los nuevos actores en la conformación del sistema de medios audiovisuales y cómo eso impacta en la discusión sobre la necesidad o no de regularlos y cómo hacerlo. También se realiza un análisis normativo y de documentos de organismos nacionales e internacionales sobre los distintos abordajes existentes en la materia.

Entre los principales hallazgos es posible mencionar en primer lugar la ausencia de consenso internacional sobre el concepto de OTT, incluso no todas las agencias utilizan esta denominación. Por un lado, organizaciones como UNESCO, ONU y CIDH centran sus preocupaciones en la libertad de expresión, no aluden al concepto de OTT sino que hacen referencia de modo general a cómo Internet cambia las condiciones de circulación de la información y la necesidad de aplicar el marco de derechos humanos al entorno digital.

Desde una perspectiva de mercado, organizaciones como la UIT, OMC y OCDE sí han aludido a la regulación de los OTT, lo que da cuenta de la injerencia de los criterios de telecomunicaciones y del comercio sobre las reglas de gobernanza de Internet. De modo general, estas instituciones han enfatizado en las reglas de competencia entre distintos tipos de actores, promoción del comercio y de la innovación.

En el plano nacional es posible agrupar los casos analizados en cuatro modos de abordaje de la problemática de los actores audiovisuales en Internet. Por un lado, la perspectiva europea que combina preocupaciones de índole económica con una mirada de derechos para extender aspectos de la regulación del audiovisual tradicional hacia los nuevos jugadores. En el caso de Estados Unidos, a partir de la tradición regulatoria del país se plantea un enfoque más reactivo hacia la intervención estatal.

En tanto en América Latina predominan los enfoques tributarios, más alineados con las agendas vinculadas al comercio –a pesar de que muchos de los países han ratificado los instrumentos de UNESCO- aunque con variantes.

Title: El servicio público de televisión en el marco de la reestructuración del Estado en Colombia (1991 ' 2018)

Session Type: Individual submission

Authors:

Name: Daniel Valencia Nieto

Email: daguivani(at) hotmail.com

Country: CO (Colombia)

Affiliation: Pontificia Universidad Javeriana

Abstract: Esta propuesta es resumen de la tesis doctoral del autor. Se elabora desde el enfoque teórico de la reestructuración del Estado en Colombia y en América Latina, la cual se ha venido adelantando desde los años noventa del siglo pasado. Ello implicó una serie de reformas propuestas por el Banco Mundial y por el Fondo Monetario Internacional, consignadas en los planes de ajuste estructural para los países en vía de desarrollo.

El informe del Banco Mundial de 1997, inicialmente denominado Reconstruyendo el Estado, luego conocido como El Estado en un mundo en transformación, estaba inspirado en la reforma o reestructuración del Estado, y en que el desarrollo sostenido –económico y social- no debía depender del Estado (Banco Mundial 1997). La reestructuración del Estado apuntó a la privatización que los estados capitalistas impulsaron en sectores sensibles y de amplia cobertura en la sociedad como educación, seguridad social, transportes férreos y aéreos, sistema financiero, y telecomunicaciones (telefonía y radiodifusión).

En Colombia, la administración César Gaviria (1990-1994) impulsó el proceso de reestructuración del Estado bajo el lema Modernización del Estado. Uno de los sectores objeto de dicha reestructuración fue el de telecomunicaciones, en el que se ubica la televisión, proceso que condujo a reglamentar el servicio público de televisión. De allí salió el modelo de televisión que ha operado en Colombia hasta la fecha, y que, actualmente, el gobierno nacional busca transformar mediante un proyecto de ley que cursa en el Congreso de la República.

En el marco de la reestructuración del Estado en Colombia, el concepto de servicio público de televisión, establecido por la Constitución Política de 1991, elevó la televisión a rango constitucional y determinó la autonomía de ese medio de comunicación frente a los poderes políticos y económicos. Sin embargo, la captura del Estado, por parte de agentes privados, y la recurrencia de prácticas clientelistas de la política en Colombia frustraron el propósito de autonomía de la televisión. Esto generó que el modelo de servicio público de este medio no garantizara el pluralismo, la diversidad, el derecho a la información y el derecho a la comunicación entre los colombianos.

El estudio se hizo desde la economía política de la comunicación, por cuanto esta área de estudios se ocupa de dos temas específicos: industrias culturales (estructura de propiedad, concentración y monopolios, relación capital/trabajo, bienes simbólicos) y concepto del servicio público de los medios de comunicación masiva (formas y garantía de la prestación del servicio, políticas públicas de comunicación, regulación estatal).

Title: Contested governance of brand sponsored media content

Session Type: Individual submission

Authors:

Name: Jonathan Hardy

Email: j.hardy(at) uel.ac.uk

Country: GB (United Kingdom)

Affiliation: University of East London

Abstract: This paper provides a theoretical, analytical and empirical mapping of the contested governance of branded content, advancing a contemporary critical political economy approach. Amid falling display advertising and subscription revenues, sponsored content has offered publishers the potential for increased earnings, and marketers a means to tackle ad-avoidance and boost engagement. Advertising that resembles editorial long predates the digital age, but marketers are increasingly involved in the production of publisher-hosted branded content. Such practices are controversial and contested, including critiques of ‘stealth marketing’ and the extension of invasive advertising across digital communications. Governance issues range from labelling and consumer identification, to editorial integrity and marketers’ share of voice, with challenges made on behalf of digital rights including transparency and data controls. Despite ongoing regulatory convergence, a diverse range of agencies regulate, and self-regulate, branded content, reflecting historical, institutional differences across publishing, broadcasting and audiovisual, public relations and advertising. These arrangements are being tested and challenged by brands’ increasing involvement in media content production and distribution.

This paper provides a mapping of key sources and agencies of governance and contestation of branded content. It examines sources ranging from formal law and regulation authorised by supranational bodies, state actors and agencies, to industry co- and self-regulation (including automation), market power mechanisms (including ad blocking) and civil society action and protest. This mapping provided an analysis of the range of actors and processes through which relations of power are produced, sustained and contested. Conceptually, governance is helpful in addressing the interacting range of formal and informal regulatory mechanisms, the proliferation and liquidity of actors, the significance of automation and AI, and modes and sites of contestation. The paper makes a theoretical contribution by advancing the analysis of governance as a tool to extend and integrate political economic, policy and cultural analysis. Such governance research is concerned with regulatory outcomes, but also with practices and behaviour, and so draws together social science and humanities approaches, including culturalist and critical political economy analyses of converging media and marketing communications industries. This paper is therefore designed to make a cross-disciplinary contribution by articulating steps, and challenges, in mapping governance across production, publication, reception and engagement.

The paper presents original research, including findings from interviews with more than 30 UK marketers, and systematic analysis of UK and international professional trade bodies, trade and general media, corporate and other literature. It draws on UK and cross-national analysis of sources and forms of prevailing governance, and policy debate across stakeholders, including those

advancing proposals for media reform and digital rights. The paper also outlines wider sources of challenge and resistance to marketing integration. This forms part of a project to analyse governance of branded content across Europe, North America, and selected countries worldwide, involving a network of international scholars that builds on the AHRC (UK) funded Branded Content Research Network project (AH/N007719/1).

Title: Fragmented Platform Governance in China: Through the Lens of Alibaba and the Legal-Judicial System

Session Type: Individual submission

Authors:

Name: Yu Hong

Email: hong1(at) zju.edu.cn

Country: CN (China)

Affiliation: Zhejiang University

Name: Jian Xu

Email: xujian(at) sjtu.edu.cn

Country: CN (China)

Affiliation: Shanghai Jiaotong U

Abstract: By leveraging lawsuits against Alibaba, this paper accounts for the elephant in the room, that is, the commercial internet in China, from a policy and governance perspective. In particular, we first conduct a systematic empirical study of Alibaba's IPR litigation, which reveals platform immunity, or so-called "safe harbors," from legal risks in dealing with third-party content and actions as the cornerstone of the legal-judicial system presiding over online litigation. We then historicize platform immunity as a conceptual and institutional construct embraced in China with adaptation, discordance, and difference and assess the range and nature of articulation and disjuncture across global, national, and local scales. Through the dialectical relationship between the construct and praxis, between governance and political economy, between industrial policy and grassroots practices, the paper further reveals how interrelated incongruences surrounding platform immunity were assembled into a fragmented governance model and why fragmented governance that assembled from multiple sequences and determinations is composite, contradictory, and dynamic. Ultimately, we argue that China's law, policy, and jurisprudence are neither the direct results of the US hegemonic imposition from the inter-national perspective nor the state's unitary or unilateral design from top-down; instead, they try to stay in sync with the platform-based sphere where corporate logic strives to capture and subsume social relations, cultural practices, and economic inventions that seek to adapt to, and also to derail, the corporate scheme. As China's online platform economy has reached the critical threshold of seeking wider extraterritorial expansion and further downward societal incorporation at once, the platform-based sphere is likely to become a globally networked space of discordance and thus renders China's governance model that unevenly presumes platform immunity inherently instable going forward.

Title: El audiovisual español en el catálogo de Netflix: una aproximación desde la perspectiva de la diversidad cultural

Session Type: Individual submission

Authors:

Name: Asier Aranzubia

Email: aaranzub(at) hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid

Abstract: Cada vez son más numerosas las voces que sostienen que el desembarco en España de Netflix está transformando el sistema audiovisual español. Los argumentos que están detrás de esta afirmación se fundamentan, por un lado, en la rápida penetración de la plataforma de Los Gatos (California) en los hogares de España -según el último Panel de Hogares de la CNMC (2018) en apenas tres años ya cuenta con dos millones de suscripciones en nuestro país- y, por otro, en una multimillonaria inversión en producción audiovisual que parece estar insuflando nueva vida a un sector que llevaba casi una década en coma -Monzoncillo y Villanueva (2016); García Santamaría (2018)-. Sin embargo, lo cierto es que todavía sabemos bastante poco sobre la actividad y la repercusión reales que el gigante estadounidense está teniendo sobre nuestro sistema audiovisual (por culpa, sobre todo, de la opacidad en el tratamiento de los datos que caracteriza a Netflix). Para empezar a cuantificar de una manera más precisa cuál es ese impacto, en esta comunicación se trabaja con los resultados de una foto fija del catálogo Netflix-España que hemos realizado entre los meses de Octubre y Noviembre de 2018. Gracias a esa foto fija sabemos ya cuáles son las series y películas españolas a las que pueden acceder los usuarios de la plataforma y podemos acometer un análisis en términos de diversidad -Napoli (1999); Albornoz y García Leiva (2017)- de dicho catálogo. Además de clasificar los títulos a partir de una serie de variables (productora, género, macrogénero, tipo de relato, etc.) en esta comunicación se presta especial atención a un caso concreto: Las chicas del cable (2017-). La serie, de la que ya se han emitido tres temporadas y actualmente se rueda una cuarta, es una producción para Netflix de la empresa española Bambú. A través del estudio, tanto de sus características de producción y difusión como de su dimensión estética y narrativa, pretendemos dar respuesta a preguntas como las que siguen: ¿Qué tipo de relación contractual establece Netflix con las empresas con las productoras españolas que están detrás de los llamados “originals”?; ¿en qué otros catálogos nacionales de Netflix se incluye la serie?; ¿las características formales y narrativas de Las chicas del cable son, en algún sentido, extrapolables a otras producciones impulsadas por Netflix?; ¿en qué medida influyen en el diseño de sus “originals” los datos sobre el comportamiento de los usuarios que atesora la empresa?

Title: Understanding Commitment of Digital Labour in Creative Industries: The Role of Worker Motivation and Passion

Session Type: Individual submission

Authors:

Name: Fuzhong Wu

Email: 674656753(at) qq.com

Country: CN (China)

Affiliation: Tsinghua University

Name: Zheng Zhang

Email: thuzz(at) qq.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: Digital labour has aroused increasing interests among scholars recently. However, few have examined into the micro mechanisms of digital workers' commitment in creative industries, which is crucial to labour productivity. In this regard, we conducted a quantitative study to explore the determinants of digital workers' commitment in creative industries, so as to provide fresh insights on the growing digital labour.

Rooted in the participatory culture, Chinese online literature platforms have seen their rapid development and commercialization since early 1900s. This has created a huge digital market at a valuation of \$13bn-15bn with more than 378 million users by the end of 2017. Simultaneously, an increasing number of online literature writers participate in the creative production, investing considerable time and efforts. In the context of casual employment and flexible payment, most of the online literature writers are low-paid and lack of basic labour protections. So an urgent question is that: why are they still willing to work continuously?

In serious leisure studies, 'Passion' consists of two related parts: harmonious passion referring to one's willingness to engage in an activity, and obsessive passion indicating an uncontrollable urge toward an activity. Both of them are regarded as outcomes of individual motivations and drivers of commitment. In worker motivation literatures, utilitarian and hedonic motivations are considered as key factors predicting job participation and commitment. Thus, we integrate worker motivation research with dualistic passion model to assess their roles in online literature writers' continuous commitment.

Using a sample of 599 valid respondents recruited from online literature platforms, we find that:

- 1) Utilitarian motivation ($b=0.452$, $p<0.001$) positively predicts continuous commitment, while hedonic motivation has no direct effect.
- 2) Obsessive passion ($b=0.176$, $p<0.001$) positively predicts continuous commitment, while harmonious passion has no direct effect.
- 3) Obsessive passion mediates the relationship between worker motivation (utilitarian & hedonic) and continuous commitment(0.087 , $p<0.01$).

This study contributes to the digital labor research by shedding light on the psychological antecedents and mechanisms underlying digital workers' commitment. And we also extend the

dualistic passion model by integrating worker motivation theory and tested it in the context of online creative work. Contrary to the previous studies which see hedonic motivations as crucial drivers of short-term digital labour, we argue that it is utilitarian motivation that really matters in predicting long-term digital work, such as generating serialized literature works. In other words, the pursuit of reputation, skill development and monetary rewards plays a more significant role in workers' persistence. Though harmonious passion is found to be positively associated with workers' commitment in other fields, we argue that only obsessive passion can help low-paid creative workers to overcome the obstacles and conflicts from other life domains. And both hedonic and utilitarian motivations contribute to the obsessive passion, which demands sacrifices and risks, thus to increase continuous commitment. The exploitation and alienation of digital labour are also discussed.

Key words: Digital labour; Creative industries; Continuous commitment; Worker motivation; Passion

Affiliation: Charles University

Abstract: Political economy of media is usually focused on structures, linking particular media-related phenomena to general tendencies and contradictions of various versions of capitalist system. On the theoretical level, there is only a limited attention paid to the role(s) of powerful actors who control many media organizations: the media tycoons. On the other hand, there are many accounts about them that suggest that they are not all the same: some are colorful characters trying to push their own political agenda, some are dry businessmen strictly denying any interference in their media outlets, some are solely focused on media and for some, it is just a little hobby on the side. In short, there are different types of media tycoons with potentially different roles. This should be explored further.

This paper provides a draft of a typology of media tycoons. They are categorized (1) by the degree of importance of their media business in comparison to their other activities and (2) by their relationship to political status quo in the country where they operate. In the spirit of de-westernizing media studies, the paper provides examples from Russia, China and the Czech Republic. These three countries with their diverging political and economic trajectories represent three main models of post-Communist media landscapes and provide a wide range of examples of media tycoons.

From a comparison of the contemporary situation in the three countries it seems that the tycoons solely focused on media would have a wide range of attitudes regarding the status quo while the tycoons with vast business empires and therefore only partial interest in media would be in principle supporters of the status quo of which they are the main beneficiaries. Especially in China but also in Russia there are also tycoons who politically serve as proxies of the dominant political power, but the most interesting are tycoons with political ambitions of their own and therefore with somewhat contradictory relationship with the status quo. Their cases suggest that it is problematic to talk about political status quo as something stable, permanent and devoid of its own contradictions because their fortunes are products of the exact same status quo they claim to challenge in their quest for their own political power.

Title: Selling Alternative Sexuality through Fifty Shades of Grey Merchandise

Session Type: Individual submission

Authors:

Name: Abigail Reed

Email: a.reed(at) fsu.edu

Country: US (United States)

Affiliation: Florida State University

Abstract: Hollywood and its associated subsidiaries have sold love and sexuality from the inception of the industry; “sex sells” is a common refrain in the business. What makes the Fifty Shades of Grey (the films in the trilogy were released in 2015, 2017, and 2018) phenomenon unique within Hollywood (and contemporary mass media in general) is its framing of alternative sexualities as a glamorous lifestyle choice that one can access through consumer purchases of products ranging from franchise-branded sex toys, themed teddy bears, official franchise wine, and much more. Within the world of the Fifty Shades of Grey, BDSM (bondage, dominance/submission, sadism/masochism) is aligned with an opulent and wealthy lifestyle. The products associated with the film reflect the values of a capitalistic system that holds opulent sexual products as more valuable than sexual knowledge, wisdom, or engagement with one’s partner(s). However, the branded merchandise brings in a lot of revenue and publicity for the stakeholders and associated companies. LoveHoney, the sex toy company selling Fifty Shades of Grey branded toys, experienced a huge increase in revenue after the debut of the line. Other adult companies have experienced similar revenue boosts without even carrying any of the branded merchandise.

This paper seeks to examine the problematic ideological implications of the brand’s merchandise using a critical political economic approach. The Fifty Shades of Grey franchise, on a scale unlike any other media text in recent memory, capitalizes on the commodity market of middle class, middle-aged women. By creating a diverse line of tie-in products, the text works in tandem with physical cultural goods that are full of dangerous misinformation regarding sexual health and well-being in the name of “empowerment.” A critical political economic analysis of the Fifty Shades of Grey merchandise, informed by Meehan’s work on the gendered commodity audience (2002), will be conducted at the intersection of discourse surrounding BDSM (Barker, 2013; Bonomi & Altenburger, 2013; Bonomi, et. al. 2016; Leistner & Mark, 2016) in the interest of critiquing the corporate system that capitalizes on the feminist rhetoric of sexual empowerment to further subordinate women both ideologically and economically. A specific emphasis is placed on the role of NBCUniversal in the production and dissemination of Fifty Shades of Grey franchise material in conjunction with its self-proclaimed understanding of its role as a media-creator to produce work that encourages critical dialogue among the audience. Additionally, this paper fills a gap in the literature surrounding the production of Fifty Shades of Grey itself, specifically the use of merchandise to promote the brand. By looking at this aspect of production, an examination and critique is conducted of the way in which this text and its associated products, with its underlying ideologies surrounding issues of alternative sexualities and sexual empowerment, are intimately involved in the lives of the audience.

Title: The regulation of the digital audiovisual market in Latin America

Session Type: Individual submission

Authors:

Name: Luis Albornoz

Email: laalbornoz(at) yahoo.com

Country: ES (Spain)

Affiliation: Carlos III University of Madrid

Abstract: Today there is a consensus in recognizing that the audiovisual landscape is characterized by regulatory asymmetries between traditional broadcasters and new audiovisual players. Some examples of these regulatory asymmetries are evidenced in the relations established between companies and consumers (some players respect the jurisdiction of the country where the service is used, others do not), taxation (some players pay taxes in the markets where act, others do not), content quota obligations (some players have while others do not) or compulsory contribution to national or regional audiovisual production (some players are integrated into national ecosystems of financing national and/or regional audiovisual works while others are not).

In this context, the possible state intervention to regulate video on demand (VoD) and video-sharing platforms or not is one of the key debates in the audiovisual sector. This discussion is taking place in different parts of the world in different ways; for example, while the European Union (EU-28) has recently amended the Audiovisual Media Services Directive (AVMSD) in order to regulate VoD platforms, the Mexican regulator (the Institute Federal of Telecommunications) has declared that there is not plan to regulate the new digital services because this “would stop the innovation” (IFT 2018).

In this regard, in the Latino American region, the private companies confront the possible public intervention: their positions range from the defence of the State’s intervention to deregulate the linear audiovisual sector in order to compete with new online players (e.g. traditional broadcasters nucleated in the International Association of Broadcasting – IAB 2018) to the claim of State non-intervention (e.g. the Latin American Internet Association – ALAI 2018). Deregulation and non-intervention arguments – that evoke notions like innovation, competitiveness or consumer free choice – are “old” and well know... These arguments totally ignore that government delegations and civil society entities have been voicing the need to examine the impact of digital technologies and to promote the modernization of policies and cultural tools in the digital era (Guèvremont 2013, Beaudoin 2014, Kulesz 2014, Rioux et al. 2015, Albornoz and García Leiva 2017).

This paper aims to introduce the current debate about the audiovisual new players regulation in Latin America and to analyse some interesting new initiatives that are taking place in some South American countries. Although the regulation of the digital audiovisual market by the states faces serious opposition, it is possible to recognize a widespread tendency in South America countries to incorporate audiovisual digital platforms into traditional tax schemes through tax reforms (Colombia, Argentina, Chile...). Also, there are some cases in the region that deserve attention: Argentina, that launched a public VoD platform called Cine.AR Play (former Odeon); Brazil, that since 2015 is living a vivid debate about the regulation of VoD services; and Paraguay, that created Audiovisual National Fund financed 50 per cent by the tax withholdings generated by commercial operations performed over the Internet (Audiovisual Promotion Law N° 6.106).

Title: Algorithms, Autonomy & Political Activity: How Social Media AI Affects Democratic Societies

Session Type: Individual submission

Authors:

Name: Jaime Kirtz

Email: jaime.kirtz(at) colorado.edu

Country: US (United States)

Affiliation: University of Colorado Boulder

Abstract: Recent questions about the role of social media in the 2016 U.S. elections have sparked public debate on the role of social media in public opinion and trust in democratic institutions. Simultaneously, there has been a growing divide in scholarship: some scholars have argued that social media reproduces political echo chambers through confirmation bias while others claim develops diverse, democratic spaces through increased network heterogeneity (Lee et al. 2014). However, aside from initial research into search algorithms and platform economies, scholarship has yet to fully address the co-constitutive nature of technology, information, and public participation, especially since the launch of AI initiatives like the Google Brain in 2016-2017 (see also Noble 2018; Gillespie 2018). My analysis examines the determination of YouTube recommendation features through AI and the role of the algorithmic features in constructing and legitimizing mediated publics on YouTube (owned by Google). The Google Brain is constituted by deep neural networks that “learn approximately one billion parameters and are trained on hundreds of billions of examples” (Covington, Adams, and Sargin 2016, 191). Furthermore, this system integrates user data from other websites and platforms owned by Google like Gmail, Google maps and drive. While users may initially search for a specific video or purpose, over seventy percent of users’ time spent on YouTube is determined by the site’s recommendation engine and approximately eighty percent of users claim to watch the recommended videos (Smith, Toor, and Van Kessel 2018). The impact of YouTube on political events like the 2016 U.S. election is speculated to have been much deeper than originally thought and it illustrates the need for scholarship that considers the political economy and cultural relations of social media alongside the technical.

I use a multimethodological approach that combines critical technology studies and political economy to examine the formation and effects of mediated publics by social media design. Because these publics appear as naturally formed, rather than constructed as they are, they hide the modes of production and design, i.e. the AI and data collection. As YouTube is a site of mass political and social information dissemination, examining the technology behind it exposes the ways in which digital culture and information infrastructure contribute to methods of democratic participation engineering. This not only produces ambivalent political effects but undermines the democratic potential of YouTube. Through a case study on the 2016 U.S. presidential election, I interrogate the complex interplay between consumers, producers, developers and technology to delineate power relations and determine the political as well as productive modes of social media. While we may believe that posting, liking, or sharing online is an example of individual autonomy, the increased use of YouTube for political participation has led to more rules, user agreements, and normalized

behaviors as well as the expansion of corporate monopolies. As we look to the future, I argue that the naturalization of mediated publics and determination of power by social media is an essential consideration that needs to be incorporated at the level of design for new communication technologies.

Title: Imaginaries of neoliberal sincerity: Emergent antitrust traps versus the necessary logistical turn in media reform activism

Session Type: Individual submission

Authors:

Name: Russell Newman

Email: russell_newman(at) emerson.edu

Country: US (United States)

Affiliation: Emerson College

Abstract: The Trump Administration in the U.S. currently faces legal and legislative pushback for its rollback of network neutrality, amongst other rollbacks of public protections and programs—even the effective self-removal of the longtime communications regulator, the Federal Communications Commission, from jurisdiction over broadband networks itself. Left deliberately in its place is a desiccated form of antitrust as a distant substitute for consumer protections, an outcome long sought by industry interests and their allies. Stimulated by these decisions as well as controversies surrounding tech giants as Facebook and Google (both real and contrived), competition law is experiencing its own seeming renewal, illustrated by the surprise splash of law student Lina Khan’s “Amazon’s Antitrust Paradox” (2017). The FCC’s own former General Counsel, Jonathan Sallet, has entered the fray (2018), as has Tim Wu (2018). All emphasize that a focus exclusively on price in antitrust is insufficient given present market dynamics; Stucke and Grunes’ (2016) magisterial study of data-extractive industries reaches similar conclusions. As Stucke and Grunes note, competition policy has ignored the role of big data collection and analysis in the growth of market power; even the European Union, with its more stringent rules, miss any number of theories of harm. They suggest past mergers be evaluated to draw out how data issues should have been considered, and alongside calls to break up large tech companies, new legislation has already been offered to allow for after-the-fact evaluation of regulator decisions. A renewed focus on competition has entered public discourse as well, appearing in the political runs of Tim Wu and Zephyr Teachout and in popular press books as Robert Reich’s ‘Saving Capitalism: For the Many, Not the Few.’ Pushback against the dismantlement of the Consumer Financial Protection Bureau ring just as familiar, even with the addition of the democratic socialist tag attached in Senator Bernie Sanders’ case.

The network neutrality debates of the last two decades have much to teach regarding these emergent controversies—and, horrifyingly, the wrong lessons are being learned. Perhaps paradoxically, antitrust’s new epistemic fluidity is not a sign of hope; it is the gears winding up again on familiar terrain when a refocus on the logistics of present-day production of value subjects is what is necessary to move forward. What media reformers are fighting now is not a rational debate even as it clothes itself in its garb: they are battling a deep-rooted institutionalized understanding that possesses strong material support networks. This paper seeks to respond to present day trajectories of debate in this sphere—traps, really—and outline new directions in an era in which media consumption becomes a crucial piece of wider circuits informing production and distribution chains that will impact media policy in both predictable and unpredictable ways. Those concerned with communications policy must think beyond its classically liberal aspects as production and

dissemination of content. Communications policy is blurring into broader fields of logistics policy operating at multiple, often contradictory levels, and activism will need to account for all these levels at once.

Title: LaMula.pe: A Peruvian model for online news'

Session Type: Individual submission

Authors:

Name: Gabriela Martínez

Email: gmartine(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: Peru's dramatic history of media corruption during the Fujimori regime(1990-2000) led to a crisis and distrust in journalism. This coincided with the changing media landscape brought about by technology, which provided an outlet for newer forms of delivering information. A newer generation of journalists and concern citizens decided to challenge the status quo of information with the creation of LaMula.pe, a digital platform.

This work traces the history and impact of LaMula.pe, one of Peru's most successful online platform founded in 2009 based on a model that combines citizen journalism with professional journalism. Furthermore, this work will analyze LaMula.pe's influence over legacy media and other local online news outlets. LaMula.pe many times serves as an agenda setter by focusing on topics that mainstream media ignores, but once it trends on LaMula they have to also follow and cover the issue9s). This work will also give attention to LaMula's diversification and lately role as co-producer or sponsor of documentary and fiction films that cover human rights issues and challenge official stories and the official history of Peru's recent political past.

Utilizing political economy of communication as the framework, this work will probe the history and development of LaMula.pe, its structure and funding model, and its sustainability as a new model for news and cultural media producer and outlet.

Title: Algorithmic Necessity: On the Key Characteristics of Algorithms in Capitalism

Session Type: Individual submission

Authors:

Name: Jernej Amon Prodnik

Email: jernej.prodnik(at) gmail.com

Country: SI (Slovenia)

Affiliation: Social Communication Research Centre, Faculty of Social Sciences, University of Ljubljana

Abstract: In technological jargon algorithm can be considered as a "method for solving a problem." (Finn, 2017: 18) In this view, narrow problems are instrumentally defined by engineers and entrepreneurs that develop code with an aim of overcoming these problems. Even at first glance, it is clear that such abstract definitions cannot explain why algorithms now play one of the central roles in almost all spheres of society, from politics and economy to culture and interpersonal relationships (Pasquale, 2015). From the most basic functions of the biggest search engines and social networking sites, to the ways formerly laborious operations are simplified, how financial institutions operate or how whole labour processes are now fully automatized. Because technologies are inevitably embedded within the social context in which they develop, this paper looks at the key characteristics of algorithms in competitive and inherently unstable capitalist society (Streeck, 2012).

While it may seem capitalism has little to do with algorithms, it - quite on the contrary - has everything to do with them. It is no technological or technical necessity inherent in algorithms, because of which they should become so omnipresent and all-encompassing. Companies using algorithms, however, potentially have significant market advantages in specific markets when using them. This means non-adoption can similarly bring disadvantages, in time leaving these companies further behind. What Marx (1990/1867: 433) called "the coercive laws of competition" thus has direct consequences for general expansion of algorithms and how they develop. This leads to what I term "algorithmic necessity", increased inevitability that different actors and institutions will use algorithms.

In this context basic features of algorithms include: (1) opacity and complexity, (2) automatization, (3) datafication, and (4) hyper-rationalisation. Obviously, social consequences of these characteristics are multifaceted. Amongst them are: Firstly, incomprehensibility and secrecy, connected to opacity (1) and the fact most algorithms are developed by capitalist companies. Secondly, social acceleration and naturalization, which are mainly connected to the automatization of processes and decisions (2). According to Rosa (2013; 2014), social acceleration is a constitutive part of modern societies; in late modernity, however, it becomes a self-propelling system "that incessantly drives itself." (2014: 31-33) Algorithms can be seen as an important part of technological acceleration, which is a dimension of this closed acceleration-cycle. Naturalization is similarly connected to the fact that socially constructed processes, which become automatized (2), appear self-evident. They are supposedly based on objective (calculative, computational) logic that has no inherent biases. Naturalization is therefore also connected to datafication (3), as algorithms today increasingly need large quantities of data to perform their key functions. Mass surveillance, enabled by digitalization, is the third consequence that is raising big concerns. Fourthly, hyper-

rationalisation (4) leads to intensification of what Horkheimer (1974/2004; 1974/2012) or Marcuse (1941/1955) called instrumental reason. They related it to the development of modern capitalism and its specific forms of rationalization, especially economic rationality that becomes predominant. For Fuchs (2009, 8), instrumental reason is “oriented on utility, profitableness, and productivity”, with its objectives reduced to cost-benefit calculations, further feeding "algorithmic necessity".

Title: The Paradoxical Role of 3C Internet Celebrities in the Labor Process: Re-interpreting Audience Commodity Theory in the Digital Age

Session Type: Individual submission

Authors:

Name: Wan-Wen Day

Email: superabraham(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chung-Cheng University

Abstract: The exploitation of audience labor concerns Dallas Smythe greatly. The media, he critically argued, puts audiences work for advertisers. Viewers' eyeballs are sold in exchange of media profits. Advertisers want more from audiences in the digital age. Many YouTubers share their product experiences online. These messages are more persuasive than regular commercials. Their brand expertises have a great deal of impact on the purchase decision-making process of other consumers. Nowadays, some of popular YouTubers have been recruited by advertisers to promote branded commodities.

According to eMarketer, the advertising spending worldwide reaches 628.63 billion dollars in 2018. Digital media account for 43.5% of all costs due to shifting viewership from traditional TV to digital channels. When audiences turn their eyeballs to the interactive platforms, such as Youtube, advertisers begin to invest more on the Internet celebrities who produce video contents to generate millions of viewers. This study intends to investigate the exploitation of audience labor on Youtube channels and the paradoxical role of YouTubers. Van Dijck (2013) argues that Youtube is homecasting. The audiences can decide what content and what time to watch empowered by search engine. Also, Youtube audiences belong to various fan communities. Unlike television audiences, YouTubers and their fans are close to one another and regularly share viewing experiences together. Prahalad and Ramaswamy (2002) believe that digital technologies empower audiences to co-create values with advertisers. YouTubers express their own viewpoints toward branded products and build fan communities on them.

My research targets are 3C Internet celebrities. In Taiwan, 3C stands for computer, communications, and consumer electronics. Generally speaking, 3C Internet celebrities maintain a consumer identity, and they currently like to introduce electronic products on Youtube, the most popular Vblog platform. First, the researcher will select the 3C Youtube channels which generate the most viewing eyeballs by tracking their Youtube Analytics. The commercial values of YouTubers are based on the quantities of fan communities and the supporting strength from them. The semi-structured interviewing is suitable for this study. The researcher will interview ten Internet celebrities who run the 3C Youtube channels with highest viewing ratings. Questions will be about the paradoxical role that YouTubers take in the labor process. They must decide how to justify commercial interests and product evaluation. Second, this study will focus on the marketing strategies of the major 3C advertisers on Youtube. The researcher will interview the marketing managers of the top five 3C brands in Taiwan. Questions will be on how the managers evaluate the audience commodities they buy from Youtube channels. Youtube Analytics offers more in-depth data than television ratings. The marketing strategists can monitor the performance of each channel

and videos with up-to-date metrics and reports, like the watch time, traffic sources, and demographics analysis.

Title: Neoliberalism and the Academia: international communication research in the Global Age

Session Type: Individual submission

Authors:

Name: Ángel Carrasco-Campos

Email: angel.carrasco.campos(at) uva.es

Country: ES (Spain)

Affiliation: University of Valladolid

Name: Enric Saperas

Email: enric.saperas(at) urjc.es

Country: ES (Spain)

Affiliation: King Juan Carlos University

Abstract: To understand the origins and evolution of communication studies it is always necessary to analyse the political, socio-economical and institutional context on which they take part. These factors should be considered as a constitutive element of the discipline, as the knowledge interest related to these contextual issues and structures are determinant to understand the scope of research, the theoretical frameworks and the methodological procedures. Without this contextualization of communication research and of the institutions on which they are performed it is impossible to have a detailed image to understand this specific field of the social sciences.

Communication studies refers to a changing object of study, which material delimitation depends on the specific context in which it happens. The neoliberal transnationalization of media industries in a global market of services and innovations provides a particular scenario for a progressive convergence between different media business such as broadcasting, telecommunication operators and knowledge industries, merging forms of financial capitalism and creative industries. This, combined with a strong de-regulation of media systems in a logic of glocalization by adopting cultural identities in a global consumer society, points to a combination of a pretended diversity of communicative uses and interactions, but in the common background of a global cultural-cognitive capitalism. In addition, it must be considered the particular context on which research activity is performed, which includes different components such as journal standards, professional and research associations, top universities rankings, competitive funding calls, impact of research measures and the evaluation of academic activity. This institutional framework developed over the past decades would have provided an academic work-ethic based on the professional status that must be analysed in the neoliberal logic of competition.

This presentation aims to describe the role developed by the current economic, political and institutional structures as determinant factors to understand current communication research. It will expound arguments to understand the influence of neoliberal ideology into academic and research procedures. The analysis will focus on the economic and institutional dimension of research, as determinant factors to understand research standards related to shared working routines, methodologies, objects of study, academic backgrounds and professional strategies in a global arena. In this regard, the institutionalization of a research canon and agenda shared by researchers will be interpreted not only as a consequence of adopting international standards for research

activity, but also as criteria for research activity and for professional careers development in a context of global competency for working opportunities and professional reputation.

Abstract: Professor Graham Murdock has made essential contributions to communications research for almost fifty years from his early work on demonstrations to political economy of communication to the digital commons and citizenship to his recent work on communication and climate change. The extraordinary scope of his interests and the global perspective he adopts mark him out as one of the most original and engaged scholars in the field. As well as being a key, critical thinker, he is also a wonderful and generous colleague and teacher held in great affection by generations of faculty and students alike.

Name: Hsuan-ting Chen

Email: htchen (at) cuhk.edu.hk

Country: HK (Hong Kong)

Affiliation: Chinese University of Hong Kong

Abstract: Research Objectives

The proliferation of fake news and misinformation on social media in recent years have raised concerns on the quality and veracity of information that people access and consume (Bode & Vraga, 2015). Recent scholarship has thus highlighted the importance of news literacy, given that higher levels imply greater competence in navigating the stream of information in today's complex media environment (Ashley, Maksl, & Craft, 2017). However, much of the work on social media and news literacy has focused on the United States. Moreover, there has been a lack of comparative work in the area. This study fills the gap through a comparative approach that examines the dynamics of social media use and news literacy in ten global democracies: UK, Germany, Denmark, Spain, Ireland, Norway, USA, Canada, Australia and Korea.

Theoretical framework and methodology

The study draws from extant models from the political communication literature, including the cognitive mediation and OSROR models of news effects (Shah et al., 2017) as frameworks to elucidate the relationship between three aspects of social media use: linkages to public actors, social media news use diversity, and social media news engagement; and news literacy. The core argument of these models is that the relationship between news and political attitudes and behaviors can derive from multiple pathways and mechanisms.

Data for the ten countries is derived from the Reuters Institute for the Study of Journalism as part of the 2018 Digital News Report (Newman, Fletcher, Kalogeropoulos, Levy, & Nielsen, 2018). The data is derived from online surveys of respective online populations from different countries. This study focuses on subsamples of respondents who use social media for news, providing a total sample size of N = 9654.

Summary of findings

Data from each of the ten countries were analyzed separately. The Canada sample was further split into English-speaking and French-speaking samples. Multiple regression analyses were conducted. After controlling for demographics, news interest and use frequency, analyses show that links to public actors on social media (e.g. journalists, government officials) were positively related to news literacy in most of the countries. Analyses of indirect mechanisms also found that the relationships are often mediated by diversity of social media news consumption and engagement. The study thus highlights and elucidates the underlying mechanisms of social media news use that can engender higher levels of news literacy.

Abstract: Este trabajo se enmarca en una línea de investigación de los autores que busca comprender el consumo de información política en el ámbito de Hispanoamérica. En concreto, el estudio se desarrolla a partir de la encuesta realizada por YouGov para el Reuters Institute Digital News Report, con base en diferentes muestras nacionales. El trabajo de campo se desarrolló entre finales de enero y principios de febrero de 2018. Se han empleado muestras de usuarios de Internet de Argentina (N=2012), Chile (N=2008), España (N=2023) y México (N=2007), representativos por edad, género, ingresos, educación y región geográfica.

La investigación persigue dos objetivos. Por un lado, ofrecer un análisis comparativo del interés en las noticias políticas en medios tradicionales y en redes sociales (Facebook, Twitter, WhatsApp y YouTube), entre usuarios digitales en cuatro países iberoamericanos (Argentina, Chile, España y México), estudiando su relación con el autoposicionamiento ideológico de esos mismos usuarios. Para ello, se plantea como hipótesis que a mayor radicalidad mayor interés en la información política; es decir, aquellos usuarios digitales que se auto-posicionan ideológicamente más en los extremos (ya sean de extrema izquierda o extrema derecha), mayor interés muestran por las noticias políticas.

El segundo objetivo es, desde el marco teórico de la espiral del silencio, analizar el uso de las redes sociales como vehículo de expresión de las ideas políticas. Más concretamente, se abordan dos cuestiones principales: por una parte, las razones por las que los usuarios digitales silencian o callan sus opiniones políticas; por otra, la relación, si es que existe, entre esta prudencia al opinar con la auto-posición ideológica. Como base para el análisis se han formulado las siguientes preguntas de investigación:

- ¿Influyen factores sociodemográficos como la edad, el género o el nivel educativo en esa cautela a la hora de expresar las opiniones políticas?

- ¿Qué relación hay entre el interés en noticias de política y la menor o mayor predisposición a expresar abiertamente las propias opiniones políticas en Internet?

Aunque aún no está realizado el trabajo estadístico que responda a las anteriores preguntas de investigación, los resultados preliminares apuntan que una proporción relativamente alta de los usuarios afirman preocupación al expresar abiertamente sus opiniones políticas en Internet. Se da por diversas razones: a) que pueda acarrear problemas con las autoridades (entre el 21% de Chile y el 34% de México); b) preocupación por lo que puedan pensar amigos y familiares del propio usuario (el 28% en España, mientras que en los tres países de América Latina es más baja); c) preocupación del usuario por los cambios en la imagen que de él tienen sus compañeros de trabajo u otros conocidos, si aquél expresara opiniones políticas (29% en España y menor en México (27%), Argentina (25%) y Chile (22%).

Title: Trump Metaphorized. Metaphors of 45th president of the United States in the Polish press at the beginning of his presidency

Session Type: Individual submission

Authors:

Name: Tomasz Gackowski

Email: t.gackowski (at) uw.edu.pl

Country: PL (Poland)

Affiliation: University of Warsaw

Abstract: In my presentation I would like to present a results of empirical research which I have conducted in Laboratory of Media Studies at Warsaw University. With my research team, we have analyzed all articles which contain words “Trump” and “Twitter” in all, polish nation-wide daily and weekly (almost 60) newspapers (from 20th of January (inauguration of his presidency) to 25th of March 2017 r (Donald Trump and his supporters resign to replace Obamacare with a new deal). We wanted to find out how Donald Trump’s tweets are resonating in a polish press discourse in a very crucial moment for a new President of U.S. – during his trying to fulfill one of his most important campaign’s pledge – replacing Obamacare. We wanted to check whether Polish journalists (and experts) reliably recall Trump’s (twitter) online statements, and how the Polish print media wrote about the communication of the President of the United States through his Twitter account. It was equally important to examine in which context journalists decide to refer to Twitter Trump and what function these references in the text do. We checked a total of 70 press titles - dailies and magazines with the highest circulation and the level of readership in Poland – to find articles which met criteria: the time criterion (January 20 - March 26, 2017), thematic criterion (containing key words: "Trump" and "Twitter" / "tweet") and genre criterion (journalistic articles). Finally, we took into consideration 113 articles from 20 different newspapers and weeklies. Selected press materials have been analyzed with sophisticated code book: the basic text parameters, its general thematization, the actors mentioned in the article, the language of the description, detailed parameters concerning individual tweets or mentions about the US president's activity on Twitter and finally metaphores which polish journalists used to describe Donald Trump, his administration and United States of America.

Title: Mobilizing the U.S. Latinx Vote: Race, Identity, and Organization

Session Type: Individual submission

Authors:

Name: Arthur Soto-Vásquez

Email: adsv03 (at) gmail.com

Country: US (United States)

Affiliation: Texas A&M International University

Abstract: After two decades of close national elections, there has been an effort to mobilize Latinx voters to improve the margins. A wide variety of political actors have conducted these efforts in the last decade since the election of Barack Obama in 2008. During this time, the rise of online and digital technologies has transformed campaigning with more data sources and new strategies developed each year. This dissertation focuses on the role of national Latinx organizations in mobilizing Latinx voters in this period. Specifically, I focus on how audiences are conceptualized, which digital strategies are deployed, and how U.S. Latinx political identity is being made.

I use a multi-method and qualitative approach to answer the question of how do U.S. Latinx advocacy organizations shape Latinx identity in the digital era of communication and the racialized public sphere of the 2010s while pursuing their goal of voter mobilization? I use in-depth expert interviews, participant observation, and discourse analysis of mediated texts to collect data. I introduce the concept of mediated U.S. Latinx identity as a theoretical framework to understand the new and old formulations of Latinx identity in the United States. Mediated U.S. Latinx identity theory argues the three themes of identity making unique to Latinxs; denationalization, homogenization, and racialization are being transformed by online communication and elite Latinx opinions.

Several findings are important to understanding how organizations mobilize Latinx voters, use digital tools, and shape identity. First, organizational stakeholders comprise a new Latinx professional elite. Their educational and social capital is very different from the majority of Latinxs. As a result, they tend to adopt the discourses of the upper-middle class, such as political incrementalism, compromise, and belief in the American Dream. They then project their identity onto a mass Latinx audience using digital media. Second, the use of digital tools varies by organizational history and technical capacities. Older groups tend to report information, even while using a variety of digital tools. Newer organizations tend to promote engagement on social media but also email communication. Third, both preceding factors are shaped by the political economy of these groups. Most national Latinx groups are funded primarily by corporate and foundation money. I assert this funding structure constrains organizational politics to small change advocacy and online strategy to the conventional. As a result, Latinx political mobilization ends up being much closer to an elaborate exercise in branding – rather than a genuine social movement.

Title: Social Networks Sites and its relation to Attitude Ambivalence Phenomenon in shaping Egyptian Public Opinion

Session Type: Individual submission

Authors:

Name: Ahmed Mohamed

Email: ahmed.taha (at) artnv.au.edu.eg

Country: EG (Egypt)

Affiliation: Cairo University

Abstract: A wealth of studies have examined the phenomenon known as "Attitude Ambivalence". This term refers to the mixed attitude a person can have towards the same issue. In other words, an individual can hold a positive and a negative attitude towards an issue at the same time. Hence, researchers have examined this phenomenon's influence on shaping the public opinion polls and how it limits predicting individuals' behavior. This phenomenon exists in all communities especially in the Arab world. The Arab world is a region that suffers from everlasting conflicts between traditions and modernity. In addition, the 2011 Arab Spring uprising made massive changes in the political sphere that led to distrust in politics. Furthermore, Arabs have rarely practiced democracy and have been living under resilient dictatorships that discredited all opponent voices.

This study examines the "Attitude Ambivalence" phenomenon in the Egyptian public opinion regarding to the economic projects and political decisions that were made during the two periods of the president Abd EL Fatah El-Sisi. In addition, this study explores the role of Social Network Sites (SNS) in amplifying or limiting the influence of this phenomenon, and how can SNS play a role in formulating stable attitudes. Furthermore, linking between spiral of silence theory, ambivalent attitudes and SNS which will help to examine individuals' behaviors and attitudes from new theoretical perspective.

To measure this phenomenon the researcher proposes a two-step approach to identify ambivalent attitudes. First, the researcher will do an experimental study by exposing respondents to specific messages from different SNS. At first, the researcher will examine them before exposure, then another post-test will be conducted to compare the results. Second, to know the influence of public opinion leaders, the researcher will do a content analysis of 15 personal accounts of public figures on SNS, and discuss the content of these pages with them using in-depth interviews. This mixed method approach will help the researcher to reach accurate information and indicators about ambivalent attitudes and how to overcome that to reach stable attitudes.

Title: Agenda-Setting y Agenda Pública. Estudios de framing e influencia en el contexto electoral (21D) del Procés de Cataluña

Session Type: Individual submission

Authors:

Name: Concha Pérez-Curiel

Email: cperez1 (at) us.es

Country: ES (Spain)

Affiliation: University of Seville

Name: Mar García -Gordillo

Email: marggordillo (at) us.es

Country: ES (Spain)

Affiliation: University of Seville

Abstract: El 6 de septiembre de 2017 se aprueba en el Parlament de Catalunya la Ley de Referéndum y marca el inicio de un nuevo conflicto. Momentos convulsos y de cambio definen el contexto político catalán. Estatuto, Declaración de Soberanía, Ley de Consulta, Sentencias del Tribunal Constitucional y Artículo 155 anteceden a la convocatoria de unas elecciones autonómicas (21D) forzadas por la confrontación Cataluña/Estado. El tema de la independencia monopoliza la cobertura mediática del país y el Centro de Investigaciones Sociológicas (CIS) constata un aumento sin precedentes de la preocupación ciudadana. La investigación analiza la posible relación de causalidad entre la proyección del conflicto catalán en los medios (Agenda -Setting) y los efectos en la ciudadanía (Agenda Pública), con el objetivo de comprobar si existe una correlación equivalente entre la información mediática publicada y la evidente inquietud de la población ante tal escenario. En esta línea, se establece una hipótesis inicial que confirma una selección y un encuadre (framing) de noticias sobre el proceso independentista y electoral en la prensa nacional y catalana que aumenta el interés público ante el problema y puede repercutir en la disrupción y fragmentación social. El análisis de contenidos de corte cuantitativo numérico y cualitativo temático aplicado sobre una muestra mediática (portadas y editoriales de El País, El Mundo y La Vanguardia) y temporal (septiembre-diciembre de 2017) constituyen el eje metodológico de la investigación. En paralelo, las encuestas del CIS correspondientes a esta franja revelan la prioridad que la opinión pública concede a la cuestión catalana. Los resultados evidencian un seguimiento mediático preferente y focalizado sobre el procés, cuya tendencia al alza o a la baja es directamente proporcional a los datos sociológicos de la encuestación poblacional. Sin embargo, las conclusiones indican que la comunidad científica experta en agenda setting y framing (McCombs, 2006, Fermín Bouzá, 2006, Garcés, 2007, Anduiza y Bosch, 2012) a la que se suma ahora la agenda inversa de los medios sociales (Aruguete, 2017; Wallsten, 2007; Meraz, 2011; Sung-Tae & Young-hwan, 2007, Casero-Ripollés, 2015) urge de herramientas que midan la capacidad de influencia de los medios, los efectos en las audiencias o la oportunidad para provocar el cambio social y político.

Title: "We are all Diba members tonight": Cyber-nationalism as emotional and playful actions online

Session Type: Individual submission

Authors:

Name: Zhe Wang

Email: thethe.wang (at) gmail.com

Country: CN (China)

Affiliation: National Chengchi University, Taiwan

Abstract: Title: "We are all Diba members tonight": Cyber-nationalism as emotional and playful actions online

Author: Zhe Wang, PhD candidates, National Chengchi University, Taiwan

This study attempts to interpret the digital traces of participants during the "Diba Expedition", especially their comments left on Ingwen Tsai's Facebook page, in order to discuss the following questions: From the "Diba Expedition", what kind of continuation and variance of cyber-nationalism can be revealed? How can netizens' construction of self-identity during the "Diba Expedition" be understood and interpreted? What are the contextual structures behind this collective action?

All of the comments on Ingwen Tsai's Facebook page during the "Diba Expedition" (from January 20, 00:00 to January 21, 24:00) were captured via API designed by this study on March 9, 2016, of which the total number was 13,684. The information from all comments were classified as time, content, account, and the number of likes. In addition, the researcher had joined the "Diba Central Division" that was established after the above-mentioned Facebook incident and the corresponding QQ group for the sake of practical observation and to get a complete overview of this incident. Comments left by participants during the "Diba Expedition" are divided as template comments and no-repeat comments, and the former one presents a distinguished cyber-nationalism when compared with before, which can be seen as emotional and playful cyber-nationalism. This could be the result of the collaboration of cyber-nationalism and cyber subcultures: those participants prefer entertaining and positive emotions, while the strategies employed by those participants rely on the digital logic of social networking, which needs to take both community-individual and sensation-reason into consideration. Above all, the cyber-nationalism discussed in this study is embedded in the practices of the "networked authoritarianism" and the entertainment business in China. Generally speaking, cyber-nationalism is still in its very nature a sort of imagination belonging to a common community, which is implemented into the terms and behavioral practices of various cyber communities. Completely different from previous cyber attacks regarding "hostility, hegemony and patriarchy", the current cyber-nationalism is more easily combined with the cyber subculture and implemented into the "Diba Expedition" with emotional and playful forms of practice and performance. On the one hand, the main message templates the agents have chosen are filled with demands focused on positive emotions, addressing delightful "love" and veiling other complicated nationalistic feelings that are activated in disperse terms. On the other hand, the active agents have adopted the action strategy of digital games, utilized the combination of numerical logic and rationality-emotionality existing in social media, and effectively organized a group of cyber citizens who have been seeking a satisfactory place between collectivization and individualization. From a

holistic view, individual nationalistic feelings have been jointly shaped by the networked authoritarianism from national institutions and the commercial pursuit of pan-entertainment from technology firms, and cyber-nationalism can only arouse a large scale of spamming actions with its connections to the growth background and daily usage of the Internet from cyber citizens. Cyber-nationalism such as the "Diba Expedition" will never be merely a single case since its first occurrence.

Title: Partisan Media Bias during Media Storms

Session Type: Individual submission

Authors:

Name: Doron Shultziner

Email: doronsh (at) hac.ac.il

Country: IL (Israel)

Affiliation: Politics & Communication, Hadassah Academic College

Abstract: This project deals with two emerging research topics: partisan media bias and media storms. Leading my research interest is the following question: is partisan media bias accentuated during a time of a media storm? This research connects between the phenomenon of Partisan Media Bias (Lichter 2017), which looks at media mechanisms that news editors employ when they are motivated by political considerations. The second media phenomenon is known as 'media storms' which is a very intensive preoccupation of media outlets with the same issue (Boydston et al. 2014; Walgrave et al. 2017) often due to a dramatic event. My research aims are to focus on the connection between these two phenomena and to explore how media outlets behave in the eye of a media storm. I will do so by analyzing the data-set which I created to study the news coverage of the 2011 Social Justice Protest Movement (Shultziner & Shoshan 2017; Shultziner & Stukalina, under review). I will analyze the behavior of the media outlets as the protest climaxed and became a heated political topic over two-month. Rather than assuming that the media operates by normal standards, I propose that media outlets move into a very different mode of behavior (Boydston et al. 2014) which is more political in nature and involves heightened PMB regarding the issue of coverage. I am not aware of a research that has tried to explore this specific question and interaction between PMB and media storms before.

Preliminary Hypotheses:

1. Media outlets accentuate their political line of coverage the stronger a media storm get and in comparison when not in storm mode.
2. Partisan Media Bias during media storm operates through several mechanisms including the percentage of positive, neutral and negative articles about the issue, and the physical placement of those items within the newspaper, such as the front page and the sizing of articles.

Title: La problemática de los asesinatos de líderes sociales en Colombia en la agenda digital de los parlamentarios colombianos: análisis de las posiciones, interacciones y estrategias de comunicación política.

Session Type: Individual submission

Authors:

Name: Juan Cárdenas Ruiz

Email: juancar (at) unisabana.edu.co

Country: CO (Colombia)

Affiliation: Universidad de la Sabana

Name: Maria Catalina Cruz González

Email: maria.cruz3 (at) unisabana.edu.co

Country: CO (Colombia)

Affiliation: Universidad de La Sabana

Abstract: El asesinato de líderes sociales en Colombia es uno de los problemas más graves que ha vivido el país en los últimos 40 años. Tanto en el marco del conflicto, como durante la negociación y en la fase de pos-acuerdo, decenas de personas que han representado algún grupo social, han luchado por la garantía de derechos y libertades, han sido asesinadas en distintas regiones del país por diversas agrupaciones violentas. Con la llegada de Iván Duque al poder, cuyo sector político tiene una posición muy crítica frente al proceso de paz, el problema ha persistido y las alertas de los organismos de seguridad siguen encendidas. Algunos medios afirman, incluso, que en los primeros días del 2019 han asesinado un líder social por día. En ese marco los ciudadanos se han movilizado y han demandado acciones y respuestas por parte de las autoridades y los representantes políticos. Este estudio experimental busca identificar dentro del grupo de Senadores y Representantes a la Cámara, la relevancia que tiene el tema dentro del entorno digital de estos políticos, específicamente en la red social Twitter, que en Colombia no es la que más usuarios tiene, pero si logra tener una fuerte influencia sobre la definición de la agenda pública

Se analizaron todos los tweets (666), que hablarán directa o indirectamente de los asesinatos de líderes sociales, publicados en cuentas activas oficiales de Senadores y Representantes a la Cámara, en el periodo del 7 de agosto al 7 de noviembre del 2018, primeros tres meses de gobierno del presidente Iván Duque. Se diseñó una matriz de análisis de contenido que contenía variables de tipo cuantitativo y cualitativo que buscaban dar cuenta del origen del contenido, la manera de referirse al tema, los marcos de interpretación frente al problema y la construcción de patrones de victimización y atribución de responsabilidad, entre otros.

Entre los principales hallazgos es importante resaltar que solo la mitad de los congresistas hicieron referencia al tema en su cuenta oficial, la mayoría de congresistas que abordan el tema son de izquierda y centro izquierda, 62%, de los partidos Decentes, Polo Democrático y Alianza Verde, el 16% son tweets del movimiento MAIS que representa a los indígenas y el 12% del partido de gobierno Centro Democrático. Se identificó un patrón relativamente mayoritario, en donde los congresistas privilegian opiniones o informaciones de terceros a través de RT, hablan del tema de manera genérica con la intención en primera medida, de informar sobre los hechos y en segunda medida, denunciar los asesinatos, exigir acciones frente a los hechos y hacer reclamos a las

autoridades. Igualmente se evidencia qué si bien se habla del tema, parece no ser claro o existir cierto grado de corrección política con relación a los patrones de victimización y a la atribución de responsabilidades.

Title: Some Explanation of the French "Yellow Vests" Protests: Emmanuel Macron Presidential Communication Mishaps

Session Type: Individual submission

Authors:

Name: Philippe Maarek

Email: maarek (at) u-pec.fr

Country: FR (France)

Affiliation: Université Paris EstIC member

Abstract: To many observers' surprise, the 2017 French Presidential Election led to the victory of an outsider without any party affiliation, Emmanuel Macron. Thanks to a well-led campaign making good use of Internet Social Media, he was able to grasp his luck when many of his strongest opponents failed for one reason or another.

Becoming president, Emmanuel Macron thought he would rule differently than his two predecessors, Nicolas Sarkozy and François Hollande. He initially adopted the "kingly" distant posture achieved in the 1980s by François Mitterrand on the advice of his communication advisor, Jacques Pilhan. Convinced after a few months that this stance was not helping his popularity and his actions, Emmanuel Macron then decided to do a complete turn around and started to adopt a very familiar tone, trying to give a feeling of proximity to the French citizens. When some of his policies implementation started to initiate the "Yellow vests" protests in reaction, this new communication attitude not only did not achieve its goal, but apparently became counterproductive, noticeably infuriating the protesters even more.

This paper will show that a partial explanation of the lasting protests of the "Yellow vests" comes from the failure of Emmanuel Macron presidential communication. It will expose the unexpected personal clumsiness of many of his public appearances, both on a personal level and on a professional level. On a personal level, the choice of words and of attitudes of Emmanuel Macron was frequently clumsy and inappropriate, not to say felt aggressive. On the professional side, his communication was often off-target, amazingly poorly organized by a succession of inexplicably disappointing communication advisors. On the core issues, his new stance, seen as arrogance, increased the unpopularity of some of his political decisions attacked by many yellow vests.

Hence maybe faultily decided and certainly ill led, Emmanuel Macron presidential communication may be seen as a partial explanation of the duration and of the intensity of the Yellow Vests protests in France in 2018-2019.

Title: Voters vs. candidates: Public opinion about electoral fairness and its influence on perceived institutional legitimacy in Singapore

Session Type: Individual submission

Authors:

Name: Weiyu Zhang

Email: viyucheung (at) gmail.com

Country: SG (Singapore)

Affiliation: National University of Singapore

Abstract: The legitimacy of elections is fundamental to democracies, including the hybrid ones that contain authoritarian components. A self-interest approach attributes public opinion of electoral legitimacy to whether one's self-interest is satisfied by the electoral result. Scholars (e.g., Rasinski & Tyler, 1988) argue that public opinion about electoral fairness plays an equally, if not more, important role in shaping perceived legitimacy of elections. This study is among the few attempts to provide an elaborated conceptualization of electoral fairness, by firstly, focusing on the communicative aspect of the electoral procedure, and secondly, delineating the voter vs. candidate dimensions of the fairness appraisals. Moreover, this study is situated in the unique context of Singapore, a hybrid system that is often called "electoral authoritarianism" (Schedler, 2006) or "authoritarian democracy" (Zhang, 2012). The puzzle of Singapore is that the ruling party, despite its authoritarian style of governance between elections, has stayed strong in electoral results. By understanding the voter vs. candidate fairness appraisals among Singaporean citizens, this paper also provides an explanation about the resilience of such authoritarian democracies.

Among the seven Asian authoritarian democracies established in the 1960s and 1970s (George, 2006), Singapore is the only one that has survived. In the most recent 2015 general election, the PAP stopped the declining trend in popular votes and regained its supermajority support (70% compared to 60% in the 2011 General Election). This victory was obtained in an election in which for the first time since independence all constituencies were contested. If the electoral reforms are manipulations that advantage the ruling party, why did they fail to curb oppositional challenges and lead to negative perceptions about electoral fairness among voters? One answer this study provides is that voters perceived the 2015 election as generally fair and the electoral institution as legitimate, because these two perceptions were influenced more by voter fairness appraisals than candidate fairness appraisals. Moreover, voters seemed to be more satisfied with the fairness in their own communicative actions such as raising questions and having an influence than in candidates' communicative actions. Nevertheless, the less fair treatment of candidates' communicative actions had less impact. This may imply that the Singaporean voters probably do not think that every candidate should have an equal chance to voice, be heard and considered, and exert influence. The voters may think that the treatment of candidates should be conditioned on their competencies or merits. This perception is both possible and plausible given the meritocracy ideology (Tan, 2008) the Singapore state has perpetrated for years.

In summary, this study helps to understand electoral fairness and its influence on electoral legitimacy, from a communicative stance by separately assessing the voter vs. candidate fairness.

The findings are useful to think about Singapore, an authoritarian democracy's resilience in popular elections and hopefully shed lights on how elections can be examined from the fairness approach, in addition to the self-interest approach, in other contexts.

Name: Carolina Carazo

Email: carolina.carazo (at) ucr.ac.cr

Country: CR (Costa Rica)

Affiliation: Universidad de Costa Rica

Name: Larissa Tristán

Email: larissa.tristan_j (at) ucr.ac.cr

Country: CR (Costa Rica)

Affiliation: Universidad de Costa Rica

Abstract: The 2018 presidential election in Costa Rica will be remembered as one of the most controversial electoral processes in the country's recent history. The central issue of the election for many voters was an advisory opinion of the Inter-American Court of Human Rights. In 2016, the Government of Costa Rica requested an opinion from the Court regarding several issues: equal marriage, change of name, gender identity, and property rights for same-sex couples. The Court's response came in January 2018, less than a month before the election, and marked the campaign profoundly. On the day of the election, two candidates obtained the right to dispute a second round a few weeks later: Fabricio Alvarado, member of the Partido Restauración Nacional and an evangelical singer explicitly opposed to equal marriage; and Carlos Alvarado, the official candidate of the Partido Acción Ciudadana and ex-minister of the outgoing administration, who argued for respecting the human rights of the LGTBQ+ population.

This paper analyzes the coverage and discussion of the Court's advisory opinion as an opportunity to further understand issues of communication, technology and human dignity. We analyze this case as a "media event" (Dayan & Katz, 1992, Sumiala et al., 2018). We focus on the development of media events in hybrid communication systems, that is, spaces "built upon interactions among older and newer media logics—where logics are defined as technologies, genres, norms, behaviors, and organizational forms—in the reflexively connected fields of media and politics" (Chadwick, 2013, p.4). To this end, we analyze how information regarding the advisory opinion (particularly equal marriage) was produced, circulated, and appropriated on Facebook. In this way, central aspects of the "media events" theory are updated to consider the case of social media.

The analysis is based on a mixed-methods study that combined qualitative and quantitative approaches. We gathered data published on Facebook by two news organizations, presidential

candidates, citizen groups, and sites devoted to creating viral content (such as memes). We conducted content and discourse analyses of these data sources and carried out interviews with journalists involved in the coverage of the case, as well as presidential candidates and the communication specialists who advised them during the campaign.

We argue that, in order to think about the role of the media and the possibilities offered by media events for fostering human dignity and rights, we need to better understand the structural changes that communication systems have experienced over the last decades. The contemporary media regime is characterized by two profound changes: hyperreality (which renders almost useless the distinction between events and their representations) and multiaxiality (which makes visible the presence of multiple voices interpreting events) (Fiske, 1994; Williams & Delli Carpini, 2011). This paper concludes by discussing three implications of our study in light of these transformations: the need to endow the theory of media events with greater analytical flexibility; the role of the media in the definition of central aspects of events in social media; and some consequences of covering media events for democratic deliberation.

Title: The Illusion of Equalized Political Discourse on Social Networks: Politicians' Blocking Practices ' The Israeli Case

Session Type: Individual submission

Authors:

Name: Sharon Haleva-Amir

Email: sharoni.haleva.amir (at) gmail.com

Country: IL (Israel)

Affiliation: Bar Ilan University

Abstract: This innovative study, interdisciplinary by its nature, addresses the overlooked fundamental issue of politicians' users-blocking and comments deletion' practices.

The internet's infrastructure design enables interactive, effective and direct communication among users; it facilitates discourse and supposedly flattens power gaps between politicians and citizens, let alone social media that are aimed at discourse. But social media political discourse between citizens and politicians is far from being mutual. In fact, in the last few years, more and more cases of comments deletion, as well as complete blocking of users on politicians' pages on social media, are published worldwide.

In my grounded theory rooted research that was based on an Israeli 2017 activists' project data, I analyzed 279 blocking incidents. Through categorizing deleted contents and blocked users' stories and tracing patterns in politicians' blocking behavior, the findings generated a theoretical framework comprised of 12 parameters such as blocking platform, appropriateness of language, content type, critic justification and context – among others, so as to study the neglected phenomenon of institutionally induced echo chambers: The apparent social media political discourse between politicians and citizens creates a false impression (i.e., politicians seem close and attentive to their followers, engaging with the public at eye level and gaining credits for being 'down to earth'). Yet, it is the invisible discourse that causes a greater harm. Put simply, the discourse reflected in the 'censored' pages is in fact a partial and fictitious discourse, and one that includes only pleasant, softened words, without a hint of criticism or difficult questions. It therefore induces a somewhat silencing spiral phenomenon thereby distorting citizens' perceptions regarding the degree of agreement within the public, with one position or another.

In an era of fragmented, radicalized and polarized societies due to filter bubbles and echo chambers (as well as fake news and disinformation spread), politicians' deleting and blocking habits might contribute to a distorted and imagined discourse which results in a weaker democracy.

Formally, politicians' activity on social media is subjected to the platforms' policies. Thus, according to Facebook's terms and conditions, each private user – and parliamentarians serving as individuals that are holding a public position (i.e., activating politicians' pages) – can ban other users; even remove them entirely from their page.

There is, however, a clear distinction on Facebook between users' personal private activity and formal public activity: MPs are elected representatives, and one of their roles is to engage with the public; this is mostly done online nowadays. As such, they are obliged to enable discourse and allow for broader free speech than what is expected from private citizens.

The suggested framework will therefore enable worldwide comparative and longitudinal studies. Furthermore, in a turbulent political world struggling with electoral intervention attempts,

disinformation and distrust, the study of politicians/users discourse is more pertinent than ever thereby serving as a starting point to dealing with broader concepts – from online censorship to the mutual, growing dependence of both governmental institutions and public on commercial platforms, and its outcomes.

Title: Communitarianism, Populism and (In)civility: The Migrant Crisis in the European Press

Session Type: Individual submission

Authors:

Name: Ekaterina Balabanova

Email: e.balabanova (at) liverpool.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Liverpool

Name: Alex Balch

Email: abalch (at) liverpool.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Liverpool

Abstract: It has been argued that the increasing usage of the concept of populism to describe political trends in Europe is in effect whitewashing the nativism of the radical right (Mudde 2017). However, the relationship between populist and anti-immigration ideas is not well understood. This is not just due to the well-acknowledged definitional issues around populism. It is also because in public debates over immigration there are a range of communitarian justifications for states to impose restrictions on the rights of non-citizens (Balabanova and Balch 2010). Moreover, all of these have multiple forms or versions that can be more or less civil or tolerant towards 'the other'. We have selected specific flashpoints in the story of Europe's migrant crisis in 2015 in order to test assumptions regarding the correlation between populism and incivility towards non-citizens. Drawing from data regarding press coverage of immigration in four European countries (Germany, UK, Hungary, Bulgaria) we map different communitarian arguments alongside the presence/absence of populist ideas. This allows us to consider the extent to which populism and anti-immigrationism are correlated, or can be disentangled, and to illustrate how these phenomena relate to levels of (in)civility across the European space.

Title: Right-wing narratives in Spain and Italy facing European election: an analysis through metaphorical framing

Session Type: Individual submission

Authors:

Name: Carlota Moragas Fernández
Email: carlotamaria.moragas (at) urv.cat
Country: ES (Spain)
Affiliation: Universitat Rovira i Virgili

Name: Arantxa Capdevila Gómez
Email: arantxa.capdevila (at) urv.cat
Country: ES (Spain)
Affiliation: Universitat Rovira i Virgili

Abstract: The last years have witnessed a (renewed) interest in right-wing politicians across the globe, exemplified through the rise of European "populist" right-wing political parties (Rooduijn, 2015) like VOX (Spain), Lega Nord (Italy), Freedom Party (Netherlands), Danish People's Party, Alternative for Germany, Freedom Party of Austria, Front National –now, Rassemblement National– (France), Vlaams Belang (Belgium), Slovak National Party, Golden Dawn (Greece), Fidesz (Hungary), Law and Justice (Poland), Swedish Democrats (Sweden), the UKIP (UK) and the election of US President Trump and President Bolsonaro in Brasil.

Despite having distinct materializations, right-wing populism shares some common features: first, it talks a good group threatened by an outsider group who is blamed for the problems concerning the in-group (I). In this regard, right-wing populism is mainly anti-pluralist and "treats cleavages as well as opposition to their own political program as illegitimate" (Rydgren, 2017:490). Secondly, it uses a specific style based on plain language in order to articulate its discourse about presumably talking in the name of the people (II). And, lastly, it proposes simplified solutions to the problems or the simplification of political issues (III), being prone to deep into "post-truth politics" (Rydgren, 2017).

Given that right-wing populist parties are expected to expand their strength in the European Parliament by over 60 percent next May (Reuters, November 2018), it is paramount to understand how they frame the main political issues in the public agenda (1) and how their speech is different from the one of left-wing populism –which is not necessarily exclusionary (March, 2017)– and non-populist organizations, such as social democratic parties (2). The present research aims to shed light on these two questions by taking Spain and Italy as a case study and this is why we will look at the political speeches delivered during the European Election campaign by the populist right-wing political parties VOX and Lega Nord and their respective leaders Santiago Abascal and Matteo Salvini. Because we cannot validate the results without taking into account other political organizations, we are also going to analyse the speeches of their opponents –i.e. left-wing populist parties Podemos/Pablo Iglesias and Movimento 5 stelle/Luigi di Maio– as well as the ones of social democratic parties that are not considered populist, such as Partido Socialista Obrero Español/Pedro Sánchez and Partito Democratico/Matteo Orfini.

In doing so, we will focus on the use of metaphor, which is one of the key discursive strategies used by right-wing leaders throughout history to legitimize their policies (Musolff, 2014). A qualitative methodology approach based on Critical Metaphor Analysis (Charteris-Black, 2011), which lets us identify (A), interpret (B) and explain (C) the ideological implications underlying the use of the metaphorical expressions, will be used. Materials –campaign advertising on various formats and platforms, rally speeches, etc.– are going to be collected and analysed during the European Election campaign and results will be presented at the IAMCR conference.

Title: What's in a Vox' Analysis of the Spanish far-right populist party VOX in Twitter

Session Type: Individual submission

Authors:

Name: Frederic Guerrero-Solé

Email: frederic.guerrero (at) upf.edu

Country: ES (Spain)

Abstract: In the last two decades, populism has become a mainstream political ideology in Western democracies (Mudde, 2004; Rooduijn, 2014a; Casero-Ripollés, Sintés-Olivella & Franch, 2017). Although populism has been existing since the 19th century (Mazzoleni, 2014), it is precisely now that populist right-wing parties have achieved a great popularity in many European countries, such as Italy, France or Austria (Mouffe, 2005). Scholars have been analysing populist discourse for decades, and have linked its roots to mass society, which gives rise to populist democracies (Taggart, 2000). The relationship between social media and populism has been underdeveloped in political science (Ernst, Engesser, Büchel, Blassnig & Esser, 2017).

With regards to populism and far-right parties, Spain is not an exception in Europe anymore. The aim of this paper is to analyse the strategies in Twitter of the Spanish far-right populist party VOX, a party that is becoming more and more influential in Spanish politics. With a sample of 273,034 posts from 212 official VOX accounts, we follow Bracciale and Martella's (2017) work to analyse VOX tweets' content and form by using their definitions of register, topics, and function. By means of a computer-assisted content analysis tool (Guerrero-Solé, 2019), we finally identify the main VOX's strategies in spreading their message in Twitter. Preliminary results show that VOX strategies include a constant appeal to the motherland (Spain) and its inhabitants (Spaniards) and the use of pronouns 'ours' and 'we'. They also stress the idea of a polymorphic enemy: the communist Podemos and its leader Pablo Iglesias, the right-winged Popular Party and the centre-left PSOE, the pro-independence Catalans, immigrants, feminists or criminals are among these enemies whose only purpose is to destroy the motherland. On the other side, the Church, the police and the army are the only institutions that fight for protecting Spain and the Spaniards from the enemies. Moreover, we also analyse the structure of the VOX networks (follower-followee, mentions and retweets) following Guerrero-Solé's (2018) works on the interactive behaviour of Spanish politicians in Twitter.

Title: "Alternative" media' Self-conceptions of left- and right-wing alternative media and their common strategic objectives

Session Type: Individual submission

Authors:

Name: André Haller

Email: andre.haller (at) uni-bamberg.de

Country: DE (Germany)

Affiliation: University of Bamberg

Abstract: In the last years a variety of partisan news sites emerged on the internet in the U.S. as well as in Europe. These pages describe themselves as “alternative” in terms of contesting established hegemonic structures in society. The Research question is whether partisan online sites on the left and on the right try to pursue traditional purposes of alternative media like criticism on the organization and content of mainstream media (Holtz-Bacha, 2015), the goal to establish a counter-hegemonic public sphere (Schweiger, 2017), non-commerciality (Bailey et al. 2008) and participatory journalism (Weichler, 1987).

To answer this question, this study investigates the self-portrayals of the most prominent left- and right-wing alternative media websites in Germany. The data contains manifestos such as self-conceptions and mission statements of the investigated sites. The categories of the analysis were constructed deductive, based on works on traditional alternative media.

The qualitative content analysis shows that almost all pages on both sides of the political spectrum share the same strategic objectives which are characteristic for traditional alternative media: 1) Media criticism, 2) the establishment of counter-hegemonic structures, 3) non-commerciality and 4) elements of participatory journalism. Particularly Gramsci's concept of hegemony (2012 - reprint) and the objective to build counter-public spheres were fundamental claims in left- and right-wing websites. The findings also show that not all traditional alternative media concepts are implemented in the investigated pages: The Compact Magazine can be seen as a "journalistic Janus Head" as it claims to be alternative for right-wing readers but also pursues economic goals (advertising, subscriptions and conference fees). The special case of Compact underlines the thesis of Scholl (2009) that alternative media formats can transform to mainstream media models.

Although political positions of the analyzed media outlets differ significantly, both alternative media camps cross ideological boundaries by sharing the same “journalistic” objectives and theoretical concepts. Although the policies of left- and right-wing alternative media producers fundamentally differ, media criticism is a “common denominator”: Critique on established media primarily aims at the accusation that alternatives are suppressed. Further expressions of media criticism concern the claim that there is censorship in the public debate and that media coverage is controlled by financial and political elites.

Recent works on extremist websites in the U.S. (Klein 2017) indicate an expansion of alternative media research towards rightist players. This explorative study can be used as a blueprint for further analysis of alternative media products. Comparative international studies seem to be promising for the study of partisan media.

Affiliation: Universitat Autònoma de Barcelona

Abstract: En esta comunicación presentamos los resultados de analizar la información que ofrecen las webs de 1.574 ayuntamientos de España, en 2018, en el marco de la investigación

"Metodologías y modelos de información para el seguimiento de la acción de los responsables de los gobiernos locales y la rendición de cuentas" (CSO2015-64568-R, financiada por MINECO-FEDER). El objetivo principal del proyecto es colaborar a mejorar la información que proporcionan las webs de los ayuntamientos para facilitar la rendición de cuentas (accountability).

La información que ofrece la administración pública es un derecho básico que debe partir de la transparencia y el buen gobierno como elemento básico de las sociedades democráticas (Cameron 2004). Internet proporciona instrumentos que, combinando el e-gobierno y las políticas de transparencia, ofrecen oportunidades para crear nuevas formas de gobernanza y de participación de la ciudadanía en la definición de las políticas democráticas. (Bertot, et al. 2010). Esto se produce de forma paralela a un aumento de la concienciación de la ciudadanía que demanda una mayor transparencia de las instituciones (Villoria y Jiménez 2012).

El ámbito de esta investigación es el municipal, ya que los ayuntamientos son la administración más directa y próxima de relación entre la ciudadanía y las organizaciones públicas (Moreno Sardà et al. 2017). Se indaga si los gobiernos locales aprovechan las potencialidades de la web 2.0 y las redes sociales para ofrecer información de calidad y fomentar la e-participación, teniendo en cuenta las exigencias establecidas por la Ley española 19/2013, de 9 de diciembre, de Transparencia, Acceso a la Información Pública y Buen Gobierno.

En la metodologías, se utilizan 52 indicadores básicos agrupados en cuatro temáticas: quienes son los representantes, cómo gestionan los recursos, cómo informan y qué instrumentos ofrecen para la participación. Los resultados se publican en una plataforma (www.mapainfoparticipa.com) para que sean accesibles a cualquier persona interesada en conocer el grado de transparencia de su

ayuntamiento, información que consideramos imprescindible para facilitar la participación ciudadana en una democracia moderna y avanzada.

Las conclusiones de la investigación muestran que las webs de los ayuntamientos analizados no siempre proporcionan información suficientemente transparente y de calidad. Por tanto, la entrada en vigor de la Ley de Transparencia no ha sido suficiente para mejorar la información o el cambio de actitud por parte de los responsables políticos y técnicos de las administraciones locales. Es necesario modificar las rutinas, construir nuevas metodologías, y elaborar nuevos modelos de producir y publicar la información. Esta es la razón por la que este proyecto de investigación se orienta también a la transferencia de conocimiento.

Title: Satisfaction with and perceptions of news media performance with alienation from government and business corporations: An Ohio case study

Session Type: Individual submission

Authors:

Name: Rafsanul Hoque

Email: rhoque (at) bgsu.edu

Country: BD (Bangladesh)

Affiliation: Bowling Green State University

Abstract: News media's role as important sources of information, influence and political socialization and their impact in increasing political participation, awareness about policy issues and reducing knowledge gaps between different education groups have been shown by scholars from all over the world. Concurrently, news media have also been seen as inducer of alienation, cynicism and apathy among the people against the government, big business/financial corporations and the media themselves. In the United States, decline of media trust has been a trend since the 1970's, and the recent unhealthy relationship between the White House and the media has been the dominant picture. Media trust is important because it is not just the impact of the news media, but perceptions towards it have been shown to be linked with other areas of political and social feelings and standpoints, and fosters activity towards or against certain issues. Hence, more knowledge about peoples' satisfaction and perception towards the media and how that impact their impressions of different aspects within the social and political realm needs to be studied. The objective of this research is to understand peoples' satisfaction with and perceptions of news media performance and their relationship with alienation from government and big business corporations.

This study will conduct a secondary analysis of data to investigate peoples' perceptions of and satisfaction with news media, and then their level of alienation from the government and business/financial corporations. It will then analyze if perception and satisfaction levels towards news media predict levels of alienation from government and alienation from big corporations. It will use data gathered from 760 structured survey questionnaires collected in 2016 (n=400) and 2017 (n=360), before and after the U.S. presidential election. The data were collected among young college students in a midwestern university using quota sampling method. Perceptions of news media, alienation from government and alienation from business/financial corporations will be measured in separate indices. The dimensions of alienation include powerlessness (over the environment), meaninglessness (of life's alternatives), normlessness (of individual and societal conduct), isolation (from cultural and social institutions), cynicism and disaffection toward major institutions in our society such as the government, big business/financial corporations, and the mass media. An analysis will reveal if satisfaction towards different news media and perceptions of news media predict alienation from government and big corporations.

The five questionnaire items measuring perception of news media will be combined into an index and a reliability score (Cronbach alpha) will be computed for this index. Similarly, alienation from government and alienation from business/financial corporations will be collapsed into two separate indices and a reliability score (Cronbach alpha) will be computed for these indices.

Regression analysis will be used to examine the prediction of news media satisfaction and perception on alienation from government and alienation from big business corporations.

Title: Robotic political communication in the European Union

Session Type: Individual submission

Authors:

Name: Berta García-Orosa

Email: bertago (at) gmail.com

Country: ES (Spain)

Affiliation: University of Santiago de Compostela

Name: Eva Campos Domínguez

Email: berta.garcia (at) usc.es

Country: ES (Spain)

Affiliation: University of Valladolid

Abstract: The main objective of the proposal is to present the results of a research on computer propaganda in the European Union that conditioned the results in the last electoral campaigns and consultative processes (Brazil, 2018; Brexit in United Kingdom, 2016; USA, 2016; Argentina 2015 Australia 2017). Although the automation of the production and circulation of information has been used since the 1970s for meteorological or sports information (Linden, 2017), technological, social and political innovation caused a stage of influence in today's digital society unknown until now. The theoretical framework used is centred on the field of communication (studies carried out on international computational propaganda, especially since 2016, and digital political communication) and on the political sphere (hermeneutics of political parties).

The methodology used is a bibliographic review and in-depth interviews with European deputies, parties represented in the European Union Parliament and think tanks. Some of the results are advanced:

1. The EU warns of the threat to democracy that implies that parties automatically elaborate messages adapted to the needs of each citizen from the analysis of big data manipulated even with fake news (UE, 2017; Government Office of Science, 2018) and other countries have elaborated laws regulating artificial intelligence and computational propaganda (Italy in 2014, France in 2016, United Kingdom in 2017, Spain in 2018).
2. Campaign political advisors indicate that the automation of communication will be a great danger for democracy: "It lowers the level of debates, subtracts authenticity, it is more negative than positive for the quality of the debate" or, as indicated by another of the interviewees "the voters are not improving at all, they are selling their souls to the devil: one gives all the data and receives nothing in return, because the only thing they receive is a selected information elaborated from data that they have given up a few days before".
3. Bots to manipulate online conversations, demobilize the opposition and generate false support for certain political options. Computer programmers produce frameworks, select themes and shape realities by influencing citizens' behaviours and perceptions of the world. The algorithms become infomediaries that examine the feelings and opinions of the recipients from their virtual identities and, in an automated way, construct information or opinions that satisfy their needs (Campos Domínguez, García Orosa, 2018).

4. For the last eight years, political parties and governments have spent more than five hundred million dollars on research and development in this field and robot trafficking now exceeds 1,000 million euros, 60 percent of all online traffic, almost 20 percent more than two years earlier (Condliffe, 2016).

Affiliation: Universidad de los Andes, Santiago de Chile

Abstract: En los últimos años en Chile ocurrieron importantes escándalos de corrupción (Thompson, 2001) que provocaron un fuerte impacto en la opinión pública. Según Transparency International (2017), el 80% de los chilenos cree que la corrupción ha aumentado mucho y que las autoridades no han hecho un buen trabajo para combatirla.

Dentro de estos escándalos de corrupción, uno muy significativo fue el ocurrido en Carabineros de Chile, una de las instituciones con mayor confianza ciudadana desde el retorno de la democracia (Latinobarómetro, 2017). El denominado caso Pacogate (2017), como lo llama la prensa en atribución a que a la policía de este país se les apoda de manera coloquial como “pacos”, no sólo sumó más de cuatro millones de dólares de desfaldo al fisco, sino que involucró a altos mandos de la institución.

Ante este panorama, el estudio de los encuadres o frames mediáticos de la corrupción cobra suma relevancia (Entman, 2012; Tagle y Claro, 2018; Zamora & Marín Albaladejo, 2010; Park, 2012), considerando tanto sus implicancias para el debate en la opinión pública como para la rendición de cuentas del poder en democracia (Christians, Glasser, McQuail, Nordenstreng, & White, 2009; Coronel, 2010; Waisbord, 2000, 2012; Tagle, 2017). Dado que los encuadres tendrían el poder para estructurar el pensamiento de la opinión pública (Cacciatore, Scheufele, & Iyengar, 2016; McCombs, 2006), es que los medios “suelen proporcionar una cierta interpretación de la corrupción que influye en la forma en que se discuten y evalúa en el debate público” (Park, 2012, p. 3).

Por otra parte, la información proporcionada por los medios sirve de contexto para los debates que se producen en las redes sociales, las que se han transformado en influyentes espacios para la discusión y promoción de la política (Ritzer & Jurgenson, 2010; Weeks, Ardèvol-Abreu, & Gil de Zúñiga, 2017; Youyou, Kosinski, & Stillwell, 2015). En este sentido, de acuerdo a Trilling (2015), existe una relación bidireccional tanto de influencia como de complementariedad entre las agendas de la televisión y de las redes sociales.

De esta manera, esta investigación se fundamenta en la siguiente hipótesis: Existe una complementariedad entre los marcos que utilizaron los principales noticieros de televisión en Chile en el escándalo de corrupción Pacogate y las opiniones vertidas en las redes sociales Facebook y Twitter sobre este mismo caso.

Se estudiaron los primeros 14 días desde que se conoció el escándalo el 6 de agosto de 2017. Para el análisis de la televisión, se seleccionaron los noticiarios centrales con mayor sintonía, los que para el periodo de estudio fueron Ahora Noticias y Teletrece de las estaciones privadas Mega y Canal 13 respectivamente (Kantar, 2017). En lo que se refiere a las opiniones vertidas en Facebook y Twitter, se utilizó una plataforma comprehensiva de captura en tiempo real de la información. Se recogieron todas las keyword que hicieron alusión al caso durante el mismo periodo que se analizó los noticieros

Title: The Mediating Role of Social Media News Use on the Effects of Personality Characteristics over Democratic Engagement

Session Type: Individual submission

Authors:

Name: Brigitte Huber

Email: brigitte.huber (at) univie.ac.at

Country: AT (Austria)

Affiliation: University of Vienna

Name: Homero Gil de Zuniga

Email: homero.gil.de.zuniga (at) univie.ac.at

Country: AT (Austria)

Affiliation: University of Vienna

Abstract: Political participation is at the heart of democracy (Verba, Scholzman, & Brady, 1995). Accordingly, understanding what makes people engage in politics has been a key issue for political scientists and communication scholars for decades. Recently, a strand of research deals with the effects that personality traits may have on political attitudes and behavior (e.g., Bekkers, 2005; Ha, Kim, & Jo, 2013; Mondak et al., 2011). While many studies focus on effects of personality traits on political ideology, less is known about its association with political participation (for an overview, see Gerber et al., 2011a). The goal of this paper is to shed more light on this relationship, expanding existing literature in three meaningful ways:

First, as digital networks and social media have amplified the ways of engaging in politics (Ekström & Shehata, 2018), this study not only looks at offline political participation and voting, but also includes online political participatory behaviors. Second, since most of the existing scholarship focus on single-country data sets (e.g., Finland: Mattila et al., 2011; Germany: Schoen & Steinbrecher, 2013), there is a need for cross-cultural studies. We address this research gap by employing survey data from 19 countries worldwide. Third, Weinschenk (2017) calls for studies that investigate indirect ways in which personality traits shape political behavior. We do so by testing whether news use mediates the relationship between personality traits and political participation and voting.

Our results indicate that extraversion, agreeableness and openness help understand people's participation and voting behavior. Interestingly, while these traits show similar pattern for offline and online political participation, the opposite is true for voting. For instance, being extroverted is positively associated to several participatory behaviors online and off; however, it is negatively related to voting. This might be explained by the fact that extraverted people prefer political activities that include social interactions such as attending a protest with others than going alone to the booth (Mondak et al., 2010). Similarly, also agreeableness was differently associated to electoral and non-electoral participation: While less agreeableness people tend to engage more often in activities online and offline ranging from participating in demonstrations to creating an online petition, more agreeableness people show higher levels of voting. This stands to reason as agreeable people are afraid of conflicting situations – the chance to get in such a situation is way more likely in a demonstration on the street where everyone takes up position than in an electoral office. In

addition, our study delivers insights into indirect relationships between individuals' personality traits and their political participation behavior. More specific, results from mediation tests show that social media news use partially mediates the relationship between personality and participation behaviors. Again, there are differences: While social media news use positively mediates the relationship between extraversion and both offline and online political participation, it negatively mediates the relationship between extraversion and voting. We discuss these results in light of opportunities and challenges of social media for democracy.

Title: [Panel] Incivilidad y negatividad en las campañas presidenciales latinoamericanas, 2016-2018, Descripción de panel

Session Type: Panel Submission

Authors:

Name: Martin Echeverria

Email: echevemartin (at) yahoo.com.mx

Country: MX (Mexico)

Affiliation: Benemérita Universidad Autónoma de Puebla

Abstract: De 2016 a 2018, en América Latina se celebraron elecciones en Brasil, Chile, Colombia, Costa Rica, Ecuador, Honduras, México, Nicaragua, Paraguay, Perú y Venezuela, algunas de ellas con vuelcos significativos en las orientaciones ideológicas de los gobiernos electos y envueltas en climas de opinión caracterizados por la polarización, el uso intensivo de las redes sociodigitales y un discurso de ruptura y anti elitismo por parte de los candidatos . A propósito de éste último, observamos grados de negatividad e incivilidad que, si bien se habían verificado en elecciones previas en otras partes del mundo, señaladamente en las norteamericanas de 2016 (Abramowitz, 2019) alcanzaron registros inusitados en esta región.

La incivilidad se define como una retórica denigrante que cercena las relaciones funcionales entre facciones políticas encontradas, en un campo, como el político, cuyo permanente desacuerdo necesita de relaciones de cortesía (Cherie & Wolf, 2012; Hill, Capella & Cho, 2015). Respecto a la negatividad como forma de comunicación política, es posible poner de manifiesto tres dimensiones bajo las cuales podemos observarla: como un tono fatalista, pesimista o catastrofista, como un estado de permanente conflicto, disputa y desacuerdo entre las partes, y como un discurso descalificador respecto a la capacidad e integridad de los actores (Esser, Engesser, Matthes & Berganza, 2018). Lo llamativo de los recientes procesos electorales es la ubicuidad de este discurso de parte de élites y ciudadanos, por lo común polarizados, y su utilización como estrategia y no sólo incidente de campaña. La inquietud de la comunidad académica respecto a las consecuencias de este estilo de campaña va desde la evidente cancelación de posibilidades de diálogo, deliberación y acuerdo entre los actores políticos, hasta el fomento de actitudes de desafección, cinismo y baja participación de la ciudadanía, espectadora central de estos sombríos intercambios (vanHeerde-Hudson, 2011; Walter, 2014) .

El objetivo de este panel es confrontar la experiencia de varios países y formatos respecto a dicho fenómeno. Para tal efecto, se reúnen trabajos de Chile, Colombia, Ecuador, Perú y México que presentan resultados o avances de investigación a propósito de objetos electorales teñidos de negatividad e incivilidad: redes sociodigitales, publicidad política, debates presidenciales y opinión pública. En última instancia, se trata de verificar tendencias, patrones y particularidades nacionales, así como distintas maneras de teorizar e investigar empíricamente dicho fenómeno.

Title: ¿Por qué los candidatos atacan en campaña' Factores explicativos en la publicidad política televisiva mexicana

Session Type: Panel Submission

Authors:

Name: Martin Echeverria

Email: echevemartin (at) yahoo.com.mx

Country: MX (Mexico)

Affiliation: Benemérita Universidad Autónoma de Puebla

Abstract: Como en las comunicaciones públicas en general (Golding & Murdock, 2000), las características de contenido de la publicidad política son modulados por factores externos a las intenciones de los equipos de campaña (Kaid y Holtz-Bacha, 2006; Holtz-Bacha, 2017). En el caso de la publicidad específicamente negativa, la literatura resalta variaciones en frecuencia y tácticas a partir de factores políticos y mediáticos tales como el sistema partidista (pluri o bipartidista), la dimensión de los partidos (establecidos o nuevos), la posición de los contendientes (como puntero o rezagado), la regulación de medios, entre otros (Lau & Rovner, 2009; Salmond, 2011; Sullivan & Sapir, 2012; Walter, 2013, 2014)

El objetivo de esta ponencia es explicar la incidencia de la estrategia de ataque en spots emitidos en las elecciones presidenciales mexicanas, así como las tácticas utilizadas para atacar (el cómo lo hacen), a partir de factores correspondientes tanto al sistema político, como a la coyuntura de campaña. El corpus proviene de los spots negativos emitidos durante las últimas cuatro elecciones presidenciales mexicanas (2000, 2006, 2012 y 2018), cuyo carácter longitudinal y suficiencia de casos (N=108), permitió ejecutar regresiones logísticas binomiales para establecer predicciones respecto a las variables independientes que moldean los spots, en cuanto a rasgos tales como el tipo de ataque (directo o indirecto), el objetivo a quien se dirige el ataque (posición del adversario respecto a algún tema, antecedentes de la vida personal, desempeño anterior, etc.) las tácticas para realizar el ataque (humor, asociación negativa del adversario con personas o políticas fallidas, etc.) y el tipo de apelación de la pieza (emocional o racional).

La investigación demuestra que la reforma electoral mexicana de 2007-08 fue el principal factor inhibidor de la negatividad, cual era su cometido, seguido de la posición del partido atacante, más beligerante cuando está en la oposición que en el gobierno. No obstante, la elección particular de que se trate moldea de manera importante las características de los spots, y sugiere que, por lo menos en México, la coyuntura electoral determina en buena medida las mismas.

Abstract: La ponencia se centra en los frames noticiosos en procesos electorales. La literatura se centró en la sobre presencia de los frames de juego-estratégico en detrimento de los frames temáticos (Patterson , 1994; Jamiesson, 1992; de Vreese y Setmenco, 2002; de Vreese 2005 y Aalberg et al, 2012). Sin embargo, la atención brindada a los frames electorales que deslegitiman o atacan las propuestas e ideas de los candidatos ha recibido poca atención.

Los estudios se enfocan en cómo la negatividad tiene consecuencias contrarias a la democracia, algunos estudios encuentran que la publicidad negativa tiene un efecto en la calidad y polarización de las elecciones (Ansolabehere e Iyengar, 1997). Asimismo, la actuación de los medios en favor o en contra de un candidato puede influir en el desencanto de la democracia (Cappella y Jamieson, 1996). Sin embargo, para Craig y Rippere (2012) la negatividad, puede movilizar a los partidarios un candidato una mayor participación política.

En periodismo latinoamericano se le acusa frecuentemente de trasgredir el equilibrio informativo y dejar de lado la parcialidad. Sin embargo, no se han realizado estudios sobre el enmarcamiento partisano. Por ello el estudio no solo se centra en la adjetivación negativa del relato periodístico, sino que aborda otras dimensiones como el estímulo a la confrontación o el uso de consecuencias catastróficas en los discursos

Se desarrolla un análisis durante los 4 meses de del proceso electoral presidencial peruano del 2016. Esto es un aporte sustantivo en tanto permite conocer la evolución del uso del frame partisano (estudio longitudinal) pues la mayoría de estudios electorales se concentra en las semanas previas al día de la votación durante la “carrera de caballos”. Además, se analizan los cambios de intensidad del uso del frame partisano antes y después de los debates de primera y segunda vuelta.

El estudio comprende el análisis de 3,460 noticias de radio, televisión y prensa, con una muestra de 20 programas repartidos en 8 semanas de cobertura. Para el análisis se desarrolló un indicador de frames partisanos con un Alfa de Cronbach de .62 compuesto por 5 elementos, y un indicador de frame temático (Crombach de .75) que sirvió de contraste y comparación.

Se encuentra que el frame partisano está presente con una mayor intensidad que el frame temático, además es muy frecuente tanto en primera como en segunda vuelta. Sin embargo, durante la segunda vuelta electoral el debate electoral genera una disminución de la cantidad de noticias con frames partisanos.

Estos resultados nos muestran a los frames no solo como un fenómeno centrado en las intenciones productivas de los periodistas para generar ciertos efectos en las audiencias, como predominantemente se ha enfocado (Scheufele, 1999), sino que los procesos de producción periodística están en interacción con los procesos políticos.

Abstract: La incivilidad, entendida como expresiones 1) obscenas, 2) que insultan, y que 3) asignan estereotipos a personas o grupos (Chen, 2014), suele ser considerada como impedimento para el intercambio fructífero de ideas, deseable en un contexto democrático que invite a la reflexión deliberativa y respetuosa hacia el prójimo (Stroud, Van Duyn, & Peacock, 2016). Es particularmente preocupante cuando proviene de líderes políticos y se refleja en una audiencia expuesta a dichos mensajes. Es el caso de los debates presidenciales televisados, donde un acalorado contraste de opiniones suele verse reflejado en los comentarios que los televidentes van haciendo en sus redes sociales (Mutz, 2015). Una de las predilectas es Twitter, aplicación que permite mensajes cortos e instantáneos, y que a través de palabras claves (hashtags), contrasta visiones de ciudadanos que no necesariamente se conocen, pero que comparten el interés de comentar una temática determinada. Al mismo tiempo, actúa como una caja de resonancia al permitir que los mensajes de los líderes políticos u otros usuarios (influyentes o no) puedan ser masificados (retweeteados), alcanzando a una audiencia mayor.

Este estudio describe cuánta incivilidad se encuentra en Twitter dentro de un contexto de debate presidencial, y cómo se vincula con la mayor o menor participación de usuarios expuestos a estos rasgos agresivos. Para ello, se descargaron 220 mil tweets generados antes, durante y después del debate presidencial en Chile del día 6 de noviembre de 2017. Los mensajes fueron descargados desde la API de Twitter usando los programas Sifter y DiscoverText a partir del hashtag #DebateAnatel.

Un primer análisis de los datos revela que el 25% de los tweets no recibió retweets de ningún usuario. En la vereda opuesta, 200 tweets fueron compartidos más de 41 mil veces, lo que equivale a un 18% de la base de datos total. Este grupo concentra también la mayor cantidad de tweets marcados como favoritos, evidenciando una gran superposición (alrededor de un 85%) en términos de engagement. El siguiente paso corresponde a analizar una muestra de 2.000 tweets para identificar niveles de incivilidad, los tipos de incivilidad que predominan y los predictores de mayor engagement por parte de los usuarios de la red.

Abstract: La negatividad en las campañas electorales se encuentra en aumento en todo el mundo (Papp & Patkós, 2018; Geer, 2012) afectando también a los debates electorales en TV (Echeverría & Chong, 2013) aunque estos podrían ser una excepción. Dada la importancia que tienen estas instancias en las campañas y sus especiales características (García-Marín, 2013) es importante entender que factores limitan o favorecen la negatividad en ellos (Papp & Patkós, 2018). Para esto, y dada la pluridimensionalidad en que ha caído el concepto negatividad (Lau & Rovner, 2009; Lipsitz & Geer, 2017) se utilizará aquí el concepto de “ataque”. Asumimos así la perspectiva de la teoría funcional del discurso de campañas políticas (Benoit, 2007) que, además de proveer un marco amplio para entender las alternativas estratégicas de los mensajes electorales, ha permitido comparar diferentes países (Benoit & Benoit-Bryan, 2014; Hrbková & Zagrapan, 2014; Téllez, Muñiz, & Ramírez, 2010). En la mayoría de los casos los ataques no superan el 39% de las intervenciones, en conjunto.

La menor ocurrencia de los ataques en comparación con otra función del discurso político (las auto-aclamaciones) derivaría del supuesto de que los votantes rechazan a quienes buscan ganar elecciones dañando la reputación de un oponente (backlash) (Choi & Benoit, 2013). Sin embargo este supuesto se ve contradicho por el aumento de los ataques en otros tipos de mensajes de campaña, y por lo efectivos que estos parecen ser (Lau & Rovner, 2009). Maier & Jansen (2017) discuten tres grupos de razones que explican la racionalidad de atacar, concluyendo que candidatos opositores o que están más abajo en las encuestas son los que más probablemente atacarán (en coherencia con Choi & Benoit, 2013). Y que la personalidad de un determinado candidato también puede favorecer la inclusión de ataques.

Este estudio testea estos resultados, aprovechando la oportunidad que brindaron los debates de segunda vuelta de dos diferentes campañas presidenciales chilenas (2005 y 2017) y que permiten aislar el factor de la personalidad, puesto que en ambos participó un mismo candidato representando a la oposición de centro derecha (Sebastián Piñera, conocido por su personalidad impulsiva, pero al mismo tiempo un frío hombre de negocios). En la primera ocasión él estaba abajo en las encuestas, y en la segunda ocasión las encabezaba. En 2005, claramente atacó más que su oponente (25% contra 8%), mientras que la última campaña su comportamiento fue similar al del candidato de la

colación incumbente (en torno al 10%). Esto daría mayor peso a la explicación basada en la posición de las encuesta y rechaza a la personalidad como factor.

Pero estos resultados se discuten en virtud de otros hechos. Cuando el candidato fue más negativo finalmente perdió la elección; mientras que cuando fue menos, ganó. Esto daría la razón a la tesis de que la negatividad produce rechazo en los electores (backlash) chilenos. Esto, en el contexto de que para la elección de 2017 hubo una amplia reacción pública contraria al negativismo que domino el debate de las elecciones primarias de la coalición de centro-derecha.

Abstract: The Obama effect of 2008 definitely transformed the political campaigns of the last decade in the world. Colombia was not unconscious of this phenomenon, being that since 2010 the use of digital social networks has been added to the landscape in electoral times as another scenario to position, viralize and discuss key aspects of their political proposals with their potential voters. This research focuses on the electoral battle for the presidency of Colombia 2018, with a particular emphasis on the main debates that were positioned on the public agenda of Twitter. Methodologically, it was necessary to systematically build a matrix with a sample of 620 tweets that correspond to 62 Trending Topics (TTs) that highlighted during the campaign. The analysis involved identifying the origin and context of the TTs, the users and their ideological orientations, which politicians they mentioned, the predominant topics and the tones handled in their tweets. As a result, the power relations on Twitter between the politicians of the Left, Right and Center during the campaign were elucidated. Likewise, a predominance was identified in the construction of the Twitter agenda by the mass media and one paradigmatic case of an opinion leader. There was also evidence of the notable participation of citizens in the main debates of the public agenda. Regarding the tone of the electoral contest, it was discovered that despite expecting a much more polarized campaign (as it happened in 2014), a more frequent use of complimentary, informative and conciliatory tones prevailed than negative tones such as disqualification, the complaint or the offense. Scenario that may lead to think that there was a more directed bet to highlight the qualities of the preferred candidate than to attack one of its main adversaries. In conclusion, the agenda built on Twitter reflected a certain fatigue in issues such as the peace agreement reached with the FARC and the negotiations initiated with the ELN. On the contrary, issues such as education and corruption were important nuclei of the debate. In addition, although Twitter narrated a good part of the relevant events that occurred during the race to the presidency of Colombia, it does not currently

seem to be a strong enough thermometer to predict electoral results, at least in the Colombian case. In short, the conclusive decision of the voters is made at the polls.

Title: Social Media and Youth Political Engagement in Tunisia. Case Study: 'Where is the Oil' Campaign.

Session Type: Individual submission

Authors:

Name: Nouredine Miladi

Email: noureddine.miladi (at) qu.edu.qa

Country: QA (Qatar)

Affiliation: Qatar University

Abstract: Abstract

Recent scholarship suggests a correlation between social media use and social and political change. Facebook for instance has been hailed as significant tool used by protesters in Tunisia to oust the dictatorial regime of Ben Ali and the subsequent success of the 14 January 2011 revolution. Ever since uses of social media platforms such as Twitter and Facebook have grown exponentially in Tunisia. Through employing a critical discourse analysis of the campaign '#Where is the oil' this paper examines the extent to which this counter hegemonic discourse succeeded in challenging the mainstream media and provided a platform for youth political activism. By analyzing Facebook threads and Twitter feeds in this campaign, this study looks at the power of social media in maintaining a balance of power between the mainstream media apparatuses and social activists after the revolution.

Findings show that although the youth in Tunisia have been disengaged from the mainstream politics during the last few years, they, on the contrary, have managed to develop various forms of alternative political activism. Also findings reveal that social media not only have challenged the top-down view of traditional journalism which is still in the hands of strong political lobbies and business conglomerates, but it has been able to redefine the agenda of political parties and their priorities for political and economic reform.

Title: Accentuation or Attenuation? How Network Heterogeneity and Cross-Cutting Discussion Moderate the Effects of Selective Behaviors on Opinion Polarization

Session Type: Individual submission

Authors:

Abstract: Scholars have strived to understand how political disagreement can help to mitigate the influence of selective exposure on opinion polarization. Discussion network heterogeneity and cross-cutting discussion are the two forms of political disagreement that have been examined, but the results are mixed. At the structural level, discussion network heterogeneity has been found to be related to dialogue openness (Campbell & Kwak, 2012), but could also lead to audience fragmentation (Lee et al., 2014). At the interpersonal level, cross-cutting discussion can lead to better understanding of opposing views (Mutz, 2002), generate greater political tolerance (Pattie & Johnston, 2008), and consequently attenuate polarized attitudes toward political issues. However, some scholars have found that cross-cutting discussion could distort the deliberative process and intensify conflict because citizens with strong pre-existing political views may be motivated to maintain their beliefs and defend their position (Valentino, Banks, Hutchings, & Davis, 2009). Much work has been devoted to elucidating the role of political disagreement in influencing opinion polarization, but the mechanism of network heterogeneity and cross-cutting discussion still remains unresolved in light of evidence supporting both accentuating and attenuating roles (Taber & Lodge, 2006; Wojcieszak, 2011; Lee et al., 2014; Kim, 2015). With the rapid diffusion of social media platforms as virtual spaces that facilitate political engagement (Kushin and Yamamoto, 2010), social media has altered the patterns of communication through affording various possibilities of self-expressing and self-controlling. Social media users can selectively approach to agreeing information, such as spreading attitude-consistent content (Shin & Thorson, 2017). They can also selectively avoid disagreeing information, such as screening out counter-attitudinal content (Zhu, Skoric, & Shen, 2017). People can decide who they want to talk with and how they would like to behave like on social media. This study intends to examine the two forms of political disagreement and their mixed effects on the associations between selective behaviors and opinion polarization.

Using two-wave panel data from the United States and focusing on different behaviors on social media, this study examines two types of online behaviors – selective approach and selective avoidance – and how they affect opinion polarization. In addition, this study investigates network heterogeneity and cross-cutting discussion in moderating the effects of selective behaviors on opinion polarization regarding the immigration issue. Results suggest that the relationship between selective behaviors and opinion polarization is weakened by the extent to which people are involved in cross-cutting discussion. Furthermore, network heterogeneity strengthens the relationship between selective behaviors and opinion polarization among those who only discuss political issues with like-minded others. The effect of both types of selective behaviors (approach and avoidance) on opinion polarization is found to be the strongest among those who reside in politically heterogeneous networks but only engage in discussions with like-minded people. This paper aims to disentangle the mixed findings by testing both structural-level and interpersonal-level political disagreement and their effects on the relationships between different types of selective behaviors on social media and opinion polarization.

Title: Information dissemination of extremist on Facebook

Session Type: Individual submission

Authors:

Name: Vlad Vasiliu

Email: vladv (at) yvc.ac.il

Country: IL (Israel)

Affiliation: Yezreel Valley College

Abstract: Social media has been at the forefront of information dissemination. While some of the spreadable content on social media does not make any impact, other became viral, popular or both. Nahon and Hemsley (2013) defined virality as "a social information flow process where many people simultaneously forward a specific information item, over a short period of time... and where the message spreads beyond their own [social] networks... resulting in a sharp acceleration in the number of people who are exposed to the message" (p. 24). Thus, social networks and the possibility of viral transmission of content enable the bypassing of traditional media institutions and reducing the oversight and censorship ability of gatekeepers (Weimann, 2016).

Organizations and individuals affiliated with extremist ideology utilized social media information dissemination abilities to different degrees of success (Weimann, 2015; Strensen, 2008). The current study examined the predictors of virality and popularity content of extremist ideology groups using analysis of activity metrics and content analysis.

Hypotheses asserts that the maximal rate of activity metrics and the number of followers can predict whether the content becomes viral or not (H1); and that correlations exist between information dissemination (as virality, popularity, both or none) and content features such as expression (H2), advocacy and justification (H3), use of intimidation and emotion (H4), attempt to recruit (H5), provision of useful information and support or opposition (H6).

The data for this study gathered by using a dedicated software program that scanned 15 Facebook accounts by organizations and individuals affiliated with extremist ideology. The corpus included 23, 494, 227 samples of 35, 879 posts throughout seven months. The posts were divided according to the discrepancies discussed between virality and popularity. Part of the analysis were conducted on the whole sample, the quantitative content analysis used sub-sample of 200 posts to examine the nature of the content according to the goals of the organization such as calling for activists participation in the organization, fundraising, donations, advocacy, and support of the organization videos as well as intimidation.

Hypothesis H1 was tested using logistic regression and confirmed. The rest of the hypotheses (H2-H7) were examined using a Chi-squared correlation (χ^2) test. Hypotheses H2, H3 were confirmed while hypotheses H4, H5, and H6 were refuted.

This research focuses on content disseminated by extremist organizations and extremist private individuals in the social networks. The mapping of popular and viral content and the dependencies found between their various activity metrics enabled the construction of a model for predicting how content behaves.

Title: The whys of political party professionalization: Experiences from a decade of inside information exchange with party campaign managers in Sweden

Session Type: Individual submission

Authors:

Name: Lars Nord

Email: lars.nord (at) miun.se

Country: SE (Sweden)

Affiliation: Mid Sweden University

Name: Marie Grusell

Email: marie.grusell (at) jmg.gu.se

Country: SE (Sweden)

Affiliation: University of Gothenburg

Abstract: We know how it is, but hardly why it is as it is. The general theory claiming that political party activities during election campaigns gradually have become more professionalized is supported in a number of political communication studies (Holtz-Bacha et al., 2007; Gibson & Römmele, 2009; Strömbäck, 2009; Moring et al., 2011). There are convincing empirical support for the claim that party campaigning is changed both with regard to structure and strategy of campaign. Digital campaign tools are more frequently used, experts and consultants have become more important, voter feedback is more carefully analyzed and the overall campaign strategy is related to the increasingly professionalized party campaign (Tenscher et al., 2012; Magin et al., 2016; Author, 2018).

While these developments are frequently analyzed and confirmed in both country-specific and comparative studies there are surprisingly little research on the main driving forces behind these trends, and especially so on how they are perceived by the parties themselves. Party rationales on professionalization are less explored, and party perceptions of risks and opportunities with further steps towards professionalized campaigns remain unclear. To some extent, the lack of knowledge in this area depends on restricted access to party headquarters and party unwillingness to discuss internal strategic campaign considerations in public.

This paper gives more insights in such internal party considerations in Sweden during the period 2009-2019. The group of researchers have had access to all party campaign managers during all European, national, regional and local election campaigns that have taken place during this period. After every election, party officials have been interviewed about distinctive campaign features and strategic decisions. In total, more than 50 one hour-long interviews have been conducted. Data enables deep insights in internal party preferences as well as possibilities to compare changes over time and between parties with different size and ideology. The preliminary findings indicate that party motives for 'going professional' vary for a number of reasons; such as electoral outcomes, internal opposition and intentions to follow other parties in this respect. However, final analyses of empirical data will be completed in the forthcoming months.

The Swedish political culture with a relatively high degree of openness and transparency has made the study possible. The study of course has the shortcomings of most case studies, but the rare insights offered on internal party reflections and decisions in this area should be valid for more general conclusions on professionalization developments in other mature democracies.

Title: It's the political economy after all: Israel as a case study of media system in transition

Session Type: Individual submission

Authors:

Name: Moshe Schwartz

Email: ms.comm.projects (at) gmail.com

Country: IL (Israel)

Affiliation: Ben-Gurion University of the Negev

Name: Hillel Nossek

Email: hnossek (at) gmail.com

Country: IL (Israel)

Affiliation: Kinneret Academic College

Abstract: This study attempts to examine the models of Hallin and Mancini (2004) through focused observation on the point of transition in which changes between models are diagnosed. We choose Israel's media Institution as a case study since it went through significant changes in a short period of time. It is also a compelling case since it went forth and back according to Peri (2015) that implemented Hallin and Mancini's models to Israel. The Israeli case is also different from east European countries which experienced a shift from communist to democratic political systems, and in some cases back to authoritarianism. By analyzing written documents reflecting the arrangements and decision-making process of the Israeli transition in the late 1980's and early 1990's, we seek to understand the implications of this transition on the normative theory. The analysis is based on the approach of historical institutionalism that analyzes the complex network of institutional arrangements (Galperin, 2004), embodied official and informal agents and provisions (March & Olsen, 1984) and struggling conflictual forces that shape laws and processes in society (Bannerman & Haggart, 2014). Institutional changes occur in particular time points, which change the existing path to a new course. These points in time can be conceptualized as "critical junctions" that can result from an exogenous crisis that changes institutional power relations (McChesney, 2009) or from institutional instability created by a combination of exogenous and endogenous factors and rooted in the period before the critical junction (Bannerman & Haggart, 2014).

Our findings show a combination of state, market and public forces in a unique socio-political situation, in which a reorganization of the economic system was required in response to changes in domestic and foreign circumstances. Despite a prevailing view that Israel implemented a liberal model, we do not believe that the political establishment in Israel did adopt a liberal worldview nor a desire to reduce involvement in the communication market. Due to path dependency, the structure of media regulation that was established in Israel is unstable and allows entry and exit into the political parallelism pattern of "politics in broadcasting" (Hallin & Mancini, 2004). As part of the role of informal patterns in shaping institutional arrangements, we identify a "walking on the threshold of legality" characteristic, on the part of both citizens and the government, that influenced the creation of change. Our main conclusions from the analysis are: (1) Research attention should be paid to junctions where a change in state and media relations takes place, in order to learn from the circumstances of their formation on the nature of the change and the type of pattern created thereafter. (2) The normative theory of media systems can be enriched by a closer analysis of the

relations between the state and the market, beyond analyzing the market characteristics offered by Hallin and Mancini. In the Israeli case, rather than the national ethos or security discourse, it was the political economy that took a prominent role in shaping the media system.

Title: Protest Movements as Media Events: the Disruptive Function and Hate Speech Movement in Japan

Session Type: Individual submission

Authors:

Name: Fumie Mitani

Email: mitani.fumie (at) nihon-u.ac.jp

Country: JP (Japan)

Affiliation: Nihon University

Abstract: The media event is a ceremonial event which gathers massive audience stopping everyday life for experiencing the event (Dayan and Katz 1992: 7). The following criticisms have been added to the definition of media events. First, in the current media environment, it is difficult to acquire large-scale audiences. In other words, the "aura" that the live broadcast of the "historic" ceremony had and the "magic" that attracted many audiences were lost (Katz and Liebes 2010: 34; Dayan 2010: 28). Second, "shocking" images have come to acquire large-scale audiences. For example, the terrorist attacks on September 11, 2001, were reported in live broadcasting. The media event is supposed to contribute to praising the dominant value and fostering the atmosphere of conflict resolution on the premise of the integrative role of the ceremonial rite (Hepp and Couldry 2010: 4). Thus, it became necessary that the media event includes not only integrative "ceremonial" event but also disruptive "shocking" one.

This research focuses on the disruptive function of media events. Katz and Liebes modified the above argument and said shocking news events were also included in media events (Katz and Liebes 2010: 33). Also, as examples of "disruptive" media events, "terrorism," "natural disaster," and "war" were mentioned (ibid: 33). With regard to disruptive media events, the "disaster marathon" was named to patterned ritual coverage about natural disasters, terrorism, and war. In addition to these three, Katz and Liebes also position "protest movement" as forth type of disruptive media event. However, they didn't explain its detail although the other three events were explained (ibid: 36).

This research examines the protest movement as a disruptive media event. As a case study, it took up the protest movement over hate speech that occurred in Kawasaki-city in June 2016. A protest movement organization which operated "Demonstration for Purification!" repeatedly expressed discriminatory remarks against Korean residents in Japan. This movement was taken place a few days after the "Stop! Hate Speech" law was enforced. Fierce conflicts between participants of hate speech and counter-action by Kawasaki residents were extensively reported through television and newspapers. This research analyzes the newspaper coverage and the TBS documentary about this conflict. It also considers how the society in Japan became divided through this issue.

Abstract: Democratic systems require the participation of citizens, particularly the manifestation of preferences through voting in elections, since the legitimacy of authorities rests on their ability to represent majority sectors. Consequently, the sustained contraction of voter registration represents a problem that calls for the attention of both politicians and scholars (González et al, 2005; Torcal, 2003).

From the perspective of social networks analysis, numerous studies published in the last two decades have sought to understand the relationship between the level of political disagreement in the conversations to which individuals are exposed in their networks and their electoral participation (Mutz, 2002; Huckfeldt Johnson and Sprague, 2003; McClurg, 2003; Eveland, 2009; Bello, 2012).

Political dialogue between individuals with divergent political viewpoints is considered a basic component of democracy, insofar as it makes it possible to understand the existence and validity of multiple positions around political issues, as well as to legitimize those that are imposed in public life (Mill, 1859; Arendt, 1968; Mutz, 2003; Huckfeldt and Sprague, 2003).

However, some scholars argue that the democratic benefits from communication between diverse points of view are gained at the expense of actual political participation, something that Mutz (2002) called the "dark side" of disagreement. That is, as suggested by Lazarsfeld, Berelson and Gaudet (1968), and then Eliasoph (1998) and Mutz (2002, 2006), heterogeneous social networks are associated with a lower probability of electoral participation. This could be due to a greater complexity in the decision-making process given the cross-pressures, as well as to the fear of offending some member of the social network.

Other studies report less clear results. For example, McClurg (2006) says that the relationship between political participation and conversation among heterogeneous viewpoints disappears when the analysis incorporates the characteristics of a neighborhood related to one's own ideas. Leighley (1990), Rubenson (2005), and Nir (2011) find mixed and even contradictory results regarding the relationship between both variables. Similarly, Bello (2012) proposes that disagreement in mixed or heterogeneous networks does not have a statistically significant impact on political participation and that only "universal opposition" generates a significant decrease in participation.

This study uses data from the Chilean version of the Comparative National Elections Project (CNEP), a representative survey conducted during the last presidential election in 2017. The 1,600

people surveyed answered a battery of questions associated with their informal political conversation networks, among other subjects. This country represents a good case study, since its electoral participation has experienced a paradigmatic downward trend since its return to democracy. In the 1988 plebiscite, 89.1% of those over 18 voted, but in the presidential election of 2017 only 46.67% did (Serval, 2017).

Preliminary results show that political conversations between homogeneous positions is associated with higher levels of electoral participation when these conversations take place with relatives and neighbors, but that relationship is not significant when political discussion takes place between friends and co-workers. Additionally, and consistent with the literature, there is a positive and statistically significant relationship between the frequency of conversations about the election and participation in the election.

Abstract: Today Internet and social media are becoming increasingly important for political communication. The use of social media as a form of communication channel has quickly been integrated and become an increasingly important part of political communication. This is particularly noticeable in the research literature, where there is a wide range of not only Anglo-American research, but also from other countries such as Taiwan, Romania, Australia and Brazil (Luc Chia-Shin Lin, 2015; Momoc. A. 2014; Bruns, A. & Burgess, J. 2011; Gilmore, J. 2011). The perspectives examined are mainly the content of social media such as Twitter and Facebook (Jungherr 2014; Aharony 2012; Tumasjan et al. 2010 Sweetser, & Lariscy 2008) and recipient studies of how the content is perceived (Ceron et al. 2014; Conroy & Guerrero 2012; Bennett 2012). However, studies that focus on how political parties strategically work with social media are fewer and even less studies focuses on Instagram (author 2017).

In conjunction to this, political leaders have become more important through the increased degree of personalization of politics (Bjerling 2013; Adam & Maier 2010). Personalization of politics indicates not only a stronger focus on candidates/politicians instead of parties, but also puts focus on their personal, non-political characteristics (Adam & Maier 2010). With the increasing use of use of social media (Svenskarna och internet 2018), it is reasonable to assume, that personalization of politics has progressed even more. This paper therefore aims to build on previous research and add knowledge about personalization through a social media frame.

Instagram had its breakthrough in the Swedish general election 2018. All parliamentary parties and six of nine party leaders were active on Instagram during the election campaign. Politicians is attracted to Instagram for many reasons; the ability to build a more personal relationship with the voters but perhaps most important - the possibility to control how their image is to be perceived by others. The Swedish political culture has a relatively high degree of openness and transparency which gives this study a rare insight on how party leaders chose to present themselves in a public forum.

So how do the Swedish party leaders choose to present themselves on Instagram? This paper provides insights to how the party leaders have utilized Instagram in the general election campaign 2018. Through a quantitative analysis, from three weeks before the election day, all of all the party leader's posts on Instagram will be examined through a frame of personalization of politics. The preliminary findings show a combination of professional and personal character, e.g. posts that reflects the political everyday life alternative "shows" the party leader in his/her family surroundings. However, final analyses of empirical data will be completed in the forthcoming months.

Title: The Impacts of Fake News on Taiwan's 2018 Mayoral and Magisterial Elections

Session Type: Individual submission

Authors:

Name: Tai-LI Wang

Email: tailiw (at) ntu.edu.tw

Country: TW (Taiwan)

Affiliation: Graduate Institute of Journalism at National Taiwan University

Abstract: Research Objectives

Fake news or misinformation had been a heated argument in Taiwan's 2018 mayoral and magisterial elections. Before elections, concerns were growing that Beijing's efforts to sway the island's politics had been armed with a new weapon as "Russian-style influence campaign" (Horton, 2018). In order to investigate the speculated effects of the "onslaught of misinformation" during Taiwan's election, a survey was conducted immediately right after the election held on November 24.

Theoretical Frameworks and Methodologies

Based on conspiracy theories and perspectives of selective exposure to news media, our survey consisted of four sections. First, the survey acquired consent to participate in this research. Second, the survey asked a series of demographic questions, including political affiliation before the 2018 campaign, vote in the 2018 election, education levels, gender, age, residence location and income. Third, the survey investigated voters' news consumption in this election. Fourth, the survey gave 6 false news stories circulated most rampantly in this election, and asked about respondents' recall. An online survey with randomly drawn 1068 voters was conducted via Taiwan's largest Internet survey company platform in the following two weeks of the election day. There are three reasons for choosing online survey over traditional telephone survey. Firstly, the survey required to complete in a short period of time when voters' recalls of fake news in elections still remained. Secondly, the news recall questions consisted of six long paragraphs of fake news reporting, and the news discernment questions stated another six correct and counter news statements, which made telephone survey a very challenging (if not unlikely) option. Finally, research scope involved various aspects of voters' social media uses, therefore respondents essentially needed to be Internet users.

The Main Argument and Findings

Findings confirmed that false news indeed affected voters' news judgment and voting decision. More than fifty percent of voters cast their votes without knowing the correct campaign news. Particularly, politically neutral voters were least able to judge fake news, and tended to vote for the Kuomintang candidates (e.g. KMT is one of Taiwan's two main parties and in favor of unification with China). Regarding demographic differences, female voters were more inclined to believe fake news in election periods than male voters. Younger voters (20-29 year old) had weaker discernment

of fake news, while voters with higher education and income were most able to distinguish between fake news and correct ones. Further analyses and implications of the findings will be deliberated in the final paper.

This study is one of the first empirical studies investigating fake news impacts on Taiwan's election. Hopefully, the findings could shed some light on research in this arena and inspire more discussions in the political communication research section of IAMCR.

Title: Competitive authoritarianism and press-party parallelism in Turkey: A longitudinal analysis of press coverage of election campaigns

Session Type: Individual submission

Authors:

Name: Kerem Yıldırım

Email: kyildirim (at) sabanciuniv.edu

Country: TR (Turkey)

Affiliation: Sabanci University

Country: TR (Turkey)

Affiliation: Koç University

Abstract: Since the AK Parti came to power in the 2002 national elections in Turkey, press freedom and media bias have become heavily debated issues. These debates mostly focused on how political pressure resulted in the (re)configuration of the press to create what some critics named as “yandaş” (a term used to describe an uncritical-partisanship of AKP and media).

This paper aims to bring a new perspective to the debates about press-party parallelism in Turkey by combining micro-level data regarding newspaper readership from national surveys with a content analysis that tracks changes in press coverage of political parties in four consecutive national election campaigns (2002, 2007, 2011, 2015). A sample of political news stories ($n = 36,167$) published in 15 newspapers, accounting for 75% of the newspaper circulation in Turkey, were content-analyzed. Utilizing survey data about the voting preferences of the readers of each newspaper, we grouped newspapers as “dominant” (i.e., pro-government), “oppositional” or “mainstream.”

Using this dataset, we explore three dimensions of press-party parallelism:

1. Voice allocated to parties was based on coding the number of times a given news story quotes political party officials and representatives.
2. Effective Number of Parties (ENP) mentioned was adopted from the Herfindahl Index, which measures competitiveness in a given sector. ENP is typically used to calculate the number of parties in a given political system. In this paper, we calculated ENP by coding the number of parties mentioned a) positively and b) negatively in a news story (e.g. a higher positive ENP score means more parties received positive coverage).

3. Favorability towards political parties: ENP is an indicator of the level of concentration in a system (in this study, the concentration of positive or negative coverage), and it does identify which party or parties benefit from this concentration in the system. In this light, we also coded the favorability of a given news story to each political party it mentions (-3 extremely negative to +3 extremely positive).

Using these dimensions, we present evidence about the extent to which the Turkish press is being consolidated in the wake of the rise of a hegemonic political system that many define as competitive authoritarianism. Our results suggest that news reporting followed suit with the rise of Ak Parti as a hegemonic party. First, within each campaign period, as we approach election day, voice given to Ak Parti representatives increase while voice given to other parties either remain stable or decline. Likewise, across the four election campaigns, voice allocated Ak Parti increases. Second, for all newspaper groups (dominant, opposition, mainstream), ENP scores indicate that the number of parties that receive a favorable or unfavorable coverage decline over election terms. Third, the concentration of favorable coverage seems to benefit Ak Parti disproportionately. Specifically, Ak Parti is the only party that gained in terms of positive coverage both during each election campaign period and across the four election campaigns.

Title: News Consumption in Times of Technological and Political Upheaval: Effects of Partisanship and Public Sentiment Cues on Partisan Selective News Exposure in a Social Media Setting

Session Type: Individual submission

Authors:

Name: Cornelia Mothes

Email: cornelia.mothes (at) tu-dresden.de

Country: DE (Germany)

Affiliation: TU Dresden

Name: Jakob Ohme

Email: j.ohme (at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: The present study examined effects of partisanship and public sentiment cues on partisan selective news exposure in a 24-hour social media field experiment during the 2017 federal election campaign in Germany. Like in many other contemporary democracies, this campaign was shaped by populist movements that efficiently used social media to spread their ideology, instigating an ongoing debate about the threats of social media to deliberative democracy through increased partisan selective exposure. Against this backdrop, 213 German participants were asked to browse a website that closely mimicked the layout and functionality of a Facebook newsfeed. The mock newsfeed presented a random sample of 100 genuine news posts that were published by the 20 most popular German Facebook pages, both major news and entertainment pages, on the day of the survey right until study launch. Aiming at high ecological validity of the data, the contents of the posts appeared exactly as they would have in the users' actual Facebook newsfeeds and were post hoc analyzed by two coders. While the content of the posts was held constant across all participants, public sentiment cues, as a unique feature of social media sites, were randomly manipulated (no public sentiment cues vs. 'likes' only vs. additional genuine emoticons).

Based on two indicators of selective news exposure (i.e., display time of posts and number of click decisions), a series of OLS regressions was conducted, one for each type of public sentiment cue (no vs. 'likes' only vs. additional genuine emoticons). Each regression model included political affinity and voting intention as two common predictors indicating partisanship on an individual level, while additionally controlling for age, gender, education, general political interest, and dogmatism. Findings suggest that partisan selective exposure to social media news posts is contingent on the conceptualization and measurement of partisanship as a political orientation of either low party commitment (i.e., political affinity) or high party commitment (i.e., voting intention). While voting intentions triggered a rather classic confirmation bias with a clear avoidance of negative news about the favored party, political affinity caused selection patterns that appeared to be more strongly guided by informational utility considerations with a clear preference for negative news about the favored party. When public sentiment cues were present, however, these attitudinal patterns disappeared, regardless of whether news posts were accompanied by 'likes' or additional emotional reactions. These findings imply that threats of partisan social media

use to deliberative democracy may be best gauged by taking a closer look at the particular type of partisanship that promotes partisan selective exposure in a new media environment. Furthermore, today's news environments may even potentially override traditional patterns of confirmation biases and informational utility by providing additional social monitoring cues.

Title: Investigative Reporting and Democratic Movement in South Korea: 1987 and 2017

Session Type: Individual submission

Authors:

Name: Jae-chul Shim

Email: jaeshim0 (at) naver.com

Country: KR (Korea, Republic Of)

Affiliation: Korea University

Name: Moon-hwan Kim

Email: kmoon2724 (at) paran.com

Country: KR (Korea, Republic Of)

Affiliation: Korea University

Abstract: We surveyed Seoul Citizens' collective memory regarding the 1987 democratic movement and compared it with the 2017 movement. For this comparison, we utilized the theoretical framework of Raymond William's structure of feeling and van Dijk's cognitive situational model in democratization discourse. Thirty years after the Korean people's uprising against the authoritarian government on June 9, 1987, Korean media's investigative reporting again revealed that the deposed South Korea President Park Geun-hye colluded with her close friend, Choi Soon-sil, for the President's post-presidency retirement funds and attempted to secure tens of millions dollars in bribes from businesses to donate to Choi's non-profit organizations.

Through this coverage and the following massive but peaceful candlelight demonstrations, the National Assembly and the Constitutional Court were pressured by public opinion to oust the first female South Korean President, Park Guen-hye, for not keeping with the Korean Constitution. From this period of political upheaval, we examined how the Korean citizens in Seoul evaluated the mass media's role in the investigative coverage of the Park government's wrongdoings and mass media's influences on people's perceptions, feelings and contextual evaluations of Park's impeachment.

We compared these investigative report findings of 2016 and 2017 with the six-month investigative reporting of Park Jong-chul, a college student who died of suffocation while he was water-tortured by policemen in 1987. In a situation similar to the Watergate scandal, the innocent college student's death emerged as a national issue, symbolizing the improprieties of an unethical government. The police brutality in 1987 became a national agenda to be solved in South Korea and led to the people's uprising for national democratic reform in 1987. Since then, South Korea has achieved a peaceful transfer of political power from the authoritarian government to a more or less democratic one. Similar to the political turmoil in 1987, the presidential impeachment of Park Geun-hye occurred in 2017.

For this comparison, we interviewed 300 citizens randomly selected from Seoul's population and asked what they remembered about President Park's wrongdoings and whether they participated in the 2016 and 2017 candlelight marches. If the subject participated in the marches, we asked why

and how she or he did participate in urging President Park to step down. We compared this survey's results with the one we already conducted about Korean citizens' uprising in 1987. We found that not many subjects remembered the details of both Park Jong-chul's death during the military regime and President Park Geun-hye's impeachment process. Nevertheless, they remembered the political situation of the 1980s under military government and President Park's wrongdoings and administrative mismanagements under her presidency. From these findings, we discussed the usefulness of Raymond Williams' concept of the "structure of feeling" for the comparative analysis of South Korea's democratic movements. We also discussed the theoretical and methodological implications of the contextual analysis of van Dijk's cognitive situational model to the historical periods of Koreans' civil uprisings in 1987 and 2017.

Title: La transparencia de los programas electorales de los partidos políticos españoles: cómo transmitir confianza sin parecer ficción

Session Type: Individual submission

Authors:

Name: Beatriz Martínez Isidoro

Email: bc.martinez (at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: La presente comunicación es un estudio que tiene un doble objetivo: en primer lugar, determinar qué información o datos deberían acompañar a las propuestas que componen los programas electores de los partidos políticos españoles, para garantizar al electorado el cumplimiento de dichas propuestas. El segundo objetivo del estudio es comprobar si los programas electorales de los partidos políticos que actualmente tienen representación en el Congreso de los Diputados durante la XII Legislatura, incluyen o facilitan esta información como garantía de sus propuestas y promesas electorales.

La teoría de este estudio está basada en dos metodologías: el sistema de análisis de la transparencia de los partidos políticos españoles, desarrollado por Fundación Compromiso y Transparencia, y publicado anualmente desde 2011 en el informe “Transparencia, el mejor eslogan”; y el “decálogo de un buen programa electoral” realizado por Fundación Transforma España sobre las características que debe cumplir un programa electoral para ser considerado bueno, entendiendo que este documento debe servir como un contrato social entre los partidos y la ciudadanía.

En concreto, este estudio se centra en comprobar los mecanismos de rendición de cuentas que los partidos políticos españoles tienen con respecto a sus promesas electorales, basado en el análisis de la información facilitada por los propios partidos políticos a través de sus páginas webs, ya que este es el medio más sencillo, económico y accesible para cualquier ciudadano.

La conclusión a la que llega este estudio es que actualmente las propuestas electorales que realizan los partidos no van acompañadas de información suficiente y considerada adecuada para permitir que los votantes tomen decisiones bien informados durante la campaña electoral. Esto quiere decir que la ciudadanía no puede comprobar la viabilidad real de las propuestas realizadas y tampoco se hace pública la información necesaria durante y al finalizar las legislaturas, para comprobar el grado de cumplimiento de los partidos con respecto a sus programas electorales, que presentaron para ser votados.

Finalmente, el estudio permite establecer una serie de directrices generales para elaborar programas electorales considerados “fiables o de confianza”, como una alternativa a los actuales programas de los partidos políticos españoles, que no establecen ningún mecanismo de rendición de cuentas, hecho que incide en la desafección política de la sociedad española.

Title: the digital performativity of populism: the case of charismatic leaders on Twitter

Session Type: Individual submission

Authors:

Name: Angelos Kissas

Email: ak2182 (at) cam.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Cambridge

Abstract: It is hard to overlook the recent mushrooming of populist political parties, movements, and especially leaders; from Donald Trump in the US, to Jeremy Corbyn in the UK, to Viktor Orban in Hungary, among many others. It is even harder to explain the dramatic rise of this dense but variegated populism. Quite popular are some macroscopic politico-economic explanations that treat populism as symptom or syndrome of deeper structural inefficiencies and failures in our societies (see Cox, 2018; Kaletsky, 2017; Montier & Pilkington, 2017).

This article attempts a different take on populism which could be said to amount to an inversion of such explanations. Its point of departure is that explaining the structural failures of a politico-economic system does not suffice for understanding why supporters of populism feel and think that the system is not working and how they come to feel and think so. As Inglehart's and Norris' (2016) recent anatomy of the populist vote in thirty-one European countries demonstrates, anti-progressivist and anti-cosmopolitanist/multiculturalist values and sentiments are strongly associated with the populist vote regardless of voters' socio-economic background. Taking these findings a step further, I wish to argue that populism should not be treated as symptom of a given politico-economic reality but as enactment-making of the politico-economic realities that we are invited to live and act upon in certain ways (instead of others).

These enactments circulate our public spheres, nowadays, through the media, primarily digital media, to such a degree that researchers talk about an 'elective affinity' (Gerbaudo, 2018) between populism and social media (see also Engesser, Fawzi & Larsson, 2017; Groshek & Koc-Michalska, 2017) or an organic bond between populism and mediatized politics, in general (Higgins, 2017; Moffitt, 2016). In this article, I explore this bond through what I call the digital performativity of populism: a repertoire of digital media practices-performances whereby 'the people' is enacted as a concrete political subject with its own moral qualities and social demands. I focus, particularly, on the charismatic leader as a distinct mode of this performativity, the authentic persona, proposing an analysis of authenticity as an affective quality of media performativity which is intertextually (semantically-symbolically) invested with certain forms of agency, or an ideological politics (Wahl-Jorgensen, 2019).

Therefore, contra to performative-discursive paradigms that want populism a non-ideological performance (Aslanidis, 2016; Moffitt, 2016), this article advocates an approach to populism as performative ideology and uses it to critically understand what is, perhaps, the major concern in the study of populism: whether and when, under what mediatic conditions, populism is democratic or undemocratic. To this end, I present two specific yet paradigmatic examples (case-studies) of digitally performed charisma: Donald Trump's defiant and Jeremy Corbyn's ordinary persona on Twitter. As I see them, the former embodies a resenting politics of national palingenesis which along with its xenophobic outburst, insidiously, serves the neoliberal agenda, while the latter

embodies a melancholic politics of moral vindication which condemns neoliberalism but fails to address the xenophobic implications of its own Eurosceptic origins. What this analysis seeks to demonstrate is that the (un)democratic potential of populism is not normatively predetermined but contingent upon the ideological dynamics of media performativity.

Title: Politics, Gender and Media in the International Arena

Session Type: Individual submission

Authors:

Name: Yossi David

Email: davidyossi4 (at) gmail.com

Country: DE (Germany)

Affiliation: Johannes Gutenberg University Mainz

Abstract: This study explores the manner in which the use of gendered stereotypes to describe political leaders can shape emotions and attitudes toward these leaders' countries. By so doing, the study aims to contribute a new theoretical perspective on the importance of gender in the international arena. The gendering of groups is the construction and representation of groups as masculine or feminine. Instances of this form of gendering include American generals characterizing the occupation of Kuwait as an ongoing "rape" to justify American military involvement in the 1991 Gulf War; Vladimir Putin stating that Donald Trump is "not my bride, and I am not his groom"; and the Israeli media using a dating metaphor to represent Israel's rejection of a Hamas-proposed ceasefire as "playing hard to get." Based on my previous research on the role of groups gendering in predicting attitudes and emotions in the political arena, this study examines the extent to which gendering affects emotions and attitudes toward groups. Using an online experiment designed and conducted in Israel and Germany, the study explores the effects of the use of gendered stereotypes for shaping public opinion. It adopts a gender theory perspective of gender as a process and social construct, adding an experimental paradigm to explore the effects of gendering in the international arena. The findings will contribute new analytical perspectives in gender and media studies—examining the role of gender as a process—using an experimental paradigm to explore the effects of gender as a construct rather than as an identity.

Title: ESTRATEGIAS DE COMUNICACIÓN DE LOS LOBBIES EN LA UNIÓN EUROPEA

Session Type: Individual submission

Authors:

Name: Antonio Castillo Esparcia

Email: acastilloe (at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga

Name: Ana Castillo Díaz

Email: anacastillo (at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga

Abstract: Los primeros estudios sobre el papel de los grupos de interés en las instituciones europeas ya resaltaban su importancia y el crecimiento de su actividad (Andersen y Eliassen, 1991; y Barron y Hultén, 2014). En este sentido, el registro de grupos de interés de la Unión Europea ha ido aumentando desde su creación llegando a una alta cifra en las diferentes categorías.

El papel de los grupos de interés y de los lobbies han sido resaltado por numerosos autores como una actividad esencial en el proceso democrático (Wittenberg y Whittenberg, 1989; Almond, 1958; Bentley, 1908; Binderkrantz y Rasmussen, 2015). En este sentido, el sistema político participa de procesos de conversión, es decir, los procedimientos que transforman el flujo de las demandas sociales hacia el sistema político, en una corriente de extracción, regulación y distribución en el proceso de participación de las organizaciones sociales en la implementación de políticas públicas.

Este texto analiza la presencia de los grupos de interés en el registro oficial de la Unión Europea para conseguir conocer qué tipologías de lobbies está más representadas, analizar los países que mayor presencia poseen en el registro y estudiar qué estrategias de comunicación utilizan en sus actividades en las instituciones europeas.

En la actualidad, en el registro se encuentran inscritas 11909 organizaciones lideradas por el sector empresarial (5977), el de las Organizaciones no Gubernamentales (3163) y el sector profesional (1196), que siguen la línea de presencia señalada por diversos estudios (Dür y Mateo, 2012; Gaber, 2013; Greenwood y Rnit, 1994; Hays, 1991).

Se observan las fichas de registro de los lobbies para ver el tipo de actividad que desempeñan, los recursos personales y económicos que disponen en su actividad de lobby y las estrategias comunicativas (proactivas, reactivas) que realizan en su labor. La muestra se selecciona de manera estratificada a partir del grado de presencia de lobbies en cada uno de los países que pertenecen a la Unión Europea.

Conocer el mapa y tipo de influencia de los grupos de interés con las instituciones públicas permiten saber el tipo de relación, ya que las investigaciones nos muestran una variedad de acceso

relacionado directamente con las características de las diferentes tipologías de lobbies (Bacheller, 1977; Barron, 2011; Berhagen, 2014; Chari y Hillebrand, 2011; Coen, 2007).

Esto nos permite realizar un mapa de los grupos de interés que mayor presencia han mantenido y, por tanto, poseen una estabilidad en la participación en los procesos de elaboración legislativa (Chari y Hillebrand, 2011; Bernhagen, Dür y Marshall, 2015; Binderkrants y Rasmuseen, 2015 y Bouwen, 2002).

Title: Cross-Cutting Exposure, Cross-Cutting Attention, and Cross-Cutting Discussion: Dimensions of Cross-Cutting Experience on Social Media and Political Participation

Session Type: Individual submission

Authors:

Name: Jihyang Choi

Email: choi20 (at) ewha.ac.kr

Country: KR (Korea, Republic Of)

Affiliation: Ewha Womans University

Abstract: Cross-cutting exposure—exposure to fellow citizens whose political views differ from one’s own—has frequently been branded with infamy for depressing political participation. However, the relationship between exposure to political disagreement and political participation needs to be revisited amid the dramatic changes in the communication environment. Individuals’ experience related to dissonant information within online social networks is likely to vary. As online space facilitates both “selective scanning” and “elaboration,” people can either disregard disagreeable voices or be very attentive to voices from the other side. At the same time, the quality of actual discussion with opposing parties might differ individually, since online forums facilitate both civil and uncivil, as well as both deliberative and non-deliberative discussion. In other words, the substance of the online cross-cutting experience has become distinctive from that in the offline space, thus allowing people to experience political disagreement in a wide variety of ways. However, many studies thus far have ignored the meaningful layers in citizens’ cross-cutting experience.

Thus, the study aims to re-conceptualize cross-cutting exposure by proposing an alternative concept of “cross-cutting experience” and to clarify its effects on political participation. The present study empirically identified that, in the social media environment, people’s cross-cutting experience is multidimensional and specifically comprised of automatic cross-cutting exposure, cross-cutting attention, and cross-cutting discussion. These differing experiences yield distinctive influences on people’s political behaviors: those who discuss with fellow citizens holding dissenting political views were more likely to participate in political activities, while those who were simply exposed to or pay attention to politically dissonant information did not show any noticeable tendency to participate in more political activities.

The study offers a clue to understanding as to why the abundant previous studies have yielded very convoluted findings regarding the link between cross-cutting exposure and political participation, by revealing a more detailed mechanism of the relationships. In doing so, the researchers re-illuminate the role of cross-cutting exposure, which has suffered a stigma of demobilizing political participation. Ultimately, the study suggests theoretical and practical solutions for connecting the ideals of deliberative democracy and participatory democracy in the rapidly changing communication environment. For this study, the researchers employed a two-wave panel survey data collected during the 2016 U.S. presidential election campaign, in which political disagreement on key national issues and political polarization were very conspicuous among the citizens.

Email: marijana (at) isppi.ukim.edu.mk

Country: MK (Macedonia, The Former Yugoslav Republic Of)

Affiliation: University Ss. Cyril and Methodius, Institute for Sociological, Political and Juridical Research

Abstract: The referendum on changing the constitutional name of Republic of Macedonia was held on September 30, 2018. Twenty days before the designated date, the official campaign for the referendum began, although the campaign from all relevant entities began immediately after the signing of the Prespa Agreement, an international agreement signed between the heads of diplomacy of the Republic of Macedonia and the Republic of Greece on June 17, 2018.

The change of the constitutional name of the state was related to the declaration of "for" or "against" EU and NATO membership, and the question on the referendum was: "Are you for membership in EU and NATO by accepting the Agreement between the Republic of Macedonia and the Republic of Greece? This essentially put the citizens of Macedonia by deciding on the name change in a position to vote "for" or "against" joining international institutions in which the name of the state is not part of the requirement for membership.

This research objective is recognition of opinion leaders in Macedonia in the online and social media in Macedonian language and what and how they speak/argue about the name issue during the critical period, June to September: from signing of the Prespa Agreement by day of the referendum. In communication theory (two-step flow theory of communication specifically), opinion leaders are individuals who are influential members of the society, group or community that other people believe in, follow them in the media field or even address them for opinion or advice. In this research Opinion Leaders (OLs) are defined as journalists or experts (not politicians) from different fields who give their opinions on the referendum in online and social media in the critical period and seek to direct citizen's opinion and attitudes. Journalists, members of the largest professional organization Association of Journalists of Macedonia, identified the members of the group on Opinion Leaders used in the research.

As a research tool content analysis is applied. Subject of content analysis are the texts of the identified OLs that are published in online and social media (depending in which of them OLs were active) during the critical period. OLs and their texts are categorized into three categories: "for", "against" and "boycott" of the referendum, and the attempt to answer on the following research questions will be made: In which three categories are the majority of the published texts?; Does the

change of the name appear as the main or secondary theme? With which other topics and themes the name change is followed? To which segment of population the authors (OLs) address their messages?; What kind of words are used and how much they are emotionally charged?, and Which basic motives are trying to be caused?

Key words: Referendum on name change, Republic of Macedonia, Prespa Agreement, Online and social media, Opinion leaders.

Abstract: La expansión de fake news en la era de internet con el objetivo de influir en la opinión pública preocupa cada vez más a instituciones públicas y privadas de todo el mundo. De hecho, el concepto de las fake news ha inundado la esfera de lo público y ha entrado de lleno en el debate político (Navarro, 2018). Por sus impactos negativos a nivel social e individual (Shu, Sliva, Wang, Tang, & Liu, 2017) este fenómeno ha impactado en el corazón de las sociedades democráticas trastocando el normal desarrollo de los procesos electorales, la reputación de la clase política, Estados y empresas, así como la credibilidad de los medios de comunicación (Ríos, 2017).

Los estudios científicos coinciden a la hora de señalar la enorme capacidad de difusión de la ‘red de redes’ de las noticias falsas, aunque, existe cierta controversia o desconocimiento a la hora de medir científicamente su influencia real (Nyhan 2018, Lazer et al. 2018). Sobre esta cuestión, ciertos estudios como el de Guess, Nyhan y Reifler (2018) demuestran que la endogamia de las interacciones podría conllevar a que el consumo de fake news sea preminentemente “intracomunidad”. Asimismo, al contrario de lo que pueda parecer, son los humanos quienes contribuyen en mayor medida que los bots a la viralización de contenido falso (Vosoughi, Roy, Aral, 2018). En todo caso, este campo de investigación académica requiere de muchas respuestas que puedan aportar información a este fenómeno.

En este trabajo analizaremos el proceso de difusión de un caso particular sucedido en el contexto del conflicto entre España y Cataluña: la noticia falsa difundida por el medio digital “El Confidencial”, según la cual el Instituto Martin Luther King (EEUU) había solicitado al President de la Generalitat, Quim Torra, que dejara de referirse a su figura en sus discursos. El director de la institución, Clayborne Carson, desmintió la información a través de su blog y corrigió al periodista

del citado medio de comunicación. Sin embargo, la polémica saltó inmediatamente a Twitter, y muchos medios de comunicación y miles de usuarios difundieron tanto la falsa noticia y los desmentidos posteriores.

El estudio de caso se examina con técnicas de análisis de datos masivos (big data) en redes sociales capturados y elaborados a partir de la herramienta Twitter Capture and Analysis Toolset (DMI-TCAT) y aplicando un algoritmo de detección comunitaria. Se consigue así conocer cómo la información incorrecta y las correcciones posteriores se difunden de manera desigual a lo largo de una red altamente politizada, en la que diferentes grupos de usuarios están expuestos a diferentes “versiones” de la información difundida (RQ1). Se analizan así 27.648 actores y 76.815 conexiones. Además, se discute la utilidad de la Red Social y el Análisis de Big Data en la detección de propagación de noticias falsas y su eventual mitigación. El estudio corrobora la hipótesis de que la exposición de la información viene determinada por relaciones virtuales ideológicamente mediadas, y que las noticias falsas tienen éxito cuando están anidadas en estructuras de ideas y visiones del mundo previamente establecidas.

Abstract: Recent work in political communication has emphasized ways in which political expression on social media can foster deeper engagement in democratic life (Boulianne, 2015; Vaccari et al., 2015). Political communication on social networks has been well-researched and supported by studies of participatory culture especially among young people. Political actors seek to engage with their electorate through these platforms. These dynamics of political expression can be explored through visual data on the popular social network of Instagram.

With social networks and particularly the international rise of the image-oriented platform, politicians are able to select how they visually present themselves online to the citizens. This is part of the celebrity politics that is at the centre of the political strategy (Lalancette & Raynauld, 2017). This paper aims to analyze how we can apply this concept of digital celebrity politics in two countries with different socio-cultural contexts. Spain, a southern-European country, and India, a South Asian country. Our objective is to delve into the differences but more importantly the similarities of the image choices of the heads of government of the two countries. For instance, international events in the agenda of the two heads of government such as the G20 summit in November 2018 in Argentina, included in the time period of our analysis, will be key to showcase the different or common approach of celebrity politics.

With these objectives, a visual qualitative and quantitative content analysis of the posts published on the official Instagram accounts of the Spanish president Pedro Sánchez and the Indian Prime Minister Narendra Modi will be studied. The period analyzed comprises six months from September 2018 until February 2019. The results will focus on the issues that the heads of government portray in the images shared on Instagram, the kind of people that they associate with and the stages of performance, public or private, that they show. This will introduce the perspective if the differences in culture and social needs of the two countries influence on how they visually portray themselves online.

Title: Effects of traditional and socio-digital media on political trust

Session Type: Individual submission

Authors:

Name: Evelia Mani

Email: evelia.mani (at) gmail.com

Country: MX (Mexico)

Affiliation: Autonomus University of Puebla

Abstract: Political trust is essential for the functionality of a democratic regime, and a downward asset in Western countries. The media have been confirmed theoretically and empirically as an important source of influence in it, although studies do not usually consider socio-digital networks as relevant channels of information consumption, where the circulation of false, misleading or propaganda information could negatively affect the political confidence.

This work compares the effect of attention to traditional media and socio-digital media on the trust that citizens place in political institutions, considering the differences between both environments in relation to their level of professionalization. Secondly, it updates the available empirical knowledge about the effects of media attention on political trust in the specific case of Mexico, an academically unexplored scenario regarding these concerns and emblematic of an acute, almost endemic distrust towards the political system, product of a semi-authoritarian regime of more than 70 years that was decomposing until culminating in a democratic transition, and successive corruption scandals occurred in the last five years, at the highest level. Both components make pertinent and current research about the role of the media in this feature of Mexican political culture.

To clarify the weight of socio-digital media compared to traditional media, hierarchical multiple linear regression models are performed on a survey applied nationally in Mexico during the recent presidential election of 2018. The findings indicate that the lack of trust towards institutions and political objects is a generalized attitude that is sharpened in those with greater media visibility. Evidence was also found in favor of a virtuous conception of media effects, with a positive prevalence of television as the main means of influencing political trust and the scarce participation of socio-digital networks in this phenomenon.

Abstract: Finalizada la Guerra Fría, hubo quienes se atrevieron a afirmar que con el desgaste del comunismo, el Islam era la nueva amenaza contra los principios occidentales (Huntington, 1993; Sciolino, 1996; Falacci, 2001), afirmación respaldada muchas veces por medios y políticos que no dudaban en culpar a musulmanes –y no islamistas- como los autores de atentados y amenazas alrededor del mundo. En Estados Unidos, el 11 de septiembre de 2001, terminó por posicionar y blindar esa imagen generalizada y reduccionista a la vez, donde para muchos el fundamentalismo equivalía a islam, sujetando a esta religión a un puñado de reglas y estereotipos sobre la fe, su fundador y sus fieles (Said, 2005) y vinculándola a acciones de fanatismo, violencia y resistencia (Castellanos, 2007).

La equiparación de conceptos y la sencillez de lenguaje facilitan el discurso político, en especial cuando el objetivo de los gobiernos es exponer la guerra como “un drama de opuestos, bien y mal, «nosotros» y «ellos», victoria o derrota” (Fisk, 2006). Desde aquel histórico 11-S, y a lo largo de estos años, el terrorismo islámico ha sido un elemento esencial en el discurso estadounidense y en concreto en su Estrategia de Seguridad Nacional (ESN).

La presente investigación procura analizar el lenguaje y la argumentación presentes en las ESN publicadas por los últimos cuatro presidentes norteamericanos: Clinton, Bush, Obama y Trump, identificando elementos y características relacionadas con el Islam, así como con sus vertientes políticas y radicales. ¿Ha sido el Islam verdaderamente una amenaza para la seguridad nacional? ¿Las ESN se comportan de manera generalizada? ¿Se tratan de discursos simplistas que alimentan las malinterpretaciones y por consiguiente el miedo, el odio y hasta una probable islamofobia en la población? ¿Los gobernantes utilizan narrativas reduccionistas del Islam para favorecer y legitimar sus acciones en el marco de una “Guerra contra el Terror”? ¿Qué transformaciones ha habido en el discurso a lo largo del último cuarto de siglo? Estas son algunas preguntas que se pretenden responder en este trabajo.

Abstract: Este trabajo tiene como objeto de estudio el politainment o entretenimiento político con el fin de hacer una contribución tanto teórica como empírica a la investigación de este fenómeno.

En cuanto a la aportación teórica, el estudio realiza una revisión conceptual del término politainment en las democracias occidentales (Van Zoonen, 1998; Patterson, 2000; Hamilton, 2004; Nieland; 2008 ; Sayre & King, 2010; Schultz, 2012; Berrocal, 2016, 2017) así como de los estilemas predominantes en el género, su presencia en los medios de comunicación, en particular en la televisión (Brants, 1998, 2008; Delli Carpini & Williamns, 2001; Thussu 2007) y sus repercusiones en la opinión pública (Nieland, 2008; Sayre & King, 2010; Schultz, 2012). Este fenómeno adquiere gran importancia en el contexto actual de posverdad donde prima la apelación a las emociones y a los sentimientos, ya que en el politainment predomina la “celebrificación de los políticos” (Oliva, Pérez-Latorre; & Besalú, 2015), la relevancia informativa de lo anecdótico (Holtz-Bacha, 2003; Missika, 2006; Kellner, 2010), el sentimentalismo y la dramatización (Carrillo, 2013) y el predominio de la sátira o el humor (Mutz & Chanin, 2004; Moy, Xenos & Hess, 2006), lo que contribuye a simplificar la complejidad de la política y favorece una opinión pública en la que predomina el conocimiento superficial dadas las dificultades para obtener una información seria y rigurosa.

El estado de la cuestión se complementa con la investigación empírica del caso español, que presenta las conclusiones de un análisis de contenido realizado sobre la muestra total de programas

televisivos de politainment emitidos en el periodo 1995-2019, para dar respuesta a preguntas tales como: qué formatos adopta el politainment, qué estilemas lo definen, qué cadenas televisivas propician su emisión, qué audiencia respalda estos programas, cuál ha sido su evolución en España y qué presencia tienen durante la campaña electoral. Precisamente, los resultados obtenidos hasta la fecha indican que es el periodo electoral cuando se incrementan el número de emisiones que contribuyen a la política espectáculo, por lo que resulta de especial interés incorporar a la investigación el análisis de los programas de politainment que puedan surgir con motivo de las Elecciones Municipales y Elecciones al Parlamento Europeo, que se celebrarán en España el 26 de mayo de 2019, con el objeto de examinar su contribución a la simplificación de la política y conocer el seguimiento que estos programas tienen entre la audiencia.

Title: How can I trust you' Diminishing disinformation strategies against the electoral authority in the Mexican 2018 presidential election

Session Type: Individual submission

Authors:

Name: Julio Juárez-Gámiz

Email: jjuares (at) unam.mx

Country: MX (Mexico)

Affiliation: Associate researcher at the Centro de Investigaciones Interdisciplinarias en Ciencias y Humanidades at UNAM

Abstract: After decades of one-party rule sustained by a charade electoral system until 1988, Mexican modern democratic history has been built upon the basis of distrust. Every presidential election ends with claims of fraud and inequality as the political explanation behind electoral results. Not surprisingly, the electoral system and its laws have been subject to structural periodic reforms every federal election. This has had a positive impact on the professionalization of electoral bodies and processes. Illustrative examples of this are one of the most accurate and comprehensive voters' registry worldwide, monitoring systems to distribute and verify political parties TV and radio advertising, platforms devised for overseeing campaign expenditure on real time, and mastering an intricate process for capacitating thousands of citizens every election to serve as polling station officers. The sole institutional responsibility nationwide for making this possible relies on the National Electoral Institute (INE in Spanish).

However, despite serving as a United Nations and a Council of Europe electoral assistance ally, unverified rumors and conspiracy theories against INE constitute a recurrent topic every election. It takes a few trending topics on Tweeter, some Facebook fake posts, a viral WhatsApp message, or a homemade YouTube video to question and dent INE's credibility by strengthening the fraud narrative. Tales of obscure algorithms changing results overnight, electoral IDs not valid for voting, ballots apparently being manipulated by polling station officers, and a long list of disinformation materials find fertile soil across Mexico's well established fraud narrative in traditional media and social networks alike.

Usually disinformation strategies target voters in order to promote or discredit a political movement or candidate. However, in Latin American countries like Mexico where the central electoral authority has a highly visible role throughout the electoral process, the elections' organizer is a target itself for questioning electoral integrity and, eventually, the results' credibility as a whole. The Mexican paradox is evident: according to Latinobarómetro, Mexico has one of the lowest regional levels of approval for democracy despite having one of the most sophisticated electoral systems in the region. The challenge for INE as the protagonist of a highly centralized electoral system is twofold. How to communicate a complex technical chain of procedures and measures designed to eradicate fraud across the whole organizational process amid a hostile environment towards the electoral authority? And, how to respond effectively to invalidate disinformation strategies put forward by different actors during the electoral process without affecting freedom of speech or endangering privacy?

The work offers a detailed analysis of INE's communication strategy during the organization of the 2018 presidential election. It takes into account different actions taken by the electoral authority in order to counteract disinformation strategies in traditional media like radio, television and print media and also across digital platforms like Facebook and Twitter. The research critically analyses INE's lessons learned from the electoral process in 2018 as well as the main challenges and opportunities ahead for preserving electoral integrity in the Latin American region.

Abstract: El uso de redes sociales en el ámbito de Internet se ha convertido en una parte crucial de la sociedad, donde los usuarios crean nuevas realidades digitales en las que poder comunicarse y expresar su opinión, interactuando así con el resto de usuarios de la red. En este nuevo escenario, algunos autores hablan de una opinión pública más amplia e inclusiva, así como la presencia de fenómenos como la polarización política en la red, la cual, gracias a las nuevas oportunidades que ofrece este contexto, el estudio del desarrollo y formación de la polarización política se ha vuelto más ambicioso que nunca.

Debido a esta digitalización de la realidad, sirviéndonos de la plataforma Twitter, con el fin de acceder a la polarización política reflejada en los mensajes de los usuarios, y con el fin de

categorizar los mismos como detractores, neutros o favorables hacia la independencia de Cataluña, nos servimos de la metodología machine learning. Con la aplicación de un análisis de sentimiento sobre una primera muestra de los tweets, clasificándolos como, en una primera instancia, si pertenecen a nuestro objeto de estudio o no, y posteriormente su posicionamiento (favorable, detractor o neutral) hacia la independencia catalana, se entrenan diferentes clasificadores de aprendizaje automático con el fin de conseguir un modelo que replique el análisis de sentimiento realizado y poder aplicarlo a la totalidad de la población de mensajes en Twitter durante el proceso de independencia.

De esta forma, los objetivos de este trabajo se resumen en el estudio del proceso de polarización política, pudiendo ser centrífuga (los usuarios tienden a expresar opiniones en orden de diferenciarse con el exogrupo, creando un posicionamiento de naturaleza exclusiva), o centrípeta (ambos grupos presentan una actitud conciliadora caracterizada por la emisión de mensajes de orden inclusivo y entendimiento), así como la valencia de la misma, durante el proceso independentista catalán. Además, Caballero, Naveso, Pérez-Núñez y Robles (en revisión), concluyeron que el estudio de la polarización en las redes muestra una capacidad predictiva sobre los resultados electorales del objeto político estudiado.

Title: Buzz mediático en la elección presidencial de México 2018: el dilema entre cantidad y calidad informativa.

Session Type: Individual submission

Authors:

Name: Marco Arellano-Toledo

Email: marellano7 (at) yahoo.com.mx

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: Las campañas electorales son procesos de gran envergadura que evidencian la disputa de proyectos políticos e ideológicos. Los mecanismos para comunicar las ideas centrales y la necesidad que tienen los contendientes para mostrar diferencias significativas entre ellos, convierten a las campañas en un pujante fenómeno informativo. En contextos de competencia electoral democrática, como es el caso de México, los competidores tienen acceso gratuito, garantizado y equitativo a radio y televisión para realizar pautas publicitarias, además, la propia autoridad electoral monitorea que los tiempos que los noticieros dedican al tratamiento informativo tengan un sentido equitativo. En lo que respecta al circuito digital, la falta de regulación posibilita que los candidatos pauten publicidad, atiborren de contenidos informativos, abanderando guerras sucias a través de bots, rumores y con deslealtad informativa. Por su parte, la autoridad electoral difunde mensajes publicitarios sobre las etapas del proceso electoral, los derechos y obligaciones de la ciudadanía, con el objetivo de potenciar su educación cívica, a fin de que pueda emitir un voto libre e informado.

El abundante y groso torrente informativo que consume un ciudadano durante una campaña presidencial indica que asistimos a una nueva relación en la construcción del proceso informativo entre emisores y receptores. Su articulación, basamento y formas de asimilación hoy están en un proceso vertiginoso, de cambio sustantivo. Por el momento lo único que se conoce, son sus consecuencias. La sobresaturación de información conlleva como riesgo más característico la calidad de sus contenidos, la imprecisión de sus fuentes, la presentación de juicios de valor sin sustento. Existe un desconcierto generalizado en el que tenemos acceso a más información, pero cada vez nos cuesta más trabajo procesarla, analizarla y entenderla. Hoy en día se peca de “gula” informativa, se consume mucha información, pero se digiere poca.

Este trabajo tiene como objetivo diagramar los esfuerzos comunicacionales de los cuatro candidatos presidenciales y la autoridad electoral, a fin de caracterizar cómo se nutrieron los circuitos informativos por los que la ciudadanía asimiló la campaña; se cuantificará y analizará en términos de contenidos, cuatro outputs informativos: la emisión de spots publicitarios en televisión; el volumen de información generado en los principales noticieros de televisión (a partir de un monitoreo que realiza la Universidad Nacional Autónoma de México); la emisión de mensajes y contenido informativo en las cuentas oficiales de twitter y, el contenido de la primera plana de dos periódicos nacionales ideológicamente divergentes a lo largo de los 90 días que duró la campaña.

¿Cuentan los ciudadanos con opciones informativas de calidad para ejercer un voto informado? O, por el contrario, ¿la vasta información que se genera en una campaña distorsiona el proceso informativo afectando la construcción de afinidades políticas y por ende el proceso democrático? Asumiendo que existe una saturación informativa que inunda el ecosistema de medios, los resultados de este trabajo buscan dimensionar el volumen de información a la que estuvo expuesta la ciudadanía en la campaña presidencial de 2018 y cómo dicha abundancia tuvo como contrapartida la calidad y claridad de la misma.

Title: Online news media, fake news, partisanship and the 2019 Nigerian presidential elections.

Session Type: Individual submission

Authors:

Name: Adeyanju Apejoye

Email: A.Apejoye (at) edu.salford.ac.uk

Country: GB (United Kingdom)

Affiliation: PhD Research student, School of Arts and Media University of Salford, Manchester, United Kingdom

Abstract: The pervasiveness of the internet especially the online news media within the sphere of human communication and the relative ease at which information is gathered, processed and disseminated has raised concern about the truthfulness and objectivity of an information and how such information shapes a democratic process (Allcott & Gentzkow, 2017; Jang & Kim, 2018). Similarly, the online media space has become proliferated with several information dissemination platforms so much so that determining the accuracy of an information is gradually becoming difficult (Shellenbarger, 2016). Likewise, the embedded algorithms on the various online news media and social media platforms have increased readers' polarisation and partisanship within the online space on the one hand (Druckman, Levendusky, & McLain, 2018), and unmoderated news sites that encourage anonymity and incivility on the other (Mustafaraj & Metaxas, 2017) to the extent that it has become a tool for politicking, blackmailing and mudslinging (McMahon, 2018). This paper focusses on the phenomenon of fake news within the online news media space and has as its main objective the interrogation of how fake news influence and affect the election process in Nigeria from contestations among the various political actors during campaigns to the actual elections in Nigeria. The paper adopted agenda-setting theory as the theoretical lens for investigating the research problem. Also, the study adopted a survey and content analysis methods. For the content analysis part of the research, twelve news stories including news photos and videos together with 632 comments around the news stories were analysed using thematic analysis method. Also, one hundred and twenty-three respondents completed the questionnaire. Preliminary findings revealed that most of the readers are not aware that the news they read is fake. In addition, the readers do not have adequate knowledge on how to differentiate between fake and real news, and the fake news postings are influenced by online media partisanship along political party line.

Title: Soundbites and emotional appeals: How technology and social media are changing political rhetoric ' The Portuguese case

Session Type: Individual submission

Authors:

Name: Francisca Amorim

Email: franciscagoncalvesamorim (at) sapo.pt

Country: PT (Portugal)

Affiliation: University of Beira Interior - LabCom. IFP

Abstract: The rhetorical and political communication paradigm in the world changed. The way politics, but also journalists, communicate with citizens has undergone a visible and audible transformation in the past decades, which is perceptible by the fact that discourse shrunk and became even more emotional. That way, two rhetorical strategies stand out in the current communication scenario: soundbites and emotional appeals. The intensification of its use coincides with the grow of social media and the technological innovation, so that soundbites and emotional appeals arise in response to advances in media and communication technology on society. How this transformation occurred, with what discursive characteristics and with what impact for information and citizens enlightenment are the main objectives of this work.

The presence of soundbites and emotions in politics was particularly evident in the Portuguese context during the campaign for the 2015 legislative elections. This moment of great national interest was taken as a case study, in order to know and better understand these ways of communicating. Intending to go beyond the negative connotations of the common language attributed to it, a rhetorical analysis of the soundbites of the leading candidates for the Portuguese legislative elections was carried out. The analysis intended to verify their strategic and argumentative characteristics focusing on the pathos - one of the three means of persuasion of Aristotle (along with ethos and logos).

The impact of technology and social media in political rhetoric and communication is undoubtedly. Given the communicative context that we are experiencing today, the study concludes that the configuration of political rhetoric in the form of short, catchy and affective appealing phrases was inevitable. Soundbite corresponds to an intentional option to give visibility to certain aspects, hiding and silencing others, which is deliberated both in the political and media decision-making process. In this sense, it is our intention to reflect on the challenges posed by the persuasive (in)visibility of soundbite and the discursive power of emotions for citizens.

Nowadays, political rhetoric is a nearly invisible, simplified and more emotional than rational rhetoric that found in the brevity and complexity of soundbite the best strategy to adapt to the 21st century media and social scene. Our research shows that the political rhetoric of soundbites and emotional appeals is a very effective rhetoric. By not fulfilling the canons of traditional rhetoric it does not seem rhetorical. Therefore, it requires a citizen increasingly conscious and attentive to the manipulation of what does not seem to manipulate him.

This study is the result of an investigation already carried out in a master's degree, which is currently been deepened at the doctoral level.

Title: The Development of Contemporary Media Populism in Japan: An Analysis of Media Discourse on "Reform"

Session Type: Individual submission

Authors:

Name: Shuzo Yamakoshi

Email: shuzo (at) mediacom.keio.ac.jp

Country: JP (Japan)

Affiliation: Keio University

Abstract: This research discusses on the role of the mainstream media on the development of populism in Japan.

As a result of the "Trump phenomenon" and "Brexit," there is increasing interest in the effect of SNS on populism. But critical media studies should not reduce dynamics of media populism to the social media, and the causes of populism to contemporary issues in Western society such as "anti-globalism" or "anti-immigration."

This research analyzes how antagonistic and populist political communication has been constructed over the past 20 years in Japan; first, contemporary populism in Japan has been established as a discourse of neo-liberal "reform," and second, this discourse has been formed by "liberal" news media as a style of "criticism" to conservative regime.

In order to clarify these two features, this research employs an analytical framework depending on concepts of discourse developed in theories of radical democracy. This discourse theory has been used in research fields such as critical discourse studies and critical media politics. By referring to analytical concepts such as "antagonism" and "political logics" in discourse theory, this research makes clear the process of the formation of discourse on "reform" with logics of populism.

In this research, news articles and editorials of the Asahi Shimbun are analyzed. The Asahi is a leading liberal newspaper with the second largest circulation in Japan. The period of analysis is from the mid-1990s to the mid-2000s.

Since the 1990s, Japanese society has experienced stagnation called the "lost decade." In this situation, "reform" as a political symbol won a legitimacy. Liberal media has formed the discourse of "reform." This discourse insisted that the "lost decade" was caused by the "post-war system" of politics and the economy, and therefore, it is necessary to break down the vested interests of Japanese conservative forces and promote neo-liberal reform.

The discourse of "reform" developed a narrative of good-evil dualism and a poetic justice story (logic of antagonism). In other words, the populist logic that criticizes politics and society was formed by news media including liberal media.

The discourse of this "reform" came to be appropriated by the conservative forces. Koizumi administration (2001-2006: Liberal Democratic Party) utilized this logic to develop populist politics (theatrical politics). The important point is that the logic of this populist antagonism has been widely shared since then. As a result, not only mainstream liberal media, but also various political actors and social media also began to deploy this kind of logic. Liberal media gradually came to be attacked by populists as "enemies" by this logic. In other words, this discourse has become the basic form of Japanese political communication of digital media environment today.

This research shows some suggestions for renewal of journalism through 'genealogy' of populist political communication.

Title: Social media use, self-censorship, and political expression: a moderated mediation analysis

Session Type: Individual submission

Authors:

Name: Putri Limilia

Email: p.limilia (at) unpad.ac.id

Country: ID (Indonesia)

Affiliation: Padjadjaran University

Abstract: Present study believes that social media is the appropriate medium to express opinion or idea. Since user did not need a permission to do it. However, this condition may lead to polarization and hate speech. In Indonesia, government tried to solve this problem with "Electronic Transaction Law". Some experts did not agree with this solution since it give a side effect such as people will afraid to express their opinion in social media. Therefore, this research tries to examine the mediating role of self-censorship in the relationship between social media use and political expression, the moderating effect of gender toward social media use and self-censorship relations, the relationship among self-censorship and political expression. Authors deploy spiral of silence theory in exploring the relationship among variables. The theory argues that the fear of isolation would predict individual decision about whether they want to speak up or keep silent. The present study also found that social media usage's motive, observation on communication climate, feedback, and diversity exposure will also affect it. Furthermore, it will also affect self-censorship. Therefore, authors used several variables such as social media observations as independent variable (IV), gender as moderator variable, self-censorship as mediation variable, and political expression as dependent variable (DV). Data was collected from college student (N=189) through survey design. In order to measure the variables, authors use measurement from Hayes et al (Self-censorship), Kwon et al (observation on communication climate), and Zuniga et al (political expression). The results indicate that there is the mediating effect of self-censorship in relationship between social media and political expression although it is not significant. There is a moderating effect of gender in relationship between social media use and self-censorship. Its effect varied among gender. The political expression can be predicted from social media use and self-expression. These results are consistent with prior research which stated that observation on communication climate, self-censorship, feedback, and diversity will predict political expression. Moreover, these results also indicate that the spiral of silence still relevance in social media context.

Keywords: social media use, self-censorship, political expression, spiral of silent, quantitative method

Title: Investigating a News Overload on Social Media and Users' Coping Strategies

Session Type: Individual submission

Authors:

Name: Zhieh Lor

Email: jiaeeh_13 (at) naver.com

Country: KR (Korea, Republic Of)

Affiliation: Ewha Womans University

Abstract: With the accelerated emergence of social media sites (SNS) and their growing importance in facilitating the speed and content of news consumption, people are increasingly becoming handicapped capacity processors in a mediated environment. This analogy becomes even more prevalent when considering the rapid rate of news production and consumption, along with its curation through numerous news algorithms. This study attempts to clarify the role of news overload within the theoretical framework of the limited capacity model of motivated mediated message processing (LC4MP, Lang, 2000), which emphasizes the inherent limitations of cognitive processes in a mediated environment. The evidence from this study suggests that allocation of mental resources in the human processing system is conducted at a rate commensurate with message density and complexity. Findings reveal that stimuli will thereby be ignored or unattended to when demands exceed capabilities, resulting in effects such as social network fatigue and negative emotional reactions to social network activities, including tiredness, stress, and severe redundancy (e. g. the repetition of useless message exposure). Such effects of cognitive overload in an individual's physiological and behavioral responses suggest that there may be significant performance breakdowns while using SNS platforms for news, which have the potential to powerfully affect subsequent political knowledge formation. Our results demonstrate substantive implications for the relationship between the use of SNS for news dissemination and civic knowledge formation.

In addition, this study specifies coping mechanisms such as “unfollowing,” “blocking,” and “delaying” that people commonly utilize when confronted with excessive news. These findings are contextualized within current literature by clarifying the relationship between cognitive (over)load and management while using social media for news consumption. These mechanisms become particularly urgent when considering the fact that a healthy democracy and civil engagement requires equal access to information—something that is elided with coping strategies such as news avoidance. Finally, we offer promising directions for future research in the domains of SNS news circulation and consumption.

Title: Global news flow: What countries are the Russian media talking about'

Session Type: Individual submission

Authors:

Name: Anastasia Kazun

Email: adkazun (at) hse.ru

Country: RU (Russian Federation)

Affiliation: National Research University Higher School of Economics

Abstract: International news construct images of enemies and friends. This can redirect the attention of the population from domestic social problems to foreign policy. According to the rally around the flag theory, external threats and crises lead to the consolidation of society and the growth of support for the national leader. In this paper we apply the global news flow theory to explain what countries discussed in Russian media and why. We study the mentions of 193 countries in the reports of the most quoted Russian TV channels, print newspapers and online resources for 2017. Since the Russian media have limited independence, coverage of the countries will be analyzed in different types of media – government-controlled (TV channels), relatively independent (newspapers) and independent (online resources). The data was collected using the Factiva database, containing texts of newspaper articles and transcripts of news television programs. In total, 26269 mentions of foreign countries in television news, 39171 articles in print newspapers and 31367 news in online resources were analyzed. The influence of geographic and economic factors and intercountry relations on the number of information messages about countries in Russian media is demonstrated. The high role of the economic factors in the coverage of international news was revealed. Some differences in the agendas of Russian television, press and news websites are concluded. Models that explain attention to foreign countries have a much greater explanatory power in the case of the press than regarding television. Observed differences may relate to greater control of Russia's government over television news, which makes the political relations of countries more meaningful than their economic characteristics. Although a significant number of studies carried out on materials of Europe and the USA suggest that the agendas of different types of media are similar, Russian data demonstrate the opposite. In addition, the paper pointed out the extremely high attention of Russian media to the US, which exceeds even the number of references to own country.

Title: The use of affective communication by right-wing parties on Twitter during election campaigns: The case of German State Elections in Bavaria and Hesse in 2018

Session Type: Individual submission

Authors:

Name: Vivien Benert

Email: v.benert (at) fu-berlin.de

Country: DE (Germany)

Affiliation: Freie Universität Berlin

Abstract: The communication strategies of populists and right-wing parties such as the German Alternative für Deutschland (AfD) have recently received considerable attention in communication science (Heinisch, Holtz-Bacha & Mazzoleni, 2017). Especially social media have been argued to be a driver of the dissemination of fake news and hate speech, which in turn have been linked to populist parties and their communication strategies during election campaigns. These changes in the affective dynamics and modes of (political) communication in digital media environments can lead to what has been described as dissonant public spheres (Pfetsch, 2018). Due to technological changes and an increasing number of actors (e.g. non-professionals, social bots) in political communication on social media, dissonance in the public sphere increases, making political deliberation more difficult. At the same time, the importance of social media, especially Twitter, as an important tool for political actors during election campaigns has been emphasized (Jungherr, 2016).

From a dissonant public sphere perspective, affective dynamics of the contents of issue publics are important with regard to the quality of discussions and deliberation in public spheres. This is especially true for election campaigns. This study therefore focusses on affective communication in Twitter discourses about the German state elections in Bavaria and Hesse in 2018. Since retweets are an important element of information dissemination and thus affect polarization and attention dynamics to content on Twitter, the questions of who retweets whom and resulting communication strategies are of special interest during election campaigns. The research question is: How does the use of affective and emotional communication of the right-wing party AfD differ from other actors' communication in Twitter retweet networks about the German state elections in 2018?

To answer this question, social network analysis will be combined with co-occurrence analysis of words to gain insights into the structure of the retweet networks and the use of (affective) language of important actors on Twitter. The data includes all tweets containing the official hashtags for the two elections (#ltwby, #ltwhe) from the election weeks in October 2018, respectively. Data was retrieved via the Twitter Search API and the R-package rtweet resulting in a total of N=300,141 tweets. The importance of specific actors will be evaluated using measures from network theory (degrees, betweenness). Community detection will be used to identify clusters of densely connected nodes in the networks, depicting what can be interpreted as communicative coalitions.

Preliminary results indicate that the AfD gets most of the attention in terms of hashtags, mentions, and retweets. Thus, a closer investigation of network structures and language used by different actors seems promising to further understand the communication strategies applied by populist actors on Twitter. Data analysis will be finished in April 2019.

Title: Global News Flow in G-20: Attention to Countries vs Attention to Leaders

Session Type: Individual submission

Authors:

Name: Anton Kazun

Email: kazun.anton (at) gmail.com

Country: RU (Russian Federation)

Affiliation: National Research University Higher School of Economics

Abstract: The paper analyzes the global news flow in the G-20 countries in 2017-2018. For the analysis we use the global news database Dow Jones Factiva, which includes nearly 33,000 media from 159 countries of the world. We compiled a list of 3 leading print media for each of the G-20 countries (120 sources) and coded the number of mentions of all G-20 countries in each of them. The similar database was created for mentions of national leaders in all G-20 countries. Based on the created matrices with mutual mentions of the G-20 countries and their leaders, we build networks: in the center of the network there are countries or leaders that are more often mentioned in leading foreign print media, and on the periphery those who are less often mentioned in the media. Existing literature (Golan, 2008; Guo & Vargo, 2017; Kim & Barnett, 1996; Segev, 2015; Wu, 2000; Wu, 2007) generally indicates that the global news flow could be generally explained with economic factors (GDP, trade etc.). We show that the situation is more complicated: interest to some countries could be largely explained with economic factors, while the interest to other countries depend on political factors (for example, participation in international conflicts, level of democracy etc.). The network analysis revealed the presence of asymmetry in the number of mentions of countries and the number of mentions of their leaders. If the attention to a country (or its position in the network) depend to a significant extend on political factors, then the name of the leader will have a relatively higher centrality on the network than the name of the country. Conversely, the leaders of countries whose mentions could be generally explained by economic factors are less frequently mentioned in foreign media. Thus, comparing the attention to the country and to its leader, it is possible to draw conclusions about the factors which explain high or low interest to the country.

Title: Changes in election campaign strategies. Party or media driven'

Session Type: Individual submission

Authors:

Name: Kajsa Falasca

Email: kajsa.falasca (at) miun.se

Country: SE (Sweden)

Affiliation: Mid Sweden University

Abstract: During election campaigns, political parties are primarily vote-seeking. This means we can expect them to design their election campaign strategies in order to be as effective as possible in attracting the support from the electorate. Over time, the media have become increasingly influential and the perceived need to communicate through the media is especially important in election campaigns (Strömbäck, 2008). The process of mediatization of politics is defined as a process where media is not only becoming more important for political information for the electorate but also has spill-over effects on how political actors more or less reactively or proactively adapt to the media and their own needs to communicate through the media (Strömbäck and Esser, 2017). However, the influence of mediatization on election campaign strategies cannot be taken for granted. If and to what extent mediatization effects political parties and their campaign strategies must ultimately be regarded as an empirical question requiring empirical research. In this paper, we investigate what the main driving forces behind the changes or developments of political parties' election campaign strategies are. We derive and evaluate expectations from two competing theories. First, party change theory (e.g. Harmel and Janda 1994) holds that parties change as a consequence of party specific events such as electoral failure, shift in party leadership or change in dominant faction in party. To validate this perspective, we expect parties' campaign strategies to change asynchronously, that is, in different ways dependent on party specific events and characteristics. Second, mediatization theory argues that a media logic increasingly is determining the actions by political actors. From this perspective, therefore, we would expect parties to adapt synchronically. In other words, we would primarily expect to find patterns of similar changes independent of party characteristics. In order to evaluate the hypotheses this study is based on systematically collected data from interviews and surveys with party secretaries from each of the political parties represented in the Swedish national Parliament at the time. The empirical material covers the 2010, 2014 and 2018 Swedish national election campaigns, which allows us investigate developments over time and within the same national context.

Abstract: Interaction among newsmedia, politics and public sector organizations in Italy (Francesca Rizzuto, Associate Professor University of Palermo, Lucia D'Ambrosi, Assistant Professor University of Macerata, Gea Ducci, Associate Professor University of Urbino Carlo Bo, Alessandro Lovari, Assistant Professor University of Cagliari)

The paper will present different perspectives of the problematic relationship among newsmedia, politics and public sector organizations in Italy in order to underline the permanence of some traditional features as well as the emergence of a new style of interaction, connected to the success of infotainment and to the pervasive use of social media, which brought about a redefinition of the role of political journalism. As a matter of fact the contemporary communication circuit among institutional sources, political actors, journalists and citizens outlines a new information ecosystem, a framework in which there is a changed perception of the meaning of journalism (Zelizer 2004; Morcellini, 2011).

The attention will be focused on two fundamental topics, highlighted by the most recent scientific debate: on the one hand, the corpus of studies that identified the peculiarities of Italian information system, often presented as an anomaly among Western countries (Forgacs, 2000; Murialdi, 2006). On the other hand, on the current problematic configuration of the interaction between public organizations and social media and its impact on the participation of citizens to democratic life (Ducci 2017; Faccioli 2013; D'Ambrosi 2012; Mazzoleni, 1998).

Hallin and Mancini (2004) included Italian journalism in the Mediterranean or pluralist-polarized model: according to them, in Italy, as in other Southern European countries, there is a peculiar relationship between the media and politics because capitalism and democracy developed later than other contexts. This slow transition to political democracy produced the tendency to consider media as instruments of political mobilization and to use them not to inform but to participate to politics (Bennett, Segerberg, 2013).

In this perspective, therefore, the characteristics of the political system would have strongly influenced the evolution of the newsmedia and their high degree of political parallelism. This anomalous proximity-proximity between journalists and politics has given rise to a sclerosis of the information circuit from politics to citizens, with the exclusion of the latter as active actors of the democratic dynamics. At the same time public institutions have not played an active role in involving citizens and promoting a wider democratic debate.

More recently, the presence of social media made possible a radical change in the interaction among newsmedia, politics and public institutions (Rizzuto, 2018; Sorrentino 2008; Lovari, 2013).

Moreover, with digitization and social media, Italian public sector organizations started to actively enter the communication circuit, with their press offices and official social media platform, bypassing traditional newsmedia and reaching directly citizens and their strategic publics. The article will investigate the Italian case study, identifying the main factors that have created these hybrid flows and complex dynamics related to the interaction of these social actors in the contemporary communication ecologies.

Title: The venting, taming and channelling of outrage online: background communication dynamics of an ad-hoc protest against animal cruelty

Session Type: Individual submission

Authors:

Name: Benjamin Loveluck

Email: benjamin.loveluck (at) telecom-paristech.fr

Country: FR (France)

Affiliation: Telecom ParisTech

Abstract: On the 31st of May 2017, a stray cat was discovered dead and mutilated in Draguignan, France, a town of 40,000 inhabitants. The event was reported the very next day in the local newspaper Var Matin but also many national outlets, with gruesome details of “torture” and a “massacre” committed by a “gang of young people”. Intense outrage sparked the immediate setting up of Facebook groups, along with the creation of an online petition on Change.org asking that “justice be done”. The petition quickly gained traction and eventually reached over 265,000 signatures – thus becoming one of the ten most successful petitions on Change.org for France in 2017.

With no resolution of the crime in sight, the movement grew steadily with demonstrations organized in Draguignan, Marseille and Paris, along with other forms of protest. A suspect was finally arrested by the end of July, and a different narrative emerged – much less dramatic than the one which initially precipitated the outrage. During that period however, passionate activity unfolded online and took a diversity of forms:

- expressing grief for the martyred cat, which became an icon for the movement;
- carrying out investigations and assessing information in order to establish the facts and make sense of the many rumours and unfounded accusations which were (sometimes intentionally) spread;
- calling for action, with an active minority pushing for the suspects to be found and punished directly, while others advocated more routinized forms of protest.

This contribution aims at understanding the internal communication dynamics of these events and the ‘connective action’ associated with expressive forms of public engagement (Bennett & Segerberg 2012). The study focuses on the social media ‘backstage practices’ (Treré 2015) of an emotionally-charged protest movement. It explores the emergence of a collective identity (Gerbaudo and Treré 2015) and highlights the ‘messy’ and uncertain nature of such ad-hoc mobilisations by addressing three related issues. The first one is the expression of outrage as driver of an ‘affective public’ (Papacharissi 2014), and how it relates to the collective definition of the boundaries of legitimate political action, sometimes verging on a form of parallel policing and digital vigilantism (Loveluck 2016; Trottier 2017). The second is an assessment of how information is discussed and deemed trustworthy (or not) within a group engaged in such collective actions. The third is an appraisal of the role played by informal ‘leaders’ online (Poell et al. 2016) as highly contested yet essential figures for organizing and setting limits to the discussions.

The research is based on a digital ethnography (Markham & Baym 2009; Hine 2008) and mixed methods approach combining several types of empirical material: 1) online observation and archiving of webpages, Facebook groups and online petitioning platform Change.org; 2) collection and analysis of quantitative data from the platforms where possible, particularly Facebook pages scraped at regular intervals via the Netvizz application (Rieder 2013); 3) semi-directed interviews of key actors such as Facebook page admins and Change.org representatives. The scale of the issue and the short time frame until its resolution (4 months) enabled the collection of comprehensive data and detailed analysis.

Abstract: In general, social movements have a limited capacity in influencing media thematic agenda and the interpretative frame that will prevail in covering protest events. In fact, social movements are compelled to compete with other actors in the definition of the specific frames that will become dominant (Albizu, 2016). In such a competition, they not only aim to receive broad coverage (standing) and to convey their own approach to the issue (preferred framing), but also, as Gamson & Wolfsfeld (1993) affirm, to receive positive coverage (sympathy). Sympathy thus refers to the tone with which the social movement and its actors are covered.

Most of the research developed in the field of mainstream news media's portrayal of social movements totally or partially supports the so called 'protest paradigm' (Chan & Lee, 1984). According to this paradigm, protests and social movements are usually covered in a negative way. Among the characteristics of this media treatment, McLeod & Detenber (1999) highlight the following: use of narrative structures that emphasize violence, reliance on official sources and official definitions, representation of activists as minority groups, and the use of other techniques that involve the marginalization of activists. However, the media treatment of social movements does not always fit within the protest paradigm (Edgerly, Toft, & Veden, 2011; Shahin, Zheng, Sturm, & Fadnis, 2016; Veneti, Poulakidakos, & Theologou, 2012). Consequently, the question to be answered is: What causes a social movement or an act of protest to receive favorable media treatment or more adapted to its objectives? In the quest for a response, different movements and protests have been analyzed and comparative research has been promoted, without getting a unanimous agreement.

This papers aims to collaborate with new data to this debate. Thus, our main purpose is to develop a comparative analysis of the news media treatment of two Spanish social movements: the 15-M movement (or Indignados movement) and the Platform of People Affected by Mortgages (Plataforma de Afectados por la Hipoteca). The media portrayal of the 15-M has been the subject of several studies. However, the comparative approach has been quite absent, despite its potential to offer relevant information about the factors that may influence the media treatment of social movements and the possibilities of getting a more positive coverage. From this comparative perspective, a mainly quantitative content analysis has been applied on a sample of news about the 15-M and the PAH published in the digital editions of five of the most popular Spanish mass media.

The results question the main premises of the protest paradigm, given the mostly positive or neutral treatment received by both movements. Both the PAH and the 15-M take advantage of the structures of opportunities that open with the financial crisis of 2008. However, the journalistic coverage of the PAH is significantly more favorable compared to the 15-M, which is derived from the PAH's combination of both disruptive (to attract the media) and institutional (to get positive treatment) tactics. This combination is reinforced through the PAH's strategy of communication.

Affiliation: City University of Hong Kong

Abstract: This study examines the role played by social media during the political crisis triggered by the Catalan Referendum of Independence held on October 1st, 2018. The referendum was denounced by the Spanish government which swiftly deployed judicial and police resources to quell the rebellion and re-establish the Spanish legal order in Catalonia. Many Catalan citizens, led by the independentist parties, took the streets to protest the government's moves against independence. The protests were extensively covered in both national and international news media and caused a flurry of activity in the social media sphere. Our study seeks to shed more light on Catalan citizens' engagement on social media, testing the assumption that these platforms provide robust public forums for political expression, discussion and deliberation during the times of political turmoil. More specifically, we examine what citizens did not do on social media, who they avoided and/or unfriended, as well as the implications of such social media behaviors for political polarization in Spain.

Our findings, based on 45 interviews with Catalan citizens, show that despite strong political partisanship, Catalans show marginal inclinations to discuss political issues online and consequently develop what we term a teflonic social media behavior. This form of self-presentation strategy on social media may involve self-censorship, segmentation of content by platform, and selective avoidance of topics for discussion (Pitcan, Marwick, & boyd, 2018). By implementing these personal tactics, they avoid commenting and sharing political information about the Catalan conflict, due to inappropriateness, sterility, or tediousness. As for political polarization, it is articulated through reciprocal discourses of alterity, "us" against "them" (i.e. independentist vs. unionist) by which Catalan citizens legitimate or challenge the narrative of the independentist process ("El Procés"). Political discussions on social media are mainly triggered by obvious lies or fake news that both sides of the political spectrum understand should be challenged or countered based on their own opinions or real-life experiences. Our participants report that despite that the fact

that the independence movement has undeniably heightened social and political conflict, the unfriend button on social media was only used when specific norms of uncivility were breached (see Schwarz & Shani, 2016, for similar findings in Israel). Verbal aggression, calls for violence, and blind insistence on certain issues (repeatedly expressed) were the typical triggers for tie dissolution on social media, rather than the mere exposure to dissonant views and opinions. We argue that the perceptions of the dramatic social consequences of the independence process reported by national media are challenged by individual narratives of Catalans, in a context where the independentist bubble is losing breath due to its media and social ubiquity.

Title: Tweeting to Influence Policy or Populism? A comparative analysis of France, Portugal and Spain

Session Type: Individual submission

Authors:

Name: Susana Salgado

Email: susanapsalgado (at) gmail.com

Country: PT (Portugal)

Affiliation: Universidade de Lisboa, Instituto de Ciências Sociais

Abstract: This paper presents the results of an analysis intended to assess whether different types of actors (e.g., politicians, political parties, journalists, pundits, interest groups, citizens) in France, Portugal and Spain are using Twitter to discuss and influence policy. The main RQ is as follows: Is Twitter just a means for spreading populism, or it is also being used to influence policy direction and policy decision-making in a substantive manner?

The paper addresses specifically the character and tone of online political speech and debate, and indirectly the risks of polarization in political discussions that may result from online discussions. It investigates whether online political discussions on issues and policy are strengthening new forms of democratic participation and citizen engagement, or if they are on the contrary polarising positions and disseminating populist agendas and approaches to problems (e.g. over-simplification of issues, etc.).

The rationale behind the choice of these three countries signals the intention of studying cases with different types of populist politicians and political parties, which have also different levels of electoral success. This allows examining whether the electoral success of populist political actors impacts on the characteristics of online messages on issues.

The methodological approach is based on content analysis (human and automated) of tweets. The analysis looks for patterns in the prevalence of references, discussions, and proposals of policy in tweets, as well as the prevalence of populism and antagonism. It classifies the tone of messages and investigates specific expressions of antagonism, hate and insult; and analyses populist rhetoric through specific elements that have been linked to populism in extant literature, such as: reference to ‘the people’ and/or expression of closeness and belonging to the people; anti-elitism (addressed to any type of elite); anti-system and anti-establishment; division between “us and them”; other expressions of dichotomous views (e.g., good vs. bad, right vs. wrong; evil vs. pure, etc.); blame frame; and other expressions of blame shifting and scapegoating.

This paper is part of ongoing research included in research project ‘Politics, Policy and Populism in the New Media’ funded by the Portuguese Foundation for Science and Technology - FCT (2015-2020; Reference: IF/01451/2014/CP1239/CT0004).

Abstract: Political scientists conceptualize populist politics as a political strategy whereby a leader claims to be the people's sole true representative reaching voters directly bypassing established intermediary organizations (Wayland 1999, 381) and as such, the populist actor him/herself becomes the crucial element (Ernst, Engesser, Buchel, Blassnig, Esser, 2017). Not surprisingly, one of the key constitutive elements of populist movements is a focus on a charismatic, often, narcissistic and intolerant party "leadership" (van Kessel, 2011; Wayland, 1999; Heinich 2008; Linden, 2008). Political scientists define charisma as a distinct type of legitimate leadership that is personal and aims at the radical transformation of an established institutional order (Pappas, 2011). While the construction of charisma has been a subject of analysis in political communication, salience of the media's role in manufacturing charisma, particularly, in this age of "mediatized populisms" (Chakravartty and Roy, 2017) has been underexplored.

This paper illuminates the similarities and differences in the use of media to construct a personal appeal by the leaders of the world's two most populous countries - India and China – across different political systems. Both Chinese President Xi Jinping and Indian Prime Minister Modi have carefully crafted and drawn on personal appeal to consolidate their hold over authority. Xi Jinping has been described as China's first populist president (Babones, 2017) as he has projected himself as both as the affable "Xi Dada" unleashing the popular anti-corruption crackdown while burnishing his strongman credentials through the "rule of fear". (Chang and Ren, 2017). The incumbent leader, Modi's historic parliamentary majority was ascribed to his charismatic personality. The Modi's "charismatic" leadership is attributed to have fashioned a new hegemonic bloc by reconstituting the voting public pulling together contradictory strands of tradition and modernity, capitalists and the working class, upper and lower castes, rewriting electoral success (Sinha, 2017; Chakravartty and Roy, 2017).

Both the states have significantly differing political systems but their political leaders bear a striking similarity in their embrace of digital technologies at the heart of propaganda, public opinion and social control work (Creemers, 2016). A discourse analysis of Modi's Twitter account and the nearest Chinese equivalent, a public Weibo account of People's Daily about Xi, titled Xue Xi Wei Pi Tai will be undertaken over a six month period preceding their elections to examine the manufacture of charismatic appeal and personal image and the constitutive elements of it. The

research seeks to examine and outline strategies adopted by populist leaders like Modi and Xi Jinping, who have always exerted tight control over media coverage of themselves (Ohm, 2015), used to manufacture political charisma adopting the Weberian idea of it being socially and politically constructed (Keller, 1999).

Given the inextricable link between charisma and populism, analyzing the process by which political charisma is constructed is crucial to our understanding of the mechanisms of populist politics (Gurov and Zankina, 2013) and its implications for deepening authoritarianism across political systems.

Abstract: In addition to the emergence of new communication tools and suffering from public mistrust, Western Journalism has faced another challenge in the recent past: explicit opposition by members of the political elite. This is not a new phenomenon. It is well known that authoritarian and populist leaders seek to consolidate themselves in power by marginalizing important actors for democracy - such as the communication companies (Levinitsky and Ziblatt, 2017). Literature in the area of Political Science (Inglehart and Norris, 2016) points out that one of the representatives of this type of behavior is US President Donald Trump, who has already pronounced statements saying that "80% of the media" is enemy of the American citizens (Patterson, 2017) and has harassed reporters from companies with which he does not sympathize as well. In this context, Trump's use of his accounts on social networks, especially on Twitter (BOSSETTA, 2018), is an essential tool for him to disseminate his views among voters - often performing attacks on media outlets such as CNN and The New York Times, classifying their content as fake news. It is, therefore, the crystallization of the hostile media phenomenon by a political agent, in the manner described by Mattes, Maurer and Arendt (2017). In this context, this paper intends to deepen the understanding of the relationship between populist leaders and media companies, as well as the hostile media phenomenon in the case of political agents, focusing on Trump's attacks towards US media. To do so, the research does a Content Analysis (Bauer, 2002; Krippendorff, 2004) of the tweets published by the president during the 2016 election campaign and his first two years at the office (2017 and 2018). The study will allow the development of a typology of attacks, identifying 1) how much they represent in comparison to Trump's total posts on Twitter; 2) which are the most attacked companies; 3) which themes are the most recurrent in this type of post; and 4) what arguments the president uses to disqualify journalistic content that bothers him. As this is an exploratory research, the study does not offer a working hypothesis, but it seeks to contribute to the literature of the area by providing a typification of the attacks and giving more details about the case under analysis. The current stage of the research is the data collection, with forecast of a finished paper by April 2019.

Keywords: Donald Trump; Twitter; populism; hostile media.

Title: The post-truth in the conversation of Spanish-speaking public space. An analysis of #Posverdad on Twitter

Session Type: Individual submission

Authors:

Abstract: The public sphere of Habermas (1962) has been collapsed by Internet and social networks. We went from a mediatized public reality to a public reality altered by Internet users and the new technologies. To a reality in which the bots are the new producers of social referents and in which the prosumers have a symbolic interference. This incorporation enhances, among other things, the dissociation between the affirmations and the facts. The cognitive bias currently covers the post-truth understood as "a form of ideological supremacy, whereby its practitioners are trying to compel someone to believe in something whether there is good evidence for it or not. And this is a recipe for political domination" (McIntyre, Lee, 2018: 13). The US presidential election of 2016 and the Brexit catapulted into the public sphere the discussion of post-truth, fakenews and "alternative facts" (or lies).

The objective of this research is to analyze Twitter as a conversation tool for peripheral public spaces. Specifically, we will analyze what and how Twitter is spoken about post-truth and what concepts and themes are associated. There are numerous studies that reveal the inextricable relationship between post-truth, political communication, political parties and elections (Gross, 2017, Rose, 2017, Ott, 2017, Sismondo, 2017, Tsipursky, 2017) from an Anglo-Saxon point of view. But little do we know what happens with this concept in the Spanish-speaking public space. The object of analysis is the hashtag #Posverdad used in Twitter from November 1, 2018 to February 7, 2019. In total we analyzed 753 tweets using the methodology Social Network Analysis (SNA) with Phyton. Basically, we have focused on the measurement of centrality, density and clustering coefficient.

The results of SNA of #Posverdad on Twitter reveal that this is directly related to the concept of Fakenews (in English) and to pedagogy; to a lesser extent, but equally important, with technology and creativity. Although timidly the debate on post-truth and the American president Donald Trump leaked into the discussion in the peripheral Spanish-speaking public space. The geographical areas from where it is supposedly discussed about post-truth is mostly Spain, in second and third place Argentina and Mexico. Other countries with significant results are Colombia, Chile and Peru.

One of the limitations of our research is to analyze Twitter as a public space due to the difficulties to verify the identity of profiles and duplicity among other things. But nevertheless, our analysis provides knowledge on the use of digital tools as dynamizes of peripheral public spaces of conversation and specifically on how the Spanish-speaking community does not directly relate #Posverdad to the political sphere. Instead, in some way, it appeals to literacy to fight with this new form of political domination and cognitive dissociation.

Title: Comunicación política y valor público: Una propuesta para evaluar las acciones gubernamentales de Participación Ciudadana y Transparencia

Session Type: Individual submission

Authors:

Name: Mariana Herrera Capriz

Email: marianah (at) ucm.es

Country: ES (Spain)

Affiliation: PhD student, Facultad de Ciencias de la Información, Universidad Complutense de Madrid

Abstract: En septiembre de 2011, la Asamblea General de la ONU, aprobó la Declaración para un Gobierno Abierto para desarrollar iniciativas que promuevan la transparencia sobre las actividades gubernamentales, empoderen a los ciudadanos y fomenten la participación mediante las nuevas tecnologías.

Sin embargo, años después de la firma de este acuerdo, se puede afirmar en conclusión común con la literatura, que los gobiernos no están aprovechando al máximo la tecnología y las posibilidades de interacción que ésta brinda para alcanzar la llamada “gobernanza colaborativa”, en la que la sociedad actúa mediante la “sabiduría colectiva” (Calderón y Lorenzo 2010, Cruz 2015; Ramírez-Alujas, 2011; Canel, 2018)

Este paper analiza la capacidad que tienen las acciones gubernamentales de empoderar a la sociedad con sus prácticas de transparencia y gobierno abierto desde la corriente de estudios llamada Valor Público. Perspectiva que ha sido sugerida para evaluar la capacidad de las administraciones públicas para orientar su desarrollo tecnológico a los objetivos de participación y colaboración (Criado y Rojas, 2013: 23; OECD, 2010; Mergel, 2012; Harrison et al., 2012). Pero es todavía muy escasa la investigación que elabora y aplica marcos de evaluación de valor público a acciones gubernamentales específicas en este campo.

La creación de valor público implica colaborar con los públicos; para que esto suceda, las organizaciones públicas han de otorgar a la sociedad espacio en la gestión pública. La comunicación puede actuar ayudando a los gobiernos a escuchar, a contemplar la experiencia de la sociedad, y a brindar capacidad de participación (Moore, 2013; Concha y Naser, 2011, Canel, 2018).

Esta investigación se apoya en una investigación previa que manifiesta que las fórmulas de evaluación de la transparencia que se suelen aplicar a los gobiernos municipales no llegan a captar algunos aspectos que caracterizan al valor público. La investigación analiza 15 Ayuntamientos de la Comunidad de Madrid, y plasma que hay ayuntamientos que poseen información vasta y valiosa, pero no la proporcionan en condiciones para que sea entendida por los públicos; y hay ayuntamientos que proporcionan la información completa exigida, pero sus ciudadanos no participan activamente de la información (Herrera, 2018).

A partir del modelo creado por (Harrison et al., 2012) que identifica mecanismos en dónde acciones como la transparencia, colaboración y participación no son fines en sí sino medios para lograr construir Valor Público; este paper explora la relación para evaluar las variables que contemplan la comunicación de la Transparencia (Usabilidad/Funcionalidad, Comprensión, Veracidad/Actualización, Localización/Filtrado, Estructura/Visualización e Integración, (Herrera, 2018; Martínez, 2015, Sandoval y Gil-García, 2009) y los indicadores de impacto de acción gubernamental que sugieren Harrison et al. (2012) en su modelo para el análisis del valor público que generan las acciones gubernamentales en red de transparencia y participación.

Con apoyo en datos de gobiernos municipales, el paper sugiere qué es lo que hace que unas prácticas gubernamentales de transparencia y gobierno abierto logren que la sociedad se empodere, participe y se involucre; y sugiere un modelo de evaluación que tiene como fin último generar valor público para todos los sectores involucrados.

Title: Migration in an electoral context: the case of Italian media discourse in the 2018 parliamentary campaign

Session Type: Individual submission

Authors:

Name: Catalina Meirosu

Email: meirosucatalina (at) gmail.com

Country: RO (Romania)

Affiliation: University of Bucharest

Abstract: In Italy, the discourse on migrants has increased in the context of the Italian parliamentary elections in March 2018 when the electoral programmes of the anti-system parties were focused especially on stopping migratory flows. During the electoral campaign, the populist public discourse of the North League and Five Star Movement parties has been characterized by a solid anti-migratory rhetoric that increased the distinction between ‘we’ and ‘them’ (Antonsich, 2015) through slogans such as “Italians first”, “Stop the Invasion”. In this paper we analyse how media -through diverse positioning, including those of politicians- situates migration and especially labour (intra-EU) migration in an electoral context. Hence, the research focuses on specific ways in which media re-brought some key topics related to migration in the electoral context which had been previously covered by the Italian press. Considering these premises, the research answers two related research questions: "What types of representations of migrants (in particular of Romanian migrants) are built in the Italian press, taking into account the context of Italian elections?" and "To what extent, by representing migrants, the media makes use of a public memory that include sensitive topics about migrants and labour migration (past representations and contexts) to build claims and types of responsibilities? By relying on these research questions, our claim is that the election context could be understood as a site of discursive struggles in which public issues (such as migration) are reframed by various public actors (especially by politicians and media) and thus, instrumentalized. Therefore, the 2018 parliamentary elections represent a key context of public debate on migration which should be seen within the broader Italian media dynamics. Based on an interdisciplinary analytical framework that links transnationalism (Portes et al., 1999; Boccagni, 2012) and media and migration studies (Balabanova, Balch, 2010, Belmonte et al., 2012), this paper focuses on opinion articles from two Italian daily general-interest newspapers: La Repubblica (centre-left political stance) and Il Giornale (one of the most popular among the right-wing national newspapers). A multi-method research design is developed, covering the month of February 2018 when the debate on elections has begun to get even more intense. In this period, the public discourse culminated with the attack of the former League candidate Luca Traini on migrants that brought back to public attention the increasingly xenophobic and anti-migratory rhetoric. In this regard, content analysis is used, on the one hand, to identify the extent to which the migration and more precisely labour migration is a topic of debate in the Italian press during the electoral campaign of 2018 and, on the other hand, what type of migration is covered by the Italian press (labour migration, refugee crisis etc). Complementary, tools from Critical Discourse Analysis (Fairclough, 2003; Wodak, 2010) is used to highlight media discursive practices of representing migrants especially in terms of building forms of engagement through normative statements and moral assessments (Beciu et al., 2018), inclusion/exclusion and prevailing ways of being and acting.

Key words: Italian elections, labour migration, media discourse, media representation, public debate, transnationalism.

Title: Clasificación de sentimientos en Twitter desde la noción de cultura política: una revisión discursiva en el escenario electoral de Colombia

Session Type: Individual submission

Authors:

Name: Ysabel Briceño Romero

Email: ybriceno (at) unab.edu.co

Country: CO (Colombia)

Country: CO (Colombia)

Affiliation: Universidad Autónoma de Bucaramanga

Abstract: En la ponencia se comunicarán los primeros avances conceptuales y metodológicos de una propuesta de clasificación de sentimientos en contenidos derivados de Twitter, desde la noción de cultura política como una expresión de la opinión pública asociada a actores, estructuras y procesos del sistema democrático. La investigación está centrada en el desarrollo y reflexión de rutas posibles para el reconocimiento discursivo de contenidos derivados de los hashtags o etiquetas Twitter, como unidades temáticas controladas.

Con la incorporación de la noción “cultura política” a la clasificación discursiva en redes sociales proponemos una adaptación de conceptos aplicados en encuestas de opinión pública en América Latina sobre el apoyo político o la desafección política del ciudadano.

La investigación transita por la aplicación y verificación de técnicas para la clasificación de sentimientos, centrada en los usuarios de Twitter como emisores de contenido, hasta la anotación manual y entrenamiento de un modelo de clasificación de mensajes originados en un contexto de campaña electoral presidencial. En esta experiencia se han documentado fases de reflexión y sistematización de ideas para fortalecer el aparato conceptual que la ha ocupado, así como también el desarrollo de un protocolo metodológico. Proponemos un enfoque interdisciplinario que sea enriquecido con criterios de revisión del discurso y la pragmática del lenguaje, adaptando categorías relacionadas con cultura política, más allá de las opciones incorporadas desde el área de procesamiento de lenguaje natural para la clasificación automática de sentimientos en el ámbito de lo positivo, negativo o neutral en el discurso.

Los contenidos derivados de la red social Twitter fueron descargados en el contexto del proceso de elecciones presidenciales del año 2018 en Colombia. El dataset obtenido consta de los contenidos

encerrados temáticamente en cinco etiquetas o hashtags originados en Twitter por los debates presidenciales, promovidos por empresas mediáticas, universidades y organizaciones empresariales, y transmitidos en momentos diferentes durante la primera vuelta de estas elecciones, por canales diversos, tradicionales y emergentes (televisión comercial, Youtube, y streaming por redes académicas). El total de tuits susceptibles al análisis fue de 6241.

Para el desarrollo de este trabajo se propuso realizar una clasificación discursiva desde cinco categorías adaptadas, en la llamada entidad o centro del mensaje: cultura Colombia, ejercicio democrático, instituciones democráticas, actores políticos, e ideología, a cuya anotación se les cruzó la valoración del sentimiento (negativo, positivo o neutro). Un subconjunto de los tuits descargados originalmente fue clasificado por un equipo de clasificadores, quienes dado un tuit, asignaron un valor a cada categoría propuesta. En este momento los resultados están siendo procesados para detectar grados de coincidencia en la anotación, entre los grupos de clasificadores, desde metodologías ya trabajadas en experiencias de clasificación de sentimientos.

Como contribución, consideramos que al reconocer los flujos y tendencias discursivas que emergen en las conversaciones de Twitter en temas nacionales con impacto social significativo, podría aportarse en la identificación de un capital social en la nueva conformación de opinión pública en entornos digitales, en medio de escenarios trascendentales para América Latina. La interpretación centrada en unidades temáticas de Twitter, expresadas en hashtags, nos propone la continuación de una línea recientemente abierta en la revisión de la opinión pública en esta red social.

Country: FI (Finland)

Affiliation: University of Jyväskylä

Abstract: Many countries are facing a number of socio-economic challenges and social risks, particularly in a period of public sector austerity. At the same time, public managers are increasingly involved in collaborative relationships with citizens to design, implement and evaluate public services. In this sense, scholars have extolled the virtues of public deliberation as a fundamental component of a responsible and responsive democracy (Carpini et al., 2004; Carpini, 2009; Dahlgren, 2005). Literature documents the positive outcomes of public participation arising from the direct involvement of citizens (Adams and Hess 2001; Head, 2008; Yang & Pandey 2011; Barrett y Brunton-Smith, 2014; Brandsen y Honingh, 2015). In fact, a "committed citizen" has been defined as that who participates in public activities (Adler and Goggin, 2005; Ekman y Amna, 2012; Kahne et al., 2012, among others).

However, so far few studies have been able to measure the benefits that a participatory society has for the economy of a country. This paper aims to assess the impact that citizen engagement has on tangible growth and provides suggestions to improve public sector communication with citizens. Building on theory of intangible assets as applied to the public sector (Canel & Luoma-aho, 2015, 2018), this paper explores the relationship between engagement—conceptualized as an intangible asset built through communication—and tangible growth (wealth), and it uses international comparisons (Northern European countries are compared to Southern ones, 14 countries on the whole) to examine the global impact of engaged citizens.

The methodology entailed the following steps: 1) Variables that may express Citizen Engagement were identified. Apart from literature review, two sets of data were analyzed. Firstly, data from the World Bank were used for valuable indicators on economic growth at the macro level of countries. Secondly, data from the European Social Survey and Eurobarometer were used to elaborate indicators of intangible assets based on citizens attitudes and behaviours; 2) Factor analyses were conducted to examine whether there are components that explain Citizen Engagement; 3) A linear

regression model was built to compute how different factors of Citizen Engagement shape economic growth (Gross Domestic Product [GDP] per capita is the dependent variable). Data from 14 countries was used.

Present research: 1) Shows that political engagement behaves different from public engagement; 2) Shows a positive and direct relation between the intangible asset Citizen Engagement and tangible wealth; 3) Suggests a regression model that allows for exploring causal relationships as also for predictions, and so it will assist in the elaboration of governmental public policies of citizen participation; 4) provides comparative data on citizen engagement and its influence on growth from 14 Northern and Southern European countries.

Based on findings, this paper determines the relevance of citizen participation and provides suggestions to improve public sector communication with citizens.

Title: Encouraging Myself: Expression Effects and Political Efficacy

Session Type: Individual submission

Authors:

Name: Meyer Levy

Email: mlevy3 (at) nd.edu

Country: US (United States)

Affiliation: University of Notre Dame

Abstract: Online discussion has revolutionized the means by which individuals communicate and discuss politics. Nowadays, the political conversation has largely moved to online discussion forums and video hosting websites. This fact is so plain as to have produced massive censorship and manipulation efforts by states around the world. However, the mechanisms underlying this revolution are still unclear. Although a number of studies have examined the effects of online discussion on the political behavior and orientation of individuals, they have done so from within a relatively narrow theoretical perspective.. From the mainstream view, media effects are one-directional; only the recipient can be influenced by some communication (Pingree, 2007; Shah, 2016). However, it is likely that not just the recipient, but also the sender of the message themselves, are affected by political communication (Pingree, 2007).

This paper intends to explore this possibility by analyzing the impact of sender effect upon feelings of political efficacy. In order to do so, I use data drawn from a survey administered to users of Reddit, a popular discussion forum which covers a variety of interests ranging from sports to local and national politics. In exchange for a chance to win a raffle prize, survey respondents are encouraged to provide their usernames, which are then used to collect their posting history.

In order to estimate the effect of political posting on one's sense of political efficacy, I intend to use propensity score matching to compare "treated" respondents to "untreated" respondents. In this case, the treated group will be respondents who completed the survey after posting, and the untreated respondents will be those who completed the survey prior to posting. In order to control for differences between these two groups, I plan to match respondents based on behavior such as average number of posts a day and average post length as well as demographic factors such as age, education, and income. I will then compare treated and untreated respondents in terms of their overall sense of political efficacy, as reported in their survey responses.

This methodological approach has a number of advantages. First, and most importantly, the unprompted posting history of individual respondents provides for an estimate of the relationship between posting and attitudes that can be generalized beyond this study in particular. Second, the means of data collection --- surveys combined with data scraping --- produces a more holistic picture of both the individual and their behavior, allowing for better statistical controls and thus theoretically appropriate comparisons.

Title: Mainstream media coverage of the far-right: A Comparative Analysis of News Coverage in Italy and the UK

Session Type: Individual submission

Authors:

Name: Cinzia Padovani

Email: padovani (at) siu.edu

Country: GB (United Kingdom)

Affiliation: University of Loughborough

Abstract: This paper contributes to the ongoing discussion on far-right populisms by focusing on “mainstream” media coverage of a selection of far-right groups and social movements in Italy and in the UK, both established democracies but with different journalistic traditions and histories of far-right politics. This research adds to the existing literature in three ways: 1) by focusing on “mainstream” media coverage longitudinally, thus paying attention to variations and continuities of coverage over time; 2) by adopting a comparative dimension, comparing and contrasting two different media systems; 3) by focusing on coverage of small groups and movements, rather than the traditional attention to parties and electoral politics.

Theoretical Framework and Literature Review:

The literature on far-right populism has been dominated by the concept of “mediated populism” (Mazzoleni 2008), according to which hyper-commercialized media systems have been necessary conditions for the contemporary rise of far-right populisms. The concept of “mediated populism” is highly connected to that of “mediatisation of politics”, a process through which political communication has become progressively defined by “media logics”, with an emphasis on the personalization of political communication (Mazzoleni, 2015).

The theory of “mediatisation” has been revised and critiqued in various further studies. For instance, in their analysis of British news coverage of the United Kingdom Independence Party (UKIP), Deacon and Wring (2016) have found little evidence that mediatisation, and in particular, “media logic”, have played to the advantage of this particular party and concluded that the increase in attention to UKIP, since the mid 2010s, was mostly due to “the ‘political logic’ of [the party’s] continued electoral advances, changes in communication policy, and a reorientation in the public relations strategies of the party and its opponents” (169).

My research adds to this body of literature by focusing on coverage of movements and groups, thus contributing to a better understanding of what happens at the fringe of political reporting.

Research Questions:

- How have mainstream news media covered far-right social movements historically in the two countries?

- Are there differences in coverage due to media organizations' political and ideological leaning? If so, what are those and how have they changed over time?
- Are there different patterns of coverage in the two national contexts? What are they (if any)?

Methodology:

Content analysis as well as textual analysis of a selection of news sources

Conclusions:

This paper discusses the results of an analysis of news sources with comparative and longitudinal lenses. The intent is to highlight patterns and changes over time in order to better understand the role of mainstream media in the rise of far-right politics in the two countries.

Title: Viejos, nuevos medios y Democracia 2.0

Session Type: Panel Submission

Authors:

Name: Michael Hoechsmann

Email: mhoechsm (at) lakeheadu.ca

Country: CA (Canada)

Affiliation: Universidad de Lakehead, Ontario

Abstract: La Democracia 2.0 plantea subrepticamente complejas preguntas relacionadas con la dinámica de la construcción social del conocimiento, conectadas con la necesidad epistemológica de una (re)consideración amplia, profunda, deliberativa y dialéctica del mismo concepto de democracia. La Democracia 2.0 cuestiona las epistemologías normativas, abre un camino hacia una pluralidad de formas (alternativas) de conocimiento, y genera construcciones sociales divergentes, incluyendo aquellas que facilitan la participación ciudadana en relación con las diversas plataformas e intersecciones que enmarcan los medios sociales y las redes.

Los medios 2.0 nos conectan a espacios que se entrelazan en un número casi interminable de nodos sociales. En conjunto, estas estructuras materiales y redes virtuales constituyen una nueva modernidad (una nueva estructuración de las concepciones del mundo) que está respaldada por una nueva racionalidad, esencialmente mediatizada y comunicacional. Esta transformación nos lleva desde la noción social del «vivir juntos» al hecho de «comunicarnos juntos». En esencia, estamos mutando desde la existencia humana del homo sapiens (el ser humano que sabe) a un homo communicare (el ser humano que se comunica). La razón ya no tiene el mando (es el declive del cogito ergo sum de Descartes) y de forma creciente, la comunicación (communico ergo sum) es lo que cuenta. Ser es comunicarse; tener es comunicarse; hacer es comunicarse; hablar es comunicarse.

Con tantos creadores mediáticos empoderados en acción, pero pocos anclajes epistemológicos compartidos, todavía estamos deliberando sobre si los medios 2.0 mejorarán nuestras vidas democráticas. No obstante, algo está sucediendo a nivel mundial: la gente en general, y los jóvenes en particular, parecen estar rechazando la democracia normativa y representativa, y los gobiernos reaccionarios están empujando a la población a las calles y a generar movimientos activistas en las redes sociales y fuera de ellas. Occupy Wall Street, los movimientos ecologistas, los movimientos por la paz, los movimientos antirracistas, las acciones contra la pobreza y muchos otros proyectos similares están vivos, aunque las fuerzas hegemónicas desean hacerlos parecer facciones aisladas y trivializables.

Las redes sociales pueden tener un impacto beneficioso en la movilización de estas fuerzas contrahegemónicas.

Pero a la vez, también tienen el potencial de desatar una visión reaccionaria del mundo, como observamos en el regreso de los discursos abiertamente racistas y sexistas en Norteamérica y en otros lugares, incluido el resurgimiento de un movimiento neonazi en Estados Unidos que está apoyado por grandes medios tradicionales y alimentado por la gran cámara de eco que ofrecen las

redes sociales. Movimientos reaccionarios, racistas y excesivamente violentos que vilipendian al «otro» han sido movilizados y nutridos con discursos unidimensionales que circulan en Twitter y en una miríada de redes/plataformas de intercambio y organización. La funcionalidad de las redes permite un diálogo interminable con aquellos que uno nunca imaginaría que existen, interacciones que pueden ser una poderosa fuerza democratizadora tanto como un factor potencialmente debilitante.

Title: Reporting from the Whites of their Eyes: How Whiteness as Neoliberalism Promotes Racism in the News Coverage of "All Lives Matter"

Session Type: Individual submission

Authors:

Name: sang kil

Email: sang.kil (at) sjsu.edu

Country: US (United States)

Affiliation: san jose state university

Abstract: This study evaluates how “all lives matter” (ALM) advances whiteness in the news. Critical race theory’s critique of liberalism’s embrace of race neutral racism is applied to journalistic practice of objectivity. Racialized reporting is considered “fair” through the race neutral journalistic practice of objectivity that mystifies the Whiteness of the news industry. Neoliberalism, a project of liberalism, creates structural racism that impacts society and the newsroom, where regulatory changes help to vertically integrate the media market. This media oligarchy threatens democratic principles, distorts racial reality, and advances Whiteness and its supremacy. I use Critical Discourse Analysis to examine the ALM slogan as a referential strategy that relates to other “lives matter” groups in terms of a dichotomous in-group (implicit) and out-group (explicit) relationship in the New York Times, Washington Post, Chicago Tribune, and the Los Angeles Times to illustrate the subtle and not so subtle ways that White supremacy appears unchallenged in mainstream news media reporting. ALM’s three discursive strategies in relation are: 1) co-optation of Black social justice work, 2) fear of Black Power or “blue”/police power, and 3) ALM=White Power. First, the news coverage treats ALM and “black lives matter” (BLM) as interchangeable slogans and overlooks the race consciousness of juxtaposing ALM and BLM by the color-conscious protestors, thereby communicating the co-optation of BLM’s intellectual justice work by ALM that further marginalizes Black by insisting that all lives are and treated equal. Second, the dangerous conflation of ALM, BLM and “police lives matter” (PLM) shows how these three groups are initially treated equally by the news, until they are not, resulting in the diminishment of BLM and its political purpose, where PLM undermines BLM’s efforts to publicly expose the historic and enduring link between whiteness and law enforcement. Third, ALM implicitly means “white lives matter” (WLM) that stands for white supremacy or helps to legitimate WLM. ALM here implicitly means WLM, given the Jim Crow/apartheid optics of Trump’s white men supporters chanting ALM while criminally attacking and choking a Black man at a presidential campaign rally. In addition, the news communicated uncritically and broadly that WLM is not racist, when in actuality, WLM is a hate group tracked by the Southern Poverty Law Center who monitors and litigates against hate groups. Theoretical significance reflects that Whiteness as neoliberalism owns all, is all, and flattens all differences. Recommendations for resistance is color-conscious, intersectional journalism.

Title: Participación política y movilizaciones juveniles en México en el escenario posterior al #YoSoy132

Session Type: Individual submission

Authors:

Name: Maricela Portillo

Email: maricela.portillo (at) ibero.mx

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana

Abstract: En este trabajo presentamos los resultados de una investigación más amplia que analiza la repercusión que el movimiento #YoSoy132 tuvo entre los jóvenes mexicanos que han sido marcados generacionalmente, ya sea porque tuvieron su primera experiencia de participación política en ese momento (Primavera de 2012) o porque se fueron involucrando posteriormente en las distintas movilizaciones que se dieron en México en los siguientes años. Modonessi (2017) caracteriza al periodo entre 2012 y 2014 en México, como un ciclo de movilización juvenil y estudiantil que fue sedimentándose a nivel experiencial en una camada de activistas y militantes y dio luz a formas específicas de politización generacional. Las derivas de este movimiento formarían parte de un mismo proceso sociopolítico (González Contreras, 2017). El recorrido que estos jóvenes activistas han seguido durante este ciclo de movilizaciones que inició en 2012 nos permite afirmar que el #YoSoy132 tuvo un fuerte impacto generacional en términos de la cultura política juvenil mexicana (Portillo, 2015, 2018). Compartimos la perspectiva teórica de Reguillo (2017) sobre la incomodidad interpretativa que más que definiciones de las expresiones políticas juveniles intenta avanzar en su comprensión. Así pues en este trabajo, nos cuestionamos específicamente por 1) las acciones colectivas juveniles posteriores al #YoSoy132 y 2) la articulación con las formas de participación política de los miembros más jóvenes de esta generación. Asumimos que “las generaciones no son estructuras compactas, sino sólo referentes simbólicos que identifican vagamente a los agentes socializados en unas mismas coordenadas temporales” (Portillo, et. al., 2012). Así pues, nuestro estudio incorporó un diseño metodológico cualitativo que nos permitió adentrarnos en la dimensión subjetiva de los sujetos (Orozco y González, 2011). Para ello, se llevaron a cabo 20 entrevistas a profundidad con jóvenes mexicanos que participaron en diversas acciones colectivas ocurridas durante 2015-2017 para explorar la conexión generacional (Mannheim, 1993) en relación al ciclo de movilizaciones juveniles previas (2012- 2014). Asimismo realizamos 240 entrevistas semiestructuradas durante los meses abril-mayo de 2018 entre jóvenes de entre 18 y 24 años en la Ciudad de México para identificar interés por la política expresado en sus temas de interés, conversaciones y formas de participación. Los resultados confirman nuestra hipótesis respecto de una reconfiguración de las formas de organización y participación de esta generación de jóvenes mexicanos que ocurre a partir del movimiento #YoSoy132 y que apuesta por nuevas formas de nombrar, ejercer y relacionarse con la política.

Title: Crafting Political Images on Facebook and Twitter: Analysis of Public Relations Strategy of Pakistani Politicians

Session Type: Individual submission

Authors:

Name: Savera Shami

Email: saverashami (at) gmail.com

Country: PK (Pakistan)

Affiliation: Institute of Communication Studies, University of the Punjab, Lahore.

Abstract: Social media has become an “integral part of public discourse and communication in the contemporary society” (Muntean, 2015, p. 6) and present an entirely new perspective at how people engage with each other. It is argued that advancement in new information and communication technologies has restructured the current political communication strategies (Kurt & Karaduman, 2012). Moreover, the significance of social media has been mainly established in politics due to the use of social networking sites (Facebook) and micro-blogging services (Twitter) which are believed to have the potential of positively influencing the political participation, as quoted by Stieglitz and Dang-Xuan (2012). Most political actors actively use social media to develop their public relations and project and promote their political ideology and preferences. In fact, social media has provided new opportunities to politicians, such as personalized communication and commodification of self, politicians shape and dictate the content, they create their own identity, cultivate their relationship with their audience and manage their reputation on their own without depending on any public relation expert. Social media provides complete freedom of expression, the politicians are now the producers of their own content, they produce information and citizens consume that information. Ideally, it should be done in a positive and respectful manner but it has been observed that the prevailing situation is quite opposite, social media is being used more as a propaganda tool to defame and insult others, in a struggle to prove themselves (politicians) right and others wrong, they completely overlook the basic social norms and values. The negativity being spread by politicians through social media can weaken democracy, which would destroy the society.

In this scenario, it is imperative to see how strategically and effectively politicians are using Facebook and Twitter for political communication and managing their reputation.

Therefore, this study is intended to explore the public relations strategy of the politicians of Pakistan that what kind of language style do the politicians employ in their posts and tweets and which tactic do they use more for building their image on Facebook and Twitter? In this research, the quantitative content analysis method was used. The data from Facebook pages and Twitter handle of 34 politicians was collected. The total number of Facebook posts and tweets examined was 3243.

According to the findings the politicians were busy in praising themselves and criticizing their opponent on Facebook and Twitter. They were using appreciative language for themselves and critical language for their opponent. The use of insulting language at both the platforms was almost the same. Interestingly, they were using Facebook to promote their positive image whereas Twitter was used more to build negative image of their opponent. On the basis of the results, it could be established that though the political actors are using social media to achieve their political agendas but they are ignoring the quality of relationship they are cultivating with the audience.

Title: Rumores y falsas noticias o fake news en Venezuela: "¡Están reclutando a nuestros niños!"

Session Type: Individual submission

Authors:

Name: Maria Fernanda Madriz

Email: madrizmfm (at) gmail.com

Country: VE (Venezuela)

Affiliation: Universidad Central de Venezuela, Instituto de Investigaciones de la Comunicación.

Abstract: En esta ponencia se exponen y discuten los resultados de una investigación sobre modalidades, plataformas, ciclos y formatos de difusión de rumores y falsas noticias en Venezuela; su impacto sobre el clima de agitación, violencia e incertidumbre política que vive el país, así como su influencia sobre la toma de decisiones de los ciudadanos a propósito de los asuntos públicos.

Sus objetivos fueron:

1. Monitorear, identificar, acopiar, registrar, seleccionar y analizar el corpus de mensajes sospechosos que circuló a través de los medios sociales venezolanos (Whatsapp, Twitter y Facebook), entre el 28 de enero y el 2 de febrero de 2019.
2. Establecer, luego del análisis crítico del discurso aplicado a los mensajes seleccionados, si éstos correspondían a información verificable o si, por el contrario, eran fake news.
3. Con base en la evidencia lingüística y de discurso encontrada, establecer si los mensajes identificados como fakes formaban parte de campañas de desinformación diseñadas por equipos profesionales.

La metodología utilizada corresponde a un diseño propio (Madriz 2017, 2018) que acoge los principios de la "Red Internacional de Verificación de Información (IFCN)" del Instituto Poynter y suma los aportes de varias ONG's dedicadas a la verificación y chequeo del discurso público y de mensajes informativos propagados a través de medios sociales (Chequeamos Argentina, 2018; Verificado México, 2018; El poder de Elegir Colombia, 2018).

La metodología se aplicó al corpus de mensajes propagados por 53 chats de whatsapp entre el 28 de enero y el 2 de febrero, y al corpus de mensajes publicados en el mismo lapso en Twitter y Facebook referidos a los temas identificados como relevantes en los chats.

Realizado el análisis, pudo constatarse que:

1. Se identificaron dos ciclos de propagación de mensajes sospechosos que resultaron ser fakes news, especialmente, archivos de audio o voces.
2. El primero cubrió el lapso entre el 28 y el 31 de enero y viralizó el tema sobre el reclutamiento forzoso de menores de edad.
2. El segundo cubrió el lapso entre el 30 de enero y el 31 de febrero y viralizó el tema sobre la inminente intervención militar en territorio venezolano, de una fuerza multinacional dirigida por los Estados Unidos desde la frontera con Colombia.
3. Ambos ciclos correspondieron a campañas diseñadas profesionalmente y lograron impactos sobre el pathos colectivo. El primero, inhibió la asistencia de jóvenes a una actividad de calle convocada por la oposición para el 30 de enero, ante el temor de resultar enlistados. La segunda, generó frustración en un sector representativo de la población que esperó un desenlace definitivo a la crisis venezolana la noche del domingo 2 de febrero.

4. La investigación no permitió establecer el origen de las campañas pero, el diseño discursivo de los mensajes y el impacto de la propagación sobre la ciudadanía opositora, sugieren autoría de equipos vinculados al régimen político en el poder.

Title: How real is the perceived media bias' Selective exposure of audience to partisan media.

Session Type: Individual submission

Authors:

Name: Fawad Baig

Email: fawadbaig123 (at) yahoo.com

Country: DE (Germany)

Affiliation: Technical University of Dresden, Germany.

Name: Sehrish Mushtaq

Email: mushtaqsehrish (at) yahoo.com

Abstract: Literature about partisan media content and selective exposure among the audience is abundant; yet inconclusive about the direction of their association. Many studies in Western context do confirm selective exposure of the media audiences based on their political affinity (Stroud, 2011, 2017; Van Kempen, 2007). Partisan audience perceive their selected news media less biased than the general media (Barnidge et al., 2017). In this study, the relationship between political leanings of newspaper readers and their selection of specific newspapers is determined. It mainly aims to find association of selective exposure to any newspaper with its real and perceived media bias. For this purpose, multi-method approach involving content analysis and survey is adopted. Content analysis of news stories and editorials published in three national dailies of Pakistan including Jang, Nawaiwaqt and Dawn is being done to determine the real bias in their coverage to three mainstream political parties Pakistan Muslim League - Nawaz (PML-N), Pakistan Tehreek-e-Insaf (PTI) and Pakistan Peoples Party (PPP). Thirty-six most important political events were selected which happened from January 01, 2011 to December 31, 2017. All news items related to PPP, PML-N and PTI were collected which were published on the front pages of three national dailies on the same and the next day of the happening of each political event. Relevant editorials of these days were also selected. A survey of the readers (N = 802) of three national newspapers was also conducted about their voting preference in the 2018 general elections, frequency of newspaper reading, and perceived bias of their preferred newspapers. Survey results showed a statistically significant but weak association between the political affinity of the participants and their selection of newspapers. Choices of newspaper readers in Pakistan seem hybrid, as results of our survey both confirmed and rejected the selective exposure. Supporters of PTI and PPP prefer reading daily Jang, even though they reported the coverage of Jang to their respective parties as unfavorable, while the supporters of PML-N read newspapers either favorable or neutral toward their party. Based on the results of both survey and content analysis, we will not compare real and perceived media bias but also attempt to give possible explanations for the hybrid selectivity of newspaper readers.

Title: Analyzing Twitter Discourse Among Publics and Pro-Democracy Movements to Locate Novel Political Communication Structures in the Democratic Republic of Congo

Session Type: Individual submission

Authors:

Name: NAKIA MATTHIAS

Email: nmatthia (at) ramapo.edu

Country: US (United States)

Affiliation: Ramapo College of New Jersey

Abstract: Anticipation of the run-up to the Democratic Republic of Congo's (DRC) 2018 presidential election was fraught with a history of public distrust, resistance, and international calls for regime change evidenced via news reports and social media activity. In support of democratic elections Congolese nationals and local pro-democracy movements took to the streets and Web 2.0 platforms to circumvent the censorship and repression of the Congolese government. Actors harnessed traditional media and computer-mediated communication to publicize experiences, facilitate information, counter misinformation, and wage political discourse with the aim of securing the country's long awaited presidential election.

Given the dearth of academic research on interactions among human communication, traditional media, and new media in the DRC's democratic processes there is a need for inquiry that explores how Congolese publics and political movements coalesce media and communication in service of progressing political participation, supporting informational legitimacy, and curating the social artifacts of political change.

This study examines Twitter communication among the DRC's resident nationals and diasporas relative to the 'Kabila Must Go', 'La Lucha', and 'Lamuka Coalition' pro-democracy political movements. Chadwick's (2013) Hybrid Media System and Adaptive Structuration Theory (DeSanctis & Poole, 1994) are drawn on as means to identify how traditional and new media facilitate communicative acts expressed via Twitter, as well as how such acts comprise a novel communication structure among pro-democracy political movements and Congolese publics.

Grounded Theory Ethnography provides the framework for observing and articulating the mediated communicative structure that Congolese Twitter interactants use and reproduce in their efforts to progress a democratic presidential vote in the DRC. Netlytic text and social networks analyzer facilitates the collection of hashtag-specific twitter content, while Atlas. Ti aids the inspection of meaning structures in Twitter discourse associated with the DRC's 'Kabila Must Go', 'La Lucha', and 'Lamuka' hashtags.

Findings indicate that tweet contents represent a communicative structure for: (1) Negotiating local political solutions and grievances, (2) projecting corporeal, verbal, and textual acts of resistance (3) signifying co-presence and active participation (4) legitimizing pro-democracy issues, processes, and information, (5) managing misinformation and fake news proliferation, (6) and

internationalization of presidential politics among Congolese and non-Congolese actors beyond the country's territorial domain.

This study bears implications for engaging and developing citizen-driven communication in support of democratic political processes, as well as informing journalistic and newsmaking practice in politically fragile states during regime change. It also offers a view to the enduring efficacy of human communication and traditional media within social media initiatives that support political transformation.

Finally, this inquiry addresses knowledge gaps in the study of the nexus between public protest, political communication, and social media in the DRC.

Abstract: Como una gramática que estructura los contenidos periodísticos bajo rasgos de simplificación, dramatización, espectacularización y personalización, entre otros, la lógica mediática ha ido colonizando los espacios de periodismo político y desplazando a la lógica política de sus contenidos, por lo menos en los últimos 20 años (Altheide, 2004; Esser & Strömbäck, 2009; Esser, 2013). Ello ocurre a medida que la política misma se mediatiza, y las presiones de rentabilidad de las industrias mediáticas, bajo un modelo conducido por el mercado, agudizan la mercantilización de los productos informativos (Cohen, 2002; Iyengar, Norpoth, & Hahn, 2004; Nord & Strömbäck, 2014; Takens, van Atteveldt, van Hoof, & Kleinnijenhuis, 2013b). Puesto que ambas condiciones se presentan en México, particularmente a partir de la transición democrática (García, 2013; Hernández, 2010), elaboramos un análisis de contenido para detectar las distintas dimensiones que indican la presencia, en mayor o menor medida, de dicha lógica: encuadre estratégico, encuadre episódico, negatividad, personalización, simplificación e interpretación abierta (de Vreese, Esser & Hoppman, 2017). Éstas fueron analizadas en los periodos de campaña presidencial de los años 1994, 2000, 2006, 2012 y 2018, momentos en donde se pone de relieve dichos fenómenos, en cinco periódicos de referencia (N=1,348). Los resultados muestran un escenario mixto en donde la lógica política fue desplazada por la mediática fuertemente a partir del año 2000, pero prácticamente se ha mantenido estable a partir de dicha fecha, como lo muestran las distintas dimensiones medidas. Tan sólo hay fluctuaciones mínimas en la negatividad, específicamente en las variables de tonalidad, competencia (aguda en 2006) y conflictividad (incrementada en 2012). Explicamos este hallazgo por la naturaleza de la prensa de referencia en México, híbrida en igual medida respecto a su modelo cívico y sus imperativos mercantiles (Hugues, 2006; Márquez, 2014).

Title: Actores de la discusión política colombiana en Twitter, acercamiento empírico

Session Type: Individual submission

Authors:

Name: Lida Tabares Higueta

Email: ximena.tabares (at) upb.edu.co

Country: CO (Colombia)

Affiliation: PhD student in Political and Social Sciences at the National Autonomous University of Mexico. Mexico. Professor at the Faculty of Social Communication - Journalism at the Universidad Pontificia Bolivariana, Medellín - Colombia

Abstract: El rol de convocatoria de Twitter en movimientos como Occupy Wall Street, la revolución de los jóvenes en Egipto en 2011 y las protestas en Turquía en 2013 señalados por Tufekci (2017), son una muestra del poder de los usuarios en esa red para llamar la atención sobre problemas políticos que los afectan y que de otra forma no estarían en la agenda informativa de los medios. Colombia no es ajena a ese proceso. En este país suramericano publicaciones en Twitter que han sido viralizadas han generado el despido o renuncia de funcionarios del gobierno y empresas privadas, y han exigido la revisión de posturas del Congreso y de varios políticos frente a temas de interés nacional.

Entender esas dinámicas de interacción y ver si contribuyen a la continuidad del conflicto en el país es el propósito de la tesis “Discurso político en Twitter en Colombia como factor alimentador del conflicto”, adelantada por la autora en el Doctorado en Ciencias Políticas y Sociales de la Universidad Nacional Autónoma de México. El primer paso para cumplir ese propósito era la identificación de los actores de la discusión política en Twitter en Colombia, para lo que se efectuó un análisis empírico empleando Twitonomy y Gephi, cuyos resultados se presentan en esta ponencia.

Para ello se partió de la observación inicial de 81 cuentas emisoras de los mensajes más controvertidos en Twitter durante los meses de junio, julio y agosto de 2018, que fueron revisadas en la aplicación Twitonomy para identificar los 10 usuarios a los que cada cuenta más retuitea, a los que más les responde y a los que más mencionan.

El cruce de estos datos en todos los actores permitió identificar otras 75 cuentas recurrentes, que son clave en la discusión política colombiana en Twitter. Entre ellos resaltan políticos, medios de comunicación, periodistas, columnistas, sociedad civil, entidades del Estado, entidades no gubernamentales y ciudadanos.

Para identificar más claramente las conexiones entre las cuentas, los datos de interacción de los 156 actores fueron revisados en dos procesos: 1) usando el sistema de análisis de redes Gephi y 2) a través de una base de datos creada en Microsoft Excel.

El cruce de la información permitió observar los distintos sectores políticos presentes en la discusión; como algunos tienen prácticas endogámicas en su interacción y que la mayoría de los actores asumen un papel de emisores, pues tienen bajos índices de respuesta a los usuarios.

Title: 'Fake news' and myth: How the British EU coverage undermined the democratic function of the news media.

Session Type: Individual submission

Authors:

Name: Imke Henkel

Email: ihenkel (at) lincoln.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Lincoln

Abstract: Lies by political actors, disinformation in news stories, as well as biased and misleading reporting had a significant impact on the Brexit vote in the 2016 British referendum on EU membership. For instance, an Ipsos Mori poll published on 16th June 2016 found that 78% of respondents had heard about the – false – claim that the British government sent £350m a week to the EU which could be better spent on the National Health Service; 42% believed this claim to be true although it had been disputed by the UK Statistics Authority. An Ipsos Mori poll published a week later on 22nd June 2016, just a day before the referendum, found that 9% of respondents named the NHS as the most important issue in the referendum campaign.

My paper argues that what has been described as “post-truth politics” (Higgins, 2016)  the persistence of lies despite their debunking and without condemnation  reflects the corruption of the public discourse to which the British EU coverage has contributed since decades. Since the late 1980s, the British press has been notoriously reporting a uniquely distorted image of European affairs and institutions (see e.g. Steele & Kettle, 2002). Stories such as the alleged ban of bent bananas have been documented and debunked as “Euromyths” by the European Commission between 1992 and 2017. However, the false stories proved immune against fact checking and eventually were revived by the Leave campaign (e.g., Johnson, 2016). Using Critical Discourse Analysis, I find that the “Euromyths” news stories (N=465) undermine critical fact-checking because they partake in two conflicting orders of discourse (Fairclough, 1992): the journalistic discourse is counteracted by a conversational discourse that implies a communality between the (British) reporter and the (British) audience against an elitist EU. This narrative structure can be read as myth in Roland Barthes’ sense: a “second-order semiological system” (1972, 223) which in this case constructs a populist myth (the pure British people against the corrupt EU elite [Mudde, 2004]) to undermine critical fact-checking.

In a second step I investigate how this populist myth of the plucky and witty British people standing up against an elite EU bully reappeared in “fake news” during the British EU referendum campaign. Drawing on Chadwick’s (2017) theory of the “hybrid media system” I analyse editorials, political speeches, and social media postings during the Brexit campaign.

Much of the growing literature on disinformation focuses either on what makes people believe in false information and lies (e.g. Jerit & Barabas, 2012; Flynn, Nyhan, & Reifler, 2017), or, on the other hand, how “fake news” spread on different media channels particularly online and through social media (e.g. Chadwick, Vaccari, & O’Loughlin, 2018; Vosoughi, Roy, & Aral, 2018). Instead, I argue that a linguistic analysis of news stories can help explain how disinformation achieves to be persuasive, and, importantly, continues to be persuasive even after the falsehoods have been exposed, and thus compromises the democratic function of the news media.

Title: A battle of identities. Mass media and the rural-urban divide in American politics

Session Type: Individual submission

Authors:

Name: David Coppini

Email: david.coppini (at) du.edu

Country: US (United States)

Affiliation: University of Denver (Assistant Professor)

Name: Daniel Estes

Email: daniel.estes (at) du.edu

Country: US (United States)

Affiliation: University of Denver (Graduate student)

Abstract: Americans are increasingly divided along the lines of significant social identities, such as party affiliation, race, ethnicity, and socio-economic status. Social identities become ways in which citizens organize themselves in in-groups and out-groups (Green, Palmquist & Schickler, 2004; Mason, 2015). Citizens increasingly tend to dislike people who hold different points of views (Iyengar & Westwood, 2015) and tend to live in politically and socially homogenous neighborhoods (Hill, 2005). An emerging divide in American politics is the one between urban and rural areas. Urban areas tend to be increasingly liberal and vote for Democratic candidates, while rural areas tend to be conservative and vote for Republican candidates (McKee, 2008). This divide was more evident than ever in the 2016 Presidential election. In this election, rural counties across the nation overwhelmingly supported the Republican candidate Donald Trump (Badger, Bui & Pierce, 2016). Existing research shows that citizens rely on social identities connected to place and local community to make political decisions (Cramer, 2016). In addition, citizens in rural and urban areas have strong misperceptions of each other. On one hand, people who live in rural areas are seen as poorly educated, extremely conservative, and intolerant (Baird, 2014; Massey, 2017). On the other hand, citizens who live in urban areas are often perceived as elitist and privileged (Cramer, 2016). Research is less clear on how individuals develop strong identities connected to their local community and on how these identities shape misperceptions toward Americans who live in different areas of the country. In particular, the role of mass media in these processes remains understudied.

To address these gaps in the literature, the first section of the study focuses on the following research questions: RQ1: How do American mass media cover people who live in rural and urban areas?

This section uses a content analysis to analyze media coverage of rural and urban citizens. The analysis focuses on ten publications chosen to represent different outlets across the political spectrum (NYT, Washington Post, Wall Street Journal, CNN, FOX News, MSNBC, Huffington Post, Breitbart, ABC News, USA Today), with eighteen articles considered for each publication, from 2016 to 2018. Themes that emerge for representations of rural Americans are: dislike towards urban elites, feeling of abandonment and despair, anger about income gaps, dislike towards immigrants and minority groups. Themes than emerge for representations of urban Americans are:

distrust of people who live in rural areas, more educated, lifestyle of drinking and leisure, discontent for hierarchical social structure and no place for middle and lower classes.

The second section of the study focuses on the following research question:

RQ2: How do mass media representations of urban and rural Americans influence attitudes towards these two groups?

This section uses an adult sample of the American population (N=700), with quotas for gender, age, education, income and geographical location. Results focus on how mass media representations of urban and rural Americans influence perceptions that individuals have of these two groups, reinforcing and exacerbating stereotypes towards members of these groups.

Abstract: In the immediate aftermath of the 2016 US Federal Election, and with allegations that the circulation of fake news stories online may have influenced the result (Allcot & Gentzkow, 2017; Silverman and Singer-Vine, 2016), President Trump appropriated and weaponized what we describe as a ‘discourse of fake news’. The discourse of fake news was initially used to undermine the concerns about fake news during the campaign, and then to attack and discredit news media and political rivals. President Trump’s first Tweet to specifically mention ‘fake news’ was sent in December 2016, and he used the phrase over 160 times in the next 12 months. This was exemplified in Trump’s first press conference as president-elect in January 2017 when he famously shouted “you are fake news!” at a CNN reporter, from whom he refused to take questions. Wardle & Derakhshan (2017, p. 5) argue that the discourse of fake news has been “appropriated by politicians around the world”. However, there has been a surprisingly limited amount of research on whether and how politicians have adopted a discourse of fake news.

This article addresses this gap by investigating whether Australian politicians adopt fake news discourse to delegitimize opponents. Data are gathered from five political communications fora

over the six-month period after Trump's election: parliamentary debates, Facebook, Twitter, press, and politicians' websites. We find fake news discourse is predominantly the domain of conservatives. Frequent users employ fake news discourse to delegitimize the media first, and their political opponents second. Politicians' use of fake news discourse is repeated and amplified by news media. Worryingly, its premise is rarely contested. We argue this has negative consequences for public debate and trust in Australia's media and political institutions.

Affiliation: Media in Cooperation and Transition

Abstract: Among the media systems in emerging democracies in the Middle East and North Africa, political parallelism has become a widespread feature. Hallin and Mancini (2017: 157) name four main ways in which political parallelism may manifest itself: Typically, there are structural ties between media and political organizations, as well as a tendency of media personnel (managers, owners, journalists) to be affiliated to certain political actors. Furthermore, journalistic role orientations and practices tend to differ in systems with political parallelism and in those without. Finally, media audiences may also be partisan. While in Hallin and Mancini's work political parallelism has been attributed mainly to the Southern European countries indicating a stage yet to be overcome, according to Voltmer (2013) in transitional societies political parallelism can be seen as an unavoidable and even necessary phenomenon to stimulate political competition and participation as elements of democratic systems. Yet, consequences of unregulated media pluralism can also be polarization and even hatred among societal groups. Mitigating media could be a means to avoid the trap of polarization.

Against this background, this presentation will examine in what ways political parallelism is shaping Libya's newly liberated media system. Based on an analysis of financial sources, political affiliations and rhetoric strategies of all media outlets currently operating in this fractured country (N=172, comprising TV, radio, newspapers, news agencies, online portals) we will show that the structures of the Libyan media system indeed reflect the anatomy of the political conflict.

From the viewpoint of 'path dependency' (Voltmer, 2012), the political parallelism as we find it in Libya today appears, to quite some degree, as an historical extension of media instrumentalization in line with media practice during the time of the Qadhafi regime. However, while Qadhafi's modus of media control was patronizing, repressive and exclusive, today the very high number of media players, the lack of state control and the openness of the media system result in a vibrant, yet highly polarized media landscape – in particular in the TV sector. The Libyan media system has thus become what Price and Stremlau (2012) called a 'market for loyalties'.

At the same time the analysis sheds light on a large number of small local radio stations that do not follow the pattern of political parallelism but instead seem to adopt a public service mission. We conclude that this kind of media, if invigorated and developed, could help overcome the Libyan polarization and strengthen the nation-building process from underneath.

Title: The Kurdish media system in Northern Syria/Rojava

Session Type: Individual submission

Authors:

Name: Kerem Schamberger

Email: kerem.schamberger(at) ifkw.lmu.de

Country: DE (Germany)

Affiliation: Ludwig-Maximilians-University

Abstract: Following discussions on how to analyze different media systems (e.g. Hallin & Mancini, 2005; Blum 2005; Meyen, 2018) and bridging some of the topics to be discussed at the Post-Socialist and Post-Authoritarian Communication Working Group in Madrid (e.g. new political and media actors in transitional societies, preferred media, media structures and journalism cultures in transition) this paper takes a look at the newly formed media structures in the Kurdish dominated regions of Northern Syria, which the Kurds call Rojava.

The Syrian war shapes the everyday working conditions of Kurdish journalists and the existence of media itself. But in those areas that have been liberated from the so called “Islamic State” and also freed from the authoritarian regime of Damascus, in the midst of conflict and destruction, a new form of media system has been developing since 2012. What does this system exactly look like? Who are the actors? What are the influences of political and economic structures, traditions, cultural values and religious beliefs onto media in Northern Syria? To answer these questions, this paper provides insights into a research trip to Northern Syria in 2018, which has been as part of a larger research project on Kurdish media. The study is based on material that was collected and analysed by means of method triangulation (documentary analysis, experts, category conducted coding).

The theoretical basis is that of the actor-structure-dynamic developed by the German sociologist Uwe Schimank (2007). It examines the interaction between individual action and social structures. Three types of social structures are important here: structures of constellation (resources, etc.), of expectation (laws, agreements, etc.) and of interpretation (e.g. journalistic beliefs, self-image). These structures restrict and, at the same time, enable the actions of actors. Schimank’s complex theory provides the basis for a category system that structures the qualitative research process and allows intersubjective understanding.

This paper is based on 20 interviews with journalists from various media, civil servants, military personal and a representative of the regional journalists' association, which were conducted during a four-week stay in Northern Syria between March and April 2018. The interviewees were chosen according to the category system and the factor reachability. Research was added by field observation in editorial offices, for example in the news agency ANHA, and the collecting of documents.

This paper shows that beyond the logic of profit and the ideal of objectivity, mostly young Kurdish journalists (especially women) produce media that take sides in favor of the societal change, which takes place in Rojava. They see themselves as actors of change in the broader context of creating a

new society that includes all types of ethnicities and religions, and takes a specific anti-capitalist position. From the theoretical perspective of Schimank, the destruction of established structures formed by the authoritarian Assad-regime in the past decades, makes it possible for the Kurdish actors to establish new structures in the media sector.

Title: A Historical Investigation of the Journalistic Communications between China and Russia

Session Type: Individual submission

Authors:

Name: lerong jia

Email: jialerong(at) hotmail.com

Country: CN (China)

Affiliation: Communication University of China

Abstract: The communications between Chinese and Russian journalism can be traced back to when the Communist International sent its representatives to found the Communist Party of China in 1920. During that period of time, the Bolshevik method of running newspapers came to be introduced to China. Thereafter, when the communistic party of China waged its revolution against Kuomintang (Literally: Chinese Nationalist Party) and the Japanese invaders from 1928 till 1949, Lenin's news thoughts were further transformed into the organizational system of the Communist Party journalism. After the People's Republic of China was founded in 1949, China formed an "leaning to one side" diplomatic relations with the Soviet Union, so that the communications between Chinese-Russia journalism reached the most extensive and expansive level. The communications at that time included the Book and periodical translations, personnel exchanges, news system managements, higher education and etc. Although Sino-Soviet relations broke in the 1960s, the theory and system of the Soviet journalism have already been deeply rooted in the Chinese journalism, and its impact still exists today. In the 21st century, thanks to the renewed closeness of Sino-Russian relations, the communications between the media industries of the two countries have been reviving once again. .

If we say that the journalistic communications before the Sino-Soviet split is more about China's unilateral study of the Soviet Union journalism and is based on close inter-party relations and ideological consensus, then the current Sino-Russian media Communications and cooperation have been based on a normally and pragmatically international relationship.

This article gives a retrospect of the communications between the two countries' journalism from a historical perspective and finds out that the nature of journalistic communications vary in accordance with the relational changes between the two parties and two countries. The motivations driving such journalistic communications are not stem from the journalistic industry itself, but are from the political powers. Although today the journalistic communications between the two countries have involved growingly abundant content nowadays and the media hold more active position than before, the communications mainly happen between the official media and the governments still play the leading roles. But since China and Russia currently still share quite a few political interests and Russia is one of the important countries along the "one belt, one road" route, we can expect this current communicating model between the two countries will be reserved for a long period of time.

Title: The role of media in a 'post-populist' dynamic: The case of Venezuela under Maduro's regime

Session Type: Individual submission

Authors:

Name: Virpi Salojärvi

Email: virpi.salojarvi(at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: Recently, an ideational approach to populism has gained recognition among many scholars (e.g. Mudde 2017). It emphasizes a division between "the elite" and "the people" in the rhetoric and politics of populists. Yet, this Manichean division is not enough because it is not able to grasp some essential aspects of populist movements such as affects, demands and formation collective memory, which are needed to understand the events of Venezuela in the post-Chávez era (2013-).

In this paper, the idea of populism as a process is a central theme. Populism is not a static state, but something that evolves and takes on different forms. It is furthermore one of the core ideas of political logic (Laclau, 2005), so it is not something that can be discussed as either existing or not existing, but rather how (Palonen, 2018), how much (Gürhanli, 2018), and when (Moffit, 2016). Thus, the aim in this paper is to analyze and theorize different aspects of populism and what is their significance in politics of President Maduro.

Using Laclau's (2005) theory, populism may be defined as constructing the very unity of the in-group, the "us" or "the people". The media may be seen as an essential part of this, since the media plays a part in constructing the unity, a collective identity among a part of a population (Sonwalkar, 2005). Populism may also be described as a rhetorical-performative phenomenon (Palonen & Saresma, 2017; Palonen, 2018), which is produced visually, verbally and spatially. To transmit these ideas, media in its many forms is useful.

One of the most extreme examples of current populist polarization and its consequences is Venezuela under the presidency of Maduro. President Maduro has aimed at continuing Chávez's movement. However, this has not been an easy task, since while Chávez was able to transmit an image of a charismatic leader that had a strong vision and connection with the people, Maduro lacks the ability to create the same impression, which is one of the preconditions of a successful populist movement (Palonen & Saresma, 2017: 16). Little by little, the government of Venezuela has become authoritarian, labeling its political competitors and many alternative actors in society, including the private media and some journalists, as its enemies – to the point where the whole society is now divided between "the good" and "the bad" (cf. Bisbal, 2009).

The paper approaches the topic from the perspective of Laclaudian theory and on the base of author's previous research on Venezuela. The author argues that affect is an essential element in populism and in the absence of vital media affect (Palonen & Saresma, 2017) Maduro was not able

to carry out populist politics, and had to resort to different measures of control in order to stay in power. Hence, the label of "post-populism" is more accurate than calling it populism because even though his government maintained the antagonist us/them division, some important elements of populism were absent.

Title: Vanished topographies, contested memories: Negotiating multi-ethnic past in the post-socialist Polish cityscape

Session Type: Individual submission

Authors:

Name: Kinga Polynczuk-Alenius

Email: kinga.polynczuk(at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: This paper deals with the post-socialist topography of a Polish city. With its roots in urban communication, and in the ontology of Foucauldian discourse analysis, this paper approaches a cityscape as a site where the discourses of power/knowledge are materially articulated. In particular, it explores how the memory of the multi-ethnic past of the city is negotiated in the context of its present-day ethnic homogeneity and rapid modernisation. In so doing, it examines what subject positions are offered to the current city dwellers, and how the past inhabitants are constructed as objects of knowledge, by racist and nationalist discourses articulated in the cityscape.

The paper zooms in on Białystok, the largest city in the north-east Poland. Currently considered a hotbed of racism and nationalism, the city has a multi-ethnic, most notably Jewish, past. In 1897, Jews constituted as much as 76 per cent of the population, effectively making Białystok a Jewish city, which in the interwar period was incorporated into the restored Poland. Most of Białystok's Jews perished in the Holocaust and, following WW2, the material traces of their presence began to fade from the devastated cityscape, methodically replaced by the communist brand of nationalism. In line with the communist policies of national unity, the process of emptying the cityscape out of Jewish presence was accompanied by the mnemonical peripheralisation of the multi-ethnic past. In the aftermath of the democratic transition, and particularly the EU accession, Białystok started rapidly to modernise. This process includes not only infrastructural development, but also the 'rediscovering' of 'multicultural' heritage that has become the centrepiece of city branding strategy.

In this paper, I seek to trouble the sugar-coated narrative in which Białystok figures as a place of happy coexistence of, and peaceful encounters among, the ethnically, culturally, religiously and linguistically diverse population. I do so by presenting historical evidence to the contrary as well as arguing that the present-day cityscape of Białystok is permeated by symbolic violence against minorities. I ethnographically study the spaces included in the Jewish Heritage Trail to show how they are purposefully disconnected from the everyday life of the city, hidden away like a shameful secret, 'exorcised' of their Jewishness, or erased from the urban topography altogether. I also analyse mediated discussions (online and offline local media, Facebook groups) triggered by the spaces previously associated with the Jewish inhabitants to demonstrate the persistence of anti-Jewish prejudice among the current population. I conclude that the skin-deep remembrance of Jews in Białystok serves to construct a modern local identity but only so long as it functions within the limits of the Polish national self-definition and does not challenge the Polish ownership of the city.

Title: Fake News and Its Tragic Consequences: Odessa Tragedy of 2014

Session Type: Individual submission

Authors:

Name: Olga Baysha

Email: olga.baysha(at) colorado.edu

Country: RU (Russian Federation)

Affiliation: Higher School of Economics

Abstract: In his recent book *The Discursive-Material Knot*, Nico Carpentier identifies three nodal points of antagonistic discourse: homogenization of the self as opposed to the enemy, the radical difference of the enemy, and the need for destruction of the enemy. The latter appears when the self and the other are imagined to be irreconcilably at odds, and the enemy is presented as inferior. In the extreme cases, this radical othering leads to a dehumanization and demonization of the other, which makes the destruction of the enemy easier. Using as a case study of post-Maidan social confrontation in Ukraine and Odessa tragedy of 2014, I analyze how fake media representations of the conflict contributed to its radicalization to the extreme.

Odessa tragedy happened on May 2, 2014, when a fire during street clashes between pro-Maidan and anti-Maidan forces killed 48 anti-Maidan activists and left more than 200 with burns and other injuries. Chased by pro-Maidan radicals, anti-Maidan protesters sought shelter in the House of Trade Unions; there, they were attacked with Molotov cocktails, which caused the fire. Many of those holding anti-Maidan views still believe that the mass killing was done on purpose, prompted by and in line with promises to kill ‘koloradi’ – a derogatory meme used to denote anti-Maidan protesters – spread by pro-Maidan media on the eve of the tragedy.

The purpose of my analysis was to trace whether the coverage of Odessa events by Ukrainian media sustained the type of antagonistic discourse described by Carpentier and contributed to the radicalization of the conflict. Driven by this research question, I analyzed discursively (using Carpentier’s method) media representation of the development of Odessa conflict before and after May 2, 2014; overall, 254 news pieces by 9 Ukrainian news outlets were analyzed.

As my analysis shows, the sign ‘anti-Maidan’ was usually linked to such signifiers as ‘terrorists’, ‘katsapi’ (a derogatory term to refer to Russians), ‘(pro-Russian) separatists’, ‘traitors’, and the like. In other words, the empty signifier ‘anti-Maidan’ came to denote the Ukrainian condition, constituting its radical outside. The major trend of media coverage before and after the tragedy was to present anti-Maidan protesters in Odessa as non-Ukrainians (‘Russian hireling/tourists’).

The link between ‘anti-Maidan’ and an anti-Ukrainian stance was sedimented to such an extent by May 2014 that many authors of the discursive constructions I have analyzed were absolutely confident that the majority of those who had been trapped in the burning Odessa building were not Ukrainians. Later, it became clear that all the victims held Ukrainian citizenship and all but two lived in the city of Odessa or its region. As I argue in the conclusive part of the paper, it is this fake representation of the events by Ukrainian media that radicalized the conflict and developed it to its

extreme, when the need for destruction of compatriots imagined as "the enemy" came to be seen as "normal."

Title: Foundation funding for news startups in hybrid regimes ' The Case of Russia and Hungary

Session Type: Individual submission

Authors:

Name: Krisztian Simon

Email: ks2948(at) columbia.edu

Country: DE (Germany)

Affiliation: Freie Universität Berlin

Abstract: The research looks at the role of foreign support for the independent news startups of two hybrid regimes in the former Eastern bloc: Hungary and Russia. Two countries, where the respective governments have in the last few years launched campaigns against NGOs as well as independent media outlets, and restricted their access to some of their previous sources of funding. I analyze the situation of Hungarian and Russian news outlets through the lens of the theory of the political economy of the media, with an emphasis on the emerging literature on media capture. The research asks the following question(s): Under what conditions can independent startups accept grants from foreign donors – and how does the country context influence the viability of this form of funding?

The political repressions affecting the media outlets in question are not independent of the economic challenges of our times. In the last decades, one of the major changes effecting the global media landscape, and with it the economics of the media, has been the growth of internet penetration and the emergence of an online media landscape. In this context, the importance of providing subsidies for the (privately owned) news media has been highlighted by a number of scholars (McChesney 2011, Murschetz 2013, McChesney 2016) – which, however, in the countries in question is not freely available. The role of philanthropic funding has been widely discussed in media studies (Feldman 2007, Guensberg 2008, Westphal 2009, Browne 2010), and grants are seen as a source of news that is ignored by the market, be it on international development (Bunce 2016, Schiffrin 2017) or investigative journalism (Nisbet et al., 2018) – and they play a particularly important role in the case of newly launched media in need of startup capital. Yet the literature only focuses on a small segment of countries: mainly Western democracies with their local donors, and developing countries in the global South, where the funding is part of the international community's development efforts. Therefore, my paper aims to examine the role of foundation funding (and other forms of non-investment forms of foreign funding) in two middle-income hybrid democracies, where the government is hostile towards independent media, and the (overwhelmingly) foreign foundations providing grants to them.

Through interviews with journalists and editors in both countries (I have conducted 20 semi-structured interviews in each country, with an average length of 80 minutes), I examine the extent and role of foreign assistance in the media systems in question – I ask them about their roles as journalists, the threats and pressures they perceive or experience during their work, the functioning of the media market, the sources of flaws of the market, the kinds of revenue sources they utilize or plan to utilize, and the associated problems, as well as their perceptions of their sustainability.

Title: Myanmar's Media System in Transition: An Example of Elite Continuity

Session Type: Individual submission

Authors:

Name: Melanie Radue

Email: Melanie.radue(at) fau.de

Country: DE (Germany)

Affiliation: Research Assistant

Abstract: Until 2010, post-colonial Myanmar was one of the most closed economic, political, social and media systems in the world, ruled by the Tadmaw (military junta) for nearly half a century. Myanmar's transition process, starting with top-down democratization through the "roadmap to democracy" initiated by the Tadmaw in 2003, has followed a similar pattern of elite continuity that e.g. Sparks (2008) examines in the comparison of China, Russia, and Poland. Sparks (2008) argues that the theory of elite continuity provides better explanation for transformation processes' outcomes than the often-applied model of transitology. The study of Myanmar's media reform process is based on 37 expert-interviews about the development of media freedom and media control mechanisms in Myanmar's political opening up, conducted in 2013, 2014 and 2017. In post-transition Myanmar the military still owns most of the media infrastructure and cronyism is the dominant structure in the political, economic, and social transformation of the country. Central media businesses are mostly owned by influential political elites including siblings of former ministers, military higher-ups, or people with strong political ties (Brooten, 2016, p. 194). The strong links between the Tadmaw and private companies, who monopolize the market, lead to a market-driven freedom of expression, where outlets other than the high-circulating state-owned publications, such as the Global New Light of Myanmar Daily (still 51% state-owned after the transition as a joint venture with private companies, which resembles the old propaganda mouthpiece), have no chance of survival on the crony-dominated market. New independent newspaper outlets, which were licenced in April 2013, mostly died due to the economic dominance of the government and cronies.

The impact of wealthy elites which try to increase their power by interfering with the public discourse in Myanmar with investment in the media market and ownership of media outlets draws criticism from the interviewees. With respect to the transformative dynamics of Myanmar's media reform which lead to commercialization, in response to Hallin & Mancini's (2004) question of "whether commercialization has increased or decreased the flow of political information and discussion" (p. 279), experts illustrate a trend which is mainly influenced by crony ownership/financial structures, leading to nepotism and partisanship, where the increase of commercial interests decreases the democratic potential of the media to provide free and plural information to inform the voters.

Additionally, the transformation of the state-owned broadcaster MRTV into a public-service medium preserves a strong intertwinement of the government and the Tadmaw with the media sector and does not balance the government's monopolistic advantages. The ideological imprint of the media outlets as transformed public-service broadcasting "remains extremely vulnerable to state interference" as shown in analysis for other transitional contexts (Votmer, 2012, p. 237). Myanmar's development highlights "a high degree of elite continuity throughout the societies, demonstrating

a shift from political to economic power” and serves “as an example of ‘elite continuity’, in which the former bureaucratic ruling class attempts to restructure itself as the owners of private capital.” (Sparks, 2008, pp. 1, 18)

Title: Use of digital humour to resist a discourse of essentialization and securitization at the times of geo-political crisis: the case of Russian-speaking minority in the Baltics

Session Type: Individual submission

Authors:

Name: Jānis Juzefovičs

Email: janis.juzefovics(at) ut.ee

Country: EE (Estonia)

Affiliation: University of Tartu

Abstract: Inspired by the concepts of ‘digital acts of citizenship’ (Isin&Ruppert, 2015) and ‘affective publics’ (Papacharissi, 2015), the paper explores performative, playful forms of digital citizenship as enacted by the sizeable Russian-speaking minority in the ex-Soviet Baltic countries of Estonia and Latvia to resist the emotionally charged pre-election discourse of essentialization and securitization on the part the local political elites against a backdrop of on-going Ukrainian crisis. In doing so, we seek to contribute to the existing scholarship into civic-political identities of the Russophone population in the Baltics where the study of conventional forms of citizenship have so far dominated (see e.g. Kallas&Kaldur, 2017; Ikstens, 2014).

Social media channels have allowed ethnic-religious minorities to exercise agency beyond the exclusionary forms of civic-political engagement as prescribed by the national political and media elites (see e.g. Harris&Roose, 2014; Johns, 2014), often motivated by the securitization sentiments with cross-border connections of these migrant, diasporic groups, including their media-related practices, being conceived as a threat to social cohesion and national security ideals (see e.g. Mythen, 2012; O’Loughlin&Gillespie, 2012). This is also the case with the Russian-speaking minority in the Baltics where discourses of securitization and essentialization on the part the local political elites have been accelerated by the on-going Russia-Ukraine conflict (see Juzefovičs 2017, Vihalemm, et al., 2019). Likewise, the previous scholarship provides rich evidence of digital humour being utilized for the purposes of political engagement, activism and self-expression, including various forms of political critique and resistance (for one highly topical example see Wiggins, 2016).

For Papacharissi, through expressions of sentiment in the online public sphere(s) where ‘humor, news sharing, opinion expression, and emotion’ are blended (Papacharissi&de Fatima Oliveira, 2012:278) ‘affective publics’ make political statements, something we can look at as a claim-making via ‘digital acts of citizenship’, to use the terminology as introduced by Isin&Ruppert (2015). These enactments of citizenship ‘disrupt habitus, create new possibilities, claim rights and impose obligations in emotionally charged tones; pose their claims in enduring and creative expressions; and, most of all, are the actual moments that shift established practices, status and order’ (Isin&Nielsen, 2008:4-5).

The empirical part of the paper presents the analysis of two cases studies of the recent provocative election campaigning that draw on the ‘sensitive’ issues of geo-politics (Latvia, 2018) and ethno-linguistic divisions (Estonia, 2019). The focus of our inquiry is on the outcry these political appeals

have triggered among the local Russian-speaking population. We employ the analytical tools of discourse and narrative analysis to examine the ways Facebook posters and commentators have utilized user-generated humorous content as a tool for resistance and claim-making. We found that members of the ethno-linguistic minority actively make use of various forms of digital political humour (memetic texts and images, hashtags, flash mob) to subvert the hegemonic political discourse of essentialization and securitization and to make alternative political statements. These micro digital acts of citizenship include claiming of hybrid, in-between self/group-identification and civic autonomy and dignity.

Title: Surveillance and Silence: Building the Media Agenda in Ethiopia

Session Type: Individual submission

Authors:

Name: Sally Ann Cruikshank

Email: SallyAnn.Cruikshank(at) mtsu.edu

Country: US (United States)

Affiliation: Middle Tennessee State University

Abstract: In October 2018, Ethiopia celebrated the election of its first female president, Sahle-Work Zewde (Gebreselassie, 2018). This followed a decade of economic growth that suggested the country was recovering from the destruction of the genocidal Derg regime (World Bank, 2016). For journalists in Ethiopia, however, press freedom has been slower to develop. Journalists in Ethiopia face political persecution and restricted access to information and resources (Skjerdal, 2008). Furthermore, the government-owned Ethio Telecom serves as the country's only Internet and phone provider, and this monopoly allows for government surveillance of nearly all communication (Human Rights Watch, 2014).

Though in-depth interviews with 37 journalists, this study examines the news landscape in Ethiopia using the theoretical framework of agenda building. Agenda building examines how information become known to the public (Cobb, Ross, & Ross, 1976). Understanding how information reaches the public in Ethiopia is particularly important, as the country continues to develop. Research questions include: How do journalists find content and sources for stories? What types of sources do journalists use in stories?

Theoretical Framework

With government censorship and surveillance, are journalists in Ethiopia able to enterprise and investigate issues pertinent to their audience? The agenda building process determines the way issues become known to the general public and subgroups within society. Cobb, Ross, and Ross (1976) determined there were two agendas: public and formal. Moreover, agenda building explains how issues do or do not become salient with the public. The agenda building process examines how journalists identify and develop news stories, including how stories are discovered, researched, and sourced (Len-Rios, et. al., 2009).

Methodology

Data for this research were collected through in-depth interviews with 37 journalists in Addis Ababa during a one-month period in 2016. The participants included 11 state-run media journalists, 21 private media journalists, and five freelance journalists. Initial interviews were obtained through cold calls to news outlets, and then snowball sampling was used to find more participants (Goodman, 1961). A semi-structured interview format was used, allowing the researcher to ask follow-up questions. Participants were asked about their role as a journalist, their daily routine, and their media organization. Interviews lasted an average of one hour.

Name: Yonghua Zhao

Email: yonghuazhao(at) 126.com

Country: CN (China)

Affiliation: School of Journalism and Communication Renmin University of China

Abstract: In China, there has been a vast growing academic interest in cyberspace in recent years. There are various viewpoints that regard cyberspace as a virtual space and emphasize its commercial value. However, these ideas ignore the fact that the cyberspace is just a part of social-cultural changes and Chinese modernity itself, which is full of politics between the body, capital and power. In Chinese modernity, cyberspace is a myth of modernity and a carrier of Chinese social-cultural implication. In these contexts, the cyber game space assumes an importance which has been rarely acknowledged or investigated by Chinese scholars and yet is central to our contemporary understanding of bio-politics and capital war inside it. This article is devoted to providing a brief introduction to these issues with an attempt to make the reader familiar with the main themes of this study.

By case studies, we intend to explain the sociology of power-body-capital politics in the rapidly growing cyberspace in China from the perspective of electric games. In what follows, we aim to reveal the real social changes caused by such complex politics and its mechanism. More specifically, we shall first examine the history of Chinese electric games and its status in the Chinese urban cultural space, offering an analysis of relationships between the electric games, body politics and power; and then we explore the significance of these power-body-capital politics for Chinese society and finally uncover the social-cultural mechanism inside these politics.

Abstract: In this paper we seek to investigate the construction of Germany's collective memory in civic and media discourse with a focus on the German troubled twentieth century past, i.e. National Socialism, Holocaust and WWII on the one hand, and the division of Germany, the emergence of the GDR out of the Soviet zone of occupation and the German reunification on the other hand. For a long time, the culture of remembrance in Germany has been perceived as a role model and, especially abroad, Germans were considered to have successfully worked through their past (Langenbacher, 2010). The media, in particular, have played a pivotal role in shaping the collective memory discourse (Dayan & Katz, 1996; Lang et al., 1993). However, we presume that the hegemonic discourses of Germany's troubled pasts are increasingly being questioned and renegotiated due to on-going changes in the political landscape, demographic and generational shifts and, more importantly, the rapid transformation of media ecologies. The rise of right-wing parties in Europe, the number of eyewitnesses dwindling every year, and a pluralisation of perspectives in light of migration, Europeanization and globalization (Assmann, 2016) have considerably changed collective memory dynamics, just as the decline of the mass media's hegemony through the rise of participatory media technologies.

In our paper, we ask how Germany's troubled past is remembered today, both in the mass media and among the population as the "carrier" of communicative memory. Against the background of Foucault's discourse theory (1972), we have analysed more than 100 published articles from both agenda-setting mainstream media and right-wing media by using a qualitative research design. Furthermore, we have conducted more than 20 focus group discussions and 50 in-depth interviews with both East and West Germans. The results show that the imperative to remember WWII and the Holocaust is deeply rooted in the German society, although—at the same time—people are also tired of being constantly reminded of Germany's past (the younger generations in particular) and wish a more diversified culture of remembrance. With regard to Holocaust remembrance, East Germans tend to prefer the former GDR's commemorative culture comparing to today's commemorative culture in reunified Germany. That said, the mainstream media still consider themselves as the chief "upholder" of today's collective memory practices, while right-wing media are calling for a new commemorative culture and a coming to terms with the past.

Title: Patriotism, lobbyism, show-off ... Framing import substitution in Russian media

Session Type: Individual submission

Authors:

Name: Anastasia Kazun

Email: adkazun(at) hse.ru

Country: RU (Russian Federation)

Affiliation: National Research University Higher School of Economics

Name: Oksana Dorofeeva

Email: odorofeeva(at) hse.ru

Country: RU (Russian Federation)

Affiliation: National Research University Higher School of Economics

Abstract: The study analyzes the discussion on import substitution in the Russian press for the period from August 2014 to December 2016. The selection of news messages was carried out using the database of printed publications "Integrum". Based on the analysis of 269 articles published in the Rossiyskaya Gazeta, Novaya Gazeta, Komsomolskaya Pravda, and Kommersant, authors show that the discussion is determined by eight frames - anti-Western, patriotic, nostalgic, sentimental, human interests, consequences, selfish and showy. The patriotic frame and the consequences frame were most popular. The newspapers used different frames. The Rossiyskaya Gazeta loyal to the government constructs a predominantly positive image of import substitution through anti-Western and patriotic frames. While the opposition Novaya Gazeta often emphasizes the possible negative consequences of this economic policy, using the showy and sentimental frames. Komsomolskaya Pravda uses the widest range of frames, but the information is simplified to be more intelligible to the target audience. While Kommersant discuss import substitution at a more expert level, actively using the selfish frame and the consequences frame. Based on the conducted qualitative analysis of media, a list of key words that were used to determine the place of import substitution in the network agenda was formulated. An analysis of joint references to these words in the Russian press allow to single out three large clusters in a public discussion: the economic-political, patriotic-selfish, and the cluster of protectionism. Based on the results of the study, it was concluded that the debate on import substitution combines both economic and political arguments. The media often resorts to ideological constructs to justify an attitude to import substitution.

Title: Half a Truth Is Often a Great Lie. How the Political and Economical Elites and the Public Shape the Messages in the Romanian Media System

Session Type: Individual submission

Authors:

Name: Andreea Alina Mogoş

Email: mogos(at) fspac.ro

Country: RO (Romania)

Abstract: The current paper is based on Siebert, Peterson, and Schramm's widely circulated idea in *Four theories of the press* (1956) that "the press always takes on the form and coloration of the social and political structures within which it operates". Post communist Romanian media system reflects the transition society and the political struggle over the almost last three decades, after the collapse of dictatorship in December 1989.

During the early '90s, Romanian society was in search for its own media and Romanian media was in search for a society (Gross, 1999:83). Freedom of expression combined with the need/demand for information, lead to an explosion of the print media in terms of variety and circulation, but only few products proved themselves to be competitive, therefore most of these publications soon disappeared. After mid '90s, important commercial actors entered into the TV landscape, thus opening a new era in the televisual political communication. The first wave consisted in generalist TV channels, but at the beginning of the 21st century, a disproportionate number of 24h news TV channels owned by political or economic Romanian elites, started to emerge (Realitatea TV and B1 TV in 2001, N24 in 2004, Antena 3 in 2005, Digi24 in 2010, RTV in 2011). Several of these news channels constantly display/ed partisanship (before and during electoral campaigns, before referendums, during protests) and have been increasingly transformed into political propaganda tools, particularly in election years (World Press Freedom Index, 2018). But the role of the traditional media such as news TV channels should be discussed in conjunction with the growing influence of the new media and social media, because the political communication is now shaped by a hybrid media system (Chadwick, 2013). As the author states, interaction among older and newer media logic (technologies, genres, norms, behaviors, organizational forms) shape the power relations among political actors, media, and public: "Power in the hybrid media system is exercised by those who are successfully able to create, tap, or steer information flows in ways that suit their

goals and in ways that modify, enable, or disable others' agency, across and between a range of older and newer media settings" (2013:207)

The paper aims to analyse the Romanian media system and how it affects the political communication by using the hybrid media paradigm. The longitudinal analysis focuses on TV channels ownership and its transparency, the media institution positioning before or during major events (elections, referendums, massive protests) and how the traditional media logic change/adapt to the new media practices, focusing on five main dimensions of analysis: the use of technologies, genres and formats, sanctions applied by the national media regulatory body (CNA), displayed behaviors/partisanship and organizational forms. The paper also discusses the Romanian media system's peculiarities using the framework of the three models proposed by Hallin and Mancini (2004): the Mediterranean or polarized pluralist model, the north/central European or Democratic corporatist model and the North Atlantic or Liberal model.

Title: Propaganda: digitized' News agenda in Twitter discussions in the Russian competitive authoritarianism

Session Type: Individual submission

Authors:

Name: Daria Dergacheva

Email: dergacheva(at) yahoo.com

Country: ES (Spain)

Affiliation: Autonomous University of Barcelona, Department of Journalism and Communication Sciences, PhD student

Abstract: Countries with competitive authoritarianism are the most common among the autocracies of the world, more so than military dictatorships, monarchies or single party regimes (Magaloni: 2010 p. 751). Russia has long been cited as one of the examples of a competitive authoritarianism regimes (Levitsky, Way: 2002; Hale: 2010; Petrov, Lipman & Hale: 2013; Schedler: 2013; Golosov: 2015; Gelman: 2014; Sakwa: 2017, Robinson & Miln: 2017) , and the list of such countries is increasing every year. For some researches, now even EU member states Hungary and Poland are close to fitting into this definition (Bustikova and Guasti: 2017; Mechkova, Lührmann, Lindberg: 2017). However, we know little about whether and how these regimes work with the new online environments, including social media.

The proposed research explores the ways current news agenda is constructed in media and discussed in social networks and what are the mechanisms of power behind it in the case of Russian competitive authoritarianism. The main objective of the study is to explore the use of online media and social networks, in particular – Twitter in the competitive authoritarianism country such as Russia around the current media agenda in the country.

In this analysis, I am collecting data from Twitter for the period of 14 days on the topics defined as the most important news agenda in the traditional media in Russia for the days of collection. I further develop an exhaustive list of keywords and key phrases that capture Twitter discussions related to the sample news stories. The most relevant keywords or phrases, which brought the most search frequency, were used for collecting the Twitter datasets withing a 14-days window. They included all public Twitter messages with the keywords and hashtags from a sample of news stories, . An online application Netlytic was used for the data collection, text and social network analysis (Gruzd, 2016)

Once the datasets were collected, I used a Netlytic online application for to build name and chain networks with this Twitter data. A Twitter actor, or name, network shows us who is interacting with who in relation to a particular hashtag or search term (Graham & Ackland: 2016).

The research has a potential to discover what kind of communication networks were build around specific news topics, where the discussions originated and how the information was spread on Twitter in the country with competitive authoritarian regime such as Russia.

Abstract: Studies on journalistic cultures at the international level usually use as an indicator the influences (internal and external) in the journalistic work that are perceived by these professionals, through the use of the questionnaire as the main research technique.

In this paper we contrast the perception of the influences on professional performance with the political-professional debate on the regulation of the media, through the analysis of content to journalistic articles, reports, presentations, conferences, panels, interviews, scientific articles, books and thesis.

For this, the Cuban context is analyzed, where the fundamental contradictory knot through which the journalistic culture takes shape is on the one hand due to the systematic aggressions of the US government against Cuba, which have the media as a center; and on the other, from the accumulated institutional and political distortions that have cemented the country's media culture, distancing the communicative social practice from the emancipatory principles of the Cuban anti-capitalist project. In Cuba during the last five years a growing and unprecedented professional debate has developed over the being and the duty to be of the media system. In this, a remarkable diversity of professional, intellectual and political voices has participated; provided an analytical framework to account for the characteristics of the professional culture of journalists and their most influential factors.

It has been corroborated from this debate and from the perceptions shared by the community of journalists in the country that the main influences in the journalistic work in Cuba are the sources of

information, the political-governmental regulation of the media, the editorial policies and routines of each media.

The qualitative content analysis of the political and professional discourse contained in more than a hundred publications, which as a whole constitute the discourse on the media, is used as a technique. This is analyzed taking into account 15 indicators, of which the relative ones to the legal regulation and the political direction of the means referred to the intervention dimension of the state are exposed. This result is contrasted with the influence on the professional performance perceived by 60 journalists interviewed, which belong to different types of media (official and unofficial, social and public-state, print, digital and audiovisual) from all regions of the country (west, center and east).

In general, the professional culture of Cuban journalism accounts for objectual and perceptual transformations enabled and constrained, at the same time, by the forms of state regulation, ideology, the path of the US political conflict against Cuba and the global context of changes in the socio-technological systems of information and communication.

Title: 'Let's Check it Seriously': Exploring the Localization of Fact-Checking Practice in Authoritarian China

Session Type: Individual submission

Authors:

Name: Yusi Liu

Email: liuyusi(at) zju.edu.cn

Country: CN (China)

Affiliation: Zhejiang University

Name: Ruiming Zhou

Email: zhouruiming(at) zju.edu.cn

Country: CN (China)

Affiliation: Zhejiang University

Abstract: In a so-called “post-truth era”, fact-checking acts as an ideal of news genre all over the world. However, fact-checking in China could not be taken into practice as well as exemplars in the western world overnight. It has to confront and adapt for tensions among political, economic and user forces in new technological circumstances. This study explores how fact-checking is practiced in authoritarian China. Supported by Tencent, a popular and renowned online portal, Fact Check implements in China recently. To explore the participatory practice of fact-checking in China, the authors conduct a case study on Fact Check mainly by combining quantitative and qualitative text analysis of its articles, as well as an in-depth interview with the practitioners and participants operating this project.

Based on content analysis of Fact Check (articles in 2017/2018), a news blog both on private-owned web portal Tencent and on private-owned social-media platform WeChat, this article finds that fact-checking in China is localized mainly as ‘rumor destroyer’, ‘scientific knowledge disseminator’ and ‘national image builder/protector’, instead of “political-speech inspector” in democratic system. Results suggest that fact-checking in China is practiced in an improvised and localized way, as journalistic professionalism is constructed in the past decade.

As a professional and innovative news genre, fact-checking is applied to advancing democratic culture with difficulty and utilized to participate authoritarian governance in a Party-state. However, this study concludes fact-checking in China is well deployed to stimulate discussion on facts and opinion, elevate Internet literacy and enhance public communication. This study also concludes that non-institutional market-oriented organizations may be potential crucial roles and driving forces to do good journalism in an authoritarian regime.

Opposing with the idea in the western countries of viewing fact-checking as a power-monitoring tool, the analyzing result shows that fact-checking in China was recontextualized as alternative discursive resource and practice strategy to help the media outlet survive in the Party-controlled media environment. Specifically, the practitioners compromise through blurring and shifting the focus of fact-checking statements of politicians. Instead, they preform urgent concern of rumors from everyday life rather than political life. This decision on what was worth checking represents a complicated landscape, which is shaped by risk assessment on media regulation and call-answering

on participatory culture online. As a consequence, the authors discuss this recontextualization of fact-checking and its influence on public life in China.

Title: Fake news across the Taiwan Strait in the post-Cold War era: the coverage of China's Military Operation around Taiwan by Taiwan News Media

Session Type: Individual submission

Authors:

Name: Lihyun Lin

Email: lihyunlin3(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Taiwan University

Abstract: In the authoritarian past, Taiwan government used Cold War to justify its authoritarian rule and to curb the spread of the Chinese Communist propaganda. After the cold war, Taiwan was liberalized. Yet China has continued to claim Taiwan as a part of China; its People's Liberation Army (PLA) of China was said to have initiated digital warfare by spreading fake news via official and unofficial channels, including social media.

China's Military Exercise around Taiwan in the end of 2017 was a critical case. At first, the social media (weibo) accounts of China's military media released pictures that PLA's bomber was flying over central Taiwan. The messages were then disseminated in Taiwan's social media. Taiwan's commercial media, in turn, followed the discussions, even using the photos and videos made by PLA, without checking their validity, though the Military of Defence has declared that the photos were fabricated.

This paper analyses Taiwan media's representations of the PLA's military operation in Taiwan. The paper adopts Shoemaker and Reese's Hierarchy of Influence Model to examine the external (institutional) and internal (organizational) factors that influence news production. This paper further adds the factor of foreign countries to the external levels of the model.

According to the analysis, at the external (institutional) level, after the deregulation in the 1990s, Taiwanese media have been in tough competition. To survive in the digital market, they produce instant articles and tend to adopt materials in social media. Thus, Taiwan's media environment has been vulnerable to fake news. Externally, after Chinese President Xi Jinping came to power in 2012, the PLA has intensified digital warfare towards Taiwan, including this "military operation."

At the organizational level, commercial news media did not check the validity of the photos; yet their representations differed slightly, according to their editorial policies. The popular news website, the Apple Daily dramatized the PLA's military operation as a hyper-real film, by making animations and creating composite photos in which the leaders of Taiwan and China confronted each other. The pro-China news groups, whose owner run business in China, was 'voice of the PLA', delivered not only the power of the PLA, but also its will to "liberate Taiwan by force" by 2020. By contrast, the pro-Taiwan independence newspaper presented Taiwan's ability to defend itself.

In conclusion, in the Post-Cold war era, the production of fake news in Taiwan was caused by external and internal factors. Externally, China has used different channels to deliver its propagandas. Taiwan's commercial and polarized media environment has intensified the impacts of fake news. Internally, different media represent the military exercise based on their editorial policy, but not on checking facts.

Title: PLATFORMISATION EFFECTS OF GLOBAL DIGITAL INTERMEDIARIES ON BALTIC DIGITAL-BORN NEWSROOMS

Session Type: Individual submission

Authors:

Name: Dzina Donauskaite

Email: dzina.donauskaite(at) gmail.com

Country: LT (Lithuania)

Affiliation: Vilnius University

Abstract: Over the past 15 years the Baltic countries (Lithuania, Latvia and Estonia) have experienced a rapid growth of digital-born newsrooms. Two Estonian-owned media companies 'Ekspress Grupp' and 'Eesti Media' compete by owning topmost popular digital-born internet dailies in each of the Baltic countries. High popularity of digital-born news media is the phenomenon common for media systems of post-soviet countries.

Amidst journalism business growth on the internet and the reported profits, the local media companies in the Baltics remain unsure about their future and the future of journalism. One of the main reasons for concern is that the two most popular global online platforms – 'Facebook' and 'Google' – have substantially affected infrastructure of journalism production. Changes in audience's news consumption patterns have been well observed and documented, not so obvious yet are platformisation effects of the global players on local digital media newsrooms in small Baltic media markets that almost at their infancy faced unprecedented competition over scarce local resources with powerful and well-established global media tycoons.

Platformisation 'entails the extension of social media platforms into the rest of the web' (Helmond, 2015). In local media systems, platformisation affects infrastructural and economic models of newsrooms by making them more compatible with logics of global platforms.

In this paper the global online platforms of 'Facebook' and 'Google' are referred to as global digital intermediaries. The term emphasizes the role of large globally operating technology platforms in distributing news to audience (Kleis Nielsen & Ganter, 2018), while local intermediaries (local media news organizations, including the digital-born ones) perform a more complex role. According to the theory of mass communication, intermediaries are cultural institutions whose role is to process large quantities of information collected for specific reasons at the public interest to receive accurate information on everyday matters in a timely manner.

While direct access to news through local intermediaries remains significant in the Baltics, yet increasing number of audience get exposed to news through search or 'Facebook'. The global digital intermediaries increasingly tend to amass audience around the content which is produced by local digital-born intermediaries. This makes platformisation effects - i.e. effects of economic and infrastructural extensions of global platforms to local media organisations - possible.

This paper is dedicated to study those effects. Insights on platformisation in Baltic media newsrooms that are provided in this paper are based on empirical evidence (qualitative interviews) with editors in chief, social media editors, CEOs and journalists in all three Baltic countries. Questions of effects on funding model of Baltic digital-born journalism, strategies of content distribution, process of editorial decision-making and even hiring requirements of journalists and other staff are addressed. In total 11 representatives of digital-born news media outlets were interviewed for this paper: 6 representatives from 'Ekspress Grupp' (most popular 'Delfi' portals in the Baltics) – 4 CEO's and 2 editors - 1 representative (CEO) of Eesti Media, 4 representatives of digital-born startups in the Baltics (Edasi, Murileht, Re: Baltica, Nanook).

Title: The paradoxes of change: Communicative practices of successful entrepreneurs in the private sector in Cuba

Session Type: Individual submission

Authors:

Name: Mabel Machado López

Email: M.Machado-Lopez(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University

Abstract: As a new social group of private entrepreneurs expands in Cuba with the transformation of the island's model of socialism, numerous contradictions are becoming visible in the social landscape. This paper suggests that the communication practices of owners of high-end private restaurants (paladares) in Havana are among the factors contributing to render visible existing social inequalities and political paradoxes in the communist-ruled country.

Since the reformation of Cuba's political, economic and social system known as "the update" kicked off in 2008, the government have issued around 200 types of licences for the private sector, benefiting, in particular, those ventures operating in the tourism industry. Although the private sector deals with the uncertainties and policy inconsistencies derived from this period of transition, the urgent need for good-quality services in the tourism sector has enabled entrepreneurs running successful paladares to rapidly convert their businesses into bars, clubs and other more complex types of business. By doing this, the entrepreneurs not only have crossed the boundaries set by the government for the intervention of the private sector in the society but have legitimised themselves as cultural mediators at a local level, taking on a role that has been almost exclusive of the state institutions in the history of the Cuban revolution.

This research draws on the studies on communication ecologies and polymedia in poor and developing countries and on the literature on transition economies (particularly in the post-socialist space) to discuss the specificities of the communicative assemblages (D. Slater, 2013) resultant from the intervention of owners of high-end paladares in the Cuban context. The concept of communicative assemblages is used here to underline the flexible, unpredictable, unstable and sometimes contradictory character of the entrepreneur's communicative practices. In this sense, this paper advances the analysis on the uses of mobile media among a population affected by a very low rate of internet penetration that has been proposed by authors such as A. Pertierra (2009, 2012). Bourdieu's notions of social and symbolic capital are key for understanding how these entrepreneurs participate in the modelling of new social subjectivities and patterns of consumption which tend to be disconnected from the ideals of the Cuban socialism.

This qualitative, exploratory approach to entrepreneurs' communicative ecologies primarily draws on semi-structured interviews to owners of high-end paladares in Havana. A content analysis of the businesses' websites and social media profiles was used here as a complementary method. Through the analysis of the data collected the study concludes that entrepreneur's communicative assemblages are articulated around small circles of influence and personal networks from which the average working-class Cuban is excluded. The study indicates that difficulties for accessing the internet force the entrepreneurs to rely primarily on mobile media and on word of mouth to promote their businesses. This paper suggests that the discretionary use of mediated communication by the

participants in this study reflects their desire to take distance from the state institutions and other less successful entrepreneurs.

Title: Celebrity politics' elements in contemporary Russia

Session Type: Individual submission

Authors:

Name: Anastasia Grusha

Email: anastasia_grusha(at) mail.ru

Country: RU (Russian Federation)

Affiliation: Faculty of Journalism, Lomonosov Moscow State University

Abstract: On one hand, in recent decades, seeking political support from celebrities in the form of endorsements has emerged as a popular strategy. Considering the importance of celebrity-oriented entertainment media, political parties and candidates have worked hard to obtain support from media savvy personalities such as entertainment-industry celebrities, spin-doctors, and famous journalists to attract undecided voters in modern democracies (Perloff, 2013; Van Zoonen, 2005). On other hand, the politicians often accepts the style of popular culture representatives to promote themselves in politics. Studies in celebritization of politics as a trend in political communication in Western countries are well developed (Wheeler: 2013, Street, 2004 and 2011, Stayner: 2013 to quote some). The extension of this phenomena to the rest of the world is not studied really much. This research is focused on the penetration of celebritization if politics - among the other recent trends in political communication - into Russian politics and media on different levels: from all-national poltical events (for example, presidential elections-2018 with “Putin’s Team” or Ksenya Sobchak participation in this and not only campaign) to regional and local (in Krasnogorsk city in Moscow Region Jeff Monsoon, an arm-wrestler, ex American citizen, was a candidate to local parliament). It’s an attempt of a qualitative study aimed at exploration of national features, formats and perspectives of this global trend in Russia during the latest elections, other political campaigns and routine periods in 2018/2019. Celebrity endorsement in the present political context and politicians’ behaviour in the era of mediated politics within national political culture is included into research program. To put it all into existing theoretical frameworks is a challenge of the research: how universal are those trends for non-Western political field or they are applicable to the Western societies only; are Street's types of celebrity (celebrity politicians and political celebrities) valid for Russia or not; what are theirs communicative strategies; what is the media role in this process.

Title: Transparency of Media Ownership and Editorial Autonomy as Corporate Social Responsibility in the Media Industry

Session Type: Individual submission

Authors:

Name: Ainars Dimants

Email: dimants(at) latnet.lv

Country: LV (Latvia)

Affiliation: Turība University; Institute of Philosophy and Sociology, University of Latvia

Abstract: With an increased impact of mass media on other sub-systems of society – political, economic, legal and socially cultural – and dependency of socialization of an individual on the information in mass media, the subject of transparency of media becomes more important, especially in transitional societies with so called oligarchs but also in regard to regulation of media concentration. Considering that media business is not possible without the implementation of social functions of journalism and the credibility is the main value of the media, it is necessary to apply higher demands regarding transparency of property in this industry – the identity and ownership of the media. However, in Latvia the above-mentioned demands have not become effective neither in legislation, nor, what is more important, in practice. In fact, the beneficial owners can remain anonymous. Therefore, by demanding transparency from other parties of the socially political process the media itself loses credibility. The law requires and achieves the publicity of the sponsors of political parties. In return, essential information regarding media powers that significantly influence the process of decision making is unavailable to the society, even though these powers might have even a greater impact on the process of decision-making of society. At the same time, the transparency of production process becomes an essential part of Corporate Social Responsibility (CSR) as a comprehensive but voluntary objective in the core business activity of media enterprises (cf. Chandler, D. (2017), 6–8; Kotler, P., Lee, N. (2005), 208–210; Weder, F., Karmasin, M. (2009), 326–327, 334–336; Altmeppen, K.-D. (2011), 259, 264–265; Karmasin, M., Bichler, K. (2017), 142–143).

In this paper the author is also advancing his analysis of the state of editorial autonomy as practiced by the contemporary newspapers in Latvia. The thesis of the author is that the editorial autonomy is a precondition for journalistic quality, which can also be stated as a goal of socially responsible business practice (one of the corporate social incentives) in the media entrepreneurship. References are made to the laws in Latvia which govern editorial independence as maintained in the relations with the founders or business managers of the newspaper or other general ownership interests. In presenting his arguments the author refers to the functional structural system-theory of Niklas Luhmann (1996) and the principles and real practice of CSR.

The concluding remark is that both, editorial autonomy as well the transparency of media ownership, significantly raise the credibility of media brands and media products, and maintain the integrity of journalism which, in the medium and long term, is the chief and most durable asset of any media enterprise which represents a modern journalistic culture.

Title: Nothing new on the Eastern front. The marginalisation of East Germany in the national German news coverage, and what it could contribute to the rise of the populist right

Session Type: Individual submission

Authors:

Name: Antje Glück

Email: A.Glueck(at) tees.ac.uk

Country: GB (United Kingdom)

Affiliation: Teesside University

Abstract: When the Berlin wall opened suddenly in November 1989, the citizens of the former German Democratic Republic (GDR) who had struggled for a democratic change were filled with joy and hope; many expecting their liberal-democratic aspirations to turn into materialistic reality. However, after the subsequent reunification in 1990 the now named 'East Germans' (colloquially 'Ossis') had a rough awakening to mass unemployment and capitalism. Besides being materially disprivileged and with little access to elite positions taken over mostly by West Germans (only 4 % of elite positions are occupied by East Germans today), East Germans found themselves voiceless. Despite unity had taken place on the political level, it remained an unfulfilled promise in terms of the national public sphere, which largely displayed the dominance ideology of West German elites. In consequence, East Germans became increasingly marginalized in the now 'all-German' public discourse. The reunification became discursively fiction.

The marginalization of East Germany in the German media public sphere has been documented since the reunification in 1990 (Früh et al. 1999, Abhe 2009, Ruhrmann 2016). The national hegemonic German mass media outlets played an important role in this process of exclusion and in shaping a rather negative image of East Germany, perpetuating Cold War ideologies in a different manner. With an ownership structure dominated by West Germans and with West German elites continuing to occupy most senior positions in East German media outlets, the stories of East Germany became told from a largely West German perspective.

The neglect of East Germany and East German citizens together with a largely devaluing and at times misinformed representation of their different historical past showed up recently in labels such as 'colonialism' (Richter 2017) or 'German-German racism'. This negative image reached a new peak in 2017 with the upsurge of populist right-wing movements, such as the political party AfD (Alternative for Germany) and the Saxony-centred Pegida especially in Germany's East. Media discourses remained often limited to (West German) experts struggling to explain the popularity of right-wing populist movements among East Germans, speaking ABOUT the EAST without actually speaking TO East Germans, who remained largely voiceless.

A Critical Discourse Analysis (Foucault) will be deployed in order to analyse a text corpus consisting of around 50 news items which appeared at the time around the parliamentary elections 2017 in major news outlets, such as ARD, Spiegel Online, Zeit etc. It analyses how meaning is created through language and symbols and how this interlinks with power and power relationships.

This coincides with the rise of populism in East Germany through the elections, so that a distinction is made if the general news discourse changes towards a more inclusive forum.

As a pilot study this research project aims to deliver an important contribution to understanding the dynamics of media coverage, identity and populism. The study maps the actual field of recent news media coverage about a disadvantaged and historically different region, subjective feelings of exclusion, and the rise of populist movements as potentially alternative forms of articulations in democratic societies.

Abstract: La investigación que se busca presentar en el Congreso IAMCR-2019 para el grupo de trabajo Comunicación post-socialista y post-autoritaria surge desde los afectos, la cercanía con el territorio, la herencia campesina y las trayectorias de un grupo de personas étnica, epistémica, cultural e históricamente diferenciadas, a las que la Gran Dueña de la Vida, la Madre Tierra, Ché já y los sabedores ancestrales terrenales y espirituales reunieron con el fin de aportar desde sus diversidades en la (re) construcción de las narrativas de la familia Bolaños-Piranga, que en nuestro sentir es una forma de “regresar al origen”, como se traduciría la palabra memoria en lengua Korebajü , sobre la resistencia y re-existencia de un pueblo originario que ha sido agobiado por la violencia derivada del conflicto armado interno colombiano, un grupo étnico cuyos territorios ancestrales son dibujados por las cuencas de los ríos Orteguaza, Pescado, Peneya, Caquetá y Putumayo.

Esta investigación busca responder a la pregunta: ¿Cómo las narrativas de la familia Bolaños-Piranga contribuyen a la construcción de memoria sobre la resistencia y re-existencia del pueblo Korebajü?

En el caso particular de los Korebajü, los cambios sociales y territoriales que han vivido se deben, principalmente, a la influencia de los distintos grupos armados que operan en Colombia, a factores y actores relacionados que hacen carrera en la puja por los recursos naturales y económicos que provee la región. Estos y otros fenómenos impactaron sustancialmente en la cotidianidad del pueblo, algo que generó un ambiente de miedo e incertidumbre a raíz de los hostigamientos, asesinatos selectivos, desplazamientos, amenazas y el desarraigo de su territorio y su cultura. Este pueblo se encuentra entre las principales víctimas del conflicto armado interno colombiano, especialmente, desde la década de los ochenta, cuando varios de sus líderes políticos y espirituales, doce aproximadamente, fueron asesinados a manos de las FARC, hecho que afectó de manera significativa su proceso organizativo, de construcción de autonomía y de lucha por sus derechos.

Casi treinta años después de estos casos de violencia y de la fractura organizativa, el Resguardo San Luis, de la mano de la familia Bolaños-Piranga, se ha trazado un modesto, pero, en nuestro concepto, fundamental propósito de volver de manera pacífica y segura al origen de la resistencia y

la re-existencia de la "Gente de la Tierra" desde las narrativas biográficas, un proceso que está acompañado del saber, la cosmovisión, la espiritualidad, la medicina ancestral y ceremonias tradicionales Korebajü como escenarios de comunicación y construcción de nuevos sentidos para reinventarse la vida colectiva.

Title: US Mega-Church and its visual culture

Session Type: Individual submission

Authors:

Name: Suki Kwon

Email: skwon1 (at) udayton.edu

Country: US (United States)

Affiliation: University of Dayton

Abstract: The 21st century US mega-church – mall like complex in the suburbs which features information desk, coffee shop with comfy stylish chairs and sofas, an auditorium equipped with movie-theater seats and massive video screens, all surrounded by acres of parking lot to accommodate hundreds of automobiles- is a byproduct of the Church Growth movement, Evangelical movement and the 1st and 2nd revivalism that swiped the entire US and some part of the UK. The US mega-church is a “seeker-sensitive” model that reflects the era’s trends in easy and feel good theology that provides convenient salvation. The mega-church provides amenities that seekers need such as online prayers, instant online community chat room, gluten free communion wafer, allergen-friendly communion, and child care service in the name of youth ministry. Mega-church indeed became the face of capitalism that became huge enterprises that leads many branches of Campus plan, utilizes electronic media, new construction materials, Online cyber church that employs the latest technology that’s available. Through this paper, I analyze visuals of US mega-churches and offer the relativity to its non-nomination creed.

Title: [Panel] Democracy, Religion and Political Communication in South Asia, Panel description

Session Type: Panel Submission

Authors:

Name: Padma Rani

Email: padma.rani (at) manipal.edu

Country: IN (India)

Affiliation: Manipal Academy of Higher Education

Abstract: The primary focus of the of the panel discussion will be to dissect and discuss as to how an average citizen as voter decides to choose a political party or a candidate that would cater to his/her personal and ideological expectations for the smooth functioning of democracy in South Asia today. What are personal, political and religious considerations in the decision making as to which party or person to vote in largely poor, illiterate and information deprived voters. Each panel participant will be expected to critically examine and discuss how the cultural and religious factors and belief systems are expressed, internalized and propagated in the election campaigns? Also how country specific/culture specific religious signs, symbols, and media are used and expressed political messages in the local languages, idioms and delivered to convince the voters to vote for a particular party or individual candidate? Further, how religious values and ethos have been intertwined within political communication to achieve democratic goals in elections campaigns?

The panel discussion is considered critical and important keeping in view that most of the British colonial South Asia achieved its independence after Second World War II and these countries adopted parliamentary democracy of adult franchise regardless of country's political history or past methods of governance and state religion. The periodic elections have been held in almost all South Asian countries regardless their population size that include few million population Bhutan and billion plus population India. By and large democracy has matured and flourished in these countries requiring serious theoretical discussion on the issues of emerging political communication and new forms of democracy.

The panel participants will bring out their research based analyses, experiences and observations during their presentations and discussions.

Abstract: It is sometimes thought that public shaming is a new phenomenon, only emerging with the advent of the Internet and, in particular, with the rapid growth of social media. Yet, from a historical and religious viewpoint public shaming can be seen as a modern version of legal penal practices that were common in the Middle Ages and occasionally resorted to in subsequent years. In this article, we survey the various modes of public shaming within the Jewish community in the Middle Ages and in modern times. We review whether and how the new practice of communications shaming on social media has been adopted by religious institutions as an extension of communal, traditional shaming, and discuss how rabbis relate to this today.

Title: Territorializing the sacred into contempt: The contextualization of celebrity shamans in Korea

Session Type: Individual submission

Authors:

Name: Joonseong Lee

Email: jlee (at) csusm.edu

Country: US (United States)

Affiliation: Communication Department California State University San Marcos

Abstract: This study is an ethnographic research focusing on celebrity shamans in Korea, the celebrities who have “come out” as shamans. The term “celebrities” refers here to actors and actresses, fashion models, singers, and performance artists. This study explores the life of the celebrities, who have decided to live as a shaman, even though doing so means they will never again appear in the limelight. Exploring the life of celebrity shamans through the cultural studies lenses can provide a perspective on how the sacred can be constructed (or deconstructed) with the mediatization of Korean culture. Mediatization is the “long-term interrelation processes between media change, on the one hand, and social and cultural change on the other” (Hepp, Hjarvard and Lundby 223).

Shamanism is the indigenous belief system in Korea, but shamans in Korea have been ostracized by the ruling power for more than five hundred years. With the mediatization of contemporary Korean culture, shamanism has seen a resurgence. Ironically though, celebrity shamans in Korea are not the beneficiary from the mediatization process. Rather, when the celebrities came out as shamans, the sacred aura that they have held became de-and re-territorialized as a sacred commodity, execrated by Korean society at large.

Cultural studies is an interdisciplinary intellectual tool, which maps out strategies of articulating power relations in the rhizomatic collection of the contexts that constantly reiterate the process of de-and reterritorialization. Also, cultural studies provides scholars skeptical, analytical disposition, by which to study the relation among discourse, power, everyday life in modern society. From a cultural studies perspective, mapping out the process of territorialization from the sacred aura of celebrity into a sacred commodity of celebrity shamans can demonstrate how the construction of the sacred can be contextualized in various domains of Korean culture.

Title: Facebook as an arena of struggle for the right to political participation of Haredi (ultra-Orthodox) women in Israel

Session Type: Individual submission

Authors:

Name: Orly Tsarfaty

Email: orlyt (at) yvc.ac.il

Country: IL (Israel)

Affiliation: Emeq Yezreel college

Abstract: In the Israeli political reality, the Haredi parties, despite their participation in the parliament, ideologically reject the democratic outlook and exclude women. This exclusion represents their religious outlook.

This political reality contradicts the law and the values of democratic rule. It has been made possible due to the unique cultural status of Haredi society and political interests.

One of the most important and unique phenomena in the 2013 elections was the political organization of a small group of Haredi women on the Facebook, demanding representation in the Haredi parties. The group operated under the name "LONI-LOBO" (Hebrew)."

For the first time in Israel, Haredi women from various groups joined in protest against the radicalization against Haredi women. In order to combat extremism, they posed a revolutionary feminist demand - representing women in the Haredi parties. Their demand for democratization, equality and partnership in the political system undermines their absolute exclusion from the public arena.

Two major changes in Haredi society have enabled women's protest: changes in the media's exposure and consumption patterns, and changes in the level of education and traditional patterns of employment among Haredi women.

Haredi society's traditional ideological stance regarding the modern media rejects the use of the new media - as part of the supervision of exposure to modern / secular content that is perceived as prohibited. There is still an argument regarding the use of computers and the Internet. The adoption of the Smartphone made it possible to breach the control walls anonymously. Against this background, the use of Facebook for the purpose of protest by women is perceived as subversive.

In the 2015 elections, the Group's activity was renewed, and it also affected other initiatives. ""LONI-LOBO" " expanded its media activity in order to raise the issue to the public-media agenda. Soon a protest movement began to crystallize on Facebook. In a reality where Haredi women were forced to deal with "symbolic annihilation" (Tuchman, 1978) in the Haredi media, the media arena in Facebook became the centerpiece of their activity .

Like other protest movements in non-democratic societies (eg, Breuer, 2012; Baylor, 1996; Mccurdy, 2012), the social network was also an effective, cheap and anonymous means of organizing and mobilizing messages. Facebook has made it possible to bypass the gatekeeper men - in the Haredi media. A virtual community of women formed an alternative political discourse, sparked a lively discussion of women and men and the formation of a new feminist-Haredi identity . Theoretically, this is an interdisciplinary study that focuses on Haredi society as a minority group in the encounter between media, protest and feminism - in terms of the status of women and political and media representation.

The study examines, through textual analysis of the posts published on the Facebook page of the protest movement, the process of forming a feminist leadership with a feminist consciousness among Haredi women. The activities of women show that they adopt the Internet and social networks as a platform for change alongside the old media .

Title: Religion on News Websites: a case study in Israel

Session Type: Individual submission

Authors:

Name: Yoel Cohen

Email: yscohen (at) netvision.net.il

Country: IL (Israel)

Affiliation: Ariel University

Abstract: The paper examines the image of religion constructed in Israeli on-line news websites in order to generate a picture of how religion is covered in the age of new media. A content analysis in four websites comprised- a secular elite website (Haaretz on-line), a secular popular website (Y-Net), and two religious websites - one reflecting the modern orthodox (Arutz 7), and one B' Hadei Haredim -- reflecting the Haredim -- was carried out for an eight week period. The most covered category was Religion 13.3% which was followed by religious festivals (8.9%), synagogue (5.2%), God (4.2%); secular Jews (4.2%), Modern Orthodox Judaism (4.1%), prayer (3.9%), and Haredim (3.7%). All other categories amounted to less than 3% each. Ironically, "Religion" and "God". the two categories creceived least coverage on the two religious-orthodox websites - 10.8% (Arutz 7) And, 11.2% (BeHadei Haredim) in contrast to 30.2% in Haaretz on-line and 19.1% in Y-Net. The high score for Haaretz on-line reflects the intellectual reflective approach it takes to questions about theological belief in contrast to the two orthodox websites which are not inclined to question fundamentals about God and religion. The two combined categories of religious festival and fasts reached 11.3%, and reflect the central part which religious festival and fasts have in Israeli Jewish culture. All the websites are clearly orientated to the Jewish faith. While it is only natural for the focus in a country's media to be on the dominant faith, the extent to which this was the case was surprising, particularly given that Muslims make up a sizeable part of the opposition.

The Western Wall and the Temple Mount in Jerusalem varied considerably -- with the two religious websites much higher than the non-religious ones.

Overall, some similarities between the two religious and the two secular websites may be identified. The religious websites (BHadei Haredim and Arutz 7) gave most space for religious leaders and non official leaders (like yeshiva heads) and official state and religious posts (like Chief Rabbis). Other key themes for the religious websites included the centrality of the synagogue and prayer; religious festival; and fasts; and broader existential theological matters about religion, existence of God, and religious streams. For the non-religious, broader or existential and theological, questions, God were even more singularly prominent. Also prominent was synagogue prayer, as was religious streams - reflecting to some extent the tribal characteristic in religious life. Both religious and non-religious were single-mindedly orientated to Judaism, away from other faith groups.

Title: Wo/Men's God-given Power: Male Headship vs Female Agency in Pentecostal Sermons

Session Type: Individual submission

Authors:

Name: Tumi Mampane

Email: mampanet (at) gmail.com

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: This research project seeks to reveal the relationship between Pentecostal Christianity and patriarchal ideology in South Africa. Recorded sermons from two Pentecostal (charismatic) churches in Alexandra Township (north of Johannesburg, South Africa) are compared using Critical Discourse Analysis (CDA). Through CDA my research ascertains how the church constructs gender hierarchies and perpetuates or challenges gender inequalities. I focus on the Christian religion in general and Pentecostal (charismatic) churches in particular, and also on Black Feminist Theology (BFT). My research is concerned with societal issues and “truths” constructed by the church in the context of Pentecostal churches in Alexandra.

Degenaar (1997: 46) and Voster (2014) refer to “Religious Discourse”, arguing that beliefs are constructed through language and that those beliefs (or ideologies) are then naturalised by repeated practice. Tuckey and Kretzhmar (2002) discuss the internalisation of ideology experienced by children who attend Sunday school. Their identities are constructed in a way which encourages “macho” leadership for boys where “servitude” and inferiority are the structures reinforced in girls. Sermons may be also be used as an instrument to conceal these ideologies through the use of a softer patriarchy—giving women responsibilities and roles which are traditional in nature, and do not pose a threat to male power and dominance. Motherhood, for example, is constructed as not only a female identity, but the only identity that should count for women as is discussed in Frahm-Arp’s (2016) research on Pentecostal churches in Johannesburg, and is similar to what Nadar (2010) terms “Formenism” and “Masculinism”. Formenism is a patriarchal ideology which is initiated and supported by women.

Employing Fairclough’s model of CDA, I describe the content of the two sermons studied as text objects—with specific reference to the use of discursive strategies (grammatical, semiotic, narrative and argument) to convey the respective messages. I also interpret the sermons in their religious context as a means of influence, giving reference to some Biblical texts. Lastly, I explain the gender issues pertaining to hierchies between men and women as communicated by the two pastors and in relation to the rights and struggles of South African women. The two ministers stand on opposite ends in constructing the identities of women within the respective congregations. The one constructs a traditional woman, who waits for a man to initiate and for God to stand up to the injustices against her. The second pastor, however, encourages a rejection of such a construct, insisting that women take their stand as leaders in the home, church and society. This shows just how the ideology of male dominance can be both naturalised and presented as a norm or how the normality of it can be presented as foolish or a danger to the family. Any of the two representations construct an identity in the listeners who are given the polarized views: Christian or unChristian. As to the degree to which women in the respective congregations subscribe to these constructs, I find through an ethnographical study of women within the respective audiences.

Title: Communicating power: The use of religion content to influence public opinion in elections

Session Type: Individual submission

Authors:

Name: Nurhaya Muchtar

Email: nmuchtar (at) iup.edu

Country: US (United States)

Affiliation: Indiana University of Pennsylvania

Name: Masduki Masduki

Email: masduki (at) hotmail.com

Country: ID (Indonesia)

Affiliation: Indonesian Islamic University, Yogyakarta

Abstract: Religion and politics are often intertwined especially in presidential elections, where many contesting powers have shown their interests for their own benefits (Tomsa, 2018). Indonesia is not an exception, especially in the use of religion to influence public opinion. The 2018 regional election in different parts of Indonesia, for example, showed the influence of religion in influencing political participation and public opinion for certain candidates.

The use of religion in politics around the world have been common. Aspinall & Mas'udi (2017) argued that even though this is an unfortunate situation, it is a sign of democratization and political participation. Scheiner (2016) argued that religion has indeed influenced and embedded in all course of life including in election, nevertheless, other factors have to be considered as well in influencing public opinion such as cultural practices and economic situation.

Indonesia adopted the combination of presidentialism and a multi-party system since reform government came to power in 1998. With the presidential election coming this year in 2019 and based on the regional election last year, it is expected that religion will continue to be used as a way to influence public opinion in the election. Messages on religion have been transmitted through media, social media or religious events. The popularity and ease of use of social media with different apps and platforms made messages could be easily altered and transmitted through mobile phones.

This study looks at the influences of religion in politics in Indonesia. Data is based on a combination of two sources; The 2015 data of journalism across the globe (WJS) and content analysis data from three online news media that were gathered from February to April, 2019. The selected duration is based on major events leading to election from presidential debates, campaign activities up to the voting process.

Title: Adventist Visual Culture from 1830s to 1900s: The Use of Religious Images by a Text-Centered Movement and the Implications to Its Relationship with Mass Media

Session Type: Individual submission

Authors:

Name: Allan Macedo de Novaes

Email: allanmnovaes (at) gmail.com

Country: BR (Brazil)

Affiliation: Adventist University of São Paulo (UNASP)

Abstract: Conservative evangelicals and fundamentalist Christian groups show in their history a pioneering and conflicted relationship with mass media, especially the electronic or audio-visual media. While they understand that mass media can be enthusiastically used as an efficient and powerful evangelistic tool, they also criticize it as an “instrument of the Devil”, which threatens the values and beliefs of Christian faith. With Seventh-day Adventists the situation is not much different, once the relationship between Adventism and mass media has alternated between a missionary engagement attitude and hard criticism.

One of the main assumptions that lead Adventism to promote an intriguing and conflictual relationship and use of mass media, especially the visual/video ones, is text-centered and print-driven orientation of the movement. This vocation led the movement toward a specific pool of restrictions and rules about how to consume media content and produce religious media products focusing on text over image and reality over fiction. Hence, this study aims to present a brief history of Seventh-day Adventist Church visual culture from 1830s to 1900s in order to identify how the Adventist mindset behind the production of print charts and religious images continued to influence the way Adventist community interacts and creates TV programs and movies.

The article begins with a succinct overview of the Seventh-day Adventist Church history, belief and culture, with an emphasis on the description of one of its identity marks – the text-centered and print-driven orientation – followed by a concise presentation of the history of charts and religious images by Adventists. This leads to an analysis of the Adventist visual imagery focusing on the emphasis on text over image and on reality over fiction. These characteristics are essential to understanding not only the origin of the movement, but also the metanarratives and paradigms by which the Adventism understands itself and the way the movement uses mass media and creates its own media products nowadays.

Title: The effect of Hope as a placebo effect in the Prophetic age: A case of religious practices on Media in Southern Africa.

Session Type: Individual submission

Authors:

Name: Joseph Muyangata

Email: joseph_muyangata (at) yahoo.com

Country: ZW (Zimbabwe)

Affiliation: Living Waters Theological Seminary

Abstract: There is hope that makes sick and hope that does not disappoint. Hope deferred as Solomon puts it “makes the heart sick”. Yet, on another hand from Apostle Paul’s perspective hope does not disappoint. It is therefore critical to examine these two forms of hope and their effects in the Prophetic age with a special interest on televised prophetic services in Southern Africa.

The rise of the mediated (televised) prophetic age has rekindled the need to probe in-depth the theology of hope. Hope is not usually treated as an isolated entity but in many cases it is fused with other things. In so doing hope is tinted and lost within a tirade of concepts. Yet, if hope is to be examined as an independent concept it speaks volumes and finds its way to addressing human plight.

The concepts of love, faith and hope are important in a human’s life and they are also crucial foundations to one’s virtues. Majority of theological researchers talk about love and faith (Althouse & Waddell, 2010; Poloma & Green, 2010; Poloma & Hood, Jr., 2008; Hardesty, 2003), however, little is known about hope. Thus, further research on hope is important, because hope is very central to our everyday life and most people do strange things, which this research will bring to light; all because of hope. This is because when a human being is in pursuit of hope, he or she carries a deep tension from within – a battle-scarred heart longing for healing. A quest for something greater than their ability to drive out despair, pain and hurt. Hope isn’t just an emotion; it’s a perspective, a discipline, a way of life. Hope is a journey of choice (Coty, 2010).

A trace on hope and the role it plays in the lives of people would lead to very crucial aspects of human life. These aspects include the ability or failure to deal with disappointment, pain, abuse and all forms of prejudice in their immediate situations. Hope provides people with the belief that tomorrow will be better than today and it helps us all face the challenges of each day with the anticipation for a breakthrough regardless of the costs.

This research will examine the factors that contribute to such occurrences as it reviews of what hope truly is. It should not be symbolic hope but rather real hope. Many times desperation has been misunderstood for hope, yet there is a very thin line between the two very different worlds. A sobering examination on how many respond to the prophetic claims on television, and the demands thereof would quickly tell us how desperate people are.

Methodology:

This research will use interpretivism and realism as my philosophical stance.

Resources to be Used:

This research will use primary sources in form of testimonies, interviews, and surveys of church service documentations, preaching recordings and other original materials in line with the hope theology (Observation and experimentation).

This research will also include material that interprets and analyses the primary sources.

Title: Technology and Religion: The Dialectical Tension of Safety in Religious Spaces

Session Type: Individual submission

Authors:

Name: Ann Strahle

Email: astra2 (at) uis.edu

Country: US (United States)

Affiliation: University of Illinois

Name: Amie Kincaid

Email: akinc2 (at) uis.edu

Country: US (United States)

Affiliation: University of Illinois Springfield

Abstract: In the last several years, the public has witnessed mass shootings at numerous religious centers around the world. From the mass shooting at a synagogue in Pittsburg, Pennsylvania to the shooting at a historically African-American church in Charleston, South Carolina, and to the violence and death at a cathedral in Campinas, Brazil, the narratives of coverage have similarities but also differ greatly in context and meaning.

Historically, churches and religious centers have been places in which people can find physical, as well as spiritual and psychological safety. Safety is being threatened today in the church not only by mass violence, but by the potentially divisive narratives produced in the narratives of coverage, and how these narratives have the potential to bleed into the safety that is found within the religious community themselves. How are these larger narratives of coverage processed by the members of the church communities themselves? Are these narratives implicitly impacting the relationships and safety of those within the church? These questions lead to a larger pragmatic question of if the growth of digital churches is coming about based on a desire for safety and/or safety from confrontation (Hoover and Clark, 2002)? Within this, is the opportunity to practice religion through digital media supporting and/or subverting the ability to exercise the rights and the achievement of universal dignity?

The current research strives to uncover, through a participatory-based, case study approach, how the issue of safety is constructed and deconstructed in light of these pivotal and horrifying moments. Focusing on a church in a midwestern community that is exploring these issues through congregational photo voice, surveys and interviews will not only help with this study, but provide a foundation for future research.

Our approach to the current research is grounded in theorists such as Durkheim who have spoken about how religion organizes people into cohesive social groups, and helps maintain order to preserve social functioning (Durkheim, 1915). Mattis (2001) who reinforces ideas regarding the church as being a space created and fully owned by African Americans as having the responsibility of using its resources to alter the material conditions of the poor and disenfranchised, as well as provide a safe location for community growth.

Locating the multiple dialectical tensions that exist within this issue of “safety” at religious centers can explicate how different elements may attribute and (re)produce individual and collective identities in the broader dimensions of social life (Sandlin, O’Malley & Burdick, 2011). In addition,

a literal foundation can be provided for individuals to begin grappling with the dialectical tensions, or contradictions, encountered daily and how we might better form dialogue, or language and meaning created between people in the interplay of contradictions/opposing forces, around these tensions to discover a new way of understanding and “seeing” the larger dimensions of social life surrounding us (See Bakhtin, 1981; Baxter & Montgomery, 1996; Galanes, 2009; Prentice & Kramer, 2006). Not only does this help to build community within the group where the dialogue is taking place, but it also helps model important dialogic skills.

Title: Politics or Religion' An Analysis of Hate Comments in Philippine Radio Station's Facebook Page

Session Type: Individual submission

Authors:

Name: Marc Pacoma

Email: marckiepacoma (at) yahoo.com.ph

Country: PH (Philippines)

Affiliation: Adamson University

Abstract: With the victory of Duterte in the 2016 Philippine presidential election, the country had experienced a relative increase of hate speeches on politics, gender and religion. The emergence of these offending and discriminating statements were oftenly attributed to some political factors and the contravening opinions of various government officials, the Catholic Church, and Duterte's critics towards his presidency and administration. Commentaries and opinions on Duterte's drug war campaign and other programs and projects had been trending in the public discourse. Hate speeches not only had been headlining the traditional media of print, radio and TV but also caught too much attention in the social media (Facebook, YouTube, Twitter and Instagram). Stalking, trolling and bashing were the names of the game as hate, threat, intimidation, and violence frequent as themes of online comments both towards Duterte and his opponents.

Drawing inspiration from previous studies and literature, this study aims to examine netizen's anti-faith speeches particularly the hate comments directed towards the Catholic Church. The study delimits to the official Facebook page of Radyo Veritas – a leading Catholic radio news network. Employing a self-made coding sheet, the researcher selected, coded and analyzed netizens' comments for a period of six (6) months (July 2018 to December 2018). Specifically, the comments were examined on its language, purpose or motivation, theme, content, attributes, producer's identity or anonymity, target and interpretation. The results indicated that offensive and obscene language, attack or retaliation, stir hostility through criticism, anonymous identity, directly targeting the Catholic Church and political believers were the dominant categories that emerged during the coding process; reflecting and resonating similar findings of research inquiries on online hate speeches.

Title: "Let them eat grass": pastors vs the people in South Africa's Daily Sun.

Session Type: Individual submission

Authors:

Name: Priscilla Boshoff

Email: p.a.boshoff (at) ru.ac.za

Country: ZA (South Africa)

Affiliation: Rhodes University School of Journalism and Media Studies

Abstract: The Daily Sun, South Africa's most popular tabloid newspaper, focuses on the lived conditions of its township readership. Many such peri-urban settlements are characterised by a lack of basic services and by high unemployment, factors that remain impediments to the realisation of a "better life for all" post-apartheid. Such dire inequality within an economy shaped by the exigencies of global neo-liberalism is conducive to desire for otherworldly intervention. Due to South Africa's missionary history, many township residents hold Christian beliefs (often alongside customary worldviews), and pastors find townships fertile ground in which to establish churches and attract followers. Some pastors who draw on a global Pentecostal discourse of deliverance have become notorious, not only for their flashy style of living. They are also blamed for leading their congregations in bizarre practices of healing and anointing, such as drinking petrol or eating grass. The Daily Sun features these pastors and their congregations frequently in its pages. Using a thematic content analysis, I examine the tabloid's coverage of the "bad pastor" from 2011 -2018. I argue that, rather than being simply sensational, the paper plays an important role by mediating for its working-class readership what it means to be a "modern" Christian, and a "good" pastor in a highly unequal society.

Title: Religion and digital media in Peru: the feast of the images of the Lord of Torrechayoc in the Sacred Valley of Cusco

Session Type: Individual submission

Authors:

Name: Pablo Espinoza

Email: pjespino (at) pucp.edu.pe

Country: PE (Peru)

Affiliation: Pontifical Catholic University of Perú

Abstract: Catholic religious traditions are very important among the people that inhabit the Andean valleys in Peru. Especially the festivities in honor of the images of Christ, the Virgin Mary and the saints. For more than five hundred years and coinciding with the Spanish colonization there was a mixture between the pre-Hispanic cults and the devotions brought from Europe. The sacred images have always been fundamental mediators for the experience of the faith of the Andean believers. They are worshiped in temples and chapels, walked in procession, adorned and made offerings because they are attributed miracles. The registration, circulation, consumption and applications of religious images has intensified due to the development and penetration of modern technologies, digital connectivity, the use of drones and the possibility of live broadcast of the parties on television.

In the Sacred Valley of the Cusco region, in Peru, in the city of Urubamba, an image is worshiped: the Christ of Torrechayoc. The term Torrechayoc means "place of the two towers", in the Quechua language, language in which the ancient Peruvians communicated and which subsists until today. The paper will offer the research advances of our doctoral thesis in anthropology by the Pontifical Catholic University of Peru. Since 2015 we have been studying the festival in honor of the Christ of Torrechayoc, patron of the province of Urubamba that is celebrated during the month of May, coinciding with the first potato harvests in the Valley of the Vilcanota River.

The festival gathers thousands of pilgrims in the city of Urubamba and is followed by an Internet channel, especially by migrants of Andean origin residing in different regions of Peru and abroad. We seek to understand what remains and what is transformed into the religious experience of Andean origin with the expansion of digital means of communication.

Our research questions are: ¿In which ways do andean believers use digital technologies to express their faith? What remains and what has changed in the identity and way of living the religious celebration due to the expansion of technologies for the registration and circulation of images? The paper shows findings after having followed the party through traditional and face-to-face ethnography and digital ethnography, as well as virtually. We have analyzed the images and various representations of the Christ of Torrechayoc during the festival since 2015. We follow authors such as Hans Belting, Arjun Appadurai, Deborah Poole, Henry Jenkins, Bryan Turner, Jesus Martin Barber, among other authors.

Title: [Panel] Religion Online: How Digital Technology is Changing the Way We Worship and Pray, Panel description

Session Type: Panel Submission

Authors:

Name: Chiung Hwang Chen

Email: chenc762 (at) gmail.com

Country: US (United States)

Affiliation: Brigham Young University Hawaii

Abstract: This panel examines the relationship between religion and Internet through exploring of how new media technologies change the way faith is communicated within religious groups and how Internet and social media affect the way people worship and pray. Drawing from case studies, it provides insights to how various religious communities adopt and adapt to new media, and at the same time how they are disrupted and reshaped by digital technology.

Title: Religion On-Line: Orthodox Jewry

Session Type: Panel Submission

Authors:

Name: Yoel Cohen

Email: yscohen (at) netvision.net.il

Country: IL (Israel)

Affiliation: Ariel University

Abstract: The attitudes of Orthodox Jewry to Internet reflects the respective ideologies of the two main strands of orthodox Jewry: modern orthodox and ultra-orthodox Haredi. Modern Orthodoxy, by definition, seek to reach a synthesis or reconciliation between Judaism and the modern age. Thus, Internet - like other media - is perceived as a potentially valuable feature of modern life - indeed, a product of God's creation. By contrast, Haredi Jewry erect cultural boundaries, and perceive in Internet a threat 'from outside'. In earlier media forms, including secular newspapers and television, Haredi rabbis succeeded to impose upon their communities' prohibitions from using such media. But in contrast to these traditional media forms, Haredi rabbis have been much less successful in imposing a ban in Internet - mostly because of the central place which computers and Internet play in the twenty-first century. Yet, the concern of Haredi rabbis about Internet is that it offers access to sex and pornographic matter - the likes of which have not entered mainstream newspapers and public television. Indeed, so threatening is Internet that the Haredi campaign against it does not even use the word 'Internet' but speaks in terms of a "campaign against Technology".

For all orthodox Jews -- including Haredim - the Internet is a huge online store of Jewish religious sources including Bible commentaries and law codes, revolutionising Jewish education --offering those studying Judaism, not just rabbis, handy technology to access Jewish sources.

Faced with these acute dilemmas, some Haredi rabbis have compromised to allow Internet - albeit with a filter - at Haredi businesses only, not at home because of the danger of children, for example, accessing it.

Accessibility also impacts upon religious identity, with some orthodox Jews looking on-line further afield outside Orthodox Judaism for their religious identity, and by corollary, while other non-affiliated Jews and non-Jews are today being exposed on-line to Orthodox Judaism and its lifestyle to a greater extent than in the pre- on-line era.

Indeed, the Internet case raises fundamental questions about the very relevance today of the cultural ghetto as a Jewish lifestyle.

But data suggests that the modern orthodox are the sector in Israel's population with most use of computer technology, reflecting their middle level socio-economic status. Similarly, many Haredi Jews have computers, and are linked to Internet, including those at home. In a certain sense, the advances of information technology over the last twenty years have reached a certain peak. The author has undertaken a detailed questionnaire survey (100 questions) on Israeli rabbis and social media.

Title: Seventh-day Adventists in the Digital Age

Session Type: Panel Submission

Authors:

Name: Allan Novaes

Email: allan.novaes (at) unasp.edu.br

Country: BR (Brazil)

Affiliation: Adventist University of São Paulo

Abstract: The study begins with an overview of the Seventh-day Adventist Church history, belief and culture, with an emphasis on the description of its two identity marks: the apocalyptic vocation and a text-centered and print-driven orientation. This leads to an analysis of the most important assumptions in the relationship between Adventism and mass media focused on the internet, which are: the emphasis on text over image and on reality over fiction. These characteristics are essential to understanding not only the origin of the movement, but also the metanarratives and paradigms by which the Adventism understands itself, and the knowledge and traditions by which the movement operates in the surrounding culture – especially in the digital age. Finally, the chapter will present some opportunities and challenges faced by the Adventist community in the digital age based on the Seventh-day Adventist reality in Brazil, the country with the largest number of Adventists in the world and with the biggest Adventist communication system in the globe.

Title: When Foucault met Deleuze in a Cybercafé: Won Buddhist Cybercafés and Mind-Assessing Diaries

Session Type: Panel Submission

Authors:

Name: Joonseong Lee

Email: jlee (at) csusm.edu

Country: US (United States)

Affiliation: California State University San Marcos

Abstract: This study explores the practice of keeping a cyber mind-assessing diary among Buddhist priests and the followers in Korea and its meaning. With the emergence of the new media era and its accompaniment of de-religionization, in this research, I intended to suggest a theoretical framework for studying various Buddhist self-cultivation practices inside and outside cyberspace, which is a combined theoretical framework built upon Foucault's confessional discourse and the Deleuzian concept of Body without Organs.

Title: Negotiating Religious Authority in the Digital Age: The Case of the Church of Jesus Christ of Latter-day Saints

Session Type: Panel Submission

Authors:

Name: Chiung Chen

Email: chenc762 (at) gmail.com

Country: US (United States)

Affiliation: Brigham Young University Hawaii

Abstract: This study surveys the intersection between Mormonism and the Internet. It looks at the use of new media technologies by the Church of Jesus Christ of Latter-day Saints (LDS Church or Mormon Church) to control messages and promote its public image, and the grassroots online community building involved in either supporting or challenging the official position. Specifically, it discusses the issue of authority and the tension/meaning negotiation between the LDS Church and its critics/membership in the digital age. The bulk of the paper examines how social media pose a threat to the institutional faith and analyzes the strategies the LDS Church uses to counter the threat, extend its influence, and secure its authority online.

Country: NG (Nigeria)

Affiliation: Lagos State University

Abstract: Usually considered as less-privileged in the society, abandoned, rejected and dejected, the physically challenged, orphans, and street psychopaths are looked down upon, deprived of basic rights and, often without means to attain the ladder of accomplishments seemingly available to the average persons in the society. Cultural inhibitions, absence of technological aids and facilities, non-existence of special care funds/policies, non-availability of healthcare facilities and welfare as well as religion and intolerance are just some of the societal inhibitions denying these categories of individuals referred to as the minority groups (including albinos, the helpless sick, all beggars and widows amongst others) access to basic things of life such as food, clothing and shelter and, forcing them to the streets as urchins, beggars, hangs-on, dependants looked down upon as never-do-wells, threats to life, security risk and dregs of the society. These minority groups are individuals in society but socially speaking, their humanity has been denigrated or reduced to second-class citizenry; their basic human rights denied without redress while the truths about them have been largely swept under the carpet with large majority in the society looking in the other direction. This study using the gospel video film platform, examines the reflections of these categories of individuals in Nollywood, the celebrated Nigerian cultural art and successful film industry with a view to ascertain their placement or displacement in the religious offering of popular cultural entertainment. Content analysis of 30 gospel video films from Mount Zion Films Productions (2010 - 2018) is used for the study while availability sampling is adopted to select the tapes because of their short life span. Date of film, duration, context, location, appearance, family relationships, language, work, issue at stake, home, marriage, dressing, lives (normal or abnormal), situation, violence, resolution, among others, constitute the content categories of the study while appearance of any of the three groups constitutes the unit of analysis. Catharsis and Cumulative theories are the framework underpinning the study showing purgation of violence through emotional release with ubiquity, resonance and mainstreaming as factors promoting the second-class citizenry approach to

the minority groups. The results of this study has promise for both policy and social action in all societies of the world concerning dealings and focus on the minority groups highlighted in the study, with critical implications for marital and socioeconomic conditions of families.

Key words: Physically-challenged; Orphans; Psychopath; Displacement; Gospel video film.

Title: The making of a Believer: a constant negotiation between the Self and God

Session Type: Individual submission

Authors:

Name: Geetanjali Kala

Email: w1396674 (at) my.westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: The proposed paper will make a case for religion to be primarily a communication tool; creating and circulating ideas, concerning matters from an individual's everyday life and activities, to more social subjects, from ethics, morality, and politics, to the metaphysical. It will explore the nature of relationship between religion and communication by partly locating it in Niklas Luhmann's (1986) system theory approach.

The paper will argue that if communication is taken as the process of exchange of meanings between individuals through common symbols (Gordon, 2016), then religion and religiosity certainly qualify. Religion, attended in this way, is primarily a process of communication between individuals and social groups, who share common signs, symbols and its meanings; and consequently identify themselves with a religious identity. Creating (revelation in religious parlance), interpreting and exchanging meanings concerning a mosaic of subjects including the unfathomable- idea of the unseen providence called God, birth, life after death, injustice, suffering, aging, illness, vagaries of nature, etc.; through sacred books, lives and traditions of prophets and their first disciples, reservoir of anecdotal stories; remains at the heart of practicing religions especially monotheistic religions. As Luhmann (1986) puts it, religion communicates ideas and abstractions about, the "observable" and the "unobservable"- universe. An individual and the group; through this shared awareness, guided by religion, about the material and immaterial; are in constant communication with each other and the larger world.

Through argumentative analysis this paper intends to explore what meaning(s) do people draw in religious concepts and practices? How does religion gets manifested in the everyday? How does it interact with an individual's agency? How does it network with other social institutions of the society?

Consequently, it aims to argue that though religion constructs and communicates, essentialized roles for its believers, an individual's agency of meaning-making, constantly interact with an array of belief assemblage besides the ones offered by religion's belief set, resulting in a hybridised outcome, often incongruent with the envisaged perfect picture of a believer, or the one portrayed by stereotypes. In that sense, this work problematizes the conception of a believer, and thus his actions in response to the events conflicting with his religious beliefs.

In essence, this paper proposes religion and religiosity as a continuous communication project, entailing constant meaning-making industry, both at an individual as well as at a social group level.

Title: Using the religion card on Twitter for campaigning : A study of the Karnataka State Elections 2018

Session Type: Panel Submission

Authors:

Name: Shubha HS

Email: shubha.hs (at) manipal.edu

Country: IN (India)

Affiliation: School of Communication, Manipal Academy of Higher Education, Manipal, India

Name: Aditya Ranjan

Email: shubha.hs (at) manipal.edu

Country: IN (India)

Affiliation: School of Communication, Manipal Academy of Higher education, Manipal-576104

Abstract: In India religion plays a dominant role, affecting even election campaigning, voting behaviour and policy making. Political parties and leaders use the religion card during election campaigning as it has a strong grip over people's mind-set. It is seen to help build their vote bank. Voting behaviour is dominated by emotions rather than rationality and religion being a strong emotive factor plays an important role in determining voting behaviour.

Political communication has witnessed the use of public rallies, radio, and television to reach the masses. Lately, social media has been the key medium. Valenzuela, Correa & Zuniga (2017) discuss the ways in which social media platforms influence participation in the field of politics in unique ways. As Twitter platform is inexpensive and propagates a two way communication, it is considered as useful tool. Twitter allows unsymmetrical and unilateral connections, where acceptance from the other user is not required to contact and follow (Latinobarometer, 2013). All the political parties in India now resort to using the various social media platforms, mainly to lure the young voters.

In Karnataka politics, religion plays a significant role. For instance, the kannada speaking 'Veerashaiva Lingayats' with 24% of population is considered to be supportive to BJP, with their chief ministerial candidate belonging to the Lingayat community.

A survey by Singapore's Institute of Policy Studies suggests that the internet affecting elections is hyped. The proposed research will study the use of Twitter by the main political parties during the Karnataka State Elections in 2018 and explore how much of the 'religion card' was used on this medium.

As the medium is largely used by the young people, the research questions the young voters if religion was an important factor that influenced them to vote for or against a candidate. Focus Group Discussions will be conducted to understand this.

Title: Media & Political Communication in Kashmir: An analysis of media content & its implications

Session Type: Panel Submission

Authors:

Name: Sabeeha Mufti

Email: sabehamufti (at) yahoo.com

Country: IN (India)

Affiliation: Media Centre, University of Kashmir

Abstract: In vibrant democracies like India, the socio-political and economic context creates a situation where latent as well as active forces are at work to scuttle and thwart the democratic practice and the development of “democratic institutions. This paper will bring forth this scenario in Kashmir, which is situated at the northernmost end of India. Kashmir is geo-strategically located, bordering India, China and Pakistan. Kashmir has been the scene of a socio-political conflict since 1947 when India gained independence. Post the 1947 partition of British India, Kashmir was divided and as of now three-fourth lies in the control of India and the rest lies in the control of Pakistan.

Since 1948, a gameplay of democracy has been enacted in Kashmir with successive regimes at helm elected by continuously rigged and manipulated elections with utter disregard for public will and public opinion. State and non-State actors have played multifaceted roles to create a crisis ridden situation.

Gramsci's notion of hegemony is actively in play in Kashmir as the “hegemonic powers of State control” with the help of legislations, repressive laws and security apparatus negate the very process and sustenance of democracy which allows for and thrives on dynamic political communication.

In this scenario of a thriving and active mediascape, the media ie, mainstream, new as well as social media act as a bridge between the state and the subjects.(citizens).An analysis of the pattern of political communication, therein, poses a fertile field of study. The media scenario in Kashmir presents an intriguing pattern as contending media play divergent and conflicting roles. There are multi layered pattern of local, regional, national and international media at work. The versions of reality, the nature of reportage, the multiple interpretations are all affected by the powers that control and influence the media. The ideological, political, economic and market driven media play their own agenda setting function. The presentation of content is highly variegated and influence driven.

This paper attempts to study media content and focus upon the interaction between politics, media content and the public. It will also focus on how people communicate about politics.

James Chesebro has identified five critical approaches to contemporary political communication. This paper attempts to study all of these - Machiavellian, iconic, ritualistic, confirmatory and dramatistic. Drawing from these five aspects, this paper attempts to contextualise all of them in the contemporary political scenario of Kashmir today.

At present, there is a very fluid and volatile political climate in Kashmir. An elected political government has been dismissed and Kashmir is under the administrative purview of the

Central Government in New Delhi. There are attempts to hold an election in the near future and Kashmir remains politically volatile and disturbed with civilian killings, excessive human rights violations and custodial killings going on.. All political shareholders are at interplay with their agendas and machinations.

In this uncertain scenario, a study of media and media content- mainstream and local ie. electronic , print and social media presents a kaleidoscopic pattern. The audience's interpretation of the media content also has an active and significant role in this powerplay of conflicting cacophonies.

KEYWORDS :

Hegemony , Multiple versions , mediascape, agenda setting, conflict in interpretations , media interplay , audience , public opinion

Name: Marie Therese Mäder

Email: marie-therese.maeder (at) uzh.ch

Country: DE (Germany)

Affiliation: Universität Zürich. Zentrum für Religion, Wirtschaft und Politik

Abstract: This study observes audience responses to documentaries about religious actors. It aims at knowing to what extent audience's cultural background and the depicted religion impact receivers' attitudes, opinions and appreciation of a religious documentary. For doing that, the study applied a two steps method. During the first, it was conducted a semio-pragmatic analysis of 15 min. clips of two documentaries produced by two different religions, Mormonism and Islam, for extracting the meanings and values conveyed by them. The documentaries were similar in length and characteristics, were created as a promotional tool of the depicted religions and presented a positive image of its followers. Then some scales were produced that included the results of the analysis. During the second phase, it was conducted a reception study to test the responses to both documentaries. A total of 408 students from Universitat Autònoma de Barcelona (Spain) and the Universität Zürich (Switzerland) were randomly assigned either to the clip on Mormonism or Islam. After the viewing, students completed a questionnaire measuring their perception of the values conveyed by the documentary and their opinions about the documentary and the portrayed religion, particularly appreciation. The main results show that the cultural and religious background impacts the reception of documentaries about religion. In fact, the opinion, attitudes and appreciation of the documentary depend on the portrayed religion and the cultural context in which it is received. These results are relevant for the understanding of religious persuasion through audiovisual narratives.

Title: Interplay of Religion and Politics in Indian Democracy

Session Type: Panel Submission

Authors:

Name: Padma Rani

Email: padma.rani (at) manipal.edu

Country: IN (India)

Affiliation: School of Communication, Manipal Academy of Higher Education, Manipal, India

Abstract: Babri Masjid was a disputed site as the birth place of Lord Rama (Hindu God), in the city of Ayodhya. It is under litigation since India's independence. Babri Masjid was a mosque built in the 16th century. Later on this site was disputed to be the birth site of Lord Rama. In the 1980s a movement was started for building the Ram Temple at the site of the Babri Masjid by political parties having an inclination towards Hindu ideologies. One of the prominent opposition leader of that time Mr. L. K. Advani (BJP) went around the country gathering support to build the Ram Temple. The structure was demolished on 6th December, 1992. There were communal violence and international reactions to the incident.

The BJP (the ruling party currently) in its election manifesto of 2014 also talked about the construction of the Ram Temple. As the election is approaching again we see a rise in the news about the construction of the Ram Temple.

This paper seeks to analyse how the issue of Ram Temple is being portrayed in the print media for three months starting from January 2019. The major English dailies will be taken for the study. The news items will help understand the interplay of religion and politics in Indian democracy.

Title: Spiritual Competence to Preserve Human Dignity in the Era of Technology: Proposal for an Analysis and Intervention Grid

Session Type: Individual submission

Authors:

Name: Patricia Cortés

Email: pattyradio (at) yahoo.com

Country: BO (Bolivia)

Affiliation: CEPIES - UMSA

Abstract: The development of technology in the field of communication certainly presents many positive and negative aspects for different areas of individual and social development of the human being. In this framework, we should not forget the key piece: the human being, his spirituality and his dignity.

Is it still possible to think of a technology that can collaborate in the promotion of true communication in the service of the human being? This question leads us to reflect on the growing development of information and communication technologies and the urgency to improve media production and, at the same time, to strengthen the diverse competences of the receiver, of the human being. This implies that the latter needs to develop competencies that lead him to strengthen a responsible attitude toward and from the messages established by these new means of communication.

From this perspective, our initial question can be formulated in the following way: Among the competences that the human being should have before the media messages, what role does the spiritual competence have, how should it be understood in the perspective of preserving human dignity?

To address these questions, we start with the main results of our previous research on the communicative dimension of media education (dialogue and cognitive decentration) in order to delve into the anthropological-philosophical dimension and deal with the aspects of spirituality and human dignity

On this occasion we wish to offer researchers and those in the field of education and the production of media messages a proposal of "Analysis and Intervention Grid" on spiritual competence (based on communicative and educational competences). Our proposal is based on the theoretical contributions of Arnaud Join-Lambert, Walter Lesch, Henri Derroite, André Fossion, Marie-France Daniel, Jean-Pierre Meunier, Paul Ricoeur, Paulo Freire Mario Kaplún, among others. In the experimental part our indicators emerge from research results with children and adolescents - that is, people with identity, spirituality and dignity - after having been exposed to various types of media messages in different geographical, social and cultural contexts.

As a general conclusion, it has been observed that the understanding and the subsequent application of spiritual competence in the human being - within formal, non-formal and informal educational processes and at any stage of life - can contribute considerably to strengthen the noblest values and to preserve their dignity amid all kinds of contrary currents.

Title: The Imprensa Evangelica journal and the origins of Brazilian Protestantism in the 19th century

Session Type: Individual submission

Authors:

Name: Rafael Santos

Email: rafael.santos (at) mackenzie.br

Country: BR (Brazil)

Affiliation: Universidade Presbiteriana Mackenzie

Name: Silas Santos

Email: silaspsi61 (at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Presbiteriana Mackenzie

Abstract: In the second half of the 19th century, the arrival of the Rev. Ashbel Green Simonton (1859) in Brazil sent missionary by the Protestant mission of the Presbyterian Church of the United States of America (PCUSA) caused significant transformations in the religious context and culture of Brazil. In 1864, Simonton and other missionaries, created the newspaper denominated Imprensa Evangelica, Evangelical Press, in Portuguese. In analyzing the creation, dissemination and diffusion of the Imprensa Evangelica newspaper, the first Protestant Portuguese-language newspaper in Brazil, published biweekly from 1864 to 1892 in Rio de Janeiro, we saw that the Protestant missionaries of PCUSA gave the printed word an extraordinary value, which would then become an efficient ally of the ideal of spreading and disseminating the Protestant faith in national territory. They also made use of the printed word for the circulation of information on the missionary activities of PCUSA and the doctrinal instruction of the faithful through reading the Bible and a vast Protestant literature. The missionaries of PCUSA long ago wanted to find a Protestant periodical to support instruction to the newly converted and their children. Its editors initially intended to publish it weekly, but they gave up after the issue number 1. They then published it every two weeks on the first and third Saturdays of each month. For 28 years, in those days when Protestantism was being implanted in Brazil, the Imprensa Evangelica was the official organ of the Presbyterian Church in Brazil. Considered the most complete document of the social changes proposed by the new denomination from the middle of the XIX Century, the Imprensa Evangelica became the great integrator of the Protestant Churches in Brazil. It served as a contact between Presbyterians and Brazilian elites. It fought for religious freedom, denounced the mistreatment and persecution of the Roman Church. It brought several texts and literary genres. It published the translation of various classics of worldly Protestant literature and disseminated throughout the country the doctrines of the Reformed faith. It was fruitful in publishing Bible studies. It was read, respected and recognized by the Brazilian society elites. However, the vast majority of the Brazilian population was illiterate and their minds were not open to the written word. The Imprensa Evangelica introduced in Brazil, from the missionaries, the habit of reading.

Abstract: The religious life of consecrated persons is an option in which women and men dedicate their time and energy to the profound service of God and of others. According to the Statistical Ecclesial Yearbook of the Vatican, in Mexico, in 2015 there were 95 dioceses, 7,165 parishes, 908 deacons and 1,670 religious of consecrated life, including 27,331 religious, 515 consecrated laymen, 45 thousand 90 missionaries. and 305,569 catechists. In addition, it was recorded that there were 197 hospitals run by religious, 471 thousand clinics, five leprosariums, 311 homes for the elderly, disabled or minors and 383 orphanages. These figures reveal that despite the fact that the National Institute of Statistics and Geography (INEGI, 2010) points out that currently there are not as many Catholics as 100 years ago, Mexico is still a country with a population full of religious consecrated.

The consecrated ones also dedicate themselves to the contemplative life, they also dedicate themselves to the pastoral work of their parish or their community. That is why they are involved in the technology that changes day by day. One of the objectives of being able to count on the internet and social networks is that besides being the strategic tools that spread the faith (Chu, 2011), or even create digital communities, also through these networks the closest ties are strengthened with people, communication grows and spiritual formation is promoted (Izquierdo, 2017).

One of these advantages of the Internet and social networks is that they foster dialogue, show personal values and generate new ideas (Palazón, Sicilia, and Delgado, 2014). However, in some religious communities the importance of constructing dialogical and training spaces through cyberspace has not been understood, and the internet and social networks have been judged as the factors that undermine the activities of the consecrated people (Sbardelotto, 2014).

The present work addresses the possibilities and limitations of the use of the internet and social networks in the lives of the consecrated people of Mexico City and the city of Puebla. It tries to clarify the prejudices about transmitting the faith in the network and evaluates the effect caused by the personal use of social networks in the religious of these two cities.

Title: Role of Religo-Political Communication and Social Media In Political Campaigns: A Case of India

Session Type: Panel Submission

Authors:

Name: Leslin Bastian

Email: leslinbastian (at) gmail.com

Country: IN (India)

Affiliation: MICA

Abstract: From time in memoriam communication has been part of political process across the world. In modern day politics the model developed by American political scientist and communication theorist Harold Lasswell (1948) is quiet relevant even today. Where he talks about an act of communication (political) to be like 'who' 'says what' 'in which channel' 'to whom' and 'with what effect'

In the most recent decade India has seen a noteworthy religio- political change. The parliamentary and local election races are today fought with more religious and caste sentiments. Political gatherings with various beliefs both ideological and religious system has made utilization of the modern communication technology to the fullest.

Political parties like Congress, BJP and Aam Aadmi Party to mention a few are utilizing platforms like Google Hangout to address the voters who are the so called kingmakers of the Indian democracy. Indian Politics has changed in second half of this decade. India is a nation of assorted variety and youth which makes up an enormous 34% of the aggregate populace is more drawn now to religious-political sentiment.

The mass media are essential to the conduct of elections in a democratic country. A democratic election with no media freedom would be a contradiction in itself. But the paradox is that, in order to ensure that freedom, a degree of regulation is required which need to be formed by the government. Although technology has always played a role in politics, it wiolds more influence today than ever before. There is a greater volume of political information, more instant communication between leaders and followers, and more opportunities for voters to exert control over the message (Johnson, 2011).

The launch of Jio and 4G technology has paved the way for better communication and access to information for every citizen. Affordable data packages and smart phones has enabled this transformation. Parliamentary election in 2014 showed how political parties used social media to communicate their religious political ideas with the voters.

The present study shows that 65 percent of the respondents believe that digital campaigns during election has a huge impact on the voters. While 59 percent respondents believe that digital media has managed to reach out to the voters and 55.5 percent believe that digital media has managed to promote party ideologies to the voters meanwhile 36 percent of the respondents are of the view that social media doesn't influence them while voting.

The author will also try and de-code how religious signs, symbols, are used and expressed in political messages, idioms delivered to convinced the voters to vote for a particular party or individual candidate. Further, the paper will also try to gauge how religious values and ethos have

been intertwined within political communication to achieve democratic goals in elections campaigns.

Title: The Militarization of Religions in the Digital Age

Session Type: Panel Submission

Authors:

Name: Sulaiman Osho

Email: sulaimanosho2014 (at) gmail.com

Country: GB (United Kingdom)

Affiliation: Department of Communication, Marketing and Media, Robert Gordon University

Abstract: One of the major challenges in the world today is the militarization of religions to gain political, economic, and socio-cultural powers. Indeed, the Encyclopedia of Wars (2004) reveals that historical accounts of conflicts show that only 7 per cent are primarily caused by religion, while Islam only accounts for 4 percent. But the pogrom and displacement of millions of refugees being experienced in the Israeli-Palestinian conflict, Syrian civil war, Afghanistan, Iraq, Chechnya, Kashmir, Libya, northern-eastern Nigeria, Middle East, Central African Republic, Congo Kinshasa, and others are worrisome. Thus, this study examines the militarization of religions in the manifestation of the philosophy of 'conflict of cultures', in the manifestation of the world to a 'Global Village' (Marshall McLuhan). It examines the impact of the new media on religious conflicts, apart from analyzing the basic foundation of terrorism. It looks at the synergy between the International Networking (Internet) and the militarization of religions, and it analyses the terrorist activities of ISIS and the White Supremacists in the USA. Using the theory of 'clash of civilizations' of Samuel Huntington (2003) as theoretical framework, the study critically analyses the data, make recommendations, and concludes that most of the terrorist acts are politically, ethnically, economically, socio-culturally prompted and revengeful.

Abstract: Resumen

¿Cuál es la integración de las ambivalentes Tecnologías de la Información y la Comunicación (TIC) por las maestras y los maestros de la escuela rural pública y primaria en un entorno sociocultural que intensifica el acceso del sistema, las instituciones y los actores educativos a la computadora, la telefonía móvil, las redes y otros dispositivos digitales?

En la Argentina -un país urbanizado temprana, amplia y desigualmente- la escuela rural y pública del nivel primario, una institución básica de la inclusión educativa, sería invisibilizada en el discurso social, político y académico. De este modo, si escasos estudios se conocen sobre la apenas visible escuela rural de Argentina, menos antecedentes abordan la cuestión de la incorporación de las TIC por el sistema, las instituciones y los actores de la educación ruralizada para la infancia. Desde una emergente perspectiva comprensiva del acceso a las TIC nuestro método comprende una triangulación intra-metodológica. Los diversos testimonios significativos de maestras rurales presentados pertenecen a dieciséis entrevistas semi-estructuradas individuales y colectivas complementadas con observaciones en terreno, ambas realizadas en un extenso e intermitente trabajo de campo con diecinueve docentes de dieciocho escuelas rurales primarias y públicas. Estas instituciones educativas corresponden a un departamento del sur de la provincia de Córdoba (Argentina) con un predominio histórico de una economía agropecuaria extensiva y mercantil así como una acotada capacidad actual de generación de trabajo directo.

Cuatro claves comprensivas específicas sostienen la tesis propuesta en este texto como conclusión general de la investigación: a) el atravesamiento de dicha escuela por el contexto rural como un modo específico de ruralización de la institución educativa dadas las continuidades y rupturas en las condiciones del trabajo y la vida en el campo de la pampa argentina; b) la compleja y dinámica situación socio-educativa de las escuelas rurales que establece una transición escolar en curso desde la posición en el sistema educativo, el plurigrado como modalidad pedagógica específica y la trama de relaciones comunitarias; c) la caracterización del docente de la escuela rural pampeano-cordobesa del siglo XXI como un actor socio-educativo híbrido, un mediador o intermediario entre los territorios urbanos y rurales; y d) las características más puntuales de la incorporación de las TIC por dichos docentes en las distintas dimensiones del trabajo escolar.

Palabras clave

Maestra, TIC, ruralidad, territorio, globalización.

Title: Media, caste and land rights movements in India: A case of Malayalam language newspapers, 2003- 2008

Session Type: Individual submission

Authors:

Name: Mochish KS

Email: mochishks(at) gmail.com

Country: IN (India)

Affiliation: Assistant Professor, FLAME School of Communication, FLAME University, Pune, India

Abstract: Societal contradictions make India distinctive rather than diversity and peaceful coexistence which more than often dominate the narrative. Indian society is distinctly stratified along the lines of caste, gender, class, ethnicity, language etc. to name a few. Specifically, caste based discrimination has been marked and inexorable. The caste system which has its origins in the Hindu Mythology is a system where castes are hierarchically organized on the basis of rules of ritual purity and pollution. This system of social division has functioned as an oppressive tool for centuries in the Indian society. Kerala, a southern Indian state is considered as one of the highest newspaper consuming states in the country as well as regarded as a classic model of politicization spreading to large sections of the population and creating a newspaper-reading culture. Amongst the regional media in India, Malayalam newspapers enjoy a unique position owing to their huge circulation and readership. This paper examines the response of Malayalam language press in the land struggles led by Dalit and Tribal groups in Kerala. The analysis is based on the Malayalam newspaper reports, articles and editorials on the Muthanga land struggles of 2003 and Chengara land struggle of 2007. Six major newspapers in Malayalam have been analysed, such as Deepika, Malayala Manorama, Mathrubhumi, Kerala Kaumudi, Deshabhimani and Madhyamam. The initial analysis of the media reportage shows that, on the whole, the strength of newspapers has historically contributed to the vitality of Kerala's political society. Yet, on key agendas, such as land struggles led by the landless Dalit and Tribal community, a section of newspapers played a complex, and sometimes uncooperative role. Landless caste minority groups' rightful fight for land can be considered a courageous act that entailed transgressing the social boundaries that were ascribed to the communities. The powerful fight had challenged the oppressive social structures at more than one levels and this act entailed challenging and opposing the oppressive structures working to maintain caste discrimination.

Abstract: During the past decade, public policies across the world have focused on providing digital connectivity infrastructure in remote rural areas (Roberts et al., 2017). Despite the different socio-cultural landscapes, the comparative examination of data from studies conducted in rural communities in Canada, Chile, and Vietnam points to many similarities in the ways inhabitants appropriate digital communication technologies (Author 1, 2010; Authors 2, 2016; Author, 3, 2018). In this paper, we reflect on the factors behind these patterns and propose a theoretical concept that we believe can serve as a useful tool for their analysis: Internet use genres. This concept integrates ideas from the social construction of technology (SCOT) approach, critical theory of technology, and sociological phenomenology (Author 1, 2005). It calls for a focus on the situated rationality of the choices and decisions guiding Internet appropriation in particular local settings in contrast to the characteristic fixation of analysts on the dominant rationalities driving policy-makers and industry players.

Internet use genres relate rural users' practices to the systems of relevance that organize their lifeworld. These systems become the cognitive map helping rural inhabitants to make sense of the new technologies they encounter. Thus, the meaning-making process and the respective appropriation of the Internet is rooted in users' socio-biographical situations marked by conditions such as geographical remoteness, the degree of mobility, scope and intensity of social contacts, sources of livelihood, among others.

Revisiting the results of the three studies, we trace the emerging use genres to elements of the relevance systems and socio-biographical situations of individuals, and further to the geographical, socio-economic and cultural conditions of their communities and the larger national context. We propose a typology for classifying these rural use genres along the axes of innovation vs. conservation; expansive potential (Miller and Slater, 2000) vs. protectionism; top-down modernization rationality vs. situated capability building. Because use genres arise and are shaped by local situations, we argue, they can produce unforeseen effects. Being able to identify, classify, and anticipate the evolution of these genres into widely shared normatively sanctioned practices gives researchers and policy-makers a nuanced understanding of adoption processes in rural communities.

Abstract: Dissemination of technologies into rural settings could affect gender division roles and activate women presence in decision making processes. Digital technologies' potential in rural areas could have beneficial consequences on economic and social sustainability. Usually women agricultural and domestic labor are invisible in rural settlements. Commonly, gender inequity and the intensifying conditions vary across countries or regions. Although the use of technologies of urban women in Turkey has received extensive attention in literature, a research gap exists about interaction of rural women with technologies. This research aims to shed light on the situation of rural women in Turkey by examining their experience with technologies.

Women's media and technological consumption is examined with a gender dimension through field work. Apparently, rural women are still disadvantageous in technology access and ownership compared to other social groups in Turkey. Owing to transformation that mechanization brings on rural life, womanhood perceptions are examined respectively by the integration of white goods, television, computer, the internet and mobile phone. Women's status in rural life are structured by the impact of patriarchal barriers which are variables according to geographic and cultural factors. Rural women experience life mostly through television due to their low literacy rate and limited mobilization. Especially television fill their leisure times and their heavy exposure shape their perception of their environment. As Gerbner mentioned in 'Mean World syndrome' which argues that television cultivates women's social relations, decision making processes and mobilization in different ways.

The paper aims to examine the opportunities and limitations that rural women may encounter by their interaction with technology. Besides the level of technological access, the offline patriarchal oppression over women has been transferred to their new media environment. Most of the women use rarely the marketing potential of social media platforms in order to raise their sales. Their presence in social media, their profile and their interaction are mostly designed by their 'offline' environment. Therefore, women's social media accounts become new spaces for rural panopticon.

This research is a part of the project named as “The socio-economic and cultural transformation of rural space: Modernizing and disappearing traditional spaces and meaning” (114K145) which is funded by The Scientific and Technological Research Council of Turkey (TUBİTAK 1001) and aims to reveal the transformation of rural on economical, sociological and gender dimensions by using both qualitative and quantitative methods. Both qualitative (focus groups conducted with women and men in 30 villages) and quantitative (1222 face-to-face interviews conducted with rural households) methods are used in this project. Mostly we rely on quantitative datas in order to understand women’s use of technologies and the opportunities and threats that they encounter.

Title: Assessing the Potential for a Digital Farmer Field School supporting local innovation in the Coffee Value Chain in Enrekang District, South Sulawesi, Indonesia

Session Type: Individual submission

Authors:

Abstract: To improve the quality and production of its specialty “Arabika Kalosi Enrekang” coffee, the local government of Enrekang district, South Sulawesi, Indonesia, invited a team of researchers to explore innovative approaches to engage farmers in local innovation. The team had prior experience with the collaborative design and development of the Digital Farmer Field School (DFFS) model in Sierra Leone and Mongolia, and was interested to assess the suitability of this model in the Indonesian coffee value chain context. The assessment involved a collaborative exploration into the state of knowledge, ability and interest of farmers in coffee farming, the challenges faced in daily life by farmers and their families, and the capabilities of the agriculture extension system in the district to help develop and facilitate a DFFS design and development initiative.

The study involved an exploratory tour through the district to get a general overview of agricultural management and farming practices, followed by two focus group discussions with farmer groups at two coffee producing villages. In addition, two key informants of the District Department of Agriculture were interviewed to provide insights into local government policy and priorities related to agricultural development in the district. Finally, extension officers of the district participated in a workshop that introduced the DFFS model and invited the participants to contextualise the model, assess its applicability, and provide ideas to tailor it for the coffee value chain in Enrekang district.

The Enrekang coffee commodity chain faces its own complex set of problems, including various constraints on production, processing and marketing. Coffee in Enrekang district is mostly produced by smallholders who cultivate less than one hectare of land per household, and achieve a production capacity of only one-third of the crop’s potential under prevailing conditions. Many coffee farmers

have shifted to other crops due to the low market price they received in recent years. Smallholder farm families face a range of social, economic and environmental challenges in everyday life, requiring them to have access to timely advice. Information and communication services, however, are often not readily available due to inadequate or non-existent infrastructure and low effectiveness of the agricultural extension system. The DFFS could provide a mechanism for farm families to not only have instant access to updated information and services, but also a platform to share their experiences and voice their concerns, while not being restricted by time and space.

The study concludes that the DFFS will provide a radical innovation to the agricultural extension system, as it can mitigate many of the difficulties caused by the insufficient capacity and resources of the extension system to assist farmer groups. In addition, the DFFS can serve the needs of other government departments to provide information, services and engagement opportunities to farm families to improve rural livelihoods in an integrated way. Careful design and development of the DFFS platform and the structures to facilitate its use, however, are required to match needs and capacities of both farmers and the extension system.

Name: Andrew Ainslie

Email: a.m.ainslie(at) reading.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Reading

Abstract: The Lake Victoria Basin region faces significant challenges because of climate change. Farmers and fishers will need to adapt, yet both groups plan and operate at a seasonal or annual timescale, while climate change projections operate at a decadal timescale. This mismatch in time horizons results in a situation where farmers and fishers have limited applicable use for climate change information (unlike city planners, for instance, or others who operate at a decadal timescale). Despite this, farmers and fishers are still presented with a narrow range of “climate futures” and possible adaption pathway recommendations, which can force rural people to make decisions that appear to lock them into a certain trajectory.

Researchers from the FCFA programme's HyCRISTAL project and the Climate Action Network of Uganda worked with “Community Climate Champions” in Mukono District, Uganda to develop video narratives that represented the subjective complexities associated with adapting to climate change within their respective sectors. Two teams, the first composed of four fishers and the second composed of four farmers, worked together to craft stories that would be developed into short films to be screened with government officials in their district.

The stories produced by participants analysed extension messaging related to climate change, and examined alternatives to the narrow set of livelihood adaptation options they were presented with by rural advisory services. The purpose of this methodology is to partly reveal what farmers and fishers keep guarded on their “hidden transcripts” of imagined possible futures for their individual selves, their families, and their communities (see Scott, 1990). Government officials and climate scientists who viewed these video stories were faced with the dilemma of response when their foundational assumptions about rural farmers and fishers were challenged. The exchange of videos to mediate discourse is an approach that was piloted by the National Film Board of Canada during

the Fogo Process led by Donald Snowden in the late 1960s (see Crocker, 2003). This process gives participants the opportunity to see their own realities depicted on screen, and to hear their own voices and positions represented in their own idiomatic language. This creates the empowering experience of self-reflexivity. The process also forces the viewers, who are invariably power-holders, to accept messages that are not dictated to them in their own hegemonic terms. The outcome is that the one-way direction of rural advisory message delivery is subverted, and the entire set of climate change adaptation narratives presented to farmers and fishers by government, NGOs, academics, and private-sector stakeholders are interrogated.

Title: [Panel] Rural Communication - Exploring concepts and directions of the new IAMCR Working Group [Presentation] -

Session Type: Panel Submission

Authors:

Name: Sarah Cardey

Email: s.p.cardey(at) reading.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Reading

Name: Rico Lie

Email: rico.lie(at) wur.nl

Country: NL (Netherlands)

Affiliation: Wageningen University

Abstract: Facilitators: Sarah Cardey and Rico Lie

Participants: GRI-RC members

This panel will explain the focus and aim of the Rural Communication (RUC) working group as well as position the field of rural communication in a wider communication and development landscape. The working group was initiated in 2018 by the Global Research Initiative for Rural Communication (GRI-RC), which is a network of academics and practitioners who seek to mainstream communication for rural development into the wider development agenda, policy and practice. The GRI-RC consists of representatives from the following institutions: The Centre for Communication and Social Change, The University of Queensland, Wageningen University & Research, Van Hall Larenstein University of Applied Sciences, University of Guelph, University of Reading, University of the Philippines Los Baños, and the Food and Agriculture Organisation of the United Nations. Members of the (GRI-RC) will share their perspectives and experiences on the state-of-the-art of the field and its future imperatives.

Title: China's We-Media Village: Urban-rural relationship and Rural self-representation

Session Type: Individual submission

Authors:

Name: Xiaotong Zhang

Email: zhangxiaotong(at) pku.edu.cn

Country: CN (China)

Affiliation: Peking university

Name: Xin Liu

Email: 15221851586(at) 163.com

Country: CN (China)

Affiliation: Peking university

Abstract: China has about 580 million rural permanent residents and 280 million migrant workers. The sum of the two accounts for more than half of China's population. Besides, the number of Internet users in China reached 802 million, of which rural netizens accounted for 26.3% and the scale was 211 million. However, for a long time, media resources have been dominated by urban intellectual elites. Rural people have not grasped the awareness and channels of media, so they have been in a state of aphasia in the age of the Internet. But the emergence of we-media (self-media) has changed this dilemma. A large number of rural self-media accounts emerging on social media such as WeChat, Weibo, and TikTok are their important voice channels.

This article will take the example of Shandong We-Media Village, which has been widely discussed on the Internet of China in 2018. Because the village's self-media operators are a group of rural women who has no higher education, but their average income exceeds that of their counterparts in Shanghai. By using a macro-level sample questionnaire and a micro-level observation interview and periodic assessment, we are trying to explore the purpose, profit model and operation status of this we-media group.

The rural we-media uses the short media, live broadcast, blog and other new media means to spread the rural natural and human landscapes that are different from the urban ones, satisfy the urban people's hunting mentality and strengthen the self-identity of the rural people. Meanwhile, they will sell attention resources to advertisers and use new media to promote and sell rural tourism and agricultural products.

This article finally focuses on the urban-rural relationship in the Internet field. The city and the countryside are two sides of the Chinese society. While the Internet gives the village a greater voice, it also more clearly shows the tearing and opposition between the city and the country. Although the Internet emphasizes the equality of rights and the deconstruction of authority, the Chinese Internet is still controlled by urban elites. The emergence of rural self-media is, to a certain extent, a subversion of grassroots to elite discourse. In this process, the rural self-media as an emerging force will inevitably be questioned and attacked by the original residents of the Internet----- Urban intellectual elite. How to express countryside on the internet, how the city understands the countryside, and how the internet plays a role in urban-rural relations are the most critical issues in China's social governance, and are important topics of rural communication studies.

Title: Studying social change through complexities of Hindi films' audiencehood for women in an Indian village

Session Type: Individual submission

Authors:

Name: Charusmita Charusmita

Email: c.charusmita(at) my.westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: This ethnographic study examines the purpose and significance of contemporary Hindi films for women living in Narwal, a north Indian village near Kanpur. Based on fieldwork carried out over four months in Narwal, interacting with more than 60 women aged 18-80 years, this paper highlights the complexities of audiencehood for women living in rural India, where 'rural' is defined as 'anything but urban' and officially houses 68.84% of Indian population (Census, 2011). Despite the women's negligible viewership of films in theatres, limited viewership within their homes, and moral issues around women's film consumption, this audience group discusses the purpose of films in everyday life in complex ways. In a village space where the pleasure of consuming film can itself be a transgressive activity, Hindi films capture the village women's imaginations by offering them a world of new possibilities. My research draws on scholarly accounts such as Purnima Mankekar's ethnography of Television, Womanhood, and Nation in Postcolonial India (1999) and Steve Derne's seminal work 'Movies, masculinity and modernity' (2000) which focused on men's filmgoing and the sociology of male audience reception of Hindi films. However, it is situation in an Indian rural context where the social factors governing women's audiencehood have a greater role to play in their consumption of films as compared to their own preferences. My larger research showed that "filmi" connotes anything that is 'other' to village life in these women's imaginations. This paper argues that by engaging in creative cultural production, using multiple modes of filmic engagement, negotiating within their own households, and capitalising on 'men looking away', women are breaking everyday rules that govern them in order to strengthen their engagement with Hindi films. Women's everyday negotiations in consuming Hindi films indicates a slow but steady social transformation which is visible through, and enabled partly by, their dealings with Hindi cinema. Drawing on James Scott's concept of 'everyday resistance' (1985) that, he argues, lies in the mundane, and his concept of 'hidden transcripts' (1990), this study argues that social change evolves through a growing cluster of 'hidden transcripts' (ibid.) of women around their love for Hindi films. Through these, the powerful position of the village males gradually begins to be questioned, thereby challenging the status quo.

Title: "Through their eyes I can work"; A qualitative exploration of rural medical officers' perception of mHealth.

Session Type: Individual submission

Authors:

Name: Manjula venkataraghavan

Email: manjula.v(at) manipal.edu

Country: IN (India)

Affiliation: School of Communication, Manipal Academy of Higher education, Manipal

Abstract: mHealth or mobile health is the use of mobile technology for delivering health care & services (WHO). With increased ubiquity of mobile phones, the potential of improved access to health information and services across the rural remote populace seem to be achievable. A number of studies have reported the potential of better maternal and child healthcare in LMICs through the use of mHealth tools. Studies have also reported that implementing mhealth systems at community level can substantially promote improved and equal access to healthcare.

However, to gain all the advantages mobile technology offers and to design effective community health worker (CHW) based mHealth interventions, it is important to conduct a 360-degree perusal of all aspects of this technology and the benefits it offers to all the players in the rural healthcare scenario. While there are plenty of studies looking into the benefits offered by the mobile phone to the CHW, there is a shortfall of studies examining the use of mobile phones by CHWs as a support tool from the rural medical officers' perspective, especially if and how the technology is supporting the last mile healthcare delivery through these workers.

This exploratory descriptive study was conducted in the Udupi district of Karnataka, India. It investigated the benefits, barriers as well as the challenges of mobile phone use by the community health workers from the rural doctors' perspective. The participants of the study were doctors belonging ten different primary health centers in the district.

During the study, doctors opined that with the coming of mobile phones, CHWs have become their eyes in the field, leading to a timely delivery of health information as well as healthcare services. However, it was also informed that remote villages from around their primary health center lacked sufficient coverage and hence mobile phone was not very useful in those areas. Digital illiteracy, lack of communication skills, and lack of continuous training to use all features of the phone among CHWs were some of the challenges pointed by the doctors.

The results from the study hopes to inform government policy to result in efforts to improve the existing mobile technology infrastructure as well as factor in more training programs to train these grassroots level workers so as to capture the benefits the technology offers and in the augmentation of the existing rural healthcare system

Key words: mHealth, community health workers, rural healthcare, mobile phone

Title: Unpacking marginalisation dynamics in the context of climate adaptation and resilience using visual tools

Session Type: Individual submission

Authors:

Name: Sarah Cardey

Email: s.p.cardey(at) reading.ac.uk

Country: GB (United Kingdom)

Abstract: Ranked as one of the most disaster-prone areas globally, the Philippines regularly experiences disaster events. The country is highly dependent on natural resources and agriculture, so the sector's susceptibility to extreme weather events contributes to the vulnerability of fishing and agricultural communities. Aurora state is particularly vulnerable, being situated in a typhoon alley. There is a pressing need to address these impacts of extreme weather events to strengthen community livelihoods. Further, different groups are affected by these events, with marginalised groups facing more extreme livelihood shocks. Through analysis of a project that seeks to mitigate these shocks and support the livelihoods of indigenous communities, this paper will explore (a) the construction of "indigenous" and how this is socially and culturally constructed; (b) unpacking resilience and adaptation narratives, using different types of knowledges and (c) unpack the dynamics that contribute to and reinforce patterns of cultural, social and livelihoods-based marginalisation. From this analysis, the paper will present opportunities and challenges for developing rural communication options through two mechanisms. First, it will explore visual narratives as a means of exploring these intertwined issues, to suggest means for challenging the marginalisation of indigenous voices. Secondly, it will explore opportunities for critical intervention and design of appropriate rural communication interventions towards building more resilient livelihoods.

Title: Factors Influencing the Decision of Early Adopters to Participate in the Fishers Household Resiliency Program in Lubang Island, Mindoro Philippines

Session Type: Individual submission

Authors:

Name: Olga Lomboy

Email: oclomboy(at) up.edu.ph

Country: PH (Philippines)

Affiliation: University of the Philippines Los BAnos

Abstract: Fisher households are considered as the poorest in the Philippines. They are very dependent on a single income source and their catch is declining due to overfishing and other environmental factors. Their limited assets in terms of physical, financial, natural, and human capital heightens their vulnerability to crises and shocks.

RARE, a global leader in behavior science approach to conservation, intervened to help build fishery household resiliency of several island communities in the Philippines by leveraging strong social capital. Among the interventions introduced in the community is the establishment of savings clubs and conservation enterprises. In Lubang Island in Mindoro, Philippines, 25 households decided to participate in these programs. Early results have shown improved financial assets that led to acquisition of productive assets, dwelling improvement and for education and livelihoods. This positive outcomes influenced others to form their own savings clubs.

While it is understood that positive outcomes of a program can influence others to participate, the question that this study aims to answer is what propelled the early adopters' participation in the household resiliency program. Guided by dual-process theories of cognition and information processing (Kahneman & Tversky, 1979), in-depth interviews and focus group discussions were conducted. Communication activities such as study tours and social marketing has influenced their decision to participate in the program but specific events and phrases that they have hears during the activities has prompted their decision to join the program.

Title: Social Media, Small Scale Fishing Business and Environmental Preservation in Phuket, Thailand

Session Type: Individual submission

Authors:

Name: Suda Ishida

Email: sishida(at) hamline.edu

Country: US (United States)

Affiliation: Hamline University St. Paul, MN, 55104, U.S.A.

Abstract: Amidst the uproar in the Global North against the negative effects of social media usage, such as privacy rights violations, data mining, and political censorship, Facebook, Instagram and Twitter continue to be very popular among social media users in Thailand. The most recent data (March 1, 2018) ranked Thailand as one of the top 10 nations in which users relied on these social media websites for networking and consumer adoption.

According to OBVOC Co., a Thai social media research firm, Thailand was placed seventh in terms of the number of Facebook users, accounting for 49 million out of 724 million globally. The number of Instagram users in Thailand totaled 13.6 million, up on a yearly basis, putting the country at 13th by user numbers. At the same time, Twitter usage also increased from 3.1 million in 2016 to 12 million in 2017.

The rapid expansion of social media usage in Thailand is partly due to accessibility and user-friendly components that allow users to generate their own visual-based content on their social media accounts. Because of this, the language barrier of being a non-English speaker or less educated has been removed. As a result, social media has been widely adopted and has become an increasingly important tool for advertising, marketing, and economic growth among less educated populations living in non-urban areas of Thailand.

In this study, the researcher examines the different ways social media has been utilized as communication and business marketing tools by small scale fishermen in the Muslim community of Baan Bangla district, Phuket, Thailand. The study focuses on how a group of local fishermen used Facebook to promote their fishing business, generate incomes, and preserve their local livelihood while competing with larger scale fishing operators. In the meantime, Facebook has also been used by the same group of fishermen and community leaders to raise awareness about environmental issues that occur within their community. The main environmental concern of this community is preventing further destruction of coral reefs and mangrove forests along Phuket-Phang Nga Bay coastal lines that thrived before the increase in large-scale fishing and the expanding tourism industry in Phuket.

The study is based on an analysis of social media posts in 2016, 2017, and 2018 as well as in-depth interviews of Baan Bangla community leaders, environmentalists and local fishermen regarding the usefulness and obstacles in relying on their Facebook accounts to enhance and support their goals.

Title: Where the 'Community Video' has disappeared? An investigative analysis of the missing case of community video in India

Session Type: Individual submission

Authors:

Name: Siddharth Chadha
Email: siddharth.chadha(at) im.uu.se
Country: SE (Sweden)
Affiliation: Uppsala University

Name: Kavita Dasgupta
Email: kavita.dasgupta(at) hist.uu.se
Country: SE (Sweden)
Affiliation: Uppsala University

Abstract: From the years 2006 to 2009, the author of this paper worked as a community media practitioner, training marginalized rural communities including Dalits & tribal groups in Western India (Gujarat) in various aspects of film-making such that these communities would use media as a tool for self-empowerment and social change. Despite the social significance of Participatory Video, a term often used in its formative years (Lunch & Lunch 2006) and its success as an effective method of mobilization and social change, especially in rural areas, the past decade has seen a dramatic decrease in the number of community video projects active in India. Although there has been a significant interest in researching community video (Jayasankar and Monteiro, 2016, Datta 2014, Chadha, Moskowitz and Prakash, 2010) there is little research to account for the disappearance of community video projects from India. Some common-sensical explanations – such as proliferation of mobile technologies, decreasing levels of funding for non-governmental organizations running these projects, are provided as reasons for this Houdini act, but there is an impending lacuna in research that provides any systematic explanation of this phenomenon.

Grounding in a self-reflexive methodology, this paper uses auto-ethnography (Maréchal 2010, Elis 2004, Adams 2015), supplemented with media reports on community media from 2005-2010, as well as informal interviews with contemporary or erstwhile community media practitioners, to investigate the conditions under which community video projects were systematically shut down or abandoned in India during the past decade. Based on this reflection, the paper firstly accounts for the discrepancies between the media reportage and ground level reality of the success story of community video in India. Using the case-study of Aapna Malak Maa, a community video unit based in rural Saurashtra, Gujarat, (Chadha 2017) where the author of this paper worked as a community video trainer, the paper analyzes how the unit was constructed to be an extremely successful and well-functioning organization, even though the group struggled to achieve several of its planned objectives during its formative stages. Second, the paper lists and analyzes various material & immaterial factors that are claimed to have contributed to the demise of community video in India. Thirdly, the paper argues for an emphatic understanding of power struggles between internally dominant voices & actors (Pateman 1971, Foucault 1970) play in the functioning & support of community media organizations. Using anecdotal accounts of power struggles in the

functioning of community video units in particular, and non-governmental media organizations/projects in general, this paper emphasizes the need to foster favourable conditions under which these organizations hold the potential to effect a transformative change in the lives of distress ridden rural populations of India.

Title: Rural Communication Initiatives on Climate Resiliency in Selected Coastal Areas of Southern Bangladesh

Session Type: Individual submission

Authors:

Name: MARIA STELLA TIROL

Email: teyscdc2(at) gmail.com

Country: PH (Philippines)

Affiliation: UP LOS BANOS

Abstract: The Rural Radio Initiatives (RRI) project in Bangladesh was implemented as one of the components of the Coastal Climate Resilient Infrastructure Project (CCRIP) funded by the International Fund for Agricultural Development (IFAD), Asian Development Bank, and Kreditanstalt fuer Wiederaufbau (KfW). Implemented by the Local Government Engineering Department (LGED) of Bangladesh. The CCRIP sought to enhance the use of community radio for sharing and exchanging site-specific information and knowledge on agriculture, food security, and climate change and to promote dialogue between communities and local service providers.

The RRI project was realized through the development of a communication plan for climate resilience in support of CRRIP and the establishment of a radio broadcast program named “Upokoler Kotha” (Voice of the Coastal People). The program was a common platform of four selected community radios in the southern coastal areas of Bangladesh. These were: (1) Krishi Radio and (2) Lokobetar, both located in Barguna; and (3) Radio Sundarban and (4) Radio Nalta, both located in Khulna.

Using the before- and after-evaluation design, the RRI project was assessed three years after its implementation to determine project outcomes and to account for resources invested on the project. Both quantitative and qualitative approaches were used. The quantitative approach employed a survey of selected samples from Radio Listening Club (RLC) members; while qualitative approach made use of narratives captured from video testimonies of the interviewed RLC members.

The outcome evaluation was conducted in selected areas or upazilas in Barguna, Satkhira and Khulna using multi-stage sampling. These areas were covered by the regular broadcast of the four community radio stations under the RRI-CCRIP. Five radio listening clubs (RLCs) were randomly picked per community radio station. Twenty percent (20%) of the total 2000 RLC members of the four community radio stations were randomly drawn to serve as survey respondents, hence a total of 400 samples. The respondents comprised an almost equal number of male and female individuals aged 15 and above.

Based on the data collected, Upokoler Kotha was found to contribute to improved communication and radio services for climate resilient livelihood in the coastal areas of southern Bangladesh. With the presence of 100 listening clubs with 20 members each, local stakeholders have been informed about project activities and climate change issues. As a consequence, communities vulnerable to climate change had become better informed and actively engaged in climate resilient innovation and

livelihood adaptation. This has been shown by the majority of the targeted population adopting climate resilient technologies that enable them to carry on with their income-generating agriculture-based livelihood. Some of these technologies included cultivation of saline tolerant crops, sack method or vertical horticulture, vermi-composting, sarjan technology, and green fertilizer, among others.

Upokoler Kotha can continuously bear its “brand” as a program on climate resilient innovations with focus on the coastal communities as its primary targets.

Title: Post-2003 Hong Kong Young Film Workers Behind the Scenes

Session Type: Individual submission

Authors:

Name: Fangyu CHEN

Email: sharonchan331(at) gmail.com

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist Univerisity

Abstract: As one of the most popular scenic spots in Hong Kong, the “Avenue of Stars” honours more than one hundred of great figures in Hong Kong film industry, including producers, directors, actors, writers and stunt choreographers, etc. They witnessed the heyday of Hong Kong cinema in the 1980s and 1990s which made the name of the island city travelling far. And yet, the trough came in the late 1990s, and the industry has been suffering from the dramatic shrinkage of both local and overseas markets for decades. Co-producing with mainland Chinese cinema brought a significant way out for the ailing Hong Kong film industry and created the new co-production film ecology henceforward. Whereas, many Hong Kong local film practitioners see the co-production as both blessings and menaces. On the one hand, the mainland market offers numerous working opportunities and rich resources for Hong Kong film talents and greatly alleviates the precariousness of their lives as creative labour; on the other hand, co-production brought about major issues for the local film industry, including the marginalization of local-content films, the strangling of creativity due to the censorship system of mainland China, and invisible state intervention in the local film market which had always been laissez-faire for ages, etc.

Against this backdrop, there emerges a huge gap between the established generation of filmmakers and the younger generation regarding their perceptions of the mainland Chinese film market, Hong Kong-Mainland film co-producing activities, and China as a nation. The attention that gave to the young people has been particularly scant. This is a study based on in-depth-interviews with 47 Hong Kong filmmakers conducted from March to November 2018. The respondents include established film practitioners/film educators, young film workers, aged between 25-35; and film students, aged between 20-25.

Its aims are two-folded. Firstly, it investigated the filmmaking ideas, material conditions, working environments etc. of the young group of Hong Kong people who joined the industry after 2003, i.e. after the signing of Closer Economic Partnership Arrangements (CEPA) between Hong Kong and mainland China. Secondly, it examined the participation of these young film labour in the co-producing activities with mainland China and their very intricate sentiments towards the Chinese film industry and China as a whole, given to the realities that Hong Kong film talents are heavily relying on the mainland market to make their livings whereas the political tension between Hong Kong and mainland is getting deepened since the launching of the “Individual Visit Scheme” in 2003. In particular, Hong Kong young generation has been seen increasingly active in participating in anti-mainland activities. In studying the facing of “Chinese takeover fear” and the domination of Hong Kong-Mainland co-productions the young film practitioners are encountering, the author is

attempting to shed light on the situation of the labour who is struggling in a down-sized market and a technologically-backwards industry which was once thriving and glorious.

Title: Anarchism, Activism and Dissent: An examination of the discourse and visual rhetoric of the Greek anarchist group Rouvikonas

Session Type: Individual submission

Authors:

Name: Anastasia Veneti

Email: aveneti(at) bournemouth.ac.uk

Country: GB (United Kingdom)

Affiliation: Bournemouth University

Name: Stamatis Poulakidakos

Email: s.poulakidakos(at) gmail.com

Country: GR (Greece)

Affiliation: University of Athens

Abstract: During the twenty-first century, we saw the development of a massive wave of protests around the world as a result of the 2007/8 financial crisis and the austerity policies that were imposed in many European countries. While there is a rich body of literature on mass mobilisations, smaller scale resistance and solidarity initiatives have attracted much less attention. As a result of the long lasting crisis, and the emergence of new social and solidarity movements, Greece makes a useful examination terrain to explore new forms of protest and urban resistance (Biekart and Fowler, 2013; Douzinas, 2013). In this article we look at the case of the Greek anarchist group Rouvikonas in order to examine how the group defines its political presence and collective identity. Since 2015, this organised collective formation has a steady presence in Greek public life through diverse forms of protest; expressing as such its discontent towards the neoliberal capitalist agenda and having as its main target various political and business actors. To do so, Rouvikonas employs a variety of tactics ranging from occupation of offices, throwing of flyers and paint attacks to more aggressive ones that include destruction of property. This is an important area of study as current research (Fominaya, 2017, Gerbaudo, 2017) suggests that recent anti-austerity movements not only reject hegemonic narratives of the crisis, but also highlight the failure of the political establishment to represent the interests of the people. Rouvikonas makes an interesting case study for two main reasons: (a) contrary to most post-2010 social movements in Greece, which keep safe distance from political parties and specific ideologies (for e.g. the Greek indignants, and the Do Not Pay social movement), this movement is characterised by its clear political ideology which is rooted in anarchism and to a great extent defines its strategy and tactics, and (b) it has raised much dispute in Greek public discourse over the identification of the group as either a criminal group or a political activist one. In our research, we examine the formation of the movement's collective identity, its messages and the tactics it employs to protest and mobilize people. We do so by conducting discourse analysis of the movement's manifesto and public documentation (such as published interviews from its members). Our methodological approach is complemented by examining the movement's visual rhetoric through the videos of protest activities that are uploaded on its own YouTube channel. A cross examination of both the discourse and visual rhetoric will allow us to gain a deeper understanding of the movement's values, motivations and tactics (Jasper, 2008; Jensen, 2006; Stewart et al., 2012).

Title: Media Representation of Social Networks of Adolescents: Analysis of Photographs Posted on Norrköping Municipal Facebook Accounts

Session Type: Individual submission

Authors:

Name: Wenqian Xu

Email: wenqian.xu(at) liu.se

Country: SE (Sweden)

Affiliation: Linköping University

Abstract: Aim: Adolescence is acknowledged as a transitional life stage towards adulthood together with a set of pivotal movements, such as developing from dependence to independence and from irresponsibility to responsibility. The adolescents' relationship with others is of significance to the meaning of life and the evolving of the life course. The media portrayals are conceived as value-expressive and constructing the public image of ageing. Most studies on media representation have analysed the portrayal of adolescents in relation to gender, sexuality, violence, alcohol use and tobacco use predominantly from a victim perspective, with scant attention on their social network developments. The aim of this study is to explore how Norrköping municipality portrays adolescents' social network with special focuses on the contexts and activities in the photographs.

Method: The material consists of the photos collected from 32 Facebook accounts produced by municipal bodies during the entire year of 2018. The analysis is based on a categorization of various features of the photos in order to statistically describe the relation between signs, activities and contexts during the life stage of adolescence. Further, the meaning of frequently-used symbols in the photographs is analysed.

Result: The study concludes that adolescents are dominantly portrayed on Facebook pages of recreational gardens (in Swedish: Fritidsgård). The social networking activities that adolescents are frequently engaged in are practical courses, meal preparations, physical exercises and collaborative games. The characters associated with adolescents in media portrayal are restricted to their peers and leisure managers, stereotypically excluding people at other life stages. A number of signs and objects in the photographs are identified which might influence adolescents developing their social network with others, such as smartphones and commercial logos. Further, the result indicates that adolescents develop their social network mostly with other adolescents who have the same ethnicity.

Conclusion: The municipality depicts stereotypical images of social networks at the adolescence stage, which may lead to negative influences on adult developments and social integration in Swedish society. Therefore, communication professionals need to be aware of the cultural construction of adolescents' social network in the media.

Title: Panorama of Brazilian television fiction Studies: Bibliographical and comparative framework of theses and dissertations produced in Brazilian Postgraduate Programs

Session Type: Individual submission

Authors:

Name: Daniela Ortega

Email: mensagemparadani(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade de São Paulo

Name: Tissiana Pereira

Email: tissianapereira(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade de São Paulo

Abstract: The study on television fiction in Brazil started only 40 years back, the first work was published in 1975. From the 90's, however, the production intensifies and, with the creation of the Ibero-American Observatory of Television Fiction (Obitel)*, in 2005, and the entrance of ten research groups from Brazilian universities to this observatory (with the creation of Obitel Brazil), there is a constant incentive to the study and consequent increase in academic production. Since the creation of the research network, the academic production on this subject grows every year. On 2017**, 40 works were published, and in the last 11 Years the volume is 281 publications. The telenovela has a prominent place in the Brazilian television fiction, being entirely national and the main product of the country's cultural industry. Some of the main theorists in television fiction are Brazilians, such as Maria Immacolata Vassallo de Lopes, Maria de Lourdes Motter and Maria Aparecida Baccega. Other of sharp relevance are from Latin American, such as Jesus Martín-Barbero, pointed out as a key figure on the Cultural Studies in Latin America (Escosteguy, 2010, p. 47).

This work brings the comparative results of a bibliographical survey on theses and dissertations presented in the Brazilian graduate programs in an eight-years period: from 2007 to 2010 and from 2015 to 2017***. We try to verify the confluence from Southern Epistemologies (SANTOS, 2010), identifying to what extent the production of knowledge feeds on investigations produced regionally and how the ecology of proposed knowledge of pluralist and propositive thinking is applied, stating that "que reconhece a existência de múltiplas visões que contribuem para o alargamento de horizontes da experiência humana no mundo " (GOMES, 2012, p.49). This survey is fundamental for the analysis of the production of any field, since its findings indicate the degree of development of scientific knowledge.

*Obitel is currently formed by 12 countries, namely: Argentina, Brazil, Chile, Colombia, Ecuador, Spain, United States, Mexico, Peru, Portugal, Uruguay, Venezuela

**We ended the research in 2017 because it was the last year with the consolidated data.

***Documents were identified from a database of the Telenovela Study Center of ECA-USP that compiles researches about television fiction from Brazilian Post-Graduate Programs.

Keywords: bibliometrics; bibliography; references; television fiction; telenovela.

Title: Roma: a tribute-documentary to Cuarón's childhood

Session Type: Individual submission

Authors:

Name: Denize Araujo

Email: denizearaujo(at) hotmail.com

Country: BR (Brazil)

Affiliation: Universidade Tuiuti do Paraná - Curitiba Brazil

Abstract: IAMCR 2019 VIC WG

DENIZE ARAUJO, PhD and Post-Doctorate

Universidade Tuiuti do Paraná – Curitiba PR Brazil

denizearaujo(at) hotmail.com; (+5541) 99983-6669

"Roma": a tribute-documentary to Cuarón's childhood

The title "Roma" is apparently suggestive of a film by Fellini or by Pasolini. However, this "Roma" here refers to Alfonso Cuarón's film (2018), a tribute-documentary to Roma, the Mexico City neighborhood where Cuarón spent his childhood and youth. The second deceptive inference is to expect a film similar to "Gravity", considering that Cuarón is best known by his use of high technology. When we start to see a black-and-white film, we wonder if the director is really Cuarón. By the end, however, we have to admit that the director makes use of high technology in a completely different way, as to portray/display his memories not in celluloid, but in BW digital photography, as he understands them now, in the present, using his well known strategies in order to make an homage -film that carries his trademark.

This paper is part of my recent research about homage documentaries that intend to reveal memories through new approaches and to dedicate them to people who were important to their lives in the past. Cuarón's documentary is dedicated to his real-life nanny, Libo (Liboria Rodriguez), an indigenous Mixtec young woman hired when he was 9 months old. The newcomer Yalitza Aparicio plays the role of Libo, as Cleo. Cuarón, in an interview to Variety before the NY Festival Premiere, talks about memory: "I think I wanted to understand, to put the pieces together. Borges talks about how memory is an opaque, shattered mirror, but I see it more as a crack in the wall. The cracked is whatever pain happened in the past. We tend to put several coats of paint over it, trying to cover that crack. But it's still there" (<https://variety.com/2018/film/news/roma-alfonso-cuaron-netflix-libo-rodriguez-1202988695/>).

The objective of this text is to discuss memory and human dignity, as the title of IAMCR 2019 Congress suggests. Cuarón, in the interview cited above, confesses that he decided to dedicate his documentary to Libo in order to give her the dignity she deserves by her work in the past. In his interview to Variety, he states: "It was probably my own guilt about social dynamics, class dynamics, racial dynamics. I was a white, middle-class, Mexican kid living in this bubble. I didn't have an awareness". The film is a way to reveal his memories of the past with an understanding of the present.

In order to discuss about memory, I am adopting Jan Assman's concept: "Memory is the faculty that enables us to form an awareness of selfhood (identity), both on the personal and on the

collective level. Identity, in its turn, is related to time”

(http://archiv.ub.uni-heidelberg.de/propylaeumdok/1774/1/Assmann_Communicative_and_cultural_memory_2008.pdf).

Revealing memories through high technology in BW, Cuarón not only contemplates his past but also portrays it as he understands it now. "Roma" is his way to give dignity to Libo's life as his nanny and to pay a tribute to the Mexico City neighborhood where he lived.

Keywords: dignity; technology; tribute-documentary; memory, Cuarón.

Title: Fundamental changes to the event' Agent-structure dynamics behind the Berlin International Film Festival

Session Type: Individual submission

Authors:

Name: Thomas Wiedemann

Email: wiedemann(at) ifkw.lmu.de

Country: DE (Germany)

Affiliation: LMU MunichLudwig-Maximilians-Universität München,Oettingenstr. 67,D-80538 München

Abstract: Film festivals play a crucial role in the production, distribution, circulation, and reception processes of movies, with major competitive festivals enjoying outstanding importance (cf. De Valck et al. 2016). However, they are simultaneously the subject of various (power) interests (cf. Wong 2011). Based on these assumptions, this paper focuses on the example of Germany and asks to what extent different agents determine the objectives of the Berlin International Film Festival and push them into a specific direction.

With an annual budget of 25 million Euros, 380 films in the public program, half a million cinema visits, 18,080 accredited visitors from 130 countries and 3,688 media representatives from 84 countries (figures from 2018), the status of the Berlinale as one of the most important platforms for the global film community is uncontested. Moreover, given the broad spectrum of its activities (such as the European Film Market, the Berlinale Talents, and the World Cinema Fund), this festival is obviously confronted with numerous stakeholder demands (cf. Iordanova 2015) coming from arthouse filmmakers, but also, among others, from the national film production landscape, the international film industry, and German film policy. The struggle of those demands is illustrated by the public debate about the future direction of the Berlinale in winter 2017/18, triggered by an open letter of 79 prominent German filmmakers who called for fundamental changes to the event (in order to maintain a high artistic level) and for a greater attention to national filmmaking.

This study critically aims to explore how much these calls finally count if one considers general power structures in the film business, which are assumed to underlie the Berlinale's decision-making. Hence, the greater goal of this study is to enlarge the connectivity of the film festival research to social sciences. To meet these expectations, the paper draws on Schimank's (2000) agent-structure dynamics and examines the orientation, expectation, and constellation patterns of all relevant agents, which came to light during the debate about the future of Germany's major competitive film festival. The sources were about 50 documents (expert interviews, transcripts of panel discussions, press releases, journalistic articles, blog entries), which were examined with a category system.

The findings reveal that different objectives of the Berlinale were negotiated (the festival as a place of film art, market and international trade fair, information and innovation platform, media location, and stimulus for the film industry). However, policy decisions finally limited the freedom of all agents. Thereby, particularly filmmakers striving for artistic autonomy could hardly gain a hearing for their interest, whereas the maxim of fostering primarily economic benefit was not put into question.

Title: Photography, human rights and social change: a historical dimension / Fotografía, derechos humanos y cambio social: una dimensión histórica

Session Type: Individual submission

Authors:

Name: María del Mar Ramírez Alvarado

Email: delmar(at) us.es

Country: ES (Spain)

Affiliation: Faculty of Communication, University of Seville

Abstract: Through the history of photography one learns, discovers and can reinterpret the history of contemporary society since, to a certain extent, photography has transformed the world view of human beings for more than a century and a half.

The purpose of the communication is to investigate, through concrete examples, the enormous power that photography has had in the transformation of certain social realities and the improvement of human rights. At the beginning we will mention the pioneering case of photographer Jacob Riis, who did an important job documenting and denouncing the way of life of the poor neighborhoods of New York through images of shocking content. In fact, with his works *How the other half lives* (1890) and *Children of the Poor* (1892) motivated changes in the management of some of the most impoverished areas of the city. Along with Riis, also highlights the work of the American sociologist Lewis Hine, known for his images of immigrants who came to Ellis Island and those that reflect the working conditions in the United States then. At a time when children's work was common and allowed, Hine brought a critical and forceful look at child exploitation by photographing for the National Child Labor Committee children working in factories, mines, etc. These images managed to alert the public, generate social debate and exert pressure to toughen the laws regarding the employment of minors.

Also in the United States will address the work of photographers hired by the Farm Security Administration (FSA) when President Franklin Delano Roosevelt, as part of policy "New Deal", promoted a series of initiatives aimed at stimulating the economy in bankruptcy after the debacle of the stock market in 1929 and the drought that had devastated a large part of the country. Through the forceful snapshots of photographers like Walter Evans or Dorothea Lange, important official aid was established for farmers and ranchers in the Southeast of the country. Similarly, in the North American context, the work of the Photo League, which explored the concept of social photography and documented the way of life of the working class, stood out. Its influence was such that, at the height of its activity, the Photographic League was censored by an increasingly reactionary government that described its activities as subversive for US interests.

There are not few the photographs that have helped to change history.

Title: "Tactile photography"

Session Type: Individual submission

Authors:

Name: Kyounghwa Kim

Email: kim-ky(at) kanda.kuis.ac.jp

Country: JP (Japan)

Affiliation: Kanda University of International Studies

Abstract: Digital camera-embedded smartphones have now become a pervasive platform for photography. As a robust example of mobile privatization (Williams 1974), the mobile camera would not only be a functional tool for taking photos but also play a sensitive role as a pivot for photography, overlaying cultural contexts and specific textures onto everyday visual practices.

Much of the previous work on mobile visibility has focused on its social aspect as an emerging medium for networked visibility (Van House et al. 2005; van Dijck 2007, 2013; Villi 2010, etc.). The act of sharing, either within small groups of acquaintances or on more public social network platforms such as Facebook and Instagram, obviously provides an important context for mobile visibility. However, the substantial proportion of unshared content is yet to be considered. Visibility may not be a core practice to frame such photos, which implies that the meaning of photography is expanding toward rather wider practical contexts such as inscribing, personal archiving, carrying-with, and even being forgotten. To examine this less-articulated but pervasive phenomenon of mobile media, this study explores how the body-sensitive aspect and the subsequent adoption of personal photography have transformed visual expression and given rise to a new visual culture, herein termed “tactile photography.”

Although McLuhan (1964) proposed, as early as the 60s, that the sense of touch was a key attribute of electronic media, tactile modes had not been widely noticed in media practices, nor had they been discussed in depth until the rise of mobile technology. From the concept of “visual tactile” (Cooley 2004) to an attempt of “tactile digital ethnography” (Pink et al. 2016), recent debates imply that the tactile modes deserve greater attention as a gateway to understanding mobile media. As an extension of these discussions, the study attempts to re-frame practices of mobile photography as a response to tactile sensitivity and body mobility.

Based on ethnographic data collected from young Japanese users over a decade, the study explores how mobile digital photography, as a portable repertoire for private archiving and visual inscription, has affected people’s definition of media production and has thus given rise to a new sensitivity of photography (i.e., the tactile). While the main contribution of this paper will be to illuminate the ongoing transformation of visual culture, it will also propose a critical approach interrelating this transition with the increasing prevalence of mobile media in photography.

Title: Visual Study on the Political Iconoclasm in Art: Human Dignity in the Scopic Regime

Session Type: Individual submission

Authors:

Name: Fernando Ramón Contreras

Email: fmedina(at) us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Name: Francisco Sierra Caballero

Email: fsierra(at) us.es

Abstract: The activity of creating images has very often much to do with the subjective overcoming of both what we see and what we look at. Art, with its political meaning, is not only what is given to see, but what speaks from the imposition of its presence. The visual space of the artistic work is shown in analogy to the public space of the street. Visual works are not irremovable blocks of the past, but inconvenient forms: the visual malice of time in history, explained by Didi-Huberman. Political images dismantle human divergences. This action of the visual work causes the disorientation of human being, throws him into confusion, the chaos from which he will emerge, what could and should exist in his humankind. Thus we come to the thesis of this work: the political purpose of the images in the scopic regimes and the iconoclastic censorship when the image is combative and uncomfortable with the reminiscent meanings established. We present a critical study in contemporary reflection on the visibility of political images; a philosophical revision of fundamental texts that link the social imaginary (Castoriadis, Groys, Benjamin, Hegel, Kant, Plato) with the phenomenon of current iconoclasm (Didi-Huberman, Merleau-Ponty, Mitchell, Moxey, Crary, Elkins, Rancière, Krauss, Boehm, Belting, Flusser) in the field of visual communication and politics. This work offers in its conclusions an analysis of offensive images in the custody of human dignity. This study contemplates a visual work that mutates in ideological incarnation through the social imagination. A visual work that emerges on the world as a symptom of the obstinacy of human being for his autonomy, but also for the defense of the reciprocity of equality and for the triumph of freedom in an "open to see" from *Sitz im Leben* of dignity. In a scopic regime, visibility rules dictate what is looked at and what is hidden. The objective of this study begins with the rejection of the cult of the image, iconoclasm. And it continues in the political control of this norm. The dialectical images not only cause the constitution of a political knowledge, but also the visibility of a historical object produced from an anachronistic situation. Political images (artistic or non-artistic) are symptoms, latencies, portents of those historical moments that reveal, on numerous occasions, the instability of the rules that delimit the boundaries between the human and the social (*sese excolere ad humanitatem*); where we place the dignity of human being.

Title: Mythological narratives of MMORPG and digital algorithm of games

Session Type: Individual submission

Authors:

Name: Sunny Yoon

Email: sunny33(at) naver.com

Country:

Affiliation: Hanyang University

Abstract: Game industry has been dramatically growing and leading the development of digital media. Interestingly enough, major scaled games, particularly MMORPG (Massive Multiplayer Online Role Playing Game) largely adopt old stories including medieval knights, sorceries, ancient arms and dark dungeons so forth. Narratives of these games follow prolonged traditions of mythical and theological stories albeit digital algorithm selectively integrates it into a new digital language. The games mostly pick up stories from so called the neo-gothic style which is a modern form of gothic culture originated from the 19th century. This neo-gothic style is genetic to diverse forms of popular culture including films, TV shows in addition to literatures in the late 20th and early 21st century. This study looks into the narratives of the game and its relation to social changes and social psychology in the contemporary world. Narrative theory and discourse analysis will be applied to examine game narratives and its implications to social changes. First, narrative analysis of MMORPG games will be conducted to examine how neo-gothic styles are adopted. Ten most played MMORPG games in the world will be selected as samples. Second, the social context of originating neo-gothic styles will be examined. The original neo-gothic style in English literatures in the 19th century demonstrates social psychology of English society at that time. This neo-gothic culture is distanced from medieval gothic culture which affects contemporary gothic culture in popular culture including games. Social changes in the era of neo-gothic culture will demonstrate a reference point to contemporary adoption of gothic styles in popular culture. Third, this study will conduct a discourse analysis of how digital algorithm adapts and converts neo-gothic culture to digital games. Two games will be selected as case studies, Warcraft which is long term hit made by US company and Lineage which is made by a Korean company who broke through the world market and contributed to enhancing Korea as the world best online game exporter next to the US. This comparative study will demonstrate the social context of constructing narratives of digital games.

Key words; Narratives of digital games, Neo-gothic culture, Mythology, Game industry, Digital culture

Title: Reflexive Identity Formation in Recent Macao Feature Films

Session Type: Individual submission

Authors:

Name: Yuan Tian

Email: ytian(at) must.edu.mo

Country: MO (Macao)

Affiliation: Assistant Professor

Abstract: Over 100 years after the birth of film, Macao is still in the initial stages of cinematic production. Surrounded by many giants in the media industry, like Hong Kong, India, Mainland China, Japan and South Korea, the tiny island is still struggling for a place on the big screen. The hypothesis of this study is that regional identity formation can be the fundamental drive behind all these efforts. Therefore, this study intends to explore sociological analysis to recent representative local works. More specifically, by linking film discourse to social political situations, it attempts to figure out the focus of current local films as reflexive social identity constructions through cultural nostalgia.

Not much previous researches have been done on Macao films, out of which more are about its exhibition history only. Represented Macanese writers Henrique De Senna Fernandes and Luis de Pina talked about their memories surrounding the viewing of imported motion pictures to form a kind of accurate historical document. (Pina, 1995; Fernandes, 1995; Fernandes, 2010) In the meantime, Chinese scholars, like Chan Su Weng and Wong Ha Pak, edited two versions of local film exhibition history, showing the ups and downs of cinema development due to social changes. (Chan, 1997; Wong, 2000) Current research tries to analyze local film production and focus more on the relationship between film and identity.

That can be done all out of the recent efforts made by local government together with native filmmakers, who have tried hard to promote film production since last decade. Following two "Support Programs for the Production of Feature Films" held in 2013 and 2016 (online at <http://www.icm.gov.mo/en/CCI-Subsidy>), a series of feature films have been made, like "Sister Hood" (2016), "Love is Cold" (2017) and "Passing Rain" (2017), which share realistic themes reflecting social anxieties, such as identity drift and fragmentation, out of quick economic changes due to the booming gaming industry. This study would like to choose "Sister Hood" (2016) for further analysis because of it owns the best commercial and critical performances among its peers to date.

Title: Window of the World: Politics, Digital Imaging, and Shenzhen Urbanism

Session Type: Individual submission

Authors:

Name: Fan Yang

Email: fanyang(at) umbc.edu

Country: US (United States)

Affiliation: University of Maryland, Baltimore County

Abstract: Shenzhen, the first Special Economic Zone in southern China, has transformed from a global electronics manufacturing hub and counterfeiting capital into a UNESCO City of Design within the last few decades. Home to Window of the World, one of China's first replica theme parks featuring world-renown landmarks, Shenzhen is increasingly becoming a showcase for ultra-modern skyscrapers. Formerly the birthplace of Shanzhai (i.e. knockoff) cell phones, which enjoy tremendous popularity among China's migrant working class, Shenzhen is now known for hi-tech startups like Transsion, whose mobile phones have achieved tremendous market success in the Global South.

Drawing on a recent field trip to the city during the 40th anniversary of its founding, this paper explores the interactions between information and communications technology (ICT) and Shenzhen's urbanism. I examine the role of information technology in digital imaging in three Shenzhen-related examples. First, I look at large-scale light shows around the city in 2018 that turn the facades of high-rises into electronic screens, using LED lights to project patterns and imageries generated by algorithm. Second, I analyze six-generation auteur Jia Zhangke's 2004 narrative film *The World*, based in part on lead actress Zhao Tao's experience working in the Window of the World theme park, in which animation sequences replace live actions when the main characters text one another. Third, I examine Transsion's localization practices in Africa, including the adaptation of the phone camera to optimize selfie-taking for dark-skinned Africans and the retention of such qualities as low cost and long battery life, which are previously associated with the Shanzhai brand.

Distinct in their operations, these examples embody the shift from analog to digital image-making in the production of urban spectacles, art-house films, and personal gadgets. Together, they point to what Vilem Flusser (2003) calls "the eruption of the dot-interval-thinking," which has come to replace plane-based and linear thought and presents new possibilities of political intersubjectivity. Evoking Scott McQuire's vision of a "relational space" (2006), they offer opportunities to examine Shenzhen as a media city of the Global South - a media-architectural nexus that straddles globalization from "above" and globalization from "below."

Name: Samara Kalil

Email: samarakalil(at) gmail.com

Country: BR (Brazil)

Affiliation: PUCRS

Abstract: This proposal aims to analyze and reflect on Brazilian users' immersive experience with content available in augmented reality (AR) on The New York Times (NYT) as an example of an innovative visual culture able to communicate beyond language limitations. The newspaper was chosen as our case because it started a specialized editorial office on AR in February 2018, making it available through the newspaper's phone app. The NYT has published news stories using AR technology since, bringing the news into the home of users with movement-reactive three-dimensional images. Two stories on fashion and behavior were chosen for analysis: a) "David Bowie in three dimensions", from March 20, 2018, explores the stage costumes worn by the musician; b) "Ashley Graham: unfiltered report", from September 5, 2018, creates a virtual catwalk for the plus-sized model, exploring fashion and body acceptance themes.

Part of Buitoni's (2011) idea is that emerging contexts demand representations through new images. As De La Peña (2010) affirms, the virtual space becomes a fertile ground for immersive narratives with mobile devices. The intended analysis focuses on understanding the perception of the AR image as being outside a traditional framework, albeit mixed with the real space of the reader (DOMINGUÉZ, 2013), and how does it affect the reader and question the potentialities and fragilities of this kind of image within this context.

Our methodology considers a bibliographical review on the adoption of AR technology by journalistic vehicles followed by perceptual tests with a group of Brazilian volunteers in order to verify how these new images enable degrees of immersion and the understanding of these experiences in a non-native language (FUCHS, 2017). The importance of the study lies in the approach of these new resources and communication processes in order to understand both the

usage of the devices and the production and consumption of the content responsible for a new visual culture brought about by the users' experience and perception.

Algorithmic Cinema and Collective Memory

In a climate of despair, when it seems to many that our idols are dead and our enemies are in power, iconic images of our heroes and heroines can provide sustenance and inspiration. Heroic words can sustain hope and inspire new generations to pick up and carry the torch of justice, dignity, survival and restoration. In the spirit of generations of media activist innovators, Pixeldust was created to inspire, educate and agitate by using new media technologies to remember, reactivate, and represent inspirational examples of people who overcame enormous challenges to achieve greatness. Our paper and presentation reflects on the use of new media technologies to celebrate collective memory, and highlight the Pixeldust platform that was recently demonstrated in Manizales, Colombia.

The Pixeldust project is a contributory, interactive video/audio/text engine that can be output to many different forms of exhibition—from small monitors to large-scale public video projections. It

is conceived of as a form of algorithmic filmmaking, that blends the aesthetics and visual power of cinema with the flexibility and mutability of computer programming. It is an innovative form of immersive communication that can be a valuable source of community communication, media activism and collective memory. In echoing the IAMCR call for 2019, it allows experiences and ideas to be expressed in a creative manner that can reinforce equality, dignity and mutual respect. Pixeldust is designed to encourage participatory and collaborative means for communities to recover, reclaim and represent voices and viewpoints that have been suppressed, forgotten or co-opted.

Written in the Processing language, the Pixeldust engine accepts photographic portraits, disassembles them into component pixels and particles that lie like dust in the bottom of the projected screen, then dramatically sweeps them up and crystallizes them into a complete portrait accompanied by the spoken word attributed to the portrayed person. In a world increasingly threatened by erosion of civil rights, environmental destruction and economic disparity, Pixeldust seeks to present a visual/aural display of knowledge, hope, faith and resoluteness through short intimate autobiographical texts and visual portraits from inspirational figures around the world, both known and should-be-known. Pixeldust is a platform that encourages individuals and communities to share their own examples of inspirational people. It is not a static repository but a digital engine that powers a collective memory machine. By using the tools of community engagement, archival research, audio/video production and computer programming we hope to bring human values to the digital world. To us, this is what digital humanity truly represents.

Title: The documentary of the crisis in Spain. Image and thought of the new realities

Session Type: Individual submission

Authors:

Name: Fernando Redondo

Email: fernando.redondo(at) usc.es

Country: ES (Spain)

Affiliation: Professor in the Department of Communication Sciences, University of Santiago de Compostela

Abstract: The deep economic crisis that began in 2007 had significant repercussions in Spain at social and political levels. The so-called 15-M Movement resulted in the occupation of squares and streets in the main cities of the country in 2011. The non-fiction cinema of these years documented this phenomenon and made several approaches by which we can now have a wide range of points of view that tackle the different dimensions of those facts. In this study we propose the comparative analysis of a brief but representative sample of documentary films. Specifically, we will study Edificio España (Víctor Moreno, 2012), Libre te quiero (Basilio Martín Patino, 2012), VidaExtra (Ramiro Ledo Cordeiro, 2013) and Informe General II. El nuevo rapto de Europa (Pere Portabella, 2015). Between the first film, with a significant and revealing title, and the last one there is the following evolution: the presentation of antecedents, the testimony of the protest, the debate on the immediate events and, finally, the analysis elaborated from a larger reflective distance. Besides, it should be noted the connection that some of these films establish with another nodal moment in the recent history of Spain: the transition from dictatorship to democracy, especially in the case of Portabella.

We propose to apply a methodology of filmic analysis of a historical-textual nature that let us generate a new knowledge about how documentary production represented that environment of social, economic and political crisis. In order to do this, we selected those films that offer a larger meaningful density and that condense all the works that emerged in this social period of crisis. Therefore, the objective of the film analysis is the exploration of the mechanisms of internal operations of the films in order to find the traces of that context on the surface of the filmic text. We consider that discourses of non-fiction have always been able to accompany those moments of change, crisis or social transformation throughout history. They introduce themselves as a visual testimony of historical events, as an expression of the diversity of opinions that converge in the public sphere and, definitively, as an instrument to think the new realities.

The political documentary occupies now a prominent place in the audiovisual sphere, as demonstrated by not only some very relevant titles, but also the attention paid by critics and analysts. The political evolution of the present time or the social urgency of the moment has been the object of study in important Spanish scientific publications, such as volume DOC 21. Panorama reciente del cine documental en España or L'Atalante magazine, which contains a revealing debate on the political importance of the documentary in connection with the 15-M movement and it insists on the need to take account of the audiovisual genre regarding the guarantee of truth and the credible representation it can offer.

Title: Visual performances of nationalism

Session Type: Individual submission

Authors:

Name: Ilhem Allagui

Email: ilhemallagui(at) yahoo.com

Country: QA (Qatar)

Affiliation: Northwestern University in Qatar

Abstract: This research uses visual communication to discuss nationalism and citizenship rights in Qatar. It departs from a diplomatic crisis, the Qatar blockade by neighboring countries of Saudi Arabia, the United Arab Emirates, Bahrain and a bit farther Egypt, to question signs of nationalism through car decals that citizens and residents of Qatar displayed on their cars. Nationals, also called locals are identified according to laws of jus sanguinis. Typically, car decals is a ritual reserved to citizens (Koch, 2016, 2019) as witnessed on the occasions of yearly national days in countries of the Arabian Gulf. However, the Qatar blockade brought people together: Fueled and energized by the speech of the Amir of Qatar delivered at the United Nations in September 2017 where he thanks the country citizens and residents alike, people began decorating their cars with images and poetic copy and catchphrases expressing support and belonging.

Decorating cars to show support and nationalism is not new. People have used car decals in other countries to celebrate sports performances or winning elections and other notable national events. This research explores what do car decals say about nationalism in Qatar, as both citizens and expatriates used visuals to communicate their support to the leader of the country in time of crisis, the imposed embargo on the country. This research uses a semiotic and visual analysis of the car decals to question the meaning of these images that “document the spectacles” of “symbolic space in which visual icons are sending political and social messages” (Allagui, 2014, pp. 996–997). The sample includes 27 images along with text. In addition to the semiotic analysis, the research uses linguistic analysis to make sense of the combination image-text and their meaning in the context of manifested political solidarity. The research findings speak to a nascent form of nationalism expressed in solidarity and sense of belonging by expatriates, so far excluded from the community (Anderson, 2006, 1983). The research proves a shift in the meaning of nationhood in Qatar.

Title: 'Protagonists of their stories': Tropes of Visibility in Photo Reportages about Refugees'

Session Type: Individual submission

Authors:

Name: Maria Nilsson

Email: maria.nilsson(at) ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: News coverage of refugees attempting to cross borders is widely familiar, arguably especially at this moment of global migration on a grand scale. A frequent focus on the journey serves a dramatic journalistic narrative and the criteria of high news value. However, the single news photograph, embodying and articulating news value, tells us little about the experiences and identities of the people referred to as “refugees” in the story. For instance, a recent comparative study of how newspapers visualize the refugee “crisis” in Europe, identified visual typologies ranging from victim to threat in front-page photographs of migrants which, the study’s authors argue, may fail to evoke empathy and identification on the part of the public (Chouliaraki & Stolic 2017).

Thus, I propose moving away from a single-image focus in order to explore the possibility of visual journalistic storytelling of migrants’ experiences. Specifically, this case study analyzes visual reportages, short documentaries and multimedia pieces, all in-depth visual journalism forms that have thus far not been a major focus in research on visual framing and journalistic visualizations of global migration. The context for the study is Sweden, which during 2015 received more than 160,000 asylum-seekers, a peak sparking a domestic debate and ultimately a switch to a restrictive asylum policy in line with the European Union. While recent research has found the Swedish news coverage positive towards immigration (Gersetti & Odén 2018), visual journalism has as yet not been examined through the lens of recent and current migrations to Sweden.

Qualitative analyses drawing on tools from visual rhetoric (Hariman & Lucaites 2016) were carried out on entries in the Swedish Picture of the Year contest in 2016, 2017 and 2018 and, whenever possible, examined in their published news media contexts. The aim was to identify tropes of visibility, voice and protagonism—essential parts of storytelling and visibility. The time frame was selected due to the prominence of migration in journalistic coverage and due to its resonance in domestic political discourse. Entries examined include the categories of photo reportage, multimedia, and everyday life where the focus was either refugees globally or asylum seekers in Sweden. Salient tropes identified include: the migrant as protagonist of her or his own story, the asylum seeker integrated into Swedish society through a focus on everyday life, and a subjective and sometimes self-reflexive perspective on the part of the photojournalist. Some entries foregrounded migrants’ perspectives at a time of political debate about migration, an indication of journalists’ support of offering asylum. A personal journalistic voice rather than an objective stance was found in some pieces, expressed either through photographic perspective or proximity, editing or other devices of visual storytelling or writing. While the acknowledgment of subjectivity can be seen as a recognition of journalistic ideology, I propose that it may also be sparked by an experience

of high impact where journalism becomes a kind of advocacy and witnessing a civic act (following Linfield 2010, Peters 2001).

Title: Geographical Representation and Identity Construction: The spatial politics in contemporary Chinese ethnic minority-themed cinema

Session Type: Individual submission

Authors:

Name: Yijun Li

Email: lij13111(at) 163.com

Country: CN (China)

Affiliation: Huazhong University of Science and Technology, China

Abstract: Mass media products are intervening the identity construction of minorities in contemporary China where 56 ethnic groups settle down and 64% of the territory defined as “Minority Autonomous Region”. In recent two decades, the Chinese official directors, independent artists and ethnic minorities filmmakers presented various geography landscapes of minority areas on screens. The spatial representations in ethnic minority-themed film provide perspectives to observe the multi-discourses of imagining the identity of Chinese minorities, in the context of the conflict and negotiation between the traditional belief and nation-wide modernization plan, the local experience and globalization storm in contemporary China.

The article focuses on the representation and politics of space in contemporary Chinese ethnic minority-themed films. It is aimed to analyze how the cinematic places are constructed by different discourses and how the spatial politics in films intervenes the identity construction of Chinese ethnic minorities, focusing specifically on the modern, diasporic and cosmopolitan identities construction and their relationships to spatial representations.

The research examines the discourses for constructing the metaphorical places including Tibetan theater, cottage, temple, highway, amusement club and domestic space. Besides, the paper also focuses on the virtual landscapes embedded in real places in films (such as the backdrops in photo studios, the paintings and the television pictures) and the politics of the interactions between the virtual places and real places. The research takes Foucault and Lefebvre’s analyses on the Heterotopia and the ideology of space as main approaches, and the criticisms on the politics of photography practice by Susan Sontag and Gill Rose also provide theoretical methodologies for discussing the politics of virtual landscapes in cinemas.

It is preliminarily argued that the spatial politics in films is intimately engaged in the identity construction of ethnic minorities in China. The diverse cinematic geographical landscapes, as well as the pluralistic paradigms of presenting the minority area in films, are served as reflections of the hybrid identity situation of Chinese minorities in transformative period.

Abstract: This paper investigates the discursive practice of the concept of emotion in photojournalism during 1980s in China. As a special component, the concept of photojournalism is not only part of the holistic body of journalism concept, but also shows peculiarity due to the media form of photograph, the working routines of photojournalists, and the position that news photography has been settled in historical context. In the early years of the great reform and opening-up China, the journalistic enterprise, among many other economic and social fields, experienced a rapid development, which significantly reformed and enriched the news concept. However, several scholars argue that the dominant concept of journalism in new era is still the propaganda paradigm, and the fundamental nature of journalism is still considered to be political and ideological. Basing on the concept of party press and its political use, media in China is an organic component of the CCP's whole undertaking, which in turn defines the ability to manage and control media an important part of governing capacity. At the practical level, after the rapidly development of different kind of news styles and forms, "positive propaganda" was finally insisted to prevail in the press by propaganda departments.

However, little literature focuses on photojournalism of that time in China. As a result, the technological and communicative nature of visual media and its influence on the concept of journalism is somehow neglected. Despite of mouthpiece theory and weapon theory, which are main journalism concepts, and documentary and decisive moment, which have been identified as foreign influences on 1980s' Chinese reportage photography, the emotion feature of photojournalism concept has also been accepted as a main standard for news report and award-giving, but earns little discussion in academia. Treating emotion as a unique nature of visual expression, this research aims at a historical investigation into the emergence of this emotion concept and how it was constructed and accepted through discursive negotiating with and integrating into the dominant ideas. It tells us a story about how photojournalism as a visual media defines its own significance out of the historical tradition of the revolutionary concept of photography which asserts news photo should be combative and the political concept of journalism which argue that news reportage should serve as an instrument of government. The rediscovery and discursive study of these sentimental ideas in photojournalism would benefit in 2 ways: to get a better understanding of the integrality and richness of news concept in 1980s China, and to

investigate the discursive space that the concept of emotion constructed for the concern of individuals to obtain a place in journalism and modern China.

Abstract: Designing for people with a certain disability or uniqueness is, in fact, better design for all. Through design we can make someone's life easier, safer and freer – as it is the case in the design for children facilities, for hospitals or for people with a locomotion disability – or, why not, for the left-handed or for the colour-blind. Through design, we can make citizens understand better a complicated public issue – as it is the case with excellent infographics, in journalism and governmental public relations. Lack of good design and, in some cases, the usage of misleading design, may lead to serious societal and individual problems, such as depression, lack of concern for public affairs and withdrawal from the public life.

We are going to use an interdisciplinary approach, based on architecture, product design and communication studies, to discuss the rules and the process of inclusive design.

More specifically, we are going to use the 10 rules of good design proposed by Dieter Rams (Kirk, 2016); the four principles of accessibility design (Lidwell, Holden & Butler, 2003); the five usability measures for interactive systems (Schneiderman, Plaisant, 2005), to discuss congruencies helpful in inclusive design. Insights from behavioural economics, on increasing readability and on charismatic sources (Kahneman, 2011), are used to understand how designers from different disciplines (product design, architecture and computer sciences) reached similar results when drafting the principles of good design.

In a second step, we are going to discuss the process of inclusive design. One approach is to create empathy, by simulating a disability or uniqueness. A second approach is to work with the intended user, in direct contact. Disability simulation may, in fact, promote discrimination, not empathy (Silverman, 2015). Direct contact (Corrigan, 1999) and working with and for people with a certain disability or uniqueness leads to inclusive design and, in fact, to better design for all, from architecture to infographics and visual journalism.

Title: An archeology of the images in modernity

Session Type: Individual submission

Authors:

Name: José Bragança de Miranda

Email: bragancamiranda(at) gmail.com

Country: PT (Portugal)

Affiliation: New University of Lisbon

Abstract: At a crucial moment in the last century, Paul Valéry said that we were entering the age of "distribution of the real to the home." The model was the electricity grid, but above all the radio transmission and its location in the domestic architecture. Occurs in this process a shift from a production technique to kinematics. Virilio accentuates the importance to this process of dromoscopy, which led him to insist on movement, relays of distribution and circulation. The so-called teletechnologies that process space and time are the culmination of this distribution process. Being essential, things are more radical. The distribution corresponds to a breakdown of the real, emerging from the crisis of the symbolic history. It is well known that Hegel considers modernity as the moment of overcoming the symbolic. By symbolic is meant a general economy that governs the world through the image, going from mythology to icon. In that general economy the exterior - matter, nature, the flesh - is managed through the interior, which in a symptomatic gesture is based on the impossible capture of the "exterior". A gesture that unfolds in oppositions like finite and infinite, high and low, mortal and immortal, etc. etc. It is an economy that was inseparable from the mode of production of objects, bodies and the world itself, and which depended on occlusion of Physis and all materiality. What Benjamin describes as techniques of reproduction corresponds to a shift from production to kinematics, in which everything produced in history serves as a material for other productions. They are, after all, a mode of technique, purely kinematic, which has as its subject the "history" and not "nature". This implies a fracture of the symbolic unity and a new redistribution of the fragments. But we must go further, and show how to explain it from movement and distribution operates an organization of experience according to large blocks. From a speculative perspective, photography reveals for the first time this process of dispersion of the symbolic and the distribution that operates. On the one hand, matter and bodies; by others the images; finally the machines, which give new powers to this process. We are facing a compositional logic formed by the synthesis and various individuations, explored by forces such as capital, war, politics, art, etc. In this new space of distribution creates a space of struggle where it is decided in each moment the forms of life, and their uses.

Title: "Learning of Regional History: application of a strategy based on documentary photography Cantonista"

Session Type: Individual submission

Authors:

Name: Ruth Gálvez Robles

Email: ruthgalvez.unsj(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de San Juan

Abstract: Communication, together with Education and Technology, constitute the integral development of human rights and dignity, enabling us to prepare for the great changes that are experienced in the various fields of scientific-technological research. Faced with this reality, these concepts are the fundamental pillar of the political, social and economic reforms in which our societies are prepared to face the challenges of the 21st century, coexisting traditional artistic productions with proposals and innovative pedagogical experiences, which reach a high educational level. -communicational

The present project of interdisciplinary visual production was based on the relationship: education-image-media, from a western / non-western perspective, whose questions to answer were: What other relationships and pedagogical practices could we propose at school? What happened from the incorporation of TIC's ?.

The theoretical corpus was supported by the Visual Culture, Martín Barbero-his analysis of Culture (2010), Youth, communication and identity (2002), the Place of Look and New ways of building knowledge in the digital world- (2014-2015); the visual studies of Dussel / Gutiérrez (2006), Mirzoeff (1999), Schwartz and Przyblyski (2004): "an interdisciplinary field that, instead of treating images as iconographic symbols, treats them as events (...) in which operate the subjects and in turn condition their freedom of action "(Mirzoeff, 2005: 11). Mitchell, W.T.J: will consider that the Visual Culture is a set of hypotheses "that need to be examined, since the current vision is a cultural construction, that is learned and cultivated; and that therefore it would have a history linked in some ways that we must still determine the history of art, of technologies, of the media, and of the social practices of exhibition and shows of being spectators; and that it is deeply involved with human societies, with ethics and politics, with aesthetics and the epistemology of seeing and being seen "(Mitchell, 2002: 166). Kimio Kase and Alesia Slocum (2011), have contrasted the ways of thinking between the two worlds in: "Asian versus western management thinking", based on the human capacity to structure thought in a way codified by concepts developed with perceptive functions and cognitive.

The proposed methodology was the realization of a classroom strategy, from the projection and observation of photographs corresponding to the Cantonist political period (1923-1934) of San Juan-Argentina, and its subsequent textual reconstruction, with students from the Secondary Level. The objective was to demonstrate that old photography as a social document is a didactic resource, for the reconstruction and re-signification of historical discourse, based on a design strategy; for the reading of images and their narrated observation.

The theoretical contribution of the work was positive, the students had previous knowledge about the history of the perceived image, so the conclusions to which they arrived were diverse, re-

meaning and generating the opportunity to develop theoretical / methodological approaches from where to think and to approach the field of the practices of the studies on the rights and the truths in dispute, in communication

Title: Young people and audiovisual culture: an empirical and theoretical approach based on the comparative study of two groups of Uruguayan youth.

Session Type: Individual submission

Authors:

Name: Rosario Sánchez Vilela

Email: rsanchezvilela(at) gmail.com

Country: UY (Uruguay)

Affiliation: Universidad Católica del Uruguay

Abstract: The purpose of this research is to study the audiovisual culture of Uruguayan youth in times of media convergence and the place of television in it. What are the set of meanings that compose audiovisual culture? In what narrative of daily life is it integrated? These are some of the guiding questions. The task of answering them, involves inquiring and interpreting the young's relational practices with respect to the multiple screens, the meanings they acquire in their daily life, and the ways such practices are engaged in the domestic space and the temporalities of the daily life (the times of leisure, of study, of work).

Audiovisual culture is understood here as a set of significant practices that link the audiovisual with the lives of young people. The modes of consumption associated with different technological formats, but also the use of the visual for individual and collective expression; these are all part of the diverse ways of being young today.

An advance of a major current investigation on Uruguayan youth (14 to 29 years old) will be presented here. This communication will analyze the results of the study of two groups of Uruguayan youth: one of rural youth and another of urban youth between 14 and 20 years old. The methodological design has adopted a socio-anthropological perspective in order to retrieve the subjects' universe of meanings, through the use of qualitative interviews. This methodological decision is based upon the view that those meanings which new and old technologies have for young people are linked to their social contexts, to practices in their daily lives, and to imaginaries about their condition as young people as well as about the future. These will be central dimensions in the discourse analysis of the interviews. The obtained results will enable a revision of the theoretical tools involved in the study of audiovisual consumption and appropriation processes by young people.

The knowledge generated in this research will constitute a relevant input for the definition of social communication and education policies, as well as an incentive for audiovisual production.

Title: Reconstructing the Memory of War: The Sino-Japanese War in Chinese-Language Films in the 21st Century

Session Type: Individual submission

Authors:

Name: Ji'an Lin

Email: linja2014(at) sina.com

Country: CN (China)

Affiliation: School of Journalism and Communication, Central China Normal University

Abstract: Since the outbreak of the second Sino-Japanese war in 1931, hundreds of anti-Japanese war themed films have been made in China. Generally, the history of Chinese anti-Japanese war themed film can be divided into six periods so far: the wartime period (1931-1945), the post-war period (1945-1949), the Seventeen Years period (1949-1966), the Cultural Revolution period (1966-1976), the New period (1977-1999) and the new century period (2000-2018). In different period, the representation of war history in these films is different due to many factors. Especially with the development of China's policy towards Japan and the relationship between the Communist Party and the Kuomintang (KMT), the historical narrative of anti-Japanese war themed films changes considerably.

Based on Jiang Wen's *Devils on the Doorstep* (2000), Ang Lee's *Lust, Caution* (2007) and Zhang Yimou's *The Flowers of War* (2011), this article tries to analyze the new trend of Chinese-language anti-Japanese war themed films in the new century and examine how is the war represented in these films. In order to gain an insight into the production mechanism of these films, I will put them in China's cultural and political context and illustrate them from the perspective of Sociology of Film. It is argued that China's politics exerts a profound impact on the production of anti-Japanese war themed films and the representation of war in these films is very different from those made before 2000. There are two main new trends in these films. Firstly, not only the backstage battlefield by the Communist Party, but also the center stage battlefield by the KMT has been usually represented on the screen with high praise. Secondly, besides the patriotism and nationalism, the complexity of humanity is also one of the important themes. These new trends of Chinese anti-Japanese war themed films could have wide influence on both people's memory of history and their attitude to reality.

Title: For an autonomous existence of images: an archaeological perspective

Session Type: Individual submission

Authors:

Name: José Cláudio Castanheira

Email: jcscastanheira(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal de Santa Catarina - UFSC

Abstract: In Thomas Elsaesser work, we are invited to think about cinema from an archaeological point of view and as part of a larger set of communication practices born and developed over the last two centuries. Elsaesser tries to present new possible methodologies for the study of moving images, different from those classically adopted by Film Studies.

The first major question that arises for those unfamiliar with the perspective of media archaeology is how to renew the approach to an object so thoroughly studied by more hermeneutical biases. In relation to both their form and content, traditional analysis has focused on producing some kind of rational connection between films and something external to them. Film's meaning is therefore uncovered through an act of interpretation – centered on narrative or on cultural issues related to the film as a social phenomenon. The interpretation and its resultant meanings depend on an external agency, which is that of the spectator, the critic or other human beings using intellectual mechanisms to produce human-centered readings of film discourse.

Existential phenomenology presented the possibility of an equal existence of both the body of the spectator and the body of the film. Although, in this case, the production of meaning by the co-existence of multiple bodies transcended hermeneutic interpretations, the results of consciousness investigation is still originated and dependent on one privileged conscience from a specific sentient body. Little has changed in the subject-object relation and its inherent hierarchy.

As part of a broader and widespread mediascape, present in virtually all moments of everyday life, images can now be read and interpreted by non-human devices. Invisibly, the repertoire of images, its organization and connection to multiple devices and infinite databases, make interpretation processes much more complex and beyond our reach. Each day, images manifest a more evident autonomous consciousness.

According to Vivian Sobchack, the archaeology of media is an undisciplined discipline, which tries, through different methodological approaches, to deal with a kind of discourse present in the materiality of media themselves. Thus, archaeology must be concerned with how objects shape thinking and our being in the world. Archaeological bias recognizes a sort of agency from the objects, something that has not been regarded as important by classical humanities. On the other hand, for authors like Wolfgang Ernst, there is no reason to look for meanings from a cultural point of view. Media (and he refers specifically to the material aspects of objects) are themselves the very meaning.

This work proposes, from an archeological perspective, that the intentionality of images, especially those that are produced and circulate in digital environment, is the symptom of a contemporary episteme that delegates to objects not just a functional autonomy, but also one of existence and of interpretation of the world. The multiplicity of digital images makes of them Beings that exist

beyond the human and that constitute a kind of continuous phenomenological machinic process, an awareness of the self and of the other.

Title: A Defiant Act of Looking: Inmate Generated Footage in Lebanese Confinement

Session Type: Individual submission

Authors:

Name: Chafic Tony Najem

Email: chafic.najem(at) ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University- Institute of Media Studies

Abstract: In January 2015, a military operation was set to raid Roumieh Central Prison, the most notorious and overpopulated prison in Lebanon (Nashabeh, 2003). The purpose of the operation was to put an end to the never ending riots in Bloc B, the part of the prison known to house individuals affiliated with fundamentalist Islamist groups. A few hours before the military operation, a photograph taken through the bars of a prison cell window began circulating on social media. It captured the military vehicles approaching the building from the P.O.V of an inmate in Bloc B. This is not the first incident of this nature to occur in Lebanon, the production and dissemination of camera footage by inmates have been increasing over the past few years. While the prison authorities are constantly trying to stop the access that some inmates have to cellphones and internet connection, news media often include such footage in their reports on Lebanese prisons. This paper examines the relationship between the footage created by inmates and the visibility of punishment in Lebanon during the January 2015 incidents. It assesses the potential that inmate generated footage has in exposing legitimized apparatuses of restriction and in constituting a defiant act of looking. I conduct a semiotic analysis of both the TV news reports on the events of January 2015, such as the Interior Minister's press conferences and his visits to the prison, and the disseminated footage produced by inmates during that time. I also carry out interviews with two former inmates in Roumieh prison for more context about this phenomenon. Situating my analysis within the framework of visual culture studies, and explicitly on the work of Mirzoeff (2011) and Feldman (2015), I consider the concepts of "looking back" and counter-visibility in relation to Lebanon's history of incarceration and colonial past.

Within the context of Lebanon, I argue that visibility shaped how prison is "seen" as a reality, it became part of a mechanism which perpetually aims to legitimize the quotidian violence of incarceration. As seen during the minister's press conferences, the audience understands the reality of the prison through the frame of legitimized power, and the broadcasted surveillance footage constitute our only "window" to the reality of the prison. However, I convey that, for once, this view is contested by the photographs taken by inmates. The audience is forced to look at punishment from the perspective of the punished. The photographs taken by the prisoner embody the "right to look". The authority's visibility, the gaze of the overseer, is challenged by the act of looking back, an act that creates a "window" in the police order through which the legitimized violence of incarceration is made visible. Along these lines, my work addresses the absent literature on visual culture and incarceration in the Middle East, and Lebanon specifically. I situate my work within the rest of the scholarship on visual criminology and media and crime by advocating the significance of visibility and visual culture in the study of punishment and incarceration in the Arab world vis-à-vis its history.

Title: Digital Per-versions or reconfigurations of the image in the Post-digital age

Session Type: Individual submission

Authors:

Name: Carlos Obando Arroyave

Email: carlosoyave(at) gmail.com

Country: CO (Colombia)

Affiliation: Pontificia Universidad Javeriana

Abstract: Abstract: Is evident that we live a paradigm shift in the creation, production and consumption of so-called cultural products, and this change is enhanced by the emergence of the Internet and particularly by the arrival of the so-called Web 2.0, which has boosted consumption, especially audiovisual, streaming through nomadic screens and ubiquitous connectivity.

Audiences are changing their way of interacting and consuming stories. When they fall in love with a movie, book, video game or series, they talk about it, share it with friends, publish it on their social networks and 'google or tweet' everything related to the story or the characters in the story. It is not new, as human beings we long to tell us things, from the stories they recited before we slept, to the super-productions of Hollywood or the stories with which we grew up on our televisions. So today, more than ever, the stories are topical, but they are looking for new clothes, and they can be told in different ways depending on the medium we use. The transmedia concept, for example, is born articulated to this evolution propitiated by digital convergence.

That is right, transmedia and expanded story is constructed from the new technological model of hypertextuality, convergence and interactivity, three key concepts to understand the hypervisuality in which we are installed. And this profound change of narrations and stories not only expands through various artifacts, languages and platforms, also promotes new sensibilities in the user-consumer, which we now call prosumer.

In summary, this paper presents and describes the novel tools for the creation, reading and consumption of images that some authors call Post-digital. New applications such as the so-called QR codes that engage in conversations between paper and screen writing, expand content, reactivate hybrid reading forms between print and digital culture so typical today in this digitized audiovisual culture.

Carlos Obando A.: PhD in Pedagogical Research, ICT Line at URL-Blanquerna, Barcelona, Spain (2007) / Master's Studies in Audiovisual Digital Communication, International University of Andalusia, Seville, Spain (2002) / Semiotic-esthetic Specialist, National University, Colombia / Social Communicator-Journalist, University of Antioquia, Colombia. Abstract: Los videojuegos se ha conformado a través de los años como productores y reproductores de imaginarios sociales. La evolución técnica de los mismos, desde el aspecto gráfico hasta las posibilidades de jugabilidad en mundo abierto plantean nuevos escenarios que permiten explorar nuevas realidades y posibilidades respecto a las representaciones sociales que se ven en ellos.

Hoy, más que nunca, los imaginarios que se muestran en el contenido ayudan a configurar la visión de los videojugadores sobre el mundo. El imaginario social, concepto derivado de los trabajos de Castoriadis, Durand y Jung, hace referencia al conjunto de imágenes mentales que permiten reinterpretar la realidad.

En este contexto, la saga Assassin's Creed se ha conformado como una de las franquicias más consumidas a nivel mundial, caracterizada por incorporar en sus videojuegos diversos mundos abiertos a través de los cuales se recrean múltiples períodos y personajes históricos, con lo que presenta una reconstrucción propia de dichos periodos.

Específicamente, el juego Assassin's Creed: Black Flag IV aborda el periodo de la época dorada de la piratería en el siglo XVIII y refleja una crítica hacia valores, roles y creencias occidentales, tales como la religión, el individualismo, la razón instrumental, etc.

A fin de delimitar, el presente trabajo analiza el imaginario de la cultura maya actualmente presentado en el videojuego Assassin's Creed IV Black Flag a través de una metodología propuesta que retoma la hermenéutica profunda de John Thompson y la triple mimesis de Paul Ricoeur.

El trabajo apunta a elucidar la apropiación crítica del imaginario maya por parte de los jugadores. A grandes rasgos se realizará un estudio contextual documental sobre la creación del videojuego, un análisis audiovisual e interactivo del mismo y un focus group para complementar el estudio de percepción. Los resultados apuntan a descubrir las potencialidades de los videojuegos como medios de comunicación críticos a instituciones sociales de poder en turno.

Title: The political expression of the Third Sense in the movie Promised Land

Session Type: Individual submission

Authors:

Name: Ernesto Coronel Pereyra

Email: ernesto_ecp(at) hotmail.com

Country: MX (Mexico)

Affiliation: Posgrado de Ciencias Políticas y Sociales, Universidad Nacional Autónoma de México

Abstract: The purpose of this paper is to answer the following question: what kind of policy emerges from movie Promised Land, which speech seems to emanate from the rawness of the pain of women trafficked for sexual trade against their will?

This film does not save anything, it shows us the crudeness of the women's trafficking, the vexations they are subjected, putting us face to face with the protagonists of a concrete and cruel reality. Thus, the main argument in this text is to show that this film is not political, because it turns into a spectacle the situation for women's sexual exploitation, to show the structures of domination and pretend to mobilize the collective forces against them.

On the contrary, his policy is to say things differently, using the camera to record calmly and patiently the faces, the screams, the suffering, the gestures and the movements as an exercise that approaches the secret of the other, with What is born on the screen is a third figure that is not the victims represented or the perpetrators, but a character that is and is not alien to our lives, an impersonal one that is captured to share his condition of life, similar to a living dead, generated by the sexual slavery, that one that can be anyone who asks for the word to tell us his story in a crude and realistic way.

To explain this matter, it is necessary to resort to the concept of the third sense offered by Roland Barthes, with the intention of understanding in a comprehensive and profound way the politics of Promised Land. For this, at first, opens a space to talk about the existence of a third level of meaning, distinguishing the obvious, second sense, the third sense, the obtuse, which is the level of significance that is beyond the meaning and informative level.

In a second moment, some sequences of this film are selected to argue that the policy of Promised Land is in this third sense, in that postfix message added to the movement image that is hardly described with words, but that is there, in the significance, to deal in depth with the political expression of this film. To conclude this paper, we discuss how the link between the film-political relationship with the third sense can be a way to emit political messages from the construction of discourses arising from a knowledge originated from emotion.

Title: The GIF as a critical device for migrants on their way through México

Session Type: Individual submission

Authors:

Name: Sergio Rodríguez Blanco

Email: sergio.r.blanco(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana Ciudad de México

Name: Mariángela Abbruzzese Abaján

Email: angyabbruzzese(at) gmail.com

Country: VE (Venezuela)

Affiliation: Universidad Iberoamericana Ciudad de México

Abstract: PRESENTATION IN SPANISH

This research reflects on the aesthetic potential of the GIF format through a critical analysis of a series of visual texts (Abril, 2012) about north-south migrations. The GIF is understood as a material product of culture with possibilities to open new communicational perspectives that generate alternatives to the hegemonic discourses that exclude minorities. We understand the aesthetic (Rancière, 2009) as the ways of distributing the sensible on the globalized modernity.

The GIF is accessible, it is not heavy, it travels fast and its loops are automatic. This format can be embedded on any website, it is free from the pursuit of intellectual property and enables appropriation. Here we sacrifice image quality in conventional terms: GIFs does not have high resolution. Then are we talking about “poor images”? Steyerl (2009) points out that a poor image can make fun of the promises of digital technology because of its conditions of continuous deterioration, ghostly aspect and its easiness of being copied in different distribution channels. Nonetheless, that ghostly aspect has not left the GIF a side. Today there is an image database available to be embedded on Whatsapp conversations, just like in Instagram stories and Facebook comments, and that database belongs to Giphy: a social network just for GIFs.

It would be impossible to mention all the ways in which the GIF has expanded on the network, but that expansion is telling us something about the Internet that Galloway (2005) has explained: networked computing has specific protocols whose operations are only known by a technocratic elite, thousands of users are connected on the net but only a few are related to those protocols. This produces a trend towards standardization. Protocols are not politically neutral and standardization erases diversity because it makes things more difficult to control.

The GIF circulates on the the capitalist production system, a structure that uses Internet protocols to achieve their goals and commodify everything; but that same network can also make fun of the promises and paradoxes of a “globalized” world. Into a logic of structural contradiction between deterritorialization of capital and reterritorialization of power, globalization dissolves borders to make possible free trades, while migrants face countless territorial and linguistic barriers. The

network is full of circular arguments based on the precondition that migrants should only be considered as victims of a circumstance, or as dangerous subjects, and this responds to a binary logic that takes away their autonomy (Giglioli, 2017). For that reason this investigation has sought to build a critical device through the analysis of GIFs made by a group of migrants on their way through Mexico, in the framework of a workshop organized by us.

In our research, the critical analysis (Abril, 2012) of these GIFs reveals that globalization might not overcome the structural disproportion between the territorialized logics of power and the deterritorialized logics of capital, but at the same time reshapes the discourse about poor image, because this is about moving images whose loops are revealing “the infinite recapitulation of an existence” (Agamben, 2005)

Title: The Music of the Gods: A Semiotic Analysis of the Representation of Indian Classical Music in Visual Media

Session Type: Individual submission

Authors:

Name: Jayakrishnan Narayanan

Email: njaykrishnan(at) gmail.com

Country: IN (India)

Affiliation: Department of Humanities and Social Sciences, Indian Institute of Technology Madras, Chennai, Tamil Nadu, Indian Institute of Technology Madras

Abstract: The study analyzes the influence of the mythico-cultural and quasi-religious identities of Indian Classical music, especially the South Indian Karnatik music, in its representation in the mainstream visual media. The paper using the semiotic theories of Umberto Eco, Roland Barthes and Juri Lotman argues that the visual media through a habitualized production pattern has brought about a semiotic synesthesia between Karnatik music and Hindu religion. While Indian Classical Music and its origin and development as a temple art form can be historically associated to the Vedic Period (1500-500 BC); it is grammatically, musically and aesthetically independent of such a religious identity association. The paper proposes that Visual media portrays Karnatik music less as 'art music' and more as religiously charged 'pure' and 'devotional' music often projecting it as a divine language that can be used to communicate with the Supreme. The researcher uses two elaborate content analyses to arrive at its conclusions. A syntagmatic semiotic analysis of mainstream films that feature Karnatik music as their prominent theme, would be used to examine if the films through their structural sememes – such as narrative schemata, dialogues, plot, characters and mise-en-scene – reinforce the aforementioned identity tags of Karnatik music and its sacramental origins. A paradigmatic analysis of the day-parting and time-slotting patterns of televised Karnatik music programmes such as concerts, music videos and documentaries would be undertaken to analyze the combinatory production patterns of Television Media where the paper predicts the stacking and juxtaposition of Karnatik music programmes with religious discourses and other devotional programmes. The paper argues that the coupling and the coding of 'Karnatik music-devotional content' pattern poses as an unmotivated and natural choice of media production and is designed to suit the mythico-cultural ideologies of the "model reader" (Eco 1979) who has access to the cultural sub-codes that connect classical music with the devotional content. This provides ample scope for the 'Myth of the divine music' to use Visual media as a vehicle to resurface in any context and propagate itself by reinforcing its superiority.

Abstract: The human eye has always had a special status as a fragile organ with the power of vision. However, it has a history and a politics. By the 20th century it was paired with the mechanical eye of the cinematic camera that Vertov (1926) saw as providing a new and powerful means of mobility, perception and meaning-making. In the 21st century autonomous robotic eyes not only capture and record images, but interpret them and even act in the world. Science fiction cinema anticipated the changing status of the eye, and transformations in vision, such as in the iconic films Blade Runner (1982) and Terminator (1984). Blade runners used the Voight-Kampff test to identify replicants by observing their eyes. The replicants visited Hannibal Chew, the maker of their artificial eyes, hoping to find the secrets to extending their lives. In one scene in The Terminator, the viewer sees the terminator's first person view, overlaid with digital information. In another scene, he uses a scalpel to extract his own eye, revealing a glowing red iris inside. In the worlds of both films, the eye, the gaze, and vision are transformed and unsettled through technology. The eye becomes abject, while vision becomes inhuman. Beyond these fictions, an array of new eye machines are emerging in high tech and everyday life. A wide range of eye machines introduce new materialisations of the eye and new mediations of vision. Drawing on case studies in hardware, software and wetware of robotic eyes, this paper explores the contemporary proliferation of eye machines, including:

- Eyes and vision in science fiction cinema;
- Visual prostheses — bionic eyes with neurological connections to the brain;
- Eyes in social robots that animate and maintain eye contact;
- Ocular prostheses, contact lenses and other transformations of eyes as objects;
- Vision systems such as LIDAR, radar, thermal sensors, night vision goggles and ultraviolet cameras that extend vision beyond the human sensorium;
- Augmented reality systems that analyse images and overlay salient information on scenes in real time;
- Smart imaging systems such as traffic cameras, security cameras, drone cameras, passport control, face recognition and biometrics that serve as apparatuses of discipline and control.

Uncanny, spectacular or surveillant, eye machines open onto the unfamiliar. In many cases these assemblages establish asymmetrical gazes grounded in unequal power relations of the state,

corporation, military or police. They unsettle the eye as a material object, vision as a phenomenon, and images as generators of meaning.

Title: Westworld: the identity of the robot through time and memory

Session Type: Individual submission

Authors:

Name: Glòria Salvadó-Corretger

Email: gloria.salvado(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Name: Fran Benavente

Email: fran.benavente(at) upf.edu

Abstract: ¿What identity does a robot have? ¿How is its personality built? ¿Will human beings be able to achieve immortality? These are some of the questions the TV show Westworld (J. Nolan y L. Joy, HBO, 2016) asks. This fictional program is framed in a posthumanist reflection context (Braidotti, 2015; Sloterdijk, 2000; Hauskeller, Philbeck and Carbonell, 2015). It proposes to think about the identity of human beings and machines and, also, about the moral and ethical limits of the fusion between humans and technology.

There is a long tradition of dystopian stories in cinema and literature that talk about complex relationships between man and machine (from The Twilight Zone and Philip K. Dick novels, to Blade Runner or Black Mirror). This paper aims to study how robot identity is built in Westworld through two crucial elements: time and memory.

Graciela Speranza (2017) explains that the most important stories of Jorge Luis Borges talk about artificial intelligence, a lost life and the uncertainty of personal memory. In these stories the reader feels lost due to manipulation of memory and identity. This also happens in Westworld when the robots try to remember an inexistent real life to be able to form some kind of identity. Our analysis focuses on the concepts of oblivion, memory and forced immersion in a dreamed life (fiction loops) because they are the central mechanisms that articulate the narration.

We'll also study how this structure culminates, at the end of both Westworld seasons, with an unexpected twist, a deception caused by the artificial nature of machines that simulates the nature of human beings: robots don't get old, which generates temporal confusion between the scenes; and robots are identical to humans, so there are also doubts about the identity of some characters. The body of the robot becomes a narrative device that breaks the temporal structure of the narration into multiple pieces. The audience feels greatly disconcerted about the nature of fiction and the real world. This doubt is related with three fundamental aspects: the need to understand the facts of the story retroactively, the need to find out the multiple identities of characters scattered in different temporal layers, and to determine the level of malleability of time.

Bergson considers that temporal multiplicity, where past and present coexist and where there are no hierarchies between before and after, contains a strong ontological component (Deleuze, 1987). In *Westworld*, time must be dissected to discover the different temporal layers that constitute robot identity. This complex temporal structure, similar to complex narrations studied by several authors in the last few years (Ndalianis 2005; Kogen 2006; Mittell 2006; Elsasesser 2009; Booth 2011; Ames 2012; Kiss, Willemsen 2018), causes the audience to live an experience of time only possible through fiction (Ricoeur, 1987).

Title: Internet Memes and Dadaism: Visual and Conceptual Linkages

Session Type: Individual submission

Authors:

Name: Bradley Wiggins

Email: bradley.wiggins(at) webster.ac.at

Country: AT (Austria)

Affiliation: Webster Vienna Private University

Abstract: Internet meme creation and propagation involve innumerable aesthetic approaches, often leveraging a mundane image to offer critical commentary regarding a real-world issue. It is precisely this final point that defines the scope of this contribution. Furthermore, whether or to what degree an internet meme incorporates such structural approaches as collage, pastiche, bricolage, etc. these choices serve the discursive power of the meme in terms of the semiotic function of meaning-making. The impetus of this contribution is to assert a conceptual connection between what is commonly called or understood to be internet memes and Dada and Surrealist art. Naturally not all internet memes share this conceptual link. My claim is those internet memes which inhere a critique of society, politics, gender, sexuality, etc. (i.e. those issues which tend to polarize people or which demarcate directionalities) contain a relationship to Dada and consequently must be discussed. A later section delves more deeply into this relationship, but for now I should emphasize that Dada and Surrealism were movements that are defined minimally as reactions to society rather than overt attempts to make or be art.

My rationale to explore historical linkages between memes and Dada and Surrealist art began in part in an analysis of the video *America First, the Netherlands Second*. The remixing of actual statements made by Donald Trump in the video accomplishes a critique of his rhetoric and ideology in a fashion similar in structure and intent in Dada and Surrealist art. This tendency is not unique to that meme; it is also present in other internet memes and indeed other forms of digital discourse (such as darkly humorous and distanced irony in viral videos, to be discussed in greater detail in another section). Before proceeding with a deeper discussion of Dada and Surrealism and also before the analysis of the *America First, the Netherlands Second* video, it is worthwhile to consider related forms of cultural criticism produced in such a way for mass consumption – again similar in form and purpose to (critical) internet memes. Following this, I will discuss selected popular internet memes from 2017 to 2018 and analyze them according to my elaboration of the model (content, form, and stance) originally introduced by Shifman's (2013). My elaboration of the model considers the absence of human speech and elevates the importance of semiotics and intertextuality in the expression of ideological practice.

Abstract: The images produced in and through mobile practices, quantified self devices and social media in our everyday lives, are part of our attempts to make sense of the world, of ourselves and our bodies, as well as to create and maintain intimate bonds, connections and attunements, to seek the sharing and recognition necessities to sustaining dignified lives. As we capture fleeting moments, save and share our lives through social media timelines, and maintain textual and visual conversations, not only with other people but also with the devices and the algorithms of social media platforms and search engines, we contribute, knowingly or not, to the growing production of data as well as to the datafication of subjects and practices. In our panel we will discuss how these practices and the datafication processes involve modes of affecting and being affected, as our contemporary digital and algorithmic visual cultures are also an important aspect of our affective culture. Focusing in the visual and drawing on ethnographic fieldwork carried out in Australia, Spain, Norway and France, this panel explores various affective and embodied aspects of contemporary digitally mediated choreographic performances of intimacy, support, sharing, creativity and wellbeing, involving people, devices, apps and platforms. The panel presents and discusses different cases from selfies and foodporn images to health and wellbeing online discussions and exchanges, as well as creative interventions into datafication through specific uses of “quantified self” devices. Our discussion highlights the connexions of images and visual

practices with and across screens with creativity and forms of affecting and being affected, by exploring particular emotions, such as shame, visual pleasures and disgust, or the online sharing of bodily experiences, and discussing what would be the meaning of human dignity, of the complex dynamics involved in the sustaining and challenging of social orderings and collective definitions of what is appropriate, of what is normal, and what is not, in an age of growing datafication.

Title: The display and sharing of personal images in social media, a practice haunted by shame

Session Type: Panel Submission

Authors:

Name: Amparo Lasén

Email: [alasen\(at\)ucm.es](mailto:alasen(at)ucm.es)

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: Digital visual practices in cameraphone users and social media sharing and displays are collective and choreographic performances, in the sense that they are highly relational and interactive, involving mutual attunement, resonance and intensities. As when dancing, if we do not follow the right moves, we risk of stepping on other people's toes and suffer from embarrassment or social punishment. Shame is a central emotion of sociability and social orderings, as it is elicited by the fear of disconnection regarding our actual social bonds or the ones we aspire to be part of. Drawing on fieldwork carried out in Madrid about the making and sharing of selfies and other digital images, involving digital ethnography, online survey, interviews and a workshop, this paper discusses how shame haunts these visual practices, this is how shame, shaming and embarrassment are involved in the production of disquiets, vulnerabilities and exclusions in mediated intimacies sustained and deployed through the convergence of cameraphones, social networks sites and mobile apps. As our mobile visual expression and exposure make us run the risk of becoming inappropriate, and make risky our becoming when we are already deemed as inappropriate. The paper will discuss gendered experiences of shame linked to the display and sharing of personal images, as well as the practice of shaming others regarding the images they share.

Title: Visual and audio-visual representations of the self in Instagram: A comparative study between Colombian and Spanish young users

Session Type: Individual submission

Authors:

Name: Lucía Caro-Castaño

Email: lucia.caro(at) uca.es

Country: ES (Spain)

Affiliation: University of Cadiz

Abstract: Introduction

Social networking sites' utilities (editing, filtering, remixing, measuring attention, etcetera) are constantly compelling users to negotiate an «authenticity contract» between the real me and the aspirational me (Enli, 2015). This is something crucial in Instagram where showing the own body and face is not only something expected but (almost) compulsory. Indeed, the fault of selfies and full-body images is usually considered by this young users as a clear signal of being in front of a fake account or a person with self-esteem issues (Aziz, 2014).

This need to perform the self through photos and videos confronts users with a complex social situation where visible and non-visible networked publics could access. To this social complexity should be added some concerns about being perceived as narcissistic (Vainikka, Noppari, Seppänen, 2017) or even spam (Marwick, 2013) by their peers. In this context, the use of hyper-ritualized gestures from the mass media and social media repertoire could be analyzed as a useful strategy to warranty the correct understanding of the visual message.

This ethnographic work-in-progress seeks to understand how first-year-university-students in Colombia and Spain navigate this social conundrum and to what extent are communicative strategies and cultural repertoires globalized.

Objectives

The general objective of this research is exploring visual and audio-visual practices developed by these young users in order to present themselves and interact in this platform. Specifically, this study seeks: 1) analyzing the differences and similarities considering two variables: nationality and gender; 2) observing to what degree socio-cultural imaginaries and communicative strategies are shared by these users; and 3) exploring the copying and remix of the mass media and social media cultural repertoire in the representation of their identities.

Method

The methodological design combines qualitative and quantitative techniques: ethnographic observation, focus group, and content analysis. The fieldwork has been structured in two phases. The first one was in Bogotá (August-October 2018), where four focus groups were developed in four Colombian universities (Universidad Nacional de Colombia, Universidad de La Sabana, Universidad Jorge Tadeo Lozano, and Universidad del Externado de Colombia). The 31 participants were also requested to give permission to access their Instagram accounts in order to collect three

types of data: biographical description, posts (photo and video), and temporal stories. They were selected from voluntary first-year-university-students in Communication degrees (Social Communication and Journalism, Advertising, Cinema, and Television Direction). The selection criteria were: 1) students who were highly interested in (and exposed to) visual and audio-visual practices on Instagram; 2) ethnic and socioeconomic diversity, and 3) equal gender distribution.

The second phase is due in Spain in February and March 2019, when the same techniques will be replicated in another four universities. Consequently, the preliminary results of the study are expected in May 2019.

Title: 'I shared the joy': The potential of visual prosumption in building communality in recreational sports

Session Type: Individual submission

Authors:

Name: Veera Ehrlén

Email: veera.ehrlen(at) jyu.fi

Country: FI (Finland)

Affiliation: University of Jyväskylä

Name: Mikko Villi

Email: mikko.villi(at) jyu.fi

Country: FI (Finland)

Affiliation: University of Jyväskylä

Abstract: Sports-related, user-generated visual content has become increasingly popular on social media over the past years (Thorpe 2016). Both professional and recreational practitioners record and share photographs and videos while they engage in sports, thus mediating visually their physical activities. Two major reasons behind the popularity of user-generated visual content on social media are the communicative affordances of mobile media and the emergence of photo-sharing applications such as Instagram. These applications support visual prosumption: the production and consumption of self-produced visual content online (Lee 2009; Scifo 2009) as part of everyday sociality (Serafinelli & Villi 2017). While engaging in the prosumption of visual sports media, practitioners feel connected; for them photography is a connective interface (Gómez Cruz 2016). However, what exactly makes visual prosumption online evoke a feeling of connection has not been studied in detail previously.

The paper builds on the concept of visual chitchat (Villi 2012) and the claim that visibility itself does not figure as a social agent, rather as a valid activator for social relationships (Serafinelli 2017). Importantly, recreational sports provide a rather unexplored, yet important context for the study of visual communication – images of sport are and have historically been an integral part of visual cultural production (Finn 2014). In addition, as a practical contribution, understanding the potential for social and visual media to provide social support for a physically active lifestyle can lead to new means of addressing physical inactivity (Meng et al. 2017).

In the paper, we examine how the sense of communality can be built and reinforced through photo-sharing activities among recreational sports practitioners. We accomplish this by asking what meanings practitioners ascribe to visual prosumption, and by observing how they communicate these meanings through photographs. The data consists of interviews with ten Finnish recreational sports practitioners (five practice climbing and five trail running as their main sport), and of 165 Instagram photographs posted by the practitioners.

We conducted qualitative content analysis of the interview data and identified four main categories of meanings that practitioners ascribe to visual prosumption: inspiration, motivation, information,

and identity. Using these categories, we carried out an image type analysis on the Instagram photographs to reveal how the practitioners communicate these meanings visually. The results indicate that different types of visual content build and reinforce sense of communality in distinct ways. Whereas inspirational photographs drive practitioners to explore, motivational photographs pull practitioners to keep going through goal-setting and peer-support. We conclude that visual prosumption on Instagram mediates a stream of such momentary encounters between the practitioners that merge into communally meaningful experiences. Based on the analysis, we argue that the social support that is generated by these visual experiences motivates practitioners for carrying out physical activity.

Title: Prosumidores visuales. La fotografía incómoda en el contexto venezolano (2014-2018)

Session Type: Individual submission

Authors:

Name: Johanna Pérez Daza

Email: johanna.perez.daza(at) gmail.com

Country: VE (Venezuela)

Affiliation: Universidad católica Andrés Bello y Universidad Central de Venezuela

Abstract: La imagen fotográfica tiene un destacado peso en la sociedad contemporánea en la que se tiende a capturar y visibilizar tanto acontecimientos relevantes como hechos cotidianos de menor trascendencia, lo cual genera una sobreabundancia que tiende a generar desinformación y confusión, tal y como expone Joan Fontcuberta en sus reflexiones sobre la Postfotografía y que en esta investigación se vinculan con los planteamientos de Sociedad Red de Manuel Castells y Sociedad del Espectáculo de Guy Debord. Los avances tecnológicos han acercado la imagen a las audiencias, propiciando la emergencia de una cultura visual en la que participan usuarios activos que no solo consumen, sino que también producen contenidos por lo que podemos hablar de prosumidores visuales que, en ocasiones, funcionan como cronistas espontáneos que registran su entorno y comparten por las redes sociales imágenes de valor informativo, especialmente en escenarios de tensión política y crisis social. En este trabajo estudiamos el rol de los prosumidores de imágenes en el contexto de las manifestaciones venezolanas de 2014 y 2018, dos años de alta confrontación nacional en los cuales circularon por la Red imágenes que desafiaron al gobierno y sus controles desde la ciudadanía, la denuncia y la protesta. Nos referimos a ellas con la categoría de “fotografías incómodas” debido a su confrontación directa al poder y a las interrogantes que plantean debido a su contenido violento, indignante y perturbador, así como a las discusiones tecnoéticas que acarrearán. A partir de la revisión documental y la consulta a expertos analizamos estas fotografías y trazamos una ruta en la que indagamos la pertinencia de su difusión masiva y reflexionamos sobre su impacto, teniendo como referencia las ideas de George Didi Huberman sobre la imagen potente, entendida como aquella que, el marco de la cultura visual y su momento histórico, logra trascender, conmocionar y estimular respuestas. Los hallazgos de esta investigación constatan, por una parte, que la divulgación de fotografías incómodas ha sido utilizada por los ciudadanos como alternativa comunicacional y protesta creativa, advertencia y relato de un país que oscila entre el silencio mediático y la saturación de informaciones que deben ser revisadas contrastadas y corroboradas. Y, por otra parte, apuntan a la necesidad de atender la alfabetización mediática y las competencias digitales con la intención de fortalecer la mirada crítica, la duda, la reflexión y la verificación entre los prosumidores visuales, teniendo en consideración los riesgos de las falsas noticias, la manipulación y la descontextualización de imágenes.

Title: #Foodporn: Eating a corpus

Session Type: Panel Submission

Authors:

Name: Gaby David

Email: championnet4(at) yahoo.fr

Country: FR (France)

Affiliation: IRCAV, Sorbonne Nouvelle Paris 3, MobCrea Group Lecturer, University Paris 8

Abstract: Following a transdisciplinary perspective, analysed under visual cultural studies approach and mainly stimulated by the colloquium “#Foodporn: The Mobiles of Desire” I co-organized December 2018 at la Sorbonne Nouvelle Paris 3, this study is an open reflection on the notion of foodporn. Based on big data statistics it describes the affective and social stakes visual representation of food and its associated hashtags can have in social networks in France. Popularized through mobile applications such as Instagram, the practices of shooting and sharing culinary dishes online questions the contemporary digital uses of everyday life staging. The #foodporn hashtag is one example of these affective pop culture and visual culture digital performative environments. In the everyday life, on holidays, in its aestheticization through technical artefacts, - such as filters, framing, and metadata -, the amount of #foodporn images illustrates the fact that these images have become a cultural object to study, where its online representation practices affect its own economies.

We study how these visual mobile practices can relate to interrogations formerly posed by Rosalind Coward (1984) in her feminist queries when introducing the notion of food pornography, and/or by Laura Mulvey (1975) and her remarks on the visual pleasure dimension present in cinema. This presentation will thus be concerned with the function, power, and performativity of the #foodporn hashtag, its imaginaries, and its “visual pleasure” economy, and its socio-economic and aesthetic repercussions. What roles do food imaginaries play in the making and sharing of #foodporn images? What are the country, gender and/or cultural differences seen in the #foodporn hashtag uses? Can different mechanisms associated with the use of the #foodporn hashtag be identified in mainstream discourses and counter-narratives?

Title: Quantitative Analysis of Japanese films in 1950s

Session Type: Individual submission

Authors:

Name: Koki Manabe

Email: koki0210manabe(at) gmail.com

Country: JP (Japan)

Affiliation: Kyoto University

Abstract: Many previous studies have pointed out that the advent of television in Japan made a great impact to the film industry. In the second half of the 1950s, television had become popular in Japan. Until the middle of 1960s, most of the Japanese families had their own television. As a result, film industry lost their audiences. Although the number of film audiences increased in 1950s, and it amounts to 1.1 billion in 1958, in 1965, less than 400 million people went to a movie.

Some researchers emphasize two characteristics that are as a consequence of a sharp decrease in the number of audiences (e.g. Tanaka 1976; Yomota 2014). 1) Many directors and actors became independent to create their ideal works. 2) More and more films used violent and/or sexual images to get male audiences. It seems that two aspects of films, films as arts and films as commodities, have been reflected in these characteristics. Many people have been believed that getting a reputation as an “artistic” film is incompatible with economic success.

In order to examine whether there is the conflict between artistic evaluation and economic success in 1960s, this paper quantitatively analyzes the data of the Japanese films screened from 1962 to 1965. The analytical method used in this paper is the multiple correspondence analysis, which can analyze categorical variables and describe hidden structures in the data set (Roux 2010). The variables used are seven: 1) the number of criticism, 2) the number of audience, 3) studio, 4) genre, 5) long film / short film, 6) color film / black and white film, and 7) original story / adaptation.

In addition, to consider the impact of television on films, the result of analysis is compared with the data of the films from 1955 to 1958, which I already showed in my published paper (Manabe 2019).

Title: Constructing Contemporary Schizophrenia: Studying the Pathological through Schizophrenic Patients in Virtual Reality

Session Type: Individual submission

Authors:

Name: Bjorn Beijnon

Email: bjorn.beijnon(at) hu.nl

Country: NL (Netherlands)

Affiliation: Utrecht University and HU University of Applied Sciences Utrecht

Abstract: This research asks the question: “How do the cognitive processes of schizophrenic patients, as studied through the Virtual Reality Head-Mounted Display (VR-HMD) within the medical discourse, fit into today’s conception of the normal and the pathological in Western urban screen cultures?” Through a medical humanities approach, this research intends to identify the ways in which schizophrenic patients perceive and make sense of virtual environments in the VR-HMD through medical case studies, and secondly examine what such a divergent perception and cognition can tell about current conceptions of the normal and the pathological in contemporary Western urban screen cultures.

In the field of medicine, the VR-HMD has shown to be a popular device in the last couple of years with a significant increase in clinical case studies with it across various objects of study: rehabilitation (Powell et al. 2018), surgical training (Harders 2008), posttraumatic stress disorder (Meeker et al. 2015), and exposure therapy (Richard, Lauterberg, and Gloster 2008). In the case of schizophrenic patients, the VR-HMD has been used to analyse the cognitive dysfunctions, and especially the executive functions and memory (Han, Kim & Kim 2012). Although these studies focus on the bodily changes that the VR-HMD as device offers through particular interventions in the virtual environment, not much attention has been given to its social implications for what is considered as the normal and the pathological (Foucault 1976, 18).

The development of schizophrenia has been related to the exponential increase of urbanisation and to the contemporary globalized screen culture. Gruebner et al. (2017) have shown that through growing urbanisation, more people tend to get exposed to increased amounts of stress that may increase the risk of development of schizophrenia. Simultaneously, present-day screen culture demands of citizens to prioritize efficiency, functionality, and speed (Crary 2014, 88). A dependency on screens and multiple, parallel processes thus ask of neoliberal citizens a societal remaking of attention, as attention now needs to be focussed on fast repetitive operations and responses. Schizophrenic patients, who struggle with the focus of their attention, can in this case be understood as the sorts of citizens that are not able to catch up to this restructuring of attention.

To get a better understanding of contemporary medical notions of schizophrenia meet today’s societal conception of the pathological, a critical discourse analysis shall be conducted. The corpus for the analysis consists of two components. Firstly, the latest version of the Diagnostic and Statistical Manual of Mental Disorders (DSM) (American Psychiatric Association, 2013) shall be analysed. The DSM functions as a guidebook for mental health professionals to ensure global

uniformity of diagnoses such as schizophrenia. As a second component, medical researches that involve VR-HMD's in their study of schizophrenia, as for example proposed by Bennekom et al. (2017), shall be analysed. This shall be done to examine how a threshold for the pathological is set by contemporary Western urban screen cultures to eventually review and reassess what is being considered as the normal and the pathological within these cultures.

Title: What the burkini ban photos uncover: French exceptionalism and the new regimes of visibility

Session Type: Individual submission

Authors:

Name: Sandrine Boudana

Email: boudanasandrine(at) gmail.com

Country: IL (Israel)

Affiliation: Tel Aviv University

Abstract: On August 23, 2016, French policemen were photographed confronting a woman on a beach in Nice, forcing her to remove her burkini before handing her a fine (Figure 1). With the large support of public opinion and politicians from right and left leanings alike, thirty French towns have imposed a ban on this female swimsuit designed to comply with Islamic rule of modest dressing. For its supporters, such ban guarantees freedom and equality of rights for female citizens, and protection of the endangered French model of integration of minorities, including Muslims. Contra this conception, opponents argue that women should be free to dress as they wish but also to use clothing to convey any ideological message. They also call for a model of co-existence that would respect the minorities' ways of life and particularities, including in their public expression: Acceptation of the other should not be conditioned by their visibility or invisibility.

As this case first points to domestic tensions about what is acceptable to show or hide, it reveals what is at stake in the complex question of visibility: individual and collective identities, and power relations structuring society. Whereas religious decency prohibits the exhibition of female bodies, French secularism considers public decency being violated by "ostentatious" signs of religious identity in the public space.

The global circulation of the photograph inflated and added yet a new dimension to the controversy. The English-speaking traditional and social media items analyzed were largely critical of the ban decision. This includes most of the 59 articles published on the topic by the New York Times, which denounced "France's Burkini Bigotry". Rather than inspiring self-questioning or what Orgad (2011) called "estrangement", the French media and politicians reacted by vividly defending their country's values. Some even expressed doubt at the authenticity of the scene depicted in the controversial photos. Thus, while the gaze has become ubiquitous – be it that of officers patrolling or that of photographers – visual representations are more and more objects of conspiracy theories and their authenticity is challenged. This case thus interrogates the profound changes of, and in, the regimes of visibility that occurred in the past few decades. In particular, while Debord and Foucault disagreed on the new regime of visibility supposed to dominate society, with Foucault arguing that "our society is not one of spectacle, but of surveillance", this case illustrates that spectacle and surveillance need not be mutually exclusive, but can, on the contrary, reinforce each other, for worse.

Abstract: For the analysis of the imaginary of contemporary visual culture from the perspective of Peircean triadic semiotic two viral videos are analyzed and compared. In one case, the campaign Pepsi #Resist- LIVE FOR NOW produces a strong backlash in social media, in the other, the social awareness campaign of PETZ, a Brazilian large chain of pet shops which promotes the adoption of pets generates exactly the opposite effect. Through a semiotic analysis of what went so wrong in the former – described as “tone deaf” by its critics - and what worked so perfectly in the latter, I develop an account of the social imaginary based on Peirce’s phenomenological categories – the phaneroscopic analysis of experience - that are the foundation of triadic semiotic. A little explored notion, namely, ‘mentality’, is used by Peirce in his later writings to “express the Firstness of Thirdness, the peculiar flavor or color of mediation” (CP 1.533, Lowell Lectures, 1903). This concept could be extremely helpful to understand in a systematic and thorough way the working of the imagination of visual culture, particularly at a time when images have become so powerful in social media. Why does a large corporation of one of the two best-known soft drinks make such a big mistake in its advertisement, which obviously aims to capture and seduce social-minded youth? And why does the advertisement of a Brazilian chain of petshops produce the massive acceptance or spreadability (H. Jenkins), that is the highest reward of commercial videos in this day and age? These two videos are paradigmatic examples of the working of metaphor/iconic signs – the failed Pepsi campaign which blatantly exploits the Black Lives Matter movement- and of the working of metonymy/indexical signs – Petz’s successful advertisement to encourage the adoption of pets through an ingenious use of the tattoo fashion and its most obvious inconvenient. Iconicity and indexicality are two of the ways in which the action of signs or semiosis produces the imaginary that is at the basis of our visual culture, and thus may contribute to develop a critical approach to this realm.
