Title: When Hong Kong People watch Mainland Chinese Television Dramas: Localism, Nationalism and the Identities Issue of 'Market Mentality'

Session Type: Individual submission

Authors:

Name: Egret Lulu Zhou

Email: luluzhou (at) eduhk.hk

Country: HK (Hong Kong)

Affiliation: The Education University of Hong Kong

Abstract: This paper tries to research a special phenomenon in transnational audience studies: a “reverse flow”. Often, media contents produced in developed countries are warmly received by developing countries’ audiences, whereas a “reverse flow” is unusual. However, this paper aims to study a “reverse flow”. Used to be a British colony, Hong Kong is much more developed than China, serving as a “media capital” which exports a large number of popular media productions to the Greater China (Curtin, 2003). But in recent years many people born in Hong Kong, especially the youngsters, have taken an interest or developed a preference for television dramas produced in China, such as *Scarlet Heart* (2011), *The Journey of Flowers* (2015), *Eternal Love* (2017) and *Story of Yanxi Palace* (2018). Meanwhile, although after 1997 Hong Kong becomes a part of China, it is still a special administrative region. Instead of being homogenized by China, all Hong Kong people’s national identifications drop sharply after 2008, and this tendency is most evident in the youngsters (Chiu, 2016). In perspectives of many radical Hong Kong young people, almost everything related to mainland China is lowbrow, disgusting and even a kind of “invasion”. Consequently, Hong Kong youngsters’ embracing of mainland Chinese television dramas is far from self-evident. In this connection, why do youngsters in Hong Kong watch mainland dramas under an anti-Mainland social atmosphere? How can they negotiate local and national identities in their consuming processes?

About the methodology, “Internet Ethnography” is used to collect media reports and audience’s discussions in online forums; production studies and textual analysis of major mainland dramas provide background information; the main part is audience interviews which use purposive sampling to conduct 34 semi-structured, face-to-face interviews with young audiences in Hong Kong.

This is the first study of watching mainland dramas in Hong Kong. It is found that Hong Kong youngsters generally demonstrate a relaxed attitude in watching mainland dramas: they would not be loyal to local dramas, while they would also not reject mainland dramas blindly; it is not easy for them to develop trans-border identifications in the processes of consumption, while it is also difficult for them to accept nationalism’ brainwashing. This relaxed attitude is rooted in one of Hong Kong identities’ characteristics: the “market mentality”. Market mentality emphasizes flexibility, smartness, personal calculation, thereby showing double suspects on nationalism and localism because both of which requires that people should be loyal to some values and beliefs of a certain place (either China or Hong Kong). This market mentality serves as a buffer for Hong Kong audiences to be relatively immune from media messages imported from mainland China, which

could be understood as an innovative method for local audiences to resist nonlocal media imperialism without necessarily turning into localism.

This project contributes mainly to transnational audience studies, television drama, and youth studies. Meanwhile, it is also illuminating in soft power studies because this case study tells how developed countries reposition their media policies in an era of “Rise of China”.

Title: Lecturas generacionales de la ficción televisiva sobre el pasado reciente de Chile: Audiencias, memoria y educación.

Session Type: Individual submission

Authors:

Name: Lorena Antezana

Email: lorena.antezana (at) gmail.com

Country: CL (Chile)

Affiliation: Instituto de la Comunicación e Imagen, Universidad de Chile

Name: Cristian Cabalin

Email: ccabalin (at) gmail.com

Affiliation: Instituto de la Comunicación e Imagen, Universidad de Chile

Abstract: La conmemoración de los 40 años del Golpe de estado en Chile (2013) trajo como novedad la emisión por televisión abierta de series ficcionales sobre el tema, construidas desde el punto de vista de quienes se opusieron a la dictadura de Pinochet y condenando la violación a los derechos humanos cometidos en ese periodo.

Distintas generaciones de telespectadores –quienes vivieron el Golpe de Estado, los que crecieron en dictadura y los que crecieron en democracia-, miraron estas propuestas, las que activaron distintos procesos de construcción de memorias sobre ese pasado traumático.

Realizamos entrevistas en profundidad y grupos focales con cada una de las generaciones de telespectadores buscando responder las siguientes preguntas: ¿Cuáles son las oportunidades y barreras de este tipo de formato ficcional para la construcción de memorias sobre el pasado reciente? ¿qué tipo de memorias sobre este pasado construye cada una de las generaciones consideradas? ¿cuál es la importancia la emoción en la construcción de memorias generacionales? y ¿cuál es el aprendizaje posible a través de estas series?

Los resultados obtenidos nos indican que:

1. La experiencia vivida en relación con la dictadura impacta diferenciadamente en las lecturas de las series ficcionales que realizan las distintas generaciones de telespectadores. Así, mientras la primera generación contrasta sus propios recuerdos con las propuestas narrativas de las series; la segunda utiliza estos marcos de interpretación para organizar sus propios fragmentos de recuerdos y la tercera “aprende” de estas series otorgándoles un estatus de realidad.
2. La construcción de las memorias individuales y colectivas se organiza en base a las imágenes propuestas por las series ficcionales sobre el pasado reciente del país. Estas están fundamentalmente vinculadas con la vida cotidiana y con la violación de derechos humanos.
3. Los repertorios iconográficos de los distintos grupos generacionales de telespectadores están constituidos por distintas imágenes provenientes no sólo de las series ficcionales mencionadas sino que también de los medios de comunicación en general y, en el caso de la primera generación, de sus propios recuerdos.
4. La emoción que generan estos relatos ficcionales moviliza la empatía en todos los casos.

5. Son mayores las oportunidades de construcción de memorias que generan estas propuestas ficcionales, -sobre todo para las generaciones que no están vinculadas experiencialmente con este pasado reciente-, que las barreras detectadas.

Title: Constructing the Racist Past in a Post-Racial Age: Colorblind Audiences and Cinemax's *The Knick*

Session Type: Individual submission

Authors:

Name: Michael Wayne

Email: michael.louis.wayne (at) gmail.com

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam

Abstract: This paper examines viewer responses to representations of overt racism and racial violence in the first season of Cinemax's *The Knick* to argue that audience reception of historical drama reflects a central paradox of post-racial culture: it is necessary to remember racism in order to forget about race. Post-racial media texts are often constructed in ways that encourage audiences not to notice racism. More specifically, audiences are encouraged to see representations of racial difference in descriptive terms, not in terms of power or hierarchy. Yet, the popularity of historical dramas like *Mad Men* (Nilsen, 2014) and *Deadwood* (Harris, 2012) is closely connected to their ability to present viewers with authentic images of race and racism. As such, this analysis explores what happens when post-racial popular culture encourages audiences to notice racism and to see representations of racial difference in terms of power and hierarchy.

Using data from *The Knick*'s official Facebook page, this research illustrates some of the ways in which post-racial ideology shapes audience reception and highlights how historicized representations of racism often work to support post-racial worldviews. The data demonstrates that many white viewers are willing to acknowledge the centrality of racism in American history. But in doing so, they employ white racial framing (Wingfield & Feagin, 2012) and rely on colorblind ideology (Bonilla-Silva, 2009) to distance themselves from contemporary racial inequality. This analysis identifies four common colorblind tropes that emerge in response to historical television drama: the past is the past, victim blaming, minimization, and white victim-hood. Although discussions of the show are primarily shaped by white racial framing, some viewers, largely people of color, offer a counter-framing that asserts the continuing significance of race in American society.

Ultimately, this analysis calls into question notions of post-racial culture centered on white people's desire to forget racism. Much of the scholarship addressing post-racial television is based on this notion that on-screen diversity and the absence of racism allows white viewers see themselves as colorblind individuals living in a post-racial world. By asking what happens when post-racial popular culture confronts audiences with depictions of racism and racial violence, this research demonstrates that the act of remembering the racist past is a crucial part of post-racial efforts to forget about race itself.

Title: Success and Failure of Social Media in South Korea: Recollections and Reflections from Industry Professionals and Social Media Users

Session Type: Individual submission

Authors:

Name: Kyung Hee Kim

Email: khkim (at) hallym.ac.kr

Country: KR (Korea, Republic Of)

Affiliation: Hallym University

Name: Sun Ho Jeong

Email: jeong.sunho (at) gmail.com

Country: KR (Korea, Republic Of)

Affiliation: Hallym University

Abstract: At a time when we realize that numerous social media short-lived and disappeared, this study attempts to further our understanding about success and failure of social media using the case of South Korea. While Myspace, Facebook, Twitter, and Instagram have dominated the Western world, Koreans had their equivalents such as Freechal, Iloveschool, Cyworld, and KakaoTalk. Among those, KakaoTalk is the only platform surviving to this day, along with its global competitors Facebook, Twitter, and Instagram. During the last 20 years, social media users in Korea have migrated from Cyworld, which started in 1999 by a university student organization, to Facebook, and then to KakaoTalk, which recorded 50 million global users as of 2018. Based on this observation, we ask: What are the reasons that explain audience shift from one platform to another? What are the implications for the industry and the academia? And what are the implications of this in relation to information exchange and user interaction?

To find answers to these questions, this study first examined paths to audience success of generic media products (Sommer, von Rimscha, Verhoeven, Kregs, & Siegert, 2018) identified as “process building blocks (i.e., organizational facets, internal processes, environmental orientation, leadership, human resources, external evaluation)”, and “product building blocks (i.e., content, form/design, marketing, and distribution)”. Next, determinants of continuance (or discontinuance) of using social media were identified (Basak & Calisir, 2015; Chaouali, 2016; Lin, Fan, & Chau, 2013; Lin, Featherman, & Sarker, 2017; Zhang, Zao, Lu, Yang, 2016). Based on the review, this study attempted to fill the gap of a fragmented field in three ways: (a) Building on existing research that focused on traditional medium, we expand the scope to social media; (b) Extending discussions of the current research on user motivation and gratification, we employ perspectives from industry professionals as well as factors of discontinuance; and (c) Based on research that reflects cultural differences in online settings (Correa & Jeong, 2011; Kim & Yoon, 2007), we explore cultural factors playing into the process. Research questions include: What are the success factors of social media in the perspective of industry professionals?; What are the factors of success and failure according to general social media users?; and What are the unique characteristics of Korea that explain such success and failure?

Based on semi-structured interviews with twenty South Korean industry professionals and social media users, the study finds: First, in contrast to “process building blocks” and “product building blocks”, industry professionals suggested “constant evolution of process building” centered around user-orientation and new device-orientation, and “constant evolution of product building” connected to service expansion and openness to various types of content and platforms. Secondly, factors that determine continuance in social media use were self-exhibition, daily records, enjoyable time, celebrity identification, and sense of belonging, while factors of discontinuance included useless content and function, fatigue, concerns about privacy, and invasion of space. Lastly, unique features of the Korean context included a culture of community with a desire not to be isolated, as well as loyalty to media platforms.

Title: Sharenting by football celebrities: audiences negotiate visibility of children on social media

Session Type: Individual submission

Authors:

Name: Ana Jorge

Email: anajorge (at) fch.lisboa.ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Country: PT (Portugal)

Affiliation: Instituto Politécnico de Setúbal

Abstract: This paper explores themes of audience identification, support and criticism established around the visibility of celebrities' children on social media. The cultural relevance and fascination around celebrities' children extends from celebrity news media into social media discourses (Jorge & Marôpo, 2017), sometimes in intertextual forms. It also meets the practice of sharenting, whereby (ordinary) parents share their experiences through social media (Mascheroni et al., 2018; Livingstone & Blum-Ross, 2017), which has raised debates about the tension between the right of parents to share online their parenting experience and their children's right to privacy. This practice has been mostly studied in relation to motherhood. Here, we seek to examine current framings of fatherhood and children's visibility together with audiences' reactions in the case of celebrity fathers.

We consider followers' acceptance, negotiation and contestation of the participation and exposure of children on their fathers' profiles to assess current discourses about children, family, privacy and celebrity culture in the context of the celebrity-fan relationship. We analyse official Instagram posts and user comments to two globally popular football players, involved for years in a clash clan - Cristiano Ronaldo ((at) cristiano, 147 million followers; father of four children: Cristiano Jr., born 2010, probably via surrogacy and the twins Eva and Mateo, born 2017, also via surrogacy, and Alana Martina, born 2017 from his relationship with the Spanish model Georgina Rodriguez) and Lionel Messi ((at) leomessi, 102 million followers; father of three boys - Thiago, born 2012, Mateo, born 2015 and Ciro, born 2018, from his relationship since 2008 with Antonella Rocuzzo, a fellow native of Rosario).

Instagram is a visually centered platform that has allowed for the growth of selfies or amateur photography, side by side with staged, professionally produced pictures. The growing popularity of this platform speaks of the wider cultural valorization of image and also of celebrities' private life.

In this context, the visibility of celebrities with their children illustrates the ordinariness of these exceptional personalities, and ascribes them a 'moral authenticity', reflecting 'current societal norms and values' (Mortensen & Jerslev, 2014: 628).

By following a case study approach and combining visual and textual analysis of pictures, captions and comments, we look at the overall children's online visibility on their father's Instagram profile: weight of posts and comments with or on children in the overall content; identification of names and faces; implicit or explicit mention of norms around children's exposure, context of pictures and captions of the children and family life. We analyse how these male celebrities and their followers negotiate the children's presentation and the fathers' role, taking into consideration the two different family context of Ronaldo and Messi. To further interpret the celebrity-fan relationship in view of this particular dimension, we pay close attention to how audiences balance the tensions between visibility and privacy by accepting or condoning children exposure.

Title: Genres as Social Affect: Cultivating Moods and Emotions through Playlists on Spotify

Session Type: Individual submission

Authors:

Affiliation: Universidad de Costa Rica

Abstract: This paper contributes to scholarly dialogues between audience research and affect theories (Cavalcante, 2018; Hillis, Paasonen & Petit, 2015). We argue that playlists on music streaming services (such as Spotify) can be theorized as contemporary instances of “genres”—defined as fusions of musical substance, sociotechnical assemblages, and sociomaterial practices—that respond to the exigencies of affect. Affect refers here to that which “contains a particular energy, mood, or movement that may lead to a particular feeling, and possibly the subsequent expression of emotion, it both precedes and sustains or possibly annuls feeling and emotion. We might think of affect as the force that drives the unconscious tap of the foot to music, the bob of the head as we listen along to conversation, the rhythm of our pace as we walk” (Papacharissi, 2015, p. 21). We depart from standard views of genres that center on the properties of (musical) texts and build instead on work in rhetoric studies that define genre as typified social action and cultural categories (Miller, 1984; Mittel, 2004).

Our study draws on interviews with users of music streaming services in Costa Rica and an analysis of their accounts and profiles on these platforms. Between August and December 2018, we interviewed 30 users (15 men and 15 women), aged 19-52, for an average of 40 minutes. We used an adapted version of the “think aloud protocol”. During the interviews, we asked informants to open their accounts on a computer, which was projected on a screen so that the research team could see contents available and users’ behaviours. We asked interviewees to describe typical appropriation practices, discussed specific instances of content on their accounts, and requested

explanations of their accounts' configurations. We captured screenshots for analytical purposes. We transcribed interviews entirely and coded the data (both transcriptions and screenshots) inductively in a grounded theory manner.

We discuss how users create playlists on platforms such as Spotify as a means to cultivate moods. The notion of cultivation stresses the dynamic work involved in producing, capturing, and exploring moods. We examine the specific fusions of content, technologies, and practices that characterize the creation of playlists. These playlists also form the basis of collective experiences. Thus, after examining how playlists work as genres, we analyze how they reach wider audiences on music streaming services. To this end, we draw on Berlant's (2008) notion of "intimate public", which "foregrounds affective and emotional attachment located in fantasies of the common, the everyday, and a sense of ordinariness" (p. 10). As material embodiments of cultivated affect, playlists offer a promise of identification and belonging to "intimate publics" formed by strangers, through the specific bonds between music, technology, and emotion they enact (as genres). Our analysis concludes with a discussion of the implications of our study for rethinking the relationship between technology, affect, and genre.

Title: my favorite female politician, my governor, my idol: citizens, fans and political celebritization in Argentina

Session Type: Individual submission

Authors:

Name: Florencia Garcia Rapp

Email: fgarciarapp (at) gmail.com

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Abstract: A brave woman against the ingrained machismo and structural corruption of Argentina's most populated province. A powerful female ally against inequality. Finally, someone who listens. The country's most popular politician meets the desire for change and the thirst for new ways of doing politics. Pairing an easy charm with a tireless work ethic, the 45-year old mother of three became Buenos Aires province's first female governor in 2015. This paper considers user comments to the official Facebook profile of Buenos Aires' governor María Eugenia Vidal to assess a diversity of citizenship performances from an interpretive epistemology (Charmaz, 2006; Merriam, 2009; Saldaña, 2012). With the aim of contributing to the fields of digital and popular culture at the intersections with audience and fandom research, the study examines through visual and textual analysis 500 comments and an array of official posts from the governor. Commenters demonstrate not only identification, but hope and respect for the work of the politician. They demand 'changing the rules of the game' and congratulate her for having started to do so. Fans, followers, sympathizers, citizens? How is political representation and participation reflected and contested by online audiences? Between the performance of fannish affect and a certain hopeful citizenship, user comments are interpreted in light of intimacies of identification and the framework of political celebritization (Richards, 2004; Street, 2004; Driessens, 2013; Sandvoss, 2012).

Title: Web communities as fields of resistance: the case of online practices of Turkish soap-operas' Greek fandom

Session Type: Individual submission

Authors:

Name: Dimitra Larochelle

Email: larochelle.laurence (at) gmail.com

Country: FR (France)

Affiliation: New Sorbonne University

Abstract: Since 2000, the production of Turkish television soap-operas is in constant development. These products that have a great success at a local level are also exported abroad. More precisely, they were first diffused in countries that were in the sphere of cultural influence of the ancient Ottoman Empire (which means the Balkans and the Middle East). Later they were also exported even far, in Latin America, in China, in Pakistan, in India, in Bangladesh etc. Among these countries, Greece has become a great consumer of Turkish television serials.

However, the viewing of Turkish soaps in Greece is considered to be a highly controversial activity. This, not only because Turkish soap-operas are products of the mass culture – and thus considered as products of a “lower” culture which are not worthy of consideration – but also because they are products coming from a country that is considered to be “hostile” to Greece. Consequently, people who declare enjoying watching Turkish serials are often criticized (or simply ridiculed) as being “uncultivated”, “stupid” or even as “traitors” of their own country. As a result, they are often marginalized even by their families, colleagues and friends.

Our research concerns the reception of Turkish soap-operas by the public in Greece and especially by women as there is a gendered perspective in it. In order to study this phenomenon, we have realized an empirical research based on 50 interviews with individuals of all ages with different socioeconomical backgrounds. In this context, we have also accomplished an ethnography of Turkish soap-operas' Greek fandom online communities.

The online practices of the fans of these products turned out to be of a great importance for several reasons. By watching these products, their fans develop common references. As a result, and through these web communities, women from across Greece can create links (that very often result even to solid friendships) and share activities with other women sharing the same interests. In addition, it is usual for women to develop artistic activities gaining this way a certain “reputation” inside the community. In addition, through these communities, women can develop alternative identities as they have the chance to redefine who they are on a new basis.

Through this paper, we aim to present the functioning of these communities. Web communities constitute alternative micro-societies through which Greek women who may be marginalized or play secondary roles in their “real” lives (roles that are peripheric to other persons – husband, children etc.) can enjoy their favorite products without risking to affront social exclusion. As a result, we could argue that Internet offers to the fans of these products a new field for emancipation.

Title: Identidad étnico-cultural y consumo mediático de la población gitana española

Session Type: Individual submission

Authors:

Name: Gabriela Marques Gonçalves

Email: gabimarques (at) pm.me

Country: BR (Brazil)

Affiliation: Universitat Autònoma de Barcelona

Abstract: En esta propuesta se reflexiona sobre el consumo mediático de las minorías, comprendiendo la diversidad que el concepto “minorías” abarca y consecuentemente la importancia de pensar este consumo desde las especificidades de cada grupo analizado. Siguiendo a Appadurai (2009), podemos comprender cómo las élites de los estados trazan estrategias que invisibilizan a determinados grupos transformándoles en minorías. Ello da como resultado que estos grupos estén en una situación de desventaja o de dependencia en relación a esas élites (CHAVES, 1971).

Aunque en el proceso de fortalecimiento de las democracias se ha dado un debate sobre la insuficiente presencia de las minorías en los espacios de poder y decisión, estos grupos siguen en la actualidad luchando por derechos básicos. Por esa razón y centrándonos en la población gitana, la ponencia se inicia con una discusión teórica acerca de los procesos históricos socio-económicos de los que surgieron argumentos que han justificado la exclusión de este colectivo, especialmente en el contexto español. Conocer esa evolución nos aporta herramientas imprescindibles para abordar nuestro objeto de estudio, la influencia de la condición de ser gitano en su consumo mediático.

Proponemos debatir sobre el consumo mediático de la población gitana española, teniendo en cuenta los medios tradicionales - televisión, radio, prensa y revista - y también internet, tanto en lo referente a la búsqueda de información como en lo relacionado con el entretenimiento. La metodología utilizada ha sido la etnografía y, además, se han realizado entrevistas semi-estructuradas a 20 gitanos y gitanas mayores de 18 años residentes en la provincia de Barcelona (España). El trabajo de campo se desarrolló entre los años de 2017 y 2019.

Como destacan Ross y Plaidon (2001), los productos mediáticos se elaboran desde las premisas y prejuicios de las experiencias culturales compartidas por sus productores, que normalmente no incluyen a los grupos minoritarios. Pero veremos que, a pesar de que la pluralidad ciudadana no es una dominante en los contenidos mediáticos, ello no provoca un rechazo de su consumo por parte de la audiencia gitana. Además, este grupo hace una reflexión sobre la necesidad de que la sociedad mayoritaria le conozca mejor. Este último aspecto concuerda con la reflexión de Ross (2001) cuando apunta el hecho de que los contenidos de los medios de comunicación impactan negativamente en la audiencia blanca en lo que se refiere a su opinión sobre las minorías étnicas, aspecto que acaba incidiendo en el modo de relacionarse con ellas en su día a día. La representación mediática de los gitanos, y también su ausencia, acaban conformando un imaginario público que responde a un orden social jerárquico determinado.

Esta propuesta parte de la tesis doctoral “Medios de comunicación y cohesión social. Estudio de caso de la comunidad gitana en la provincia de Barcelona”, que estamos desarrollando en el departamento de Comunicación Audiovisual y Publicidad, bajo la dirección de Amparo Huertas Bailén, directora del Instituto de la Comunicación de la Universitat Autònoma de Barcelona (InCom-UAB), y con beca de CAPES, del Ministerio de Educación de Brasil.

Title: YouTube: A Teenage Social Space

Session Type: Individual submission

Authors:

Name: Nina Duque

Email: duque.nina (at) uqam.ca

Country: CA (Canada)

Affiliation: Université du Québec à Montréal

Abstract: YouTube is the preferred website for young Canadians (Common Sense Media, 2018) and watching YouTube videos has become a significant online practice for today's teens (Thoër et al., 2017). Not surprisingly, the appeal of YouTube is inspiring new and exciting research both in Youth and Audience Studies. Researchers observe that while viewing content (be it digitally or traditionally broadcast) is foremost an entertainment practice, it is also very much a social one (Combes, 2011; Astigarraga Agirre et al., 2016). Beyond being an "essential" teenage practice, viewing content on digital platforms such as YouTube also functions as a social space where teenagers can network, create and maintain relationships with peers (Baym, 2010; Balleys, 2017). Today's teens, connected through an array of devices, are socializing as much in online spaces as offline ones (boyd, 2014). Such that "youth social spaces" can no longer be solely considered by way of their physical attachment but should also be understood as spaces that co-exist and are co-experienced online and offline (Hodkinson, 2017). It within this context that our proposal objectives lay. We hope to better understand adolescent socialization practices by exploring the role of these new entertainment digital spaces. To do so, we will present the results of our ongoing doctoral research that centres on Québec teenagers aged between 13 and 16 years old. Our project is based on a qualitative ethnographic approach combining traditional and online methods as well as incorporating the results of a broader Québécois study on youth online spectatorial practices. Our analysis draws on various scholarship (Sociologie des usages, Audience Research, and Youth Studies) and considers both online and offline spectatorial practices as fluid notions and dynamic processes whereby the user constructs meaning through his or her practices (Proulx, 2002). Our initial results show that socializing both online and offline is an integral part of the teenage spectatorial experience and digital platforms such as YouTube have enhanced the active socializing role of content watching. The youths we spent time with, are very active both online and offline participating in conversations around content and meaning, discussing and sharing thoughts, and suggesting contents to watch and appreciate. Teenage socialization on YouTubers is linked, though not exclusively, to two significant dimensions: a sense of "connection with" and of "belonging to." Teenagers identify with the contents they view, especially with YouTubers. At the same time, watching YouTube videos, subscribing to channels, engaging in exchanges online with the broader community of followers, registers teenagers in a networked community that is experienced both online and offline. Finally, it would seem that YouTube acts as a connection hub, allowing teenagers to forge and maintain friendships.

Country: CN (China)

Affiliation: Audience Research Center, Communication University of China

Abstract: CCTV-4, also known as China Central Television Chinese International Channel, is the flagship Chinese channel that appeals to a global audience. For many years, CCTV-4 has been conducting trends surveys on its overseas audiences (audiences who know Chinese language) in collaboration with the Audience Research Center (ARC) of the Communication University of China. Against this background, this paper describes and analyzes the long-term changes of those overall Chinese overseas audiences' TV watching behaviors and the corresponding psychological features by utilizing the data collected by the ARC from 2013 to 2017. Since the beginning of the CCTV-4 trends survey, the relatively stable principles with moderate adjustments have been employed by the ARC to construct a longitudinally continuous and comparable-results generating analysis system. In other words, the general researching framework, questionnaire structure and option setting remain unchanged to maintain the stability while the key-points and sampling methods slightly shift and evolve over time to meet different needs in the radical changing media environment. Both qualitative and quantitative researching methods are adopted. In other words, questionnaires with good internal reliability are issued and distributed both online and offline to reach a wider range of audiences, including fieldwork and handing out via the CNTV website and SNS platforms, the QR code embedded screen of OTT set-top box is utilized as well. Additionally, the survey data is processed with the software of SPSS and a database is also established for further insight on the basis of other first-hand materials obtained from face-to-face interviews and focus groups. The statistical analysis shows that CCTV-4's overseas Chinese audiences' individual feature is high social status, male and widely middle-aged (mainly middle-aged people while extending toward both directions of the young and the aged). They tend to watch TV programs via web-based platforms other than the cable or satellite TV. Moreover, they retain a high-level satisfaction with CCTV-4 and regard it as a primary information source, even as a necessity in their daily life. In a narrow sense, overseas audiences incline to watch CCTV-4 programs concerning international affairs, China-Taiwan relations and China's homeland security issues with neighboring countries, as

well as their individual health. Meanwhile, audiences' needs and demands for cultural and entertainment programs, TV shows, films and emotional programs grows gradually in the five-year interval. This paper concludes with a discussion on improving the effectiveness of CCTV-4's overseas communication. To be more specific, four relevant proposals are put forward, namely, reporting the multi-faceted news story about China in accordance with China's current conditions; establishing the NCE cluster (news, culture and entertainment) for the program content while prioritizing news content; establishing an overseas trans-platform content distributing system in the media converging environment, especially under the guidance of multi-screen linkage and mobile-first strategy; building an interconnecting and interacting platform, both online and offline, for audiences all over the world to stay (or get) in touch with CCTV-4.

Title: Audiences' experience with Netflix: A case of emancipation and control'

Session Type: Individual submission

Authors:

Name: Vivi Theodoropoulou

Email: vivitheodoropoulou (at) gmail.com

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology, Department of Communication and Internet Studies

Name: Stelios Stylianou

Abstract: The paper examines the migration of audio-visual content online and the shift to the post-broadcast era from an audience perspective, focusing on Netflix and its uses. It draws on fifteen qualitative interviews with Netflix early adopters in the UK to discuss how they consume this streaming medium and what use patterns and audience habits emerge around it. Netflix allows for new forms of audience engagement such as bingeing, targeted uninterrupted viewing, an enhanced control over the schedule, time and space shifting. This flexibility in consumption enhances audiences' sense of freedom, power and control over their viewing to a significant degree, compared to the past. At the same time, Netflix employs big data and audience tracking in its content production. Users' behaviour, preferences, viewing history, location, device data etc. are being stored and analysed so as to feed in the creation of programmes users 'will' like. The popularity of Netflix Originals, also amongst interviewees, seems to verify the success of the model of 'giving viewers what they want' through this seamless continuous automated surveillance (Van Dijck 2013, Couldry 2016). Overall, the findings suggest that users simultaneously appear more empowered, selective, planned, engaged, flexible and in command of their TV consumption, but also unrestrained and excessive -through bingeing-, ambivalent about the control they now possess, sometimes reminiscent of their old unstructured viewing, surrendered to algorithmic measurement and largely uncritical about it. The paper considers the divergent forces and challenges working on how this digital streaming technology is enhancing users' engagement and control over viewing on the one hand, while deploying audience agency and producing popular content based on computable data and audience metrics on the other. Conceptually, the paper starts from audiences in their role as users of networked platforms and the 'coping strategies' they develop in order to appropriate such digital media in their daily routines and lives, to conclude by discussing the role of audiences as people whose work or role is 'co-opted' (Das, 2017) or used by large players like Netflix for their purposes. It deliberates on how the concept of 'audience agency' is changing in the era of big data in digital entertainment; and at what cost and with what implications for audiences. In line with Vesnic-Alujevic & Murru (2016), it also stresses the call for building bridges between audience studies and political economy perspectives in order to better understand the role of participatory audiences in the digital algorithmic era.

Title: Cruzando culturas: el consumo mediático de la población migrante

Session Type: Individual submission

Authors:

Name: Amparo Bailén

Email: amparo.huertas (at) uab.cat

Country: ES (Spain)

Affiliation: Instituto de la Comunicación de la Universidad Autónoma de Barcelona (InCom-UAB)

Abstract: El título es intencionadamente ambiguo, pues queremos reflexionar acerca de la experiencia de la población migrante en calidad de audiencia y lo hacemos pensando tanto en la necesaria etapa de adaptación al nuevo entorno de convivencia (tras “cruzar de una cultura a otra”) como en los procesos de hibridación cultural que ello genera (identidades formadas a partir del “cruce de diversas culturas”).

David Morley (2005) fue uno de los primeros en señalar los nuevos entornos de recepción y consumo que se darían como fruto del paralelo aumento de la comunicación global y los desplazamientos poblacionales. El trabajo empírico de Miller y Slater (2000) sobre la comunicación en el seno de familias con miembros emigrados, desarrollado en la isla de Trinidad, fue uno de los primeros que abordó esos cambios.

A nivel teórico, tres autores nos han marcado fuertemente. En primer lugar, Pierre Lévy (2007: 7): “La distinción entre cultura (la dinámica de las representaciones), sociedad (la gente, sus lazos, sus intercambios, sus relaciones de fuerza) y tecnología (los artefactos eficaces) no puede ser más que conceptual”. En segundo lugar, Saskia Sassen (2003), especialmente su lectura feminista de la globalización. Sassen plantea, por ejemplo, que los espacios urbanos asociados con la mundialización económica tienen repercusiones diferentes según el género, tanto en lo referente a los aspectos laborales como a las relaciones de poder. Y, por último, actualmente estamos trabajando la perspectiva de la transculturalidad, un concepto recuperado por Wolfgang Welsch (2009) que apunta hacia la idea de una cultura permeable construida por múltiples entrelazamientos y penetraciones.

Después de algo más de quince años investigando el consumo mediático de la población migrante, siguiendo la literatura publicada y realizando trabajos empíricos propios en Cataluña y España, recogemos aquí los principales ejes de estudio detectados alrededor del binomio migración y Tecnologías de la Comunicación (TC).

En primer lugar, trataremos acerca de la comunicación interpersonal en el marco de las familias transnacionales, uno de los ámbitos más prolíficos y en el que incluiremos también la cuestión de las “segundas generaciones”. Desarrollaremos conceptos como la “presencia conectada” (Licoppe, 2004).

A continuación, nos centraremos en la comunicación comunitaria, en la que la población migrante puede ser observada (a) como destinataria de medios especializados (medios étnicos) y (b) como agente participante, creando y difundiendo contenidos. Reflexionaremos sobre el riesgo de caer en la “desconexión pública” (Couldry, Livingstone y Markham, 2010) y de que los contenidos mediáticos acaben centrándose demasiado en la visibilidad abandonando el componente de lucha social como grupo minoritario (Touraine, 2005).

Y, en tercer lugar, dedicaremos un apartado específico a un ámbito de estudio emergente -y de imprescindible desarrollo- como es el uso de las TC en los desplazamientos forzados. Las TC son herramientas muy útiles en estas circunstancias, pero también pueden ser usadas para ejercer el control. Por ejemplo, Alemania y Dinamarca han conseguido que sea legal extraer los datos de los teléfonos móviles de los solicitantes de asilo. (Meaker, 2018)

Abstract: Recently, we have witnessed information disruptions stimulated by the success of social media and people's declining trust in institutions. Bennett and Livingston (2018) argue that there has been a global breakdown of trust in institutional information, and at the same time, the amount of alternative information channels has multiplied, which explains the emergence of misinformation. Misinformation has become so massive in online context that the World Economic Forum (2014) has listed it as one of the main threats to society. Term 'fake news' refers to false information which is created and spread deliberately and disguised as a credible news source for political or financial gain (Silverman, 2017). It has also become a useful concept for people in expression of their discontent with media (Nielsen & Graves, 2017).

In this study we examine how people perceive three, partly intertwined, contemporary social media concerns: spread of fake news, control of hate speech, and freedom of expression. We analyse how these concerns are connected to people's political ideologies, and drawing from the Media System Framework by Hallin and Mancini (2004), we discuss the implications for prevailing media system. Our findings are based on a population wide survey study for Finnish people (N=3762), which was carried out in January 2018 via questionnaire and online panel. The data is analysed statistically. Since previous research is mostly set in the context of strongly polarized two-party system in the US, Finland represents a very different research case: The Finnish multiparty-system, people's high trust in institutional media and the rather recent emergence of counter media constitute an interesting combination for research. Attacking 'media elite' is an integral part of populist strategies worldwide (Essenger et al. 2017) and has occurred recently in Finland as well. Finnish counter media sites support the views of anti-immigration movement, and became very popular during the immigration wave to Europe in autumn 2015. Counter media has thus played a significant role in mobilization of anti-immigration movement and provided political fuel for populists (Ylä-Anttila,

2017). In this respect, we expect that supporters of the populist right wing party ‘the Finns’ are the least worried about spreading of fake news. Our findings show a strong connection between political ideology and social media concerns. Our findings also demonstrate that ‘fake news’, ‘hate speech’ and ‘freedom of expression’ are politically charged and interpreted very differently by populists.

Abstract: In the paper we plan on presenting at the IAMCR conference, we examine audience interpretations of different political advertisements. Our interest emerged from heightened political tensions in the United States that have led to increases in political advertisements targeting people in general, but young people and students in particular. In our research, we engaged in seven focus groups with students at a mid-sized university. Prior to the focus groups, we asked the students to fill out a survey to collect information pertaining to their political preferences and activity. In each focus group, we asked students to watch a series of advertisements; nine in total. Three of the ads were campaign ads by politicians seeking elected office; three were ads produced by activist organizations like Green Peace; three were public service announcements about topics like smoking or bullying.

After viewing all of the ads, students were asked a series of questions to generate discussion. Students were asked about their reactions to the ads (e.g., What did you like/dislike about these ads?), as well as their opinions of things like politics or activism. We also asked the students to build a category system, and place each of the ads that they watched within these categories; students were then asked to compare and contrast the categories that they had developed. Overall, these questions provided insight concerning the interpretive strategies that were used to make sense of the ads. The concept of interpretive strategy was developed by Fish (1980) to explain the ways in which people come to different interpretations of one text. Later, Lindlof (1988) expanded the

notion of interpretive strategy to explain how audiences of mass media make sense of genres or broadcast content.

In the case of this research, most of the students would only interpret the campaign ads as “political”, while the others—including ads produced by activists—were interpreted as “issue ads” or “topic ads.” What is more, most of the students (but particularly those who identified as conservative) found the candidate ads to be untrustworthy, or viewed them as negative. Many of these students explained their interpretations of the candidate ads as a response to the growing negativity and partisanship that they saw in contemporary elections. In many ways, our findings demonstrate rationales of many students to embrace activists or non-politician figures, like Donald Trump. Indeed, our research demonstrates that audiences are increasingly open to political messages that do not fit traditional campaign ads described by Trent and Friedenberg (2015). Such findings hold important implications for strategic approaches to audiences—for both traditional politicians, as well as activist organizations. These implications will be outlined in greater detail in our final paper.

Title: The Temporal Dimensions of New Viewing Practices in The Multiscreen Home

Session Type: Individual submission

Authors:

Name: Deborah Chambers

Email: deborah.chambers (at) ncl.ac.uk

Country: GB (United Kingdom)

Affiliation: Newcastle University

Abstract: Today's multiscreen home reverberates with traces of past domestic screen technologies and viewing practises. However, dramatic changes in screen-based timescapes within and beyond the home confirm that opportunities for active audience/user engagements with speeded-up media have hitherto been understated. Before the advent of the multiscreen household, it was assumed that a proliferation of domestic screens would lead to a scattering of family members into separate rooms. It was predicted that the communal attributes of television viewing, for example 'family time', would succumb to a fragmentation and individualization of viewing practices. By presenting research on new digital screen practices in the multiscreen home, this paper offers a new analysis of the changing temporal organisation of the household. The study is supported by data on patterns of use of screen devices and streaming services from the UK communications regulator, Ofcom. This is combined with the findings of qualitative studies on media time and domestic screen uses.

Leading perspectives on temporal routines associate the accent on clock time, speed and immediacy with adverse features of urbanisation, industrialization and globalisation (for example, Clough et al., Rosa, Tomlinson). To assess the temporal micro-dynamics of today's digital media home, this paper probes these claims by engaging with key research and theorisations of media time (such as Morley, Silverstone, Scannel, Keightley). I use the concept of 'polymediated timescapes' to understand a new temporal agency associated with second screens in the home, drawing on Madiannou and Miller's concept of 'polymedia'. This concept of polymediated timescapes challenges conventional arguments about audiences in today's media ecology, as individualising and fragmenting temporal experiences. It does so by explaining new configurations for shared family and public time. The paper will argue that rather than creating a temporal dislocation, the multiscreen home opens up new forms of temporal agency. Second screens and streaming services generate a new kind of temporal synchronicity that can transform the living room into a flexible temporal zone. While these striking changes indicate a reorganisation of 'audience', domestic time and space, today's screen-based temporal dynamics suggest that time is not so much 'consumed' but constituted through practice. Elaborate synchronisations of distinctive times involve 'alone time', 'family time', and public network or 'communal time'. Via social media, the multiscreen living room facilitates common talking points and also remote interactions between homes through synchronised viewing and communication. Supported by a series of examples, I explain these emergent forms of polymediated screen time as 'intra-' and 'trans-domestic temporality'.

Title: "Changed Beyond Recognition": A comparative examination of shifting audience measurement models

Session Type: Individual submission

Authors:

Name: Jen Mclevey

Email: jm981 (at) exeter.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Exeter

Abstract: Audience viewing habits have dramatically shifted in the past decade, and this has had an undeniable impact on the broadcast business model where audiences are the primary currency. This paper offers a comparative review of the changes that have occurred in audience measurement since 2017 in several broadcast markets (the UK, the Netherlands, Switzerland and the US). Each change, including controversial measurement of SVoD viewing, has aimed to do the same thing: get a full picture of exactly what audiences are watching, where they're watching, and how they're watching.

Existing academic interrogations of audience measurement methods have provided a valuable historical overview. However, recent industry developments in measurement have been largely absent from academic discussion, with audience studies being primarily reception-based or focused on the implications of the datafication and commodification of audiences rather than the ways in which audiences are being quantified (and therefore commodified) by broadcasters. In a media environment where catalogue is more important than schedule broadcasters and JICs have had to develop new ways to quantify audiences to maximise their values.

In the UK, BARB's Project Dovetail has offered broadcasters an audience metric for viewing on computers, tablets, and mobile phones. While this does offer useful insight into viewing habits, it still does not account for SVoD viewing. At the same time, JICs in the Netherlands are in the process of a complete redevelopment of audience measurements and in 2018 put out a request for proposals for five contracts that would create a new Total Media Audience Measurement. The aim of this is to create a unified currency that includes audiences for VoD and digital platforms. In Switzerland, a similar approach is underway through the Swiss Media Data Hub, which aims to create a single moving picture currency across media platforms.

These European discussions are occurring in the shadow of developments in the US, where Nielsen began to offer a Total Audience metric that included VoD viewing in 2017. In 2018, they began providing a controversial measurement of SVoD audiences at a programme level, a move which has caused controversy and open debate across the global audience measurement industry, with the legality of such practices being called into question.

Reviewing the different models for total audience measurement, the precedents for this metric in existing practice, the inclusion or exclusion of SVoD services, and the commercial and research reasons why each model has been chosen, this paper aims to interrogate both motivations and

outcomes. While these changes are likely to have short-term effects on reported audience sizes, they are certain to have larger long-term implications for how the audience is understood, as a currency and as consumers of content, for both broadcasters and scholars alike.

Abstract: Media have developed in the last decade a great dependence on social networks (Singer et al, 2011). Source of new audiences, social media are also a space for the verification and localization of new contents. Sometimes these functions has forced to alter editorial models to host viral topics, necessary to try to overcome the crisis of attention particularly concerning in the context of the young people (Boczkowski and Mitchelstein, 2016). Digital media estimate that one third of their visits come from Facebook (Somaya, 2014), a figure that forces them to create specific strategies that ensure the reputation and growth of the company in the 2.0 sphere. Recently, Emily Bell (2018) confirmed that Facebook is reshaping newsrooms.

A wide range of studies analyze the different forms of media participation from the perspective of the user, studying the degree of interactivity or through content analysis techniques, while the internal opinion of the newsroom is more inaccessible. The aim of this research is to know the motivations of Spanish digital newspapers to act on social networks; describe how they manage their relationship with audiences, and focus on their internal vision of Facebook. The methodology applied to achieve these objectives have been the in-depth interview with ten social media managers representative of three national media (El País, El Mundo, Abc), two regional media (La Vanguardia, El Periódico de Catalunya), four digital natives (El Confidential, eldiario.es, The Huffington Post, El Español) and a local media group (Joly). All interviews were conducted in person in the newsrooms, during 2017.

The qualitative and current approach of the study yields novel results. In the recent practice of journalism there is a new choreography of information, where breaking news are released first on Twitter, then published on the web and finally on Facebook. This atomization of content has caused fragmented and descontextualized audiences (Masip, Suau and Ruiz Caballero, 2017) consume

individual news. What kind of relationship does the medium maintain with these new consumers? According to the interviews carried out, in the Spanish media scene very diverse and even antagonistic participation management models coexist: while some media value the elimination of comments, others defend the externalization of moderation, or the programming of messages. Decisions in general that reduce the responsibility of the journalist, and allow him/her to focus on the production of content. We observed that there has been a progress in the internal organization of newsrooms, creating specific positions to coordinate participation, but the lack of resources prevents continuous dialogue with users. Nowadays newsrooms continue to be guided by intuition and voluntarism in their activity on social networks.

Research is supported by the national research project CSO2015-64955-C4-3-R MINECO / FEDER.

Title: [Panel] Audience Research in Children, Youth and Media. Are the right questions being asked' Panel description

Session Type: Panel Submission

Authors:

Name: Antonio García Jiménez

Email: antonio.garcia (at) urjc.es

Country: ES (Spain)

Affiliation: University Rey Juan Carlos (Spain)

Abstract: Children, adolescents and young people are fully immersed in the digital life. They turn continuously to smart and mobile screens. They do it to keep in touch with family and friends, to carry out school activities and to access a variety of digital media content and services. With more and more accented use patterns. These habits of use and consumption include social networks, music, videos, books and games. The everytime-and-everywhere-access to mobile media has changed children's and adolescents' everyday life with potential implications on their -from a broad perspective- socialization, consumer patterns, schooling orientated behaviour, teaching and learning... among others. This panel wants to address these issues from both a theoretical and methodological perspective. And it focuses on reflecting on a possible research agenda for the future. The topics discussed are:

1. Role of mobile media in children and adolescents at school, and in everyday life.
2. Methodological challenges of research on smart-screens.
3. New models of audiovisual life: YouTube, etc.
4. Teacher and parental mediation and monitoring of mobile media use.
5. Impact of Internet on children's and adolescents' social development and consumer behaviour.
6. Cyberspace and children's and adolescents' risks, threats and opportunities.
7. Mobile media contents and activities, cultural and educational consumption: games, video, music consumption, education, democracy, social interaction, marketing-publicity..., new phenomena or old habits in new screens.
8. Regulation and protection of children in apps, social networks, and gaming activities, marketing, ... and others.
9. Children's approaches to opportunities, risks, safety, literacy, entertainment in smart-screens and other devices.

10. New audiences and media literacy in educational centres (or schools).
11. Big data, robotics, children and adolescents.
12. Children, Youth and Media, safety, privacy and “security”.
13. Consequences of the digital divide and inequality in minors.
14. Potential Research Agenda, Methods and Questions for Audience Research in Children, Youth and Media.

The main objective of this panel is to contextualize and review the situation and prospectively discuss the future of research in Audience Children Youth and Media Research and collectively discuss the opportunity and focus for research in the “key” questions arising in the area.

Abstract: Children in many societies experience many opportunities of eating outside of home. These occasions play an important role in children's socialization and development: They may enhance general knowledge about food and culture, foster encounters with new people, develop eating and conversation habits, and challenge them with experiences in which they may acquire significant social skills, such as patience, restraint and courtesy. Spending time together at the local family restaurant, food court in the mall, or a coffee shop thus provides parents and children with a wealth of opportunities for enriching interaction.

Over the past few years, however, communication between parents and children spending time together away from home has been affected by the massive penetration of mobile digital devices, such as smartphones and tablets. It is becoming increasingly common to see parents and children engaged in individual digital activities while being disconnected from each other, which might have significant impact on the quality of parent-child interaction and children's overall development. At the same time, shared digital practices are emerging too, as parents and children might play together gaming applications, read a digital book or formulate a message to distant grandparents while spending time away from home.

With this in mind we set to investigate media use patterns among parents and children while they are visiting public places on the continuum between “a digital bubble” and shared media use. The present study aims to achieve this goal by tackling the question if and how parents and children use digital media while having a family meal in public establishments and whether this use affects the communication between them and their emotional availability towards each other.

The study was conducted in parallel in the US and Israel, using qualitative observations in food courts, self-service coffee shops and family restaurants. In each country 30 observations were conducted which included 120 families with children aged 2-8 years. Observations followed families from the minute they entered the eatery to the minute they left and focused on providing a thick description of the following categories: (a) parent use of mobile media (when, for how long, and how are they used and under what circumstances); (b) child use of mobile media (which activities; under what circumstances; who initiates; for how long); (c) parent-child interaction (type of interaction; who initiates and in what ways; shared attention and eye contact; parent’s emotional availability; parent’s mediation of child’s media activities); (d) parent-environment interaction (interaction with others; engagement in non-media activities); (e) child-environment interaction (interaction with others; engagement in non-media activities).

Our findings suggest that use of mobile media dominates a significant part of time spent in eateries, particularly by the parents themselves, with implications to the quality of child-parent interaction, responsiveness to the child’s needs, and safety concerns. Parents often use mobile devices to regulate their child’s behavior and keep the child busy. Joint interactions around mobile media are more rare, and most fruitful interactions seem to happen when mobile devices are out of sight.

Abstract: A notable amount of investigations conducted over the last decade found a disparity between the interests of journalists and audiences regarding news. It is frequently noted that the former show a preference for hard news, while readers seek news that is softer. Researchers reached this conclusion based on the number of visits or clicks received by information as an indicator of audience interest. However, in recent years, another factor has also been used to measure interest, namely, the number of readers' comments. Based on this indicator, audiences attach more importance to hard news than the previous measurements had indicated.

Our study aims to analyse this difference of interests in greater depth by identifying what kinds of information audiences visit and what kind of news they comment on. To this end, we examine the activity of the users of the most successful Spanish-language news aggregator, the Menéame social network, by examining audience behaviour with respect to the content published on this network. The research was carried out using a sample of 8,000 news items randomly selected from a total of 156,800 items published on the front page of Menéame throughout the first ten years of its existence (2006-2015). The number of visits and comments that each item received was analysed, and the two indicators were related to the type of content and its thematic category. For this purpose, we produced a classification of 14 categories which were in turn assigned to a basic typology, divided into hard, soft and general news.

The data indicate that the distribution among these three types of news over these 10 years was as follows: hard news, understood as having greater informative relevance according to the traditional

information canons, shows a proportion of 50.3%; soft news 30.8%; and general news items 18.9%. Preliminary results show that there is a clear opposition between clicks and comments in terms of content types, with two main trends with respect to hard and soft news items. On the one hand, on average the latter receive almost 4,000 visits more than hard items, which on average receive around 5,500 clicks. However, hard news tends to provoke a greater amount of comments than soft news. The average for the former is 66 comments, while soft news receives 10 less (55.7). If the findings for this social network are applied in the field of news media, the data suggest that the alleged difference in interests between journalists and their audiences is not insurmountable.

Title: Intergenerational solidarity or intergenerational gap' How elderly people experience the ICT challenge within their family context

Session Type: Individual submission

Authors:

Name: Celiana Azevedo

Email: celianaazevedo (at) hotmail.com

Country: PT (Portugal)

Affiliation: Universidade Nova de Lisboa (FCSH-UNL)

Abstract: The aging of the population and diffusion of information and communication technologies (ICT) have created alterations in social relations by placing new challenges at the individual, family and social life. Drawn on the concept of intergenerational solidarity (Brubaker, 1990, European Commission, 2012) this paper focused on the elderly discusses the influence of younger family members of their ICT practices in two countries, Brazil and Portugal.

The paradigm of intergenerational solidarity is positioned at the forefront of exchanges of support as a permanent feature of the families, thus becoming a standard in measuring social cohesion between people belonging to different generations. The composition of the household is described as "one of the most fundamental and essential determinants of well-being of older adults" (Zimmer, 2003, p. 248) influencing the life course (Elder and Shanahan, 2006; Elder, 1975; Mortimer and Shanahan, 2003; Loos and Mante-Meijer, 2011; Sánchez, Kaplan and Bradley, 2015), driving or inhibiting the ability of older people to use and benefit from the use of ICT.

The prerogative of the intergenerational relationships as beneficial to the well-being of older people has prevented the exploitation of possible negative aspects that may arise in this context (Lowenstein, 2005; Umberson, 1992; Ingersoll-Dayton, Morgan and Antonucci, 1997; Lee, Netzer and Coward, 1995). Normative interpretations can easily be idealized and the benefits arising from the use of ICT may not occur between the elderly and younger generations, necessarily.

Taking into account these perspectives, this paper discusses empirical results collected in both countries on the ways in which relations of the elderly with younger generations in family contexts may influence these appropriations and uses, both as facilitator as embarrassing. For data collection, we used a qualitative methodological approach through the non-participant observation, focus groups and semi-structured interviews. The sample was composed of 36 persons, Brazilian and Portuguese, with ages between 60 and 84 years old, who attended computer classes in senior universities and who had access to at least one of the following digital technologies: computer, cellphone and tablet with internet connection.

The analysis reveals that families influence how older people deal with ICT in distinctive ways, both building up social interactions and increasing the communication inside and outside the family or contributing to social and emotional isolation even when family generations are physically close. We concluded, that there is not an intergenerational relationship solely based on technology, but a relationship that encompasses various spheres of life of an elderly as a primary source of instrumental, emotional and social support, that extends to the use of ICT. This conclusion has implications for public policies that assuring ICT access and support to the elderly in general and working with different generations, challenging stereotypes related to ageism and the use of digital technology.

KEY-WORDS: Information and communication technology; elderly; intergenerational relation; Brazil; Portugal.

Title: Listening to radio in the age of the digital assistant and the concept of intimacy

Session Type: Individual submission

Authors:

Name: Paul Rixon

Email: p.rixon (at) roehampton.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Roehampton

Abstract: Since the early 1920s, when radio services first began regular broadcasting, radio listening has gone through many changes: from families listening together at home, transistor radios listened to outside, radios in cars allowing listening on the move, to the smart phone allowing a more personalised audio experience. With the appearance of smart speakers in the home, the way we listen to audio is changing yet again. Smart speakers, like Amazon echo, using a form of AI linked to the internet act as a form of digital assistant. One of their popular ‘skills’ is to link up to sites from which radio services and podcasts can be streamed or downloaded at the vocal command of the listener. Such sites include TuneIn which gives access to over 120,000 plus radio service (<https://tunein.com/>). Indeed, such technology has helped digital consumption of radio overtake analogue listening to FM in the UK (RAJAR, 2018). Another popular ‘skill’ allows the user to choose music to listen to, either downloaded or streamed, allowing the creation of a kind of personalised radio music channel (Lacey, 2013). For some the coming of digital technologies have signalled the start of a new era for audio, where people can easily explore a vast range of streamed radio channels, podcasts, music or even to create and share audio as part of social media (Bea, 2013).

In this paper, I will explore, using the concept of intimacy, utilised by those including Crisell (1994), Shingler and Wieringa (1998) and Hendy (2010), how we listen to audio output through AI smart speakers and whether this is changing the way we listened to radio, in all its forms. The research has been carried out by first analysing existing radio audience data collected by RAJAR and other data from Ofcom to help contextualise our understanding of the wider changes occurring, combined with autoethnographic research, where I reflect on my own experiences of using Amazon’s echo, a smart speaker with AI, in a family setting over a two-week period. For this I kept a listening diary reflecting on what was listened to and when, where it was listened to (there are five Amazon echos in the house), who was listening, and how such listening was undertaken. To collect this information, I used data from the Amazon app which records what was played and on which echo, I kept my own diary to reflect on my own experiences combined with discussions with other family members about what they were listening to and why. Throughout the two weeks I also took a record of what was happening in the rooms where the Amazon echos were being used. And while I was particularly interested in radio streaming, I also included how the echo was used to listen to all forms of audio, including music, audio books and podcasts, all of which, in various ways, are part of a traditional radio service output (Lacey, 2013).

Title: Towards a theory of a "strategic fandom": new trends in fan-producers tensions within transmedia storytelling systems

Session Type: Individual submission

Authors:

Name: María-José Establés

Email: mariajose.estables (at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Name: Mar Guerrero-Pico

Email: mariadelmar.guerrero (at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: Relations between fans and media producers are often complex and controversial (Zubernis & Larsen, 2012). The "free" and official ancillary contents of the transmedia storytelling systems (Jenkins, 2006, Scott, 2009, 2010) offer fans an assortment of canonical media texts that encourage their engagement while, at the same time, work as a control tool for producers to weigh up the commercial performance of said content.

Specifically, there are two ways of addressing the transmedia expansion of a narrative world according to its design: whether it is planned from the beginning (strategic transmedia expansion), or if it unfolds as a reaction to diverse industry inputs (tactic transmedia expansion) (Scolari, Jiménez & Guerrero, 2012; Scolari, Guerrero-Pico & Establés, 2018). In this sense, there is a increasing amount of narrative worlds being developed with a strategic vision in which the management of hypothetical fans arises as one of the key questions to be addressed by producers. As part of this growing trend of strategic transmedia expansions, we present a theory of "strategic fandom", as an emerging phenomenon of pre-emptive organisation and control of fan activity around transmedial narrative worlds.

Thus, drawing on the Gramscian theory of cultural hegemony (Martín-Barbero, 1987), media producers are seen as elite groups that build alliances to keep the upper-hand of production processes within cultural industries. In this way, fans receive what they want, that is, their objects of fandom in exchange of a certain interactions with that elite. Particularly, if the interaction is driven by the producers it will be top-down through different "brandom strategies" (Guchwan, 2012) or if, conversely, it comes from fan content that promotes the narrative world, it will be bottom-up through "fanadvertising" strategies (Lozano-Delmar, Ramos-Serrano & Hernández-Santaolalla, 2013).

Anchored in this commercial framework, we suggest that "strategic fandom" pre-emptively enables producers' fanagement (Hills, 2012) beyond co-optation up to the point of "fan-personating" fan activity. We name this "fan-personation" the fact of pretending to be a fan account with no visible links to producers' ownership. Therefore, fandom is appropriated by producers, who

effectively create a fandom before fans do, in order to monitor future fan response and production and so “not losing control of the narrative world” (El Cañonazo Transmedia, n.d.).

Based on an ethnographic approach and applying content analysis techniques, in this paper we explore the cases of two Spanish high quality TV dramas “La Zona” (“The Zone”) and “La Peste” (“The Plague”). By observing the fan communities of both shows, we have detected that the transmedia producers have “fan-personated” themselves through different safe spaces for fans such as wikis or social media groups.

To conclude, we propose an analysis of the control strategies and mechanisms developed by some production companies featuring both "strategic fandom" and "fan-personation" practices.

Title: Media Generations, online-privacy and the use of social network sites (SNS)

Session Type: Individual submission

Authors:

Name: Sascha Trültzsch-Wijnen

Email: sascha.trueltzsch-wijnen (at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg

Abstract: Management of identity, relationships and information have been identified as central motivations for the use of SNS (e.g. boyd 2008; Ito et al. 2008; Livingstone 2008). In order to (re-)present identity and maintain relationships, users present personal information like preferences, personal data and photographs (see e.g. Taraszow et al. 2010; Thaddicken/Jers 2011, Joinson et al. 2011). In order to benefit from SNS providing personal information is central. At the same time users are aware of the value of privacy protection. Earlier discussed as privacy paradox (Barnes 2006, Joinson et al. 2011, Utz/Krämer 2009), this is questioned in latest research (Park 2015, Suh/Hargittai 2015, Young/Quan-Haase 2013). It is more likely that concepts of privacy and related attitudes changed within the younger generation grown up in a mediatised world (e.g. Livingstone/Lunt 2014). Privacy management – as management of personal information – can be theorized in different ways. With regard to generational differences it is fruitful to emphasize the role of socialisation processes, which can be integrated in a perspective of communication privacy management (Petronio/Durham 2015, Trepte/Dienlin 2014) as well as similar approaches of privacy calculus (Suh/Hargittai 2015, Einspänner-Pflock 2017). Individual attitudes towards privacy rooted in internalised cultural traditions are modified in social interaction resulting in specific generational habits of media generations (Vittadini 2013).

The presented research focuses on such specific attitudes towards privacy differentiating between children, adolescences and young adults. Based on a quantitative online survey (N=2069, age 10-30) giving an overview on usage habits, interviewees were recruited for deeper insights into attitudes, strategies etc. towards privacy (20 guided interviews).

With regard to SNS different usage strategies can be identified: For children (age 10-15) privacy is situated in the context of family and school. Socialised in a mediatized world they permanently use SNS to present themselves to school mates and communicate with them. In order to be recognised by all students they make rare uses of software's privacy management tools. For adolescents (age 16-22) the control of SNS profile and communication is much more complex and accordingly they make extensive use of the software's privacy settings to present specific information to different groups of contacts. According to their lifeworld, contacts are related to different contexts such as sports clubs, fellow students and colleagues etc. It is important for the interviewees to address these realms with specific presentations – with a strict border between them – in order to both, protect privacy and fulfil the norm of presence in SNS. Young adults (age 23-30) prior the need for privacy over benefits of communication and self-presentation on SNS. Users limit access to their profile content to close friends and family only: A relevant number of non-users for privacy reasons can be identified. SNS are no longer used to be present and searchable, but to communicate with family and close friends sharing respective photographs.

Usage patterns, underlying concepts and attitudes towards privacy differ between the agegroups with regard to their specific lifeworld contexts and socialisation. The contexts of socialisation will be discussed towards the waves of mediatisation (e.g. Hepp et al. 2015, Livingstone/Lunt 2014).

Title: The chaotic marketing of the FYRE Festival: Audiences and influencers.

Session Type: Individual submission

Authors:

Name: Ilhem Allagui

Email: ilhemallagui (at) yahoo.com

Country: QA (Qatar)

Affiliation: Northwestern University in Qatar

Abstract: This research starts from the FYRE Festival, a case of deceiving marketing operation, to point to two topical issues in online advertising: First, communication technologies (including AI, big data, etc.) have evolved fast to the pace of marketers who turn to these technologies while not being fully prepared to embrace them. This extends to the ongoing restructure of the marketing industry that now counts techies and other illiterate marketing professionals, which could be a nuisance to consumers, if not harmful. Second: There is an overwhelming acceptance of and enthusiasm towards social media influencers and bloggers by the audiences, i.e. followers, who tend to forget that what appear as close friends are in fact a new marketing communication channel. Social media influencers get driven by sponsored packages and marketing results, they are little educated in marketing and have little tools to protect their own audiences, their real ‘capital’. The industry and regulators need to take seriously the role that influencers play as a new media channel and establish new regulations to protect both the consumers, but also their marketers.

Aside from the fraudulent behavior of the festival organizers who failed to deliver the show and the Bahamian luxurious experience promised to festival attendees, the debacle of the FYRE Festival is largely linked to the nascent business of social media influencers who were able to persuade of and sell the promises of this event. The influentials or influencers are “a new type of independent third part endorser who shape audience attitudes through blogs, tweets, and the use of other social media” (Freberg & al. 2011, 90). They can seed information in their network, and because of their high reach, they can ‘trigger a cascade of influence’ thanks to their connectivity and influence in the network (Bakshy & al. 2011). In addition to ‘diffusion of information’ from brands, influencers promote referrals to products or services and engage their followers who become interested and attracted in viewing the influencers while using, commenting on or wearing the products and services endorsed. Marketers found in influencers a cost effective and persuasive way to promote their products and services through online word-of-mouth and opinion shaping within niche groups, as the influencers spread and multiply the message of the brand through their followers. With large base of audience followers, the influencers turned into media channels themselves; they spread messages nearly from one to many, but they still escape the regulation reserved to media channels. Repeated examples of deceived audiences and consumers speak to the imperative of revising the influencers’ function as a new social communication channel.

Using visual evidence (images and videos) of deceptive communication from the FYRE Festival and other marketing occurrences that left consumers with little dignity, this paper investigates This paper investigates the impact influencers have on the audiences , who jubilate by interacting and being around fandom and influencers. The study warns of possible pitfalls leading to a bigger question about ethics and regulation of online advertising (i.e. influencers) to protect media audiences.

Title: [Panel] Conceptualizing Mobile Audiences, Panel Description

Session Type: Panel Submission

Authors:

Name: Erika Polson

Email: epolson (at) du.edu

Country: US (United States)

Affiliation: University of Denver

Abstract: The main challenges facing audience research (the very existence of the audience, the relevance of its social location, its increasing segmentation, and its involvement as interactive producers of meaning) have been compounded by the introduction of mobile communication devices, content, users, and networks. The papers in this panel provide case studies that endeavor to consider how various types of audience are newly constituted in divergent mobile contexts. Taking a holistic approach that spans production, multiplatform distribution, and participatory reception across multiple platforms and communication forms, these papers look at how emerging and evolving audiences for news, reality television, art, and music.

In “Entertainment mobilisation in reality talent shows,” Hill and Kondo consider how the hidden labor behind reality dance competitions, where family, friends, supporters, and followers are mobilized to help constitute the dance performance for a televised reality event. Arguing that this labor spectacle reveals the material infrastructures and symbolic meaning making, they put forth entertainment mobilization as a theorization of the many audiences, and their labor, that make up a program, and call attention to the audience resources that must be brought to bear for the industry to succeed. In “Mobile extensions,” Picone and Vandenplas examine a romance reality show, *Temptation Island*, as a crossmedia text that through mobile devices extends beyond the television screen into additional mobile-first content, online conversations, and discussions across the country. The study will discuss the results of the interviews in light of the methodological benefits posed by the highly contextually sensitive intersection between go-along interviewing and situational analysis for future qualitative research on media repertoires and conversely, crossmedia audiences. In “Children as Mobile News Audience,” Kleemans considers whether online news applications can help children to cope with their emotions after exposure to news about negative events indications that the online news environment can help children to better regulate their emotions, which may consequently contribute to their news engagement. Schofield Clark and Jimenez study the use of the music-making app, *Tik Tok*, to ask how young People of Color work as co-creators to negotiate the demands of an always-on mobile experience and the growing awareness of the business interests that drive the apps they use most frequently. And Polson, in “Street Art on Instagram”, follows street art images as they circulate on Instagram through stories that re-center the art to spotlight the audience-as-subject rather than the artist or artwork.

While representing a diverse collection of case studies, all of the papers on the panel seek to critically explore how users are constituted as audiences for user-generated as well as for commercially available content.

Title: [Panel] Las audiencias de los debates políticos y electorales: de la televisión a las otras pantallas, Panel description

Session Type: Panel Submission

Authors:

Name: Natalia Quintas

Email: n.quintas.froufe (at) udc.es

Country: ES (Spain)

Affiliation: Universidade da Coruña

Name: Andrés Mazaira

Email: amazaira (at) uvigo.es

Country: ES (Spain)

Affiliation: Universidade de Vigo

Abstract: La retransmisión de los programas de debate político y electoral a través de las televisiones públicas y privadas europeas aglutina, tradicionalmente, grandes audiencias, convirtiéndose en verdaderos acontecimientos mediáticos desde el punto de vista de la emisión televisiva. Sin embargo, el debate electoral, fruto del ecosistema mediático actual, de la introducción de nuevos formatos televisivos y de las segundas pantallas, se desarrolla también en un entorno digital dominado por las aplicaciones de mensajerías, las redes sociales y las herramientas de automatización.

Internet ha ampliado espacial y temporalmente el espacio televisivo de los debates, además de posibilitar una interacción mayor con los principales actores políticos que intervienen en los mismos. Asimismo, el espacio de conversación que ofrecen permite al ciudadano ejercer el derecho a participar en la esfera pública a través de diversas plataformas.

Es una nueva forma de entender los debates y la influencia de la opinión, en la que la audiencia ejerce un rol activo y participativo en dicho proceso comunicativo que merece ser estudiado para tratar de determinar cuál es su verdadero significado e influencia.

El objetivo de este panel es tratar de dar respuesta a los siguientes interrogantes, tomando como referencia la convocatoria de elecciones europeas y los recientes procesos y debates electorales celebrados en los distintos estados miembros:

- ¿Qué estrategias discursivas se desarrollan en la red por todos los actores implicados en los debates?
- ¿Cuál es el papel de esta audiencia en la estrategia de las cadenas públicas y privadas y las formaciones políticas?
- ¿En qué grado la conversación en la red determina el establecimiento de la agenda, el debate y la discusión política y pública?
- ¿Cuáles son las dinámicas propias de esta audiencia, de su comportamiento en la red y de la influencia en terceros a través de esta?
- ¿Hay semejanzas entre las audiencias de los distintos sistemas mediáticos, formatos de debates y países?
- ¿Cómo se puede evaluar la repercusión mediática desde el punto de vista del electorado?

El marco teórico en el que se ubica este panel parte de teorías de la recepción (Morley, 1996; Lull, 1997), de la participación de la audiencia (Livingstone, 2013; Carpentier, 2011) y de la audiencia social (Selva, 2015; D’Heer & Verdegeer, 2014; Claes y Deltell, 2015); así como de las teorías sobre modelos y sistemas de relación entre los medios de comunicación y la política (Hallin y Mancini, 2008), convergencia (Jenkins, 2008), hibridación mediática (Chadwick, 2013) y de la función social de la televisión como servicio de interés general y público (Horowitz, 2015; Tremblay, 2016; Trappel, 2016; Marzal y Zallo, 2016).

Este panel se desarrolla en el marco del proyecto “DEBATv, Debates Electorales Televisados en España: Modelos, Proceso, Diagnóstico y Propuesta (CSO2017-83159-R), proyecto de I+D+I (Retos) financiado por el Ministerio de Economía, Industria y Competitividad (MINECO), la Agencia Estatal de Investigación (AEI) y el Fondo Europeo de Desarrollo Regional (FEDER) de la Unión Europea (UE).

Este panel se puede encuadrar dentro de varios de los temas de interés propuestos por la Sección de Audiencias “Rethinking audience research”, “Audience in Context” y “Transnational audiences”.

Title: Children and youth's emotions in relation to online risky situations: a comparative Iberian perspective

Session Type: Panel Submission

Authors:

Name: Cristina Ponte

Email: cristina.ponte (at) fcsh.unl.pt

Country: PT (Portugal)

Affiliation: NOVA University Lisbon

Abstract: Research on online experiences, and around children's and youngsters' use of media, is often framed by adult concerns. Furthermore, the cultural figure of 'the Child' is often politically mobilized to fulfill adults' desires and goals, turning children and youths into political objects, rather than subjects (Cardoso, 2018). However, how children perceive their experiences and how they feel about what they lived through is important both from a psychosocial perspective (to understand how these experiences impact and are impacted by emotional development), and to understand how, following the affective turn in social and cultural studies research, emotionality is present in all aspects of social and helps shape and make meaning of experiences (Ahmed, 2014; Paasonen, 2011).

In the 2000s, four situations regarding children's online activities were framed by the Safer Internet Program as being risky and potentially damaging: Cyberbullying, Pornography, Sexting and Meeting new people. In 2010, The EU Kids Online network conducted a representative survey in 25 countries with a focus on these four risks, asking children and parents what they had done / thought their children had done. In 2014, the NCGM research continued asking these questions in the new digital environment of the mobile phones. The results showed these occurrences were similarly low or even lower than in 2010 (Mascheroni and Ólafsson, 2014). Yet, how these experiences were felt by those who lived them was still unknown.

In 2018, a new 2018 EU Kids Online questionnaire adds a question on feelings (I was happy/I was neither happy nor upset/I was a little bit upset/I was fairly upset...) when facing risky situations. This presentation focuses on the Portuguese and Spanish results collected in 2010, 2014 and 2018 regarding two risky situations: seeing sexual images and meeting new people they had known through the internet. How have these situations been reported by children in the three waves of national surveys? What emotions were reported regarding each one in 2018? Our work aims to identify differences introduced in the analysis by taking into account their emotional responses, and then contextualize those responses in regards to the impact that age and gender have on understanding or presenting those emotions in a survey context.

This analysis may offer a contrasting narrative to the one presented on media and to parental concerns reported in 2010 in Portugal and Spain. Then, Portuguese and Spanish parents led as the most concerned with their children seeing inappropriate material and being contacted by strangers: around 60 per cent, twice the European average (Livingstone et al., 2012).

Eduarda Ferreira and Daniel Cardoso have also participated in this research.

Affiliation: Prof. Dra.

Name: María Esther Pérez-Peláez

Email: mariaesther.perez (at) campusviu.es

Country: ES (Spain)

Affiliation: Valencia International University

Abstract: The research on the use and consumption patterns of the Public Service Media (PSM) has been a traditional focal point in European communication studies. The citizens' opinion on this issue has not been thoughtfully investigated albeit their constant revolution process in the last decade (Ortega, 2016). The European consumer tradition of PSM is frequently demanding for an improvement in quality, service, diversity, funding, interaction and more importantly effective independence from politics in the programming of products and management. Their professionals and citizens alike share this historical still not completely accomplished demand. European Institutions (European Parliament 2013, European Commission 2016) and academics (Humphreys 2016, Bustamante 2016, Fernández Alonso and Fernández Viso 2012, Iosifidis 2011) have repeatedly highlighted the essential role of this independence for their proper accomplishment of their public service remit. Some authors (Hortz 2016, Hasebrink 2012, Carpentier 2011) have pointed out the need of an increased effort in offering consumers with more possibilities of real participation in the decision making process and pro. There exists a need to analyse the present use and consumption of the Public Service Media in Europe and its regulation, we present the case of Spain.

Aims of the research:

1. To obtain evidence from citizens' demands and their consumption patterns in the different devices and platforms, in seven differentiated age groups 14 to 19, 20 to 24, 25 to 35, 35 to 44, 45 to 54, 55 to 64, and 65 and above.
2. To identify the evolution in the product-gender-type consumption, timeline and intensity consumption, platform-screen preferences, relative importance of "own values" for the PSM.
3. To propose a SWOT analysis for content and product evolution for the PSM in Spain and Europe.

Title: The challenging issue of school mediation among Spanish children and adolescents

Session Type: Panel Submission

Authors:

Name: Maialen Garmendia Larrañaga

Email: maialen.garmendia (at) ehu.es

Country: ES (Spain)

Affiliation: University of the Basque Country

Abstract: ICTs are strongly embedded in children and young people's everyday lives as they are growing up in a media convergence society (Ito et al., 2009) where opportunities for social interaction, learning, creativity and participation are increasingly provided by online mobile media (Goggin & Hjort, 2014). Nevertheless, children do also encounter risks online. In fact, the more often children use the internet, the more digital skills they generally gain, and the more online opportunities they enjoy, the more risks they encounter (Livingstone, 2018).

Digital literacy has become an essential factor for the welfare and the development of children and young people's rights. Therefore, digital literacy becomes a vital way of empowering all children online, and school can play an essential role in this.

In 2009 the Ministry of Education implemented the 'School 2.0' programme in all state schools, with the aim of setting up the digital classroom of the 21st century. This programme was introduced during the 5th and 6th years of Primary Education and in the 1st cycle of Secondary School. Nevertheless, after 2012, implementation of this programme was no longer compulsory for schools.

This paper will explore the role of school in mediating children's online experiences in Spain. We will analyse the findings from fieldwork carried out in the autumn of 2018, which surveyed over 3,000 schoolchildren from the 4th year of Primary School until the 4th year of Secondary School (aged between 9 and 16).

The data show that the level of teacher mediation greatly depends on the school cycle or the age of the pupil. The older the child, the more attention he or she receives from the teachers, so there is a great difference between the amount of attention children received in Primary and Secondary Education. For instance, among the youngest children (aged 9-10) only one out of four said his/her teachers suggested ways to use the Internet safely sometimes or often/very often. However, among 15-16 year olds the percentage who said they receive advice was 55%. Figures related to encouraging the students to explore and learn things online or to set rules are also very similar.

Digital literacy for all children and young people would require the provision of resources and a clear commitment from government, in order to minimise inequality and the knowledge divide and to foster greater social justice (Stoilova, Livingstone, & Kardefelt-Winther, 2016).

Abstract: This proposal includes two levels of analysis. Firstly, it focuses on audiovisual material published on YouTube aimed at teenagers. It also takes into consideration the material prepared both by individuals who are themselves teenagers and by other agents.

This study takes into account the line of research focusing on those situations of risk and vulnerability as regards production and consumption of videos by adolescents. We are in a context dominated by the digital spectrum, which is combined with the usual issues of adolescence through online communication, the expansion of peer networks and the huge growth of formats for self-presentation and construction of identity.

In an environment characterised by an increase in the conditions to enable use of Internet by young people (Bleakley, Ellithorpe & Romer, 2016), it is appropriate to analyse adolescent behaviour in a digital context (Blomfield & Barber, 2014), with videos representing a key element in understanding it (Álvarez-García, Barreiro-Collazo & Nuñez, 2017).

This study refers to videos linked to teens on the YouTube platform. Its aims are as follows: a) to identify the subject matter or purpose of the teenager-related videos with the highest number of views; b) to analyse the characteristics of these audiovisual creations; and c) to study the audiovisual treatment of videos whose content demonstrates their preventive/educational purpose. The methodology used is content analysis, applied to $n = 400$ videos. The study has worked with different variables, such as setting, structure, genre (or format), number of views and interactions.

After ascertaining the main themes (“sex”, “drugs”, “bullying” and “pregnancy”), the subthemes comprising them have been defined. It can also be observed that users have shown greater interest in seeking out constructive content in order to learn, educate themselves or avoid potentially risky situations (prevention) than in looking for violent or humorous content or content of other types.

Secondly, this presentation connects with another research work. The patterns of use and consumption of media information of adolescents undergo frequent changes due to the constant technological evolution. In this sense, our research also seeks to know the use and consumption of internet, social networks and online messaging services of adolescents in the Community of Madrid, as well as their perception of risks, parental control and access to news. Through four focus groups, with children between 13 and 17 years old, a multitasking use of the internet, social networks and messaging services has been observed, in short consultation periods spread over the day, with parental control only at the beginning of adolescence. There is an incidental consumption

of news, together with a low assessment of media credibility and a lack of self-regulation by young people in the use of the internet and mobile devices. Finally, the presentation discusses the relationships between these results and new lines of research such as: the impact of big data or the relevance of privacy.

Abstract: The presentation of identity has become key in creating and maintaining relationships online, especially on social media platforms. However, the study of cultural identities has not been deepened, particularly in non-Western contexts. To understand the motivations behind the online performance of cultural identities, this study inquires how Bolivian students are performing cultural identity on social network sites. A key theoretical framework provides the basis for this study: using Erving Goffman's concept of the self as a performance, this paper will argue that cultural identity work on social media consists of deliberately constructed performances that straddle the frontstage and the backstage, the public and the private. For this purpose, we conducted a qualitative study including focus groups and personal interviews with students of 18 to 25 years old of nine Bolivian universities distributed in three cities: La Paz, Cochabamba, and Santa Cruz, focusing on social media use and cultural identity. In the absence of empirical research on the interaction between social media and cultural identity in Bolivia, this paper explores how and when Bolivian university students change their cultural identity performance across different platforms, specifically looking at Facebook, Instagram and WhatsApp. Notable findings relate to the use of language according to the audience, the purpose of use of each social media platform, and the type of content college students post on each platform. The findings indicate that, depending on the social medium and their social background, Bolivian students oscillate between more controlled and more imaginative performances of cultural identity.

Key words: social media, cultural identity, identity performance, Bolivia, young people

Abstract: In this paper we discuss how the use of a computational ontology (hereafter ontology) and mixed-methods deepens knowledge about the nature of film audiences, their experiences, and the contexts in which those experiences take place. Our project, ‘Beyond the multiplex: audiences for specialised films in English Regions’ focuses on how audiences form around film, including mainstream, small-scale, foreign language, documentary, and other films with unconventional narratives or themes. Film audience experience is changing in range and type through online consumption and new modes of theatrical exhibition such as boutique cinemas (Christie, 2012), as well as changing audience profiles and demographics (Friedman et al., 2015). Reception studies established that audiences are plural in the ways they interpret and reflect on film and that their cultural context matters (Livingstone, 1998, 2013). Given these insights and new types of audience engagement, Livingstone suggests that audiences should be conceptualised ‘...as a relational or interactional construct, as a way of focusing on the diverse sets of relationships between people and media forms’ (Livingstone, 1998, p. 14). To analyse audiences in this way requires a methodology that captures the connections among audiences, the various media forms with which they engage, and the contexts in which they do so. Those contexts include the nature of film distribution and access to a range of films, the socio-cultural dimensions of people’s daily lives, and the different ways of making meaning and understanding films.

Our research is based in four English regions and involves film policy and industry analysis, secondary data analysis to construct a socio-cultural index of film audiences, 200 semi-structured interviews with film viewers, 16 film-elicitation focus groups, a longitudinal survey of audience film viewing practices and elite interviews with policy and industry experts. We use the insights from these mixed-methods to iteratively develop our ontology and formally describe the film audiences under investigation. The ontology uses taxonomies for controlling the vocabularies of the data (e.g. socio-cultural indicators, film type, venue information) and rules (axioms) for governing the definition of relationships. The ontology covers the attributes of, and relationships between, audience participants, films, venues, digital platforms and film services as well as the regions (i.e. their socio-economic population profiles and film provision). The value of an ontological approach to structuring our data is that it allows us to ask questions about these relationships. This is enabling us to further develop conceptualisation of audiences as relational and interactive, and to uncover how these relationships configure in particular audience types, places and experiences, as well as broader audience trends. The significance of our approach goes further in that it allows us to understand how the cultural value of diverse film experiences is negotiated by audiences within a complex and changing media ecology. It also demonstrates that audiences have the potential to critically engage with meaning making through the contested truths and human stories told through the moving image.

Abstract: Although in contemporary TV series panorama corpses and morgues have become very popular (especially in the crime and medical genres), with a few exceptions such as the cutting edge but unique series *Six Feet Under* (2001-2005) (Akass, McCabe 2005) and some recent innovations in the scenario of “quality tv” – such as the British TV series *River* (2015) and *Broadchurch* (2013-2017) – death, bereavement and mourning are rarely treated (Weber 2014, Penfold-Mounce 2016). Media representations play a relevant cultural role, offering symbolic resources and showing people how to react to death and the strategies for mourning (Walter 1999), a role even more crucial today when the well established modern thesis of a denied, individualized and privatized death is challenged by national and regional glocalization dynamics, needing to be more deeply investigated (Walter 2012, 2018).

In this paper we present the first results of a qualitative research on media representation of death in Italian TV series in the frame of the wider national research project *Death, Dying and Disposal in Italy* (founded by the Italian Ministry of Education, University and Research), and based on a survey (2000 interviewees) and 480 in-depth interviews with Italian families’ members. This research represents the first systematic and multidimensional national research on attitudes, behaviours, beliefs and rituals concerning death in Italy.

For our qualitative focus we chose a sample period (2010-2019), and we selected 8 Italian TV series featuring dead characters playing an active role within the plot; of course from one side these characters can be connected with the classical figure of the ghost, but from the other side they shape new and particular views of postmortem bonds and afterlife (Benvenuto 2013, Scotti 2013,

Brancato 2014). All the series in our sample are produced by the Italian public broadcasting company (RAI) and co-produced by public institutions or private companies.

Our first research question regards the idea that we are witnessing a cautious attempt of the Italian prime time, mainstream TV series in copying with death and bereavement. In this perspective we investigate the relation between these unprecedented TV narratives and the symbolic needs and expectations of Italian audiences.

In particular in this paper we present a case study based on *La porta rossa* (The red door) a crime/mystery series aired in February 2017 (the second season will be aired in the mid of February 2019). We conducted a content analysis of the series' narrative, that we are triangulating with its author's interviews and with an analysis of the audience reception. For this purpose we analysed the audience social TV practices on Twitter during the airing of the show's episodes. We wondered what the main topics of interaction were, if the themes of death, grief, mourning and bereavement are relevant or marginal and how they are treated by the public in twitter conversations. So secondly, we guessed if *La porta rossa* allowed audiences to engage in a self reflective dynamics on death, grief, mourning, postmodern bonds and afterlife, or if their tweets show a deeper relationship with the plot and the characters of the TV series.

Title: Public deliberation and engagement with news: the user's approach

Session Type: Individual submission

Authors:

Name: Jaume Suau

Email: jaumesm (at) blanquerna.url.edu

Country: ES (Spain)

Affiliation: School of Communication and International Relations. University Ramon Llull

Name: Carlos Ruiz

Email: carlesrc (at) blanquerna.url.edu

Country: ES (Spain)

Affiliation: School of Communication and International Relations. University Ramon Llull

Abstract: From a normative approach, online environments such as comment on news or social media have, potentially, the necessary affordances to become ideal spaces for public deliberation and debate (Prochazka, Weber and Schweiger, 2018). This potential does not just manifest by commenting, but also when reading others' comments or sharing news, as these act as a framework of reference for deliberation about public issues, both online and offline (Springerman, Engelmann and Patfinger, 2015; Swart, Peters and Broersma, 2018). In a comparative research, Ruiz et al. (2011) found that in British and American news media public online conversation was more civilized and respectful rather than in other countries such as South Europe, with a much more polarized media system.

Within this context, this paper presents results about how Spanish citizens engage with news. More specifically, about their perception on the formats for public debate offered by news sites, as well as their option to share this content on social media. Based on a survey (N=6.679) made among registered users of 18 news media websites, we found that to comment and share news is common among Spanish audience. Furthermore, we also found that such practices within the public sphere work as a way to avoid traditional patterns of selective exposure. Nevertheless, survey results also point out that the formats offered by news sites are not suitable for public deliberation. Citizens see economic motivations in the adoption and format of such options, with some of them preferring to debate about public issues in private or closed spaces rather than in public ones.

Title: Viewing narco-novelas in the U.S. border with Mexico: Reception of Netflix's 'Narcos' by Latino audiences on the Texas border with Mexico

Session Type: Individual submission

Authors:

Name: Jose-Carlos Lozano

Email: carlos.lozano (at) tamiu.edu

Country: US (United States)

Affiliation: Texas A&M International University

Abstract: The paper presents and discusses findings from 160 surveys applied to frequent viewers of Netflix's popular television series *Narcos* living on Laredo, Texas, a small town on the U.S. border with Mexico.

While the series has been extremely popular all over Latin America and the United States, studying its reception and readings in a predominantly Mexican American border town like Laredo allowed us to focus on a liminal space where the ethnic characteristics of its viewers and the particular geographic location (just across Nuevo Laredo, one of the Mexican cities where cartel violence and the War on drugs have been most intense in the last 10 years), provided a unique setting to explore particular interpretations and appropriations of the series.

Results discuss the perceptions and valorizations of Pablo Escobar, of the US DEA and CIA agents, of Colombian law enforcement officials, and of Colombia as a whole by Laredo viewers of *Narcos*. In addition, the paper discusses the degree in which viewers consider this Netflix Original Series accurate and realistic and some of the different ways in which they seem to negotiate its contents. According to our findings, significantly more younger viewers than older viewers, and more males than females reported that after watching the series their personal impression of Pablo Escobar had improved, while their impression of Colombia as a country remained the same in all groups. Also, most viewers, regardless of their age, acknowledged that they identified somewhat or a lot with Pablo Escobar, although males were more likely than females to sympathize with him. Most Laredo viewers, however, rejected or were neutral on the assertions that the drug trafficker was justified in doing what he had done or that he deserved more positive recognition for his actions. On a different vein, the vast majority of respondents considered the series depicted Colombia and the conflict involving drug cartels convincingly or very convincingly.

In addition to the relevance of findings like the ones mentioned above, this paper provides an example of the extent in which quantitative survey methodology can be used to explore cultural studies concerns on preferred and negotiated readings of television series like *Narcos*. While clearly limited when looking into complex appropriations and negotiations of hegemonic meanings embedded in media messages, our findings suggest surveys can provide useful and relevant evidence on the exploration of differentiated decodings of the same television message according, for example, to social mediations like gender, ethnicity, and the geographical proximity of audience members to real-life situations like the ones depicted in a fictional show.

Approaching the decoding of *Narcos* through a quantitative technique like surveys respond to requests by cultural studies scholars like David Morley, Sujeong Kim and Justin Lewis, among others, to triangulate qualitative research with quantitative empirical work on audiovisual media.

While audience readings of television programs have been a recurrent topic in theoretical discussions of cultural studies scholars during the last four decades, empirical studies on particular titles or genres are still scarce. This study on the reception of *Narcos* looks to contribute in a modest and limited manner to broadening the number and type of empirical research on specific media contents.

Title: The transnational audience in a political crisis. The Russian-speaking audience in the Baltics.

Session Type: Individual submission

Authors:

Name: Triin Vihalemm

Email: triin.vihalemm (at) ut.ee

Country: EE (Estonia)

Affiliation: University of Tartu

Name: Jānis Juzefovičs

Email: janis.juzefovics (at) ut.ee

Country: LV (Latvia)

Affiliation: University of Tartu

Abstract: The article contributes to discussions on the impact of the mediation of political conflict on the civic attitudes and identities of transnational audience members. In particular, this study explains the interconnections between transnational allegiances of audience members of migrant background and their media use strategies during political crisis between the countries of their historical homeland and current residence. The meaning-making strategies of transnational audiences have not received much attention in scholarly literature and this paper aims to provide new topical knowledge on this issue.

Transnationalism is conceptualised as the practice of a migrant population in maintaining parallel social relationships with their societies of origin and settlement (Basch et al 1994), incl participating in cross-border mediated social spaces and claiming multiple identities (Vertovec 2001).

Researchers have reported that migrants who are considered relatively well integrated into the receiving society are at the same time most transnational in their everyday practices (Guarnizo et al 2003, Cela et al 2013). Levitt (2011) argues that trans-local structures are actually liberating for the individual, as they increase agency. Researchers of the media use of transnational populations claim that they employ parallel frameworks and types of interpretation across different national and international (media) spaces and compare the situation in their historical homeland with that of their host society (Guarnizo 1997; Golbert 2001; Robins & Aksoy 2005). Thus, transnational ties provide a cultural basis for resistance, for refusing the obligation to follow the prescriptions of acceptable conduct inscribed in the norms and values of either the sending or receiving society and thereby increasing individual agency. Studies conducted in politically peaceful environments show that the media production of the former home country is interpreted in the context of present-day experiences and social needs (Robins and Aksoy 2005). Research done during the conflict between the neighbouring countries of Russia and Ukraine has revealed the latent hegemony of Russia's geopolitical narratives even among those Ukrainian transnational audience members who are suspicious of Russian propaganda and subscribe to alternative, oppositional media (Szostek 2018), which contradicts the thesis of the strong agency and emancipatory, "in-between" identity of transnational populations.

This paper examines different phenomena in which the sending country has strong hegemony among a migrant-background population who have settled in the host society for a long time, involving second and third generations. This study explains the interplay between media use

strategies, transnational allegiances and interpretations of mediated battles between Russia and Western states among the sizeable Russian-speaking minority living in the ex-Soviet Baltic countries of Estonia and Latvia. Their media repertoires are mainly a combination of the Russian and local Russian-language media, and occasionally Western media and they carry the normative ideal of smart media user by making comparisons and searching for the “truth in the middle”. In line with the survey data, large parts of these audiences subscribe to the Russian geopolitical agenda. The authors will provide typology of media use strategies formed at times of a geopolitical crisis, and explain how these strategies interplay with the transnational allegiances of audiences.

Title: Binge-watching and the rhythms of everyday life

Session Type: Individual submission

Authors:

Name: Deborah Castro Mariño

Email: castromarino (at) eshcc.eur.nl

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam & Madeira Interactive Technologies Institute

Name: Lothar Mikos

Email: l.mikos (at) filmuniversitaet.de

Country: DE (Germany)

Affiliation: Filmuniversität Babelsberg

Abstract: Forty two percent of international TV viewers state that they binge-watched more TV series in 2017 than they did five years ago (Ericsson Consumer Lab, 2017). Loosely defined as the consumption of several episodes of the same program in a row, binge-watching (or marathon viewing; Perks, 2015) is nowadays a dominant mode of TV viewing and is tightly linked to the consumption of TV fiction. Some authors have also linked this practice to the domestic (Brunsdon, 2010) and affective relations (Bury, 2017) that emerge within the household. The aim of this presentation is thus to share and discuss the results of the first cross-cultural and transnational audience study on domestic binge-watching.

Methodologically, this conference presentation discusses the results of 30 semi-structured in-depth interviews carried out in Germany and in the Netherlands. To identify potential generational and gender differences, we interviewed both youngsters and adults as well as male and female TV viewers. Participants were asked about their consumption of TV series and their binge-watching (or marathon-viewing) behaviour, its context and its seamless integration in everyday life.

Results from the study suggest that binge-watching of TV series is a domestic, social and cultural practice that viewers integrate into their everyday lives and tailor to their personal circumstances. In some cases, it is planned as a social event with partners and friends. Therefore, the experience of binge-watching represents the festive and the spectacle in everyday life. Drawing from data collected in the two studies, the presentation will also discuss the integration of binge-watching into everyday routines and rituals of TV viewers as well as the effects of binge-watching on personal relations. Moreover, it will explore how gender, age and socio-cultural factors shape the binge-watching experience. Finally, the study aims to establish a basis for a more extensive transnational research project.

Abstract: Los debates electorales televisados se han posicionado como uno de los elementos más atractivos de las campañas políticas en las elecciones de cualquier país, considerados en ocasiones incluso como un acontecimiento histórico (Téllez, Muñiz y Rodríguez, 2010).

Distintos documentos internacionales (Unión Europea, Consejo de Europa, UNESCO), aluden a la necesaria adaptación del servicio público televisivo a la nueva era digital.

La irrupción de las denominadas segundas pantallas (Gil de Zúñiga, García-Perdomo y McGregor, 2015; Horning, 2017), que permiten el visionado y selección de información a través de distintos dispositivos, reabre un debate sobre el papel de las nuevas plataformas y redes sociales, acorde con los requerimientos básicos de gobernanza de los medios de servicio público en Europa, dentro de cuyos principios se encuentra el fortalecimiento del debate y pluralismo democrático, la libre expresión de opiniones y la participación de las audiencias.

Principios que están también presentes en la Ley de la Radio y la Televisión de Titularidad Estatal de 2006, que atribuye a RTVE esta gestión y que, asimismo, abren un debate sobre la revisión pendiente de la Ley 7/2010 General Audiovisual de España, ante la exigencia de hacer uso de las nuevas tecnologías para ofertar servicios interactivos audiovisuales, con la intención de llegar a los nuevos públicos.

En este contexto, la literatura científica nos ofrece información sobre el papel de las redes sociales en ámbitos como las campañas electorales (Graham et. al, 2013; Ceron y d'Adda, 2015), el debate público sobre temas políticos especialmente relevantes (Hooker, 2016; Campbell, 2017) o, también, sobre el rol de las redes sociales antes, durante y después de los debates electorales televisados (López-García, 2016; Trilling, 2015; Vergeer y Franses, 2016; D'heer y Verdegem, 2015; Elmer, 2013; Deller y Hallam, 2011).

Esta propuesta analiza el papel de las principales redes sociales (Facebook, Twitter, Youtube, Instagram), con motivo de los debates electorales entre candidatos al Parlamento Europeo en las

elecciones previstas en mayo de 2019, antes y después de la celebración de los mismos, en las televisiones públicas y privadas de cuatro países (España, Portugal, Francia e Italia), que responden al sistema y modelo pluralista polarizado (o mediterráneo) de Hallin y Mancini (2008).

El objetivo es analizar si las redes sociales contribuyen a “ensanchar” el espacio público de la comunicación política dando más protagonismo a los ciudadanos (Wolton, 2007) o, por el contrario, actúan como caja de resonancia de los medios offline (López-Meri, 2016; 2017) y, en concreto, de las televisiones analizadas.

Esta comunicación se presenta en el marco del proyecto DEBATv, Debates Electorales Televisados en España: Modelos, Proceso, Diagnóstico y Propuesta (CSO2017-83159-R), proyecto de I+D+I (Retos) financiado por el Ministerio de Economía, Industria y Competitividad (MINECO), la Agencia Estatal de Investigación (AEI) y el Fondo Europeo de Desarrollo Regional (FEDER) de la Unión Europea (UE).

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: Tradicionalmente se ha entendido la interacción entre los medios de comunicación y la ciudadanía como un proceso en el que los primeros logran posicionar ciertos temas de su agenda entre las prioridades de la ciudadanía; así lo establece la teoría de agenda setting (McCombs, 2004), bajo la cual se han desarrollado numerosas investigaciones y que cuenta con abundante evidencia empírica en numerosos países. A partir de esta teoría, cabe preguntarse si, de la misma manera, las problemáticas de la ciudadanía pasan a ser temas de interés para los actores mediáticos y políticos. Este planteamiento es particularmente significativo en un contexto electoral, en el que los actores políticos tratan de acercarse a la audiencia para conseguir su apoyo (Paletz, 1997) y los temas de los diferentes actores podrían estar acercándose. En este sentido, en este trabajo identificamos los principales temas de preocupación ciudadana en la agenda pública y cuántos de ellos tienen un recorrido destacado en la organización del discurso de los partidos políticos mayoritarios a través de la difusión de sus comparecencias en los medios de comunicación (Llera, Montabes y Baras, 2018; López, Llorca, Valera y Peris, 2018). Desde diferentes perspectivas como pueda ser la relevancia de los análisis de framing en la cobertura de los temas de agenda, cobra un valor destacado la estrategia de framing vinculada a noticias de información política (Schmuck, Heiss, Matthes, Engesser y Esser, 2016).

La hipótesis de la que partimos es que algunos de los temas de preocupación de la audiencia logran insertarse en el discurso político en momentos electorales y, en segundo lugar, que esta transferencia responde a una estrategia implementada por los líderes políticos como mecanismo de activación de la audiencia para su movilización por el voto.

Para ello, realizamos un análisis de los barómetros preelectorales relativos a la campaña de las elecciones generales de 2016 en España y de la campaña presidencial de 2017 en Ecuador. Ambos países cuentan con características similares en lo referido a la configuración de sus sistemas mediáticos (Hallin y Mancini, 2004; Albuquerque, 2012) y algunas semejanzas en las estrategias utilizadas por los medios frente a nuevos líderes políticos (Chavero, Rodríguez y Navarro, 2018).

Este estudio nos permitirá identificar si, en el caso de las audiencias, también se cumplen patrones similares y cuáles son las particularidades como evidencian otras investigaciones (Rodríguez-Virgili, Jandura y Rebolledo de la Calle, 2014).

Uno de los hallazgos más interesantes que obtenemos es el surgimiento de nuevos temas de preocupación para la audiencia, tales como la clase política o la corrupción, que emergen con fuerza en período electoral. Más allá de insertarse en un contexto determinado, encontramos que esto responde a un proceso generalizado de percepción de la actividad política, por lo que hallamos semejanzas en los temas de preocupación de la audiencia en los diferentes países iberoamericanos analizados.

Country: ES (Spain)

Affiliation: Universidad de Santiago de Compostela

Abstract: La rigidez en la programación y cobertura de las campañas electorales por parte de los medios públicos de comunicación ha suscitado en España diversas polémicas políticas, recursos judiciales, críticas profesionales y repercusiones en las audiencias específicas y medias de las cadenas de televisión. Esta comunicación estudia y analiza el marco legal e institucional en el que se realiza la planificación de las campañas de cobertura electoral en los medios de comunicación públicos y la evolución de sus resultados de audiencia tomando como referencia las elecciones municipales y autonómicas que se celebran en España en el mes de mayo de 2019. En el mismo contexto se observa también si los distintos partidos políticos que concurren a dichas elecciones incluyeron en sus programas electorales propuestas concretas de referencia o modificación del sistema de cobertura electoral por parte de los servicios audiovisuales públicos.

Las leyes de creación y funcionamiento de las radiotelevisiónes públicas españolas, sometidas al marco legal establecido por la ley 5/1985 de Régimen Electoral General (publicada en el Boletín Oficial del Estado número 147 del 20 de junio de 1985 y reformada hasta 2018 en 22 ocasiones), marcan los criterios para la cobertura de las campañas políticas en los medios de comunicación públicos de ámbito estatal, autonómico y local. El plan de cobertura de las campañas electorales en los medios de comunicación públicos españoles tiene que ser presentado, debatido y aprobado por el consejo de administración del respectivo medio; y posteriormente elevado a la Junta Electoral local, autonómica o central según el correspondiente ámbito de cobertura. La Ley 5/1985 de Régimen Electoral General (LOREG) dedica siete artículos a la regulación de la cobertura electoral en los medios de comunicación públicos.

La cobertura electoral en las televisiones públicas ha sido estudiada desde distintas perspectivas académicas y científicas (Canel, 1999; Durán Muñoz, 2003; Berganza, 2008; Sampedro et al., 2009; Casero, 2009; García Mahamut y Rallo Lombarte, 2013) pero también ha recibido distintas críticas de ámbitos profesionales internos o externos a los medios estatales o autonómicos, sobre todo en lo que se refiere a su repercusión sobre los espacios informativos, condicionados por la rigidez de su planificación y el control político partidista de la representación que conforma los consejos de administración de las corporaciones audiovisuales públicas y la composición de las juntas electorales.

Title: Co-viewing of a live television event in a multi-platform environment: The 2018 Eurovision Contest case study

Session Type: Individual submission

Authors:

Abstract: This article aims to investigate collocated and connected co-viewing practices around a live television event, using the 2018 edition of the Eurovision Song Contest as a case study. Co-viewing practices are usually triggered by specific events and institutions, such as a series finale or a live broadcast event with a large follow-up. The Eurovision fits in these kinds of live events that can activate co-viewing practices in multiple manners and with the use of online backchannels (Doughty, Rowland & Lawson, 2011). Due to its long-running tradition, the Eurovision viewing activities have been extended to connected platforms, such as Twitter (Highfield, Harrington & Bruns, 2013), the official Eurovision second screen app and other connected spaces.

In this study, we took Eurovision in the Spanish context to study co-viewing because it is one of the European Broadcasting Union territories with more conversation about the Eurovision Song Contest, and the main non-English language cluster community (Highfield et al., 2013).

We employed the following methods: participant observation on co-viewers that were collocated into the same physical space using the official second screen app of Eurovision. Also, an observation in real time (rather than just data retrieving) of the studied unofficial Facebook group dedicated to the contest, a follow-up of Twitter hashtags, and data mining.

The following issues were addressed: (1) how collocated co-viewers collectively engaged with (and without) the use of the official second screen app? (2) how co-viewers materialize their co-viewing practices within social media platforms? (3) how platforms' differences can bring together like-minded people when performing connected co-viewing?

The case of Eurovision offers insights into the co-viewers social circle selection and normativity. Our findings show differences and similarities between three ways of co-viewing that are usually supported by the affordances and features of the used platforms. Participating in a traditional co-viewing setting with collocated co-viewers that also used the official Eurovision second screen app reaffirmed that peers' conversations are essential for engaging with the broadcasted content and official products as an app. Also, it indicates that sharing the experience of usage of the same app or connected platform is a way of enhancing co-viewing activities. Furthermore, the analysis shows the centrality of user-generated content (UGC) to the performance of co-viewing, which happened by engaging with UGC via consuming, producing and participating (Shao, 2009). Nonetheless, this UGC engagement can be altered depending on the designed architecture and features of the

platform chosen to carry out this practice. Moreover, as co-viewing is a group activity we identified the need for this kind of connected spaces to implement elements that spark viewing interactions rather than individual use.

In summary, the study points out to the following findings: (a) collocated co-viewing is a shared experience that could be expanded by second screen apps when designed for collective use; (b) user-generated content and data production is part of co-viewing while engaging with connected platforms; (c) the affordances of the platforms can create digital spaces, which co-viewers might perceive as enhancing their experience or rather feel bewildered.

Abstract: Desde hace ya casi una década, las redes sociales son las favoritas para la consulta de información entre los jóvenes (Casero-Ripollés, 2012), aunque Newman et al. (2017) destacan el actual avance de servicios privados como WhatsApp en detrimento de las redes sociales, y en el caso particular de España la competencia entre ambos se torna de forma más intensa. Una de las principales consecuencias de estos cambios se traduce en una preocupante difusión de fake news que son transmitidas a discreción sin filtro, sin verificación y desconociendo la autoría y procedencia (Alcott & Gentzkow, 2017).

Este trabajo se interesa por la percepción de los futuros profesionales de la Comunicación ante la divulgación de informaciones carentes de veracidad, así como la capacidad que ellos mismos consideran tener para detectar las noticias falsas de las que no lo son. Aplicada la técnica del cuestionario entre alumnos de ciencias de la Comunicación de la Universidad Rey Juan Carlos (España), se observa que su principal fuente de información procede de redes sociales, aunque es significativo que casi la mitad reconoce que gran parte de la información les llega desde WhatsApp. Un escaso número manifiesta contrastar siempre las informaciones, y entre quienes lo hacen a veces, el principal motivo que les impulsa es si su contenido genera una alarma social. Aunque es muy baja la confianza que los jóvenes muestran sobre la veracidad de noticias que les llega desde las redes sociales y de WhatsApp, apenas un 50% contrasta estas informaciones y, lo que es más preocupante, las difunden frecuentemente si proceden de las redes y ocasionalmente si su origen es el servicio de mensajería.

A pesar de estas prácticas, se sienten notablemente capacitados para reconocer los contenidos no ajustados a la realidad y, según sus observaciones, la mayoría de ellos corresponde al ámbito político y a la prensa rosa. Finalmente consideran que la educación digital y estar correctamente informados son claves para detectar las fake news, factores que coinciden con las recomendaciones planteadas por Fernández-García (2017).

Abstract: Los debates electorales televisados constituyen la expresión más clara de competición y negociación entre los agentes legitimados para intervenir en el espacio público: candidatos, medios de comunicación y ciudadanos (Wolton, 1997). Su investigación y estudio sistemático se ha realizado en torno a varios bloques con sus consiguientes subdivisiones: las que se centran en el estudio de su estructura (Blasco et al., 2008) o negociación (Gallego-Reguera, 2009); las que miden los posibles efectos sobre la audiencia y su consiguiente comportamiento electoral y la expresión del voto; las que analizan, mediante el ejercicio de la mediación, el papel de los medios de comunicación y el encuadre de la información (Goofman, 1986; Shoemaker, 1991); así como aquellas otras realizadas desde la técnica del análisis de contenido, aplicando el primer y segundo nivel de la teoría de la agenda setting (McCombs y Shaw, 1974; Matsaganis y Weingarten, 2001). El presente estudio tomará como base este último enfoque para poner en discusión la agenda analógica del primer debate electoral de las elecciones presidenciales brasileñas del año 2018, celebrado entre ocho candidatos en la TV Band el jueves 9 de agosto, con la agenda digital en Facebook a través del estudio de las cuentas de los principales candidatos treinta días antes del mismo. En este sentido, los parámetros que se estudiarán serán la temática, el encuadre y la audiencia, entre otros.

La investigación de las últimas elecciones presidenciales en Brasil es de relevancia y de interés no solo por su fenomenología política (polarización, crisis institucional e ideológica) y económica (subida de la tasa de paro y desaceleración del crecimiento del Producto Interior Bruto), sino también por el uso intensivo de las Redes Sociales por parte del ganador y por el papel desarrollado por los medios de comunicación en la contienda. De esta forma, el objetivo principal es el de comparar las temáticas discutidas previas al debate televisivo en la red social Facebook, exponiéndolas en tablas y aplicándole coeficientes para determinar su grado de relación. El objetivo secundario es el de conocer el comportamiento de la audiencia a respecto de la posición de

cada uno de los contendientes. Así, desde el punto de vista epistemológico, se trabajará dentro del espacio interdisciplinario de la Comunicación Política, utilizando la técnica de análisis de contenido, el programa cualitativo Nvivo y el estadístico SPSS, además de otros instrumentos para la extracción de información de la red social. Como conclusión general, la agenda digital genera marcos en el llamado debate analógico, a la vez que moviliza a la audiencia a través de la preponderancia de temas morales e ideológicos, quedando en un segundo plano los económicos. Esta comunicación se presenta en el marco del proyecto DEBATv, Debates Electorales Televisados en España: Modelos, Proceso, Diagnóstico y Propuesta (CSO2017-83159-R), proyecto de I+D+I (Retos) financiado por el Ministerio de Economía, Industria y Competitividad (MINECO), la Agencia Estatal de Investigación (AEI) y el Fondo Europeo de Desarrollo Regional (FEDER) de la Unión Europea (UE).

Abstract: Los debates políticos en televisión mantienen su fortaleza como referentes informativos, al tiempo que se posicionan como uno de los eventos que mayor engagement generan con la audiencia. Livingstone y Lunt (1994) ya analizaban a mediados de los años 90 los efectos de la participación activa del público en televisión, y se preguntaban cómo se gestionaba esa relación en los programas de discusión abiertos a la participación ciudadana. Más de veinte años después, el valor y la importancia de la discusión pública y el debate en televisión se redefinen en un escenario dominado por las redes sociales. La facilidad de uso de plataformas como Twitter y su creciente popularidad la han convertido en un foro para el debate y la participación pública (Burnett & Bloice, 2016). La red de micro-blogging se consolida como un importante backchannel para los mass media (Harrington, Highfield & Bruns, 2013), a través del cual interactúan con una audiencia que se muestra especialmente activa a la hora de participar en los debates políticos (Bruns and Burgess 2011; Elmer 2013; Shamma, Kennedy & Churchill, 2009).

La presente investigación analiza la conversación social generada en Twitter durante los debates electorales emitidos por las televisiones españolas durante la campaña de las elecciones al Parlamento Europeo del 26 de mayo de 2019. La muestra se centra en la cobertura realizada por La 1 (RTVE) y La Sexta (Atresmedia). Se ha seleccionado La 1 como cadena que ostenta el récord del debate electoral más visto de la última década, correspondiente al que mantuvieron Mariano Rajoy y José Luis Rodríguez Zapatero el 25 de febrero de 2008, y que obtuvo una audiencia media de 8.017.000 espectadores y un 36.4% de share. Mientras, La Sexta se consolida como en canal

privado que acaparó mayores cuotas de pantalla en los especiales informativos electorales de los últimos años. El “cara a cara” político entre Albert Rivera y Pablo Iglesias en el programa Salvados del 18 de octubre de 2015, con 5.214.000 espectadores y un 25.2% de share, conseguía situarse en el top de emisiones más vistas del canal en el último lustro. Además, La Sexta lideró el ranking de audiencia social de los especiales informativos en 2018, según la medición de KTTR-Kantar Media, con la cobertura Objetivo Andalucía: Especial elecciones autonómicas. Con 129.3 k tuits, este programa se coloca inmediatamente por detrás de GH Vip, Operación Triunfo, Los Goya o Eurovisión como formatos más comentados del año.

Sobre esta muestra se estudia la conversación en tiempo real de la audiencia que comenta en directo los debates electorales a través de la red social Twitter (live-tweeting). Para ello, se toma como base el hashtag oficial que cada una de las cadenas lanza al inicio de los debates entre candidatos. A través de la extracción de los comentarios, retuits y respuestas realizadas bajo el hashtag de los programas, se observa el volumen de conversación generada, así como la interacción entre los live-tweeters.

Title: Impacto de los debates electorales en la prensa digital

Session Type: Panel Submission

Authors:

Name: María Gallego Reguera

Email: mariagalle (at) gmail.com

Country: ES (Spain)

Affiliation: Universitat de Lleida

Abstract: Cuando el programa televisivo del debate electoral finaliza, comienza el debate sobre el debate en la prensa, que realiza su propia interpretación de lo ocurrido en el plató. En general, los medios de comunicación llevan a cabo un tratamiento de las elecciones que los expertos han coincidido en denominar "carrera de caballos", ya que los medios narran la campaña en términos de carrera electoral. Respecto al tratamiento que realizan los medios de comunicación en general sobre el debate electoral, se da otro fenómeno que ha sido denominado media convection, lo que se podría traducir como la "cobertura de la cobertura". Los medios realizan resúmenes del debate para realizar sus informaciones. Estos resúmenes interpretan el debate a través de la propia selección de cortes, imágenes y frases de lo sucedido. Además, también aportan su opinión sobre quién ganó o perdió el debate a través de expertos o periodistas políticos. La propia cobertura se convierte así un veredicto del debate, un juicio sobre la actuación de los candidatos. Diamond y Friery (1987) explican que quizá la cobertura mediática es más importante que los debates en sí. Por su parte, los estudios de sobre las organizaciones de campaña y el entorno de los medios concluyen que, aunque la cobertura periodística es relevante, las decisiones importantes de campaña rara vez se basan únicamente en la esperada cobertura periodística; la estrategia de los medios y la estrategia política están entrelazadas como parte del mismo proceso.

El objetivo de esta comunicación es analizar la información publicada en los principales periódicos digitales españoles sobre las elecciones al Parlamento Europeo de mayo de 2019 para analizar el tratamiento y el enfoque que se realiza de la información sobre los resultados del debate electoral. En esta comunicación se propone abordar el objeto de estudio desde una metodología mixta de corte cuantitativo para analizar las informaciones publicadas, y cualitativa para estudiar el contenido, tratamiento y enfoque de las mismas. Para ellos se tendrán en cuenta los trabajos previos de Arterton (1978/1986), Dader (1998), Gerstlé (2005), Canel (2006), Diamond y Friery (1987), Bourdieu, P. (1999/2000), Castells (2009), Lakoff (2004); Legnante (2002); Noelle-Neuman (1984/1995) y Alan Schroeder (2014), entre otros.

Esta comunicación se presenta en el marco del proyecto DEBATv, Debates Electorales Televisados en España: Modelos, Proceso, Diagnóstico y Propuesta (CSO2017-83159-R), proyecto de I+D+I (Retos) financiado por el Ministerio de Economía, Industria y Competitividad (MINECO), la Agencia Estatal de Investigación (AEI) y el Fondo Europeo de Desarrollo Regional (FEDER) de la Unión Europea (UE).

Title: La integración de la audiencia social en los debates televisivos electorales

Session Type: Panel Submission

Authors:

Name: Natalia Quintas-Froufe

Email: n.quintas.froufe (at) udc.es

Country: ES (Spain)

Affiliation: Universidade da Coruña

Abstract: Los debates electorales televisivos constituyen uno de los ejes principales de las campañas políticas por, entre otros motivos, la posibilidad de llegar a un amplio sector del electorado. Las audiencias generadas por estos espacios televisivos superan ampliamente los índices de audiencia media de los canales de televisión logrando cifras solo superadas por retransmisiones deportivas. Además, la televisión es el canal de mayor difusión e impacto para transmitir unas ideas a la audiencia-votante (Pérez-Curiel y Lancharo-Montiel, 2017), sin embargo, el ecosistema en el que está inmersa se ha transformado poderosamente en la última década.

La introducción de otras pantallas en la experiencia televisiva ha dado lugar a nuevas formas de participación de la audiencia, como la audiencia social, que deben tenerse en cuenta por parte de las cadenas de televisión y de los actores políticos implicados en el debate. Sin embargo, gran parte de la literatura académica previa sobre televisión social centra su análisis en formatos televisivos ligados principalmente al entretenimiento (Selva, 2015), de ahí que sea relevante y necesario aproximarse al estudio de esta audiencia desde otra perspectiva.

El objetivo de esta comunicación es analizar la actividad de las cuentas oficiales que los candidatos de las formaciones políticas españolas generan en las redes sociales ante la celebración de las elecciones al Parlamento Europeo de mayo de 2019 para tratar de conceptualizar la estrategia comunicativa que siguen para dirigirse a su audiencia y el grado y modo de interacción con esta. El universo de análisis se ha limitado a Twitter por dos motivos: estar considerado como “el canal imprescindible en las estrategias comunicativas de los actores políticos” (López-Meri, Marcos-García y Casero-Ripollés, 2017); y ser la única red que a día de hoy sirve como referencia para la medición de la audiencia social en España auditada por Kantar Media.

En esta comunicación se propone abordar el objeto de estudio desde una metodología mixta de corte cuantitativo para analizar la actividad de los candidatos, y cualitativa para estudiar el contenido de los mensajes emitidos. Para ello se tendrán en cuenta los trabajos previos publicados en el ámbito nacional (Rodríguez-Fernández y Saavedra Llamas, 2017; Alonso-Muñoz, Marcos-García y Casero-Ripollés, 2016; López-García, 2016; López-García, Gámir-Ríos, García-Ull, Llorca-Abad, Cano-Orón y González-Esteban, 2015; Pérez-Ruiz y Melgosa, 2015); e internacional (Livingstone, 2019; Babos y Milágy, 2018; Moe, Poell y van Dijck, 2016; Anstead, 2016; Bentivegna y Marchetti, 2015; Wilson, 2015; Pond, 2016; Larrosa-Puentes, 2016; Selva, 2015; Coleman, 2013;).

Esta comunicación se presenta en el marco del proyecto DEBATv, Debates Electorales Televisados en España: Modelos, Proceso, Diagnóstico y Propuesta (CSO2017-83159-R), proyecto de I+D+I (Retos) financiado por el Ministerio de Economía, Industria y Competitividad (MINECO), la Agencia Estatal de Investigación (AEI) y el Fondo Europeo de Desarrollo Regional (FEDER) de la Unión Europea (UE).

Title: Experiences of liveness: theorising audiences' engagements with connective media as sensorially perceived and discursively shaped

Session Type: Individual submission

Authors:

Name: Ludmila Lupinacci Amaral

Email: L.Lupinacci-Amaral (at) lse.ac.uk

Country: GB (United Kingdom)

Affiliation: The London School of Economics and Political Science

Abstract: Liveness has been a persisting manifestation of media's self-proclaimed capacity to fulfil the aspiration of connection with others and with the world beyond the limits of time and space (Scannell 2014, Frosh 2018). Although it is well documented how different institutions and technologies have been claiming to offer 'live experiences' as a strategy to reach their own commercial interests and ideological purposes (van Es 2017), we still know very little about if and how these claims are actually perceived by the ordinary people who make use of these technologies in their everyday lives.

Bearing this in mind, this theoretical paper has two central aims: (1) to make a case for why an audience-centred perspective is urgent for the understanding of liveness, particularly in the context of pervasive connectivity and 'datafication', and (2) to use a paradigmatic topic (i.e. liveness) to call into question the frequently reproduced separation between sensory perception and discursive construction in the examination of audiences' experiences.

Notably, 'the live' seems to have reacquired visibility alongside the pervasive adoption of connective (so-called 'social') media. Thus, a study of liveness in the current context cannot ignore the existence and increasing relevance of such platforms in people's everyday experiences of others and of the world. If these technologies are indeed able to shift perceptions of temporal, spatial, and social distances, then they must be accounted for, especially if we consider their constant effort in effacing their very operation through an appearance of neutrality and transparency (van Dijck 2013). Social media conceal their presence under claims of real-time, continuous, and immediate connectedness – that is, through promises of liveness. In this regard, this paper endorses the position that the experiences of the people involved in and affected by these processes, regardless of how automated or 'datafied' they might be, still matter, and should be critically examined (Livingstone 2019).

Furthermore, I take this as an opportunity to contribute to the refinement of a term that is often left unpacked. Despite continuous academic efforts in rethinking, renaming, and reframing the 'audience', what we mean by experience is usually taken for granted. Experience is frequently employed in an elusive manner, or used interchangeably with perception to refer to embodied, self-evidential, and purely sensorial processes. By arguing that experience is always already permeated by discourses, representations, and imaginaries (Scott 1991, Orgad 2012), I offer a critique on how common unquestioned conceptions have not only stopped us from exploring the full potential of more critically informed phenomenological approaches to audience studies but also, in the case of

liveness, limited the empirical findings we are able to obtain and discuss. A one-sided conception of experience, I argue, overlooks the embeddedness of audiences' expectations, beliefs, and previous contact with technologies in the experiences they have of, with, and through media. Therefore, this paper argues that experience depends both on affective, corporeal senses and on discursive structures that shape and inform how each of us gains access to, and ultimately lives in, the social world through practices of audiencehood.

Title: 'Family generated content' and the mediated construction of family relationships: an ethnographic case study on an extended Chinese family

Session Type: Individual submission

Authors:

Name: Hao Wu

Email: h.wu21 (at) lse.ac.uk

Country: CN (China)

Affiliation: London School of Economics and Political Science

Abstract: Audiences in domestic contexts has been a crucial topic of audience study and it has gone through a journey from 'passive' to 'active' audience or 'user' in recent years. However, even with many fruitful attempts, the gap between 'media as content' and 'media as technology' still seems difficult to overcome theoretically and methodologically, especially in the 'new' digital media environment. Moreover, the audience experience and behaviors are still haunted by the linear framework of the 'media effect' to a large extent. With these in mind, this study seeks to explore the mediated construction of the extended family relationships in urban China by looking at a) the active media practice of the family members, b) the meaning dimension of their media practice and c) the everyday family practice in a concrete historical and cultural context. By doing so, this study attempts to go beyond the one-way discussion of the consequences of the media, but focuses on the co-construction of media practice and the family practice through a comprehensive examination of the active media usage as well as the media content's meaning.

Based on ethnographic methods as well as a close semiotic analysis of various types of the media content in the family WeChat groups, this study examines an urban extended family which contains 36 people in total at Wuhan city, China. It finds that the extended family members, especially the older generation, tend to actively post all kinds of media content (e.g., articles, videos, pictures and hyperlinks) in their family WeChat groups. These various forms of 'family generated content' are specially selected and created by the family members and for the family members. These posts are mainly family oriented and focused on themes including a) the happiness of the family, b) the life meaning of the individual, and c) all kinds of social risks that might happen on their family members. Meanwhile, by a close look at their everyday family life, the author finds that, because of the radical and compressed development of the Chinese society, the family is facing intense social risks and dramatic social changes in contemporary China. The extended family members, not just the nuclear family members, separately seek to stick together and rebuilt intimate family relationships. Therefore, the media practice of these extended family members can be considered as an active move to re-embed into the family in the 'compressed modernity' which is full of great risks and uncertainty shaped by domestic and global forces.

Abstract: Multi-screen media practices are clearly rooted in our society, especially amongst young generations, who have been described as active audiences, used to multitasking and transmedia consumption, participation, engagement and prosumption. This scenario has been described as a (new) media ecology (Scolari, 2012; Scolari and Fraticelli, 2017), a new media environment (Castells, 2013; Jenkins et al., 2013; Press and Williams, 2010), hybrid media ecology or hybrid media system (Chadwick, 2017) or the media life of audiences (Deuze, 2011; Manovich, 2009), who live “across” different media (Lomborg and Mortensen, 2017).

The core role of social media in children and adolescents' life has been pointed out both by quantitative data on their access to internet - as more than 90% of young people in Western societies have access to it and have social media accounts, at an increasingly young age (Eurostat, 2015; IAB, 2015; INE, 2015; Lenhart et al., 2015) - and by media scholars, since teens can attribute to social media at least five kinds of functions. Those are: entertainment, information and learning, narrative or storytelling, socialisation (including identity building process, identifying with the age group and sharing with peers) and prosumption (Fedele et al., 2018; Tur-Viñes et al., 2018).

This study was carried out in Italy in May 2018, applying a holistic perspective and a mixed theoretical framework, which combines the constructivist perspective, the field of cultural studies, the uses and gratifications perspective, and the gender studies perspective. Its main aim was to analyse how and for what purposes/functions middle and late adolescents use different social media and technologies.

A mixed method approach was employed, divided into two phases: (1) Quantitative analysis of the audience via survey administered to students of 2° (14-16 years of age) and 5° year (17-19 years of age) of liceo in four public high schools (n=774, x=16.6 years old); (2) Qualitative analysis of the audience with focus groups (with six participants each, three girls and three boys). Quantitative descriptive and bivariate analysis were carried out through SPSS (significance set at <0.05), while qualitative analysis with the help of Atlas.ti.

Data triangulation shows that Instagram, Whatsapp, and YouTube are the three social media teens in our sample use and like the most. Among the main results, the preference for, and presence of, Instagram in teens' life must be emphasised. In particular, teens use Instagram for the identity building and socialising functions, to express and “tell” themselves to their friends. They recognise

Whatsapp as the “base of everything” to stay in touch, use YouTube as a broadcasting system more than an interactive platform, while considering Facebook out-of-date.

In conclusion, adolescents in our sample consider social media as an extensions of their offline lives and relationships, and include them in their complex media life. They are not really prosumers, but they do use social media, especially Instagram, to “tell” themselves and their lives (auto-narrative function).

Further studies based on more ethnographic approach need to be carried out to delve into teens’ practices on social media.

Abstract: Adolescent fans are configured as a new paradigm of audiences on new media (Stein, 2015). Their active reception of contents and their organization through user communities represent a new culture (Barton & Lampley, 2013), oriented to audience participation in the development of a transmedia universe. In particular, the audience experience in TV shows for young people is leading a profound change in both programming and viewing models.

The case of the remake of Norwegian show Skam (Julie Arden, 2015) in Spain is especially paradigmatic. The series develops through clips on social networks such as Youtube, Instagram and WhatsApp, and its success is directly linked to new consumption habits among young people, centered around the use of mobile devices and social networks. According to this, our goals are to explore the practices used by young people when participating in social media and to identify mimetic discourses in social networks such as Instagram (Ibrahim, 2015).

Moreover, we will analyse big data from social networks and the audience experience as a media ecosystem in which adolescent fans come together and converge. Following a sociocultural approach, we combine some qualitative methods such as visual ethnography (Delgado, 2015), NVivo is the tool used to process multimodal material and the analysis of data combines a narrative and a conceptual approach (Lacasa, Martínez-Borda, & Méndez, 2013).

The results about this adolescent fandom, which represents youth values and forms of identification with the characters, gives us the chance to delve into the audience's practices as revealed through their online conversations. Eager for content, they usually end up creating it when they need more,

creating their own fictions about the topics that concern them the most: sexuality, friendship, identity. These creations help to guide the creators of TV series, generating feedback between followers and producers.

Title: Los medios digitales en la estrategia comunicativa de la Plataforma de Afectados por la Hipoteca y su influencia en el discurso mediático

Session Type: Individual submission

Authors:

Name: Irene Peiró Compains

Email: irene.peiro (at) e-campus.uab.cat

Country: ES (Spain)

Affiliation: Autonomous University of Barcelona (UAB)

Abstract: Analizamos cómo han contribuido los medios digitales y las redes sociales en la estrategia comunicativa y organizativa de la Plataforma de Afectados por la Hipoteca (PAH), el principal movimiento social en defensa del derecho a la vivienda en España durante la última década. La principal novedad del análisis es que estudia la influencia de la PAH en el discurso mediático sobre vivienda, una relación escasamente estudiada en España, pese a la relevancia de la vivienda en el debate público. Con este objetivo, se analizan contenidos de medios impresos y digitales de distintas líneas editoriales desde el inicio de la crisis económica en 2008 hasta 2017, tomando en consideración la irrupción de medios independientes, que se ha producido en España durante este periodo, con modelos de financiación basados principalmente en las aportaciones de los lectores.

El análisis se centra en Cataluña, la comunidad autónoma con mayor número de desahucios (un 18% de los 570.708 de toda España entre 2008 y 2017 según el Consejo General del Poder Judicial) y donde la PAH, que nació en 2009 en Barcelona, tiene mayor implantación. El análisis se centra en la PAH de Barcelona y la muestra de medios de comunicación también está conformada por publicaciones editadas desde Cataluña: La Vanguardia, el Periódico de Catalunya y el Crític, uno de los principales medios digitales independientes en catalán nacido en 2014.

El marco teórico se basa en el modelo social y comunicativo androcéntrico/no androcéntrico descrito por Amparo Moreno Sardà. Según la autora, el modelo androcéntrico responde a los intereses de los colectivos ubicados en los centros de poder y, frente al mismo, propone un paradigma no androcéntrico y horizontal, que tenga en cuenta las relaciones entre los colectivos ubicados en los centros de poder y aquellos situados en posiciones periféricas (Moreno Sardà, 2007). Desde el punto de vista comunicativo, este paradigma coincide con el modelo descentralizado y reticular que promueven las TIC (Scolari, 2008; Massey, 2004; Castells, 1997; Keane, 2009; Fernández-Armendáriz, 2013; Suau y Masip, 2014).

Se han analizado 244 informaciones de La Vanguardia; 216 del Periódico de Catalunya"; 29 del Crític y 307 mensajes de la PAH de Barcelona en Twitter, la red informativa por excelencia de los movimientos sociales en España desde el nacimiento del 15-M (Bernal Triviño, 2015), seleccionando fechas consecutivas en las que se han producido hechos relevantes sobre vivienda. El análisis se ha basado en la metodología del análisis de contenidos de la obra "La mirada informativa" (Moreno Sardà, 1998).

Podemos concluir que la PAH ha aprovechado la pérdida de legitimidad de los centros de poder, que ha comportado el impacto social de la crisis, para extender su relato contrahegemónico, a partir de una estrategia que combina el uso de medios digitales con las movilizaciones y las acciones de presión política, a lo cual han contribuido especialmente los medios independientes. Su incidencia sobre los medios de comunicación de masas alcanzó su máximo nivel entre 2011 y 2013, coincidiendo con el periodo de mayor movilización social en las calles.

Title: 'You cannot serve two masters at a time!' Examining the ambivalence, agency and complex relationship in children's digital practices and negotiation of digital technology with parents and adults in rural and urban spaces

Session Type: Individual submission

Authors:

Name: Chikezie Uzuegbunam

Email: chikezieuzuegbunam (at) gmail.com

Country: ZA (South Africa)

Affiliation: University of Cape Town, South Africa

Abstract: Children are an important segment of all populations. In the digital age, they have become even more critical audiences. Because of their being born into an increasingly ubiquitous digital media environment, children have become, for most scholars, the most media literate of any generation; most connected and plugged in, most technology savvy and most receptive digital media users in contradistinction to a “technologically clumsy or uncomfortable older generation”. Some studies – but not enough, and particularly from the global North contexts – have focused on the contested and complex relationship between children and adults including parents and teachers. These studies highlight the often direct and nuanced power relations between children and adults who aim to control their digital practices as well as show the agency with which children approach their digital lives. From a specifically Nigerian, and broadly African perspective, this paper interrogates adolescents’ digital practices as it relates to their negotiations of technology use and the role of ‘digital gatekeepers’ in the constitution of their digital lifeworld. The study draws from the child-centred research tradition which privileges the hearing and acknowledgement of children’s voices directly, and therefore focuses on mainly qualitative analysis of 16 focus group interviews conducted with 175 school children in rural and urban areas in Nigeria. Theoretically, the domestication and technology appropriation framework enabled the study to unpack the ways in which Nigerian children aged between 13 and 18 constitute their digital lives and negotiate their identities as well as strict mediations by parents and other adults. Nigerian children’s digital practices are substantially shaped and at the same time undermined by digital gatekeepers such as parents, teachers, guardians and older adults who play mostly prohibitors and moral panic mongers. Nigerian parents, schools and adults who mediate and control children’s digital practices do so from a socio-cultural and contextually appropriated positionality, meaning that they prioritise traditional notions of familial authority and socialisation. Other issues such as the absence of digital literacy and skill on the part of the children, their parents and teachers also limit the children’s agency and digital opportunities and result in unchecked risks such as pornography, meeting with online strangers/online grooming, distractions, identity issues/negative role modelling. Based on this, the distinctions between negative and positive dimensions remain fuzzy and complicated, and the impact of technology on children’s lives has been both cursed and praised. The study recommends that rather than techno-shaming children into silence, fear, scepticism, guilt or moral panic, families and schools must first rethink the precarious subjective-subordinate and marginalised position of children and commit to expanding Nigerian children’s opportunities and rights in the digital age, alongside government ICT intervention. There is a need to have a system that supports parents’,

families' and adults' access to critical resources that empower them with knowledge of the opportunities and risks of the digital age and how to support their dependants.

Abstract: La innovación tecnológica, el cambio en el paradigma de los hábitos de consumo, así como la permutación en el acceso a los distintos medios de comunicación son algunos de los factores que han modificado el acceso, por parte de determinados segmentos poblacionales, a las fuentes primarias de información. El presente estudio pretende establecer las bases que permitan demostrar cómo ha afectado a los jóvenes universitarios españoles la implementación de las redes sociales como motor principal de búsqueda, y a su vez, dirimir las consecuencias dentro del sector tradicional que ha ofrecido hasta ahora este tipo de funciones. Lo que plantea la siguiente pregunta: ¿el consumo de información en las redes sociales está produciendo la obsolescencia de los informativos televisivos?

Los procesos de migración están implementando nuevas rutinas las que favorecen el surgimiento de las fake news, las cuales no generan un efecto negativo en las plataformas digitales, mientras que suponen un detrimento en la credibilidad en los mass media. Una pauta que puede propiciar el fomento de la obsolescencia informativa como práctica convencional y poner en cuestionamiento la versatilidad y pluralidad que son capaces de mantener el sistema democrático como una clave a futuro de grupos comerciales clásicos venideros.

El espectro de estudio es especialmente interesante y relevante para las compañías mediáticas dado su peso en el ámbito comercial, como en la predominancia de corrientes futuras y el mantenimiento del ecosistema audiovisual español y publicitario. Aspectos relevantes que pueden conllevar el empoderamiento de los datos como un activo potencialmente rentable en el ámbito on line frente al descrédito de los mismo en las vías de acceso convencionales, procurando una serie de efectos que habrá que disgregar y que pueden provocar un crecimiento exponencial de aparición de noticias falsas y sin contrastar que motivarán el surgimiento de un caldo de cultivo válido para la búsqueda de nuevos filtros, nuevos mensajes y nuevas estructuras de creación de contenidos validables y accesibles a todas las generaciones.

Las fuentes tradicionales de información, véase prensa, radio y televisión, han cedido importancia a las nuevas prácticas comunicacionales esgrimidas por los nuevos prosumidores, los cuales han logrado marcar una serie de hitos que han generado nuevas rutinas profesionales, que cuanto menos, hacen cuestionar si su implementación en el sostenimiento de los derechos universales debe primar

sobre los medios como artífices de los intereses y conciencia común, siendo legitimadores del sistema democrático.

Este estudio se centra en el análisis del comportamiento sobre el consumo y activismo informativo de los jóvenes universitarios españoles, analizados en diversos estudios existentes, complementado por un estudio de campo realizando diversos focus group; así como un estudio de caso en relación con la obsolescencia de los informativos en televisión a consecuencia de la migración del consumo informativo.

Las prácticas periodísticas del espectro poblacional analizado en el estudio, que como generador y distribuidor de noticias se convierte por sí mismo en un activista mediático, supone un reto para los medios convencionales sobre el control periodístico y editorial de la información.

Title: "News should find me!" Online News consumption habits of university students studying in the UK, Greece and Turkey

Session Type: Individual submission

Authors:

Name: Eylem Yanardagoglu

Email: eyanardagoglu (at) gmail.com

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: According to the recent Digital News reports of the Reuters Institute for the Study of Journalism the media scene is very mixed and trends are difficult to identify on a global scale. The challenges of digitalization on news organizations, future of newspapers and other traditional media present an ongoing struggle. This struggle is also altering the audiences' media use habits as technology companies such as Facebook, Twitter and Google try to shape the production as well as consumption of news. In its sample of 26 countries, the biggest change in the Digital News Report 2016 report was observed in the ways in which news accessed via social media sites. Whilst the weighted EU average stood at 46% using social media for news [the UK (35%) and Germany (31%)] Greece and Turkey are the high adoption in countries with 74% and 73% usage rates respectively. Trust in news is found to be highest in Finland (65%) and lowest in Greece (20%). This research aims to explore the factors that influence youth's news consumption behaviour in the UK, Greece and in Turkey. The data collection took place in 2017 and 2018 in London, Athens during the time the author was based as a visiting scholar and in Istanbul. About 80 students who study in some of the top universities in these cities took part in this qualitative research via answering questions in an online survey followed by an in-depth interview that lasted 30-40 minutes. This presentation aims to focus on the youth's reflections of their own habits of news consumption, the challenges, risks and opportunities they face in navigating the current media environment.

Abstract: PRESENTATION IN SPANISH

La televisión está afrontando en la actualidad profundos cambios motivados por distintos factores. La digitalización de los contenidos, la enorme penetración de los dispositivos móviles que funcionan como nuevas pantallas de visionado y la expansión de las redes sociales han alterado la forma de producir y consumir televisión al tiempo que han propiciado el nacimiento de la televisión líquida basada en el concepto de Bauman (2006), explicado por Area-Moreira y Ribeiro- Pessoa (2012). Todo este proceso se enmarca en un desarrollo de la cultura participativa (Orozco, 2010) que se ha manifestado en el empoderamiento de las audiencias.

En este contexto, los canales tradicionales de televisiritos tras la digir lsnto? o vos por parte de los emisores tradicioanles ante el avance de nuevos actores como Amazon TV?, HBO oón asisten a la huida de espectadores hacia nuevos emisores de naturaleza muy diversa entre los que se sitúan telcos (Vodafone, Movistar), nuevas plataformas de SVOD como Netflix (Lobato, 2018) o gigantes del comercio online como Amazon Prime Video. Estos agentes emergentes optaron por modelos de negocio muy diferentes a los emisores tradicionales de televisión y están sujetos al cumplimiento de normativas diferentes.

La pérdida de público es todavía más significativa entre los más jóvenes, acostumbrados a un tipo de consumo no ligado al habitual aparato de televisión. Por ello, los canales de televisión han comenzado a salir de la pantalla tradicional en busca de esos públicos.

El objetivo de esta comunicación es conocer las emergentes formas de distribución de los contenidos televisivos por parte de los emisores tradicionales ante el avance de nuevos actores como Amazon Prime Video, HBO o Netflix. Estas ventanas de emisión permiten a su vez construir audiencias transnacionales que superan fronteras.

En este trabajo se estudiarán las nuevas formas de distribución de los principales canales de televisión de España e Italia. A través de una plantilla de análisis se evaluará su presencia como emitenes en redes sociales (Twitter, Facebook e Instagram), así como en Youtube, la emisión en web y la existencia de plataformas específicas con contenidos exclusivos o no (Loves tv). En una segunda parte, a raíz del éxito recabado en Youtube con experiencias como Operación Triunfo o La Resistencia se pretende investigar qué otros formatos han alcanzado cotas de éxito en las nuevas ventanas de distribución y qué niveles de audiencia han obtenido.

Esta investigación se enmarcaría dentro de varios de los temas sugeridos en el call for paper de la Sección de Audiencias “Rethinking audience research”, “Measuring audiences” y “Transnational audiences”.

Title: [Panel] Contexts of Audience Influence Online, Panel description

Session Type: Panel Submission

Authors:

Name: Asta Zelenkauskaitė

Email: az358 (at) drexel.edu

Country: US (United States)

Affiliation: Drexel University

Abstract: The current information landscape is marked by new contexts in which audiences can experience influence. These changing conditions include online social practices where human and non-human actors co-exist thus reconfigure the notion of (active) audience. With the rise of a user-generated content and artificial intelligence, conditions for new actors of influence emerge for public sphere. This panel argues for the need to reconceptualize audience influence through the context-based conditions that mediate user-generated content. When everyone and anything can engage influence, how can we reconceptualize influence forces? What online infrastructures have been highlighted or overlooked, and what theoretical frameworks might be considered for contextualizing these concepts?

From a theory-building perspective, the media effects paradigm has largely treated influence as linear. ‘Magic bullet’ theory predicts input-output expectations, yet influence is not so simple. This panel expands the notion of influence as a non-linear process. Specifically, we argue for non-linearity through drawing on micro-and-macro aspects of analysis. Moreover, influence takes place as masspersonal communication (O’Sullivan & Carr, 2018) and it is mediated by forces of information (infra)structure (Plantin, et al., 2018). We argue that the contexts of influence become the focal forces that inevitably re-shape the concept of audience influence. This panel is designed to bridge micro and macro conceptual frameworks of influence and connect it to theories relevant to political communication, information science, and discourse analysis.

In the first of our four papers, to discuss the concept of influence, we show how news portals users, audiences, and readers make sense of the construct of Russian trolling. Discussion on the sociotechnical premises of online news portals and social networking sites such as GAB are use the Russian troll denial frame and how priming as a structural-temporal element can perpetuate these frames. In the second paper, network polarization dynamics cover how networked interactions between ideologically close and distant audiences/users shape the evolution of topical foci of discussion and contribute to the reconfiguration of communicative interactions. In the third paper, we discuss the impact of AI-driven systems of news distribution on highly polarizing topics, such as military conflicts, and examine how algorithmic designs can facilitate constructive journalistic coverage. In the last paper, metadata macrostructures are conceptualized as baking influence into the content ecosystems of platforms.

Title: Sociotechnical influence online: Frames of denial of Russian trolling

Session Type: Panel Submission

Authors:

Name: Asta Zelenkauskaitė

Email: az358 (at) drexel.edu

Country: US (United States)

Affiliation: Drexel University

Abstract: Comments on online news portals create new contexts for democratic deliberation. Yet, they also are subject to influence by various actors. This study builds on early conceptualizations of social influence to theoretically situate the concept of online Russian trolling (Chen, 2015). In the 1950s, influence literature aimed at interpreting interpersonal communication (Katz & Lazarsfeld, 1955), followed by the role of influence within mass media (McQuail, 1977) leading to the current media landscape treated as mass-personal environment (O'Sullivan & Carr, 2018), mediatized by online infrastructure (Klobas & Clyde, 2001). Given that influence in online spaces is bound to the ever-changing information architecture, how does this influence reconfigure the notion of audience? By analyzing threaded conversation in online news comments, I trace new conditions of influence as a vehicle to dominate public debate by actors who are less interested in democratic deliberation. I focus on emergent democracies, i.e. Lithuanian news portals notoriously attacked by Russian trolls. In comparison, I have analyzed the GAB readership negotiation of the term Russian troll and making sense of it. To situate these audiences' practices, I refer to sociotechnical premises of online spaces in which interaction takes place. I ask, how do audiences negotiate the construct of Russian trolling? And how do news portals' (infras)structure, i.e. affordances and temporality are and can be used to exert influence in online commenting?

While Lithuanian news portal comments and GAB are very distinct, they shared a commonality of Russian trolls' denial. This denial frame was used as a shift the blame. In Lithuania, it was about conservatives and the President Grybauskaitė (both vocal Russian critics); in the USA GAB presented anti-Democrat arguments and had anti-Semitic attacks blaming them for perpetuating the Russian troll frames.

From the structural perspective, analysis of the news portals comments shows how the first posts attract more attention (in terms of likes), thus having a potential to set the tone of the conversation. And each news story provides audiences new opportunities to enter the race for the prominence of their own comment. Yet, temporal prominence is less pronounced in GAB where audiences' messages are irrespective of the news content and are listed in the individual audience member's page.

Temporal commenting practices re-imprint principles of priming theory, found in legacy media settings (Berkowitz, & Rogers, 1986). I argue that users can strategically employ structural and temporal components presented by the sociotechnical systems and use them to gain individual influence. Two-way online spaces require a re-conceptualizing of social influence as a hybrid phenomenon that is mediated, mediatized, decentralized, and spread through individual networks or elaborated through an interpersonal threaded interaction, where influence lies not only in content but also in the context in which content is enmeshed. What are the potential of priming theory for

artificial intelligence to automate these targeted practices, especially for emergent democracies or in alt-right rhetoric e.g. on GAB? And what constitutes authentic audiences in these spaces?

Title: Metadata as Influencer: Baking Contextual Expressivity into Semantic Platforms for Users

Session Type: Panel Submission

Authors:

Name: Andrew Iliadis

Email: andrew.iliadis (at) temple.edu

Country: US (United States)

Affiliation: Temple University

Abstract: Large amounts of disparate data proliferate on apps and platforms. The ability to automatically search and reason with those data meaningfully through machine-readable metadata – without having to manually search through user-facing text – adds a layer of granularity that enhances data accessibility (Pomerantz, 2015; Gartner, 2016; Zeng & Qin, 2016). Rather than navigating through traditional web searchers for human-readable text located on frontend interfaces, semantic web technologies directly link content through vocabularies and axioms expressed in richly curated metadata. Such background enhancement increases data's contextual expressivity on the web (Stefanov & Huang, 2009; Hervás, et al., 2011) influencing users' perceptions regarding the aboutness of content.

Semantically loaded metadata schemas can arguably be described as influencing mechanisms by endowing meaning to our machines, returning results that are manipulated through backend informational infrastructures which affect user decisions about content. Such infrastructures provide context for understanding what data are supposed to be about. Context awareness in computational media has been analyzed from the perspectives of ubiquitous computing and recommender systems (Dourish, 2004; Seaver, 2015). While metadata naturally provide context there is a lack of literature about how contextualizing metadata may serve as influencing mechanisms for users.

In this paper, I draw from interviews with key practitioners involved in the creation and maintenance of semantic web metadata, focusing on their experiences in the formalization and application of metadata schemas, to show how the project of building semantic web platforms is embodied in multiple scaled projects, each with their own claims, stakes, and idiosyncrasies for users. In the first half, I formulate the concept of metadata as influencer while referencing several cases studies to show how contextual expressivity is built into and contested on semantic web platforms. I explain how search and retrieval are affected by such metadata manipulation. In the second half, I explain how metadata as influencer ecologies are shaping the future design of platforms and enterprise architectures by baking semantics into products like Siri, Airbnb, and Uber, thus affecting user interaction and engagement.

Email: neta.kv (at) mail.huji.ac.il

Country: IL (Israel)

Affiliation: The Hebrew University of Jerusalem

Abstract: For social media audiences, both political confirmation and contestation are rarely more than a click away. As individuals discuss political issues on social media, expectations raised in the academic debate range from enhanced liberty, diversity and civic engagement to possible isolation, polarization and rising cynicism (Citron & Norton, 2011; Nahon, 2016; Sunstein, 2001). One influential argument suggests that social media's tendency to sustain exchanges among like-minded users may contribute to the emergence of homophilious 'echo chambers' (e.g. Ben-David & Matamoros-Fernandez, 2016; Pariser, 2012), wherein dissent and contravening information becomes increasingly silenced (Noelle-Neumann, 1974). In consequence, different social media publics may construct increasingly selective, biased interpretations of social reality and arrive at ever more polarized, if not radicalized political viewpoints. However, most available research and theoretical work focuses on those social influences exercised by audiences' digital environments as a whole, while the role of specific user interactions is subsumed.

In the present study, we aim to examine how influence is exercised through interactive social media conversations, which unfold between individual social media users in the form of interactive dialogues, threaded discussions among multiple participants, and the direct expression of support or opposition. Identifying characteristic patterns of interaction and social influence, we investigate how the different affordances and uses of different social media platform give rise to different dynamics of contestation and consensus formation. In a large-scale study of social media discourse on Facebook, Twitter, and Whatsapp over a duration of 16 months, we trace how Israeli social media users discussed the highly controversial shooting of an incapacitated Palestinian assailant by Israeli soldier Eleor Azaria in March 2016. Specifically, we trace how the networked interactions between ideologically close and distant participants shape the evolution of topical foci of the discussion and contribute to the reconfiguration of communicative interactions. Through a computer-assisted content analysis and socio-semantic network modeling of almost a quarter of a million discursive contributions, we distinguish between both positional and interpretative

processes of intra-group consensus formation and inter-group polarization. Initial findings suggest a link between the more constrained and homophilic range of user interactions on Facebook and the greater extremism and faster polarization of posted contributions, both with regard to the adoption of conflicting interpretations and positions, and with regard to the expression of negative sentiment toward dissenting voices. By contrast, the ongoing exposure to contestation on Twitter appears to exert some mitigating influence upon at least a part of the users, limiting the proliferation of extremist positions and hostile sentiment. The study's findings contribute to developing a more nuanced understanding of social influence that can take different forms depending on salient platform characteristics.

Title: News personalization for peace: How algorithmic content distribution can impact conflict coverage

Session Type: Panel Submission

Authors:

Name: Mariella Bastian

Email: m.b.bastian (at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Name: Mykola Makhortykh

Email: M.Makhortykh (at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Name: Tom Dobber

Email: T.Dobber (at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: In our paper we discuss how the increasing use of AI-driven systems of content distribution impacts the ways in which people are exposed to news about wars and conflicts. Specifically, we discuss the place of algorithmic personalization – i.e. the tailoring of individualized news feeds based on users' information preferences – in the framework of peace journalism (PJ), a journalistic paradigm calling for more diversified and creative war reporting. Using a conceptual approach, we discuss how the deployment of news personalization can address existing pitfalls of PJ paradigm, and develop a theoretical framework for analyzing how algorithmic system designs can facilitate constructive conflict coverage.

To achieve these purposes, we provide a thorough review of existing research on peace journalism and algorithmic personalization, and analyze the intersections between the two concepts.

Specifically, we identify recurring pitfalls of peace journalism based on empirical research on constructive conflict coverage, and then introduce a conceptual framework for identifying to what degree these pitfalls can be mediated – or worsened – through algorithmic system design. By doing so, we address the following research questions: In which ways can AI-driven distribution technologies influence the realization of central objectives of peace journalism? Which ethical concerns arise from the use of algorithmic personalization for constructive conflict coverage? And what are possible technical solutions through which algorithmic personalization can contribute to strengthening peace?

Through our analysis we identified five major aspects of conflict coverage which can be affected by algorithmic content personalization: relativity, objectivity, diversity, transparency, and engagement. For each of these aspects we examined potential opportunities and pitfalls related to the introduction of news personalization systems and connected them to concrete algorithmic designs (e.g. context-aware recommender algorithms in the case of relativity or point of interest cross-referencing for

objectivity). Based on our examination, we propose a conceptual framework for assessing interactions between AI-driven distribution techniques and peace journalism. Our findings suggest that AI-driven distribution technologies can facilitate constructive war reporting, in particular by countering the effects of journalists' self-censorship and by diversifying conflict coverage. The implementation of these goals, however, depends on multiple system design solutions, thus resonating with current calls for more responsible and value-sensitive algorithmic design in the domain of news media. Additionally, our observations emphasize the importance of developing new algorithmic literacies among journalists both to realize the positive potential of AI for promoting peace and to increase the awareness of possible negative impacts of new systems of content distribution.

Title: From audiences to networked publics: participative cultures and new involvement experiences in the (social) network society

Session Type: Individual submission

Authors:

Name: Alfonso Amendola

Email: [alfamendola \(at\) unisa.it](mailto:alfamendola@unisa.it)

Country: IT (Italy)

Affiliation: Dipartimento di Studi Politici e Sociali - Università degli Studi di Salerno

Name: Simona Castellano

Email: [sicastellano \(at\) unisa.it](mailto:sicastellano@unisa.it)

Country: IT (Italy)

Affiliation: Dipartimento di Studi Politici e Sociali - Università degli Studi di Salerno

Abstract: On the basis of the tecno-socio-cultural factors which have determined the transition from the concept of audience to the concept of networked publics (boyd 2010), in a context in which people pursue the ideal of an always on (Boccia Artieri 2012) state of existence in a (social) network society (Castells 1996), the main purpose of the paper is to establish how it is possible to think about new ways of engaging and defining new experiences for Internet users, for example by subjects such as brands and companies.

The concept of networked publics underlines how people are today involved with the media and through them. The birth and the advent of Web 2.0 and in particular of social network sites, in fact, changed the concept of fruition: people today are not simply users and consumers of a media product, but they also are producers, becoming then prosumers. They take on an active role in spreading contents, rather than being passive viral media carriers (Jenkins, Ford, Green 2013). Precisely for this reason, it becomes essential for brands and companies to rethink their relationship with their audiences, who actively focus their attention on the message with a real value for them (Dayan 2005). With this research, we will try to shed light on the new ways of engaging networked publics, through the analysis of the successful case history of the brand Starbucks. This company has always been attentive to innovations, experimentations and personalization and above all to user generated contents (Amendola, Castellano, Troianiello 2018), also on social network sites and in particular on a platform like Instagram, used not only by young audiences, but also by Millennials (ibidem). With the support of sentiment analysis - to understand and study the opinion of the users about the brand (Arvidsson, Delfanti 2016), and also their expectations and appreciation - this research wants to define the guidelines for a communication that aims to achieve more and more engagement with users. They, in fact, can provide their contribution in a way that is certainly different from mainstream productions, but that anchor themselves to people's daily life (Boccia Artieri 2012).

Affiliation: Tsinghua University

Abstract: This study examines generational differences in media use based on pooled-data analysis of CGSS (Chinese General Social Survey) 2010-2015. In order to show a full picture of the substitutability between new and old media, the study brings age heterogeneity of respondents and time effect into consideration.

This study distinguishes four generations based on the year of birth, with the 'newspaper generation' (people who born before 1969), 'broadcast generation' (1970-1979), 'TV generation' (1980-1989) and 'internet generation' (born after 1990) and aims to explore whether generations differ in their frequency of media use.

The research analyses five-year pooled data CGSS2010-2015 (CGSS2014 data is missing) to examine the influence of internet on old media among different birth cohorts and how this effect changes over time. New media refers to the internet, old media include newspaper, broadcast and television.

The results are summarized as follows: First, for the 'newspaper generation', 'broadcast generation' and 'TV generation', Internet heavy users are usually more willing to use newspaper and broadcast as well. Internet heavy users are information seekers. They have a strong need of information and usually involved in multi-tasking media activities. Nevertheless, only the internet heavy users in 'TV generation' will regard TV as another channel to get more information, which indicates that generations may adopt specific patterns of media use when they are young and remain faithful to those throughout their lifespans. 'TV generation' have a stronger attachment to television than their previous and later generation.

Second, in terms of the time effect, the empirical data proved that the broadcast shows a stronger vitality in digital age compared with newspaper and television. The frequency of broadcast use does not drop significantly until 2015. However, the frequency of newspaper and television use has shown a significant downward trend since 2011.

Third, for the 'internet generation', the use of the Internet has no effect on the use of other media. Even internet heavy user, the one who has strong need of information, would not choose other media to search more information. This suggests that these digital natives would rather confine themselves to the internet cocoon than collect new information through old channels.

This study provides new insight to understand the current media ecology. The relationship between new and old media is 'more-more' instead of 'more-less', which cannot be explained by functional displacement, but should be understood from the perspective of audience's information need and media consumption habits.

Abstract: La fragmentación y la personalización en el consumo de noticias parecen amenazar la posición de las marcas periodísticas en el mercado. Al mismo tiempo, son muchos los que alertan sobre la polarización política de los usuarios que ambas tendencias promueven. Sin embargo, en aquellos contextos mediáticos polarizados en los que fenómenos como las fake news logran influir en los procesos democráticos, la necesidad que los usuarios tienen de acceder a una información veraz, equilibrada, rigurosa y creíble es aún más crítica. Eso ofrece a las empresas informativas la oportunidad de seguir creando valor para sus audiencias a través de la elaboración de unos contenidos de calidad. Según la teoría del branding de las marcas periodísticas, en esa calidad se fundamentan la credibilidad y el valor que dichas marcas aún tienen para buena parte de la audiencia. No obstante, algunos estudios han afirmado que la congruencia ideológica entre audiencia y empresas periodísticas es también uno de los principales predictores del valor de marca. Este trabajo tiene el objetivo de medir el valor de marca basado en el consumidor (Consumer-Based Brand Equity o CBBE, en adelante) que tienen 5 de las principales marcas informativas en Cataluña. En un contexto mediático especialmente polarizado, esta investigación analiza cuáles son las dimensiones que tienen mayor impacto en el CBBE. La metodología utilizada es el análisis factorial exploratorio (AFE) y confirmatorio (AFC) de más de 15.000 respuestas a una encuesta realizada a los lectores de 5 cabeceras catalanas. Los resultados muestran, por un lado, que el CBBE está principalmente definido por la calidad periodística percibida por los usuarios –la cual está relacionada con aspectos como la ecuanimidad, la objetividad o la independencia política- y por su

satisfacción. Por otro lado, los resultados indican que los consumidores prefieren las marcas periodísticas caracterizadas por dicha calidad que aquellas en las que perciben un sesgo político. Esa tendencia es diferente en los usuarios de las marcas identificadas como de izquierdas e independentistas, los cuales otorgan valor a las marcas que asocian con ese tipo de sesgo. Este trabajo discute la validez de estos resultados y sus implicaciones para la teoría sobre la gestión del valor de las marcas periodísticas en un contexto de polarización política.

Abstract: Typically, the word “binge” is associated with some form of excess, such as overindulgence of food or excessive consumption of alcohol. That is no longer the case for media binge-watching. As early as 2013, Netflix declared that binge-watching was the new normal, noting that 61% of US adult television streamers binged regularly (Netflix, 2013). In just a few years, binge-watching (hereby defined as the consumption of three or more episodes of a show in one sitting) has evolved from its original roots as an extreme form of watching mostly associated with fans and fandoms (Jenner, 2017) into a common behavior adopted by audiences worldwide. Millennials, and in particular college students, who have more free time and more flexible schedules than their fully employed generational counterparts, are particularly prone to binge-watching (MorningConsult, 2018).

In spite of the considerable impact of binge-watching on audiences, the narrative structure of shows, the structure and revenue models of the media industry, etc. (Bernadin, 2018; Schweidel and Moe, 2016; Poniewozik, 2015; Graser, 2013) very little research has been done on the topic by communication and media scholars. Thus, many basic questions remain unanswered, such as what makes young people engage in binge-watching and what are the consequences of adopting this practice.

The present study relies on data from a survey of college students (N=378) from two large universities to explore part of the answer. Specifically, we focus on socially-related predictors and consequences of TV binge-watching (as opposed to psychological variables). We do so while recognizing that not everyone who binge-watches does it in equal measure (Trouleau et al, 2016). Thus, we explore social determinants of binge-watching with a particular focus on highlighting differences between heavy binge-watchers (HBWs) and other TV viewers, such as regular binge-watchers (RBWs) and non-binge-watchers (NBWs).

The data support most of the study's hypotheses. First, they challenge the view of HBWs as less socially-active than other individuals. Supporting H1, we found no significant differences in sociability and social engagement between HBWs and RBVs or NBVs. In fact, HBWs could binge-watch more often precisely because that would allow them to take on social media or engage in face-to-face interactions and gain social capital by sharing their knowledge with others. Thus we proposed that one benefit for HBWs in particular is that they may start to be viewed by others as a source of advice on what shows to watch. Supporting H2, data showed that HBWs are more likely to be opinion leaders in this domain than RBWs and NBWs. It was also expected that the Fear of Missing Out (FOMO) on a particular show should be higher among HBWs, who have the most to lose socially if they appear to not be "in the know" (H3, also supported by data). Finally, we found that HBWs may experience more negative consequences in terms of work performance and sleep deprivation than RBWs and NBWs (H4 and H5, supported).

Contributions to literature and implications for countering the negative effects of heavy binge-watching are discussed.

Title: Comparison of Game Use Factors Affecting Depression and Psychological Well-being: Focusing on Young-Generation Users

Session Type: Individual submission

Authors:

Name: HUN KIM

Email: kimhun6301 (at) naver.com

Country: KR (Korea, Republic Of)

Affiliation: Sungkyunkwan University

Abstract: Previous studies that examined the relationship between media and mental outcome mainly focused on social media and television as media affecting users. Most previous studies have checked effects of media on mental problems, but only a few studies have found that using game has effects on positive outcome such as individual well-being. This study aims to investigate the game - related factors affecting depression and happiness as an exploratory study. In order to present an integrated model between using game and user's mental outcomes, categories of independent variables are composed of usage patterns, game motivations, individual and social level of game factors, and factors regarding young generation's life. The independent variables are composed of categories related to usage pattern (game usage, platform and solo & multiple usage), game motivations (social, achieve and flow) game use's behavior in part of individual (game efficiency, over-immersion and game leadership) and social level (game subjective norm and participation in online community), and individual and environmental in the game user's daily life (study & friendship stress, level of communication with parents, relationship with friends and teachers).

This data was collected from 968 respondents who are 10s and early 20s in South Korea during 2017 considering gender and school grade. 10s and early 20s were conducted for students in middle, high school and college students who are main users of game. In school grade, 344 students in middle school (35.5%), 333 students in high school (34.4%), 252 were college students (26%) and 39 were retakers for university (4%).

The results of the regression analysis of model for depression showed that over-immersion in game ($B = .032$, $p = .072$), study stress ($B = .117$, $p = .000$), friendship stress ($B = .409$, $p = .000$) significantly affected dependent variable positively. The level of communication with parents was negatively related to depression ($B = -.036$, $p = .063$). In the model of psychological well-being, game leadership ($B = .119$, $p = .022$), subjective norm of game ($B = .129$, $p = .000$), level of communication with parents ($B = .601$, $p = .000$), relationship with friends ($B = .384$, $p = .000$) and relationship with teachers ($B = .121$, $p = .012$) significantly affected dependent variable positively. Social motivation ($B = -.136$, $p = .055$) and study stress ($B = -.165$, $p = .046$) negatively affected psychological well-being.

Regarding implications of the study, social factors related to game mainly affect well-being. It is confirmed that the game world is similar with the characteristics of the real world, which must interact with others and adhere to certain norms. The over-flow in game effect on depression is consistent with previous studies. We predicted that independent variables affecting well-being and depression are the same but direction might be different only. The results of this study, however,

found that the number and characteristics of independent variables on two dependent variables were different.

Affiliation: Universitat Pompeu Fabra

Abstract: Este panel nace del trabajo de la sección de Estudios de audiencia y recepción de la Asociación Española de Investigación de la Comunicación (AE-IC) y tiene como objetivo presentar un panorama de las investigaciones sobre audiencias que se están llevando a cabo en España.

Una de las propuestas trata sobre las audiencias sociales y las estrategias publicitarias y analiza el papel que estas dinámicas de consumo y participación en las redes sociales tienen para las campañas de comunicación.

Para completar este escenario, otra de las propuestas que conforman el panel aborda los retos de la actividad periodística en Youtube. Partiendo de la escasa participación periodística en este entorno, la investigación presenta cuál es el conocimiento que tienen los profesionales sobre sus audiencias y qué papel les otorgan, cuando el discurso que mantienen es que dichas audiencias deben cuidarse.

La tercera de las comunicaciones aborda el produsage en las redes sociales y analiza la configuración de contrapúblicos a través de la producción trans* en Youtube. Quienes producen y consumen vídeos trans* son grupos que verían conflictiva su equiparación con el público dominante y, a través de los vídeos promueven un espacio reflexivo de construcción de identidades no-binarias.

La cuarta propuesta trata sobre la incorporación de los usos en medios sociales que realizan los estudiantes fuera de clase en las prácticas de aprendizaje de las aulas universitarias y expone la percepción que tienen los universitarios españoles sobre el uso de las redes sociales con fines didácticos en el aula. Los y las alumnas valoran la utilidad de estas herramientas, aunque también se muestran cautos con aspectos como la dispersión y la privacidad. Recoger sus voces permite generar pautas para el manejo de las redes sociales en el aula más acordes con sus inquietudes.

Abstract: La conversación social que se genera entre usuarios de redes sociales en los diferentes consumos multipantalla, antes, mientras, o después de la exposición de un programa televisivo aumenta cada vez más. La audiencia social se contempla en la estrategia de comunicación tanto de los medios como de las marcas. Ambos no solo la consideran como cifra de seguimiento de televisión y, por tanto, de impacto televisivo, sino como índice de valoración del programa, posibilitando la posible mejora de la eficacia de campañas de comunicación.

Este trabajo tiene como propósito profundizar en los premios a la eficacia publicitaria, impulsados por la Asociación Española de Anunciantes, únicos galardones que premian los resultados de las campañas realizadas en España. El libro de los casos ganadores en el que se recoge, con brevedad, la estrategia de comunicación desarrollada, la idea y ejecución y los resultados o efectos, se publica cada año. Esta investigación analiza los últimos cinco años (2014-2018) con el propósito de detectar las estrategias orientadas a los diferentes tipos de audiencias, con especial atención a las sociales y al consumo multipantalla.

Se concibe, así, un estudio exploratorio y descriptivo basado en la investigación documental que profundiza en el contenido de los casos eficacia teniendo en cuenta cuatro tipos de información: categoría, tipo de premio, tipo de producto y agencia. Se hace una lectura exhaustiva de cada caso por si las audiencias sociales fueran mencionadas. En particular, se profundiza en las decisiones estratégicas, en la ejecución y en los efectos. Los resultados permitirán confirmar la presencia y el impacto que tienen este tipo de audiencias y consumos como contribución a la eficacia de las campañas.

Este estudio se sitúa en una de las líneas de trabajo del grupo E-COM de la Universidad de Alicante y del grupo INNECOM de la Universidad Nebrija de Madrid.

Title: Between participatory culture and the exploitation of users: the spanish-language booktubers and the publishing industry

Session Type: Individual submission

Authors:

Name: José-Miguel Tomasena

Email: josemiguel.tomasena01 (at) estudiant.upf.edu

Country: MX (Mexico)

Affiliation: Universitat Pompeu Fabra

Abstract: Literary vloggers (commonly known as booktubers, for the acronym of Book + Tube) have gained a strong social recognition as an influential group to promote reading, specially among children and young adults. (Lluch, 2017; Tomasena, 2016).

This paper is part of a PhD project about the communicative practices of spanish-language booktubers. It pretends to describe and understand how booktubers relate to the main actors of the literary field (authors, publishing houses, literary agents, book fairs, etc). It uses a digital ethnographic approach, that integrates an auto-ethnographic point of view (through my own YouTube channel), semi-structured interviews, visual and discourse analysis and descriptive statistics.

Booktubers have built powerful and joyful communities around the interest in books and reading. This dynamism has collided with the dual logic of the literary field, that, according to Pierre Bourdieu, functions around the dichotomy of “pure” and “commercial” art (Bourdieu, 1996): In the eyes of the purists, booktubers are just a marketing trend; they are associated to “low” and delegitimized genres, like fantasy, horror, sci-fi, young adult. On the other hand, many institutional forces have established alliances with them because of their popularity: book fairs and libraries invite them indie and self-published authors look desperately for their support and publishing houses have included them in their marketing campaigns. Recently, some of the most popular booktubers have become young-adult book authors.

By analyzing how affinity groups in YouTube negotiate their practices with the publishing industry, this article contributes to the existing debate between the notion of participatory culture (Jenkins, Henry, Clinton K., 2009; Jenkins, Ito, & Boyd, 2015) and the interest on labour and the exploitation of users (Fuchs, 2014; Terranova, 2000) and the cooption of creativity (Das, Ytre-Arne, & (eds.), 2017).

Abstract: La televisión sigue siendo el medio tradicional de mayor penetración, y dos terceras partes de los jóvenes españoles entre 18 y 29 años aseguran ver las noticias emitidas por esa vía diariamente (Matsa, Silver, Shearer, y Walker, 2018). No obstante, Youtube es la segunda red social para el consumo de noticias, sólo por detrás de Facebook (Reuters Institute, 2018), y en 2018 la plataforma ha incrementado su compromiso con el periodismo de calidad promocionando fuentes informativas con autoridad y recomendando el consumo de dichos vídeos para combatir la desinformación (Lapowsky, 2018). Los medios, conscientes de esta realidad, han reaccionado aumentando su oferta de contenidos audiovisuales (Kalogeropoulos, 2018), a pesar de que ello suponga descentralizar su producción y distribuir sus contenidos en plataformas de terceros (Peer & Ksiazek, 2011).

Este contexto se ha rodeado de múltiples incertidumbres: ¿por qué la actividad periodística en Youtube es tan reducida?, ¿qué aporta esta herramienta a los periodistas?, ¿qué saben de su audiencia y cómo se relacionan?, ¿influye el usuario en la planificación y producción del contenido?.

En un estudio preliminar se ha elaborado un directorio analizando la presencia de periodistas españoles en Youtube y creando categorías en función de la participación detectada. Los datos muestran que la presencia de profesionales en la Red es muy limitada: de más de siete mil periodistas inscritos en España, son 207 quienes tienen un perfil público en la plataforma, y de ellos tan solo 36 obtienen resultados satisfactorios.

En esta segunda fase se ha aplicado metodología cualitativa con entrevistas en profundidad a diez de estos periodistas con los mejores resultados en su canal, teniendo en cuenta que tienen diferentes perfiles y edades, así como distintos modos de usar la herramienta.

Los primeros resultados indican la importancia de cuidar a la audiencia, y la retroalimentación que supone en muchos casos en los que sugieren temas a tratar o debatir. En cuanto a las métricas de desempeño del canal, hay un elevado consenso en que la métrica más adecuada es el ratio de retención de audiencia por encima de otros datos más conocidos como los “me gusta”, los comentarios en texto, o el número de reproducciones del vídeo. Con respecto a la duración de vídeos, contradicen la tendencia reconocida en otros tipos de contenidos de que cuanto más corto mejor.

Los entrevistados coinciden mayoritariamente en señalar la necesidad de estar en una plataforma como ésta, por las posibilidades que brinda de tener un medio propio, pero también explorar modos distintos de contar historias, nuevos formatos, que atraigan a las audiencias más jóvenes.

Abstract: For the study of cinema as a cultural practice, historical research into the experiences of audiences is a quintessential area of investigation. Giving voice and visibility to film spectators is a bottom up approach, which contributes to an in-depth analysis of the spatial and social conditions of the cinematic experience (Kuhn 2002).

Our research aims to move beyond the particularism of local and national cinema histories. We intend to explore - through a more systematic comparative approach - the cross-national voices of film audiences in seven European countries (Biltereyst & Meers, 2016). Drawing from the AHRC-funded research 'European Cinema Audiences' this paper examines the linguistic, cultural, political and ideological challenges of a comparative oral history approach. Using several different theoretical perspectives (Bornat 2013; Koleva, Coleman and Bornat 2013; Keightley and Pickering 2013; Steen Mangen 2013) on the complexity of working with memory across national and linguistic barriers, we propose new methodological recommendations while outlining the importance of transnational and transcultural perspectives for memory studies today. The issues of language and translation of oral history; the danger of losing the cultural specificity and the intention of finding shared grounds across different countries will be some of the concerns raised and explored within the context of our paper.

Our audience is the last surviving generation for which going to the cinema was the only way to experience movies. Therefore, capturing their voice and their memories, giving visibility to their personal experiences, and comparing their narratives will provide a vital contribution to the understanding of the transnational history of European film culture. A total of 140 video-interviews on their memories of going to the movies in the 1950s have been conducted in seven languages in the cities of Ghent (Belgium), Bari (Italy), Leicester (Great Britain), Rotterdam (The Netherlands),

Brno (Czech Republic), Magdeburg (Germany), and Gothenburg (Sweden) with respondents born between 1925 and 1945. This unprecedented project - which combines oral history, an online repository created with local and national archives across the seven cities, and programming data for 3 full years - will attempt to make use of innovative digital tools and methodologies to become a model for comparative work of this kind.

Abstract: La producción trans* en Youtube es parte de un proceso de construcción simultánea de identidades y comunidades. La apropiación de estos vídeos y la práctica del produsage (Bruns, 2016) cristalizan en un conjunto de contrapúblicos (Warner, 2002; Barnett, 2015) que, gracias a estas creaciones que cuestionan las representaciones hegemónicas del cuerpo y la sexualidad, se desplazan desde las fronteras o márgenes de lo normativo hacia el centro de una comunidad. Lejos de elaborar un único discurso, lo que aparece en estas conversaciones en red es un proceso reflexivo de construcción identitaria que constituye un espacio de subpolítica (Beck, 1998) basado en la resistencia. Quienes producen y consumen vídeos trans* son grupos que no pueden equipararse o que incluso verían conflictiva su equiparación con el público dominante (Trey Barnett, 2015). La exposición trans* online configura prácticas de recuperación identitaria desde las que proyectar y renarrar el yo (Jenzen & Karl, 2014; Wargo, 2015), así como un espacio de pertenencia (Cavalcante, 2016). Con todo, existen diferencias en la forma en la que cada persona o grupo imagina la comunidad trans* online, así como sesgos de género y diferencias de capital social en cuanto al nivel y difusión de la actividad (Jenzen & Karl, 2014).

Para explorar qué tipo de inercias sistémicas y culturales, y qué clase de resignificaciones promueven estos vídeos y sus apropiaciones, hemos revisado toda la producción del canal de Elsa Ruiz Cómica, hemos realizado un close reading de un conjunto de 11 vídeos, escogidos por su temática, y hemos llevado a cabo un análisis textual cualitativo de los comentarios que los acompañan.

Tanto los vídeos como los comentarios vertidos con posterioridad acerca de los mismos promueven un espacio reflexivo de construcción de identidades no-binarias (Halberstam, 2018) y ofrecen un conjunto de prácticas subpolíticas (Beck, 1998) que amplía el repertorio identitario dominante. Así, el análisis que se ha llevado a cabo recoge la creación de significado (Silverstone, 1999) que se produce en las performances del género y la sexualidad (Butler, 2007), sean éstas reproductoras o contrahegemónicas (Kellner & Kim, 2010). El espacio creado por Elsa, como el de otros pequeños

contrapúblicos, permite que las voces de quienes participan en estos audiovisuales sean oídas y adquieran protagonismo, contribuyendo al diálogo democrático (Wright, 2012) y, quizá, impulsando el cambio social en los espacios dominantes. Desde el análisis del produsage trans* en youtube, las identidades transgénero dejan de ser sólo observables y pasan a ver (y mostrar) el mundo con sus ojos (Halberstam, 2018).

Affiliation: Universidad de Murcia

Abstract: El uso que los jóvenes hacen de las redes sociales en su día a día es enorme, siendo sin lugar a duda la práctica mediática que más realizan (Noguera, 2018). En este contexto, cada vez son mayores los esfuerzos por incluir los usos en medios sociales que realizan los estudiantes fuera del aula dentro de las prácticas de aprendizaje de las aulas universitarias (Brazuelo, F., y Gallego, 2014; Mateus, Aran-Ramspott, Masanet, Figueras-Maz, 2017; Masanet y Ferrés, 2017; Marta-Lazo, Marfil-Carmona, y Hergueta-Covacho, 2017). Sin embargo, la aplicación innovadora de la tecnología móvil y de sus redes sociales en las universidades españolas es todavía escasa, y su aplicación didáctica presenta al mismo tiempo aprobación y crítica entre los estudiantes. En esta comunicación exploramos la percepción que tienen los universitarios españoles sobre el uso de las redes sociales con fines didácticos en el aula, una percepción contradictoria. Para ello, presentamos datos del proyecto I+D+i “Competencias mediáticas de la ciudadanía en medios digitales emergentes en entornos universitarios” financiado por el Ministerio de Economía y Competitividad de España provenientes de 897 encuestas realizadas a estudiantes universitarios españoles de titulaciones vinculadas a la Comunicación y la Educación, así como de 6 grupos de discusión realizados en Sevilla, Madrid, Huelva, Barcelona y Oviedo durante el curso 2017-2018. Los datos muestran cómo la aplicación de las redes sociales en el desarrollo docente es la práctica más extendida entre las universidades españolas, pudiendo diferenciarse entre prácticas formales (organizadas por el profesor) e informales (organizadas de manera espontánea por los alumnos). Esta última es la más común entre los universitarios siendo Whatsapp la herramienta interna más utilizada, seguido de lejos por Facebook e Instagram. Al aprecio por la comunicación directa e instantánea de estas redes, se suman temores por parte del alumnado sobre aspectos vinculados a la distracción en el aula o invasión de su privacidad por parte de los docentes. Esta comunicación concluirá con pautas concretas para un manejo de las redes sociales en el aula más acorde con la sensibilidad de los alumnos.

Title: Between anxiety and apathy: romantic audiences' 'new' pleasures

Session Type: Individual submission

Authors:

Name: Benjamin De La Pava Velez

Email: bdelapava (at) gmail.com

Country: CO (Colombia)

Affiliation: Universidad Jorge Tadeo Lozano

Abstract: Based on a research project with group screenings and interviews (group and individual) of film romantic audiences in East London, this paper proposal seeks to reflect on some of the challenges and results that studying audiences of films no longer in a cinema or festival provided (Blue Valentine, Her, Once, 500 Days of Summer and Don Jon). This as a way to further nuance the understanding of audiences' experiences in an era of diffused, or ever-present, media experiences. Why study film audiences through films that no longer provided a 'natural occurrence' of people? On the one hand, because I posit that the idea of privileging audiences that occur at specific, ritualistic spaces is helpful only insofar as one assumes there's a special, unique type of information and insight to be accessed and obtained that cannot be otherwise be known. This via events separated from the ordinariness of daily life. The problem with these seemingly self-evident claims for many researchers is that it drives an unhelpful wedge, methodologically and theoretically, between types of audiences as if some were better because, like the anthropologists of the 19th and early 20th century, one has "simply found them." Such has been the case with plenty of scholarship regarding film audiences, where the ethnographic turn has been strongly felt, particularly in an era where some claim the death of cinema-going (Cherchi Usai, 2001). Thus, the focus shifts from the act of reception to its locus (See Ateşman, 2015; Dickson, 2015; Martinez, Frances, Agirre, & Manias-Muñoz, 2015; Smets et. al, 2016). However, this is to forget that there has never been anything "natural" about audiences. Also, this understanding of film audiences fails to take into account that people constantly intertwine their experience of a given phenomenon -its values, intentions, practices and discourses- with its processes of mediation (See Livingstone, 2005; Banaji, 2006; Iglesias-Prieto, 2004). Such is the case, unsurprisingly, with romantic love. Such is my contention, that, to understand the experiences of audiences, both as such and as romantic selves, inviting people to congregate and watch a film, as I did, by no means provides lesser or "manipulated" evidence in regards to their experiences as audiences and as subjects of wider socio-cultural phenomena. Further, the choice of romantic audiences obeys two main criteria: First, while some of the seminal works of the field dealt with romantic audiences (Ang, 1986; Livingstone, 1991; Radway, 1984), little attention has been given to how these audiences and their experiences might have changed in the time since. Plenty has (Bauman, 2000; Dröge & Voirol, 2011; Hardt, 2011, 2014; Illouz, 2012; Jónasdóttir & Fergusson, 2014). Second, because some of these changes have had to do with the mediatization (Alberti, 2013; Deleyto, 2000, 2004; Peberdy, 2011), and technologisation of romantic love itself (Kaufmann, 2012; Ong, 2016; Smith & Duggan, 2013), to which, undoubtedly, both audiences and films have been paying attention to.

Abstract: The rise of the Internet has dramatically enriched people's everyday life, while it also raises worries about users' mental health. An enormous literature has focused on the so-called "Internet paradox" – whether the use of the Internet is improving people's life well-being or not. Some hold that Internet exposure was negatively associated with the mental health condition, an important indicator of life well-being, while others disagree. Along with the debate are criticisms on research limitations including small sample size and endogeneity caused by omitted variables and the interaction between Internet use and depression, which limit the research's ability to provide conclusive evidence.

Taking proper advantage of the nationally representative panel data - China Family Panel Studies (CFPS), this study aims to move towards a more satisfactory answer to the question: how is the Internet embeddedness linked with life well-being, especially the development of depressive symptoms?

Limitations in previous studies could be overcome to some extent by the use of the aforementioned dataset. Launched in 2010 by the Institute of Social Science Survey (ISSS) of Peking University, CFPS interviewed 14,960 families with 42,590 people as the baseline and conducted follow-up survey every two years. Until now, it has finished five waves of survey including 2010, and released 4 waves of data for public use, namely, 2010, 2012, 2014, and 2016, which are the years witnessing the rapid development of the Internet in China. Each of the four waves covered over 8,000 adolescent respondents. The large sample size of CFPS data addresses the problem of the small sample size in previous studies. As for the endogeneity problem, scholars usually try to include control variables such as gender, age, education, and income, but other omitted variables could still exist. The use of panel data is able to eliminate the influence of all the time-irrelevant omitted variables, reducing bias in analysis effectively.

The basic hypothesis for our study is that the greater embeddedness in the Internet is associated with the increased likelihood of developing depression. Additionally, we will consider sociodemographic factors to explore the nuances of the above association. Through these analyses, we aim to achieve more robust results and draw a few practical implications from our findings.

Title: Not sharing news on social networking sites: Why young adults abstain from participating in news diffusion on Facebook (but still expect to find shared news in their feeds)

Session Type: Individual submission

Authors:

Name: Maria Elliot

Email: maria.elliott (at) lnu.se

Country: SE (Sweden)

Affiliation: Linnaeus University

Abstract: Today, social networking sites have become a major news source in many countries - especially among young news consumers. Studies have indicated that social media users who also are interested in keeping up with current events employ different media strategies for news purposes: Some users regularly visit online news sites as well as using social media, other users rely mainly (or only) on social media as a provider of news.

In Sweden Facebook is the most prominent social media news source among young adults. Since only a minority of these Facebook users follows news organisations or journalists on Facebook, they trust their social network to forward the necessary news through sharing. This turns one of the signature affordances of social networking sites – user activity – into a crucial condition for news dissemination: Without news sharing on Facebook, or other social media, users that rely on social media alone for their news would be left in the dark.

Considering this, it is remarkable that many Facebook users shun participation in news activities, not only when it comes to taking part in digital news discussions but also when it comes to sharing news. Far more read shared news on Facebook than share news with the network. The object of this paper is to shed some light on the reasons behind this paradoxical attitude. Why do Facebook users, who are interested in keeping up with news and current events and who expect to find news on Facebook, deliberately abstain from contributing to circulating news on the networking site?

In order to explore this, a purposive sample of young adult Swedish Facebook users was investigated. Qualitative interviews were conducted in which the interviewees elaborated on their reasons to share or not to share news. Results from the analyses of the interviews indicate that one salient reason behind not sharing is grounded in one particular social quality of the sharing act itself: the offering of a gift. If the intended receiver does not confirm receiving this gift, the forwarder does not feel appreciated. Another important reason for not sharing news on Facebook is the lack of control, both regarding the validity of the content of the shared news item and regarding the network's perception of the person sharing that particular news story.

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: The use of social media as a second screen platform to discuss television programs is already an established reality in Western audiovisual markets. Social television is a way of socialising the viewing experience in a context where audiovisual consumption is individualized and audiences are fragmented. Several studies have analysed the responses of viewers on different social networks, mainly Twitter. Most studies have focused on the textual content posted by users and the network relationship created by the conversations of ad hoc publics created around a hashtag (Bruns & Burgess, 2015).

However, images are becoming increasingly important on social networks, not only on the image-oriented platforms such as Instagram or Snapchat, but also on Facebook and Twitter that were originally more text-focused. In this paper we analyse the visual content shared on Twitter by the viewers to explore what is expressed by this type of data and the relationship with the television content. The sample includes visual data shared about two popular music talent shows from the United Kingdom and Spain.

This study has been carried out by GRISS (Research Group on Image, Sound and Synthesis) at the Universitat Autònoma de Barcelona (Spain). It has been developed within the framework project “Social Networks and European General-Interest Television (EU-5): Screen Uses and Network Activity of Audiences” (RSTV), of the National R&D Plan, founded by the Spanish Ministry of Economy and Competitiveness (MINECO-FEDER) (ref.: CSO2015-65350-R). The focus of this

project is to explore and explain the synergies that allow broadcasters to innovate in their social networks' strategies through the most popular European television content, and to identify correlations between the broadcaster's actions and the social audience's response.

The main results show that in both countries an average of 15% of the original tweets includes visual data, mostly including digital popular culture memes and images from the television program that is being aired at that time. In the latter case, the audiences reuse the images to not only talk about the television content but to talk about their daily life. Furthermore, it is important to highlight the trend by British viewers of posting images of where they are watching television, a type of image that is not found in Spain. Finally, it is also relevant to highlight that more than a quarter of the images have a mutual dependency to the text of the tweet, putting the visual data at the centre of the message. To conclude, the results highlight that viewers take a role as digital editors that create a parallel visual conversation on Twitter with visual data.

Title: Breakneck Brexit: engaging with political storytelling in live professional wrestling

Session Type: Individual submission

Authors:

Name: Annette Hill

Email: annette.hill (at) kom.lu.se

Country: SE (Sweden)

Affiliation: Lund University

Abstract: The performance of politics in professional wrestling is an unusual example of political and cultural engagement taking place at the same time in the live theatre of sports entertainment. This paper explores the work of professional wrestlers in political storytelling for live audiences. It takes as its focus Swedish wrestling, with a storyline that mines the rise of populism and anti-immigration discourses in Europe. Through qualitative interviews with wrestlers and audiences, and observations at live matches, the research analyses the way wrestlers build an engagement profile, inviting audiences to politically and emotionally engage with the performance of wrestling as part of a broader narrative of populism in Europe, in particular Brexit. By crafting characters as elite politicians, or migrant workers, with a back story of right wing parties and political power, wrestlers shape ways of engaging their audiences and fans with a visual representation of real world politics. At a time when politics feels intractable, for example the coalition government in Sweden, or Brexit negotiations in Europe, the local space of Swedish wrestling enacts an alternative story of swift action, where good triumphs over evil. The engagement profile of these wrestlers and their various live matches offers a clear invitation to their audience to negatively engage with populism and right wing extremism, and positively engage with liberal democracy and social justice. Political storytelling in wrestling shapes a raw form of emotional and physical engagement with an imagined reality where Brexit is beaten, and power hungry politicians forced into submission.

Title: Estudios de audiencias y medios comunitarios: qué significa escuchar radio en el proceso de convergencia tecnológica

Session Type: Individual submission

Authors:

Name: Susana Morales

Email: susanamoralesar (at) gmail.com

Country: AR (Argentina)

Affiliation: Centro de Estudios Avanzados - Facultad de Ciencias Sociales - Universidad Nacional de Córdoba

Abstract: Esta ponencia se propone trabajar sobre algunos resultados producidos en el marco del proyecto Radios cooperativas y públicos: estudios de audiencia del Gran Córdoba I y II que permiten abordar algunos tópicos del debate sobre las transformaciones en el consumo de medios ligados al proceso de convergencia tecnológica. En particular, nos proponemos trabajar en torno a la escucha de radio en contextos metropolitanos, en ciudades del Gran Córdoba.

En ese proyecto se desarrollaron ocho estudios de audiencia, uno cuanti y uno cualitativos, para cuatro radios comunitarias de gestión cooperativa en cuatro ciudades de nuestra provincia . De esos estudios se desprenden un conjunto de datos sobre la relación entre medios tradicionales y digitales en el consumo mediático que aportan al debate respecto de algunos supuestos sobre el proceso de convergencia que tienden a ser naturalizados, como el de la fuga hacia dispositivos y medios digitales, o como la pérdida de centralidad de los medios tradicionales, o la caída en el consumo de radio.

En particular, la ponencia se propone profundizar en esa relación vinculada al consumo de radio, incorporando los distintos tipos de vínculo que se mantienen con ese medio, las modalidades de escucha, la escucha de radios locales y la centralidad que adquieren en la estructura de las audiencias de radio en las localidades estudiadas y el sentido que adquieren respecto del modo de experimentar la ciudad. Todo esto, en el marco de una percepción de las audiencias respecto de transformaciones en el panorama informativo nacional.

Title: Watching Turkish Television Drama in Latin America: The Case of Argentina

Session Type: Individual submission

Authors:

Name: Celeste Wagner

Email: celeste.wagner (at) asc.upenn.edu

Country: AR (Argentina)

Affiliation: University of Pennsylvania

Name: Marwan M. Kraidy

Email: marwan.kraidy (at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: In the last decade, Turkish television drama has found success around the globe (Kraidy & Al-Ghazzi, 2013), and most recently in Latin America, where they compete with local telenovelas (Julio et al., 2015). This popularity has been studied through the lens of hegemony, resistance, and soft-power construction (see Yörük & Vatikiotis, 2013).

Telenovelas, a heavily studied genre, has been argued to be central to everyday life in Latin America (La Pastina, et al., 2003). Nevertheless, the popularity of Turkish drama has received little scholarly attention. In order to help fill this void, we conducted 22 interviews with Argentinian television viewers to explore how audiences are constructing meaning around Turkish dramas in Argentina, country that has traditionally had a profuse fictional local production and consumption (Mazziotti, 1994) and where Turkish dramas now dominate national open-air television (Stiletano, 2016). We aim to shed light on new transnational dynamics of non-Western fiction in Latin America.

We found that all interviewees were aware of the popularity and themes of Turkish dramas, even when they had never watched them. The main reasons why people like watching them are related to: (a) enjoying learning about another culture, which is associated with wanting to escape from local reality; (b) the beauty and quality of the productions, centered on “exotic” landscapes; (c) feeling a return of the traditional soap opera themes; and (d) an appreciation for watching the representation of a more traditional society with clear family roles. Among those who do not relish Turkish dramas, it was expressed that: (a) traditional representations of gender and family roles was at points troubling and impeded their enjoyment; and that (b) the dubbing hampered their engagement. Interestingly, interviewees assumed all dubbed dramas, whatever their actual geographic origin, to be Turkish, in a way in which foreign comes to signify Turkish. Finally, among those who do not appreciate them, arguments about cultural proximity and identification were salient. This group might dislike soap operas in general, but enjoy the new Argentinean social drama, as it crudely depicts real life, one that they themselves do not experience because of class privilege.

Title: Los memes vistos desde la audiencia: identificación de los elementos de noticia, sus componentes visuales y gatillantes de interacción.

Session Type: Individual submission

Authors:

Name: Francisco J. Fernández Medina

Email: ffernandez (at) uc.cl

Country: CL (Chile)

Affiliation: P. Universidad Católica de ChileFacultad de Comunicaciones

Name: Valentina Proust

Email: vsproust (at) uc.cl

Country: CL (Chile)

Affiliation: P. Universidad Católica de ChileFacultad de Comunicaciones

Abstract: El acceso permanente y ubicuo a las redes sociales ha cambiado las dinámicas de consumo de noticias. Ya no es necesario acceder a los sitios web de los medios para mantenerse informado, sino que al revisar sus RRSS los usuarios se encuentran con las llamadas incidental news (v. Tewksbury et al, 2001; Boczkowski et al, 2017; Serrano-Purche, Fernández y Rodríguez, 2018). Este consumo pasivo e involuntario pero constante de noticias ha transformado a los memes en un soporte digital de transmisión de información.

Entendidos como la combinación imagen-texto, los memes transmiten ideas concisa, eficaz y masivamente a una comunidad que se identifica con el mensaje (Spitzberg, 2014; Wiggins, Bowers, 2015; Seiffert-Brockmann, Dieh y Dobush, 2017). Si bien se les suele asociar con el humor, también pueden hacer referencia a noticias, convirtiéndose en una vía alternativa para acceder a la información. Esto plantea un nuevo desafío al periodismo desde la Teoría de Usos y Gratificaciones, ya que su consumo implica la preferencia del usuario por un contenido que satisface sus necesidades y que genera una identificación socio cultural (v. Katz, Hass y Gurevitch, 1974; Ruggiero, 2000).

Desde el punto de vista de las audiencias, estos revelan comportamientos como el engagement, que hace referencia al estado cognitivo que marca altos niveles de involucramiento y absorción del contenido visualizado, la atención y la interacción en un contexto de múltiples pantallas. La prevalencia del teléfono celular como instrumento de participación en las RRSS, hace que el consumo de memes ocurra dentro del Complementary simultaneous media use (Coater y Doizer, 2017), al utilizarse mientras se consumen otros medios. En términos de la estructura del mensaje, una de las claves de la efectividad de los memes está en sus recursos visuales, -aunque no es el primer producto que los utiliza- transformándose en un objeto de estudio necesario para entender cómo funciona esta nueva dinámica de consumo informativo.

La propuesta de esta investigación contempló la atención tanto a las características propias del meme como al consumo de éste en contextos definidos. Para ello, se diseñó un test con una selección de memes de actualidad, preguntas basadas en los valores noticiosos (Galtung y Ruge, 1970) y los niveles visuales del meme (Djamasbi, Siegel y Tullis, 2011). Respecto al compromiso cognitivo con la información, se realizó un análisis exploratorio por medio de grupos focales. Ambos instrumentos mostraron que los memes contienen más de un aspecto considerado como

elemento de noticia, aunque los gatillantes de la acción de compartir corresponde a criterios más blandos de lo que es noticia, principalmente la proximidad con el hecho y la identificación con este. Asimismo, se identificaron los puntos fuertes en la gráfica del meme y los principales elementos visuales, a partir de lo cual se propone una categorización de éstos. Dado que las audiencias latinoamericanas se han mostrado más escépticas respecto de las noticias (Newman et al, 2017), se espera que conocer más sobre este tipo de consumo informativo permita dar luces en un tema tan relevante como el derecho a estar informado.

Title: The adoption of citizen journalism in Arab news coverage: A case study of Al-Arabiya channel project 'I see'

Session Type: Individual submission

Authors:

Name: Aiman Alsaeedi

Email: aalsaeedi1 (at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: The University of Sheffield

Abstract: Abstract:

The paper examines the work of “I see” project in Al-Arabiya news channel from 2011 to 2018. Al-Arabiya offered the audience the chance to capture and upload user generated contents using an interactive app as and displaying these contents on a website, twitter account and special TV news segment. The initiative has faced ups and downs and closed twice from the start in 2011 until now. It witnessed important events such as Arab Spring as well as Syrian and Yemen wars. The research on the project would demonstrate different topic such as: citizen journalist risk, verification, fake news and editorial decisions.

Background and significance:

The combination of new communication technology innovations and Web 2.0 features has created a chance for ordinary citizens to become involved in the news-gathering process. In many cases around the world, inventions such as smart phones and digital cameras are used by citizens to report live news by easily capturing videos and photos of events and sharing them through social media platforms to reach a wide audience. The audience engagement in new gathering has received a considerable attention, reaching traditional media where it has become widely used, especially in TV news channels. Many major network news added citizen journalism as a valuable source of news and information, whether through social media or by creating specific apps and websites for this purpose in case such as iReport app from CNN or the social media hub in the BBC. Although the use of citizen journalism and user-generated content in the mainstream media is considered to be a form of audience empowerment, it raises many concerns within the news organisations regarding the journalism standards of accuracy and objectivity (Harrison, 2010).

It is important to highlight that citizen journalism played a vital role during the Arab spring uprisings 2011 and Syrian war which helped promote this new form of journalism and encouraged citizens to become more involved in news gathering. Several Arabic news networks have followed CNN and the BBC by adopting user-generated content in their converge whether in the form of TV programme, website, phone app or by using social media.

Methodology:

Qualitative approach was chosen in this research to gain a deep understanding of the case study using semi-structured interviews along with direct and participant observation. The interviews include the project founder, journalists , editors and head management in Al-Arabiya who worked closely with the project. The paper addresses motivations, verification techniques and ethical implications of the adoption with some practical examples of errors and challenges faced the project.

Title: Watching Trauma: audiences dealing with sexual violence in film at a horror film festival.

Session Type: Individual submission

Authors:

Name: Rosana Vivar

Email: rosana.vivar (at) slu.edu

Country: ES (Spain)

Affiliation: Saint Louis University

Abstract: Upon its Spanish release in 2018, the Chilean exploitation film *Trauma* (Lucio A. Rojas, 2017), generated considerable controversy on social media and in specialized online zines over its crude depiction of sexual violence towards women. The film features recurrent rape scenes, pornographic depictions of lesbian sex, slasher scenes and incestuous relationships while commenting on the scars and traumas of a post-Pinochet Chilean society. This paper presents the early findings of research aimed at exploring audience reception of *Trauma* during the 2018 edition of the San Sebastian Horror and Fantasy Film Festival (SSHFFF). SSHFFF is renowned among Spanish fans of the Horror genre for the audience's participatory and intentionally annoying behaviour during the theatrical screenings. Additionally, in recent years, the event has become more controversial among casual visitors and locals due to the abusive heckling of women that appear on stage, and the male-chauvinistic comments that drive the heckling (Vivar 2019). Drawing upon earlier research on cinematic audiences and exposure to violence on screen (Barker, 2005), this paper brings together academic concerns about rape on screen (Brownmiller, McKinnon, Dworkin) and ethnographical audience research (participant observation and questionnaires) in order to gain insight into the audience's responses to the film. The main focus of this piece of audience research was to interrogate the impressions of a hard-boiled group of festival regulars (mixed-gender), who attend the festival every year for diversion and pleasure. Ultimately, given the irreverent verbal interaction that takes place between audience members during the screenings, I was interested to uncover the different 'viewing strategies' that men and women in the audience employed in order to watch such a film collectively within a context driven by fervent expressions of hyper-masculinity.

Key words: audience research, San Sebastian Horror and Fantasy Film Festival, shout-a-long, violence on screen.

Title: ENVIRONMENTS OF PROTAGONISM AND IDENTITY FORMATION LITERARY BLOGS AND LITERATURE CONSUMPTION

Session Type: Individual submission

Authors:

Name: Dorama Carvalho

Email: doramacarvalho (at) gmail.com

Country: BR (Brazil)

Affiliation: Escola Superior de Propaganda e Marketing

Abstract: The purpose of this study is to present the formation of a reader-protagonist in the current brazilian literary scene, based on the analysis of the discourses generated in blogs about literature and the intersection with other social networks, especially YouTube. The intention is to show new ways of accessing reading and that bloggers and youtubers are representatives of various literary consumption practices. The analysis of 12 blogs indicated the emergence of subjects that are transforming the dynamics of the book sector, with reviews and commentaries in social networks, both on book launches and on classical works. The printed book is highlighted even in a scenario of sales retraction and allows the emergence of new actors in literary criticism. The work resulted in some points that deserve to be highlighted: the current reading scenario in Brazil; the reader in a universe of media consumption of literature; convergence of media platforms as a generator of new identity formations; the discourses aimed at specific audiences and, as a consequence, the rise of authors, genres and literary styles.

Title: The subject in times of media and social change. The analytic potential of the mediatization approach using the case of retro-gaming.

Session Type: Individual submission

Authors:

Name: Jeffrey Wimmer

Email: jeffrey.wimmer (at) phil.uni-augsburg.de

Country: DE (Germany)

Affiliation: University of Augsburg

Abstract: The question of the medial constitution of subject and subjectivity is in the centre of proposed lecture. The analytical reference to the mediatization approach and the concept of the molding force of communicative action (Hepp 2011) enables a holistic understanding of subject, communication and media. Drawing on a case study about the media culture of retro-gamer, the article examines empirical, to what extent computer gamers are being shaped by their media culture not only in the moment of the gaming, but also in the long term through their media hobby in terms of their personal development and social communitization. The categories developed from the interviews (N=14) depict important connections with regard to the individual reflection of medial socialization processes, which in turn can be understood as a specific process of subjectivation. Although the computer game socialization of retro gamers takes its starting point in the game experiences from childhood and youth. In the further course, however, from the point of view of the gamer, different shaping forces in different contexts have different influence on them and their subjectification as retro-gamers. A strong impact is the subcultural atmosphere of the early computer game culture in which most retro gamers were socialized. This feeling of having had something special makes them like to return to their roots today. feel the urge to relive classic game contexts, but it also promotes a current demarcation need, especially in relation to younger computer gamers. The socialization process is accompanied by current media practices at the acquisition level, such as the collection of game artifacts as well as on production level such as making digital copies of old games and distributing them online. On the one hand, many of these actions keep alive the computer games that are perceived as a cultural asset, on the other hand they are not controversial among the respondents, but they are socially controversial because they raise copyright issues. Here are some overlaps with other Internet subcultures such as the cracker scene. The findings illustrate two dimensions of subjectivization processes: On the one hand the reflexive handling of computer games and thus the subjectivation through games and game contexts, on the other hand the nostalgic remembering. The findings show surprisingly large correspondences between the individual points of view. The memory performance expressed in the interviews thus goes beyond the pure 'individual' and may be a reference to the group-related construction of communicative action within the framework of the media culture investigated here exemplarily - a finding which speaks for a relative homogeneous media (sub) culture of retro-gaming and their perception of shaping elements of the computer games then as well as today. On the one hand, the players are very satisfied with their past and current media practices, on the other hand, they seem to be steadfast in the formation of a player subject. This form of recursiveness is also a central feature of the current media change and its subject-related meaning.

Title: Dividing the Fandom: Memes as Tools of Visual Argumentation in r/SequelMemes

Session Type: Individual submission

Authors:

Name: Abigail Reed

Email: a.reed (at) fsu.edu

Country: US (United States)

Affiliation: Florida State University

Abstract: This article seeks to analyze how members of the subreddit r/SequelMemes position themselves in relation to the debate within the Star Wars fan community regarding the quality of the film *Star Wars: The Last Jedi* (2017). Members of this online space utilize memes to align themselves both with other members of the community who agree with them and to rhetorically argue against their opponents. Building off the theoretical basis of Obst et. al. (2002) who position sci-fi fandoms as groups with a strong sense of community and Nissenbaum and Shifman (2017) who assert that memes can be used as discursive weapons, it will be argued that the memes analyzed as part of this study act as pieces of visual rhetoric that function as rhetorical iconography and discursive weaponry, which work to segregate the fandom according to their affinity or disaffinity for the film.

r/SequelMemes is a subreddit that functions as one of the primary online spaces where memes relating to *The Last Jedi* are created and disseminated. This space is dedicated to sharing memes regarding the Star Wars sequel films. This article examines three memes selected from the five all-time most up-voted posts on the subreddit when searching "The Last Jedi" (as of November, 2018) to study the ways in which fans express their feelings about the film using memes. As the conflict within the Star Wars fandom over the film continues more than a year after its release, the ways in which community members discursively handle ongoing conflict and disagreement in their virtual spaces is worth examining. While the culture of fandoms certainly is not feel-good all the time, it is remarkable that they create such salient identities. The ways in which people contribute their own knowledge to the community (Kim, Zheng, & Gupta, 2011) and the digital avenues available to them to navigate the space have a significant impact on the salience of group identity for any virtual community (Ren, Kraut, & Kiesler, 2007).

This article engages with the Audience section's call for papers regarding the various ways that audiences experience and associate with media texts in new ways through social media as well as examining audiences in an "alternative" context to the movie theater or the living room in front of the television. By studying both the digital context of r/SequelMemes wherein fans engage with *The Last Jedi* as well as with fellow fans of the film and the mediated experience of sharing "knowledge" or sentiments about *The Last Jedi* in a dedicated subreddit for those interested in the Star Wars sequels, this article adds to a critical understanding of the contemporary ways that fans engage with popular film properties and how they express their feelings about those popular films to other fans in a digital community space.

Title: Audiencias transnacionales: los personajes como enlace entre la ficción y la realidad

Session Type: Individual submission

Authors:

Name: Lizbeth Kanyat

Email: lizbethkanyat (at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade de São Paulo

Abstract: Este trabajo parte del interés por analizar el éxito que programas televisivos tienen en países culturalmente distintos. Reconociendo la multiplicidad de factores que influyen en este hecho y de las diversas disciplinas que pueden estudiar el fenómeno de la afinidad de audiencias por productos culturales, elegimos concentrarnos en nuestro estudio en el análisis de los aspectos narrativos que despiertan identificación y, consecuentemente, crean vínculos en sujetos de diferentes nacionalidades hacia un mismo producto televisivo.

La reflexión se apoya en los Estudios de Lenguaje y en los Estudios Culturales y su problema de investigación es: ¿Cuál o cuales aspectos narrativos son clave para despertar y mantener el interés y compromiso de jóvenes receptores de Brasil y Estados Unidos con la serie Game of Thrones? Como recorte de esta investigación para la conferencia IAMCR 2019, proponemos discutir la hipótesis que señala a los personajes como elementos clave para comprender los vínculos que la audiencia tiene con la ficción seriada de éxito transnacional.

Se cree que los personajes típicos (LUKAKS, 1965) posibilitan la creación de lazos profundos y afectivos entre el receptor y el producto ficcional una vez que estos presentan y/o traducen las fuerzas sociales que atraviesan la vida de las personas en determinado tiempo histórico, a veces específicas para una comunidad, a veces comunes a múltiples naciones.

Lukács parte del entendimiento de que la realidad como una totalidad compleja, caótica y dinámica. Por lo tanto, el trabajo del artista comprende seleccionar los trazos que rebelan su esencia y presentarlo a través de tipos. “La tipicidad implica la presentación de individuos que, en sus actividades y en su desarrollo, dan concreción a los ‘momentos determinantes, humana y socialmente esenciales, de un periodo histórico’” (OTSUKA, 2010, p. 38).

Lukács desarrolla su análisis teniendo por objeto de estudio el realismo y la literatura. En esta investigación, tomamos la libertad de extender la reflexión para elucidar las narrativas audiovisuales. Por lo tanto, inferimos que para despertar identificación del espectador con los personajes, la narrativa debe descubrir rasgos significativos de la praxis social. Los tipos pueden ser vistos como colecciones de figuras y figuraciones con las que se organiza nuestra experiencia con el mundo de modo que parezca ser comprendido, explicado y decantado (Ianni, 2002). Por ello, la ficción ejerce el papel de organizador mental del mundo real que es caótico, mutante e inaprensible.

Concluimos que los personajes son la expresión más concreta de la relación dialéctica entre lo real y lo ficcional. En esa relación la ficción le posibilita al sujeto reflexionar sobre su vida cotidiana,

sobre alternativas a su realidad y sobre cuestiones existenciales de la ontología del ser. En contrapartida, el sujeto retribuye con asiduidad, fidelidad y compromiso con el producto televisivo.

Title: Contexts & conditions of the reception of Nollywood, an African popular movie culture: Social dispositions, identifications and everyday politics.

Session Type: Individual submission

Authors:

Name: Anouk Batard

Email: anouk.ba (at) gmail.com

Country: FR (France)

Affiliation: LaSSP, Sciences Po Toulouse, University of Toulouse

Abstract: The emergence of the Nigerian popular movie industry (“Nollywood”) in the 1990s is emblematic of Africans’ autonomous access to screen media. Nigerian movies circulate transnationally, mainly throughout sub-Saharan Africa and African diasporas worldwide. This paper is part of the difficult task of grasping invisible, disseminated, shared, fragmented, “uses” (Hoggart), “reappropriations” (de Certeau) and meaning constructions out of Nollywood’s “encoded” content (Hall). I explore Nollywood’s heterogeneous contexts and conditions of reception not only to show that the films are used in ways more complex than just entertainment, but above all to examine how social dispositions (gender, age, class, race, ethnicity, nationality, religion) may “speak” and highlight, reinforce or perhaps even create identifications (Brubaker & Cooper). In other words, I investigate how the social conditions of reception (Champagne) account for differentiated uses of Nollywood.

As I attended screenings in multiplex cinemas and at film festivals in Nigeria, I noticed that audiences reactions - switching from "oblique" attention to intense, loud reactions and arguments - inform us on, for instance, how historical movies - such as *Across the Niger*, on Biafra war, and *Invasion 1897*, on colonization and the looting of Benin kingdom - result in plural readings and uses shaped by and reshaping individual dispositions and collective memory sometimes related not only to past events but also to topical ones. As a matter of fact, I discovered a heavily degraded version of *Black November* including pirated (unofficial) French subtitles was posted online and some viewers have even commended it. It tells a lot about the eagerness to circulate and watch movies dealing with postcolonial injustices and exploitation of Africa. Furthermore, comments made during Q&As by Nigeria-based-Nigerians or individuals from African diasporas of different generations and locations (Afro-Americans, British-Caribbeans, African immigrants) help us complicate race and ethnicity. This study contributes to enlighten distinct “imagined communities” (Anderson). It reveals Nollywood fuels alternative public spheres (Fraser): Not only spaces made of rather “fragmented and competitive groups” (Livingstone & Lunt), but also spaces where subaltern and otherwise marginalized populations argue the social order (Gamson). Indeed, my observations of the politics of a lagosian living room, where diverse people have supper around a TV set on, show that different social trajectories account for disagreements among women on gender issues.

Falling within Ien Ang’s “ethnographic critique of media consumption in the transnational media system”, this paper explores Nigerian popular cinema bringing “political questions and processes into the domestic sphere” (Livingstone & Lunt) and beyond. From Lagos to Jos, Bordeaux, London and New York City, it follows Nollywood audiences engaging in everyday politics into social spaces such as pubs, restaurants, buses, homes, waiting rooms, hotels, video shops, cinemas, film premieres, film festivals, a university arts theatre and the British Museum. This study combines

semi-structured interviews and participant observations run essentially in urban Southern Nigeria during a two-year fieldwork (2010 – 2012 and 2014), and some research done abroad till 2018.

Title: Influencers y sus efectos en las autorepresentaciones de las jóvenes mexicanas

Session Type: Individual submission

Authors:

Name: Jessica Garcia Romo

Email: jgr3535 (at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana Ciudad de México

Abstract: Jessica García Romo

Maestría en Comunicación

Universidad Iberoamericana Ciudad de México

jgr3535 (at) gmail.com

Influencers y sus efectos en las autorepresentaciones de las jóvenes mexicanas

Con el crecimiento de la popularidad de los influencers, las investigaciones sobre el tema han ido en incremento en los últimos años. A pesar de que se encuentran un buen número de investigaciones que hacen referencia a los influencers, las redes sociales, las diferentes plataformas, sus seguidores y sus efectos. No se encuentran estudios que analicen a profundidad en términos de fotografía y género. En cuanto a la parte de género, son faltantes investigaciones que ahonden en las particularidades de las mujeres influencers, como se distinguen a los varones en cuanto a contenidos, audiencias, plataformas y ganancias. Por la parte fotográfica, no se encontraron investigaciones que analicen las imágenes que comparten los influencers en sus redes sociales y los efectos que estas puedan tener sobre su audiencia.

Los estudios ya existentes sobre influencers se han realizado en diferentes países, como Corea del Sur, Turquía, España, Eslovaquia e Indonesia. Cada uno tiene objetivos distintos, así como metodologías múltiples, como cuantitativas, cualitativas y combinadas. Las temáticas son variadas, ya que tratan temas desde el turismo hasta la política. Sin embargo, no se encuentran estudios que hablen sobre el tema de influencers, fotografías y sus efectos en las audiencias, aún menos localizándolo específicamente en México.

Con el propósito de cubrir esa área poco explorada el objetivo principal de esta investigación es determinar si la forma en que las influencers se representan en sus redes sociales tiene efectos sobre la manera en que las jóvenes mexicanas se muestran a sí mismas en las fotografías que comparten en Instagram. Dicha pregunta forma parte de la metapregunta ¿A qué tipo de dinámicas de la representación obedecen las mujeres jóvenes como subjetividades arrojadas por la modernidad globalizada?

Por lo tanto, el presente trabajo busca responder: ¿qué efectos tiene la representación de las influencers sobre la forma en que las jóvenes mexicanas se muestran a sí mismas en las fotografías que comparten en Instagram? Así como tres preguntas de investigación secundarias: ¿cómo se muestran las influencers y las jóvenes mexicanas en las fotografías que comparten en Instagram?

¿qué reacciones tienen las jóvenes mexicanas ante las publicaciones de las influencers? ¿cuales similitudes y diferencias hay entre la representación de las influencers y la de las jóvenes mexicanas?

Para responder estas preguntas se llevarán a cabo tres métodos: el primero consiste en un análisis crítico del discurso visual de las fotografías de Instagram de las influencers mexicanas con más seguidores, así como de algunas de sus seguidoras para posteriormente buscar similitudes entre las fotografías. Después se realizará un análisis de audiencia de sus seguidoras tomando como material empírico los comentarios, las reacciones y sus perfiles. El tercer método consiste en realizar entrevistas a profundidad con las seguidoras, para entender su relación consigo misma a partir de las ideas transmitidas por las influencers a las que sigue.

Title: National interest vs. online freedom of expression: The discussions of the Internet users on the blocking of Wikipedia in Turkey

Session Type: Individual submission

Authors:

Name: Ruhdan Uzun

Email: ruhdanuzun (at) yahoo.com

Country: TR (Turkey)

Affiliation: Ankara Hac' Bayram Veli University, Faculty of Communication

Abstract: International organizations and national governments across the world have endorsed freedom of expression as a basic human right in the United Nations' Universal Declaration of Human Rights since 1948. Also in 2012 the United Nations Human Rights Council adopted a landmark resolution affirming that 'the same rights that people have offline must also be protected online'.

On the other hand, the governments make greater efforts to restrict and control the use of the Internet for information and communication on political, moral, cultural, security, and other grounds.

Along the same line, in 2017, Turkish Internet Regulator (ICTA) blocked online access to all language editions of the online encyclopedia Wikipedia throughout Turkey on the grounds that its articles and comments describe Turkey's alleged involvement with terror groups. Since then, the blocking has been criticized by Turkish people as a violation of the right of access to knowledge and a crackdown on online freedom of expression. However, freedom of expression becomes controversial when expression appears to threaten some important national interests.

This paper aims at providing a framework for resolving questions about the recognition of online information rights, by finding out the rational behind online users' arguments on freedom of expression. To this end, the online users' comments on the blocking of Wikipedia in Turkey are analysed. Such comments are a rich source of qualitative and quantitative data have the potential to increase our understanding of public opinions and they provide insight into how attitudes and beliefs toward boundaries between censorship and information rights are formed as well as the nature of attitudes. Therefore, the findings of this study are based on a quantitative and qualitative content analyses of 257 online users' comments on "Wikimedia Foundation urges Turkish authorities to restore access to Wikipedia" on the website of <https://blog.wikimedia.org>. The study examines whether the users support the blocking, and which concepts they use while discussing the the relationship between freedom of expression and national interests. Therefore this paper contributes to the deliberation on disputed rights in order to improve online freedom of expression and access to knowledge.

Preliminary findings reveal that the most of the users disapprove the blocking. Besides, both opponents and approvers discussed the issue by putting a broad framework including exact information, alternative access methods, digital divide, national interests, international relationships, etc., and they put forward very different arguments within themselves to justify their attitude.

Key words: online freedom of expression, disputed rights, users' comments, censorship

Title: El uso de Twitter en Master Chef Junior en Estados Unidos, España y Portugal

Session Type: Individual submission

Authors:

Name: Belen Monclus

Email: belen.monclus (at) uab.cat

Country: ES (Spain)

Affiliation: Autonomous University of Barcelona

Abstract: La emergencia de la Televisión Social (Gross, Fetter & Paul-Steuve, 2008) como resultado de las nuevas posibilidades tecnológicas en la era digital ha propiciado nuevos hábitos en las audiencias (i.e. Livingstone, 2002; Jenkins, 2006; Webster & Ksiazek, 2012) como el uso de las ventanas secundarias, especialmente entre los más jóvenes para compartir y comentar lo que sucede en el flujo programático de la emisión (i.e. Kätsyri et al., 2016; Lochrie & Coulton, 2012; Sørensen, 2016). Twitter se ha erigido como un backchannel para los programas televisivos (Bruns & Burgess, 2011; D’heer & Verdeggen, 2014), al convertirse en el vehículo principal para comentar simultáneamente mientras se mira el programa de televisión (Saavedra Llamas, Rodríguez Fernández y Barón Dulce, 2015). Los operadores televisivos se han adaptado a este nuevo entorno, implementando el uso de Twitter en sus contenidos. Los talent shows son un espacio idóneo en el que desarrollar esta práctica (Franquet et al., 2018). Un uso especialmente sensible cuando se trata de programas que involucran la audiencia infantil.

Esta comunicación analiza el uso que los broadcasters hacen de Twitter en las versiones infantiles del talent show ‘MasterChef’ en Estados Unidos, España y Portugal y cómo emplean esta red social para interactuar con sus respectivas audiencias. Se trata de las versiones junior emitidas más recientemente a nivel internacional, concretamente en las temporadas 2017-2018 y 2018-2019. Se ha llevado a cabo un análisis de contenido de la actividad de los perfiles de twitter de estos programas durante el período de emisión de los mismos y, en el caso español, se han realizado además entrevistas en profundidad semi-estructuradas con los responsables del programa y de la gestión de las redes sociales. Para el análisis de contenido, el protocolo de análisis elaborado aborda cuestiones como la frecuencia de publicación, tipología de los tuits, tipología de los contenidos, sinergia con la emisión, plataforma de publicación, uso de recursos audiovisuales, hashtags y emoticones, interacción con la audiencia, uso de retuits y menciones y engagement. En total se han analizado 3.251 tuits (el 53,3% corresponden a la versión española, 38,5% a la versión estadounidense y 8,2% a la versión portuguesa).

El estudio realizado evidencia la existencia de diferencias notables tanto en función del territorio como de la titularidad de los operadores en relación a las estrategias empleadas en el uso de Twitter y en su interacción con las audiencias en los casos analizados. La versión española presenta un uso más intensivo de Twitter durante la emisión del programa y su actividad principal es retuitear, además su estrategia la convierte en un caso de estudio particular. La actividad mayoritaria de la versión estadounidense es la de responder a tuits de otras personas y, en el caso portugués, todos sus tuits son originales. Como tendencias compartidas destacar la predominante sinergia con el broadcasting, no únicamente con la frecuencia de publicación de los tuits sino también con su contenido, y la autopromoción y la creación de memes como actividades distintivas en detrimento de la interacción activa con sus audiencias.

Title: Audience's experience of Plus Belle La Vie : dealing with societal issue within transmedia strategy

Session Type: Individual submission

Authors:

Name: Frédéric Marty

Email: frederic.marty (at) univ-montp3.fr

Country: FR (France)

Affiliation: Université Paul Valéry Montpellier 3

Abstract: Compared with UK and its soap Coronation Street, French television was quite late regarding his own production and diffusion of daytime soaps since 1960. The public broadcast company France Télévisions solved it out in 2004 when it released Plus Belle La Vie. This daytime soap takes place in the fictional neighborhood “Le Mistral” – supposedly located in Marseille – and features dozens of characters typical of the audience the channel targets. Actually, more than three millions viewers are following the program and thousands users are interacting actively with its Facebook page. In this presentation I would like to develop how the audience of Plus Belle La Vie experience societal issues the soap addresses, through a multiplatform storytelling.

This ongoing study mobilizes ethnographic methodology in order to understand audiences practices and experience. Indeed, creative conceptual and practical approaches are required to study audiences in a changing media ecology. The observation can't be focus on one single media or platform, nor limited to a compilation of data. Within this study I aim to understand this “roaming audience” (Hill, 2019) experience of soap in their everyday life and their discussions around societal issues covered by the soap. This work is therefore in line with the perspective of Cultural Studies by questioning the place occupied by spectators in the public space configured by this series. All in all, it is a question of examining this characteristic soap as “media culture”, as defined by Eric Macé and Éric Maigret (2005).

It seems particularly relevant to study Plus Belle La Vie from this point of view because it comes under the responsibility of a public operator for whom “the group's strategic project is based on strong values: independence, universality, innovation and reliability of information; not to mention the promotion of diversity, in order to reflect today's society”. I will study more specifically the question of individual liberties, gender equality and social classes representation. In addition, the show highlights these issues through an original digital editorial strategy that articulates a transmedia narrative in order to debate social issues. Several Alternated Reality Games (ARGs) have been developed on these topics. Finally, beyond the “ordinariness” of the program's characters the programming strategy of Plus Belle La Vie and the production team “strive for reality” (Mille 2011) allows us to observe a tension among the spectators with this fictionalization of reality. As Marlène Coulomb-Gully and Jean-Pierre Esquenazi (2013) pointed out : “Prospering on the unspoken aspects of information discourse, fiction ends up appearing truer and more credible than information discourse, this paradoxical inversion of polarities being reinforced by the operations of storytelling and scriptwriting of political life which have contributed to masking what citizens continue to perceive as the reality of power, at the same time blurring the boundaries between the

genres”. A series of interviews and observations with spectators will allow us to assess the reality of the practices and representations of the audience of Plus Belle La Vie in a digital context.

Title: Affective Audiences: Mood Tracking and Sentiment Analysis in Media

Session Type: Individual submission

Authors:

Name: Holly Avella

Email: Holly.Avella (at) Rutgers.edu

Country: US (United States)

Affiliation: Rutgers University

Abstract: Widespread sentiment analysis and tracking of mood data in social and entertainment media are signs pointing to the growing significance of affective engagement in contemporary capitalism, often leaning on scientific research that demonstrates emotion's essential role in cognition and its primacy in terms of behavior and decision-making.

This paper aims to extend and complicate surveillance and datafication analyses of mood tracking and sentiment analysis in management and marketing research, nuancing the role of mobile apps and bio-sensing technologies in modulating the capacities of individuals and populations to be affected by, through, and as media.

By leveraging affective attachments to personal mobile devices and augmenting them with biometric software that analyzes facial, vocal, and textual expression, audiences are integrated into participatory sensing networks at the levels of market production, circulation, and consumption.

Ethical dimensions of audience mood tracking will be explored using recent cases in social media, television, and popular music concerts. Theoretically situating affective audience tracking in biocapitalism and as biomediation will help explain how mood tracking fits into current political, social, and economic systems, as well as how mood tracking works to draw audiences into affective economies of engagement.

Title: Chinese Youths' Online Bantering: Face and Social Relation

Session Type: Individual submission

Authors:

Name: shuhan chen

Email: sc463 (at) le.ac.uk

Country: GB (United Kingdom)

Affiliation: (0044)7741939962

Abstract: Accompany with the rapid modernisation and urbanisation in China is the rocket social media development and Chinese youths' intensive participation in online activities. People from rural areas and small cities frequent migrant to large urban cities for better education and work opportunities. Social media become an essential tool for them to connect, and WeChat is one of the most popular social media platforms among Chinese youths. In this context, the researcher aims to explore the interaction tactics that Chinese youths adopt in sustaining their mediated social relations.

By conducting a qualitative study among 37 Chinese young WeChat users, the results indicate that online 'likes', and kind online comments still sever as two main tactics that Chinese youths use in sustaining social relationships with others. However, the research findings also indicate that Chinese young male participants are taking advantage of the semi-open commenting affordance of WeChat platform, and make 'online bantering' a trendy way to express their closeness with each other on WeChat. Male participants frequently describe online 'likes' and polite 'comment' as ordinary and sometimes could be faked, which fail in expressing their true feelings toward their peers. In contrast, bantering with best friends with harsh comments enable them to express their strong feelings and create a feeling of 'speciality' for their close friends. Meanwhile, participants also note that 'online bantering' is not appropriate in interacting with females online. Reflecting on the cultural notion of face concept which suggests individuals act according to social and moral norms, this paper provides an in-depth analysis to understand the rationale of the popularity of 'online bantering' in sustaining social relations among Chinese young WeChat users.

Title: The metafiction of music: Challenges of capturing audience experiences as data

Session Type: Individual submission

Authors:

Name: Rafal Zaborowski

Email: rafal.zaborowski (at) kcl.ac.uk

Country: GB (United Kingdom)

Affiliation: King's College London

Abstract: Drawing on empirical data on music listeners, in this paper I engage with changing cultural practices surrounding music, and with that, the methodological challenges in approaching music experiences as audience data. Specifically, I look at unintended consequences accompanying the move from the analogue to the digital, which play a salient role in contemporary audiences' experiences of music.

While the materiality of music was never fully denied (Magaudha 2011, Duffett 2012), everyday listening is increasingly experienced through streaming and online storage. This, combined with the portability of phones and music devices, has opened up a new range of music use in everyday life (Bull 2007, Denora 2007), but also moved the musical collection from the home sanctuary to the outside world. The constant availability of one's musical possessions has thus resulted in an unprecedented conflation of private and public spheres, the personal and the social. Since music can be ubiquitously accessed, it can also be examined and judged by others – leading to anxiety and stress (Zaborowski 2015), but also to the emergence of audience strategies of resistance.

As music is increasingly consumed digitally and ubiquitously, listeners' attention strays away from textual cues and the social aspect of music seems less pronounced than ever – arguably becoming almost odourless (cf. Iwabuchi 2002) and challenging to capture. At the same time, my findings show that despite the organised infrastructure of digital music platforms, listening and storing practices surrounding music remain often accidental and chaotic. The quantity of available digital music has made some individual genre distinctions obsolete (cf. Avdeef 2012), while the blurring of lines separating creators and fans reinforced the liminality of musical experience. For the listeners, then, processes of datafication and digitalisation transform music as the object of cultural practice from text to a meta-system of platforms, streams and formats, where, in the words of a participant, "music is not just music anymore – it's a whole thing". With the increasing technological capabilities of online platforms, this metafiction of music becomes crucial to understanding methodological and epistemological challenges surrounding listening as a social practice.

Title: Personifying Corporation: How Japanese Consumers Engage With Corporate Twitter account'

Session Type: Individual submission

Authors:

Name: Jinah Lee

Email: jina (at) enelab.com

Country: JP (Japan)

Affiliation: Keio University

Name: Kwangho Lee

Email: e-office (at) keio.jp

Country: JP (Japan)

Affiliation: Keio University

Abstract: Social media has changed the way we communicate and interact with companies, and brought about significant changes in the advertising process. It has become common Japanese corporate to build brand personality and foster consumer engagement in a fun and conversational way using so-called “soft” accounts, which are very personalized, full of funny, witty, and “loose” tweets. Corporates are eager to show off their personality by using soft accounts as well as fully launched campaigns. For instance, Twitter account of Sharp, a major Japanese electronics company, received the new face award of Osaka Copywriter’s Club in 2014, which shows corporate social media function in the same way that traditional mass media campaign does.

The current study aims to explore in what ways consumers engage with brands through the experience and consumption of tweets by corporate Twitter accounts. Specifically, the study examines what type of personality consumers perceive from corporate Twitter accounts and how the personality is related to the feelings of parasocial interaction with the accounts. We also examined several effects of the perceived personality of corporate Twitter accounts on consumers’ brand evaluation and experience.

The data was collected from an online survey conducted in February 2018. Respondents were asked to choose the most favorite and important corporate account from all the accounts they are following on Twitter. Respondents were also asked about the reasons for following the corporate Twitter account, the perceived personality of and parasocial interaction with the account. Two major motivations of following corporate Twitter accounts were “entertainment” and “information”. Entertainment dimension refers to the seeking of exciting and enjoyable entertainment. Information dimension depicts an instrumental seeking of information and campaigns related to brands, and information that they cannot get from usual advertising.

The study also revealed a set of the perceived personality of corporate Twitter accounts including “excitement”, “competence”, “sophistication”, “peacefulness”, and “meekness”. Parasocial interaction with corporate Twitter accounts was associated with its perceived personality. Several personality dimensions were related to positive brand evaluation. The results also showed that the way consumers respond to corporate Twitter accounts varies according to brand and corporate type. It is also worth noting that “meekness”, a dimension of perceived personality that has been often

revealed as Japanese brand personality was confirmed in this study. The implication for the study of consumer media engagement and corporate communication will be also presented.

Title: Street art on Instagram: The audience as star of the urban 'story'

Session Type: Panel Submission

Authors:

Name: Erika Polson

Email: epolson (at) du.edu

Country: US (United States)

Affiliation: University of Denver

Abstract: Just as other media forms have been altered through the dynamics of mobile platforms that enable increasing crossmedia use and multivalent participation, so has art. For this presentation, I consider the production of Instagram stories with street murals and other outdoor art-as-backdrop, and explore how street art 'audiences' produce online media with themselves as star. Using a specific "art district" in Denver, Colorado as a case study, this paper follows a variety of images as they circulate on Instagram through stories that re-center the art to spotlight the audience-as-subject rather than the artist or artwork. Yoga posers, millennial women, young couples, families, and even dogs are positioned in front of striking backgrounds (characterized by vibrant colors, complex geometric textures, revolutionary symbols, anthropomorphic nature, dazzling women, fantasy worlds), framing themselves as protagonists for Instagram. While these posts are often geo-tagged for the neighborhood, very seldom do they tag the artist (even as artists now frequently sign their work with their Instagram username).

Having emerged out of the more underground graffiti cultures, street art has in recent years gone from a subversive cultural expression to being an accepted, welcomed, and often compensated artform. Increasingly, city neighborhoods invite these visually impactful artists to decorate the walls of former industrial areas as a way of attracting visitors into neighborhoods in 'transition.' Although for artists such pre-'transformed' neighborhoods have often been those where they can afford to live and work, the success of their work and its circulation among a variety of new audiences (in person and on social media) has been implicated in the gentrification of neighborhoods (and the displacement of artists), in part by making unknown territories more familiar and attractive. Thus, while some may celebrate how people can use the art to interact in new ways with an urban environment, it is worthwhile to examine such participation in a broader social and economic context, one that perhaps suggests a more ethical role for the active audience.

Title: Entertainment mobilisation in reality talent shows

Session Type: Panel Submission

Authors:

Name: Annette Hill

Email: annette.hill (at) kom.lu.se

Country: SE (Sweden)

Affiliation: Lund University

Name: Koko Kondo

Email: k.kondo (at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: This research draws on qualitative production and audience research of Got to Dance (Princess, Sky One 2010-2014, UK), with a focus on reality talent show participants and their supporters at auditions and live events. Our case study highlights affective and material practices related to labour and mobility in reality television participation. The analysis is based on two interconnecting arguments about the labour of participants and their supporters, and how this labour connects to mobility within the creative industries. The first part of our argument builds on the performance of selfhood in reality television. The visible performance of participants is a spectacle of labour (Roland Barthes 1979), one that suggests hidden labour that lies behind the televised dance performance. Thus, there is the visible performance of participants filmed for the show, and there is the invisible labour of family and friends, supporters and followers, who are mobilised to engender this dance performance for a televised reality event. The second part of our argument is that this spectacle of labour reveals the material infrastructures and symbolic meaning making for what we call entertainment mobilisation. This kind of mobilisation includes the material conditions of being a reality TV participant, and there is the mobilisation of fans and supporters through voting, social media, and as vocal crowds at the live events.

Entertainment mobilisation is a key part of the television production of a talent show. Kaufman (2002) uses the term motility to refer to the unequal distribution of skills and resources for mobility, a category that can be expanded to include reality television participants. They come from a range of class, ethnicity, gender and regional backgrounds from the UK, and they have different skills and resources for competing in the dance industry. The reality talent show is constructed as a resource to overcome obstacles and achieve success in a precarious labour market, to increase motility capital through this televised event. Overall, our research suggests that participation in a reality dance competition involves entertainment mobilisation and that there are resources and barriers for mobility and success in the dance and reality TV industry.

Title: Mobile extensions: Temptation Island as a crossmedia text within Flemish media repertoires

Session Type: Panel Submission

Authors:

Name: Ike Picone

Email: Ike.Picone (at) vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Name: Ruben Vandenplas

Email: Ruben.Vandenplas (at) vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Abstract: In light of the convergence and deconvergence that shattered the media landscape, several audience researchers have rallied around the concept of media repertoires in order to follow increasingly mobile audiences as they cross the boundaries of media texts, devices, and platforms (Bjur et al., 2013). While repertoires offer a way to aggregate users at the intersection of their crossmedia use, critical attention is called to repertoires as “not just a concept for describing the sum of the media a person uses, like pearls on a string”, but instead focusing on “the meaningful relation between them in everyday practice” (Couldry & Hepp, 2016, p. 55). Just as the boundaries between media have become permeable, the locus of consumption expands. It has become multi-modal, multi-medial, and unrestricted by time or place.

The study proposes a weave of go-along interviews and situational analysis to effectively follow and trace users as they traverse their repertoires, and focuses on the Flemish reality show ‘Temptation Island’ as a crossmedia text that through mobile devices extends beyond the television screen into additional mobile-first content, online conversations, and discussions across the country. Three main research questions are explored:

- (1) Where can we situate reality-tv as a form of crossmedia content within the repertoire of media users?
- (2) How do media users activate mobile components in their media repertoire to extend their viewership of Temptation Island across media boundaries?
- (3) How do these possibilities affect the way media users experience popular culture?

The study will discuss the results of the interviews in light of the methodological benefits posed by the highly contextually sensitive intersection between go-along interviewing and situational analysis for future qualitative research on media repertoires and conversely, crossmedia audiences.

Title: Children as Mobile News Audience: How Mobile Devices May Contribute to Children's News Engagement

Session Type: Panel Submission

Authors:

Name: Mariska Kleemans

Email: m.kleemans (at) maw.ru.nl

Country: NL (Netherlands)

Affiliation: Radboud University

Abstract: Children are increasingly understood to be ‘citizens’ in society, and the importance of being well-informed in childhood is, therefore, more recognized than ever (McGonagle, 2017; Vis, 2017). Although children most often get their daily news from television, there are indications that online news is gaining ground (Ofcom, 2017). Producers have increased efforts to get children more involved in news by targeting them online, for instance via mobile news applications, YouTube channels, or social media. An advantage of these online media platforms – in comparison to television – is the increasing possibility for interaction with and between young news consumers. Whether this contributes to their news involvement is rather unexplored and is therefore central to our line of research.

In this paper, we focus on the question whether online news applications can help children to cope with their emotions after exposure to news about negative events. This issue is of growing importance, as research shows exposure to news may lead to enduring negative emotional responses in children, which may hinder their willingness to follow the news (cf. Buijzen, Walma van der Molen, & Sondij, 2007; Smith & Moyer-Gusé, 2006). We could thus expect that the online environment offers promising opportunities for children to cope with their negative emotions, for instance, because they can seek social support from peers online. Moreover, children can place a comment to a news story to write off emotional thoughts. We conducted several experiments among children (8-13 years old) in which we tested the effects of interactive online tools on children’s emotion regulation. Preliminary findings provide promising results. There are indeed indications that the online news environment can help children to better regulate their emotions, which may consequently contribute to their news engagement. These insights add to the discussion of mobile news audiences and how these developments should guide future research.

Title: Growing Up Tracked: Partnering with young people to explore Tik Tok and the mobile repertoires of U.S. young people of color

Session Type: Panel Submission

Authors:

Name: Lynn Schofield Clark
Email: Lynn.Clark (at) du.edu
Country: US (United States)
Affiliation: University of Denver

Name: Carlos Jimenez
Email: Carlos.Jimenez (at) du.edu
Country: US (United States)

Abstract: Young people have become increasingly aware of the ways that social media platforms collect data about them in the environment of the “quantified self” (Lupton 2016). Whereas research has affirmed that nearly half of U.S. teens say that they are online almost constantly (Anderson & Jiang 2018), and some research has suggested that young people of color engage in self-censorship in light of fears related to surveillance (Shresthova 2016), there is little research on how issues of tracking play out among young people of color who live in economically distressed neighborhoods. The project reviewed in this paper aims to fill this gap, asking: How do young people in economically distressed locations utilize mobile media in their everyday lives, and how do they engage in strategies to avoid or temper tracking, if they do?

Of particular interest to us is the use of Tik Tok, which has joined Instagram, Snapchat, and YouTube as mobile-based locations where young people are constituted as audiences for user-generated as well as for commercially available content. In early 2019, Tik Tok rose to the #3 spot on Apple’s list of top free applications. Through the app, young people capture video and make a music selection from a list of licensed songs, setting original video to music as a means of creating short, meme-like shareable content that is usually humorous, absurd, or nonsensical.

Following work with youth co-researchers that has been piloted in the disciplines of education, social work, and public health (Anyon et al., 2018; Cammarota & Fine 2010; Kelly, 2006; Stewart, Riecken, Scott, Tanaka, & Riecken, 2008; Watson & Marciano 2016), the project reviewed in this presentation works with young people, inviting them to explore how they and their peers negotiate the demands of an always-on mobile experience and the growing awareness of the business interests that drive the apps they use most frequently. In so doing, it contributes to the rethinking of the audience, and of audience research, in a context of user-generated entertainment and identity-construction.

Title: Étudier les pratiques de visionnement connecté des séries transnationales des jeunes adultes au Québec : quels enjeux méthodologiques '

Session Type: Individual submission

Authors:

Name: Christine Thoer

Email: thoer.christine (at) uqam.ca

Country: CA (Canada)

Affiliation: Université du Québec à Montréal

Name: Christian Agbobli

Email: agbobli.christian (at) uqam.ca

Country: CA (Canada)

Affiliation: Université du Québec à Montréal

Abstract: Au Québec, malgré l'attachement de la population aux séries et téléromans québécois, la présence des acteurs du numérique suscite de nombreux questionnements, entre autres, parce qu'elle menace le financement des productions locales et leur «découvrabilité» dans l'écosystème numérique. Les pratiques de visionnement des jeunes adultes (18-25 ans) ont tout particulièrement retenu l'attention car ceux-ci sont de plus en plus nombreux à se tourner vers les plateformes en ligne, notamment le service Netflix, pour visionner des séries. Si les logiques d'expansion des services de vidéo à la demande (VSOD) contribuent à la circulation des fictions sérielles produites aux États-Unis, elles favorisent aussi la consommation de séries télévisées produites dans d'autres régions du monde. Ces productions suscitent de plus en plus l'intérêt des jeunes adultes, témoignant d'un «cosmopolitisme esthétique-culturel» (Cicchelli et Octobre 2017).

S'inscrivant dans le courant des Cultural Studies, cette recherche mobilise les travaux de Hall (1991) qui insiste sur le rôle joué par les flux culturels dans la construction d'identités hybrides, considérant ainsi les séries comme des espaces de «fertilisations transculturelles» (Maigret et Soulez, 2007). Nous nous appuyons aussi sur les travaux invitant à articuler les contextes de production, de circulation et de réception des séries, ceux-ci étant aujourd'hui de plus en plus imbriqués (Esser, 2007 ; Hill, 2018). Nos objectifs sont de 1) documenter les pratiques de visionnement des productions sérielles transnationales des jeunes adultes au Québec (modalités de découverte et de sélection des séries produites hors de la zone Nord-Amérique sur les plateformes en ligne, recherche d'information sur les contenus, échanges autour de ces pratiques avec les pairs); 2) d'identifier les attraits qu'exercent ces productions auprès des jeunes (éléments favorisant l'intérêt et l'engagement : langue, thématiques, personnages, univers représentés, éléments de localisation, esthétique, etc.) et 3) de cerner le rôle de la pratique de visionnement de ces productions culturelles dans la construction des imaginaires transnationaux, et plus largement, des identités culturelles.

Toutefois, ces questionnements soulèvent de nombreux enjeux sur le plan méthodologique, dont la discussion sera l'objet de la présentation. Ceux-ci renvoient, entre autres, à la nécessité de comprendre comment les jeunes découvrent et s'engagent à l'égard des fictions transnationales.

Comment identifier ce qui relève du dispositif, et notamment des algorithmes, des discussions avec les pairs ou d'autres communautés interprétatives ? Quelles plateformes de VSOD faut-il prendre en considération ? Quels modes de collecte faut-il combiner pour cerner les réflexions qu'occasionne le visionnement de fictions transnationales sur le rapport à l'autre, les espaces transnationaux et saisir en quoi ces pratiques participent de la construction des identités culturelles ? Faut-il envisager des recherches privilégiant une temporalité longue ? Enfin, comment cerner le rôle que joue la diversité des configurations des industries culturelles selon les pays sans multiplier les terrains et engager une analyse comparative. Nos réflexions s'appuieront sur une revue de la littérature et l'analyse de groupes focus pilotes réalisés auprès de jeunes adultes vivant à Montréal et ayant une pratique de visionnement régulière des séries transnationales via les plateformes de VSOD.

Abstract: Over the past decades, scholarly research on news consumption has produced contradicting theses. Some studies claim that news users are increasingly being locked up in ideological echo chambers and that this leads either to the fragmentation or to the polarisation of audiences. Others maintain that users continue to be exposed to a relatively great diversity of news and information. This controversy has given rise to a renewed interest in theories and research on “selective exposure.” The quality of these theories and research, however, is being questioned by other scholars. A major aspect of this critique is that the current methods scholars are employing are not sufficiently sophisticated to assess actual news consumption or to adequately capture the psychological and/or social mechanisms that explain selectivity.

The research proposed in this paper responds to this critique by using a detailed time diary in order to assess news consumption, as well as a variety of attitudes scales to explain patterns of news consumption. A weeklong diary study (N=460) and a survey questionnaire (N=1,006) into the exposure of Flemish media users has been developed for this purpose. The results show that news consumption in Flanders is currently relatively well balanced in terms of content diversity. In addition, news consumption patterns span across all media platforms.

These findings debunk the thesis that news audiences are becoming increasingly fragmented due to customized news provision via the Internet. However, indications were found of a possible polarisation of news use on the basis of ideological attitudes and of dualisation of news consumption between so-called better off, highbrow news users and less well off, lowbrow news users. The relation between these two tendencies is examined.

Keywords: selective exposure, news diversity, social attitudes, echo chambers, polarisation, dualisation

Abstract: In *Getting a Life* (2018), Woo points out that, in marketing as well in symbolic terms, in last years the media production has been strongly influenced by the Geek Culture. This action, at its roots, is connected to Comics consumption and products made out of these narratives. On the second half of the twentieth century, some elements of geek culture were already being seen in different kinds of culture and artists systems, as Pop Art. In this same period, it came to street art. According to Stewart, in *Graffiti Kings* (2009), the comics characters show up at graffiti in New York trains interventions in 1970's. The Cartoon Style brought to the urban environment figures of known characters such as Snoppy, Mickey, Beetle Bailey and, especially, a character group named "The Straphangers", inspired on the comic book of the underground artist Vaughn Bodé. In general, graffiti gives an ideological message that is frequently aimed at the demystification of symbols of cultural domain. Graffiti artists usually develop personal graphic styles and ideological contributions both in message content and the place chosen for intervention. Concerning the characters use, the graffiti artists create their own characters or make a cultural appropriation of an already existing character, licensed, giving a new meaning to its original content to send a new message.

According Ramos, in *Grafite, Pichação & CIA* (1994), Vallauri was the first artist to bring to São Paulo walls, in 1970's, comics references on a stencil of the characters Mandrake and Jungle Jim. At the same time, the graffiti artist Matuck reproduced, also in São Paulo, the silhouette of Little King of the Otto Soglow comics *La Contestazione di sua Maestà*, and Hergé character Tintin. This practice spreads through the Rebouças Avenue tunnel, in São Paulo, at the end of the twentieth century, images of characters as Batman, Joker, Wolverine, Ranzero and the cat of Squeak the Mouse. By licensed products appropriation, these artists had just demystified symbols of cultural domain.

Based on these assumptions, and using as an object of analysis the work of graffiti artist Cranio, this article aims to examine as elements of Geek culture – especially the characters of serial fictional

narratives – goes through contemporary graffiti. Cranio broaches, with humor and irony, themes related to consumerism, corruption, hunger and environment. His paintings of Batman, Superman, Mickey, Captain America, Wolverine, among others, interact with the blue indians, a sign of his work, on criticism about national identity. This work is part of a research supported by FAPESP and it aims to investigate the means of licensed characters appropriation by subversive systems – as in tattoo and protest marches (IJOCA, 2015; 2018).

Title: Animación y mito del héroe como recursos discursivos en campañas políticas mexicanas: López Obrador y Alfredo del Mazo

Session Type: Individual submission

Authors:

Name: Citlaly Aguilar Campos

Email: citlaestrella(at) hotmail.com

Country: MX (Mexico)

Affiliation: UNIVERSIDAD NACIONAL AUTONOMA DE MEXICO. INSTITUTO DE INVESTIGACIONES ESTÉTICAS FACULTAD DE CIENCIAS POLITICAS Y SOCIALES

Abstract: Palabras clave: animación, mito, héroe, política, discurso

Los procesos electorales en las sociedades democráticas se transforman de manera inequívoca en campos de batalla campales, donde los diversos candidatos construyen estrategias específicas para poder conseguir el voto de la población: Una campaña política siempre hará un despliegue de recursos discursivos que logren generar empatía, es decir, los mensajes deben tener una enorme potencia de significado que vaya acorde al contexto donde se están generando.

Cada campaña electoral va adaptándose a su horizonte sociohistórico y va tomando como inspiración recursos de la cultura actual. Ejemplo de esto son los políticos mexicanos Alfredo del Mazo y Andrés Manuel López Obrador, quienes durante sus respectivos comicios utilizaron la animación digital para crear una llamativa propaganda. En el caso del primero, su equipo de campaña hizo todo un avatar que se promovía a través de redes sociales y que de manera virtual daba conferencias de prensa; Andrés Manuel recurrió a un cortometraje producto del fan art, además de merchandising con su persona caricaturizada.

Asimismo, Obrador y del Mazo en sus animaciones utilizaron un poderoso relato que se configuró a través del mito del héroe, haciendo de ellos mismos un personaje épico lleno de asombrosas cualidades. Aunado a esto, la estética de la animación sigue el estilo japonés del anime, permitiendo que los jóvenes -que tal vez iban a votar por primera vez- se sintieran representados y atraídos por dichos candidatos.

De tal forma, esta investigación tiene como objetivo exponer la estructura de los ya mencionados discursos políticos animados de López Obrador y Del Mazo. Se observarán sus convergencias así como sus notables diferencias. A la vez, se hará hincapié en la manera en que cada personaje va conformando una ideología que busca tener congruencia con su partido que representa y la forma en que el mito del héroe es la constante en ambas narrativas.

Los discursos políticos son configuraciones de relaciones de poder complejas. El que utilicen esta clase de elementos como la animación y el mito no es azaroso, sino que habla de las intenciones de los actores involucrados, son actos de enunciación que tienen como objetivo concretar una huella en el imaginario colectivo y personal de su tiempo.

Como aparato crítico se utilizarán las ideas de teóricos como Joseph Campbell, Rollo May, Carlos A. Scolari, Clifford Geertz y Edna López Becerril.

Title: Representation of Women in the Self-defined Feminist Caricature Magazine of Turkey

Session Type: Individual submission

Authors:

Name: Seval Erkul

Email: s.erkul(at) sussex.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sussex

Abstract: In this study, I examine the representation of feminism in the self-defined feminist caricature magazine of Turkey, namely Bayan Yani, and aim to determine the way in which gender related socio-political issues are debated in this particular publication. Being initially launched on 8th March 2011 by women caricaturists and writers of the Leman Publication Group, Bayan Yani was originally intended to be a single, special issue, dedicated to International Women's Day. However, as a result of the positive and satisfied feedback from critics and readers, a decision was made to continue publishing the magazine and the first and only women led caricature magazine of Turkey, appeared on the shelves on a monthly basis, targeting mostly but not exclusively women. The scope of the research also includes exploring the responses of women audiences living in Turkey's patriarchal and conservative society to their own humorous portrayals. In this way, by interviewing a representative selection of audiences, the study allows women to criticise and even correct their own representation in contemporary humour culture in Turkey. The study takes feminist theories of media representation and humour theories from a feminist perspective as its starting point and aims to further the current academic discussions around them.

It is an ongoing research and is based on archival research and limited pilot interviews I have done so far. It is also a part of broader investigation, which will include deeper analysis of women's portrayal as well as the responses of women audiences and creators/editors/producers of not only the self-defined feminist publication but also in several types of caricature magazines in Turkey that vary in political orientation, audience, popularity and specialism.

For the purpose of this paper, thematic and visual analyses employed and by doing so key trends and changing dynamics in the depiction of women have been determined. All the issues of Bayan Yani magazine (71 issues in total), since its first appearance on the market, scanned briefly. As far as I can see based on the thematic and visual analyses I have done so far, the magazine engages with gender related socio-political national and global agendas and promotes uprising and solidarity for the sake of women and gender equality in the various realms of life. The prominent themes that will be discussed in this study are:

- Insurgent/Taboo-breaker Feminists
- Awareness Rising Feminism
- Moderate/Domesticated Feminism

To summarise, the study will provide a detailed discussion around the determined themes and interview findings, and it will include various caricature examples to explore.

Title: El uso de la Tomografía Computarizada en la creación de animación visual: Radiology Art de Satre Stuelke

Session Type: Individual submission

Authors:

Name: Paola Moreno Izaguirre

Email: paola.alessandra.m(at) gmail.com

Country: MX (Mexico)

Affiliation: UNIVERSIDAD NACIONAL AUTONOMA DE MEXICO. FACULTAD DE MEDICINA

Abstract: Ciencia y arte no pueden ser considerados antónimos, punto común esencial entre ambas es que son manifestaciones humanas cuyo objetivo es una comprensión del mundo que nos rodea. Dichas disciplinas han conciliado en diversos momentos de la historia -la cámara fotográfica, el cinematógrafo comenzaron como investigaciones científicas, o el que se tengan óleos envasados es gracias a los avances industriales- dentro de esta misma línea es digno mencionar proyectos como el del estadounidense Satre Stuelke “Radiology Art”, iniciativa que busca crear imágenes artísticas a través del uso de un equipo de Tomografía Computarizada (TC).

La Tomografía Computarizada es un invento del ingeniero británico Godfrey Hounsfield que le valió el premio nobel de medicina en 1979, el cual actualmente es parte fundamental en la imagen diagnóstica. Su funcionamiento se basa en un tubo (o dos) de rayos X que atravesarán el objeto a escanear y serán captados por una fila de detectores que transportarán la información a ordenadores avanzados con algoritmos específicos para la reconstrucción de una imagen tridimensional.

Gracias a los modernos software de reconstrucción tridimensional es posible resaltar ciertas características de un objeto por la atenuación del paso de los rayos x a través de éste, es así que Stuelke aprovecha estas características para hacer sus animaciones.

El objetivo del presente trabajo es resaltar la labor del médico radiólogo -y ahora artista- Satre Stuelke, quien a través de un equipo de TC ha escaneado diversos objetos: juguetes, alimentos, electrodomésticos, envases, etc., creando imágenes muy llamativas que se han transformado en piezas artísticas gracias a la composición que Stuelke maneja a través del color y encuadre.

Al ver las obras de Satre, es como si viéramos una serie de cuadros de animación, donde tales imágenes parecen pertenecer a un videojuego o caricatura. Este médico nos permite entender que el arte no es aquel que una institución o grupo de especialistas determinan como tal, sino que es aquello que nos despierta emociones y sensaciones profundas, en el caso de Radiology Art nos acerca al interior de lo que a simple vista es invisible a nuestros ojos, nos descubre las entrañas de lo que está a nuestro alrededor, haciendo que sus radiografías parezcan producto de una chispeante y fantasiosa imaginación y no objetos cotidianos que están en nuestro día a día.

El trabajo de Satre Stuelke es un parteaguas para el mundo de la animación y el arte debido a que brinda alternativas para crear contenidos atractivos a partir de diferentes tecnologías

Title: Simulacro y esquizofrenia en el manga Tsubasa: Reservoir Chronicle

Session Type: Individual submission

Authors:

Name: Sarahi Isuki Castelli Olvera

Email: sarahi.castelli(at) correo.buap.mx

Country: MX (Mexico)

Affiliation: Benemérita Universidad Autónoma de Puebla

Abstract: En el presente trabajo, planteamos que el manga japonés Tsubasa: Reservoir Chronicle, creado por el colectivo CLAMP entre 2003 y 2009, y publicado en México por Vid (2006) y Kamite (2018); presenta una narrativa posmoderna donde el sujeto del relato se fragmenta e interactúa en realidades que se mezclan a través de rupturas temporales y espaciales. Esta idea, se contraponen al pensamiento de que dicho manga, únicamente representa el componente ambiguo presente en la filosofía japonesa y basado en la estética taoísta. Sin descartar lo anterior, retomamos la posmodernidad debido que en Tsubasa, se presenta la esquizofrenia posmoderna a través de la ruptura de tiempo- espacio, en donde escenarios y elementos modernos, se mezclan con lo tradicional; además, se ve presente la desmaterialización del sujeto, al representar personajes con yoes que no son únicos e intrínsecos, sino múltiples y complejos; esto último, lleva a la presencia de simulacros, en donde los clones se confunden con los originales.

Fundamentamos nuestro análisis en el paradigma de inferencias indiciales, propuesto por Carlo Ginzburg (1999) desde la micro historia. En este paradigma, el detalle, presente en la gráfica y relato de la fuente primaria, nos llevará a realidades complejas relacionadas con aspectos culturales, religiosos y sociales, propios de su contexto y origen. En este paradigma, el detalle es un indicio que acentúa lo local y nimio, como forma de llegar a contextos más amplios a través de la interpretación. Con la finalidad de descomponer al relato e identificar los elementos en los que se debe ahondar, retomaremos algunos aspectos de la propuesta de análisis de Jenaro Talens (1980), quien, siguiendo a diversos autores de la semiótica, propone examinar el texto artístico tres fases: semántico, sintáctico y pragmático.

Para llevar a cabo nuestro análisis, son de especial importancia dos autores de la teoría de la posmodernidad: Fredrick Jameson y Jean Baudrillard. Del primero retomaremos dos aspectos, la desmaterialización del sujeto del relato (1996) y la esquizofrenia posmoderna (2006); lo primero, implica la desaparición de la individualidad del sujeto, quien toma muchas funciones en el relato, incluso si llegan a ser contradictorias; además de lo anterior, retomamos la noción de esquizofrenia posmoderna (2005), en la que la ruptura de lo individual, lleva a la mezcla de aspectos procedentes de tiempos y espacios diferentes; se rompe la cadena signifiante y quedan presentes sin conexión de tiempo. Por su parte, de Baudrillard (1978) retomamos al simulacro, que es un vestigio que intenta coincidir con el real y en el camino ambos terminan confundidos.

Nuestras fuentes primarias serían los 13 volúmenes publicados por Editorial Vid; además de los ejemplares de la edición que actualmente publica Kamite. Con la finalidad de tratar aspectos de la narrativa a los que las ediciones mexicanas no han llegado por ser una publicación en curso, revisaremos las ediciones traducidas por sitios scanlation como tumangaonline, que cuentan con ediciones completas y traducidas al español. Las fuentes secundarias son los libros y el material audiovisual que ocuparemos para el análisis.

Title: Cartoon Censorship: Rights, Dignity and the Endangered Art of Ridicule

Session Type: Individual submission

Authors:

Name: Cherian George

Email: cherian(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: Drawing on cartoon disputes from around the world, this paper aims to enrich the concept of censorship by explicating its various forms, ranging from censorship by the state to self-censorship, as well as attacks triggered by the appropriation of cartoons for symbolic purposes never intended by the artist. In line with the theme of the conference, the paper focuses especially on cartoons that have been accused of being racist or otherwise undermining the dignity of particular communities. The aim is not to deliver definitive verdicts about whether these cartoons have indeed crossed an ethical or legal line, but to use these disputes as a window on unresolved, and perhaps unresolvable, dilemmas in media and communication. International human rights norms currently draw a distinction between incitement to objective harms like violence and discrimination, which do not deserve free speech protection; and, on the other hand, subjective offence against people's feelings in the course of public debate, which must be treated as protected speech if does not cause any objective harm. But two very different lobbies—one pre-modern, the other post-modern—have advocated a redrawing of this classic liberal line separating offence and harm. The governments of many Muslim countries led an international campaign to recognise “defamation of religions” as an additional limitation on the right to freedom of expression under international law—a campaign that was energised by the Danish Prophet Mohammed cartoons controversy of 2006. More recently, American identity politics—perhaps in response to the spike in white nationalism that greeted the Obama presidency—has elevated the concept of micro-aggressions, which highlights the psychological harm arising from offence. Accordingly, cartoonists interviewed say that “political correctness” and a culture of offence-taking constitute a major—and in some settings, the main—obstacle to their work. Further complicating the issue is that censorship controversies can sometimes take on a life of their own. This paper argues that the most intractable of these disputes cannot be understood in literal terms. Laws have never only performed a protective or instrumental function; they also have a symbolic function, to affirm a group's values by expressing its disapproval of some behaviour. Debates over censorship, similarly, are partly about asserting a group's values as part of on-going identity politics. The most irreconcilable positions are what can be termed symmetrical or mirrored symbolic disputes, where both the pro- and anti-censorship camps are equally invested in their positions, for reasons that go well beyond the content of a cartoon.

Affiliation: Pontifical University of Rio Grande do Sul (PUCRS)

Abstract: Internet and other digital technologies brought new possibilities for the comic book industry. Even with the possibilities of stories in motion or narratives through apps, the paper and its routines still works as a pattern, something that led to subscription systems and even piracy. Graphic novels and story-arcs keep attracting the attention of the readers, but most of them use the original medium in a regular way. Two books present a different idea and use the page as a big panel and the act of revealing the page to reach the next becomes the new gutter.

The first one is *Unflattening* (SOUSANIS, 2014), a Ph.D. thesis that discusses the relationship between images and words in our learning process and presented as a graphic novel. Due to its nature, the work uses pages as chunks of art created to be read by a different order, examining the pages. What conventionally was used through the gutter changed into the act of turning the page, be surprised and then examine the page/panel. This is something that could be reproduced through a series of digital images, but the zoom feature in each image could change the original idea.

The other one is *Ar Condicionado* (Air Conditioning in Portuguese), a contemporary tale of life inside office cubicles. To better illustrate the stresses and how people are becoming automated persons that talk the minimal possible but spend its time thinking mundane things. To illustrate this, Piqueira created double pages with the thoughts being written inside the outline of each character, in a way that the person became it's thinking bubble. The story could be read as a series of JPG files, but the act of admiring the page and pull the book closer to the eye to follow the flux of each phrase was designed to be read on paper.

In both cases, the support acts as a medium and through its meaningful capacity, since it itself is characterized as a form of expression. In an electronic publication, new materialities would appear, however, the authors opted for the materiality of paper as reading support, leading and transforming

the reading experience through the medium. Thus, the authors find in the physical medium a way of reinforcing their intention with the content and meaning of the text, preventing it from being altered by the change of medium. Hence, the format appears as another actant, dictating the content and being dictated by it, in a mutual dualism.

Affiliation: Xi'an Jiaoong Liverpool University

Abstract: The Cultures of Comics and Animated Media Regionalism on Germany Television

While TV is rapidly losing its grip on being the Leitmedium (dominant medium) of the early 21st century, there remains much to be said about it as its power is still immense. The Internet has been able to ride on the dovetails of globalisation (or vice versa), but in many places TV is still powerful and regionalised, in part due to the federal structures within which it originated. This is particularly so in Germany which continues to enjoy a strong TV media presence and where public broadcasting is still under the jurisdiction of the Laender (states). I will examine two particular programmes which continue to enjoy a large cult following, Äffle und Pferdle and the Saarlodris. The former is a dialect-tinged animated insert series aired together with advertising blocks on the Südwest-Rundfunk around Stuttgart, the latter falls in the same programming category, but is aired around the Saarland area of Germany. Numerous and very successful comics accompany and enlarge upon the TV characters.

My special interest here lies in the regionalised character these shows exude and which speak to a regionalised audience, an audience that is oftentimes excluded from the High German context and marginalised as 'backwards' and 'rural'. Furthermore, although these animated characters were originally created to attract children to the advertising segments aired, and advertising in the 1950s itself consisted largely of animated clips, the former were in many instances multicoded, as some of the jokes were decidedly for an adult audience.

All in all, over 100,000 of such inserts between advertising clips were produced from 1956 onwards, but there is very little academic writing in existence today which would cover them. One of the seminal texts, Hickethier/Bleicher (1996) does refer to them in two instances, but not more. Forster (2013) and Schönknecht (2017) discuss the supraregional ones, but not their country cousins. Lastly, Maresch does look at humour in advertising sections, but not at the animation itself. I will approach my topic using media history and media archeology as methodological tools. In my presentation, I will screen a number of pertinent 10-second clips, discuss a number of fora contributions on the topic, display a number of the comics and analyse them with Disputed Rights, Contested Truths in mind. It will become clear that such kind of programming is able, if not able to fight back the globalising effects of the digital economy, at least to complement and question it in a meaningful way, thus aiding the survival of local linguistic and cultural communities into the future.

Title: Ocaso y nacimiento del héroe a través del OVA My hero academia: Two heroes

Session Type: Individual submission

Authors:

Name: Jorge Anaya Martínez

Email: jorgeanayamartinez(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México (UNAM)

Abstract: En las historias narradas a través de textos escritos o audiovisuales, heroínas y héroes cumplen la función de personajes ejemplares para su audiencia. Tratan de reflejar acciones o situaciones que, de acuerdo con su creador, deben ser admiradas o reflexionadas a fin de que, en la medida de la posible, sean repetidas o ejecutadas de forma similar por las personas para evolucionar como humanidad.

Para resaltar su carácter excepcional, heroínas y héroes enfrentan o surgen en situaciones extremadamente adversas. Este es el caso del manga y posterior animé My hero academia, cuya historia tiene como eje central, que su protagonista adolescente —Izuku Midoriya—, es un ser humano que nació sin un don o habilidad especial, en un planeta donde más de la mitad de la población cuenta con una de estas particularidades.

Como vemos, el arquetipo de héroe que analizó Carl Jung sigue retomándose para las nuevas generaciones y en los nuevos textos. Para resaltar este hecho, retomaremos esta teoría con la cinta animada original (Original Video Animation u OVA, por sus siglas en inglés) My hero academia: Two heroes (Japón, 2018). Esta narración audiovisual original, retoma elementos del texto central como el surgimiento de un héroe en el personaje antes mencionado de Izuku Midoriya y su relación con su ídolo All Might, quien debe dejar de serlo.

El presente texto abordará en un primer momento, una sinopsis general de la historia del manga y animación que dan origen a la cinta, para comprender la relación que existe entre el héroe que debe aparecer para remplazar al que vive su ocaso, y la importancia que la película—a pesar de ser una historia original, y no una parte de la trama central— tiene dentro de la narrativa. En una segunda parte de la presentación, se presentará en forma breve una síntesis de los arquetipos de Carl Jung, para que, en la tercera y última parte se relacionen los conceptos con algunos de los momentos que presenta la cinta.

Title: "Construyendo preceptos de vida desde la cultura friki"

Session Type: Individual submission

Authors:

Name: Nadiezhda Camacho Quiroz

Email: nadusicaa(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: El objetivo de esta ponencia es explicar, primero, qué se entiende por <cultura friki> en México, cuáles son las características que la diferencian de otros países (por ejemplo, de la <cultura geek> en Estados Unidos), así como cuáles son las comunidades de fans (fandoms) que la conforman (comunidad otaku, comunidad gamer, comunidad cosplayer, etc.), en la actualidad. Para después, profundizar en el proceso a través del cual, sus integrantes -los frikis- construyen una suerte de preceptos de vida (entendidos como las afirmaciones o principios que guían nuestra conducta y le dan cierta dirección o sentido a nuestras vidas), a partir de los discursos emanados de los productos o manifestaciones culturales pertenecientes a la cultura friki (como los comics, mangas, animes, videojuegos, etc.); todo ello en el marco de lo que algunos autores como: S. Hall (2007), A. Giddens (1996) o Z. Bauman (2008) denominan: “posmodernidad”, “modernidad tardía” o “modernidad líquida”.

Descriptores: cultura friki, cultura de fans, fandom, preceptos de vida, posmodernidad, estudios culturales, Henry Jenkins, Stuart Hall.

Abstract: Frank Odoi, the late Ghanaian cartoonist who made Kenya his home, was a visual storyteller with an uncanny knack for capturing details in his cartoons. His friend, Paul Kelemba, is not any different. His Madd Madd World series of cartoons that started in the late 1980s appeared as full page of detailed reflection of the nation's reality and has remained so for many years. These early Kenyan cartoonists operated in the age before computer software was introduced into the modernizing world of newsroom operations. Their tools of trade remained their lap-desks, erasers, pencils and blending tools. Odoi has been dead for a while now thus his work remains in the pristine form in which he first caricatured them, but Kelemba continues to caricature embracing technology in the presentation of his works. In exploring Kelemba's later works in comparison to his early works there is an appearance of difference in terms of the details captured in the more recent presentations. A near similar difference appears in the works of Godfrey Mwampembwa, another one of Kenyan cartoonists. Mr. Mwampembwa too started caricaturing in the early 1990s, way after Odoi and Kelemba and before newsrooms and art rooms adopted technology as part of their toolbox repertoire. To what extent has the software caricature studio been a game for cartoon artists? The objective of this paper is to explore how the changes in tools available to cartoonists have affected the final artwork of cartoonists.

In this study we explore the early works of Kenyan cartoonist prior to the adoption of computer software in their workshops to capture the nuances in their drawings. We compare these early drawings with later day drawings and consider any differences in the final published works. In the second component of the study we discuss with select cartoonists the impact of the adoption of technology in their works in order to see how they have been influenced by these technologies. Should computer software, as we suspect, have influenced the execution of the work of cartoonists? We seek to understand how cartoons may continue to change as newsrooms and art desks of cartoonists continue to change.

Title: A Preliminary Research Guide to the Study of Comic Art in Argentina, Chile, Ecuador, Peru and Uruguay

Session Type: Individual submission

Authors:

Name: John A. Lent

Email: jlent(at) temple.edu

Country: US (United States)

Affiliation: International Journal of Comic Art

Name: Geisa Fernandes

Email: geisaf(at) hotmail.com

Country: BR (Brazil)

Affiliation: Observatório de Histórias em Quadrinhos (ECAUSP)

Abstract: While parts of South America, particularly, Brazil and Argentina, figure rather well in the comics/cartoons studies published in English, that of comic art in other sections of the continent come up short and even in those countries, research material tends to concentrate in the same authors or regions, usually metropolis such as Rio de Janeiro or São Paulo, in Brazil or Buenos Aires, in the Argentinean case.

The purpose of this study is to remedy some of the shortcomings by: 1. Locating and interviewing prominent cartoonists; 2. Gathering secondary research materials (anthologies, biographies, histories); 3. Reporting our findings in a series of articles in the International Journal of Comic Art. It is also a purpose of this research to strength the dialogue with Latin American institutions, such as the Museo Nacional de Bellas Artes, in Montevideo and the Universidad San Francisco de Quito. We consider this an important step towards spreading the discussions on comics to different contexts and building audience to the field.

Obviously, it is not possible to draw definitive conclusions from such short stays in these countries, thus, the emphasis on the preliminary aspect.

The nature of the papers that result will be akin to field notes, meant to aid other researchers in their quests for contacts and steer them to available resources (professional organizations, academic programs, libraries, and archives).

This first paper will present the background of the research and an overview on the data collected during the interviews with prominent cartoonists from Argentina, Chile, Ecuador, Peru, and Uruguay. The meetings took place in March 2019 and happened in the cities of Córdoba (ARG), Santiago (CHL), Lima (PER), Quito (ECU) and Montevideo (URY). The interviews are conducted by Prof. John A. Lent with the assistance of Dr. Geisa Fernandes and have also the support of local collaborators.

Title: Spatial-Temporal Processing in Comics.

Session Type: Individual submission

Authors:

Name: Damien Tomaselli

Email: damientomaselli(at) gmail.com

Country: ZA (South Africa)

Affiliation: University of Kwazulu-Natal / AFDA (The South African School of Motion Picture Medium and Live Performance)

Abstract: Spatial Processing in Comics.

“In order for sounds to be differentiated, they must have some form of beginning, middle and end (or in the parlance of synthesized sound, “attack, decay, sustain, release”). This means that in comics, a medium where space and time merge, representations of sound are crucial to making sense of action, in particular, to the passage of time within a singular panel—for while time can be shown to pass between two or more panels through the process of closure (implicitly understanding the movement or occurrence not depicted between panels that makes them sequential), a singular panel is not necessarily a discrete moment, as an entire conversation can occur within it, requiring readers to perform closure even within the scope of a single panel.” (Osvaldo Oyola, 2011)

The above statement speaks towards the abstraction and representation that audio signifiers employ upon the negotiation of visual syntax of the comic. The concept of Bhatkin’s chronotope suggests that a metaphorical, ‘spacetime fabric’ exists in the literary realm. I attempt to extend the notions application to sequential art in hopes that leveraging the concept of the Chronotope may aid to identify the syntax the fabric exerts upon comics and in turn, the single frame. I argue that temporal delineation may become apparent through visual, audio connotations ultimately confronted through representations, shaping what I refer to as a comic spacetime grammar. In the comic, where the relationships of motion and proximity of signifiers are deep etched, we may be able to consider a spacetime ‘weighting’ incurred upon a single frame. Semantic connotations of spacetime grammar may provide a base point of departure in determining a spacetime comic methodology. Scott McCloud discusses the abstraction of an image (McCloud:1993), invoking the imagination to implore spatial-temporal signifiers. Will Eisner suggests that representation in comics relates to real world experiences (Eisner:1985). In contrast to the comic, we consider spatial-temporal significance of the photograph which Barthes states is a ‘message without a code’ (Barthes:1961), etched not in the space of imagination but closer to an experienced real spacetime experience, providing an example of an alternative spacetime syntax. These ideas suggest a correlation between illustrative processes and suggestions of place and time experiences. My aim is to present an introductory framework toward identifying an approach to determining a comic spacetime syntax through its representative form.

Abstract: Dystopian narratives are not unknown in comics. Perhaps some of the best-known examples are Alan Moore and Dave Gibbons' *Watchmen* (1986), which portrays a fictional 1980s US with hooded vigilantes, and Robert Kirkman and Tony Moore's (2003) *The Walking Dead*, whose post-apocalyptic Atlanta is reminiscent of a dystopian London presented by John Wyndham in his book *The day of the Triffids* (1951). In Colombia, despite there being no comic industry to speak of, dystopian narratives are not uncommon. In a recent research project, it was found that 41 out of 130 collected comics from 1992 onwards contained some form of dystopian image of Bogota.

In this presentation we seek to expand previous research on the image of dystopia in Colombian comics to cover a wider array of sequential narratives – more than 160 in our most recent collection – and looking at all images of Colombian cities and their utopian/dystopian rendition. We want to see if there is any difference between the types of dystopia that are presented in Colombian cities, or if they all conform to one general pattern for the nation as a whole.

Dystopia is understood here under the definition given by Claeys (2010), as a concept often used interchangeably with 'anti-utopia' or 'negative utopia', by contrast to utopia or 'eutopia' (good place), to describe a fictional portrayal of a society in which evil, or negative social and political developments, have the upper hand, or as a satire of utopian aspirations which attempts to show up their fallacies... (p. 107)

Utopias and dystopias are often considered to be closely related to science fiction, yet they are not necessarily always related (Fitting, 2010). The images of a given future or alternative present, may be rooted in some of the elements commonly associated with science fiction (technological developments, for instance) but they may also be predicated upon current political issues or past issues, had they developed differently than they did.

In the Colombian case, dystopias tend to be concerned mainly with forms of military or symbolic violence that plunge cities into chaos. Although there are a few mystical or fantastic apocalypse stories dealing with zombies or indigenous deities that return to the world of humans, most of the dystopian narratives seem to highlight current political struggles about the environment, authoritarian views and the inner conflict.

We will present five categories of dystopia and try to infer from them the fears of modern-day Colombian comic book creators.

Title: Autores chilenos masculinos de cómic autobiográfico: ¿qué muestran' ¿qué cuentan'

Session Type: Individual submission

Authors:

Name: Mariana Muñoz

Email: mfmunoz(at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Abstract: Durante los últimos años ha sido muy difundido el alzamiento de la voz de las mujeres a nivel global, y fuertemente. Latinoamérica, y específicamente Chile, no han sido ajenos a esto, a pesar de que histórica y popularmente son identificados como una sociedad machista y patriarcal, donde predomina un estereotipo de virilidad relacionado a lo que R.W. Conell planteó como la masculinidad hegemónica a mediados de la década de 1980. Kimmel, por su parte, señala que este tipo de masculinidad se relaciona con aquella imagen de los “hombres que controlan el poder, que ha llegado a ser la norma” (1997: 51), y que ha sufrido pocos cambios con el pasar del tiempo, entretanto que Dettleff nos ayuda a entender que el género “es una construcción social (...) que establece discursos normativos sobre cómo deben ser los sujetos generizados” (2015, p.51). Mientras que en el sistema patriarcal el hombre es “el ser responsable de proveer a la familia los elementos que le permitan el éxito, la subsistencia, el avance y el prestigio” (Dettleff, 2015, p.52), relacionado con el machismo culturalmente propio de Latinoamérica, aparece también la figura del hombre igualitario como una nueva masculinidad, ya que al igual que la nueva valorización de la mujer, el hombre entró en terrenos relacionados con lo propiamente femenino, como por ejemplo la expresión de las sensibilidades y las emociones.

La autobiografía, por otro lado, ha sido definida por varios autores. Sin embargo, Philippe Lejeune fue uno de los pioneros que en 1975 la delimitó como un “relato retrospectivo en prosa que una persona real hace de su propia existencia, poniendo énfasis en su vida individual, y, en particular, en la historia de su personalidad” (p.48); y por su lado, el cómic autobiográfico específicamente, no solamente cuenta de forma narrativa, sino que también muestra los eventos de la vida de una persona, de acuerdo a El Refaie (2012), donde la dimensión representacional de cada uno de los autores adquiere una importante notoriedad.

En Chile, específicamente durante el siglo XXI, han sido editados 13 libros de cómic autobiográfico pertenecientes a 8 autores hombres; este calificativo de hombre responde a que se identifican con un nombre propio del género masculino, que al mismo tiempo es independiente de la orientación sexual o identidad de género de cada uno de ellos.

¿Cómo se cuentan y se muestran los hombres que han publicado cómic autobiográfico, quiénes son y cómo son sus procesos de trabajo? Son las grandes preguntas que este trabajo responde a través del análisis del discurso y visual de los libros impresos de cómic autobiográfico publicados por autores masculinos chilenos, además de entrevistas en profundidad a cada uno de ellos y su posterior análisis del discurso.

Title: Construyendo democracia con historietas. La lucha por la memoria durante la etapa post-dictatorial en Argentina.

Session Type: Individual submission

Authors:

Name: Iván Facundo Rubinstein

Email: ivanfacundo88(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Name: Laura Nallely Hernández Nieto

Email: nallelyhn(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: Nuestra propuesta de trabajo tiene como objetivo visibilizar las operaciones de asignación de sentido mediante las cuales la historieta argentina "Protección al menor" se configuró como actor político en la lucha por la memoria durante la etapa post-dictatorial.

La historieta aquí analizada se publicó en la revista "Humor Registrado" (1978-1999), uno de los pocos medios críticos que supo escapar a la censura durante la última dictadura cívico-militar argentina (1976-1983). Dicha revista fue objeto de análisis en tanto medio (ya sea que se analice en su totalidad como revista, su circulación, sus estrategias para evadir la censura, sus portadas o sus editoriales), pero las historietas individuales que aparecían en su interior han sido menos trabajadas desde la academia. Asimismo, la etapa posterior a la dictadura militar (aquella marcada por la vuelta a la democracia, el juicio a las juntas militares, la debacle económica y la protesta social) ha sido poco analizada. Luego de las elecciones de 1983 la Argentina entró en una etapa caracterizada por una fuerte y rápida apertura política y cultural: las movilizaciones obreras y estudiantiles coincidieron con expresiones artísticas experimentales; los movimientos sindicales volvieron a tomar presencia pública y se impulsó la búsqueda por la memoria, la verdad y la justicia, en la cual se reveló que el estado era responsable por la desaparición de 30.000 personas. En el ámbito económico, dicha etapa se caracterizó por el desmantelamiento del estado bajo principios neoliberales, el cierre de fábricas, el consecuente aumento del desempleo y la hiper-inflación, hecho que provocó la convocatoria anticipada de elecciones presidenciales.

Bajo este contexto, nuestra propuesta busca evidenciar la forma en que la historieta "Protección al menor" construye un pasado, se posiciona a sí misma (y a sus lectores) en relación a él, y proyecta un futuro común. Para ello, haremos uso de herramientas metodológicas procedentes de la semiótica y del análisis visual, y expondremos las modalidades a través de las cuales la historieta construye su referente: los actores y eventos que considera más relevantes; el tipo de relación que se establece entre ellos; el grado de implicación afectiva que presentan; el enmarcamiento (framing) con que se los encuadra; la valoración que se hace de ellos.

De esta forma esperamos contribuir a la profundización de los estudios sobre el rol político de las historietas en tanto producciones sociales que disputan por la producción de sentido en un momento histórico determinado.

Title: The right to tell: the navigation of story-telling from a position of privilege

Session Type: Individual submission

Authors:

Name: Ellen Heydenrych

Email: ellenfrancesheydenrych(at) gmail.com

Country: ZA (South Africa)

Affiliation: Rhodes University

Abstract: After 25 years of democracy and the pursuit of racial equality in South Africa, numerous strides have been made in this regard. However, many of the consequences of a long and brutal colonial history are still evident. Systems of value created by colonialism continue to live on in today's post-colonial world (Maldonado-Torres, 2007). One small example is that the majority of children's picture books for sale in post-apartheid South African book shops continue to tell stories detailing the white European and American childhood experience or featuring white protagonists in fairy tales, thus perpetuating Eurocentricity and whiteness as the norm. I set about challenging this norm by writing and illustrating a children's picture book about a black South African girl child (called Naledi) who overcomes a variety of obstacles in order to achieve her dream of becoming an astronaut and going to space. However, early in the development of this project, I began to interrogate my privileged position as a middleclass white woman, and how this societal position might impact my telling of this story in a way that perpetuated the dominance of whiteness. White people have been telling the stories of people of colour for centuries as their naturalised position of power and privilege has given them the 'right' to do so. Maldonado-Torres (2007) maintains that the coloniality of being and of power function in such a way that white voices, such as mine, are given more airtime than those of people of colour in many circumstances, including the writing and illustrating of books. His work makes visible this naturalised assumption of privilege and power, and this led me to question my assumption that I had the right to tell this story. In this paper, I will present parts of a comic that I created as a form of visual research, in which I documented and interrogated the process I undertook in order to navigate the telling of this story from my position of privilege. In an attempt to create a picture book which told an authentic South African story, I gathered a group of university peers who are all women of colour, whom I interviewed, discussing the creation of the character, her surroundings, her clothing, her home, her school and her tale. The consequence of this was that I rewrote, redrew and restructured the story in such a way that mine was not the only voice interpreting Naledi's journey into space. However, the question remains – was this enough to create a genuine contemporary South African tale? The comic chronicles 'discussions' that I had with that peer group, the book's characters and others, in order to better understand whether the process I had undertaken to create this book adequately addressed the concern that it may continue to perpetuate colonial systems of value by the simple virtue of it being written by somebody in a position of privilege.

Title: The reclamation of black South African subjectivity in Kwezi, Loyiso Mkize's superhero comic

Session Type: Individual submission

Authors:

Name: Brendon Reyneke

Email: reyneke.brendon(at) gmail.com

Country: ZA (South Africa)

Affiliation: Rhodes University

Abstract: In 2014, South African artist and comic illustrator, Loyiso Mkize created Kwezi, South Africa's first superhero comic. His comic features the titular Kwezi as a young, disaffected black man living alone on the outskirts of Gold City (a stand-in for Johannesburg) who discovers he has superpowers and starts to learn how to use them and the responsibilities that come with them. Along with Kwezi, the comic is populated by predominantly black African characters – both good and bad. The creation of Kwezi is an important step in the development of comic books in South Africa as it draws from the cultural and physical landscape of the country and speaks to young black people without them having to look outside of the country for comics with which they can identify. Also, against a backdrop of sustained negative media representations of South Africa, Mkize recasts South African blackness in a positive light. Stuart Hall (1997) asserts that attempts to reclaim the black subject in popular culture tend to go through two phases. In the first phase blackness is liberated from negative representations and is replaced with more positive depictions. Thereafter though, the black subject is produced inside contemporary “regimes of representation”. In this paper, I will show how Mkize's comic follows Stuart Hall's description of the reclamation of black subjectivity. Using visual social semiotics and discourse analysis I will show how Mkize successfully challenges racist stereotypes of black people as corrupt, deficient or defective and replaces those with positive assertions of black identity in a comic genre that is still largely dominated by the white, western male. But in his attempt to challenge the primacy of whiteness in superhero comic books Mkize overlooks normative genre representations of masculinity and femininity and he produces a story of an Africa that remains unliberated from patriarchy and other hegemonic ideologies. Mkize reproduces many of the hegemonic discourses concerning the masculine and feminine body, the power difference between male and female characters and subscribes to the justified, violent actions of the masculine superhero character. Typically, in superhero comics there is an erasure of the ordinary man in favour of an excessive and powerful one-dimensional masculine ideal (Brown, 1999). In many ways, Kwezi uncritically adopts the tropes of the Western superhero genre. In conclusion, I will propose ways in which Mkize might challenge hegemonic masculinity and suggest alternative possibilities for the superhero.

Title: Portraying Social Issues: A Heuristic Study of Contemporary Cartoons in India

Session Type: Individual submission

Authors:

Name: MRINAL CHATTERJEE

Email: mrinalchatterjeeiimc(at) gmail.com

Country: IN (India)

Affiliation: INDIAN INSTITUTE OF MASS COMMUNICATION

Abstract: Cartoon does three acts with considerable overlapping: it lampoons, it comments and it creates humour/mirth. Cartoon can take different forms and hues- from genteel to caustic to acerbic to vitriolic. Cartoons often comment on and critique the contemporary social phenomena, political happenings and also long held belief system. It can and often does analyse the socio-political scenario with great clarity and insight. As pictures convey more meaning and clarity than written text- the cartoonists are at an advantage to form a narrative that is cognitively more acceptable and is more endearing and closer to the heart of the audience because of its fun quotient. Thus cartoons do two things simultaneously: first, entertain by the funny caricatures and drawings and second tell a story or offer a slice of life. While doing so, it can comment, lampoon or ridicule- which can either generate or trigger a discourse on certain issues. It is this ability of the cartoons to comment, generate a discourse and shape public opinion – with fun that makes it a unique tool.

Cartoons have the ability to involve and engage the common mass, the hoi poloi with the key players of governance even without them realizing that. It can simultaneously entertain and enrage people on issues- a unique ability unmatched by any other form of visual or written communication. In India cartoonists have always championed the cause of the poor, downtrodden and the marginalized since cartooning began in India early 19th century. They have highlighted and attacked social maladies and portrayed the condition of the common masses. Though cartoons are getting less space in mainstream print media now, the tradition continues.

This paper takes up three contemporary events that shook the collective conscience of the Nation- and looks at how cartoonists across the country have engaged with these events (a. Tens of thousands of barefoot farmers marching into Mumbai, the commercial capital of India; b. a poor man carrying the dead body of his wife on his shoulders; c. a farmer commits suicide as he fails to repay the loan and is continuously harassed) and issues- leading to these events. These issues are: poor health service, agrarian crisis and farmers committing suicide under the debt trap, even as the administration is mired in procedural quagmire.

It is a heuristic study of the cartoons on these events, which aims to map the pattern in the cartoons in the portrayal of the subject.

Title: Superheroes and the salvation of Africa

Session Type: Individual submission

Authors:

Name: Brian Garman

Email: b.garman(at) ru.ac.za

Country: ZA (South Africa)

Affiliation: Rhodes University

Abstract: The superhero genre emerged from the United States in the late 1930s as an escapist fantasy that helped readers cope with the misery of the Depression and the anxiety brought about by the rise of fascism in Europe. Today, superheroes are no longer only white men, nor are they confined to America, or even the pages of comic books. Such diversity is necessary given the superhero's increasingly important role as an "escapist fantasy, cross-generational icon, and aspirational figure" (Burke, 2016). Several short-lived black superheroes emerged between the mid 1940s and mid 1960s, but the first black superhero that has enjoyed any longevity was the Black Panther who appeared in Marvel's 1966 *Fantastic Four*. Since then he and his fictional home country, Wakanda, have become symbolic of the possibilities of a newly imagined Africa. In this paper, I will use a visual social semiotic approach to examine the discourses in the Black Panther series (specifically that written by Ta-Nehisi Coates) that are drawn on to imagine Africa and Africans in a manner that contest the stereotypical representations found in political, news and economic discourses about Africa. My analysis of the comics shows how complex and difficult it can be to contest regimes of representation that work to fix racialised and derogatory meanings. In response to the pejorative stereotypes of the black body, successive writers and illustrators have used images of strong, healthy, and magnificent black people to construct a more affirmative representation of Africa and Africans. Significantly, they draw on sports, traditional, developmental and hegemonic discourses of masculinity in an attempt to expand the complexity and range of possible representations of African-ness. In so doing they run the risk of reproducing many of the stereotypes that sustain not only the racialised and gendered (masculinist) representations of Africa, but also a sentimentalisation and romanticisation of a place, a people and their traditions.

Title: Memoria y derechos humanos. Tres novelas gráficas sobre la dictadura militar en Chile

Session Type: Individual submission

Authors:

Name: Hugo Hinojosa

Email: hugo.hinojosa.l(at) gmail.com

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Abstract: La memoria, como ejercicio de construcción individual y colectivo, se presenta como la posibilidad de reconstituir un pasado asumido como traumático, el cual muchas veces es negado u obviado por el discurso historiográfico oficial. Desde esta perspectiva, podríamos afirmar que la pugna por las imágenes se vuelve un problema central en la investigación de las novelas gráficas históricas contemporáneas, dado que en ellas es posible constatar lo que en palabras del filósofo francés Jacques Ranciere se establece como el “reparto de lo sensible” (2009)

En ese sentido, tal como afirma George Didi Huberman, las implicancias del uso de las imágenes (en este caso, las viñetas y páginas de cómic), son profundamente políticas, en la medida que en ellas se sostiene un diálogo tenso entre lo que se da a ver y aquello que se oculta. Si pensamos en los violentos eventos que se produjeron a partir del golpe de estado de 1973 en Chile, ejemplificados en los innumerables casos de tortura, desapariciones de personas y exilio, y que son constatables a través de documentos como el informe Rettig, derivado de la Comisión Nacional de verdad y reconciliación, o el informe de la comisión Valech, la necesidad de reconstruir una memoria parece adquirir una papel central en algunas de las novelas gráficas de los últimos años en el país.

De este modo, en esta potencia se hará una revisión acotada a 3 novelas gráficas publicadas en Chile, que abordan desde diversas perspectivas el golpe de estado y las violaciones a los derechos humanos ejecutadas por la dictadura militar. Los años de Allende (2015), Ese maldito Allende (2016) y Fuentealba 1973 (2018), se presentan como tres ejemplos paradigmáticos de la disputa por las imágenes, en un tránsito que va desde la mirada documental más tradicional hacia las escrituras de la memoria y el trauma histórico, y que permitirán abordar un período oscuro de la historia de Chile que es necesario visitar, no sólo como ejercicio colectivo nacional, sino también desde nuestros dolores y silencios.

Title: Cultural Wars and Comics: A Typification of Social Media Debates

Session Type: Individual submission

Authors:

Name: Celbi Vagner Melo Pegoraro

Email: celbipegoraro(at) yahoo.com.br

Country: BR (Brazil)

Affiliation: University of São Paulo

Abstract: In the period of political instability and rapid evolution in the field of values, be they progressive or conservative, digital culture has presented new forms of public debate. In many cases, in a sudden and overwhelming way, debates condemn, ignore and / or distort the facts, often without the details being fully presented and without the presence or active participation of their protagonists. This is not a specific problem in Brazil and it is not restricted to comics. The aim of this article is to analyze, from the selective survey, publicly debated cases of cultural products involving themes such as politics, violence and identity, whether these products are comics, comic strips or cartoons, and to verify how the controversy of the discussion is structured within the context of digital culture. Examples include a work by cartoonist Laerte, a case involving the Turma da Mônica Jovem magazine, and the cartoons of The New Yorker magazine at the time of the Rio Olympics in 2016. This paper is part of an interdisciplinary postdoctoral project on Cultural Wars, Journalism and Politics. The work involves themes such as fandom culture, digital activism, ideological bubbles and the use of algorithms. We pretend to present a typification of debates on comics involving users of social media. Among the results explored are the traditional closed debates without engagement, the atomized and polarized discussion, the process of appropriation and adulteration of cartoons, the debate by engagement and pressure, and finally the activism by the political use of the comics characters in social media in China. The analysis is based on documentary and bibliographical research, using as a theoretical framework the works of Manuel Castells (2001) on the internet, Frédérick Martel on the perspectives and fragmentation of the network, Henry Jenkins (2009 and 2014) on culture and digital engagement, Paulo Ramos (2010) and Daniele Barbieri (2017) with the typology of comics, John B. Thompson (2000) who theorized the political scandal, and critic Robert Hughes (1993) who developed a "culture of complaint" analysis. This paper proposes to be useful for future research on the relationship between social media and cultural production.

Title: La representación del referéndum catalán en el humor gráfico internacional

Session Type: Individual submission

Authors:

Name: Israel Vázquez Márquez (Signature: Israel Márquez)

Email: isravmarquez(at) gmail.com

Country: ES (Spain)

Affiliation: Complutense University of Madrid

Abstract: El pasado 1 de octubre de 2017 se celebró en la comunidad autónoma española de Cataluña un referéndum de autodeterminación convocado por el Gobierno catalán en el que los ciudadanos debían responder con un “Sí” o un “No” a la siguiente pregunta: “¿Quiere que Cataluña sea un estado independiente en forma de república?”. A pesar de haber sido suspendido por el Tribunal Constitucional y calificado de ilegal por el Gobierno español, el 1 de octubre los colegios electorales abrieron sus puertas y el referéndum se celebró. La reacción del Gobierno español fue tratar de impedir la votación mediante la intervención de la Policía Nacional y la Guardia Civil, lo que dio lugar a situaciones de extrema tensión entre los agentes de las fuerzas y cuerpos de seguridad del Estado, la policía autonómica catalana y los propios ciudadanos, que sufrieron numerosas cargas policiales durante el día de la votación. Las imágenes de las cargas policiales del 1 de octubre se viralizaron rápidamente a través de Internet y las redes sociales y acapararon la atención de los medios de comunicación internacionales, que condenaron unánimemente su violencia y brutalidad. Las primeras páginas de medios como The Times, The Guardian, The Independent, Financial Times, Le Figaro, Corriere della Sera o La Repubblica, y cadenas de televisión como ABC, la BBC, la NBC o la CNN, recogieron las imágenes de las cargas policiales de los agentes antidisturbios españoles contra los ciudadanos catalanes y destacaron la crisis abierta entre España y Cataluña.

Dada la cercanía temporal de este acontecimiento, aún son escasas las publicaciones académicas en torno al mismo (Letamendia, 2018), más aún en el caso de las imágenes y textos desplegados en relación a la celebración del referéndum. En esta comunicación nos centraremos en un tipo particular de textos vinculados al referéndum catalán del 1 de octubre: los relacionados con el género del humor gráfico, un componente fundamental de la prensa diaria y una eficaz manera de observar la realidad y la actualidad informativa a partir de un lenguaje peculiar cercano al cómic que se distingue de otros textos informativos por su imaginativa combinación de signos visuales y verbales y por su énfasis en el juego, el humor y la ironía como formas de criticar y hacer reflexionar sobre algún hecho o noticia (Peñamarín, 1996, 1997; Álvarez Junco, 2016). En concreto, realizaremos un análisis semiótico de textos visuales (Rose, 2001; Abril, 2008), dirigido a interpretar cómo los elementos visuales -o visuales y verbales- de las viñetas y tiras del humor gráfico se combinan entre sí para producir efectos de sentido. La muestra se ha seleccionado principalmente a partir de las imágenes disponibles en plataformas digitales de humor gráfico como The Cartoon Movement y Toonpool, las cuales reúnen actualmente el trabajo de numerosos dibujantes y humoristas gráficos de diferentes partes del mundo.

Title: Sex, swastikas, satire and social responsibility: the role of controversy in South Africa's culture wars

Session Type: Individual submission

Authors:

Name: Sandra Pitcher

Email: pitcher(at) ukzn.ac.za

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal Pietermaritzburg South Africa

Name: Nicola Jones

Email: jonesn1(at) ukzn.ac.za

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal (Pietermaritzburg)

Abstract: It's hard to believe that, as South Africa enters its 25th year of democracy, satirical artists are still treated with vitriol and condemnation for work which criticizes the ruling government or high-ranking politicians. Brett Murray had his painting *The Spear* vandalized, political cartoonist Zapiro has found himself on the end of death threats, and Ayanda Mabulu, a self-taught artist from the rural Eastern Cape, has been called a vulgar sell-out, whose crude work of the black body should be censored (ANC, 2017). Overall, such artists are often at the mercy of critical politicians who argue that those who openly demean them are both unpatriotic, and undermine the dignity and reputation of the State. But as with all satire, we argue, despite politicians' criticism, such work has an important role to play in post-apartheid South Africa. Pitcher (2016: 73) argues that "[f]or democracy to be efficient, the action of those in power, whether favourable or unfavourable, must be allowed to be questioned in public", and satirical artworks often do this in ways that force society to not only take account of its leaders, but also of itself (Hodgart, 1969). Therefore, this paper examines three of Ayanda Mabulu's most controversial works, *Zuma-Mandela* (2017), *Zuma-Gupta* (2016), and *Mandela as Black Hitler* (2018), in order to highlight how his work, while possibly vulgar and anarchist, offers critical reflection about South Africa, its politicians and, what Dubin (2012) describes as ongoing 'culture wars' between South Africa's numerous ethnicities. While part of this paper considers Mabulu's work from a utilitarian framework, acknowledging John Stuart Mill's idea that if opinion is silenced (even one that is disagreeable) so is the truth, we also take into consideration South Africa's distinct 'culture wars', and the importance of being socially responsible in such an environment. In doing so, this paper concludes that while such work may be undignified in its positioning of prominent politicians, Mabulu's work, like much satirical art, breaks down such individuals to their basic humanness, and in doing so allows South Africans to reflect on their leaders and thus the dignity of the nation.

Title: El Ridículo. Acerca de la Comicidad y la Violencia Cultural en la Obra de Memín Pinguín

Session Type: Individual submission

Authors:

Name: Alejandra Patricia Gómez Cabrera

Email: patriciagomez444(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México (UNAM)

Abstract: Memín Pinguín es una historieta de corte dramático y costumbrista que narra las aventuras de un niño de rasgos afrodescendientes en el contexto del México del siglo XX. La estereotipia con la que sus creadores, Yolanda Vargas Dulché y Alberto Cabrera, representan al personaje principal, evidencia mucho del imaginario colectivo y de los modelos de convivencia, identificación y pertenencia social de ese momento. Algunas de estas características han perdido vigencia, pero otras han adquirido mayor relevancia y sentido dada la realidad de la violencia que se vive actualmente en el país.

Con base en las propuestas de autores como Johan Galtung, Alfred Stern y Mariana Liberman, se analizan los modelos representados en este cómic, los cuales no sólo buscan fomentar el sentido del humor en el lector, al tratar con ironía las experiencias de su vida cotidiana; sino también legitimar, naturalizar y encubrir un tipo de violencia que se inserta en las actitudes, las sensibilidades, las percepciones y los prejuicios de los propios mexicanos.

A través del análisis narratológico del ridículo, se estudian tres historietas –Impertinentes (2003), Vamos a la Escuela (2005) y Memín Despreciado (2006)- para reconocer los modelos identitarios de sus personajes, sus modos de interacción y las formas como estas coadyuvan en la legitimación y el encubrimiento de la violencia cultural.

Title: Comics scholarship in Brazil: development and state of the art

Session Type: Individual submission

Authors:

Name: Waldomiro Vergueiro

Email: wdcsverg(at) usp.br

Country: BR (Brazil)

Affiliation: Escola de comunicações e Artes da Universidade de São Paulo

Name: Roberto Santos

Email: robelisio(at) yahoo.com.br

Country: BR (Brazil)

Affiliation: Observatório de Histórias em Quadrinhos da Universidade de São Paulo

Abstract: The paper, as its own title emphasizes, aims to discuss the state of art of comics scholarship in Brazil, having also a look to its evolution from the first researches developed in the country. It is well known that the first research on comics accomplished in a Brazilian university institution was coordinated by the late prof. José Marques de Melo with his undergraduate students of Journalism in the Faculdade Casper Libero (Casper Libero College), in São Paulo. It happened in the second half of the 1960s. Afterwards, perhaps due to that first approach to comics' research in Journalism, Brazilian scholarship was mainly linked to the scientific field of Social Communication. However, curiously, the first master's dissertation and PhD thesis were, respectively, presented to the scientific fields of Letters and Psychology, both in the University of São Paulo. In a way, we can say that the University of São Paulo has been the axis for the research on comics in Brazil. This is due, principally, to the existence of an undergraduate course on comics in the syllabus of the Publishing career, as well as to the presence of several lecturers interested in comics. Three of these scholars founded the Observatório de Histórias em Quadrinhos da Escola de Comunicações e Artes da USP (ECA-USP) (Observatory on Comics of the School of Communications and Arts of the University of São Paulo) in 1990, a research center that assumed the leadership on the research on comics, having a strong influence, for example, in the increase of interest for the research on the application of comics in education in the beginning of the 2000s. In parallel to the Observatório de Histórias em Quadrinhos's efforts, other faculties and universities in all fields of Knowledge in Brazil have started offering opportunities for the development of formal researches on comics, increasing considerably the academic production in the area. This can be proved by the assessment of the number of end of course papers, master's dissertations add PhD thesis in the several Directories of Dissertations and Theses available in the internet. Other important indicator regarding the development of the research on comics is the increase in the number of scientific meetings about the subject that have been occurring in Brazil in the last twenty years, as, for example, the Jornadas Internacionais de Historias em Quadrinhos (International Conference on Comics) that happens in São Paulo since 2011; it is possible to see that the number of papers presented in them grows year by year. Last but not least, it is also important to consider the number o scientific articles about comics that are published in Brazilian scientific journals, as well as the publication of several dossiers about comics and the existence of at least two academic journals dedicated to the dissemination of the research on comics in Brazil. All those facts together

concur to place Brazil in the forefront of the research on the 9th Art in the Latin America and perhaps in the entire world.

Title: Sabrina, the rebel witch: from comics to Netflix

Session Type: Individual submission

Authors:

Name: Luiza Lusvarghi

Email: lumecom(at) uol.com.br

Country: BR (Brazil)

Affiliation: ESPM São Paulo

Abstract: The goal of this paper is to analyze the relationship between cartoons, teen fiction and the representation of gender relations in the series Chilling Adventures of Sabrina, based on the homonymous cartoons, and the most recent attraction on Netflix. Sabrina Spellman (Kiernan Shipka) previously appeared in the series The Archie Show, as the witch of Greendale, a city neighboring Riverdale. The girl rose to fame on television with her stories adapted for the sitcom Sabrina, the Teenage Witch (ABC, The WB, 1996-2003), which focused on her conflicts regarding the use of her magical powers among mortals, accompanied by the ever-present commentary of the cat Salem (Nick Bakay), a relative.

The puerile tone of the early comic books and series have taken on darker notes in the current version, the series of comics Afterlife with Archie, and in the adaptation directed by creator, Roberto Auirre-Sacasa, with art by Robert Hack. The characteristic Anglo references that compose fantasy stories about witches of a European influence are present – black cats, the presence of a goat, identified with Satan, and cannibalism. The horns, goat's hooves and tail are features of the god Pan and usually personify Satan according to Christianity, symbolizing the pagan culture. Sabrina represents a typical all-American girl of the 1960s, the period in which the series plays out, reaffirming the differences between the New World and the Colony, and Old England, within the context of the call for civil rights that marked this period in that country, but which are equally suited to the era of Trump. The young witch wants to conciliate the existence of a God and her vocation for witchcraft, without signing a pact with the devil.

Netflix is favoring intercultural and transnational projects. It's productions blend formats and genres firmly established in the global and Hollywood film industry, exploring niche markets and discussing controversial subjects, as well as ethnic and religious conflicts. Archie Comics, which published Sabrina, was established in 1939 as MLJ Magazines. The company has always been associated to adolescent characters and, in 2014, Archie Comics signed a partnership with DC Comics, looking to expand further into the crime, suspense and adventure genres.

Title: The threat of neoconservative unilateralism for Community Communication systems

Session Type: Individual submission

Authors:

Name: Adilson Vaz Cabral Filho

Email: acabral -at- comunicacao.pro.br

Country: BR (Brazil)

Affiliation: Fluminense Federal University

Abstract: Community Communication is an important sector of the Communication system, established in many national regulations and demanded by organizations such as AMARC (2008) and UNESCO (1980). As part of a broader public policy, it is considered and affirmed under the principle of communication as a human right allied with other traditional ones (education, health ...), as structured by Marshall in civil, social and political rights (1950). This is an important pillar for what democratic states based on the rule of law are constituted, taken as references for UN consolidation since 1948, in despite of its limitations. Few years ago, some political moves are revealing a strong offensive against this political project: a neoconservative wave of unilateralism not only constituted by hate speech based on fake news in a post-truth era, in which the lack of solidarity with migrant people is one of the most shameful and hideous faces, but the defense of one specific country in despite of others in different regional contexts; the preference for binational relations in despite of bloc or multilateral relations and the apology of the "nationalism as a betrayal of patriotism" (Macron, 2018). Although based on community and local principles, national policies for Community Communication should not be embraced with ideas related to country supremacy or ufanism, as plurality and diversity are directly related to the recognition of different people worldwide. This leads to the understanding of general principles for community communication initiatives, to be recognized by multilateral organizations, as a sector distinct from the state/public and the market/private ones, that should be developed to strengthen public policies related to the affirmation of different fundamental human rights, social justice and the multilateralism itself as a proposal for political, economic and cultural organization of nation-states. With the proposal to investigate what can be the role of Community Communication in times of neoconservative unilateralism, this research brings firstly a broad characterization of these times, then presents Community Communication's principles that highlight differences in relation to the neoconservative unilateralism and the limitations to be overcome by practitioners, supporters and policy-makers, exploring the example of Kirimurê TV, a community tv channel in Salvador, Bahia, Brazil, running through web and pay-per-view multi-platform environment, articulating different kinds of social movements and organized groups, which may offers strategic principles for resistance in other national contexts.

Keywords

unilateralism; neoconservativism; community communication; communication policies.

Abstract: En plena era digital de la información y las comunicaciones, la sociedad en general reconoce nuevas capacidades y habilidades para procesar, producir, transmitir y divulgar contenidos informativos, articulados a través de plataformas digitales, las cuales se utilizan para producir, procesar, enviar y recibir mensajes, particularmente, a través de las redes sociales digitales. Estas últimas se afianzan con enorme potencial para interconectar colectivos sociales, compartir información y conocimiento, para crear colectivamente y ser protagonistas de nuevos contenidos de mayor significado y utilidad para las comunidades. Han propiciado el desarrollo de un profundo sentido colaborativo para la transformación social. Esta investigación pretende identificar, reconocer y analizar las manifestaciones concretas que tienen el periodismo digital ciudadano y los medios alternativos de comunicación, específicamente a través de la plataforma WhatsApp, en casos concretos como: Eje Central y Emisora La Buena 95.4 FM en las comunas tres y cuatro del municipio de Bello, Valle de Aburrá, y Mi Comuna Dos, en la comuna dos de la ciudad de Medellín. Mediante una metodología cualitativa se busca entender y articular, en los casos seleccionados, las diferentes dinámicas sociales donde están involucradas las nuevas herramientas digitales con los procesos informativos periodísticos y la participación de las ciudadanías implicadas.

Title: LA RADIO COMO INSTRUMENTO DE CREACIÓN DE MEMORIA Y NO REPETICIÓN ANTE EL CONFLICTO ARMADO (INTRA URBANO EN MEDELLÍN)

Session Type: Individual submission

Authors:

Name: Marlon Echavarría Rodríguez

Email: mechava1 -at- uniminuto.edu.co

Country: CO (Colombia)

Affiliation: Docente Universitario

Abstract: Palabras Claves: Medios – Conflicto Armado – Paz – No repetición

Ante la urgencia de contar con procesos efectivos que permitan superar las diferentes etapas del conflicto que ha golpeado al país desde hace más de 50 años, se propuso la creación de estrategias cercanas, reales, asequibles y de participación sin distinción de ningún tipo, que permita que la ciudadanía pueda dar cuenta de procesos individuales y colectivos sobre esta tragedia y las maneras desde que la resiliencia se han podido ir mitigando con diferentes estrategias desde los estamentos gubernamentales, departamentales, locales y comunitarios desde la radio (web).

Lo anterior surge ante la necesidad de crear contenidos multimediales (podcast) que permitan su masificación a través de diferentes plataformas digitales, construyendo tejido social, vincular la comunidad víctima, la comunidad no víctima, los estamentos del Estado y hacer un llamado al cuidado, preservación y mantenimiento de los acuerdos que permitan que la restauración sea completa y que desde la radio se potencie este proceso. La construcción de contenido se genera desde las experiencias de personas víctimas y no víctimas, desde premisas como ¿Cómo concibe la Paz? ¿Qué es tener Paz para usted? ¿Cómo contribuye usted a la Paz? Entrevistas, reportajes, crónicas e historias de vida son parte del material que se ha realizado para la difusión entre las comunidades participantes y a través de los medios masivos comunitarios y web pertenecientes al proyecto.

La radio (web) y comunitaria potencia nuevos modelos de comunicación con énfasis en procesos de construcción de paz, reconocimiento del otro desde la diferencia, desde su contexto y desde su experiencia de conflicto, podcast que dan cuenta de narraciones crudas, procesos que enmarcaron una historia violenta en el país, pero qué desde la emisión de las mismas, aporta a la no repetición

Title: Techio Comunitario training program: Weaving technological autonomy in Mexican indigenous peoples

Session Type: Individual submission

Authors:

Name: Carlos Baca Feldman

Email: bacafeldman -at- gmail.com

Country: MX (Mexico)

Affiliation: Redes por la Diversidad, Equidad y Sustentabilidad A.C.

Abstract: In this paper I wish to discuss the ways in which technological autonomy is woven from the convergence between the organizational and cultural forms of the indigenous and rural communities in Mexico in relation to the use and appropriation of the tools that facilitate the communication processes of the villages. For this, I will use the analysis of the Techio Comunitario training experience and specifically the first and second edition of the Community Diploma Program for Telecommunications and Broadcasting Promoters.

This project arose about four years ago and had as a methodology of creation the technique of participatory research. After we made an analysis and reflection with trainers in indigenous communication, we detected the need to make available to people working in community and indigenous media the knowledge necessary for the operation, use, and maintenance of technological tools in broadcasting, community cellular telephony and wireless Internet networks. Likewise, we created four laboratories in key regions that have all the necessary instruments for the repair and maintenance of the equipment.

In the first generation (2016-2017) the Diploma was attended by 27 participants from six states of the country. In the second generation (2018-2019) 21 people from seven states of Mexico are participating. Each of the modules is held in different venues that include community media spaces and rural and urban training centers in the states of Oaxaca, Chiapas and Puebla.

This training program takes as pedagogical and methodological references the educational practices that are part of the indigenous vision on teaching, the construction of knowledge and the socialization of knowledge. It also draws on elements of popular education and takes up approaches of free knowledge societies. The basis that allows this methodology to take place is the figure of the so-called Advisory Committee, made up of 13 organizations, since its members have collaborated with each other for several years as part of the processes of articulation and networking of community communication processes existing at the regional, national and continental levels.

The theoretical discussion that accompanies the systematization of this training experience is related to the problematization of the common as a way of articulating the life of indigenous peoples and the discussion around technological autonomy as a complex struggle that contains different possibilities and contradictions in its obtaining.

While this type of project represents important opportunities for rural and indigenous communities to operate and manage their own telecommunications projects, I also want to discuss the limits and contradictions that may exist in these processes of search for technological autonomy. My experience as organizer and facilitator of the Diploma course has allowed me to see the intercultural frictions that are woven in the ways in which technology is appropriated by people. In general, I believe it is important to point out a critical vision that empowers community and indigenous communication experiences.

Title: From free radios to digital commons. Governance and sustainability of community media in the EU and Latin America

Session Type: Individual submission

Authors:

Name: Nuria Reguero

Email: nuria.reguero -at- gmail.com

Country: ES (Spain)

Affiliation: Digital Commons (DIMMONS-UOC) & Institut de Govern i Polítiques Públiques (UAB)

Abstract: Alternative and community media shape autonomous spaces of public communication and self-expression where the search of common good replaces the aim of profit. For this reason, they can be understood as particular forms of commons, specifically “digital commons” (Fuster, 2010). In this paper, we analyze the governance and sustainability of 58 grassroots's radios, TV and internet projects from the EU and Latin America.

We strive on the commons’ balance of collaborative economy (Fuster, 2017; Fuster & Espelt, 2018) in order to reflect on the principles and values promoted by this kind of media. With that purpose, we try to highlight a particularity of these initiatives: they claim for social change while being organized under commons’ and solidarity economy principles.

We focus in radio and TV stations because of the difficulty to produce audiovisual contents and to get spectrum’s licenses. Aiming to grasp shared attributes and challenges among regions, we have selected different cases from the EU and Latin America. We conclude that the transformative role of these communities concerns to their organisation (self-government, assembly), production (cooperation, horizontality, des-professionalization) and economy (independence, community funding). Seeking maximum autonomy is what unites apparently different communities such as Spanish urban free radios and Mexican indigenous stations. The key is always the same: achieving finance independency from state and big corporations.

Data was obtained mapping grassroots self-managed media, using web ethnography, in countries with common and contrast elements (Latin vs. Anglo-Saxon cultures; old vs. young democracies; central vs. peripheral economies; presence of indigenous peoples) and conducting an online survey.

Title: A Revolution within 'the Revolution'. Independent Media and the Reconfiguration of Journalistic Resistance in Cuba

Session Type: Individual submission

Authors:

Name: Sara Garcia Santamaria

Email: garcias.sara -at- gmail.com

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Abstract: Over the last few years, the digital independent mediasphere has eroded the Cuban state monopoly over informational and communicational channels. Digital platforms have eased the coverage of new social phenomena, giving visibility to a growing plurality of voices. While Cuban journalists are able to work for independent media outlets, practising independent journalism still needs to be done at the margins of the law. In western countries, a common assumption has been that this new independent mediasphere would be necessarily counterhegemonic and inherently democratizing. However, this oversimplification equates journalistic independence with political opposition, overlooking the complex processes of identification, cooptation, negotiation and resistance that operate both at a personal and at a professional level.

The goal of this paper is to examine the processes by which some journalists decide to break aside from the Party-media system and to foster a debate within digital independent outlets. This work offers a historicized analysis of the Cuban media, looking at sources of change and resistance that arose both from the official and the independent mediasphere. Challenging the presentism and technological determinism that often permeate the study of the media in non-western authoritarian contexts, this paper defies the assumption that processes of media-led democratization are only possible when they come from the edges of the hegemonic system.

This paper borrows sensitizing concepts from Ernesto Laclau and Chantal Mouffe's (1984) body of theory, which are applied through a discourse theoretical analysis (Carpentier and de Cleen, 2007). The sample includes online posts from Cuban independent digital media outlets that look at the way in which digital technologies are reconfiguring journalists' professional identity. This is triangulated through qualitative interviews with journalists, which were conducted between 2016 and 2019. The preliminary results indicate that journalists' ideological identification and professional affiliation are blurry. Often, practitioners need to work both for Party-owned and independent media outlets in order to make ends meet. This material restriction means that their positionality within hegemonic-counterhegemonic discourses is not set, but rather swinging. Therefore, Cuban journalists need to constantly reposition themselves within a loop of cooperation and resistance that goes beyond fully official or oppositional discourses. The data suggests, therefore, that a democratizing change needs to be studied from this dual identity, which operates both within and outside the Party-media system.

Title: Listening to the listeners: adapting community radio to the local environment

Session Type: Individual submission

Authors:

Name: Bridget Backhaus

Email: b.j.backhaus -at- lboro.ac.uk

Country: AU (Australia)

Affiliation: Loughborough University London

Abstract: Bertholt Brecht (1932) famously lamented the one-sided nature of radio, suggesting that it would be the “finest possible communication apparatus” if it allowed listeners to speak as well as hear. This represents a significant limitation for community radio, a medium that is supposedly participatory and is said to provide a “voice for the voiceless”. What good though is a voice if no-one is listening? Community radio should represent a convergence of both voice and listening, in that audiences should have the opportunity to have a voice and, more importantly, to have that voice heard. How this works in practice however is unclear. Listening refers to both the cognitive tasks associated with receiving, understanding and interpreting messages, and the behavioural tasks of verbal and non-verbal feedback in response to those messages (Burleson, 2011; Jones, 2011). Purdy differentiates between “hearing” as “the physiological process of receiving sounds”, and “listening” as the infinitely more complex process of “attending, perceiving, interpreting, remembering, and responding to other human beings, in a sociocultural-linguistic environment that thoroughly permeates and influences the receptive, meaning creation process” (1991, p. 61). Listening research on community radio has, for the most part, tended to focus on how and why audiences listen, while the role of listening for community radio practitioners represents a significant research gap.

As such, this research explores how community radio practitioners listen to their audiences in order to adapt their communication practices to their listeners and their local environment. The research design draws on principles of postcolonial feminist thought as espoused by authors such as Edward Said (1979) and Gayatri Spivak (1988), as well as the concept of cognitive justice which recognises the equally valid existence of different forms of knowledge outside of mainstream, western thought (Visvanathan, 2009). Such an interpretive framework considers the knowledge emerging from this research as co-constructed by the researcher and research participants and commits to listening throughout all aspects of the research design.

Drawing on ethnographic research conducted at two community radio stations in South India, this research explores the relationships between community radio broadcasters and their listeners as well as the various structures that influence how listeners interact with broadcasters and vice-versa. These interactions are framed within their broader legislative, socio-economic, cultural, and discursive environments in order to arrive at a well-rounded understanding of the factors influencing participation in community radio, as well as the role of listening on the part of the broadcasters, not just the audiences. This research offers insight into the communicative cultures and practices of community radio practitioners working within a development agenda. The findings also reveal how broadcaster listening contributes to the ways in which audiences are able to adapt community radio as a communicative technology to suit their needs and local environment.

Title: Ecocinema: A Study of Community Based Video Production in Sundarbans

Session Type: Video Submission

Authors:

Name: Elja Roy

Email: royxx324 -at- umn.edu

Country: US (United States)

Affiliation: University of Minnesota

Abstract: Ecocinema as a field of research primarily focuses on biocentric or ecocentric critical readings of films. However, the production of environmental films requires additional scholarship that explores the challenges, choices, and embodied experiences of making such films. As a scholar filmmaker, I wish to explore how can ecocinema broaden the scope of community participation and reach beyond national borders to deal with global problems like climate change?

My video is a result of community-based production. It was recorded during Summer 2018 in Narayanganj, Bangladesh. The song in the video, written and performed by the local artists, raises awareness about a proposed coal-burning power plant in the fringe of Sundarbans, worlds' largest mangrove forest. The forest is an archipelago, jointly administered by India and Bangladesh. The transnational waterbodies are a path for oil exploration and transport between the two countries. The dense mangrove not only protects highly populated metro cities like Kolkata (India) and Dhaka (Bangladesh) from tropical cyclones but also provides the livelihood for the natives. Where rising sea level is threatening the existence of several islands, oil spills threaten the survival of native flora and fauna such as the Royal Bengal Tigers, Irrawaddy Dolphins etc. The proposed (Bangladesh's largest coal-burning power plant) plant's massive demand for water, and hazardous sludge and liquid waste will disrupt the air and water quality of the Sundarbans ecosystem. So, the artists and/or academics of Dhaka are using music to raise awareness about the issue. Movements are propelled by music and community-based creation of such music results in unexpected outcomes that any individual can never predict (Pedelty, 2017). So, my study seeks to explore the unexpected results by focusing on the production, distribution and consumption of environmental audio-visual contents. The song, "Dwellers of The Forest Arise" is performed by the musical groups of Dhaka, Bangladesh on rallies, streets and during protests. My research aims to capture the artists-activists in a documentary film. The submitted musical video is a part of that work. Through the 8-minute 18 seconds long video I would like to introduce the issues encircling the forests and my research aims. The techniques of ethnographic film making guided my work. My video recordings are results of constant dialogues with the artist-activist community members. Paulo Freire's (2018) approach towards learning through dialogue created a framework for the productions. As opposed to the top down banking model of education (Freire, 2018) I am researching collaborative learning in co-creation of community-based videos. Based on participant observation, my research intends to offer an alternative to the commercial consumption of nature facilitated by mainstream media.

Title: The construction of the homeless in the Greek street paper 'shedia'

Session Type: Individual submission

Authors:

Name: Vaia Doudaki

Email: vdoudaki -at- gmail.com

Country: CZ (Czech Republic)

Affiliation: Charles University

Name: Nico Carpentier

Email: nico.carpentier -at- fsv.cuni.cz

Country: CZ (Czech Republic)

Affiliation: Charles University

Abstract: The street papers constitute a special type of alternative media that focus on the coverage of issues of homelessness and social exclusion, and involve homeless people in their distribution. These publications offer alternative representations of homelessness, creating more respectful and dignified articulations of the subject position of the homeless, in contrast to the representations found in mainstream media (Daly, 1996; Whang and Min, 1999; Howley, 2003).

In order to study how an alternative articulation of “homeless people” is constructed, but also how we can still see (traces of) the hegemonic discourse on the homeless, we focus in this paper on shedia (σχεδία, raft), the only active street magazine currently operative in Greece. This paper deploys Laclau and Mouffe’s (1985) discourse theory, to better understand the discursive construction of the homeless subject position in shedia, and its empowering capacities, and to structure the discourse analysis of the shedia issues from summer 2017 to summer 2018.

As the analysis exemplifies, the shedia magazine firstly renders the articulation of the disempowering hegemonic discourse on homeless people (as can be found in mainstream media) visible, in order to then critique and dislocate it. Secondly, shedia offers an alternative, counter-hegemonic discourse, centred around three nodal points: the home, agency and citizenship, which offers a much more empowered subject position.

Name: Renata Souza

Email: renatasouza.ufrj -at- gmail.com

Country: BR (Brazil)

Affiliation: Federal Fluminense University

Abstract: This workshop is developed from work completed within the AHRC International Network e-Voices: Redressing Marginality, which explored how marginalised communities around the world, especially in Kenya, Brazil, Syria, and Costa Rica, are using digital media and arts to fight against marginalisation and for inclusion. The project draws from research in various fields, such as media activism, community media, development studies, and urban communication. The methodological approach was based on interviews, ethnographic observations online and offline, case studies and creative methods that included producing animations and illustrations.

The workshop will comprise three sessions, structured around the lessons learnt through the project, outlined in our report, in order to promote discussion and learning:

1. Using Creative Arts to Share Knowledge: Art-ivism across borders
One of the activities in the network involved conducting an experimental workshop in which Kenyan artists created an animation piece about Brazilian Human Rights advocate Marielle Franco. Based on this experience, we will discuss and reflect on how creative arts can be used to establish a dialogue between the activist groups around the globe, and, particularly, between countries of the Global South.
2. Ethical Methodologies to work with the marginalised.

How can we work with marginalised communities without exposing them to further risks? when does visibility (an end goal for many social movements) become vulnerability? With the support of an animated guide and a series of reflective and interactive exercises, this session will explore this issue, going beyond "academese" and issues like the need to have informed consent forms. Additionally, we will discuss the visibility journey, a model that our research team has developed to address these issues.

3. Digital Technologies and marginalised communities: What works? What are the challenges? In one year, we have collected the experiences of dozens of activists, development organisations and public foundations in several countries. During this session, we will present lessons learnt from this journey and we will work with the workshop participants to find differences and commonalities with their research and experience.

The workshop will be highly interactive, the presentation of our concrete output will facilitate discussion, and offer the possibility for workshop participants to share their examples and experience with the group. For this reason, we will need a room with easily movable chairs and tables, a video projector, loud speakers, A0 papers and pens.

Title: Localism for losers' Audience perception of localism and its implications in Taiwan

Session Type: Individual submission

Authors:

Name: Ya-Chi Chen

Email: cyq14 -at- ulive.pccu.edu.tw

Country: TW (Taiwan)

Affiliation: Department of Journalism, Chinese Culture University (TAIWAN)Chinese Culture UniversityTAIWAN

Abstract: This paper aims to know what localism, the supposed backbone underpinning radio regulation and policymaking, means for audience in contemporary Taiwan in which network radio system has acquired more than 70 per cent of total listenership nationwide. It points out a noteworthy feature that, especially in areas lacks of local contents, audience seems to relate the localism in radio programs to technological capability, arguing that it is not necessarily for radio to serve localism since 'all information can be obtained online through internet.' This research tries to see this argument, which is seemingly opposite to mainstream regulatory discussions, from the perspective of identity formation in unequal social development amid rural-urban divide.

It is repeatedly demonstrated through focus group interviews that localism is often described as trivial, unimportant matters that do not deserve public resources, or that could be easily fixed by technology. Listeners from southern and eastern parts of Taiwan, where local contents are usually under-provided according to surveys, show contradictory attitudes that on one hand they are unsatisfied with the radio content but on the other they do not want unimportant local matters to waste their time. This research argues that this contradictory opinion rightly pinpoints the fact that audience are both under-served and yet they also want to have their voice heard and valued.

Title: Consumer Activism and the Media: A Genealogy of Signs, Scales and Issues

Session Type: Individual submission

Authors:

Name: Eleftheria Lekakis

Email: e.lekakis -at- sussex.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sussex

Abstract: This paper explores mediated consumer activism to understand the historical and contextual characteristics, which condition this form of participation. It offers an interdisciplinary approach to the study of this phenomenon as well as a commitment to critical political economy and cultural studies traditions (McGuigan, 2012) under the framework of what Miller and Kraidy (2016) discuss as ‘media studies 3.0’ where concerns of social and environmental justice drive research agendas in the field. What we know about consumer activism is predominantly based on Anglo-American accounts whether through historical (Glickman, 2009), political science (Heldman, 2017), sociological (Stillerman, 2015) or cultural studies accounts (Mukherjee and Banet-Weiser, 2012). This paper first traces narratives about the emergence of consumer activism and suggests that the way in which its histories have been written, privilege Western consumer culture within which the phenomenon appears. However, it also records phenomena as they appear beyond this context (e.g. Panda Man in China, Proyecto Squatters in Argentina).

In order to construct a genealogy of consumer activism, this paper sets three elements: sign (positive or negative), scale (local, national, and transnational) and issue (race, gender, and the environment). Political consumerism, in the form of positive vs negative consumer activism refers to the preference or abstinence of the targeted product, service or company (Stolle and Micheletti, 2013; Boström, Micheletti and Oosterveer, 2019). Regarding scale, key historical moments are identified in terms of peak transnational mobilisations (e.g. Boycott Apartheid), but also grassroots national mobilisations (e.g. 1968 Buy British campaign) and local contestations over consumer culture (e.g. consumers in London borough threatening to boycott a supermarket in 2015 because it only offered halal meat on its hot food counters). Furthermore, in terms of labour justice, examples of consumer activism range from ethical consumption (Littler, 2008; Lekakis, 2013) or alternative economic practices focused on reorganising the economy on the basis of solidarity (Conill et al, 2012; Lekakis and Forno, 2019) to consumer protests against the gig economy (e.g. Amazon and Uber boycotts, anti-Airbnb campaigns). Hence, this genealogy includes a contextualisation of the ideological fluctuations of consumer activism in light of targets of progressive to regressive social change and from institutional to grassroots campaigns.

This paper presents potential ideologies attached to consumer activism in a coordinate grid of environmental and social justice goals. It also presents this genealogy as interwoven with a timeline of media activism connected to historical peak moments (e.g. anti-globalisation protests, anti-austerity protests), while taking into consideration Clifford Bob’s (2005) marketing perspective to international activism, which reminds us that those in the spotlight do not matter more than those who are not. Developing on this approach, it argues that loosely-organised forms such as those based on consumption (consumer activism) is relying specifically on this logic of the ‘popularity contest’ (Bob, 2005). It constructs a case for paying attention to consumer activism historically,

contextually and in line with social and environmental justice and against what it calls ‘consumer activist solutionism’ which suggests that all political action can be mediated by the marketplace.

Title: Role of radio in community communication inside prisons in India

Session Type: Individual submission

Authors:

Name: Vartika Nanda

Email: vartikalsr -at- gmail.com

Country: IN (India)

Affiliation: Delhi University, India

Abstract: This paper seeks to analyze the birth and growth of prison operated radio stations, their relevance and impact on the inmates. Of all the Asian countries, China, India and Thailand have the largest number of people in confinement. There are about 1400 prisons in India. Prisons in India, and their administration, is a state subject covered under the State List in the Seventh Schedule of the Constitution of India. The presence of media in prisons is minimal because of the restrictions imposed both by the state and the central government. Prisons are an inevitable part of every society, but they are not commonly discussed in the civil domain for reasons that are known. Prisoner populations are regarded as sub-cultures further imprisoned to various internal and external constraints. Despite this, prisons have made huge contributions in the field of art, literature and culture of various societies and given a fresh perspective to the existing approach towards life.

Though the Indian Constitution has laid down the fundamental rights for Indian citizens and have also emphasized upon the rights of those lodged behind bars, the need for communication has never been the dominant priority within the prison system. While the largest jail of South Asia, Tihar, boasts of having started the first radio inside the prison, lot needs to be done. This model has been adopted by several prisons in India and have yielded positive results. These radio stations are operated within the four walls of prisons, are run by the inmates themselves and they are also the consumers. Catering to the needs of the inmates, programmes are designed accordingly. Interestingly, these stations have the defined territory of the prison itself and are free from commercial interests and interference. Yet the content is heavily monitored and is kept away from the inclusion of news and current affairs. With fixed time slots and also lack of proper technical training, these radio stations run without any commercial pressures and thus, represent radio in an unadulterated form.

This paper will be based on author's original work in prisons, contribution of inmates to promote the culture of radio broadcasting and community participation through radio in prisons. The results of these endeavors have been immense and they have demonstrated huge potential in the field of human rights and prison reforms. The research methodology will be based on direct interviews and qualitative analysis of the existing radio stations in prisons. This paper will also aim at providing an inside into the almost untouched territory of the marginalized lives inside prisons deciphering stories of media literacy and media empowerment.

Title: Negotiating the Political in the Community Radio Sphere in India: Historical Choices, Contemporary Predicaments

Session Type: Individual submission

Authors:

Name: Vinod Pavarala

Email: vpavarala -at- gmail.com

Country: IN (India)

Affiliation: University of Hyderabad

Name: Kanchan K. Malik

Email: kanchank.malik -at- gmail.com

Country: IN (India)

Affiliation: University of Hyderabad

Abstract: The two-decade-old community radio movement in India, right from its inception, has had to contend with the political. Advocates and activists campaigning for opening up of airwaves in India for third-sector broadcasting, independent of the state and the market, were cautious to eschew an argument based on communication rights, something that would have surely been construed as overtly political by a government that was wary of the demand for community radio (CR). Instead, campaigners deployed an already prevalent paradigm of communication for development which seemed somewhat benign and acceptable to the regime.

Not only did this strategic decision by the movement turn into a trap, but was also compounded by other originary sins, such as the policy prohibitions placed on the broadcast of news and 'political' content by community radios. During the past 10-15 years of their existence, many community radio stations, while trying to deliver on their mandate to use community radio as a tool for enhancing people's participation in development, have had to muddle through the political question. In the process, the CR sector has fallen short of its own campaign expectations that community radio would help reverse the hierarchy of access, promote alternative voices, support social movements, revitalize neglected cultural forms, build solidarities among, and empower, the marginalised, and propagate the right to communication for all.

In this paper, we offer a ring-side view of the campaign for community radio in India by dipping into the archive and analyzing some of the early posts on cr-India, an online mailing list that was set up in 2000. This allows us to understand the paradigmatic choices made by mostly urban media activists and advocates to graft an older media technology (radio, albeit in its new FM avatar) on to an equally settled discourse of development communication and, more hesitantly, on to ongoing political and social struggles.

We also discuss the complex ways in which the community radio sector in India has been negotiating the 'political' in their programming as well as through their engagement with the state. We consider some key challenges of the sector -- content restrictions, state funding, monitoring and surveillance, and NGOization -- in order to analyze how this complex web of patronage and

surveillance results in keeping CR stations, from the state's perspective, at a safe distance from the potential ravages of the political.

Title: Examining the quality of participation among the NGO owned Community Radio stations in South India.

Session Type: Individual submission

Authors:

Name: Padmakumar K

Email: fmkumar -at- gmail.com

Country: IN (India)

Affiliation: Manipal Academy of Higher Education

Name: Padma Rani

Email: padma.rani -at- manipal.edu

Country: IN (India)

Affiliation: Manipal Academy of Higher Education

Abstract: It is almost a decade since the first community radio station owned by Non-Governmental Organizations in India started. Easy Access, high level of Interaction and Participation are the core aspects that define community radio as an alternative medium. Ideally a medium for the community and of the community. It is touted to be highly participatory in its approach. There are a total of 583 Community radio stations (CRS) in India (MIB, 2018). These stations are mostly owned by Educational Institutions, Non-Governmental Organisations and Krishi Vigyan Kendras. An extensive review of literature in this area suggests that there is a dearth of empirical studies pertinent to the assessment of the quality of participation in CR stations in the Indian Context. Using the theoretical frameworks of AIP Model (Carpentier, 2012) and Hyde et al. (2010), the paper attempts to assess the quality of participation of NGO run Community radio stations in South India. The paper examines the developmental functions of community radio stations, assessing the quality of programming content and evaluating the nature of participation among the listeners of NGO run community radio stations in South India. The specific concepts taken up for the study include listenership patterns, quality of participation, perceptions of community radio stations and some of the issues that hamper the growth of this aural medium with respect to the Indian Government's current policies related to Community Radio.

Title: Not just sitting at home: The dignity of backyard digital media technology

Session Type: Individual submission

Authors:

Name: Alette Schoon

Email: a.schoon -at- ru.ac.za

Country: ZA (South Africa)

Affiliation: School of Journalism and Media Studies Rhodes University South Africa

Abstract: This paper examines the meanings attributed to digital technology by hip-hop artists from Makhanda, South Africa. Most of these hip-hop artists are young black unemployed men in their twenties, who live in backyard rooms made from corrugated iron. Their social and creative lives revolve around the production of music in the backyard, using second hand computers, mobile "feature phones" and social media. Like most of South Africa, this town is still characterised by great racial inequality despite the rise of a small black middle class. The modernist narrative of progress underpinned by coloniality, positions people like these black unemployed youth at the bottom of the rungs of progress, without potential, without dignity, without humanity. By considering the process of becoming a hip-hop artist as part of identity formation within a community-of-practice, and linking this to Fanonian notions of subjectivity and Maldonado-Torres' notion of coloniality of being, the paper argues that communities-of-practice play an important role beyond the transference of skills. Here the process of gradually mastering digital technology and the genre of conscious hip-hop within the community, and becoming a hip-hop head, forms an alternative narrative of progress, of becoming, of acquiring dignity, humanity and success. On the wrong side of the digital divide, their neighbourhoods have hardly any computer or internet users producing and distributing media, making these hip-hop artists early adoptors on the cutting edge of recycling, repairing and reconfiguring digital media for the "ghetto". By using their mastery of digital technology to engage with the modernist notion of progress, while simultaneously producing music that incorporates indigenous languages, traditional idioms, and poetic constructions of everyday struggles, the hip-hop artists are able to engage with alternative ways of being modern and South African. Here in the backyard they remix the modern and the traditional, they remix the backyard shack and digital technology, they remix the mobile internet and a network of township backyard audiences, and they remix the meaning of being black and poor with having dignity and pride.

Title: [Panel] La comunicación comunitaria frente a la emergencia del neoliberalismo autoritario en América Latina, Descripción del panel

Session Type: Panel Submission

Authors:

Name: Isabel Ramos

Email: iramos -at- flacso.edu.ec

Country: EC (Ecuador)

Affiliation: Facultad Latinoamericana de Ciencias Sociales, FLACSO, Sede Ecuador

Abstract: Los medios comunitarios latinoamericanos, desde la segunda mitad del siglo XX, han protagonizado importantes transformaciones en las formas de ejercer y entender el periodismo y la comunicación; han contribuido de manera relevante a la construcción de nuevos conceptos y categorías teóricas para analizar la comunicación alternativa y popular y, además, a partir de su histórica vinculación con los procesos organizativos y reivindicativos que surgen desde los ámbitos más desfavorecidos y afectados por las políticas de ajuste, han promovido la emancipación y la transformación de las estructuras de dominación en las sociedades de América Latina.

A partir de estas constataciones realizadas en los trabajos de investigación previos de quienes proponemos este panel, en esta oportunidad consideramos que resulta urgente reflexionar sobre la situación de los medios comunitarios latinoamericanos, a partir de la llegada al poder de gobiernos que expresan tendencias societales conservadoras y cuyas políticas pueden ser definidas como de un neoliberalismo autoritario (Bruff 2014; Wigger y Buch-Hansen, 2015; González, 2016; Yeşil, 2016; Smith, 2018 y Tansel, 2018).

Esta etapa contemporánea del neoliberalismo se caracteriza por la invocación del mercado y del imperativo económico como justificación para el ajuste en beneficio del capital concentrado; en el recurso a mecanismos legales y judiciales, a expensas de la participación y el debate democrático y, sobre todo, en la movilización del aparato estatal para la represión de los sectores opositores (Bruff y Tansel 2019). Todos estos elementos, unidos al alineamiento de los nuevos gobiernos neoliberales con la política exterior estadounidense y su disputa con China y Rusia por la hegemonía configuran un nuevo contexto geopolítico, económico y social en la Región.

En lo que respecta a la comunicación comunitaria, nos encontramos frente a una serie de cambios de fondo en las leyes y en las políticas comunicacionales; actos de represión y atentados a la libre expresión, por la vía del cierre de medios o de la anulación de concursos públicos para la concesión de frecuencias y al retiro de la pauta publicitaria oficial y privada, entre muchas otras medidas que impactan negativamente en estos medios populares, a la vez que privan a la ciudadanía de sus canales de expresión, organización y protesta legítima.

Proponemos, por ello una reflexión teórica y empírica, desde diversos países, sobre los alcances y las limitaciones de nuestra comunicación del común (Cerbino 2018) frente a la participación ciudadana, las políticas de comunicación, las resistencias populares al ajuste y el autoritarismo, y la construcción de sociedades auténticamente democráticas en América Latina.

Se presentarán las siguientes ponencias:

1) Avances y retrocesos en la democratización de la comunicación en Ecuador, de Palmira Chavero, Isabel Ramos y Paulo López.

- 2) Los medios comunitarios de Venezuela frente la posibilidad de una confrontación armada, de Fernando Casado y Rebeca Sánchez.
 - 3) De la esperanza a la frustración. El discurso de los medios comunitarios frente a la reforma de la Ley Orgánica de Comunicación en Ecuador, de Ana Tamarit y Belén Puñal.
 - 4) Los medios comunitarios indígenas como construcción de memoria en resistencia en Bolivia. Organización y disputa por el relato, de Juan Ramos Martín.
 - 5) Evangelización, reconocimiento y (neo)liberalismo: las bases ideológicas de la radio comunitaria y su lucha por el reconocimiento legítimo, de Werner Vásquez Von Schoettler y Carol Murillo Ruiz.
- Moderator: Isabel Ramos, Facultad Latinoamericana de Ciencias Sociales, FLACSO-Ecuador
(iramos -at- flacso.edu.ec)
- Discussant: Palmira Chavero, Facultad Latinoamericana de Ciencias Sociales, FLACSO-Ecuador
(pchavero -at- flacso.edu.ec)

Id: 20698

Title: 'Hearing refugee media: minority voices and institutional listening'

Session Type: Individual submission

Authors:

Name: Diana Kreemers

Email: a.kreemers -at- unsw.edu.au

Country: AU (Australia)

Affiliation: University of New South Wales

Abstract: The challenges of social justice are recognised by multicultural democracies around the globe. Australia, the USA, Canada and many European countries face similar issues concerning refugees, migration and cultural diversity which - with the growing influence of populist and (far) right actors in the political domain - are more urgent and topical than ever before.

Governments, media and other established (semi-)public institutions are seeking new ways to capture the concerns and needs of their publics (Macnamara, 2016). At the same time refugees struggle to get recognition of their stories (Coleman & Ross, 2010; Nolan, Farquharson & Marjoribanks, 2018). Despite initiatives in policymaking and media production and emerging digital platforms where refugees share their stories, their voices often remain unheard by powerful actors in the public sphere (Dreher, 2010; Bassel, 2017).

Studies on projects of participation through community, digital and alternative media have led to hopeful results. The literature celebrates the ability for members of minority communities to find a voice, speak up and to participate in the public sphere (Couldry, 2010; Forde, 2011; Budarick 2017). However, this does not necessarily ensure that policymakers and journalists will listen or respond (Dreher, 2010, 2017; Waller, Dreher & McCallum, 2015, 2016). Literature on organisational communication even identifies a crisis of listening: communication is primarily understood as speaking, with crucial implications for listening to subaltern voices, ideas and counternarratives (Bickford, 1996; Lloyd, 2009; Macnamara, 2015, 2016).

In this paper I explore the gap between (1) refugee media's value for social justice and (2) the ambitions and practices of established institutions towards listening and democratic participation of minorities. The research question is: 'How can institutional listening to refugee media contribute to the value of refugee media for social justice?'.

The paper presents the outcomes of an extensive desk research on alternative media, social justice and recognition for minorities, listening in government communication and in journalism. I build on the emerging research on organisational, political and mediated listening, on my earlier research for community media organisations, and on my two-year participatory action research at the Dutch government. I analyse the democratic potential of refugee voices and refugee media as defined by literature on alternative, community and minority media (Cottle, 2000; Dreher, 2017; Budarick 2017). This will be compared to the ambitions for and practices of listening in government communication and media production (Garman & Wasserman, 2018; Dreher & Mondal, 2018; Nikunen, 2018; Dreher, 2009; Curry Jansen, Pooley & Taub-Pervizpour, 2011).

The research shows that when professionals in established institutions talk in terms of listening, and about their intentions to connect with citizens they often talk about 'engagement' (cf. Johnston & Taylor, 2018). I scrutinise this buzzword to explore the (possible) consequences of the concept of 'engagement' as an equivalent for listening. From the perspective of institutional listening, I reflect on the role of media and the mediatisation of society in the achievements and challenges for refugee and migrant community media and their value for social justice.

Title: One side is enough: the journalism practiced by alternative media in audiovisual pieces

Session Type: Individual submission

Authors:

Name: Kamila Fernandes

Email: kamila.fernandes -at- gmail.com

Country: PT (Portugal)

Affiliation: CECS, University of Minho

Abstract: Increasingly alternative media groups acting in the digital environment present themselves as alternative information producers to the mainstream, putting in practice a performance that seeks, among other things, give visibility to socially subjugated individuals and groups, to generate social change (Atton & Hamilton, 2008; Forde, 2011; Rodriguez, 2001). However, to what extent does this communicational practice reaffirm, modify or even subvert the values that guide traditional journalism? Studies on alternative journalism have not prioritized this question, focusing more on case studies that evoke sources of information (Atton & Wickenden, 2005) and the view of alternative journalists themselves on their work (Harcup, 2015) than on the content produced by these initiatives, and even less when we talk about video. To answer this issue, we propose in this presentation to discuss the discursive strategies applied in the construction of videos of alternative journalism, having as parameters the ethical and aesthetic canons spread by traditional journalism (Broersma, 2007; Schudson, 2001; Ward, 2004). A total of 45 audiovisual pieces produced by alternative media groups from Brazil, Portugal, and Spain bases the analysis, made from the concepts of critical multimodal discourse analysis (Fairclough, 2001; Ledin & Machin, 2018; Van Leeuwen, 2014). The discussion is relevant both because it addresses alternative communication practices of non-English-speaking countries, which are still under-investigated, as well as to reflect about changes in the journalistic practice itself, especially in times of deep mediatization as experienced in the contemporary world (Couldry & Hepp, 2017; Silverstone, 2007), in which journalism lives an unprecedented crisis (Luengo, 2014; Nerone, 2015). Among the points to be highlighted, we identified that the contents of the alternative media analyzed give prominence to activists and ordinary people, omit the so-called "other side", associated to values like impartiality and balance in the traditional journalism, and use little data to support the information. Nevertheless, such productions seek to apply a narrative that preserves certain performative objectivity (Broersma, 2010), by highlighting the images as a greater proof of the truth of the narrative. These choices demonstrate the potentialities, but above all the weaknesses of this communication practice to expand its reach and generate effective social changes.

Title: Periodismo digital y medios comunitarios españoles: hacia nuevas narrativas y formatos informativos audiovisuales

Session Type: Individual submission

Authors:

Name: Gloria Rosique

Email: grosique -at- hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid

Email: paz.crisostomo -at- alumnos.uc3m.es

Country: CL (Chile)

Affiliation: Universidad Carlos III de Madrid

Abstract: La presente investigación se enmarca como un estudio de tipo exploratorio que le da continuidad a una investigación precedente, donde se realizó un análisis descriptivo de las características del periodismo digital audiovisual del medio comunitario español: “El Salto”, que se retoma como caso de estudio.

"El Salto" se autodenomina como un medio de comunicación sin fines de lucro de propiedad social, descentralizado e independiente que se configuró en el año 2017. Nace de la unión de 20 proyectos de comunicación que hasta entonces operaban de manera autónoma, entendiendo su rol de servicio desde la transformación social y la participación ciudadana. En el ámbito del periodismo digital, tiene como objetivo ser un medio propositivo que aporte una nueva agenda informativa a través de temáticas y enfoques alternativos de la noticia, en la búsqueda por cambiar las formas clásicas de producción y distribución de la información. Su representatividad como medio comunitario, permite hacer inferencias respecto a sus prácticas periodísticas y analizar sus contribuciones al ámbito del periodismo audiovisual digital.

Este estudio tiene como objetivo general analizar aquellos formatos que se alejan de las narrativas clásicas de la noticia, con el fin de conocer las nuevas prácticas periodísticas que se configuran en el entorno digital desde la perspectiva de los medios comunitarios españoles.

Para ello, se ha llevado a cabo la revisión de la literatura existente sobre los medios comunitarios españoles (Barranquero, A. y Meda, M. 2015; García, J. 2015; Sáez Baeza, Ch. 2014), y sobre el periodismo audiovisual digital (Mayoral, J. 2015, 2016, Masip, P. Mico, J.L. y Ayerdi K. M. 2012; García-Avilés, 2017).

Posteriormente, se realizó un análisis de contenido – entre febrero 2017 a diciembre 2018- de los vídeos de “El Salto TV” identificados como “otros”, es decir, aquellos contenidos que no se circunscribían a las características propias de los formatos audiovisuales de la noticia. Este análisis consideró las variables: duración, estilo de realización, temática y tratamiento informativo y, permitió hacer inferencias cualitativas del objeto de estudio.

En los resultados preliminares se constata que este medio se mantiene fiel a la cobertura de manifestaciones sociales y de género/LGBT bajo un enfoque de tipo contestatario. Asimismo, dentro de la categoría “otros” subyacen tres formatos audiovisuales innovadores. El primero apunta a desvelar la línea ideológica del medio a modo de “editorial” -dejando clara su postura frente a ciertas temáticas. El segundo realiza una crítica a los medios tradicionales en la que destaca el uso de imágenes de archivo -principalmente de políticos- pero no como fuentes institucionales al uso, sino cumpliendo una función de watchdog orientada a la concientización social respecto a la función de los medios. El tercero se ciñe a “crónica en imágenes” en la que, si bien se mantiene la estructura de una crónica no hay participación del periodista (voz en off de un narrador), no obstante, el medio de comunicación es capaz de entregar una visión concreta del hecho noticioso narrándolo sólo con imágenes editadas a modo de “colas” y texto (rótulos).

Abstract: El objetivo de nuestro trabajo es presentar y analizar los procesos de construcción de ciudadanía y resistencia que se producen en una serie de experiencias de comunicación popular, comunitaria, indígena en el territorio de la ruralidad de las provincias de Salta y Jujuy, en el noroeste argentino.

Lo realizamos a partir de reconocernos como sujetos que hacemos parte de la naturaleza que habitamos y en el marco de la implementación de políticas públicas nacionales que tienden al borramiento de los derechos comunicacionales (a partir de la intervención de la Ley de Servicios de Comunicación Audiovisual), el avance sobre los territorios (y por ende en torno a los conflictos sobre la tierra, el agua, los montes, entre otros), la producción alimentaria (la decisión y los modos de producir y consumir nuestros alimentos) y las políticas de conectividad.

Para ello proponemos realizar una sistematización del trabajo y las reflexiones que vienen haciendo hombres y mujeres de la ruralidad que integran experiencias de comunicación enredadas en torno a la Mesa de Comunicación Popular de Salta y Jujuy desde 2012, específicamente en los encuentros de Comunicación y Ruralidad que desde hace cinco años venimos realizando en la Universidad Nacional de Salta. Abordamos estos procesos de sistematización desde la observación participante y la investigación acción, en tanto acompañamos procesos de comunicación “emancipadores” en ambas provincias desarrollando la implementación de una serie de proyectos que se fueron construyendo de manera colectiva.

De esta manera, presentaremos una serie de experiencias en comunicación popular, comunitaria, indígena que en el escenario de la LSCA encontraron mejores condiciones de expresión y desarrollo y que actualmente se encuentran en un proceso de resistencia y las reflexiones que venimos construyendo en torno a la comunicación como elemento constitutivo y articulador de los vínculos entre los seres de la naturaleza y la tecnología.

Estos encuentros son una oportunidad para reunirnos y fortalecernos en la red que conformamos en la Mesa de Comunicación Popular de Salta y Jujuy, sobre todo en una coyuntura que agudiza la

adversidad donde se manifiesta la retirada del estado de derecho. Nos permiten poner en común las realidades de las diferentes experiencias (y sus comunidades y actores), el impacto de la reconfiguración de las políticas públicas y encontrarnos para generar acciones que, aún en escenarios adversos, nos permitan soñar, planificar y concretar proyectos comunicacionales más inclusivos y democráticos.

Title: Sostenibilidades y gestión de las alternativas mediáticas en Uruguay

Session Type: Individual submission

Authors:

Name: Gabriel Kaplún

Email: gabriel.kaplun -at- fic.edu.uy

Country: UY (Uruguay)

Affiliation: Universidad de la República - Uruguay

Abstract: Presentaré algunas conclusiones de una investigación realizada entre 2015 y 2018 por nuestro grupo AlterMedia y un desarrollo mayor de lo referido a la gestión. La investigación buscaba responder a una pregunta general: ¿cómo pueden generarse y sostenerse alternativas mediáticas hoy en Uruguay? También a preguntas específicas: ¿cómo perciben la cuestión de la sostenibilidad los responsables de emprendimientos mediáticos alternativos, cómo la han encarado y con qué resultados?

El sistema mediático uruguayo tiene un núcleo hegemónico con base en la televisión privada metropolitana y ramificaciones en el resto del país y en otros medios. Son empresas privadas cuyo principal ingreso proviene de la publicidad. La distribución de contenidos de difusión masiva constituye su vínculo principal con las audiencias. En el caso de la televisión hay baja producción nacional de esos contenidos, especialmente de ficción, cuyos altos costos relativos -difíciles de sostener con un mercado reducido como el uruguayo- estimulan su sustitución por “enlatados” importados más baratos. La producción propia, además, está concentrada en Montevideo y atiende poco otras realidades (Unesco 2015).

Diversas expresiones mediáticas pueden considerarse alternativas frente a esta realidad. Algunas “alternatividades” refieren a las formas de propiedad o gestión: medios públicos, comunitarios o cooperativos. Otras proponen contenidos diferentes o formas de comunicación más dialógicas con sus audiencias. Muchos combinan estas características. A la mayoría no les resulta fácil sostenerse y sostener su propia propuesta alternativa. En nuestro marco teórico preferimos hablar de alternativas mediáticas –en lugar de medios alternativos- para incluir también a quienes producen contenidos para medios y plataformas diversas (Kaplún et. al. 2014).

Para nuestra investigación se recolectó documentación y se entrevistó a responsables de televisión pública, radio y prensa del interior del país, productores audiovisuales independientes, prensa cooperativa, portales web informativos, youtubers. Se incluyó a dos proyectos fracasados de televisión digital cooperativa y comunitaria y se utilizó lo ya estudiado en un trabajo anterior sobre las radios comunitarias (Kaplún et. al. 2015).

En las conclusiones se destaca la necesidad de distinguir diversas “sostenibilidades”: económica, social, comunicacional y político-institucional. Entre los responsables de las distintas iniciativas la sostenibilidad puede referirse a poder vivir del emprendimiento, a poder sostenerlo en el tiempo y/o sostener su propuesta comunicacional (contenidos, relación con la audiencia). Pero es habitual que estas cuestiones no se planteen inicialmente en forma explícita y clara, generando conflictos y

frustraciones posteriores. También juegan un papel clave las políticas públicas, que en la última década aportaron algunos apoyos para levantar barreras de entrada y sostener emprendimientos comunicacionales alternativos, aunque no tuvieron una incidencia transformadora decisiva del sistema mediático uruguayo (Gómez et. al. 2018). En ese contexto muchos optan por propuestas de bajo costo sostenidas principalmente en trabajo voluntario o militante.

Un aspecto clave generador de tensiones es el de la gestión y los aspectos político-institucionales. Especialmente la articulación entre gestión cotidiana y decisiones colectivas de productores y audiencia, la adecuación de las formas jurídicas, las inercias funcionales y culturales, el tamaño de la empresa, la profesionalización del trabajo y las oportunidades e incertidumbres de la convergencia tecnológica.

Abstract: En trabajos anteriores hemos debatido sobre la evolución de la conceptualización de la comunicación comunitaria en América Latina y las contribuciones de los medios comunitarios al desarrollo y reconfiguración de la comunicación mediática en Ecuador. En este recorrido, acogemos la propuesta de una comunicación comunitaria para referirnos a “un ámbito de producción cultural marcado por la articulación entre comunicación y lucha política” (Vinelli, 2014: 39-40). De esta manera, destacamos el propósito transformador y el carácter contestatario de las prácticas comunicacionales que buscamos caracterizar.

En esta ocasión, proponemos un trabajo a partir de dos objetivos fundamentales. El primero de ellos es identificar los niveles de participación de la comunidad en los medios de comunicación comunitarios y la relación que estos medios mantienen con su audiencia. En particular, estudiaremos los factores de influencia percibidos en el ejercicio de este tipo de comunicación (Shoemaker y Reese, 1991) y las formas de profesionalización (Hallin y Mancini, 2004) que se pueden identificar en los medios comunitarios. Esto redundará en la caracterización de los medios de comunicación comunitarios como un actor propio ante el nuevo contexto político y mediático. En segundo lugar, nos proponemos revisar las principales reformas aprobadas de la Ley Orgánica de Comunicación (2018) y cómo éstas afectan a la nueva configuración del sistema mediático (Hallin y Mancini, 2004) ecuatoriano, en especial en lo referido a una vuelta a la desdemocratización de la comunicación en la región. De esta manera, estudiaremos cómo la intervención del Estado en materia de comunicación puede tener dos efectos antagónicos: la mejora de la comunicación en términos de democratización o el retroceso de este proceso democratizador. Por último, abordamos los principales retos de los medios comunitarios ecuatorianos ante el nuevo contexto político-mediático y digital.

Para lograr estos objetivos, realizamos una combinación metodológica; por un lado, aplicamos una encuesta a una parte representativa de los medios de comunicación comunitarios de Ecuador, articulados en torno a la CORAPE, con quienes también realizamos grupos focales en todo el

territorio nacional. Por otro lado, realizamos un análisis de la política pública (Subirats, 1992) en materia de comunicación tanto de la normativa de 2013 como de la reforma aprobada en 2018.

Title: "Another world is possible": A critical discourse analysis of the news construction of the anti-globalization movement of AlterNet

Session Type: Individual submission

Authors:

Name: Xiang ZHOU

Email: juliewuhan -at- 163.com

Country: CN (China)

Affiliation: Shantou University

Name: Wei ZHAO

Email: 2005058 -at- wtu.edu.cn

Country: CN (China)

Affiliation: Wuhan Textile University

Abstract: In the context of globalization, can alternative media, as a challenger to mainstream media power (Andersson, 2012) and a “natural ally of social movements” (Coyer, Downmut, & Fountain, 2007), form a discourse system different from mainstream media to challenge neoliberal “discourse hegemony”?

Using critical discourse analysis with the framework of the ideological square of Teun A. van Dijk (2011) and other previous studies (e.g., Atton, 2002, 2004; Atton & Wickenden, 2005; Bennett, Pickard, Iozzi, Schroeder, Lagos, & Caswell, 2004; Downing, 1984, 2001, 2003, 2008; McFarlane & Hay, 2003), this paper attempts to reveal the dynamic relationship between alternative media and the anti-globalization movement by analyzing the representation and discourse strategies of the ideological schema painted in the news construction the AlterNet, which is selected as a representative of alternative media for its organizational characteristics, media operation and foundation time. Specific questions are addressed as follows: in terms of discourse subjects, recognition and identity, what kinds of news sources, discourse citations, and opinion leaders in different discourse camps are presented? What kinds of attitudes toward discourse subjects in the movement are projected? What kinds of rhetorical and ideological strategies are used in the news construction? And how are global critics/activists and their identity constructed?

Two keywords, “anti-globalization movement” and “anti-WTO Seattle protest”, were separately used to search the related articles on the AlterNet website (<http://www.alternet.org>) with the time period from November 1999 to December 2014 and the order ranked by relevancy. Respectively, the top 100 articles for the former and another 46 articles for the latter were taken as the sample to be analyzed.

It is found that a variety of ideology-speaking activists with different strategies are contained in the AlterNet coverage. The main purpose of the AlterNet, with a thematic focus on activism rather than global debate, is to express various demands and political views of the movement, provide legitimacy for the discourse of activists and their protest against capitalism and neoliberalism, and establish the consolidated identity for activists. The supportive attitude toward ‘us’,

‘activists/neoliberal opponents’ as the inner group, and the oppositional attitude toward ‘them’, ‘neoliberal supporters’ as the outside group, are sharply presented in a binary pattern emphasizing the contrast of our good and their bad.

The discourse system of the Alternet against the ideology schema of neoliberalism is directly reflected in the quotation sources, mostly from left-leaning or radical peer media, such as Wiretap, Nation, Progressive and In These Times, so as to ensure the unity of ideology. Accordingly, the AlterNet tends to report marginalized characters and topics, mending what the New York Times ignores and/or misses, such as dissident people or activists/‘protesters’, young students, grassroots, and themes with political resistance to the established order and the strong ‘anti-’ ideology against ‘them’, such as anti-corporate capitalism, anti-war, anti-authority, and anti-system. Finally, the semantic structure and rhetorical strategies of the AlterNet, echoing its position against the mainstream hegemony, differs from the NYT. In short, ‘we’ are those who want to push down the Berlin Wall of Capitalism System, and our basic values are unity with a goal that “another world is possible!”

Title: Immigrant Nation Media: movilidades mediadas y derivas tecnológicas para el retrato documental de las comunidades migrantes en Estados Unidos

Session Type: Individual submission

Authors:

Name: Nieves Limón

Email: nlimon -at- hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid

Abstract: Podemos calificar como “giro de la movilidad” la no tan reciente investigación que intenta arrojar algo de luz sobre uno de los rasgos más destacados de nuestras sociedades: los flujos masivos de personas entre diferentes naciones atendiendo a razones económicas, sociales, políticas (algunos trabajos de C. Rumford, A. Sager, S. Sassen, N. García Canclini, S. Marschall sobre globalización, interculturalidad y ética de la movilidad son muestra de ello). Si estos tránsitos pueden materializarse en actividades como el turismo, el presente análisis se centra en otro tipo de movilidad claramente diferente: las migraciones masivas. Más concretamente atendemos en este trabajo a las migraciones de comunidades latinas en Estados Unidos. Estos movimientos migratorios, abordados desde perspectivas inevitablemente interdisciplinares, han quedado en buena medida retratados gracias a, y en algunos casos a pesar de, diversos medios de comunicación, diversas tecnologías del audiovisual. Entre ellas, el género del documental audiovisual (y sus actuales derivas transmediáticas e interactivas) han jugado un papel crucial debido a, al menos, dos de sus principales características: por una parte, su alta capacidad indicial para crear discursos sobre estos sujetos y sus circunstancias; por otra, la dimensión inclusiva y participativa de aquellas comunidades donde se producen y/o reciben estas prácticas documentales de última generación. Por decirlo con otras palabras: hay sobrados ejemplos de proyectos documentales interactivos que trabajan en campos cercanos al activismo mediático en el retrato de estas migraciones (recientes estudios de L.E. Dyson, S. Grant, A. Gifreu, J. Cerdán, M. Fernández, A. de Souza e Silva, R.G. Davis, D. Fischer-Hornung y G. Rings también abordan estas cuestiones).

Esta investigación se centra en la plataforma audiovisual alternativa INation Media que crea discursos documentales sobre comunidades migrantes en Estados Unidos. Asumiendo que a partir de muchos de estos retratos se ha consagrado una cierta “imagen del migrante” como individuos dominados, inactivos, victimizados (como sostienen en parte de sus investigaciones I. Ballesteros, T. J. Demos o N. Bayraktar, entre otros), se pretende explorar cuáles son los territorios de resistencia en estas producciones documentales, cómo se opera una “plasticidad alternativa de la migración” en dichas producciones (G. Blair). En este estudio de los cánones y contra-cánones del documental se tendrá explícitamente en cuenta no solo los ejercicios propios de una metodología centrada en el análisis de la imagen audiovisual, sino también la dimensión didáctica y el contexto de la alfabetización mediática (A. Burn y M. Reid, M. Hjort, S. Malik) que este proyecto ha puesto en marcha, pues es la transferencia de conocimiento y el empoderamiento a través de la formación en las tecnologías del audiovisual una de las claves de esta plataforma alternativa.

Title: CIMAC, una agencia de noticias alternativa: La perspectiva de género en la información sobre el feminicidio de Ciudad Juárez (Video presentation)

Session Type: Video Submission

Authors:

Name: Santiago Gallur Santorun

Email: santiagostgs -at- hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Autónoma de Ciudad Juárez

Abstract: Este ponencia se centra en el análisis del uso de los valores noticia, utilizados por la agencia de noticias CIMAC, como elementos vinculados a la producción informativa, determinantes para la cobertura de las noticias sobre el feminicidio de Ciudad Juárez. El objetivo de la investigación de la que nace esta ponencia es el exponer la perspectiva de género utilizada por CIMAC para conseguir invertir los valores noticia tradicionales, con el fin último de visibilizar a las víctimas y protagonistas de las noticias sobre el feminicidio de Ciudad Juárez. Este medio de comunicación se sitúa como una de las pocas agencias de noticias en las que la prioridad absoluta es dar cobertura exclusiva a las noticias que afectan a las mujeres. En concreto se ha estudiado el seguimiento del feminicidio de Ciudad Juárez desarrollado por este medio desde 1999 hasta el 2015. La metodología utilizada fue de corte cuantitativo, estudiando el contenido, mediante un análisis exhaustivo de todas las noticias publicadas por la agencia de noticias CIMAC en su página web entre 1999 y el 2015 sobre el feminicidio de Ciudad Juárez. A la vez se llevó una investigación simultánea y paralela sobre las fuentes usadas (2.712) por este medio, vinculadas al uso de los valores noticia, en la cobertura del feminicidio (1.284 noticias), haciendo énfasis en el estudio de su nivel de oficialidad y de su género. Como conclusión destaca el hecho de que la presencia de las mujeres en las noticias es inversamente proporcional al nivel de oficial de la fuente. Es decir, cuanto menos oficial sea la fuente mayor es la cantidad de mujeres dentro del contenido informativo.

Title: Radios comunitarias en la ciudad de Madrid y el modelo de 'radio inclusiva'

Session Type: Individual submission

Authors:

Name: Javier García

Email: Javier.Garcia92 -at- alu.uclm.es

Country: ES (Spain)

Affiliation: Universidad Castilla-La Mancha

Abstract: La historia de las radios comunitarias corre paralelamente al desarrollo de la democracia española. Estas emisoras fueron pioneras y se adelantaron a formas de comunicación y participación ciudadana que ahora con Internet resultan naturales: apropiación de las tecnología, periodismo ciudadano, funcionamiento horizontal. Con este estudio se pretende mostrar cómo y hacia donde se han producido las transformaciones de las radios comunitarias y cómo estas han pasado de ser un medio de difusión alternativo a configurar nuevas prácticas de comunicación comunitaria. Un aprendizaje que puede ser de gran utilidad para los nuevos medios y prácticas de comunicación en Internet.

Esta propuesta consiste en un estudio de caso de las actividades realizadas por las radios comunitarias de la ciudad de Madrid en el ámbito de la discapacidad. Para ello se realiza un catastro de los programas de radio realizados por personas con discapacidad y por personas diagnosticadas con enfermedad mental. A partir de los datos recogidos y de la bibliografía existente se destacarán los principales hallazgos así como los elementos que contribuido a configurar un modelo de “radio inclusiva”.

Este trabajo supone una continuidad de las investigaciones realizadas por la Red de Investigación en Comunicación Comunitaria, Alternativa y Participativa (RICCAP) y profundiza sobre un nuevo modelo de radiodifusión comunitaria identificado y que supone un aporte novedoso a la literatura relativa al estudio de las prácticas de comunicación comunitaria.

Title: Panel: Twenty Years of Indymedia. The fall of an 'experiment', the rise of many seeds,
Panel description

Session Type: Panel Submission

Authors:

Name: Valentina Baú

Email: v.bau -at- unsw.edu.au

Country: AU (Australia)

Affiliation: University of New South Wales

Abstract: In 2019, Indymedia will celebrate its twentieth anniversary. The time appears to be right to reflect on both its achievements and present situation. Indymedia is a reaction to the lack of media coverage of the 29th-30th November protests in 1999, during a meeting of the World Trade Organization in Seattle. Its activity has revolved primarily around the use of new Information and Communication Technology such as the internet (Juris, 2005). 169 Indymedia centres (IMCs) are listed on Indymedia Brussels site (one of the main centres of the collective), of which only 36 are still online and some of them no longer active (no update has been provided since 2017). Most of the active websites are located in Europe, United States and South America, with an additional one in Oceania and one in West Asia. Based on these figures, two questions arise. The first one concerns the disappearance of 133 websites: it is interesting to identify the reasons of such a phenomenon, be these legal, financial, or membership-related. The second one focuses on the concentration of Indymedia centres (27) in Western countries: while the decline is general, it is useful to understand the causes behind the disappearance of all IMCs in Africa.

This panel focuses on three research questions:

- (1) How can we explain the decline of Indymedia centres?
- (2) How has the role of Indymedia centres evolved over time in the social movement landscape of their respective region/country?
- (3) Which role has the "Indymedia experiment" (Garcelon, 2006) had on the new initiatives that have developed after Indymedia?

Answers to these questions are addressed following a qualitative exploration involving semi-structured interviews with current and former members of Indymedia collectives in different parts of the world, through which information has been gathered on the operating mode, evolution and performance of a number of Indymedia centres. Through collaborative research work, this panel is proposed by an international team of researchers, with each member focusing on the IMCs in their own region/country. Comparison will be an important element of the discussion. In 2011, Frenzel et al. found that "Northern partners were oriented to more 'marginal' identities, fluid organizational structures, and informal structures of accountability. In contrast, Southern activists articulated more 'mainstream' identities, relied on more structured forms, and linked to formalized modes of accountability" (p.1173). This and other reflections on the first twenty years of Indymedia will be advanced.

Title: Indymedia ' Time to Take Stock. The IMC experience of Australia and New Zealand

Session Type: Panel Submission

Authors:

Name: Valentina Baú

Email: v.bau -at- unsw.edu.au

Country: AU (Australia)

Affiliation: University of New South Wales

Abstract: As a reaction to the lack of media coverage of the 29th and 30th November 1999 protests during a meeting at the World Trade Organisation (WTO) in Seattle, civil society organisations as well as independent citizens mobilised with the aim of influencing the public opinion by making visible the issues that the WTO was causing across the globe. They did so by creating their own media, writing articles and sharing videos and images, while progressively giving birth to an Independent Media Center (IMC), also known as Indymedia. With time, IMCs have been established in a large number of countries around the world. counting 175 active centres by 2010. Many articles have been published on this phenomenon, with some researchers coming to consider Indymedia as a social movement (Milberry, 2003; Wolfson, 2013).

2019 marks that 20th anniversary of this collective. Hence, it is time 'to take stock' of what it has meant locally. This paper presents the experience of Indymedia in Australia and New Zealand. While most of Indymedia centres in this area of the world have closed down, small sections continue to operate, while former Indymedia writers have now launched new platforms for alternative information. The work of Pickerill (2003, 2007), in particular, has looked at the growth and endeavor of the Australian Indymedia collective at the time it was most active. More than a decade later, this presentation discusses the effects that 20 years of Indymedia have had on the Australia & New Zealand alternative media scene.

Interviews have been conducted with both present and former collective writers involved in the establishment and operations of the Australia Indymedia centres of Sydney, Adelaide, Brisbane, Melbourne, Perth and Tasmania, and the New Zealand centre of Aotearoa. The presentation offers insights into how IMCs in Australia and New Zealand were born and how they evolved; what objectives their writers and editors were working towards; what have been the key moments for Indymedia in these countries, and most importantly what these centres have meant for the current alternative media scene.

Title: Hate the media' Be the media! Indymedia contributions for an in-action media reform

Session Type: Panel Submission

Authors:

Name: Adilson Cabral

Email: acabral -at- comunicacao.pro.br

Country: BR (Brazil)

Affiliation: Federal Fluminense Federal University

Name: Ana Lúcia Nunes de Sousa

Email: anabetune -at- gmail.com

Country: BR (Brazil)

Affiliation: Rio de Janeiro Federal University

Abstract: The emergence of the International Media Center (IMC) brings an important contribution to the media reform movement. The collective appropriation of digital technologies made possible an interactive communication system, based on democratic principles of plurality and diversity. Indymedia began as a structure for communication support for demonstrations at the Seattle Meetings of the World Trade Organization (WTO). In a decade, with collectives organized all over the world, Indymedia became the biggest decentralized organization in history involved with media activism. More than that, claiming "Hate the media? Be the media!", Indymedia activists call for a participatory communication that contributed to what can be called an in-action media reform, giving materiality to what has been described and desired since UNESCO's McBride Report (1980). According to Downing (2001, pp.14-15), three aspects are relevant in the IMC open dimension: "(1) appropriate links between IMCs and the possibilities for coordinated action; (2) questions of free speech and editorial control; (3) the relation between media activism and state repression".

The purpose of this research is to compare the historical process of Indymedia and its legacy for contemporary media activism. We highlight reflections on Indymedia contributions for the media reform movement, especially in relation to the connections among different social movements through the social appropriation of Information and Communication Technologies (ICTs). These connections strengthen the importance of communication in their specific agendas and they allowed new kinds of demonstrations that brought different groups together on a global scale, who took part in global mobilizations articulated regionally and locally.

Media activism of Brazilian Indymedia collectives strongly influenced the Brazilian media reform movement. Since the beginning of 2010s, new media collectives have appeared and have been involved in the coverage of demonstrations, events and direct actions. At the same time, alternative proposals for public policies related to broadcasting production platforms were created, and also a number of interesting initiatives using the media as a tool for protests and/or mobilizations.

Affiliation: Cyprus University of Technology

Abstract: As part of a large comparative study on the global Indymedia phenomenon, this study traces and accesses the course of IMC Cyprus. Despite being active for almost a decade, IMC Cyprus never managed to grow into something bigger than a small and closed group of activists, lacking resonance to and connection with the field of social movements in Cyprus. While IMC Cyprus is not unique in this regard (see Giraud, 2014), the lack of involvement by readers and activists beyond its core members is striking in this case. In the same vein, despite the initial effort to be established as a bi-communal project linking the Greek- and Turkish-Cypriot communities, against and beyond the hegemonies established by political actors, this attempt was also left unfinished. Today, Cyprus IMC is operated by Greek-Cypriots, with most publications being in Greek.

The study employs, first, content analysis of posts published in IMC Cyprus from its emergence until today to assess the scope of its content and the opinions voiced. Second, it analyses material collected from in-depth interviews with the activists who created and continue to be actively involved in the IMC today, as well as with activists who were engaged with the IMC at various points in its time.

The analysis investigates the reasons behind the perennial marginality of IMC Cyprus, as uncovered by the content analysis, and probes the following questions: Why did IMC Cyprus fail to become an alternative voice on both sides of the Green line? What explains its alienation from social movements operating in the island (such as the local version of the Occupy movement and the recently emerged environmental and political civic actions)? More generally, what are the prospects of radical alternative media in Cyprus, a country characterized by a weak and underdeveloped civil society (Mavratsas 2003; Charalambous & Ioannou, 2017), state actors and political parties overdetermining the political behavior of people at the expense of grassroots protest movements (Katsourides, 2013), and the predominance of the “Cyprus Problem”, which has tended, at least until recently, to subsume other political causes and actions? The article discusses how these conditions can both hinder and foster the radical (media) activism that Indymedia envisaged in the case of Cyprus.

Title: Indymedia Chiapas: Colectividad y prácticas emancipatorias desde los Medios | Collectivity and emancipatory practices through the Media

Session Type: Panel Submission

Authors:

Name: Luz Aída Ruíz Martínez

Email: Luz.RuizMartinez -at- colorado.edu

Country: US (United States)

Affiliation: University of Colorado Boulder

Name: Amaranta Cornejo Hernández

Email: amarai -at- unam.mx

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana Puebla

Abstract: La presente propuesta de ponencia es el inicio de un análisis reflexivo a partir de la experiencia vivida en la formación y funcionamiento de Indymedia Chiapas (2000-2008), por lo tanto, no son resultados de investigación, sino el germen de lo que en los siguientes meses será un análisis más profundo.

Indymedia Chiapas fue formado en el año 2000, inicialmente siguiendo el modelo de los Indymedia creados para la cobertura mediática de movilizaciones y protestas altermundistas frente a cumbres y reuniones de organismos financieros multilaterales, realizadas en distintas ciudades del mundo durante la década de los 1990s. Fue el primer espacio digital de acceso libre en México, que implicó un deliberado acercamiento a la tecnología digital para jóvenes activistas con sede en la ciudad de San Cristóbal de las Casas (Chiapas). La plataforma resultó ideal para la producción colaborativa de información alternativa, principalmente relacionada al movimiento Zapatista y luchas afines, desafiando y rompiendo cercos mediáticos corporativos. A partir de la existencia de este espacio, se gestó y fortaleció un entendimiento de la comunicación como un proceso socio-político, el cual rebasaba la noción de un medio de difusión de información. Así, a lo largo de los siguientes años se desarrolló un proceso de vinculación capilar principalmente con distintas realidades en el estado, aunque extendiéndose a nivel regional.

A partir de un ejercicio de la memoria de algunxs integrantes de este colectivo de base, nos proponemos realizar una reflexión que parte desde la sociotécnica (Wajcman) para entender, en términos interseccionales cómo la ética hackfeminista del do it together, y las pedagogías de la resistencia y las emancipaciones (Korol) aportan para re-conocer la participación diferenciada de quienes colaboramos en Indymedia, trabajando sobre las dos dimensiones ya mencionadas: acceso y apropiación de las tecnologías digitales; y procesos capilares de organización a partir de este espacio de difusión de información. Entonces, a partir de una revisión sobre la categoría de 'brechas digital y tecnológica' se pueden conocer y entender los procesos de organización social y de re-apropiación cultural que propició Indymedia Chiapas.

Title: The "black cat" of Thessaloniki that became the "black sheep" of Indymedia network

Session Type: Panel Submission

Authors:

Name: Pantelis Vatikiotis

Email: vatikiotisp -at- gmail.com

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: In the context of an international, comparative research on the radical online news network Indymedia, the paper investigates the case of IMC Thessaloniki, aiming to contribute in the exploration of the decline of Indymedia centers as well as their role in the field of activism.

IMC Thessaloniki, initiated by a collectivity ("black cat") that had the form of an occupation haunt in Thessaloniki, was active from November 2001 to July 2005; a project that was typical of the long tradition of synergies developed between social movements and radical media in Greece (indicatively, at one point, three different IMCs – Athens, Thessaloniki and Patras – were active in the country) (Vatikiotis, 2005; Milioni, 2009). Being one of the many Indymedia centers that ceased their operation, the experience of IMC Thessaloniki points to a number of critical issues concerning the "failure" and the "legacy" of the Indymedia network (Giraud, 2014).

The paper probes into the research areas of the international study "Twenty Years of Indymedia" – decline; role of Indymedia in the social movement landscape; and, the development of new initiatives – by doing a qualitative research. The research involves semi-structured interviews with former members of Indymedia Thessaloniki, expressing opinion and feelings about it and describing the relation of the project to the Greek alternative milieu as well as to the global Indymedia network. In addition to the interview material, the analysis is complemented with information provided in the manifesto farewell ("Goodbye") of the editorial team of Indymedia Thessaloniki (2005), which gives a detailed account of historical aspects (influences, reference points, and evolution of the project) and normative issues (structure of anti-information practices in the Internet era, principles and performance of IMC Thessaloniki, and its relation with the other Indymedia centres).

In this regard, the analysis: a) explains the factors, practical and ideological ones, of the decline of IMC Thessaloniki; including its 'distance' from the other IMCs – by declaring its autonomy within the Indymedia network (the "black sheep" of Indymedia) on the basis of a very radical understanding of the principles: independent, non-commercial, and self-organized; and, b) evaluates the vital and dynamic interplay between IMC Thessaloniki and social (media) activism in Greece.

Title: Earwitnessing 'Breathless' the podcast: contesting carceral logics, sounding human dignity

Session Type: Individual submission

Authors:

Name: Poppy de Souza

Email: poppy.desouza -at- griffith.edu.au

Country: AU (Australia)

Affiliation: Griffith University

Abstract: From the indefinite detention of asylum seekers and refugees on former Australian colonial territories in offshore 'black sites' (Pugliese, 2013), to the imprisonment and deaths in custody of Aboriginal and Torres Strait Islander peoples, racialised carceral logics are at the heart of the settler-colonial Australian state. In this context, collaborative podcasting that combines independent journalism, community radio, and grassroots activism is amplifying the voices of those whose lives are impacted by state-sanctioned violence and incarceration.

'Breathless' is Australian podcast series made by community radio station 2SER in Sydney in partnership with independent media organisation Guardian Australia. The series bears (ear)witness to the life and death of young Dunghutti man David Dungay Jr. who died in Sydney's Long Bay jail in 2015 following restraint and sedation by correctional services officers. The series follows the 2018 coronial inquest, and walks alongside members of the Dungay family. Central to the inquest is prison CCTV footage of the last moments of Dungay's life that captures him in a state of increasing duress. Dungay's final words – 'I can't breathe' – uttered twelve times like an incantation, hauntingly echo the last words of Eric Garner, and the rallying cry of the Black Lives Matter movement in the U.S.

Bringing an orientation towards sound into conversation with theoretical concepts of political listening (Bickford, 1996; Bassel, 2017; Dreher 2009), media witnessing (Lydon, 2018; Peters, 2001) and earwitnessing (Lloyd, 2009), this paper conducts a close listening of four episodes of 'Breathless' to locate it within a larger 'archive of breathlessness' left in the wake of colonisation and violence (Sharpe, 2016). Listening along and against the archival grain (Stoler, 2010), I attend to the sounds of Dungay's death and the family's grief, beyond the evidentiary framing of the CCTV footage. As a provocation to stretch the ear – to slow down, to listening again, to listen differently – I argue 'Breathless' works as both reckoning and recuperation: pressing us to register the 'continuity of colonial practices' (Carlson et al. 2016) found in the details of David Dungay's death, while attending to his dignity and the dignity of his family in its wake.

Title: Counter-hegemonic media production among urban and rural social movements in Brazil

Session Type: Individual submission

Authors:

Name: Leonardo Custodio

Email: leonardo.custodio -at- tuni.fi

Country: FI (Finland)

Affiliation: Tampere University

Name: Paola Sartoretto

Email: paola.sartoretto -at- lai.su.se

Country: SE (Sweden)

Affiliation: Stockholm University - Institute of Latin American Studies

Abstract: Social movements act in and/or with marginalized and excluded groups towards the respect for their citizenship, social justice and political participation in unequal Brazil. Amid these struggles, initiatives to produce media – facilitated by the popularization and availability of digital technology – as an alternative to often hostile hegemonic media coverage have mushroomed both in urban centres and rural areas with restricted access to digital media. In this paper, we analyse how Brazilian rural and urban social movements have used media technologies, genres and techniques to make their voices heard, exchange knowledge, mobilize peers, and inform society about their political struggles. Considering the stark differences between urban and rural areas in access to technologies, presence of established media outlets and coverage in hegemonic media, we discuss how a peripheral or central geographical location may condition media production among social movements. The analyses draws on empirical material from our research on the communication initiatives of the Rural Landless Workers' Movement across Brazil (Sartoretto, 2015) and media activism initiatives among favela residents in metropolitan Rio de Janeiro (Custódio, 2016). We compare similarities and differences in challenges and demands and investigate how these materialise into media production and practices, further analysing how rural and urban struggles interact. The comparative approach provides valuable insights about the challenges underprivileged social groups face in their efforts to forge pluralism in contexts where media and political power are dominated by oligarchic and corporatist forces. We find strong evidence of widely different levels of access to digital media which is restricted in rural areas and abundant even for low-income communities in urban peripheries. As a consequence, rural social movements rely on radio and community events as channels for their media production while urban social movements use social media platforms. The audiences of media produced by the Landless Workers Movement in rural areas often identifies politically with the movement, while in the favelas the audience turns to the media produced by the movements due to geographical identification, i.e. the fact that the media is produced in, by and for the local community. The ethnographic nature of our research contributes to critically addressing the technocentric understanding that media, both as institutions and technologies, “give voice” to and empower marginalized groups. Rather than a consequence of media affordances, media pluralism – especially in deeply unequal contexts like Brazil – results from the constant struggle of those whose voices are neglected or silenced to forge own spaces for discussion and action. Furthermore, our study indicates that social and material conditions are

determinant in shaping the roles and uses of media production technologies among social movements.

Title: Danish Muslims and social media mobilizations of counter-narratives

Session Type: Individual submission

Authors:

Name: Morten Stinus Kristensen

Email: mkriste2 -at- illinois.edu

Country: US (United States)

Affiliation: University of Illinois at Urbana-Champaign

Abstract: Previously, costly and cumbersome distribution methods required alternative media producers to devote large amounts of labor and money if they wanted to reach beyond their own community. With the advent of social networking sites such as Facebook and Twitter, however, wide distribution of alternative media widely has become much more accessible than before. Minorities in particular now have ways to reach the majority in ways that are more accessible than before.

This case study engages racial formation theory to examine how the largest religious minority in Denmark, Muslims, may rely on social media to produce and disseminate a counter-narrative to the oft-stereotyping and essentializing ways in which this diverse religious minority is portrayed in mainstream media. This is an urgent task for this increasingly marginalized minority as Danish values are increasingly “opposed to the so-called immigrant or Muslim culture” especially through political narratives reproduced through media discourses. (Yilmaz, 2016, p. 17) This paper seeks to provide an answer to how Danish Muslims utilize Facebook in order to develop counter-narratives and supplement the image of Muslims produced through Danish mainstream media?

Increasingly, scholars are shining a light on the opportunities as well as pitfalls of mobilizing resistance through social media (for research on the US, see Jackson & Foucault Welles, 2015; for research on the Nordic region, see Nikunen, 2019). By examining a selection of Facebook pages created by and, to various extents, seeking to represent Danish Muslims, this research contributes to the growing scholarly literature on how minorities mobilize social media platforms to provide a site of resistance to various forms of discursive oppression.

The three Facebook pages I examine produce content from the point of view of Danish Muslims and Danish immigrants—two groups that heavily overlap. Some engage in civic/citizen-journalism, others produce satirical content that revolve around living as a Muslim and/or immigrant in Denmark. I engage these two genres of media not only because they are among the most common and popular alternative media types on Danish-language Facebook, but also to determine whether there are variances in their methods and efficacy at challenging the dominant racial formation that revolves around the Muslim/Danish binary.

In order to untangle the dynamics between these counter-narratives and the mainstream narratives to which they respond, I engage Omi & Winant’s racial formation theory. I situate the discourses produced in these pages as what Omi & Winant (2015) refer to as racial projects: the building blocks of racial formation that serve as “an interpretation, representation, or explanation of racial identities and meanings” in order to, for instance, (re)arrange racial privileges. (p. 125) I thus conceptualize these Facebook pages as engaging in the ideological work of racialization as they seek to supplement or counter dominant patterns of racial formation in Denmark where, I contend,

“Muslim” has become the centrifugal racial category around which other racial categories are (re)constituted, most significantly “Danish” and its correlate “White”.

Title: Resiliencias subalternas al silenciamiento sistémico: relatos de experiencias de medios comunitarios en India.

Session Type: Individual submission

Authors:

Name: Amaia Landaburu

Email: amaia.landaburu -at- gmail.com

Country: ES (Spain)

Affiliation: Universidad de Málaga

Abstract: Esta presentación analiza experiencias de comunicación participativa en medios comunitarios en India y narrativas decoloniales enfocadas en la democratización mediática y la justicia social. La investigación parte de la pregunta planteada por Spivak (1998): “¿Puede hablar el sujeto subalterno?”; y está centrada en estudiar los procesos de resiliencia mediática de las poblaciones subalternas frente al silenciamiento sistémico.

En un contexto en el que existen acusadas desigualdades sociales y las poblaciones subalternas sufren severas discriminaciones y un silenciamiento sistémico, en especial las poblaciones rurales campesinas, adivasis, dalits y las mujeres, las iniciativas estudiadas pretenden suplir este vacío comunicativo.

Desde una perspectiva crítica con la Comunicación para el Desarrollo y el Cambio Social, seguimos la propuesta de Escobar (1996) de estudiar las formas de resistencia en las que se elaboran las alternativas; centrando el interés de la investigación en los procesos, las transformaciones y las mediaciones (Martín Barbero, 1987); y siguiendo las vías marcadas por el grupo de investigadores indios de los Estudios Subalternos que centraron el interés de la investigación en el momento histórico de la resistencia (Das, 1989).

El análisis parte de la Comunicología de la Liberación en la que Beltrán (1981) propuso las bases de la Comunicación Horizontal; considerando que su pensamiento, en el que tuvieron gran influencia las ideas de Freire (1970), es una fuente de referencia principal en el pensamiento decolonial (Torrico Villanueva, 2010). Nos basamos en la definición de comunicación como proceso formado por un acceso-diálogo-participación y en la necesidad de apropiación a partir de lo endógeno (Beltrán Salmón, 1981).

Así, este trabajo toma como ejemplo contribuciones de referencia en la investigación en comunicación en India que han analizado y reflexionado sobre la dimensión participativa y transformadora de la comunicación (Dutta, 2012; Nilsen, 2010; Pavarala & Malik, 2007; Tacchi & Nair, 2008).

Desde una aproximación etnográfica en la metodología, presentamos los resultados de un análisis cualitativo llevado a cabo durante varias visitas a siete iniciativas de comunicación participativa en el norte de India: cinco radios comunitarias, un museo comunitario y una biblioteca comunitaria. Mediante técnicas como la entrevista personal en profundidad y la observación participante, seguimos un enfoque metodológico basado en las ideas de la pedagogía crítica de Freire (1970); estas defienden que podemos crear conocimiento desde los sujetos construyendo un diálogo común entre voces diferentes (Freire, 1970).

Mediante un análisis comparativo conocemos las interrelaciones y articulaciones entre las experiencias y los contextos en los que surgen; los desafíos encontrados y los logros alcanzados. A

partir de los relatos, presentamos los espacios compartidos de las experiencias particulares de los procesos de participación y apropiación en los medios comunitarios, que reflejan la contribución de la comunicación participativa y decolonial a la resiliencia de las poblaciones subalternas y a la realización del derecho a la comunicación.

Palabras clave: Comunicación participativa, medios comunitarios, decolonialidad, subalternidad, resiliencia.

Title: Comunicación, subalternidad y género: experiencias comunitarias de mujeres afrodescendientes e indígenas en América Latina

Session Type: Individual submission

Authors:

Name: M^a Tornay

Email: cruztornay -at- gmail.com

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: En esta ponencia se presentan los resultados de la investigación de tesis doctoral titulada "Comunicación, subalternidad y género: experiencias comunitarias de mujeres afrodescendientes e indígenas en América Latina" realizada para la obtención del título de doctora en Comunicación por la Universidad de Sevilla. En la investigación se analizaron las potencialidades del acceso al ejercicio del derecho a la comunicación a través de radios comunitarias en América Latina por parte de mujeres afrodescendientes e indígenas, poblaciones históricamente excluidas del acceso y representación en los medios de comunicación de masas, y se examinan los elementos que obstaculizan y potencian el proceso de apropiación comunicativa.

La investigación se construye y desarrolla a partir de dos ejes articuladores: como primer eje, se asume la construcción de la subalternidad como un producto de las relaciones de poder moderno-coloniales que es actualizada y legitimada por la representación que los medios de comunicación de masas realizan de la población subalternizada. El segundo eje aborda el reconocimiento del derecho a la comunicación en el contexto del debate latinoamericano con el que se abre una oportunidad histórica para el ejercicio del derecho a la comunicación de las poblaciones excluidas de los medios de comunicación de masas, tomando en cuenta las potencialidades de la comunicación para la transformación social.

A partir de lo anterior se tomó como referencia el análisis de dos experiencias comunicativas que han permitido comprender y analizar los procesos y ejercicio del derecho a la comunicación de mujeres afrodescendientes e indígenas. La primera experiencia que se toma como estudio de caso es la emisora Avanzadoras de Yoco, una radio comunitaria gestionada de manera exclusiva por mujeres afrodescendientes sin experiencia previa en comunicación, situada en el Estado Sucre, en el Nororiente de Venezuela. Como segunda experiencia comunicativa se toma como objeto de análisis el diseño, implementación y sistematización de una intervención comunicativa con mujeres indígenas sanadoras de la provincia de Chimborazo, Ecuador, dirigida al desarrollo de habilidades comunicativas que permitieran un acercamiento al ejercicio del derecho a la comunicación a través de la grabación de un programa de radio en la emisora comunitaria Escuelas Radiofónicas Populares del Ecuador (ERPE).

La investigación demuestra las potencialidades del ejercicio del derecho a la comunicación para mujeres excluidas de la representación y acceso de los medios de comunicación de masas, en relación al desarrollo de un proceso de empoderamiento y de transformación social en el entorno.

Sin embargo, dada la multiplicidad de situaciones discriminatorias que colaboran en la subalternización de estas poblaciones, es necesaria la concurrencia de diferentes circunstancias que permitan la superación de los obstáculos que encuentran en el acceso al disfrute general de sus derechos, incluido el derecho a la comunicación.

Title: Workers protesting precarious labor in Tunisia and Egypt: Media agenda building and disputed rights in authoritarian contexts before the Arab uprisings

Session Type: Individual submission

Authors:

Name: Hanan Badr

Email: hanan.badr -at- fu-berlin.de

Country: DE (Germany)

Affiliation: Freie Univesität Berlin

Name: Carola Richter

Email: carola.richter -at- fu-berlin.de

Country: DE (Germany)

Affiliation: Freie Universität Berlin

Abstract: Before the Arab uprisings in 2011, mineworkers in Gafsa, Tunisia, and textile-workers in Mahalla, Egypt, sparked protests for more socio-economic rights and dignity that caught national attention and inspired other dis-privileged social groups for protests. They are actors that pushed what we know as Arab uprisings (Beinin, 2015).

However, media studies on the 'Arab Spring' focused primarily on social media and digital activism. Missing from literature is agenda-building processes. We know little about interactions between challenging actors and the media that either reported their demands or concealed them. Even eight years after the uprisings, understanding the constellations that shaped media agendas before the uprisings is lacking. This study aims at filling this gap. This endeavor is important because comparative media research within the Arab countries is lagging behind (Hafez 2014). Arab media systems share some characteristics, but diverge on other elements.

By comparing the issue cycle in different media and focusing on the workers protesting labor conditions and unemployment in Tunisia and Egypt, this paper reconstructs media agendas and discourses in two authoritarian contexts.

We pose two research questions:

- 1) How did marginalized movements push their claims into the mainstream media discourse to delegimize the regime?
- 2) What media strategies did the regimes adopt in response to contain the movements' demands?

As a theoretical framework, this paper applies agenda-building theory within authoritarian contexts. Agenda building research on the links between civil society and traditional mass media remains sparse, as literature rarely addresses the surrounding conditions of agenda-building processes (Pfetsch et al., 2013). The awareness of the grievances would not have been possible without the agenda-building efforts of actors and certain media responses that made them visible.

In the methods, we use quantitative and qualitative content analysis to reconstruct the issue cycle (Kuckartz, 2016). The media sample represents two regime-loyalist newspapers (EG: Al-Ahram, N=106 ; TN: As-Sabah, N=4), and two licensed newspapers (EG: private daily Al-Masry Al-Youm, N=427; TN: weekly left-leaning party newspaper Al-Mawqif, N=78) We also conducted 20

interviews with activists and journalists in each country to help explain the activists' media strategies and journalists' reactions within the constrained media systems.

While we chose the time frame from 2008-2011, this paper focuses on the first peak moment of contentious politics (TN: 15.1.–31.3.2008, social unrest, marginalized people in Gafsa protest the inequalities in distribution of socio-economic rights; EG: 15.3.–31.05.2008, social unrest, eruption of the first Facebook strike that coincides with Mahalla textile workers). Both peaks set the agendas and frames for the subsequent mobilizations.

Results show that protests' media coverage wasn't monolithic. The attention levels diverged dramatically within each country and cross-nationally. We found three different media strategies: 1) stabilizing pro-regime discourse (promises reforms and delegitimizes the challengers); 2) an activist journalism (dismisses governmental actions) and 3) professional media discourse (gives voice to both sides).

Both regimes responded differently. The Tunisian loyalist newspaper ignored the issue in a tightly controlled media landscape. The Egyptian loyalist newspaper raised the issue but followed a containment policy by reframing the socio-economic rights.

Title: How Social Media Facilitate the Indian Marginalized Dalit to Mobilize Against the Caste Discrimination: The Study of "India Shutdown" Protest

Session Type: Individual submission

Authors:

Name: Dhyan Singh

Email: dsinghjmc -at- gmail.com

Country: IN (India)

Affiliation: Govt. PG College Dharamshala

Abstract: Abstract

Between 2016 and 2018, India experienced several massive Dalit protests that were aggressively organized to root up the ancient caste prejudices and social inequality. Especially, recently organized "India Shutdown" protest profoundly influenced the political and social arenas of the country while the previous Dalit protests were simply restrained to some of urban spaces and terminated without any optimistic approach. This protest, which surprised many people because of its sudden eruption and massive input of Dalit people across the country, was witnessed an influential beginning of Dalit unity and identity. First time of Indian history, any non-political party especially an untouchable community which was recognized submissive and feeble in many terms had dared to shutdown the whole India for one day and got succeeded. However, 12 Dalit people were killed and injured thousand in clashes with dominant groups and police firing during the agitation and millions of properties were estimated damaged. The protest one hand delivered a muscular message against the ancient social injustice but on the other contrary their disruptive actions and resentful behavior of the Caste Hindu towards Dalit also posed many serious questions. Later, a US-based Dalit activist, Dileep Mhaske, claimed that they had employed various platforms of digital media as a facilitator of Dalit awakening and spent around 500,000 \$ in purchasing important data from social media to make the protest successful (Indian Express, 17 April 2018). The revelation hit the front-page headlines of all major Indian newspapers while several televisions programs and debates conducted on the Dalit protest and digital media. These arguments represent a unique approach and opportunity to study how social media information motivated the Dalit to take part in the protest and which type of content they created, used, processed and shared with one other for mobilizing, motivating and organizing the protest.

After conducting face to face and telephone interviews with 60 protestors, fifteen participants of them chosen through purposive sampling for focus group discussion sessions, the study would explore the role of social media in the "India Shutdown" protest organization and how social media connectivity mobilize Dalit to fight the caste discrimination. The theoretical framework for the study will be social mobilization theory in digital age. Finally, I will discuss the scope and future of the social media channels' use for oppressed communities around the world.

Keywords: Dalit, Protest, Social Media, Social Mobilization theory, etc.

Title: Engaged Journalism: Understanding the Adaptation of Media Practices to Changes in the Sociopolitical Context

Session Type: Individual submission

Authors:

Name: Débora Medeiros

Email: deb.medeiros -at- fu-berlin.de

Country: BR (Brazil)

Affiliation: Free University of Berlin

Abstract: In this study, I propose the concept of engaged journalism, focusing on a specific kind of alternative media: unlike some types of community or alternative journalism, engaged journalism is often done predominantly by media professionals. However, these practitioners pursue other goals than commercial or state media outlets and are motivated by a strong media criticism, both defining elements of alternative journalism.

Based on Shove, Pantzar and Wattson's (2012) analysis of how practices link elements encompassing material, meanings and competence, I regard engaged journalists as possessing the necessary material and competences to perform professional journalism while, at the same time, attributing a different meaning to their practices. Engaged journalists want to offer an alternative to the objectivity standard that marks traditional journalism and seek to actively counter shortcomings of traditional journalism, such as elite-based source selection (Bennett, 2010; Tuchman, 1978). They also see their coverage as a forum for various social and protest movements, constituting a specific form of counter public sphere.

I developed this concept as part of the answer to my two research questions. Research question (RQ 1) asks: How do actors involved in the alternative coverage of protests adapt media practices to changes in the sociopolitical context? I answered RQ 1 by drawing from methodological resources of grounded theory, such as expert interviews and their subsequent coding, in order to make patterns and processes in a specific case visible, generating a theoretical model that can then be applied to similar cases.

In the current study, I applied this approach to the case of the protests that took place in the city of Fortaleza, Brazil, during 2013 and 2014. They were part of a broader, national context of protests against excessive government spending in the build-up for the 2014 FIFA World Cup. Two media collectives, Nigéria and Na Rua, were the main actors responsible for the alternative coverage of the protests in Fortaleza. Their members and the network around them were my interviewees.

Complementing this data, I performed a qualitative content analysis of the alternative coverage these collectives published online, guided by the following research question (RQ2): How do shifts in the alternative coverage of protests relate to the adaption of media practices in a changing sociopolitical context? The multi-layered qualitative content analysis resulted in a robust system of theoretical categories that describes the material in terms of formats used, recurring elements of representation and argumentation.

At the intersection between challenges to journalism and media activism, engaged journalism seeks to make a contribution to the field by conceptualizing the activities of alternative journalists that put their professional knowledge at the service of movements.

Title: Constructing a narrative of the self in the Greek anarchist radio. New roles, identities and relations for the non 'professional radio producers.

Session Type: Individual submission

Authors:

Name: Angeliki Gazi

Email: angelikigazi -at- gmail.com

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology

Name: Lambrini Papadopoulou

Email: lpapadopoulou83 -at- gmail.com

Affiliation: Panteion University of Social and Political Sciences, Athens

Abstract: This research seeks to explore the potential identity transformation that takes place organically for the non –professional radio producers who are part of the Greek anarchist radio ecosystem.

Drawing on the most recent theories that consider the notion of identity not anymore as a static and definite element of the ‘self’ but rather as a liquid element that can be constructed through a persons’ sense of ‘self’ through various social and cultural contexts (Berzonsky, 2016), we argue that participation in alternative media initiatives that aim to practice a radical kind of journalism, close to the idea of counter-information and introduce radical changes and ruptures in the notion of the mainstream media (Siapera, Papadopoulou & Archontakis, 2015) can lead to a radical transformation of one’s identity.

Moreover, we argue that since human and social/organizational identity builds on the idea that identity is a relational construct formed in interaction with the other, thus, the identity of the producer depends upon the glance of the other and, in our case, depends upon the hearing of the other: his crisis, his perception, his recognition and his acceptance.

Rodriguez was the first to note that the term ‘citizens’ refers to those members of society who ‘actively participate in actions that reshape their own identities, the identities of others, and their social environment, [through which] they produce power’ (Rodriguez, 2001:19). To this end, we also aim to focus our research in the ways that these producers engage with their colleagues and their audiences.

Through semi-structured non-interventionist interview, due to the fact that the main goal is to investigate the issue of identity through the construction of a narrative of the self, we aim to research the non-professionals radio producers of three Greek anarchist web radio stations -based in Athens and Thessaloniki- and examine the ways that their participation in these initiatives has changed the way they perceive themselves, their roles and their identity.

The field of Greek anarchist radio remains under researched and thus we anticipate to contribute effectively to a discussion that is just starting to emerge in the current literature.

Key words: Greek anarchist radio, identity, non-professionals radio producers

Title: Citizens on alert: mediatization and the challenges for journalism in the violent everyday life of Rio de Janeiro

Session Type: Individual submission

Authors:

Name: Juliana Ferreira

Email: juli.diasferreira -at- gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal Fluminense

Abstract: Urban violence is one of the main social problems in Brazil. According to the World Health Organization , the country currently ranks ninth among those with the highest rates of homicide. At the same time, Brazilians are the second largest population in the world in terms of their daily average time connected to social networks . This demonstrates the significant impact of the phenomenon of mediatization (HJARVARD, 2014; HEPP, 2014) in everyday life.

The sum of these factors contributed to a movement to create groups in social networks, particularly Facebook, with the aim of issuing warnings about shootings, urban violence and other forms of urban conflict. The local press, in turn, began to use the shared content in these new media territories (TOSONI AND TARANTINO, 2015) as a primary source of information for the production of local news.

This paper aims to observe the interaction within these groups, in the context of the state of Rio de Janeiro , and its media environment. In terms of their media visibility, I ask to what extent can online communities - born as "tactic" media (CERTEAU, 1998 [1980]) that can tackle violence - be considered as expressions of "connective action", as defined by Bennet and Segerberg (2012)?

In order to address such issues, the methodological approach is based on one week of content analysis of the daily local news programme "Bom Dia Rio" (Good Morning, Rio), conducted between August 6 and December 7, 2018. Here, I wish to observe the ways in which the contents published on the Facebook groups are used in the local news and how they help give visibility to the issues discussed by the participants.

The academic literature (BOWMAN AND WILLIS, 2003; JENKINS, 2008; RECUERO 2009) often assumes that the use of photos, videos and information posted on social networks might alter the nature of journalism practice. On one hand, this makes it possible for journalists to get closer to the population and portray situations that would otherwise not be reported. On the other hand, there is a high risk of spreading fake news and reinforcing the discourses of intolerance and prejudice often present in these new online spaces.

Country: US (United States)

Affiliation: University of California Irvine

Abstract: In September 2018, Dr. Christine Blasey Ford accused US Supreme Court Justice Nominee Brett Kavanaugh of sexual assault, with Kavanaugh denying the allegation. Soon after, US President Trump questioned Dr. Ford's credibility on Twitter, saying that she or her parents would have reported the assault to the authorities 30 years ago if it "was as bad as she says." Immediately, sexual assault survivors responded by tweeting their reasons for not reporting using #WhyIdidntreport. These tweets provide insight of (primarily) women sharing their reasons for not reporting sexual assault.

This study's two research questions:

RQ 1: How were #WhyIdidntreport posts discussed on Twitter and how did users engage with these posts?

RQ 2: To what extent were Social Ecological Model (SEM) constructs present in #WhyIdidntreport tweets?

This study used a quantitative content analysis of 1000 #WhyIdidntreport tweets in September 2018. Tweets were collected using the web-based social media mining tool netlytic.org, after which 1000 distinct tweets were collected using random sampling. Coding items included: reasons for not reporting; violence type; relationship to perpetrator; message framing; and SEM variables.

68.7% mentioned a specific reason for the victim not reporting; of these, 24.1% referred to the perpetrator being in a position of power, 36.3% feared they would not be believed, and 20.6%

mentioned others invalidated the assault. In addition, 47.6% mentioned a specific form of violence - 95.6% referring to sexual violence and 40.5% to rape. Using the SEM to categorize reasons for not reporting was present in 74.1% of tweets; of those, 47.6% referred to individual, 52.6% to interpersonal, 43.2% to community-related, and 21.7% to societal reasons.

Mann Whitney U tests were used to determine if tweets with specific variables elicited significantly different engagement among Twitter users than tweets that did not use these variables. Tweets mentioning specific violence types; sexual violence; reasons for not reporting: perpetrator in power, fear of retribution, and fear of not being believed all were associated with significantly higher median levels of engagement. In addition, using the SEM constructs of both interpersonal reasons and organizational reasons for not reporting were associated with significantly higher median levels of engagement. Mentioning family or friends as perpetrator and mentioning rape were associated with significantly lower median levels of engagement.

Social media platforms have increasingly become a place where sexual assault survivors share their stories. Evaluating such conversations offers insight into how social media serves as a platform for visibility, support, and activism. In addition, providers should be aware of how sexual assault may be framed/perceived by different populations. For example, tweets mentioning rape were associated with lower engagement, which may be due to the “severity” of the word and the concept; tweets mentioning powerful perpetrators were more likely to elicit engagement, likely reflective of the original issue.

Understanding how to frame messages about sexual assault, as well as experiences with and reporting of such crimes, in ways that will increase engagement among survivors and others is integral to increasing knowledge and accomplishing the broader systems level changes that are necessary.

Title: Los medios comunitarios de Venezuela frente la posibilidad de una confrontación armada

Session Type: Panel Submission

Authors:

Name: Fernando Casado

Email: casado.fernando -at- gmail.com

Country: EC (Ecuador)

Affiliation: Universidad Técnica de Manabí

Name: Rebeca Sánchez

Email: resanchez -at- gmail.com

Country: EC (Ecuador)

Affiliation: Universidad Técnica de Manabí

Abstract: Desde la segunda mitad del siglo XX, los medios comunitarios latinoamericanos han protagonizado importantes transformaciones en las formas de ejercer y entender el periodismo y la comunicación. Coincidiendo con los llamados gobiernos progresistas, en la última década se registran importantes avances en el reconocimiento de los medios comunitarios en América Latina, aunque los mismos no han estado exentos de incoherencias y contradicciones que comprometen su sostenibilidad en el tiempo (Observacom, 2017, p. 4).

Concretamente en Venezuela se reconoce el status legal del sector, proporcionando lo que Mateos califica como “un factor de equilibrio al ecosistema mediático” del país (2017, p. 462), proceso sobre el cual existe una reducida, -y en ocasiones- contradictoria producción literaria que impide conocer su estado actual.

No obstante, en los últimos años el escenario político en Occidente y América Latina ha sufrido profundas transformaciones y una oleada de gobiernos conservadores que ha cubierto la región, muchos de los cuales por sus específicas características han sido calificados como neoliberalismo autoritario (Bruff 2014).

Venezuela, con un gobierno que reivindica su inclinación por el socialismo y con la figura muy discutida de su Presidente, ha visto cómo la hostilidad de muchos de los países occidentales se ha ido convirtiendo en un aislamiento y acoso con sonido de tambores de guerra que actualmente amenazan convertirse en una intervención armada real.

Frente a esta situación, los investigadores del presente trabajo nos planteamos indagar cuál es el rol que los medios comunitarios venezolanos consideran deberían desempeñar en una situación crítica como la actual o en caso de que una intervención armada llegara a materializarse. El trabajo se apoya en una investigación que mapeó un total de 280 medios comunitarios venezolanos que contestaron una encuesta a partir de la cual fueron caracterizados (Casado y Sánchez, 2018).

Para cumplir con el objetivo realizaremos una serie de entrevistas en profundidad a distintos voceros medios comunitarios ya identificados, herramienta cualitativa que junto al instrumento cuantitativo ya aplicado arrojará luces sobre este controvertido objeto de estudio.

Title: Sostenibilidad de los Medios Sin Fines de Lucro de Córdoba, Argentina; tras la modificación de la Ley de Servicios de Comunicación Audiovisual

Session Type: Individual submission

Authors:

Name: Natalia Traversaro

Email: nataliatraversaro -at- hotmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de Córdoba. Facultad de Ciencias de la Comunicación. Argentina

Abstract: El objetivo de este trabajo es comprender/explicar las estrategias de sostenibilidad de los medios sin fines de lucro (MSFL) que están actualmente en funcionamiento en la provincia de Córdoba, Argentina; a partir de un relevamiento actualizado de estos medios realizado en 2018 (Bilbao y Traversaro 2018). Si bien hubo relevamientos anteriores (RADIODIFUSIONdata 2006; Marino et al 2015; Espada 2015; Segura et al 2016; Segura et al 2018) no estaban incluidos todos los MSFL de la provincia, ni había análisis de sostenibilidad. Por este motivo, el trabajo ha sido valorado por algunas organizaciones estudiadas, por el Círculo Sindical de Prensa y la Comunicación de Córdoba (CISPREN) ya que la información contribuiría a conocer la situación, tomar medidas y generar políticas pertinentes hacia el sector.

Las preguntas que guiaron la investigación podemos resumirlas en: ¿cuántos medios sin fines de lucro (MSFL) hay actualmente en funcionamiento en la provincia de Córdoba? ¿Qué estrategias de sostenibilidad utilizan los MSFL de Córdoba tras las modificaciones de la LSCA? El uso de las nuevas tecnologías ¿Es utilizado como estrategia de sostenibilidad?

El trabajo se abordó desde una perspectiva teórica interdisciplinaria y un enfoque socio-histórico, se preguntó acerca de los agentes que las producen y las condiciones del proceso de producción. Se entiende que las prácticas encuentran el principio de comprensión/explicación (Costa, 2010) a partir del lugar que define la identidad social de los agentes.

Metodológicamente, en primera instancia se realizó un relevamiento de los medios comunitarios de la provincia de Córdoba (páginas web, redes sociales, encuestas) (Bilbao y Traversaro 2018).

En esta nueva etapa, se realizaron entrevistas a miembros de los medios. Luego; se construyeron a) los agentes sociales b) las condiciones de producción c) de las estrategias desarrolladas por los agentes de acuerdo a sus características y condiciones de producción (Costa 2010).

Las estrategias de sostenibilidad se analizaron de acuerdo al “Documento de trabajo. Sostenibilidad en las radios y televisoras comunitarias, populares y/o alternativas. Dimensiones, categorías e indicadores.” elaborado por el Equipo PIO-CONICET Las radios y televisoras comunitarias desde la Ley 26522: condiciones, estrategias y desafíos.

En la primera etapa del relevamiento encontramos una variación en la cantidad de MSFL en relación a otros relevamientos y se observaron mejores condiciones para los MSFL en el marco de la LSCA (Bilbao y Traversaro 2018).

En esta etapa del análisis, se presenta el análisis de cómo el cambio de contexto político, económico y en la LSCA producido desde diciembre de 2015; contribuyó a que los MSFL empeoraran su poder relativo y sin embargo, los agentes continuaran promoviendo estrategias de sostenibilidad: trabajando colaborativamente, articulándose con otras instituciones, realizando propuestas al estado, entre otras estrategias que les permiten fortalecer el poder del sector y

continuar funcionando. Además, si bien hay disminución de subsidios para equipamiento que permita transmitir por aire con calidad de contenidos; la mayoría de los MSFL continúan haciendo programaciones utilizando nuevas tecnologías y emiten programaciones por internet, utilizan redes sociales, entre otros recursos.

Title: Beyond Horizontalism: The Complexities of Media Activist Organizational Structures

Session Type: Individual submission

Authors:

Name: Sandra Jeppesen

Email: sjeppese -at- lakeheadu.ca

Country: CA (Canada)

Affiliation: Lakehead University OrilliaMedia Studies

Abstract: Anti-capitalist grassroots media groups have long argued for the importance of horizontal structures in media projects in order to avoid replicating exploitative capitalist modes of media production. Horizontal projects such as Indymedia or Alternative Media Centres (AMCs) have gained popularity in social movements for the use of prefigurative politics—organizing anti-capitalist media in anti-capitalist or non-exploitative horizontal forms. However, scholars have also long noted a disingenuity in claims of horizontalism, whereby informal hierarchies evolve that establish longer-term activists with greater power, where intersectional marginalizations may play a role in inclusion/exclusion or power dynamics, or unintentional consequences such as the people who do more work have more power. Little attention has been paid to the specifics of horizontal organizing and power dynamics, in terms of the much more complex organizational forms and structures that groups calling themselves horizontal may actually take. The Media Action Research Group has conducted interviews with over 100 global media activists to address the question of power dynamics in grassroots intersectional media. We have found that there are five complex models of horizontal organizing used in media projects to challenge not just top-down structures, but also an unquestioned horizontalism, which can loosely be characterized as: horizontally paid labour; horizontal volunteerism; hybrid structures of paid, unpaid, and underpaid labour; a hybrid organizational form in which a partially autonomous horizontal group operates within a top-down organization; and economic liberation from capitalism. Each organizational structure offers specific affordances in terms of both successes and challenges in terms of the content produced, the relationships generated, networks engaged, power dynamics achieved, and more. This new taxonomy of activist media can not only deepen our scholarly understanding of the complexities of the political economy of horizontal, intersectional, anti-capitalist media projects, but also provide useful information to media activists engaged in new or on-going projects to inform their decision making and trajectories.

Title: Los medios comunitarios indígenas como construcción de memoria en resistencia en Bolivia. Organización y disputa por el relato

Session Type: Panel Submission

Authors:

Name: Juan Ramos Martín

Email: juanramosm -at- javeriana.edu.co

Country: CO (Colombia)

Affiliation: Pontificia Universidad Javeriana

Abstract: Históricamente en Bolivia, las diferentes resistencias culturales y cosmopolíticas han asumido un papel central como elemento movilizador de la conciencia sociopolítica frente a los poderes establecidos por la institucionalidad gestora del espacio público, más allá de la organización formal de sus estructuras, en la construcción de intersecciones, interzonas o zonas temporalmente autónomas, en palabras de Hakim Bey, que aprovechan los espacios intersticiales para desarrollar relatos identitarios con clara vocación emancipadora.

Pensado desde esta perspectiva, y a pesar del amplio desarrollo de análisis sobre las formas y experiencias de comunicación sindical y popular en el contexto boliviano (y latinoamericano), la comunicación indígena y sus formas de organización no han sido profundamente analizadas como formas estructurales y discursivas en su innegable papel para la construcción de memorias de resistencia.

La propuesta que este trabajo pretende desarrollar es precisamente la necesidad de constituir una matriz teórico-metodológica localizada, variable y horizontal capaz de analizar las representaciones de las redes de comunicación comunitarias e indígenas desde una perspectiva dual y en tensión, a partir de la reconstrucción de las memorias 'largas' surgidas de los diferentes movimientos y redes de medios indígenas en Bolivia como formas políticas identitarias propias que ofrecen estructuras, relatos, canales y legitimidad de resistencia más allá de su consideración como movimientos sociales genéricos, pero también como agentes sociales capaces de generar interacción, discusión y consenso en el debate por la construcción del espacio público.

Para ello, este trabajo retoma diferentes herramientas presentes en la Investigación-Acción Participativa, la reconstrucción crítica de la historia y la etnografía crítica a fin de poder develar las formas no aparentes de construcción identitaria y política presentes más allá de las estructuras formales de representación. En ese sentido, será necesario, por tanto, construir un desarrollo de la acción histórica y actual de dichas redes, entendidas éstas como sujetos político-culturales duales, presentes en sociedades abigarradas pero organizados a su vez en torno a prácticas e identidades propias, cosmologías y cosmogonías que otorgan elementos diferenciadores en el desarrollo de identidades políticas integrales.

Country: MX (Mexico)

Affiliation: Universidad De La Salle Bajío

Abstract: This inquiry focuses on the digital public expression of activists in local conservative contexts, taking as its starting point three main delimitations. First, activism is not limited to the protest or to the institutional political ways, but it also considers the initiatives rooted in everyday life, at the local level. Second, conservative contexts are especially hard for these initiatives. Third, those initiatives are usually long-term projects, in which the symbolic/communicative dimension are very relevant (Bringel, 2017; Pleyers, 2018).

The paper explores the communicative dimension of activism, by analyzing the digital public expression of activist groups, in Guanajuato, Mexico. This is a Mexican state characterized by economic and population growth, in tension with political and cultural conservative positions. In this context, the emergence of initiatives towards social change becomes a source of hope for some actors, and a threat for some others as well.

The theoretical framework discusses the relations among activism in local contexts, public sphere, public expression and digital media in the global age (Bringel, 2017; Dahlgren, 2005; Fraser & Honneth, 2003; Fraser, 2014; Pleyers, 2015; Pleyers, 2018; Ristovska, 2017).

The first phase of the study explores the civic/activist groups in Guanajuato, in order to identify the concerns on specific problems, in a temporal and spatial extent. This includes: 1) the review of information about civic groups in official databases, websites and social media; 2) semi-structured interviews with local activists, who point out the local civic/activist configuration, in the snowball logic. The preliminary findings let identify a conservative logic, even in these initiatives towards social change. At the same time, there is a strong connection among certain groups that produce support networks.

The second phase will analyze the digital public expression of specific groups. The expected outcomes are an in-depth understanding of their perceptions, experiences and materials of digital public expression, and their positioning in the local-national-global levels.

The inquiry contributes to the discussion on the tension between the local and global levels of activism, media activism, and the global public sphere.

Title: From Activist Technologies to Internet Standards: Civil society involvements in the development of Internet standards and protocols

Session Type: Individual submission

Authors:

Name: Stéphane Couture

Email: scouture -at- glendon.yorku.ca

Country: CA (Canada)

Affiliation: York University

Abstract: Civil society organizations and social justice movements have long been involved in issues like community networking, free and open source software development, and advocacy of human rights in digital policies (Powell, 2008; Milan, 2013; Belli, 2016). Their voices have particularly been heard in spaces like the Internet Governance Forum where many authors have recognized the vocal participation of civil society (Raboy, Landry, & Shtern, 2010). Up to quite recently, these involvements seemed limited to policy advocacy, experimentation, and discourses, and didn't extend to standard and protocol development. In the past few years however, members of civil society organizations have started participating in standardization bodies alongside engineers from large telecommunication and Internet companies like Verizon, Google, and the likes. The goal of these civil society organizations is to integrate concerns for human rights and equitable access for all in the development of Internet standards.

This presentation will focus on the case of working groups currently involved with the Internet Research Task Force (IRTF), an Internet Governance body which aims at conducting long term research related to Internet standards and protocols, and which is closely associated with the Internet Engineering Task Force, that focuses on short term standardization decisions. Our conceptual approach is situated at the intersection of Communication, and Science and Technology Studies, in continuity with the “turn to infrastructure” in Internet Governance (Musiani, Cogburn, DeNardis, & Levinson, 2015). Our research is based on a multi-sited ethnography, and is grounded in participant-observation within a preeminent organization involved in digital rights and Internet governance. Our approach consists in “following actors” who address issues related to our research. We are interested in how these actors are able to influence engineers from large Internet and telecommunication companies. Data collection is done by conducting semi-directed interviews with actors, data mining of publicly available mailing list archives, and attendance of events organized by these groups. We argue that it is possible to analyze these emerging initiatives as a process of “sedimentation” (Barad, 2003; Suchman, 2007) of previous practices and discourses in the making of technical standards, and we look at how this may actually have a significant influence on the development and/or reconfigurations of Internet infrastructures.

Title: The Activism-Journalism Nexus: Alternative media organisations and the re-invigoration of watchdog journalism in the Arab World

Session Type: Individual submission

Authors:

Name: Yazan Badran

Email: yazan.badrans-at-vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Abstract: In April 2016 the online media outfit, Inkyfada, became a household name in Tunisia after publishing a series of investigative reports based on the Panama Papers. The media outfit, only established in 2014, was the only Tunisian partner in the International Consortium of Investigative Journalism which investigated the well-known Swiss Leaks and Panama Papers. Inkyfada is but one example of a new generation of media outfits established by dissident journalists and activists across the MENA region in the aftermath of the Arab spring protests in 2011. This article aims to explore the conditions of their emergence and the importance placed on their watchdog role in shaping their journalistic practice.

The disruption of the political order in the MENA region following the 2011 uprising was keenly felt in the field of media beyond the immediate and intense mediatization of the protests. Activists, dissidents and journalists filled up spaces vacated (even if temporarily) by the retreating state and private media of the ancien regime. Today, almost a decade on from the tumultuous months of 2011, outfits like Inkyfada (Tunisia), Mada Masr (Egypt), SyriaUntold and Siraj (Syria), are persisting in their mission despite the continued upheaval and authoritarian retrenchment across the region. Politically-engaged and led by activists and dissident journalists, they privilege a mode of watchdog journalism in their content and have given a new impetus and prestige to investigative journalistic work across the region.

This paper argues, based on qualitative interviews with the media actors, that the specific opportunity structure that opened up after the Arab Spring was instrumental in sustaining these outfits and in allowing them to thrive thus far. The influx of media development aid channeled to the region in the immediate aftermath of the uprisings allowed such actors to break with established media outfits in their regions and to establish new self-managed institutional settings that were more oriented towards watchdog journalistic practice. Such a mode of journalism was also most compatible with the politically-driven and politically-active practice of these journalists. Furthermore, a move away from “dissident journalism” modes towards watchdog journalism was aided by the capacity building and training efforts associated with media development practices and its link to the dominant paradigm of good governance (Manyozo, 2012). The confluence of these different conditions allowed a culture of watchdog journalism to germinate more easily among these new media outfits, circumventing many of the obstacles that blighted earlier efforts (see for example Bebawi, 2016).

Finally, the paper argues that the Arab Spring, in its disruption of the establishments' power in the MENA region was instrumental in this process. Indeed, the sudden collapse of statist logics at the hands of popular mobilization represented a condition of possibility for the emergence of such new actors.

Affiliation: Universidad Central del Ecuador

Abstract: La denominada comunicación comunitaria y popular, para el caso del Ecuador y de América Latina, se inscribe en el cruce de factores ideológicos, económico-políticos y religiosos. Son estos últimos que definieron el carácter de la radiodifusión comunitaria, educativa, étnica en el Ecuador. Sus inicios están en la provincia de Chimborazo, en la sierra centro sur, la cual históricamente aglutina el mayor número de indígenas (Delaunay 1985; Clark 2008). Es en esta provincia donde la iglesia evangélica y la iglesia católica fundan las dos primeras radios comunitarias. La primera, “Radio Colta” fue fundada en el cantón del mismo nombre, el 5 de diciembre de 1961 en la comunidad de Majipamba, con el auspicio de la “Unión Misionera Evangélica, (UME)” y la asesoría técnica de la radio evangélica mundial HCJB (Hoy Cristo Jesús Bendice) “La voz de los Andes” que funcionaba desde 1931 (Laporta 1993; Muratorio 1982). La segunda, las Escuelas Radiofónicas Populares del Ecuador, ERPE, fue fundada por la Diócesis de Riobamba el 19 de marzo de 1962, siguiendo el modelo de Radio Sutatenza en Colombia (Proaño 2010). Ambos proyectos nacen con el objetivo de alfabetizar desde las comunidades y convertirse en un dique frente al avance de los partidos comunistas y socialistas (Becker 2007; Rivera 1998; Baud 1996). La convergencia evangelizadora duraría poco, ya que las tensiones extremas del sistema hacendatario en la provincia, en el Ecuador y en América Latina estaban en una fase de disolución. (Lyons 2001; Quintero 1983). La evangelización alfabetizadora en el caso de las ERPE, bajo la Teología de la Liberación (Vásquez 2016), las convierte en un articulador político de base -de izquierda cristiana- en la lucha por el reconocimiento legítimo (Honneth 1997, 2009; Benhabid 2006) en las relaciones interétnicas. Así lo educativo-alfabetizador, la comunicación como dispositivo político, se convierte en lo que se conocerá como comunicación comunitaria. Este hecho fundacional, contrastará con el fondo de la comunicación privada, incluso estatal, de corte liberal y la emergencia de la esfera pública nacional (Habermas 1994; Lippmann 2003). Esa comunicación comunitaria, sus radios, se convirtieron en actores e instrumentos en la lucha étnica contra el (neo)liberalismo como proyecto cultural autoritario (Harvey 2007). La investigación se desarrolla utilizando el Análisis del Discurso (Van Dijk 2003, 2008; Fairclough 2003; Charaudeau 2009) y técnicas de archivo histórico y entrevistas. La pregunta central es: ¿Cómo los procesos de evangelización radiofónica determinaron las bases de la radio comunitaria en el Ecuador y su lucha contra la emergencia (neo)liberal? El análisis histórico de caso aporta a la comprensión estructural

de la actual mass media evangelizadora en los procesos electorales que han llevado al poder a proyectos políticos neofascistas, neoliberales, autoritarios en Ecuador y América Latina. Como a la comprensión de las nuevas dinámicas de la comunicación y de las resistencias populares desde una perspectiva analítica de la Teoría Crítica del Reconocimiento.

Abstract: En los últimos quince años el movimiento sindical uruguayo tuvo un aumento masivo de afiliación, en general jóvenes (hombres y mujeres) y mujeres adultas, con escasa o nula trayectoria organizativa, a partir de factores como la reinstalación de los Consejos de Salarios, la promulgación de normativas que protegen la actividad sindical y el crecimiento del empleo en Uruguay en su momento. Esto lo potenció y le presentó nuevos desafíos. Al mismo tiempo, el rol central de la comunicación y las nuevas tecnologías de la información y comunicación, determinan un nuevo escenario social, político y económico que también repercute en la vida cotidiana de los sindicatos, y en particular en su comunicación. Transformaciones que se tradujeron en procesos de cambio organizacional (Chiavenato, 2009; Daft, 2000) y en la emergencia de nuevos públicos internos y externos (Capriotti, 2009) dentro del sindicalismo.

En este marco, nos propusimos estudiar las estrategias de comunicación de los sindicatos uruguayos, partiendo de las siguientes preguntas: ¿Qué medios y estrategias construyen para su comunicación? ¿Ha llevado el nuevo contexto sindical a repensarlas? ¿Cómo inciden las nuevas tecnologías en sus estrategias? ¿Qué rol ocupan las asambleas y otros espacios en su comunicación? ¿Qué modelos y formas de comunicación se construyen en estos espacios?

La investigación “Comunicación en los sindicatos: entre la acción urgente y la planificación estratégica” centró su análisis en cinco sindicatos, muestra que buscó ser representativa de la diversa composición del movimiento en nuestro país. Analizamos sus medios y discursos, a partir de sus contenidos, características y formas de producción, con particular interés en los medios digitales. Complementariamente, se aplicó un formulario que recogió información relevante sobre

los medios utilizados, observamos los diferentes espacios sindicales que hacen a su dinámica cotidiana y realizamos entrevistas en profundidad a referentes de los casos estudiados.

Este artículo propone enfocarse en el uso de nuevos medios y formas comunicacionales, y su convivencia con las tradicionalmente utilizadas dentro del sindicalismo uruguayo. Nos centraremos en la vigencia de clásicas expresiones de la comunicación sindical, la convivencia de viejas y nuevas formas en los nuevos medios, y las diferentes miradas que coexisten sobre los medios digitales en el mismo movimiento. De este modo, buscamos aportar al debate sobre el uso y apropiación de las tecnologías de comunicación por parte de los movimientos sociales. Consideraremos contribuciones que aportan al análisis del uso de los distintos medios y lenguajes (Hall, 1980; Kaplún, 2003) por parte de los sindicatos, y el diálogo con miradas críticas en torno lugar de las nuevas tecnologías y medios digitales, su uso y apropiación por parte de los movimientos sociales (Treré y Barranquero, 2013; Fuchs, 2010; Sierra y Gravante, 2012, etc.).

Abstract: Media fills an important role in recording and documenting disasters. Commentators have levelled various accusations against Tokyo-centered mass-media journalism: that its reporting is sensationalistic and centers too much around a specific region, that it relies on stereotypical stories, and that it exacerbates weathering. Contrasting with this is community FM radio, which — from the time a disaster strikes through its restoration and recovery — transmits information about the disaster and restoration efforts in the affected region. Though the role and significance of community FM radio is highly regarded, most prior research has not focused on its role in remembering the memory of disaster. This study examines community FM radios that broadcast information about restoration and recovery in disaster-affected areas, investigating to what extent they can serve as apparatuses to remember the region's disaster. It is a long-term, continuous qualitative study of disaster-affected areas throughout the country. Based on the research on 24 years of community radio, FMYY in the wake of the Great Hanshin Earthquake, it is observed how the region's collective memory of the disaster was constructed and renewed through long-term disaster-related events held by community radio broadcasters, and it became clear that community radio performs an important role. Especially, the media event held by FMYY on the memorial day of the disaster becomes the place where people not only share the memory but create new memories bridging different generations in the community.

Additionally this study conducted in-depth interviews with eleven community FM radio stations in the Tohoku region that suffered heavy damage in the Great East Japan Earthquake of 2011. Based on the case study of Great Hanshin Earthquake, it is analyzed the process through which and the possibility that community FM radios in East Japan may become apparatuses to remember and construct the collective memory of the Great East Japan Earthquake.

Abstract: Community radios play a significant part in the media structure of a developing country like India. Community radio stations help provide a platform for people to communicate. The fact that these radio stations are present within a community and are run by the people living there, gives the station a chance to deliver content which is often neglected by commercial radio stations. The floods of 2013 in the northern Indian state Uttarakhand, heightened the requirement for community radios as a tool for disaster management. In such times of need, information provided by a community radio can have an empowering effect. They can function as a medium of surveillance, broadcasting messages regarding safety of individuals and reconnecting family members. This specific information at the right time is vital due to the absence of other media platforms. A similar absence of a local medium of communication in these rural areas is evident across India and its neighbouring countries. The emergence and growth of community radios in rural areas over the last few years spiked our interest, encouraging us to undertake this research study. Through the study, we hoped to better understand the functioning of a community radio station, the influence on their audience, and to assess the extent of community participation at these stations. A case study on the community radio station “Mandakini ki Aawaz” was conducted to facilitate the research. Located in the disaster-prone district of Rudrapur, Uttarakhand, ‘Mandakini ki Aawaz’ was set up due to the abject isolation of the region. It covers 350 villages in a twenty-kilometre radius. Through primary data collected from members of Mandakini ki Aawaz and 4 villages around the radio station, we were able to better understand the functioning of the radio station, the program content aired, and the flow of information during times of emergency. However, some disparities emerged between the information provided by the members of the station and its audience, which helped us understand the actual progress of the radio station.

Although the community radio movement has been gaining momentum in the global south, it has great potential to help decentralize existing unequal media systems. Deeply embedded social

realities of the average Indian village, pose a huge challenge to the idea of community radios that are truly participatory in its essence.

Title: Nomadic activism ' doing democracy beyond the nation-state

Session Type: Individual submission

Authors:

Name: Antje Scharenberg

Email: a.scharenberg -at- gold.ac.uk

Country: GB (United Kingdom)

Affiliation: Goldsmiths, University of London

Abstract: This paper investigates the question how the concept and practice of nomadic activism can point to new forms of democracy and active citizenship.

In recent years, the UK's vote to leave the European Union was but the most illustrative example of what Appadurai calls 'democratic fatigue' (2017). This development is marked, for instance, by an increased sense of Euro-scepticism and the rise of far-right, nationalist forces all across the European continent. Moreover, on a planetary level, contemporary challenges arising in the context of climate change, migration and the injustices of global capitalism call for more radical imaginations of how we might do democracy today. Thus, the search for transnational alternatives from bottom-up becomes one of the urgent question of the contemporary moment.

The paper uses Braidotti's idea of 'nomadic activism' (2006) as a theoretical framework to discuss how alternative media practices of transnational activists can help push our thinking about democracy beyond conceptual and national borders. Braidotti sees nomadic activism as an approach that can expose and denounce the horrors of national border politics. Indeed, the theoretical concept of the nomad has featured in academic discussions more widely - for instance in feminist, queer and media theory (Sutherland, 2016; Georgiou, 2012; Bousiou, 2008) - as a figure of transgression which holds the potential to imagine new forms of political participation beyond national borders.

Respective literature is discussed alongside findings from more than two years of ethnographic fieldwork conducted in collaboration with activists who work towards 'democracy, equality and culture beyond the nation-state'. More specifically, I draw on the example of Transeuropa Caravans, a campaign which sees several activist buses drive across Europe in the run-up to the European Parliament elections. The campaign's aim is to document, connect and make visible European alternatives from below, which are being built all across the continent. Particular attention is paid to the various alternative media practices activists employ throughout their journey to communicate respective ideas and demands to politicians and to a wider public.

As these activist practices illustrate, nomadic activism might, indeed, be able to hint at alternative forms of democracy. In 'grounding' their actions in nomadic rather than sedentary principles, nomadic activists invite us to think democracy beyond the nation state, as a politics constantly in motion. The paper suggests that such reflections on the possibilities of nomadic activism for social justice movements are particularly relevant in times when rights and freedoms of (mobile) citizens are increasingly threatened.

Title: [Panel] Prácticas y experiencias de comunicación indígena diálogo de tecnologías en un entorno digital, Panel Description

Session Type: Panel Submission

Authors:

Name: Maria Luna Rassa

Email: mlunar -at- tecnocampus.cat

Country: CO (Colombia)

Affiliation: UNIMINUTO and Tecnocampus ESUPT UPF

Abstract: La co-creación y la colaboración son prácticas características de la comunicación indígena en un entorno digital, especialmente cuando se refieren al uso de herramientas de audio y video y estrategias de exhibición que buscan la conexión y el impacto en diferentes entornos. En este contexto la presencia de facilitadores y el interés de audiencias no-indígenas sigue siendo importante, como lo demuestra la organización de muestras de cine indígena, la circulación transnacional de contenidos y por supuesto los talleres de producción usualmente vinculados a universidades o proyectos de organizaciones aliadas. Dichos procesos de co-creación evidencian que, pese a la pérdida de la lengua (elemento central de la cultura), varios pueblos indígenas luchan por la pervivencia de otros de sus principios culturales, cosmovisiones, autonomía, territorio y costumbres (Almendra, 2010; Noreña, 2014; Herrera, Fayad & Peña, 2015; Uruburu, Herrera & Rodríguez, 2011; Magallanes-Blanco, 2007, 2008) y encuentran en la interacción con las tecnologías caminos de autorepresentación y formas de resistencia, reivindicación y re-existencia política, social y cultural.

Siguiendo los planteamientos de Arturo Escobar, la propuesta de este panel explora cómo estas comunicaciones propias tienen el potencial de mostrarnos pluriversos, en cuanto a riquezas de relaciones y puntos de vista que cuestionan el mito del desarrollo como única vía de progreso. Más allá de los temas y contenidos, la experiencia de las prácticas de comunicación mediante la apropiación de tecnologías en comunidades indígenas ha generado diversas implicaciones, cuestionamientos y procesos que van más allá de la producción mediática en sí misma y deben ser considerados como experiencias de mediaciones comunicativas.

Este panel construido desde experiencias de investigación/acción propone un punto de mirada de los procesos de comunicación indígena recientes en culturas colombianas de la Sierra Nevada de Santa Marta y El Amazonas colombiano y se extiende a los aprendizajes y preguntas suscitadas por la divulgación de estos contenidos entre públicos nacionales y transnacionales no-indígenas.

Title: Kesennuma's Building for the Future and Ishinomaki's Rolling Press: An evaluation of two community media initiatives that are sharing localised news of recovery and reconstruction from T'hoku's disaster-affected communities

Session Type: Individual submission

Authors:

Name: Jamie Matthews

Email: jmatthews -at- bournemouth.ac.uk

Country: GB (United Kingdom)

Affiliation: Bournemouth University

Abstract: The earthquake and tsunami that struck Japan in March 2011 was an unprecedented disaster, destroying coastal communities in Tōhoku and resulting in the deaths of more than 18,000 people (Japan Fire and Disaster Management Agency, 2016). It triggered a second event, the nuclear emergency at Fukushima and the subsequent evacuation of over 100,000 residents from the towns and villages in proximity to the Daiichi plant.

Amongst the areas hardest hit by the tsunami were the port cities of Ishinomaki and Kesennuma in Miyagi prefecture, and both featured prominently in international news coverage of the disaster. Waves of up to ten meters in height overwhelmed these two communities, inundating lower lying areas up to two kilometres inland. While post-disaster recovery in Tōhoku has understandably remained significant on media, public and policy agendas in Japan, news about recovery and reconstruction has received far less attention from the foreign news media.

This paper evaluates two community media initiatives that were launched in Miyagi prefecture to address this apparent gap in news and content accessible to non-Japanese speaking audiences seeking information about recovery in the disaster-affected area. It focuses on the Rolling Press, an initiative launched by volunteers living in Ishinomaki city, and Kesennuma's Building for the Future Project, as two case studies of community media projects instigated after the 2011 tsunami that sought to make information and news about their respective communities and disaster recovery available in English. Both of these initiatives, this paper will argue, are indicative of the forms of community and alternative media that may emerge in post-disaster contexts. By drawing on interviews with participants, alongside an analysis of the content that they produced and shared it will explore how these projects have attempted to reach audiences that are geographically dispersed (Reader and Hatcher, 2012), in particular through harnessing the opportunities afforded by digital media. It will also reflect on some of the difficulties that the Rolling Press project faced in achieving longer-term sustainability and endeavour to shed light on the intrinsic and altruistic motivations that guide volunteers' involvement in such initiatives. In these cases, to provide localised news and information about their community as it seeks to rebuild from the tsunami, to connect with English-speaking audiences and support post-disaster recovery.

Abstract: Si bien en nuestro país registramos un crecimiento de la investigación sobre los servicios de comunicación audiovisual (SCA) denominados comunitarios, populares, alternativos, cooperativos y de pueblos originarios aún no existe en Argentina un relevamiento que dimensione exhaustivamente el universo empírico al que nos referimos cuando hablamos de ellos. Esta tarea

tampoco fue encarada suficientemente desde el Estado ni desde las organizaciones de la sociedad civil.

Así, en 2018 desde la Red Interuniversitaria de Comunicación Comunitaria Alternativa y Popular (RICCAP) comenzamos el “Relevamiento de los SCA Comunitarios, Populares, Alternativos, Cooperativos y de Pueblos Originarios en Argentina”. Este proyecto se propone relevar la existencia y principales características -organizacionales, legales, tecnológicas y de producción local- de las radios y televisoras de este tipo. Nuestra ponencia profundizará sobre los primeros resultados de esta investigación y sobre las implicancias del trabajo articulado entre investigadorxs de unidades académicas y redes de medios.

Nuestro trabajo se inscribe en el entrecruzamiento de perspectivas teóricas dedicadas tanto a las políticas de la comunicación, como al derecho a la comunicación, la ciudadanía comunicativa y la comunicación comunitaria. Sintéticamente, consideramos que el desarrollo y fortalecimiento de este tipo de emisoras contribuyen a la democratización de las comunicaciones, en contraposición a la histórica tendencia a la concentración de la propiedad y la centralización de la producción de contenidos del sistema audiovisual argentino. Complementariamente, suponemos que se trata de espacios estratégicos para el ejercicio de la ciudadanía comunicativa, en tanto posibilitan el derecho a la libertad de expresión de diversos actores sociales generalmente marginados o estigmatizados en los medios masivos. De acuerdo con los marcos interpretativos internacionales del derecho a la comunicación estas afirmaciones presuponen, por último, que el Estado tiene un rol fundamental en promover y garantizar la diversidad y el pluralismo audiovisual.

Metodológicamente, recuperamos herramientas cuantitativas utilizadas en la elaboración de censos. El trabajo de campo -a finalizar en febrero- implica la aplicación presencial o telefónica de un cuestionario de 60 preguntas a unas 400 emisoras autodefinidas como comunitarias, populares, alternativas, cooperativas y/o indígenas. La relevancia del relevamiento se potencia con la participación de diversas redes del sector en el diseño de los instrumentos; asimismo, su ejecución implica el trabajo colaborativo y articulado de 7 equipos regionales de investigación en los que participan más de 40 investigadorxs y estudiantes de 12 universidades nacionales.

En términos políticos, aspiramos a que este trabajo constituya base empírica para la implementación de políticas públicas por parte del Estado y de instituciones educativas de cara al fortalecimiento de estos SCA. En ese sentido, esperamos generar información relativa a las emisoras y sus condiciones de funcionamiento de cara a los procesos de digitalización y de convergencia. A su vez, proyectamos producir conocimiento significativo para el trabajo de intervención y de incidencia en el espacio público de las redes en torno a las cuales se nuclean estos medios en pos de la democratización de las comunicaciones. Finalmente, esperamos que los resultados permitan desplegar estrategias de visibilización de las emisoras de cara a las audiencias y la ciudadanía.

Title: La radio sin radio, el devenir de un sueño colectivo

Session Type: Panel Submission

Authors:

Name: Eliana Herrera Huérfano

Email: eliana.herrera -at- uniminuto.edu

Country: CO (Colombia)

Affiliation: UniMinuto (Universidad Minuto de Dios)

Abstract: Desde el año 2012 la comunidad del resguardo Ticoya, a través de Emperatriz Cahuache, me invitó a trabajar en la recuperación de la emisora Ticoya Stereo, en Puerto Nariño, Amazonas. Se trata de una radio estación local que la comunidad tuvo en funcionamiento durante el año 2009, pero que producto de las dinámicas de las leyes de radiodifusión de Colombia terminaron perdiendo. Este trabajo de investigación e interacción con el resguardo ha buscado generar la construcción de conocimiento conjunto a largo plazo, por eso se ha mantenido en el tiempo, reconociendo asimetrías temporales entre las lógicas institucionales universitarias y la lógicas de la comunidad. El propósito ha sido facilitar espacios de diálogo, reflexión y análisis para que la comunidad iniciara la construcción de un proyecto radial que responda a sus formas de organización, expectativas y necesidades y así apropiarse un medio no indígena en función de sus propias prácticas y narrativas.

A lo largo de estos cinco años hemos hecho un intenso trabajo de investigación, identidad y recuperación de memoria oral con las comunidades indígenas de ticunas, cocamas y yaguas en el territorio amazónico y aunque no hemos logrado la recuperación de la radio estación como medio local, los trabajos de campo, basados en la co-creación de piezas sonoras, han dado cuenta de algo más importante: durante los procesos de investigación/acción hemos tenido la oportunidad de presenciar e incentivar un devenir que está más allá del medio. Estos procesos de lo que podríamos denominar 'intermediaciones' evidencian interacciones interesantes en y con la comunidad cuyos aprendizajes se evalúan en esta propuesta en tres sentidos: Empoderamiento de las mujeres, diálogos intergeneracionales y recuperación de elementos históricos del territorio.

Title: Los espíritus de la comunicación: Indígenas de ritual y conexión

Session Type: Panel Submission

Authors:

Name: Omar Rincón

Email: orincon -at- uniandes.edu.co

Country: CO (Colombia)

Affiliation: Universidad de los Andes

Abstract: Fuimos a la Sierra Nevada de Santa Marta en Colombia. Estuvimos con los Wiwas, los Arhuacos, los Wayuu y los Kankuamos. Vimos muchas imágenes y escuchamos a los hermanos mayores. Fuimos a Daupará (imágenes para ver más lejos). Fuimos a la 10 muestra de Cine y Video Indígena de Colombia. Y esto fue lo que aprendimos que es la televisión indígena: Comunicar significa “ir escuchando” en el pueblo Arhuaco, comunicar es el ritual de la paciencia en el tiempo infinito de la conversación que mantienen los pueblos con la madre tierra y las diversas culturas. Por eso, los pueblos indígenas nos recuerdan que la comunicación es una necesidad para existir, resistir y proponer. Pero antes de la cámara o el comunicar está el plan de vida y el proyecto político. Entre las comunidades no hay un autor, no hay un artista; comunica colectivo, el pueblo. Esta presentación se ubica desde la experiencia de los espectadores y permite comprender desde nuestras "miradas externas" cómo la comunicación se pone en práctica como una actitud de diálogo con la naturaleza, el territorio, los espíritus.

Title: Circulación de cine indígena en Europa: Experiencias de exhibición transnacional

Session Type: Panel Submission

Authors:

Name: Maria Luna Rassa

Email: mlunar -at- tecnocampus.cat

Country: CO (Colombia)

Affiliation: UniMinuto/ Tecnocampus ESUPT UPF

Abstract: ¿Qué pueden aportar las experiencias de comunicación indígena a otros entornos? ¿Cuáles son los lugares clave de esta exhibición? ¿Cómo analizar el significado de los encuentros y tensiones que se producen en esta divulgación de contenidos locales en entornos transnacionales? A través de la recopilación de experiencias de distribución y proyección de cine y video indígena esta propuesta indaga en la experiencia de exhibición documental de la producción indígena en Europa desde la Asociación para la divulgación de Cine Latinoamericano El Perro que Ladra, una organización independiente que funcionó como un nodo de divulgación para algunos documentales indígenas en alianza con otras instituciones culturales y universidades. Desde el caso concreto de los diálogos que generaron proyecciones como Resistencia en la línea negra, Ushui (Bunkuaneyuman) y Naboba (Zhigoneshi) entre las audiencias de muestras independientes en París, Barcelona y Toronto se examinan los alcances de la comunicación indígena en un entorno transnacional. Por otro lado, la propuesta se pregunta por los mecanismos de financiación de estas producciones y toma una perspectiva crítica que se nutre de los estudios de festivales de cine global para examinar el peso de los apoyos estatales y el acceso de estos colectivos a los fondos de producción global. Un capítulo importante se dedica a las alianzas estratégicas para mostrar la importancia que tienen la producción y la distribución independiente en la existencia de estos contenidos. Finalmente, desde el debate por la entrada de la comunicación indígena en un entorno digital, se interroga la presencia/ausencia de estos contenidos en internet y se analiza el impacto que las campañas en redes sociales sobre este cine, usualmente relacionadas con la sensibilización sobre derechos humanos, impacto ambiental y la fuerza de la comunicación propia, tienen sobre los encuentros físicos, el encuentro de intereses y los diálogos que generan entre las nuevas audiencias del cine indígena.

Title: Analysis of Communicative Processes in Local Communities. The Case of the Creative and Cultural District of the Ouseburn Valley, in Newcastle Upon Tyne, United Kingdom

Session Type: Individual submission

Authors:

Name: Jennifer García Carrizo

Email: jennigar -at- ucm.es

Country: ES (Spain)

Affiliation: UNIVERSITY COMPLUTENSE OF MADRID

Abstract: Esta investigación se presenta en el marco de los estudios metodológicos para trabajar e investigar sobre procesos de comunicación en pequeñas comunidades.

En este sentido, su objeto de estudio es el Distrito Cultural y Creativo del Ouseburn Trust, situado en Newcastle Upon Tyne, Reino Unido. Este se define como un espacio postindustrial que ha sido revitalizado a través de diferentes actores culturales y creativos que desarrollan actividades en el área dirigidas al público local (Lazzeretti, 2008). Partiendo de este objeto de estudio, la pregunta de investigación planteada se centra en cómo los diferentes actores que conforman el distrito, tanto privados como públicos, y tanto culturales como creativos, se comunican interna y externamente. En este sentido, el principal objetivo de esta investigación es analizar el sistema de comunicación interna y externa del distrito.

Para ello, partiendo de la Teoría Fundamentada, que tiene como base los estudios metodológicos de Saunders, Thornhill y Lewis (2009) y el muestreo teórico de Glaser y Strauss (1967), se realiza un análisis del caso del distrito cultural y creativo del Ouseburn Valley a través de una revisión bibliográfica, seguida de un trabajo de campo consistente en diferentes entrevistas semiestructuradas a expertos, tanto a nivel académico y empresarial, en este tipo de espacios urbanos. Igualmente, desarrolla una serie de más de 15 entrevistas semiestructuradas a los diferentes actores del distrito. Dentro del trabajo de campo realizado, también se han analizado diferentes folletos e información corporativa relativa al distrito y se han recolectado datos in situ, tales como la toma de fotografías de los diferentes espacios que configuran el entorno.

Así, se analiza el modelo de comunicación del distrito mediante la técnica del mapeo (British Council, 2010) y se constituye un mapa en el que se visualizan los actores creativos y culturales, así como las relaciones comunicativas que se dan entre ellos. Mediante él, es posible visualizar aquellos actores principales y puntos neurálgicos a nivel comunicativo para, posteriormente, clasificarlos como catalizadores del Ouseburn Valley y ver cómo trabajan con el público local para establecer enlaces con él, fidelizarlo y legitimarse ante el mismo.

De tal modo, a través de este caso de estudio, se observan diferentes impulsores del Ouseburn Valley, tales como el Ouseburn Trust, la Ouseburn Farm o Seven Stories Library, y, además, se aplica exitosamente el modelo metodológico del mapeo para identificar puntos neurálgicos a nivel comunicativo en los distritos culturales y creativos. Así, de forma novedosa en los Estudios de Ciencias de la Comunicación, se introduce una herramienta metodológica ya utilizada en otros

campos como la Economía. Esto supone un gran aporte a nivel teórico y práctico para el desarrollo de los estudios culturales, comunicativos y sociales. Y es que, los distritos culturales y creativos se erigen como motores para el desarrollo de las ciudades (Rosselló y Wright, 2010) (UNESCO, 2016) y para la integración y la cohesión social (Rowe, 2016) (Burkman, 2017), por lo que analizar los procesos comunicativos que se dan en ellos se torna de suma importancia.

Title: El aprendizaje emocional a partir de la participación en experiencias de comunicación comunitaria.

Session Type: Individual submission

Authors:

Name: Ana Martínez Ortiz de Zárate

Email: azarat.ana -at- gmail.com

Country: ES (Spain)

Affiliation: UNED

Abstract: Esta comunicación pretende analizar la dimensión del aprendizaje emocional que adquieren las personas que participan en experiencias de comunicación comunitaria, caracterizadas por ser protagonizadas por la ciudadanía (Berrigan, 1981), que de forma horizontal (Beltrán, 1998) se involucra en todos los aspectos que requiere llevar a cabo un proyecto de este tipo.

Estamos en un contexto social donde cada vez se es más consciente de la importancia que tiene el aprendizaje emocional, incluso varios autores manifiestan que se está produciendo una revolución emocional; sin embargo, muchas personas siguen reconociendo una falta de formación en este aspecto.

Al estudiar los diversos tipos de aprendizajes adquiridos en los medios de comunicación comunitarios, ha sido muy destacado el relacionado con el terreno emocional, aquel que supone la comprensión de tanto las emociones propias como de las ajenas (Goleman, 1996). Asimismo, tenemos también en cuenta la denominada ética del cuidado (Gilligan, 1985).

En este caso, nos centraremos solo en esta parte del aprendizaje, pero siendo conscientes, como expresó Damasio (2011), que no se puede separar la mente del cuerpo y que por tanto, el aprendizaje cognitivo está estrechamente unido al emocional.

Se ha utilizado la metodología de las historias de vida, que se puede definir como el proceso de indagación, a través de entrevistas y charlas entre investigador y protagonista, sobre los sentimientos, la manera de entender, comprender, experimentar y vivenciar el mundo y la realidad cotidiana (Martín-García, 1995).

Hemos realizado 12 historias de vida de personas que han estado implicadas en experiencias comunicativas comunitarias de tres formatos mediáticos diferentes (radio comunitaria, comunicación audiovisual participativa y los escenarios colaborativos virtuales). Se han elegido perfiles muy heterogéneos que cumplieran tres criterios: su participación relevante en este tipo de experiencias, la percepción de haber adquirido aprendizajes significativos y la disponibilidad para profundizar en sus vivencias.

Los testimonios provienen de España, donde nos ubicamos, y de Uruguay, uno de los países referentes en relación al desarrollo tanto académico, con autores como Mario y Gabriel Kaplún, como práctico de los medios de comunicación comunitarios.

Las personas entrevistadas identifican el aprendizaje emocional como experiencias de empoderamiento. La forma en que se producen estas experiencias y para qué son útiles, tanto en los contextos de participación en los medios comunitarios como en la vida cotidiana, son los ejes de análisis de esta comunicación.

Title: [Panel] Decolonizing Pedagogies, Panel Description

Session Type: Panel Submission

Authors:

Name: Dorothy Kidd

Email: kiddd -at- usfca.edu

Country: US (United States)

Affiliation: Dept of Media Studies University of San Francisco

Abstract: The challenges to Euro-American systems of colonial, patriarchal and capitalist thought have been long-standing. Taking many different forms, and emerging from a diversity of social, political and cultural movements around the world, the goal has often included the production of new forms and practices of pedagogy. In the 1960s and 1970s, for example, Paulo Freire's pedagogy of the oppressed emerged from political and faith-based movements in Latin America, while soon after, radical educators based in social justice and feminist movements in the global north were experimenting with different ideas inside and outside the formal classroom (hooks 1994).

In the last decade, we have seen a renewed call to critique and unpack dominant epistemologies (especially but not limited to the global north) in the academy, and to instead highlight and draw from the knowledge production, methodologies and pedagogies that are emerging from the practices of indigenous, anti-racist, post-colonial, feminist, environmental, queer, and other political, social and cultural change movements. Plural in nature, and by no means unitary, all of these calls ---indigenizing (Tuhiwai-Smith, 2008), de-colonizing (Escobar, 2017, Battiste, 2016) post-abyssal pedagogies (Boaventura de Sousa Santos, 2018), take transforming education inside and outside the academy as important goals.

This international panel will address ways to think about and deal with these questions in our work in the classroom related to the fields of community communication and alternative media. Presentations will include building the self-reflexivity of students, using performance and auto-ethnography, addressing differences across the abyssal lines, and facilitating exchanges between students and communities.

Title: Commonality and Tequio as Tools for Decolonizing Classroom Learning

Session Type: Panel Submission

Authors:

Name: Antonieta Mercado

Email: Antonietamercado -at- sandiego.edu

Country: US (United States)

Affiliation: University of San Diego

Abstract: My contribution to this panel is an account of my practice teaching social justice and community engagement classes at a private medium-size liberal arts college in California; as a communication scholar with a sustained involvement with indigenous immigrant communities from Mexico in the United States, particularly Zapotec and Mixtec communities in California, and as a working-class immigrant from Mexico in the United States. The University of San Diego where I work has public and extensive commitment to social justice and I have made my goal to create articulation points between indigenous epistemologies and Western knowledge by means of sustained contact between students and community members who are authorities in different forms of knowledge, such as collective decision-making, environmental knowledge, storytelling or cultural and civic engagement. One of the main goals of my teaching is to help students develop awareness about how hierarchies of power affect them and contribute to exoticize indigenous people and their systems of knowledge. My students are required to think about the colonial structures of power and knowledge that have enabled many of those distinctions. For example, the existence of scientific knowledge created in university realms, and community knowledge that may not be classified as such, but that has been used and transformed by indigenous people in daily practices for millennia. Working with indigenous communities I have learned the value of tequio, which means mandatory community work in Náhuatl language, and one of the foundations of what Mixe Anthropologist Floriberto Díaz called “commonality” which is a system of production and transmission of knowledge in indigenous communities. Communal organization, and communality are important pedagogical tools that indigenous people use to organize their everyday life. In many indigenous communities it is required for all able adults to participate donating work or resources to complete communal projects, reinforcing the bonds among community members. Indigenous migrants have had to adapt to new transnational circumstances to preserve their ancestral knowledge. Practicing tequio transnationally has helped many communities to pass knowledge into the next generation keeping it involved in communal projects across borders. I have incorporated community engagement activities in my classroom as a form of tequio, and “commonality” as a pedagogical tool so students can develop social bonds and build trust with indigenous migrants and other communities. When engaging in community work with indigenous immigrant organizations, such as the creation of an urban garden, the documenting of story-telling by community elders, or the description of medicinal plants or ancestral food recipes, both students and community members reflect on structures of power and knowledge created to maintain hierarchical social orders traced back to colonial relationships of power and representation. Working together we are able to connect the classroom to local communities creating a space for dialogue with different epistemologies. This presentation is an account of what my students have experienced, what members of these

communities have conveyed to me, and what I have learned in the process of teaching community engagement classes in communication with a focus on decoloniality as social justice.

Title: Listen to the voices

Session Type: Panel Submission

Authors:

Name: Nivea Bona

Email: bonanivea -at- gmail.com

Country: BR (Brazil)

Affiliation: Independent Researcher

Abstract: The gap between the research produced from the North and the “Epistemologies from South” (Santos, 2014) has everything to do with justice, as Boaventura says. But it also has everything to do with voices silenced or not listened to. One of the reasons is the obvious language gap. Researchers in Latin America see the request of some institutions to publish in English as more of an obligation than a request. They don’t see this as spreading knowledge alone. However, when some become part of the “South in the North,” they can see that the translation of work into English is one way to shrink the gap between languages, knowledges, and researchers. These are challenges that some journal editors recognize and should lead to prioritizing the budget to translate works from South, including from those communities that have been systematically marginalized and ignored by the academic and scientific world.

As Tufte says, “voice remains a fundamental element of the potentially vibrant, inclusive and empowered body politic” (2017, p.178). This presentation will focus on how to give voice to the South, Indigenous, African, and disenfranchised communities, with some practical examples from Latin America. One suggestion is to get out of the Ivory Tower and its logic and open space for these groups inside the academe world. This can be done by inviting people with practical experiences to academic events. I will discuss the example of the research group COMUNI in São Paulo – Brazil which, for more than 10 years organized its annual meeting alternating research presentations with experience reports. Master’s and Ph.D. students present their research findings in the same day as community communicators present their reports about how they make the community newspaper in their neighborhood, or how they built a community radio, for example. The intersection of the research with the practical experience reports makes both groups listen carefully to each other and enriches the respect for both knowledges.

I will also reflect on the participatory methodology from Mario Kaplun. He found a simple method to provoke communities to find their solutions and bring together communication and education by using the cassette-foro (tape-forum) (Bona, Conteçote, Costa, 2006). The cassette-foro was a methodology of recording campesinos’ (farmers’) discussions about a specific problem. Another group would edit the best solutions recorded and exchange that knowledge with other communities which in turn would send their solutions to the first group. Beyond academic conferences and other kinds of scientific events, our challenge, therefore, is to create with this “logic”, and find ways to stimulate scholars and community to build a common ground where everybody’s voice is heard and respected on the same level.

Title: Self-reflexivity and subjectivity for knowledge production

Session Type: Panel Submission

Authors:

Name: Claudia Magallanes-Blanco

Email: claudia.magallanes -at- iberopuebla.mx

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana Puebla

Abstract: In this paper I want to explore the role of self-reflexivity and subjectivity in the construction of knowledge from the Masters' in Communication for Social Change at the Universidad Iberoamericana Puebla (México). This postgraduate program includes a participatory approach to research (Orlando Fals Borda), a critical pedagogy (Paulo Freire) and a constant critique to dominant epistemologies (Boaventura de Sousa Santos, Walter Mignolo, Aníbal Quijano). Through an analysis of the masters' thesis produced by students from the first three generations of the program, I want to emphasize the role of subjectivity and self-reflexivity in the research processes conducted by students. Moreover, I want to highlight the role of self-reflexivity and subjectivity in the knowledge construction processes of researchers about themselves, about the realities they were analyzing and intervening, and about the individuals they worked with in their research projects. (former gang members, women living on the streets, housewives, community radio broadcasters, migrants, deaf youth, marginalized youth, indigenous women victims of violence, amongst others). I argue that the personal positioning as researcher as well as subject of the research process has strengthen the work conducted by the students. It has led them to deeper, more analytic and reflexive research processes at the same time that it has led them to personal transformations that bring about social change. In addition, the personal positioning and the reflexivity that brings about are a concrete transformation of the research practice and the educational process from a higher education institution and a research oriented postgraduate degree in particular.

Title: Decolonizing Knowledge, Making Media in the Classroom

Session Type: Panel Submission

Authors:

Name: Dorothy Kidd

Email: kiddd -at- usfca.edu

Country: US (United States)

Affiliation: Dept of Media Studies University of San Francisco

Abstract: My contribution to this panel is an examination of student participation in decolonizing knowledge. Efforts to challenge the dominant Euro-American systems of colonial, patriarchal and capitalist knowledge has been ongoing for decades, and has often included practices of alternative media and community communication designed to critique the hegemonic and/or represent the perspectives of subaltern and marginalized voices. In the educational sphere, scholars and educators have put forward transformative curricula to engage learners in critique, and as importantly, in producing transformative change in every social, political, economic and cultural dimension (Freire 1974, hooks 1994). Key to this pedagogy has been an emphasis on learners critically reflecting on the oppressive conditions within their own life experiences and in light of systemic power analyses and assessments of intersectional movements, towards the creation of collective forms of action (Nadeau, 1996). At the same time, the relationship between students and the media ecology has changed dramatically. No longer restricted to receiving messages, students inhabit social and other media-scapes and are involved on a daily basis in making media.

This presentation combines reflections from employing media-making practices with students in several different cohorts (education, international studies and media studies in San Francisco, U.S.A and in education, and communications, development and social change in Bogota, Colombia). Starting with a quick survey of the students, exercises and resulting student media projects, I review what these projects tell us, or not, about hegemonic ideas, and about anti-patriarchal, de-colonial and anti-capitalist practices. My findings consider questions of effective power & analysis or how to combine anti-systemic and media critique with media-making, trans-localism and intersectionality, or how to deal with lack of student knowledge about peoples/struggles in other regions, and other sectors or movements. The presentation ends with reflections on how to strengthen the transgressive decolonial intent of these exercises.

Title: Walking the abyssal line with double consciousness: A way to make new and different knowledge from the South'

Session Type: Panel Submission

Authors:

Name: Anthea Garman

Email: A.Garman -at- ru.ac.za

Country: ZA (South Africa)

Affiliation: Rhodes University

Abstract: In 2015 and 2016 university students across South Africa brought campuses to a standstill as they protested high fees, the decolonisation of education, and sexual violence on campuses. Among these demands, one grievance struck me as a particular challenge. Black students in the protest movements (#Rhodesmustfall, #RUrefencelist and #FeesMustFall) made a special performance of black embodied pain accompanied by statements of anguish and rage which they connected to their rejection of disembodied, unaffected ways of knowing.

In particular, the critical mindset with its powerful focus on logos-based rationality and styles of verbal critique were opposed and challenged. This of the construction of knowledge itself goes to the heart of how universities conceive of their core purpose in the world.

In 2018 my School was given a Mellon Foundation grant to rethink the focus of our postgraduate teaching and research. We chose to situate this programme within decolonial terrain and Southern epistemologies.

But the more testing situation for us is to incorporate within this alternative knowledge production the lived reality of poor, black, female and queer students who experience profound violence and constraint. I have begun to experiment with two ideas to alter my own practice: Boaventura de Sousa Santos' "abyssal line" (2007) and an old idea, renewed by Toi Derricotte of "double consciousness" (2011).

De Sousa Santos believes that within modern-day democracies there are 'civilised' and 'savage' zones which co-exist and overlap as "two realms" of social reality (2007). This is opaque to some because of the "abyssal line", an invisible line that only those at risk of losing their rights, dignity and bodily integrity have to cross to participate in the 'civilised' zones. In South Africa the 'savage' zones are not confined to the impoverished townships or under-developed rural areas. They are also on our campuses (and very evident in the violence used against protesting students).

Then, in her account of *Race in the Creative Writing Classroom* (2011), Toi Derricotte, says that the one "who has privilege... walk[s] the line between worlds, to see with double vision from the eyes of the 'other'" (2011, 50).

This task for those privileged and schooled in Western forms of academia, is to recognise that those marked still as the oppressed continue to live double lives across the abyssal line, and that we must learn to see, recognise and move into the savage zones so that we feel and know them too and acquire a double consciousness of their impacts.

It is this shift of consciousness, perspective, and commitment that I will discuss in my presentation as I point to my own experiences of trying to reorient the making of knowledge and the reconstruction of the community that makes that knowledge.

Title: [Panel] Decolonizing Research and Knowledge, Panel Description

Session Type: Panel Submission

Authors:

Name: Dorothy Kidd

Email: kidd -at- usfca.edu

Country: US (United States)

Affiliation: Dept of Media Studies University of San Francisco

Abstract: This panel addresses current challenges to Euro-American systems of colonial, patriarchal and capitalist thought in the formal and non-formal educational practices in the field of community communication and alternative media. In the 1960s and 1970s, for example, Paulo Freire's pedagogy of the oppressed and Orlando Fals Borda's participatory action research emerged from political and faith-based movements in Latin America; both of these frameworks were taken up in Latin America and spread throughout the world, leading to significant changes in non-formal and formal education.

In the last decade, we have seen a renewed call to critique and unpack dominant epistemologies in the academy, (especially but not limited to the global north), and to instead recognize and draw from the knowledge production, methodologies and pedagogies that are emerging from the practices of Indigenous, post-colonial, feminist, environmental, autonomist and other political, social and cultural change movements. Plural in nature, and by no means unitary, all of these calls ---Southern Theory (Connell 2008), indigenizing (Rigney, 1999), de-colonizing (Tuhiwai-Smith, 2008, Escobar, 2017) epistemologies of the south (Herrera Huérano 2016, Boaventura de Sousa Santos, 2018), take transforming education inside and outside the academy as important goals.

This international panel brings together scholars who are addressing these questions. The papers examine Indigenizing educational institutions and educational practice; and utilizing Indigenous and other non-dominant forms of cultural representation and pedagogy.

Title: Using Performance Autoethnography as an Embodied Tool for Ontological Disobedience and (Self)Decolonizing

Session Type: Panel Submission

Authors:

Name: Carmen Hernández-Ojeda

Email: chernandezoj -at- umass.edu

Country: US (United States)

Affiliation: University of Massachusetts Amherst

Abstract: Mignolo points out that in order to foster decolonial thinking, we need to engage in epistemic delinking. The question, thus, is to what extent we can delink as teachers and researchers when we use inherited epistemological and methodological tools developed for colonizing endeavors. Methods and theories based upon Eurocentric, heteronormative, and patriarchal (post)positivist premises such as separating body and mind, rejecting the body as a site of knowledge production, promoting objectivity as an unquestionable dogma, or delegitimizing knowledge that includes researcher's body or aesthetic writing. Lorde warned us that we cannot dismantle the master's house with his tools. We need, thus, to find or build epistemologies and methodologies that allow us to delink, that allow us to embody such delinking process—making sure that what we say and what we do match. Thus, in my scholarly commitment to self-decolonize and decolonize academia, I employ performance autoethnography as a (self)decolonizing tool (Chawla & Atay), drawing from Third World Feminism and Indigenous Decolonizing Methodologies (i.e., Anzaldúa, Tuhiwai Smith) and their axiological premises—i.e., healing, repairing, transforming, and generating hope. This paper provides a meta-autoethnographic performance in which I reflect upon my scholarly experience employing this method as a Communication researcher, explaining when and how I use it as well as its outcomes and limitations. In this sense, I use performance autoethnography to explore and transform my role as colonize(d)r subject: a queer, Canary Islander, diasporic woman who is colonized and colonizes other people simultaneously—as an immigrant settler in the U.S. Furthermore, I use this exploration to better understand my complicity, as a teacher and researcher, with the role of academia in (neo)colonizing and oppressing youth of color in the U.S. Hoping to contribute, through my own transformation and work, to decolonizing academia. My goal in this panel is twofold. First, I want to provide an embodied methodological experience that could be useful to other scholars, both in their research and pedagogical practices. Second, I aim to foster a conversation about the possibilities—i.e., pedagogical, heuristic, kinesthetic, aesthetic—of performance and the body to enable ontological disobedience and facilitate (self)decolonizing processes.

Title: Come together: Journalism and the desire for community in Turkey (Video presentation)

Session Type: Video Submission

Authors:

Name: Caitlin Miles

Email: caitlin.miles -at- tamu.edu

Country: US (United States)

Affiliation: Texas A&M University

Abstract: Based on fieldwork conducted during 2017-2018, I explore how journalists in Turkey articulate and cultivate a community of journalism both within their institutions and through their daily lives. I argue that journalists' fantasy and desire for community is an affective attachment to address economic precarity and political persecution amidst a prolonged state of emergency and concern over increased authoritarianism. Historically, the news media in Turkey have been beholden to ruling party political interests (Akser & Baybars-Hawks, 2012; Christensen, 2010; Heper & Demirel, 1996; Kaya & Cakmur, 2010; Oncu, 2012; Yesil, 2016). Moreover, the ways in which the military has deployed the news media to orchestrate coups and coup-attempts, has resulted in a deep mistrust and skepticism of news outlets by the public (Akser & Baybars-Hawks, 2012). Though my interlocutors face a daunting and dangerous environment in their attempts to practice their craft, they see journalism as a way in which they can personally resist against a political system and ruling party they see as divisive. Journalism is connecting different voices and experiences and an attempt to foment a more communal society through awareness and empathy. Building upon Ahmed & Fortier (2003), Anderson (2006), and Zelizer (1993), I argue that the desire for community is a powerful affective state for cultivating real if unrealized bonds amongst disparate people. Moreover, it is a mechanism to affirm the importance of journalism within contemporary Turkey.

Title: Repensar la comunicación desde los conocimientos, saberes y practicas de los pueblos indígenas del Abya Yala

Session Type: Panel Submission

Authors:

Name: Jose Vicente Otero Chate

Email: chente2009 -at- gmail.com

Country: CO (Colombia)

Affiliation: Universidad Autónoma Indígena Intercultural -UAIIN- CRIC

Abstract: En los últimos años, la Red de Universidades Indígenas, Interculturales y Comunitarias de Abya Yala- RUIICAY, emprendió un dialogo horizontal e intercultural de saberes, con sus universidades y comunidades de base, en diversas áreas del conocimiento, entre ellas la Comunicación Indígena e Intercultural.

Una de las experiencias emblemáticas, en el campo de la investigación en comunicación indígena e intercultural, es la que se está gestando entre la Universidad Autónoma Indígena Intercultural, UAIIN del Consejo Regional Indígena del Cauca-CRIC (Colombia), la Pluriversidad “Amawtay Wasi” (Ecuador) y la Universidad de las Regiones Autónomas de la Costa Caribe Nicaragüense-URACCAN (Nicaragua) con el apoyo de Agencia Noruega de Cooperación al Desarrollo (NORAD), en la que investigadores, estudiantes y comunidades indígenas trabajan en la consolidación de una metodología de investigación, a la que han denominado Cultivo y Crianza de Sabidurías y Conocimientos-CCRISAC.

El CCRISAC es la respuesta al cansancio y desconfianza que hay sobre las prácticas de investigación convencional, que solo se han ocupado de estudiar, etnografiar, registrar, conocer desde la perspectiva etnocéntrica a las diversas culturas y facilitar los procesos de colonización y homogenización del pensamiento. Estas prácticas investigativas, han generado dependencia epistémica, despojo de experiencias, saberes y prácticas de los pueblos originarios, convirtiéndolas en mercancías y en una práctica usurpadora de las sabidurías ancestrales, sin la generación de ninguna retribución para los pueblos.

Aunque cada universidad, tiene su plan de formación en comunicación indígena e intercultural, éste está articulado dentro de la Red –RUIICAY- a la metodología CCRISAC que además de ser elaborada y concertada con sus comunidades, obedece a otro tipo de concepción y práctica de la comunicación. Se trata de humanizar la comunicación desde la comunicación propia, medios de comunicación apropiados, formación, derechos y garantías, en el que prevalece la defensa del territorio, la autonomía, la auto-determinación, la identidad y la cultura.

Esta comunicación se centra en trazar la discusión que se ha generado en torno a la creación y evolución de la red RUIICAY, valorando, en particular, cuáles son los alcances y resultados obtenidos hasta el momento por la metodología CCRISAC en el campo de la comunicación propia, y anticipando el posible escenario futuro al que esta apunta. En palabras del coordinador de la

RUIICAY “El método de investigación CCRISAC, no es más que un proceso de reciprocidad bioética, es decir, un diálogo entre la ética (ethike) y la vida (bios)”

Title: [Panel] We Media versus They Media: Socio-political and Economic Dimensions of Do-It-Yourself Media in China, Panel Description

Session Type: Panel Submission

Authors:

Name: Zixue Tai

Email: ztai2 -at- uky.edu

Country: US (United States)

Affiliation: University of Kentucky

Abstract: Blossoming platforms of social media and social networking sites have been pushing grassroots user-centered communication to ever-new territories in China in recent years. The expanding social space has engendered innovative ways of individual behaviors, corporate practices and technological forms in enabling variegated types of communicative acts. The DIY media platforms have already demonstrated profound and far-reaching impact through their multifaceted encroachment into the political, cultural, social and economic arenas throughout Chinese society. Against this backdrop, there is an urgent need for the scholarly community from both within and outside China to engage, and come to grapples with the frontlines of DIY media communication in the country.

This panel features accomplished scholars and upstart scholars in China in the field of media and communication, and presents cutting-edge research interrogating the diverse aspects of the ongoing DIY Media revolution in China. These papers were selected from collections in an actively ongoing book project in answering the call to study China's DIY media, and represents "cream of the top" efforts in disentangling a number of important lines of academic inquiries into the fast-evolving landscape of China's DYI media. One paper contemplates national goal-setting and state efforts in controlling and regulating corporate and individual practices, and another study showcases the use of QQ groups in organizing and mobilizing contentious action. Two papers pertain to the "celebritizing" aspects of DIY media, but in different ways, with one scrutinizing the Top 100 Social Media Influencers as measured by advertising value, and the other analyzing the most eye-catching micro movies across popular video sharing sites. The last paper presents a case study of the marketing strategy of Tik Tok, the fastest-diffused social media app in the last two years.

The moderator and discussant, Dr. Zixue Tai, has published extensively in examining the various social-cultural dimensions of China's new media. He is also the editor of the book project from which these papers have been selected.

Country: GB (United Kingdom)

Affiliation: university of loughborough

Abstract: As far-right movements continue to adapt to changing social political and cultural circumstances, it is imperative for progressive scholars and activists alike to study their variances to address the challenges these organizations pose. In order to contribute to the growing literature on the far-right, this paper focuses on Generation Identity (GI) and in particular on its media activism. The analysis looks at GI in various European countries with a focus on the UK and Italy. The paper concludes with a short discussion on how to best counter this movement.

The group, which originated in France in the early 2000s and recently developed in Austria, Germany, the UK & Ireland, and Italy, has a considerable presence on the Web and social media. It targets younger generations, presenting itself as a non-racist/non-fascist movement. However, despite its novelty, I argue that Generation Identity bases its success on its ability to reframe old ideas championed by the far-right in new, fashionable forms. In this operation, media activism is of strategic importance.

Although there is a large corpus of scholarship on far-right populism (Wodak 2015, among others), there is much less work dedicated to GI, a movement that seems to challenge some of the central tenets of the traditional far-right. A noticeable exception is Fabian Virchow's work (2015), who analyzed the formation of GI and its collocation within the broader spectrum of the far-right.

My research builds upon this literature and offers a contribution focused on an analysis of GI's media activism, an area in need of further exploration (Waisbord 2018).

I propose to implement Gramsci's notion of hegemony critique (1975), in order to better understand GI's repurposing of "old" ideologies in "new" forms. In fact, the visibility of ultra-right ideologies is a reminder that cultural leadership remains a primary goal of political activism (Padovani 2018).

Research Questions:

- What are GI's ideological characteristics and how are they articulated into social media formats and the Web?
- How does GI's media activism change in different national and linguistic contexts?

Methodology:

1. Archival research of media reporting on GI in Italy and UK to establish the contours of the debate and select the most salient public events to study GI's activism.

2. Online ethnography of a selection of GI's web and social media texts.

Conclusions:

GI raises challenges for anti-racist activists and scholars. The paper concludes with ideas about the necessary responses to the far-right at a time when media activism has become of strategic importance.

Title: Participation is a struggle: Performing collective decision-making in Russian alternative media

Session Type: Individual submission

Authors:

Name: Kirill Filimonov

Email: kirill.filimonov -at- im.uu.se

Country: SE (Sweden)

Affiliation: Uppsala University

Abstract: The paper explores micro-dynamics of participation on two Russian alternative media platforms: an anarchist community Autonomous Action and a broadly defined, self-proclaimed 'Russia's first horizontal editorial team' Discours. Both strive to provide opportunities for non-professionals to participate in media production. On the one hand, this engenders a set of power struggles, not least for defining the terms of participation. On the other hand, this creates a set of challenges for the communities on the outside, as their media production often displays a radical resistance to the established political order.

Approaching participation from a discourse-theoretical perspective (Laclau & Mouffe, 1985) and engaging with Butler's (1990, 1993) concept of performativity, the paper poses the following research question: How is participation performed on the two alternative media platforms? By performance of participation, we mean a set of material enactments in which discursive conditions of decision-making – and, therefore, power dynamics – are anchored. The paper analyzes discursive struggles underpinning participatory processes in the communities, as well as material conditions and acts that enable and constrain their democratic practices.

Data collection for the ongoing study includes a set of participant observations conducted in Russia and Finland in the spring of 2017 and the fall of 2018, interviews with 9 contributors, and textual analysis. The study draws on a theory-supported reiterative methodological framework that deploys discourse-theoretical approach and is supported by qualitative content analysis.

Preliminary findings indicate that participatory intensities in the two rather different communities are nonetheless affected by similar discursive and material conditions. The data provides a rich evidence of how their democratic ethos is endangered by elitist articulations deriving from the discourse of media professionalism. Despite providing the material infrastructure for a broader inclusion, alternative media producers often tend to reproduce the same (unequal) power relations that plague their mainstream counterparts. Besides, the paper specifically addresses the role of the constitutive outside – the state – in shaping participatory intensities in the communities. On the one hand, the constitutive outside legitimizes internal practices of exclusion: for instance, the discourse on trust – rationalized by some very material threats stemming from the Russian state – serves as a gatekeeping mechanism that keeps outsiders away. On the other hand, the antagonism enables the communities to expand the field of resistance not only through the application of principles of co-decision-making in content production, but also through a broad(er) construction of the self, where

a set of contradictory political struggles (e.g. feminists and antifeminists, libertarians and socialists) are often articulated into the self-definition.

The paper provides an important empirical ground for a discussion on the discursive conditions of plurality of voices advocated by alternative media theory – and their material limitations.

Affiliation: Shanghai Academy of Social Sciences

Abstract: Social media has experienced exponential growth in the past decade in China. In particular, Chinese cyberspace has entered the era of social media since the 2010s, as highlighted in three aspects: the sophistication of a variety of popular (and ever-expanding) technologies available to the mass consumers; the steady consolidation of the user base (the world's largest market in a number of categories); and the speedy commodification of diverse assets through marketing, advertising, and sponsorships.

The penetration of social media into everyday life has led user participation to new levels, and this naturally has magnified the influence of user-generated communication in Chinese society. Three types of DIY media dominate China's online mediascape now on popular social media platforms: information publishing (e.g., QQ, Weibo, WeChat, Qutoutiao); live streaming (e.g, Huya, Inke, Huajiao), and video sharing (Tik Tok, Kuaishou, Youku). Influential DIY accounts easily reach millions of fan bases each, and besides making a sizable income (often millions of Chinese yuan per month), what they do and say produces huge repercussions in society. For example, DIY media crusade has led to the demise of the Quanjian Group (a direct marketing empire), remove of government officials in the Changsheng Biotech vaccine scandal in 2018.

Being at the center of the virtual spotlight has inevitably turned DIY media into the target of state regulation and scrutiny. This presentation offers to systematically review multi-layered efforts by the national and local authorities in regulating the DIY media market in recent years. The focus is placed specifically on four levels of state intervention. First, we look at the national goal-setting by the state authorities in spearheading the overall infrastructure and architecture of user-centered media from technologies to practices (Tang et al., 2017). Second, we analyze the unfolding legal framework that the government has been enforcing in the past years through legislation, mandates, and official directives with specific relevance to DIY media. The discussion is contextualized in the broad scheme of China's online control via the Great Firewall (Tai, 2015). Government goals in content targeting (e.g. false and misleading information, pornographic material) are highlighted in this part of the discussion. Third, efforts by local authorities are examined as they relate to the national framework. Fourth, we review state efforts of control at the micro-level in targeting prominent individuals and high-profile cases, which is a common practice in China's state

regulatory scheme. Relatedly, we also discuss the prevalent practice of self-censorship and individual cases of disobedience. The discussion concludes with our vision for what may happen next with regard to state control of DIY media, and what that means to the industry and practitioners.

Title: Capitalizing Fun, Fame and Fanfare: Social Media Influencers in China

Session Type: Panel Submission

Authors:

Name: Rongchun Xiao

Email: xiaorongchun4481 -at- 163.com

Country: CN (China)

Affiliation: Ningbo University of Technology

Abstract: Social media communication has been a leading force in recent years in engendering a brand-new public sphere in China's online space. The purpose of this research is to disentangle a special genre of social media communicators –the Top 100 Social Media Influencers – in terms of the thematic alignments, rhetorical invocations, and rapport-building strategies as revealed through their online spaces.

Public participation in social media communication in China is massive and staggering, as shown in multiple measures of production, consumption, and impact (Kent, Ellis, & Xu, 2017). Expectedly, as exemplified in the “Big Tail” phenomenon, only a small percentage of social media accounts may succeed in creating splashes and in attracting voluminous eyeballs in the social media space. This leads to the emergence of a special type of micro-celebrities on social media who garner glaring assets of social and cultural capital through carefully cultivated popular personas on variegated forms of social media (Khamis, Ang, & Welling, 2017; Usher, 2019). As van Krieken notes, these so-called “influencers” very much exacerbates the “celebrification of society” in the digital era.

Our study selects the top 100 social media accounts as ranked by Weiboyi.com based on the number of followers and advertising rate they accrue respectively. Because these venues openly solicit advertisers as a primary way of commodifying social media communication, they each have to carve out their path to amassing huge fan bases (at least in the millions) and maintaining a persistent presence in order to earn the much coveted and highly competitive advertising investment. As a result, studying their virtual ethos and communication strategies contributes valuably to our understanding the evolving formations of social media culture in China.

Our analysis first develops a typology of the 100 micro-celebrities, and then offers a systematic analysis on the basis of content (textual, graphic, and video posts), volume (daily production), strategies, and rhetorical devices in maintaining their online identities. Within- and cross-category comparisons are integrated in the analysis, where our focus is on pinpointing both overarching commonalities as well as noticeable particularities. Discussion is contextualized against the backdrop of the highly controlled nature of China's information environment and the closed setup of the Chinese political system, and offers insight on a well-trodden terrace in China's evolving social media landscape. In particular, the analysis showcases the transfer of “celebrity capital” to other capitals (Driessens, 2013) in the social media era.

Title: The Other Green Movement in Iran: Instagram and Environmental Activism

Session Type: Individual submission

Authors:

Name: Elham Atashi

Email: ea543 -at- georgetown.edu

Country: US (United States)

Affiliation: Georgetown University

Abstract: This paper uses the citizen led environmental campaign in Ahvaz, the most polluted city in the world to explore activism on the social media site Instagram. The campaign emerged in Ahvaz with citizens uploading their self-portraits and images from the city covered in dust on Instagram to demonstrate alarmingly dangerous air pollution levels. The strong reaction to the images triggered broad mobilization with uprising and protests in other polluted towns. Through a qualitative content analysis of a sample of Instagram posts from Feb-Dec 2017, this article argues that the use of Instagram was central to this form of citizen participation and in building communication for collective mobilization in a previously fragmented public sphere. It served in mediating the discursive inequality and closing the periphery gap between the mega urban capital in Tehran and the other previously muted provinces by creating a network of “environmental communities”. The subsequent environmental protests disrupted the institutionalized elite dominated environmental activism; democratizing the periphery. The general characteristics of this communication is unique in the unanticipated nature of actors and activism by the underprivileged and impoverished people in the provinces driven by the impact of environmental grievances that can surge the basis of activism and political action. The article further argues that the participatory and individualized citizen owned counter-narrative on social media posed a direct challenge to the denial, distortion and indifference policies by the state controlled media. In societies with limited space for organized channels to express discontent citizen adaptation to social media provides an effective medium for participation. In the present case, activism around environment issues served as a safe and tolerated domain that can be directed into broader movement of political mobilization in society.

Title: La lira popular como caso de comunicación alternativa a fines del siglo 19 chileno: representaciones y visiones de mundo desde la cultura popular ausente

Session Type: Individual submission

Authors:

Name: Chiara Saez Baeza

Email: chiara.saez.baeza -at- uchile.cl

Country: CL (Chile)

Affiliation: Instituto de la Comunicación e Imagen (ICEI)Universidad de Chile

Abstract: La poesía popular impresa chilena (llamada "Lira popular") fue un fenómeno en el que se unieron aspectos literarios y periodísticos. Sus autores (al menos 53 han sido identificados) escribieron sobre temas religiosos y de amor, pero también sobre problemas sociales, noticias políticas, crímenes, etc., desde un punto de vista popular, pero al mismo tiempo diferenciado de la cultura obrera-ilustrada. La mayoría de ellos eran "gañanes": "trabajadores sin calificación, con empleos inestables, a menudo subempleados" (Romero, 1987: 82), que encontraron una manera de ganarse la vida vendiendo sus pliegos en calles, mercados y plazas. Este fenómeno comenzó en la década de 1860 y disminuyó a partir de la década de 1910, perdiendo relevancia y visibilidad gradual en relación con los primeros periódicos de masas, orientados a los sectores populares, pero ya desde una lógica industrial y comercial.

La lira popular puede ser concebida como una experiencia de comunicación alternativa, en tanto medio de pequeña escala que expresa visiones alternativas a las perspectivas, prioridades y políticas dominantes (Downing, 1984), tanto a través de su contenido, como por medio de su capacidad para generar métodos no estandarizados de creación, producción y distribución (Atton, 2002). Los poetas populares se convirtieron en líderes de opinión y generaron a su alrededor una esfera pública subalterna autónoma (Fraser, 1997; Warner, 2002), aunque inserta en los conflictos sociales de su época. Sin embargo, en la investigación acumulada, el concepto de comunicación alternativa no ha sido utilizado para comprender esta producción cultural (Lenz, 2003; Cornejo, 2013; Rodríguez, 2014; Araos, 2015), predominando un enfoque literario y un análisis temático a discreción para satisfacer diversas hipótesis (Navarrete, 1999; Tala, 2011, entre otros)

El propósito de esta comunicación es presentar las representaciones y visiones de mundo que emergen de un análisis de la totalidad de los pliegos de lira popular disponibles (alrededor de 3.000). Con especial referencia al modo en que se mezclan (o no) ideas de la cultura popular tradicional con ideas o principios del discurso ilustrado moderno. Para esto, se presenta el resultado de un análisis de contenido surgido de la digitalización de los archivos de lira popular, que nos permite una aproximación estadística a las relaciones entre temas, sustantivos y adjetivos presentes en ellas.

Este trabajo forma parte de una investigación más amplia sobre comunicación alternativa y cultura popular en perspectiva de largo plazo, cuya hipótesis subyacente es que existe un circuito continuo (y persistente) de la cultura popular "ausente" (ni ilustrada como la cultura obrera ni masiva como la industria cultural, pero en relación con ambas) dentro del cual es posible identificar diferentes

experiencias, algunas de las cuales mantienen formas de continuidad incluso hasta el presente (como la relación entre poesía popular impresa y hip hop, por ejemplo). En última instancia, el propósito es "visibilizar" el contenido de esta cultura popular "ausente", entendiendo la politicidad subyacente a estas formas de expresión y comunicación, como una manera de pensar el cambio social hoy desde una perspectiva decolonial históricamente y espacialmente situada, a partir de las particularidades del proceso de industrialización latinoamericano y su impacto sobre la cultura popular

Affiliation: Federal Fluminense University

Abstract: This paper analyzes the role of favela digital activism as a tool to fight against oppression, injustice and Human Rights violations in Rio de Janeiro. By studying “favela digital activism”, we refer to residents’ “us by us” philosophy in which they can become the narrators of their own stories. The methodological approaches are inspired by digital anthropology. We conducted the research in two stages, with netnographic observations in the first phase and offline ethnographic observations and interviews in the second phase. In order to offer an in-depth exploration of one successful initiative, we analyze the case study of a Facebook page called Maré Vive, created by residents of Maré, a large network of favelas in Rio de Janeiro. We argue that favela digital activism represents a distinctive urban media phenomenon, providing residents with tools for everyday survival in a context of conflict and social inequality.

communitiesCEDLA- Centre for Latin American Studies and Documentation ARTES- Amsterdam

School for Regional, Transnational and European StudiesFaculty of HumanitiesUniversity of Am

Abstract: En el contexto del conflicto armado y la implementación de numerosas políticas neoliberales en Colombia, las comunidades indígenas se han visto afectadas en diferentes niveles. Algunos de los principales problemas a los que se han enfrentado en las últimas décadas están relacionados con el acceso a la tierra, debido a que viven en regiones geoestratégicas que son del interés de empresas transnacionales y compañías mineras, que, en consecuencia, devienen en situaciones de violencia y desplazamiento forzado. En ese contexto, he estado investigando cómo las comunidades indígenas en Colombia a través de prácticas culturales ejercen su agencia para trascender las adversidades y desafíos externos, de cara a problemas estructurales que enfrentan de manera reciente. En el presente texto presento los resultados de un análisis comparado entre dos comunidades indígenas en diferentes contextos rural y urbano, quienes vienen incorporando narrativas audiovisuales como parte del ejercicio de su agencia cultural (Sommer, 2005). En ese sentido, la pregunta de investigación es, ¿Cómo a través de la apropiación de herramientas audiovisuales las comunidades indígenas están potenciando el ejercicio de su agencia? Los casos analizados son, en primer lugar, la comunidad wiwa de Siminke en la Sierra Nevada de Santa Marta, quienes han realizado un proceso de revitalización de su música tradicional como medio de transmisión del conocimiento local para el fortalecimiento de su tejido social. Segundo, un grupo de mujeres indígenas provenientes de diferentes regiones del país que viven actualmente en Bogotá debido a circunstancias relacionadas con el conflicto armado, quienes han acudido a la revitalización de prácticas ancestrales como el tejido, la danza y música tradicionales como espacios alternativos donde pueden participar y comunicar sus experiencias de vida. En ambos casos, las comunidades están actualmente interesadas en la apropiación de herramientas audiovisuales para la preservación de prácticas culturales como la música en el caso de los wiwa, o como un medio para el empoderamiento político, en el caso de las mujeres de Bogotá. A través de la utilización de métodos como entrevistas abiertas, análisis audiovisual de documentales previamente realizados por las comunidades y técnicas de elicitación fotográfica en campo, pude identificar que ambos grupos usan las narrativas audiovisuales con tres objetivos específicos que deben situarse en cada contexto, rural y urbano. Primero, como un dispositivo de registro para la preservación del conocimiento territorial y cultural con fines de circulación educativa local para la transmisión generacional; segundo, como una herramienta para la revitalización de prácticas culturales como estrategias de fortalecimiento comunitario; y finalmente, como un instrumento para el empoderamiento y posicionamiento político ante situaciones que enfrentan. Como sugieren las temáticas de la sección de “comunicación comunitaria y medios alternativos” del IAMCR 2019, la apropiación de tecnologías audiovisuales se constituye entonces como un espacio en el que las comunidades

indígenas en Colombia están encontrando un camino y una voz para una comunicación efectiva con una fuerte base participativa y comunitaria, que es apenas emergente y merece ser estudiado en profundidad.

Title: Why Models Matter: Communication Justice and Movement-building

Session Type: Individual submission

Authors:

Name: Charlotte Ryan

Email: Charlotte_Ryan -at- uml.edu

Country: US (United States)

Affiliation: University of Massachusetts Lowell

Abstract: Communication justice models whether called communication activism (Frey & Carragee, 2016); justice communication (Cyril, 2005; Themba & Cutting, 2006), social movement communication (Mattoni, 2012; Kidd, 2015), participatory communication (Riaño, 1994; Freire, 1994), or communication for social change (Dagrón & Tufte, 2006; Waisbord, 2015) share core elements (Ryan & Jeffreys, 2019):

1. Communication power (like other forms of power) is unequally distributed.
2. To challenge inequalities, marginalized constituencies form collective actors.
3. Marginalized constituencies have the right to act and theorize on their own behalf.

With these in mind, we analyze two sets of news articles regarding food justice. The first data set includes 700+ articles published in weekly News Digests gathered by Robert Wood Johnson Foundation between June 2010 and December 2011. A second smaller data set includes news articles from the same period describing the food justice organizing of ten social movement organizations mostly in first nations and communities of color within the U.S.

To explore whether articles in the two data sets recognize the role of social movement actors in addressing food inequalities, we analyze 3,000 cited sources coding for institutional affiliation (government, non-profit, food industry, etc.) or individual role (service provider, service recipient etc.)

We find that the News Digest articles generally portray government and social service organizations as active change justice in terms that downplay both systemic inequality and movement-driven solutions. Collective agency and calls for structural change are subsumed in a liberal discourse of sympathy for the poor.

In contrast, news accounts from social movement-based campaigns for food justice portray those experiencing food inequality as active change agents challenging their circumstances through collective organizing. In concluding, we highlight how grassroots social movement communication models emerging in the Global North resonate with grassroots communication models in the Global South in that both place constituencies directly experiencing inequalities at the center of strategizing and theorizing.

Title: [Panel] Connected Communities: Rethinking digital technology in Latin America, Panel description

Session Type: Panel Submission

Authors:

Name: Cheryl Martens

Email: chermartens -at- yahoo.com

Country: EC (Ecuador)

Affiliation: Universidad San Francisco de Quito

Abstract: This panel examines digital technology and community media in Latin America. It will discuss the use of digital activism and a diversity of digital strategies currently being used within Latin American communities nationally and transnationally. The panel will also consider digital technology and its relation to issues of sustainability and the wider ecology and indigenous understandings of communication and technology. This panel aims to present interdisciplinary theoretical and methodological tools and best practice in relation to digital technologies, community media open source movements, as well as indigenous community uses of digital media in Latin America and transnationally.

Id: 23379

Title: Digital technology and social movements in Latin America

Session Type: Panel Submission

Authors:

Name: Cheryl Martens

Email: chermartens -at- yahoo.com

Country: EC (Ecuador)

Affiliation: Universidad de las Americas

Abstract: This paper looks at digital community activism in Latin America and its interrelation with struggles for recognition of indigenous nationality, language rights and territoriality. This paper focuses on digital activism in Ecuador and Mexico. It will discuss how some local communities are challenging the profit models of global mobile communication through low-budget connections to satellite signals in remote communities. This paper will also consider how digital technology is being used in Latin America to challenge dominant technology-related policies through collaborations between activists, local government and transnational communities of open technology. Through new conceptions of collective futures, these spaces point to new possibilities, theoretically and methodologically, for rethinking interfaces, practices, and sustainability concerning the aims and uses of technology.

Title: On the limits of community and alternative media: towards a political economic assessment

Session Type: Individual submission

Authors:

Name: Andrew Ó Baoill

Email: andrew -at- funferal.org

Country: IE (Ireland)

Affiliation: NUI Galway

Abstract: There is a sense of fear and uncertainty in contemporary global politics, which extends to a pessimism regarding the potential of the progressive social movements with which alternative and community media are associated. A sharp tilt in the balance of power to the authoritarian, anti-democratic Right, across numerous influential states; the destabilising of the already inadequate multi-lateral diplomatic responses to global challenges such as climate change, migratory flows, and armed conflict; the coalescence of technological, economic, and political developments that facilitate misinformation and the undermining of inclusive, discursive public spaces.

This pessimism contrasts with the optimism of the period around 2010. Then, despite a global financial crisis, and as explored so ably by Zeynep Tufekci, there was an enthusiasm and optimism for the potential of mass uprisings, such as those of the so-called Arab Spring, to challenge entrenched despotic regimes, and to a somewhat lesser extent for experiments and projects such as Occupy Wall Street to offer a pre-figurative model of participatory, emancipatory democracy.

The later suppression and appropriation of the various 'Arab Spring' movements, by institutional forces and regressive civil society movements, dampened that initial enthusiasm, with evidence - again comprehensively examined by Tufekci and others - of the limits of loosely networked, heterogenous opposition movements to attain and sustain positions of power and control.

This author has previously explored the manner in which community media groups exploit opportunities in the social, regulatory, and economic structures they encounter, identifying the use of arbitrage practices to develop and sustain counter-hegemonic projects within, and alongside, state/capitalist systems. These practices have long been - and continue to be - an important part of the reality of community and alternative media, and focus on tactics adopted can provide both hope, and insight into the dynamics of such opportunistic activities.

However, the present moment suggests a need to focus not just on possibilities, but on constraints, and in particular on interrogating the manner in which structural forces - including the emerging challenges to shared public spaces referred to above - limit and distort the activity and the impact of alternative progressive media projects. Such a study will provide an understanding of the nature of the barriers, and potentially insights into the structural-level changes necessary (and possible) to facilitate future development of projects in this sector.

This paper, in tackling these key questions, will build on the work of Tufekci and others, who have assessed the context for social movements and dissenting political projects more generally in the

present moment, as well as on the extant media on community media. In seeking to theorise the tensions between the alternative and community sectors and the political economic context within which they are situated, the project fills a gap in the scholarship of the political economy of the media, as well as drawing together important conversations concerning social movements, media technologies, and alternative media.

Title: Journalism for the State, not for the community

Session Type: Individual submission

Authors:

Name: Rodrigo Araya

Email: rodrigo.araya -at- pucv.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Valparaíso

Name: José Manuel Vergara

Email: josemanuelvergara.jm -at- gmail.com

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Valparaíso

Abstract: The present paper identifies the notion of journalism of professionals of diverse media that covered a critical episode of contamination occurred in the neighboring communes of Quintero and Puchuncaví, Valparaíso Region, Chile.

During 2018, companies located in the area made emissions that exceeded the permitted standards. Especially sulfur, arsenic, nitrobenzene, methyl chloroform and toluene. This affected the health of the inhabitants of the territory, registering more than a thousand emergency attentions in a period of three months. The population of both communes reaches 50 thousand people.

This situation resulted in a profuse coverage of these events, which translated into both communes were frequently in the national news agenda, which is not usual. News media teams from regional and national media were transferred to the territory.

For the present paper, eight journalists who participated in this coverage were interviewed in depth: two from local media, three from regional media, and three from national media.

The interviews revolved around three dimensions:

- a) Why they attributed news value to this event.
- b) What journalistic coverage they made, and
- c) What impact they sought to produce with their journalistic work.

The interviews were subjected to an analysis inspired by hermeneutics, in order to identify the mentalities present in the justification that journalists perform their work.

This, considering that journalism is constituted as a profession in the way of an interpretive community (Zelizer, 1993), so Journalism can be understood as an ideology (Deuze, 2005), in the sense that Ricoeur (2006) gives to ideology.

This work is part of a larger project, which seeks to show the Eurocentric condition of the notion of journalism that prevails in Latin America (Araya, 2014).

This paper presents three findings that confirm the predominance of this Eurocentric notion of journalism:

1. For the journalists interviewed, the episodes of pollution of Quintero-Puchuncaví have news quality since it is an event in which poor people (therefore, weak), are faced with powerful entities (companies that pollute and a State indolent and insufficient).
2. Despite their interest in acting on behalf of those affected, the interviewed journalists agree to go to citizens only to be able to graph the consequences of pollution (illness, suffering).

3. Despite their distrust of the way in which the State fulfills its role in controlling polluting emissions, the interviewed journalists agree that it is their duty to interview the representatives of the State because they (and not the citizens) offer the official and true version of what is happening. In conclusion, regardless of the will of journalists, the news coverage ends up privileging the sources of the State, to the detriment of other citizen voices. It is a notion of journalism that insists that the public dimension of social life is the monopolistic responsibility of the State, so the journalistic mission is to publicize (in the Habermasian sense) the affairs of the State, to the detriment of serving to the strengthening of the communication of the inhabitants of a determined territory.

Title: Data activism between the feminist and the postcolonial

Session Type: Individual submission

Authors:

Name: Stefania Milan

Email: s.milan -at- uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: Data activism—that is to say the social mobilisations taking a critical approach to datafication and mass surveillance—contributes to create critical imaginaries around the so-called “big data”. It encodes these alternative imaginaries in a myriad of sociotechnical practices and digital artefacts articulated around values such as privacy and openness. In so doing, it directly questions mainstream rituals associated with datafication, such as the quantification of human existence, the blanket citizen monitoring by states and corporations, and the institutional rhetoric of transparency as the antidote to the rampant anti-politics.

While in its infancy data activism leveraged mostly cypherpunk and/or techno-positivist narratives, fiercely opposing or enthusiastically embracing datafication and its consequences, activists today are slowly adopting more subtle nuances. They increasingly make room for feminist and postcolonial interpretations of the consequences of datafication for individuals and communities. But how does feminist data activism look like? To what extent is postcolonial thinking translated into sociotechnical practices able to offer a counter-point to mainstream imaginaries? This paper explores what feminist and postcolonial theories of datafication (and the related theories of change) emerge from contemporary data activism.

Grounded on a rich body of qualitative data gathered over the period 2015-2019 consisting of over 200 semi-structured practitioner interviews and extensive participation in activist events, the paper investigates the co-constitution of feminist and postcolonial data activism projects and their material counterparts, namely websites, data visualizations, apps, and artistic interventions. For example, it looks at projects like Chupadatos (“the data sucker”), by the Brazil-based organization Coding Rights, which questions anti-feminist narratives encoded in tracking and dating apps (<https://chupadados.codingrights.org/en/>).

This paper finds that the relationship between data/fication and gender is situated and fluid. Feminism and intersectionality emerge as fruitful venues to rethink gender-based discrimination and the sociotechnical reproduction of the gender binary. While feminist (and, to a lesser extent, intersectional) analyses have become more popular, the field of action of data activism has still a long way to go to fully embrace the postcolonial—in part owing to its “Western” origins.

Title: El aporte al derecho a la comunicación de las redes de medios comunitarios en América Latina en las regulaciones nacionales del siglo XXI

Session Type: Individual submission

Authors:

Name: Juan Ramos-Martin

Email: jrm1404 -at- gmail.com

Country: CO (Colombia)

Affiliation: Pontificia Universidad Javeriana

Abstract: Desde los primeros intentos de regulación en los años 70, pasando por la presión política de colectivos de comunicación alternativa en los procesos de reforma, hasta la retoma de memorias largas y cortas como formas de legitimación en lucha y acción política, las redes de medios comunitarios y alternativos en América Latina se establecen como formas de resistencia y disputa frente a los intentos de mediación y dominación de formas hegemónicas impuestas en la construcción de un derecho verdaderamente democrático a la comunicación. En la actualidad, los procesos de reforma comunicacional progresistas que fueron llevados a cabo durante las últimas dos décadas en la región dan cuenta de la multiplicidad de estrategias y formas de participación política de dichas redes.

Este texto pretende reconstruir y analizar el desarrollo de la acción política de dichas redes -con especial énfasis en los casos de Bolivia, Argentina, Brasil, Colombia, Ecuador, Uruguay y Venezuela-, entendidas éstas como sujetos políticos duales, presentes en sociedades abigarradas que funcionan al interior de los canales de la política institucional, pero organizados a su vez en torno a prácticas e identidades propias, cosmologías y cosmogonías y conformación de ontologías no asumidas, las cuales serán vitales para el éxito de sus propuestas.

A partir del rastreo de sus estrategias de inclusión y democratización de las políticas de comunicación aprobadas durante este periodo, se podrán rastrear los elementos estructurales que ayudaron al éxito de sus propuestas, precisamente en un contexto político de retracción en la región, que alcanza de manera central a las regulaciones, el reconocimiento y apoyo a los derechos a la comunicación.

Title: Hacia la construcción de una epistemología mestiza en la Yajé Bwé desde la comunicación intercultural

Session Type: Panel Submission

Authors:

Name: Rigoberto Solano Salinas

Email: rigosolanosalinas -at- gmail.com

Country: CO (Colombia)

Affiliation: Docente-Investigador UNIMINUTO (Colombia)

Abstract: En el marco de la Conferencia AIMCR 2019 se propone el trabajo Hacia la construcción de una epistemología mestiza en la Yajé Bwé desde la comunicación intercultural”, para el grupo de trabajo de Comunicación post-socialista y post-autoritaria.

En esta ponencia se comparte una experiencia investigativa que, desde un trabajo etnográfico y biográfico-narrativo de más de cinco años con el sabedor Korebajü Miguel Valencia, pretende responder a la pregunta: ¿cómo se construyen a través de la práctica intercultural del Yajé (ayahuasca) epistemologías mestizas que integran los conocimientos del occidente moderno con los saberes ancestrales indígenas?

Este trabajo se sitúa en el ámbito de la Decolonialidad (Castro-Gómez & Grosfoguel, 2007) y las Epistemologías del Sur (De Souza Santos, 2006), cuya agenda investigativa contra-hegemónica pretende reconocer esos saberes otros vivos en la contemporaneidad, no como culturas monolíticas que parecieran no ponerse en diálogo con otras comprensiones de la realidad, sino que, por el contrario, se mezclan y yuxtaponen entre los saberes ancestrales y modernos.

El eje de la reflexión es la práctica espiritual indígena asociada con la ingesta de Yajé (Ayahuasca) en distintos territorios, que van de la selva amazónica y hasta las cabeceras urbanas de las grandes ciudades de Colombia (Solano Salinas, 2016).

Es así como la categoría de “mestizaje” y por ende de una “epistemología mestiza”, se reivindica desde una mirada crítica como forma de auto reconocimiento en nuestra región, a veces para negar una serie de identidades contrapuestas, otras para diferenciarse con lo blanco-europeo y sus respectivas lógicas, pero que en general, desde los hallazgos de la investigación, se consideran la base de un accionar político que asume esta condición desde la memoria de las contradicciones de lo que somos para potenciarlas en la lucha anticolonial (Rivera Cusicanqui, 2014).

Title: Digitally savvy online activists: Ending violence against women in Canada

Session Type: Individual submission

Authors:

Name: Nasreen Rajani

Email: nasreen.rajani -at- carleton.ca

Country: CA (Canada)

Affiliation: Carleton University

Abstract: This paper focuses on the political economy of networked communication technologies (NCTs) and the role of such tools in online activism by marginalized groups. More specifically, this paper examines how marginalized activists develop, adapt and appropriate NCTs to end violence against women (VAW) in Canada despite challenges and limitations faced by working alongside Canadian mainstream media and the Canadian government.

Activists' role with NCTs such as social media platforms is complicated and contextual. On one hand, some research highlights the democratic possibilities of social media use for activists (Jenkins, 2006; Shurky, 2008). For example, current research on feminist online activism demonstrate how Twitter hashtags have been successful in changing the narrative of mainstream media messages around 'rape culture' and reasons why women refuse to report their sexual assaults to law enforcement (Horeck, 2014; Rentshcler, 2015; Clark, 2016).

On the other hand, social media platforms are profit-driven companies creating many design and policy-related challenges specific to activists' needs (Youmans & York, 2012; Leistert, 2015; van Dijck, 2013). To further complicate the situation around online activists, marginalized groups online, especially those speaking out against VAW, are often the most vulnerable to receive online violence and abuse, causing many to abandon such platforms altogether (Duggan, 2014; Citron, 2014; Phillips, 2015). This may have resulted in the high volume of research of White feminist in online activist research on ending VAW. Therefore, my research asks: how do activists from marginalized groups relying on NCTs to end VAW in Canada develop their own digital tools or appropriate existing ones for their specific needs?

This paper is grounded in an intersectional analytical framework centering the experiences of marginalized individuals (Noble & Tynes, 2016) developing their own digital tools or online campaigns to end VAW in Canada. This research is also guided by a political economy of NCTs that understand how one's experiences with technologies are shaped by political, social and economic cultural and other institutional factors (Barney, 2000). Through semi-structured interviews with Black-, Indigenous-, and Muslim-Canadians of colour involved in the creation of digital tools and/or online campaigns primarily to end VAW in Canada, women share their experiences with developing their own digital tools to end VAW and appropriate existing ones. Preliminary findings demonstrate counternarratives from the research of the experiences of White feminist activists. For instance, mainstream media either fail to report on issues of marginalized groups VAW and when they do, they often rely heavily on gendered and racial stereotypes. Despite unique challenges and limitations marginalized activists face with mainstream media coverage of VAW and government support of ending VAW through funding and resources, some online

activists from marginalized groups turn to create their own digital tools to take action into their own hands, but this is dependent on how 'digitally savvy' they are online.

Title: A Modular Public Sphere Theory as the Basis for a Scalable and Sustainable Model of Community Media

Session Type: Individual submission

Authors:

Name: Rich Potter

Email: rpotter -at- aju.edu

Country: US (United States)

Affiliation: American Jewish University

Abstract: We must envision community media not as a peripheral intervention in an unjust society, but as a fundamental and essential component of a maximally democratic society. Manifesting such a vision will require a scalable model of sustainable community media practice, which in turn requires a more elaborate and precise theorization of institutional and organizational structure than has so far been developed within the subfield of community media studies. This paper contributes to that project by conceptualizing a democratic civil society via the elaboration and application of a particular model of the public sphere and situating community media as an articulating mechanism of that democratic civil society. I begin by recognizing the value of thinking in terms of “counterpublics” while critiquing the oversimplification that such a model implies. I argue instead for a modular theory of the public sphere that A) acknowledges the existence of multiple, interpenetrated spheres of deliberation; B) understands deliberative spheres to be organized according to the principles of heterarchy, which is a structural logic in which organizational units may simultaneously belong to hierarchical structures and participate in horizontal (and diagonal) exchanges; C) distinguishes between decision-making and meaning-making spheres; and D) recognizes that organizational units belong to external deliberative spheres and contain internal deliberative spheres. By allowing for a more precise mapping of communicative relationships, this modular public sphere theory will enable community media practitioners to better comprehend their integration (or lack thereof) within networks of civil society actors and thus more conscientiously assume an articulating role within those networks. One highly significant benefit of such clarity regarding the external social context of community media initiatives is the potential for reciprocal exchanges with a wider range of civil society partners and thus new models of sustainability. The more precise mapping of communicative relationships afforded by a modular public sphere theory will also clarify thinking about the internal organization of community media initiatives, thus allowing practitioners to implement more democratic yet still efficient management structures. For researchers, this modular public sphere theory provides a framework for analyzing community media initiatives and developing a set of best practices that will yield clear recommendations for practitioners interested in building and scaling up a robust and democratic media system in the service of a robust and democratic civil society.

Abstract: This is the third stage of a research that looks the ways in which communities - that live in disputed territories, and have survived war, poverty and state abandonment for more than 50 years - understand and live reconciliation and forgiveness after the signing of Peace Agreement. This period marks a milestone in the history of Colombia. Among the findings of the previous stages it was found that the aspects of land tenure, relations with the environment, and economic activities in their territory are basic conditions to build a stage of coexistence and to strengthen the social fabric and sense of community.

The south of Bolivar, region where the research is located, is characterized for being a landscape of forests and waters, where fishing, mining and agriculture have always been practiced. It is a zone of colonization since the 50s of the 20th century; the settlers have come mainly through gold mining and agriculture. The war has been due to the wealth of this strategic area of the country, and because of its isolation has been "hidden" from the surveillance of the central state.

This research locates the dispute for the territory, the usurpation of its riches, and the obstruction of the transformations to be integrated to the development of the country, in two arenas: the landscape, and the social movements. It focuses the study on the dialogue between the social movements and the use and care of water. It seeks to specify the central issues and problems, but above all, the understandings and imaginaries of the inhabitants regarding the role of water, as well as their

actions towards it. It also looks for the lessons derived, as well as the knowledge that becomes collective patrimony, on which to build this new Peace and coexistence stage.

Two aspects in particular will be specified in this presentation: the role of women and that of community media. The first as a weaver of life that builds harmony with nature, carrying out communication practices derived from her understanding of sustainable development in a subtle and even anonymous way, managing to change the logic of economic development, the life of her family and her community.

And community media as communicative social movements whose main function is to make visible and put on the table for debate, the substantial issues for the transformation of their municipalities, those that guarantee their survival, development and their inclusion in the future of the country, contributing in that way not only its material wealth, but its cultural heritage

Title: Radio Indígena and Indigenous Mexican Farmworkers in Oxnard, California

Session Type: Panel Submission

Authors:

Name: Carlos Jimenez

Email: carlos.jimenez -at- du.edu

Country: US (United States)

Affiliation: University of Denver

Abstract: This paper documents the emergent digital strategies of indigenous Mexican farmworkers from Oaxaca, Guerrero, and Puebla (Mixtec and Zapotec) alongside the Mixteco/Indígena Community Organizing Project as they worked to combine community radio with social media in Oxnard, California. The paper expands the scope of current Latina/o radio scholarship by examining the social media use of a community radio station, and complicates the self-promotional function attributed to radio's use of social media. Analysis of Radio Indígena's Facebook page shows a digital communication strategy where the mission of MICOP, local community, online followers, and FM radio become increasingly visible and interwoven. In the process of communicating, the farmworker community gains experience with the politics, structure, and practice of digital communication that helps them address urgent community issues.

Title: Untold stories: Documenting the experiences of U.S. citizen children of their undocumented parents (Video presentation)

Session Type: Video Submission

Authors:

Name: Sonia De La Cruz

Email: soniadlc -at- uw.edu

Country: US (United States)

Affiliation: University of Washington-Tacoma

Abstract: This video presentation offers a unique perspective on collaborative documentary and the power it can have in elevating marginalized voices, while disrupting dominant perspectives about immigration as it is faced and seen in the United States. More specifically, this video presentation will shed light on the various collaborative practices taken to address the differential rights and challenges that U.S. citizen children and their undocumented parents have through the story a child and her extended *Zapotec family.

The documentary Sad Happiness: Cynthia's Transborder Journey tells the story of eleven-year-old Cynthia, born to undocumented parents in the United States. Cynthia makes her first trip to her parent's natal community of Teotitlán del Valle in Oaxaca, Mexico, where she spends two weeks with her extended family—many of whom she has never met— and learns about the values and traditions of her indigenous heritage. Over the course of the film, viewers are witnesses to how Cynthia becomes aware of her parents undocumented status, while at the same time realizing the power of citizenship and the complexity of her own identity as “Zapotec,” “Mexican” and “American” all at once.

At its core, the documentary speaks to the experiences of approximately five million U.S. citizen children who live in families with mixed legal status where at least one parent resides in the U.S. without legal permission (i.e. undocumented or “illegal”). When parents are undocumented and their children are U.S. citizens, difficult inequalities exist within the same family. For example, children have access to a wide range of benefits associated with citizenship and can come and go freely across the U.S.–Mexican border to visit family, while their parents cannot.

This video presentation will offer short clips of the documentary as a way to address how Cynthia's story is representative of the experience that many other children like her have; especially when they are socially and politically marginalized indigenous subjects. It will highlight some of the practices of collaborative documentary -which give collaborators a space for negotiation and agency to those represented- and offer some suggestions for how the documentary has the potential for elevating traditionally invisible voices.

The documentary helps raise important aspects of voice, visibility and representation; features that illuminate the IAMCR 2019 conference theme. In sum, the goal of this presentation is to address many of the complexities for producing collaborative film across the U.S.-Mexico border, while highlighting various practices and challenges for producing collaborative media aimed at social justice. And more particularly, it will address the experience of children who are typically

underrepresented in U.S. mainstream media, especially in relation to the national discourse on immigration and family separation.

*Zapotec are an indigenous culture from Mexico.

Title: 'A single black voice in this whole racist'country': The legend and legacy of Australian Aboriginal journalist John Newfong

Session Type: Individual submission

Authors:

Name: Susan Forde

Email: s.forde -at- griffith.edu.au

Country: AU (Australia)

Affiliation: Griffith Centre for Cultural ResearchGriffith University, Brisbane, Australia

Abstract: In a late start for the Australian media, John Newfong (1943-1999) became the first-ever Aboriginal journalist to be employed by a mainstream newspaper when he was taken on as a cadet journalist at the flagship national broadsheet, The Australian, in 1971. He hailed from the small community of Minjerribah (Stradbroke Island), off the eastern coast of Australia, and began media work in Sydney at a time when the Aboriginal land rights movement was gaining momentum on the back of the US civil rights' movement, and world-wide social change. His turn at The Australian was cut short when community called – what had started as a small protest by three Aboriginal men in the city's capital to establish an 'Aboriginal Tent Embassy' on the lawns of Parliament House had become a major national movement with rolling protests for Aboriginal land rights and equality. He became the media officer for the Aboriginal Tent Embassy, and then went on to edit Australia's first major Indigenous publication, Identity, in the 1970s and again in the early 1980s.

This paper is the beginning of a larger examination of Newfong's life and role in the early development of the modern Indigenous media, and his place as a key political figure in the tumultuous years of the 1960s, 70s and 80s. This was a time of enormous change in Indigenous affairs as the system of control of Aboriginal people in government and church-led missions was gradually dismantled. The paper emerges from a five-year project about the Indigenous land rights movement in the state of Queensland, Newfong's home state, and brings together historical records with wide-ranging qualitative interviews with 50 activists and their families who formed the core of the movement from the 1960s to now. This paper places Newfong's trajectory and contribution in the context of the nuanced relationship between Indigenous media, mainstream media and the broader social/political struggle for Indigenous rights; and contributes a long-overdue illumination of Newfong as a major figure in the shaping of modern Australian Indigenous politics.

Title: Let's Talk about Regulation: The Revolving Door, Partisanship, and Regulatory Discourses at the FCC

Session Type: Individual submission

Authors:

Name: Pawel Popiel

Email: ppopiel-at- asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: Regulators' political communication is an essential component of the regulatory process – crucial to the accountability and legitimacy of Independent Regulatory Agencies (IRAs).

Policymakers issue statements and give speeches to legitimize their decisions, to justify regulatory action and philosophy, and to signal to the industries which they oversee (Ali & Puppis, 2018; Black, 2008; Puppis, Maggetti, Gilardi, Biela, & Papadopoulos, 2014). At the same time, communications by IRAs remain understudied in the field of communication (Puppis et al., 2014). This research gap is especially salient since communications regulation impacts the capacity of the media system to support democratic discourse and participation (Freedman, 2008; Hardy, 2014). While IRAs are designed to be independent, shielded from political pressure to maintain credibility and regulatory stability, corporate influence on policymaking can manifest itself in various ways, including through lobbying pressure, regulators' passage through the revolving door to and from the industry and, ultimately, regulatory capture (Teachout & Khan, 2014). The consequence of a regulatory agency's loss of independence involves a shift from policymaking in the public interest to exclusively promoting the interests of the regulated industries.

However, rather than overtly manipulating regulation by influencing voting patterns, corporate interests impact policymaking agencies in subtler ways (Kwak, 2013; Teachout & Khan, 2014). Various conceptualizations, including as framing bias (Entman, 2007), media policy silences (Freedman, 2010), and discursive capture (Pickard, 2014), this nuanced form of corporate influence manifests in the ideologically-inflected selection and framing of policy options considered by regulators. The revolving door serves as one key mechanism underpinning this influence (Calabrese & Mihal, 2011; Pickard, 2014). However, no systematic analysis examining the relationship between the revolving door phenomenon and policy discourses has been conducted.

This paper takes up this task, examining the public communications of commissioners at the U.S. regulator Federal Communications Commission (FCC) to a) understand the policy priorities of the regulatory agency, and b) to shed light on how political and industry influence on policymaking manifests itself discursively. As a methodological intervention, the paper combines computational text analysis and qualitative document analysis to examine over 7,000 commissioner speeches and statements given over two decades at the FCC. The results shed light on how external factors, like party affiliation and industry background, exert influence on IRAs, namely by impacting agenda-setting processes, and occasionally the actual content of regulators' political communications. As certain topics are privileged over others, media policy silences, or at least media policy inattention emerges. However, the findings also reveal the contingency of this influence in certain contexts, suggesting public mobilization and efforts by individual regulators can upset, if not upend these power dynamics.

Title: The Relationship between Mobile Users' Privacy Concerns about, Attitudes toward m-Health Apps, and Health Behavior

Session Type: Individual submission

Authors:

Name: KENNETH C. C. YANG

Email: CYANG-at- UTEP.EDU

Country: US (United States)

Affiliation: THE UNIVERSITY OF TEXAS AT EL PASO

Name: YOWEI KANG

Email: yoweikang-at- mail.ntou.edu.tw

Country: TW (Taiwan)

Affiliation: Degree Program of Oceanic Cultural Creative Design IndustriesNational Taiwan Ocean University

Abstract: The ubiquity of mobile media has impacted on health organizations in integrating these technologies into healthcare delivery (Free et al., 2013; Kay, Santos, & Takane, 2011; Nasi, Cucciniello, & Guerrazii, 2015). About 37% of the US consumers indicate that they have used mobile apps or wearable devices to manage their health and 7% of them has adopted trackable wearable devices (such as Fitbit) (Kantar Health, 2016). Furthermore, the widespread use of mobile devices and apps also contributes to the delivery of healthcare, health information, and health sensing technologies, commonly known as m-health systems (Kumar, 2013; Nasi et al., 2015).

However, the successful deployment of m-health systems still relies on how users would respond to the technology (Adhikari, Richards, & Scott, 2014). Scholars have identified one the most critical factors in the diffusion of m-health systems as patients' or users' privacy concerns (Arora, Ytrri, & Nilsen, 2014; Guo, Zhang, & Sun, 2016; Helm & Georgatos, 2014; Martinez-Perez & De La Torre-Diez, 2015). Therefore, it is important that communication researchers and practitioners, as well as policy-makers, need to take advantage of the ample communication opportunities offered by mobile media in facilitating the diffusion of health information to achieve the vision of Global Health 2035 by "leaving no one behind" to ensure human dignities regardless of their background.

However, m-health systems are innately intrusive, location-based, and pervasive with their ability to reach a person at any time and any location by creating an encompassing communication environment (Cole, 2014). This study combines literatures from past innovation adoption with the rising privacy concerns (Deloitte, 2012; Gagnon, Ngangue, Paye-Gagnon, & Desmartis, 2014; Sunyaev, Dehling, & Taylor, 2014). The objectives are to examine how users' privacy concerns may affect the adoption of m-health systems. Results could help policy-makers to develop user-centric policy initiatives in promoting m-health systems (Ahmed, Lucas, Khan, Bhuiya, & Iqbal, 2014; Barkman, 2017; Michael et al., 2010;).

This study aims to investigate the three questions below:

RQ 1: What are the perceptions of privacy and privacy-related concerns about m-health systems among mobile users?

RQ 2: What are mobile users' attitudes toward m-health systems?

RQ 3: How will mobile users' attitudes toward m-Health affect the effectiveness of m-health systems?

This survey study provided empirical data of conveniently-recruited 115 participants. Among them, 35 participants were male (33.3%), while 70 of them were female (66.7%).

The perceptions of users' privacy and privacy-related concerns about m-health systems (Mean=3.13, SD=0.87) were measured by fifteen 5-point Likert statements (Cronbach's $\alpha=0.93$). Nineteen 5-point Likert statements (Cronbach's $\alpha=0.92$) were used to measure mobile users' attitudes toward m-health systems (Mean=2.84, SD=0.82). The effectiveness of m-health systems was measured by ten 5-point Likert statements (Cronbach's $\alpha=0.87$) (Mean=3.50, SD=1.02).

To examine if users' privacy perceptions, attitudes toward m-health systems, and effectiveness m-health systems in facilitating behavioral changes, a linear regression procedure has demonstrated that users' attitudes positively predict the effectiveness of m-health systems ($\beta=0.91$, $t=7.90$, $p<0.001$) and users' attitudes explained 37.9% of the variance in the effectiveness m-health systems ($F=62.382$, $df=1/102$, $p<0.001$).

Email: S142006-at- ud.ac.ae

Country: SA (Saudi Arabia)

Affiliation: University of Dubai

Abstract: Blockchain is a relatively new technology and most people only know about it and develop their opinions from the media. This first systematic study of Arabic media coverage of blockchain applications aims to analyze the media framing of this emerging technology in Arab press using data from four Arab countries; Egypt, Lebanon, Saudi Arabia and the United Arab Emirates. The study consists of a quantitative content analysis of the online versions of twenty-one mainstream Arab newspapers from 2017 to 2019. In total, 300 news articles published over a period of two years are collected, read and coded according to two frame dimensions identified in earlier studies: subtopics and cognitive attributes. The study aims to empirically assess the attitudes and perceptions towards this emerging technology in mainstream Arab media as the subject gains an increasing regional and global importance. The study finds that cryptocurrency is the highest covered blockchain application. Furthermore, there is a significant correlation between the application type and the tone; while the coverage is generally positive, the articles display a less positive tone towards cryptocurrencies and a more positive tone towards governance, management and supply-chain applications. In terms of subtopics, the study finds that the majority of the articles focus on the economy. There is a significant correlation between the subtopic and the tone of the article; articles discussing technology are more positive than articles discussing other subtopics. The main perceived opportunities are seen in saving money and the main perceived risks in are seen in various types of crime including money laundering and terrorism. The study discusses the various differences in the media coverage between the four studied countries which can be seen in the amount of coverage, subtopics, applications and tone; the data shows that the United Arab Emirates is the most positive and Lebanon the least positive. The study addresses the shortage of empirical data on the coverage of this emerging technology in the Arab world and offers an insight into the way in which blockchain applications are understood and discussed in the Arab region. Limitations of the study and recommendations of future research are also discussed.

Keywords: Blockchain, quantitative analysis, framing, Arab media, attitudes toward technology

Country: CA (Canada)

Affiliation: Universite du Quebec a Montreal (UQAM)

Abstract: The Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR) the International Covenant on Economic, Social and Cultural Rights (ICESCR), and their Optional Protocols, are the foundations of the modern international legal and administrative edifice of human rights. The two covenants, which are the principal legally-binding multilateral treaties on human rights, are meant to clarify the standards set out in the UDHR and to establish follow-up mechanisms to ensure their implementation. Described as “imprecise” and “obscure” (Moeckli, 2018), the norms laid out by the covenants have been given detailed official interpretations – known as General Comments – that frame their meaning conceptually (what they are, what they cover, what they exclude) and define the specific obligations of the Member States, which are on the front line of their application. However, the nature of the rights and obligations imposed by the General Comments continues to be a subject of debate (Neuman, 2018).

This presentation will cover the results of using computerized “Modeling using Object Types” (MOT) theory (2002) to evaluate the scope and limits of the General Comments in the conceptualization of human rights. Through the examination of a corpus of General Comments addressing core “communication rights” (rights to freedom of opinion and expression, right to privacy, right to take part in cultural life, etc.), we will show how a modeling process can (1) result in a visual deconstruction of the General Comments to reveal their normative substance (constitutive dimensions, state obligations, limits and scope of rights, links with other rights), (2) shed light on the political interests integrated into the very structure of the official interpretations of the covenants (use of the conditional verb tenses, lack of definitions of key concepts and of enforcement measures), and (3) identify weaknesses in the conceptual framework owing to undefined, polysemic notions that are, therefore, difficult to make operational.

The work that will be presented questions interpretations of human rights that are stated to be “authoritative” by international bodies (Neuman, 2018; Buergenthal, 2011; Abline, 2008). This involves looking at “communication rights” as political concepts that contain interests and power relations.

Title: Covert Hate Speech: White Nationalists and Dog Whistle Communication on Twitter

Session Type: Individual submission

Authors:

Name: Prashanth Bhat

Email: nrbhatprashanth-at- gmail.com

Country: US (United States)

Affiliation: University of Maryland

Name: Ofra Klein

Email: Ofra.Klein-at- eui.eu

Affiliation: European University Institute

Abstract: Politicians in the United States have long employed racially-coded communication to convey their message to a subset of the population. This kind of communication has acquired the label of “dog whistle politics,” drawing upon the way that dog whistles are perceptible to dogs but not to humans due to high frequency. As Mendelberg (2001) points out, such coded communication enable politicians to make racist appeals without using overt racist language. In the American context, the end Jim Crow rule in the South, and the repudiation of open white supremacy has forced demagogues to repackage racial appeals. Conservative politicians such as George Wallace, Barry Goldwater, Richard Nixon, and Ronald Reagan have all embraced dog-whistle communication to demonize minorities as welfare cheats, illegal aliens or terrorists, and to provoke a sense of white victimization (López, 2015).

Dog-whistling as a rhetorical strategy has been used by not only mainstream politicians but also far-right groups such as White nationalists and neo-Nazis. This trend was particularly visible during the 2016 US presidential campaign, where white supremacist groups utilized dog-whistling to convey racially-coded messages to their followers on social media. Initially, when white supremacist leaders like Milo Yiannopoulos and Richard Spencer made offensive comments about African-Americans, and feminists, social media platforms such as Twitter suspended their accounts. Thereafter, these extremists started using coded-language to refer to blacks, Jews, Muslims, and feminists. Such strategic communication allowed them to circumvent anti-harassment tools used by Twitter to detect hate speech.

In this paper, we study the use of dog-whistling and cryptic messaging by white supremacists and neo-Nazis on Twitter. Using netnography as a method, we examine the tweets posted by white supremacists in order to understand the meanings they associate with particular words. Netnography is a form of digital ethnography, which is widely used to study online communities and their social interactions. This approach uses computer-mediated communications as a source of data to arrive at ethnographic understanding of a cultural phenomenon (Kozinets, 2010).

This investigation enables us to deconstruct racially-coded messages and covert hate speech employed by extremist groups on a public platform like Twitter. Further, it helps us understand the

innovative discursive strategies utilized by white identity groups in online spaces. These insights will likely compel tech firms to develop better policies to counter covert hate-speech being used by far-right groups on social networking sites.

Title: 'Too old for toys, but too young for boys' Exploring the design of mapping apps for Tweens' independent mobility

Session Type: Individual submission

Authors:

Name: Cláudia Silva

Email: silvaclaudia01-at- gmail.com

Country: PT (Portugal)

Affiliation: Madeira Interactive Technologies Institute (M-ITI)

Abstract: Past research in European countries has found that 11-12 years-old children experiment higher steps in what is called by Livingstone & Helsper (2008) the “ladder of online opportunities”. That means that their digital media usage increase and becomes more intense and diverse at that age. Having this a departing point, this paper explores how this group of ‘tweens’ perceive their mobility in the urban space and also their perceptions and thoughts on the possibility of moving around where they live without adult’s supervision with the aid of smartphones (the design of a new app) - more specifically, by using wayfinding and locative apps designed for the needs of people their age (e.g., going to school alone by bus or by walking). With this purpose in mind, we conducted a pilot case study with 27 children, all students of a 6th grade (11-12 years old) class in a private school located in Lisbon, between May and July 2018. This pilot study had three main steps:

- 1) Drawing of cognitive maps and questionnaire with open and closed questions such as: “What is the street name of your house?” “Do you have a smartphone of your own?” “Have you ever used Google Maps or Google Earth? Use your imagination to write down which type of functionalities would you like to have in your app?”
- 2) Creation of written narratives about their cognitive maps. During this step, the students were asked to describe chronologically and analytically their itinerary from home to school based on their cognitive map.
- 3) Face-to-face interviews with 24 children (out of 27 participants). Some of the questions were: “How do you use your smartphone?” “What types of activities do you do most on your smartphone?” “And which are your favorite apps?” “What do you not like in these apps?” “What is difficult to use?” “What is easy to use?” “Tell me a bit about your experience with these applications?” “What do you know about public transport in the area where you live?” “Have you ever gone to school by bus or public transport?”

Some of our results suggest that children this age would like to be more independent and to go to school by themselves. They would not mind being tracked by their parents on a navigation mobile app if location tracking lessened their parents’ anxiety and fear. Interestingly, our findings also suggest that children start using mapping apps such as Google Maps at the age of 9, for two main reasons: 1) To see satellite images of a specific place before going on vacation to that same place, 2) To help their parents with navigation while driving. In order to shed light on our results, and to emphasize the interdisciplinary nature of the project, we draw on theories across different disciplines such as sociology of media and children as well as human-computer interaction. The results of this project may inform the creation of policies regarding cutting edge systems related to the design of mobile apps for children.

Title: National Internet Governance Needs a Holistic Approach: The Case of Net Neutrality in Israel

Session Type: Individual submission

Authors:

Name: Avshalom Ginosar

Email: avshalomg-at- yvc.ac.il

Country: IL (Israel)

Affiliation: The Max Stern Academic College of Yezreel Valley

Abstract: Israel was one of the pioneer countries in adopting a pro net neutrality (NN) policy back in 2011 (Marsden, 2016), a policy which was updated and finalized in 2014 (Ginosar, 2019, in review). The current paper follows a previous work on the various phases of the NN policy process (Ginosar, 2018) and addresses the policy's confusing results. Through an analysis of formal documents, such as bills and white papers, stakeholder position documents, debates in parliamentary plenum and committees, this study attempts to examine whether the current policy is the ultimate answer to the issue of NN.

NN as a policy issue comprises contradictory stakeholder interests and various societal and cultural values (e.g. Bauer & Obar, 2014). The core element of NN policy that reflects most of these interests and values is the non-discriminative nature of net transmission (Wu, 2005) which addresses a major public interest. The NN Israeli policy follows this core idea and prohibits – by law – any discrimination of services or applications in terms of transmission priority, speed and price. However, the law includes a wide range of exceptional cases in which transmission "management" is allowed. The general and vague wording undermines the principle of non-discrimination, and an expert committee recommended in 2015 to amend the law and decrease the number of allowed discriminative cases. Since then, nothing has been done. Furthermore, between 2016-2018 a series of legislative initiatives have been launched, all of which address various aspects of networks transmission, although they are not parts of the main NN legislation. These initiatives – such as the Website Blocking Bill, the Pornography Law, the Facebook Law, and amendment to the Copyright Law – relate to various interests and values which are building-blocks of NN policy.

The analysis of the policy process through which NN policy has been shaped, and of the developments that have occurred subsequently, demonstrates that policy-makers have not had the necessary broad perspective on the issue. Consequently, the national NN policy is more like an unfinished patchwork rather than a holistic and comprehensive public policy. This case study is a good example of the way in which politicians who attempt to act in the name of the public interest fail because of insufficient knowledge and understanding of the various technological, managerial and content aspects of Internet governance.

Title: How do Chinese social media users feel about being scored' ---A empirical investigation of the implications of the Social Credit System in China

Session Type: Individual submission

Authors:

Name: Wen Ma

Email: maw6-at- cardiff.ac.uk

Country: GB (United Kingdom)

Affiliation: School of Journalism, Media and Culture Studies at Cardiff University

Abstract: Governments and institutions in different countries and regions are using machine learning algorithms to process and analyse large quantities of data for governance purpose. The Snowden revelation exposed the collecting and processing of big data or metadata for mass indiscriminate surveillance (Lyon 2015) and the violation of privacy. The Cambridge-Facebook analytical data scandal has levelled up the concerns from big data-aided surveillance to big data-driven decision-guidance (Yeung 2017) and data-score mode of governance (Dencik et al. 2018) in both political and economic domain. In China, a Social Credit System (SCS) using big-data driven algorithms to allocate every citizen with a “credit/trustworthy score” by 2020 has been promulgated. Segmented data from social media, economic history, political engagement, social activities, and other aspects of daily life will be aggregated and cross-referenced on “surveillance assemblage” (Haggerty and Ericson 2000) to assess and sort a person’s level of “trustworthiness”. Citizens are categorised into different groups. Privileges and benefits are provided for those with higher scores while punishments and restrictions are imposed on the “blacklisted”. With the power to affect daily life, the SCS not only aims to rate a person’s behaviour but also to shape it.

Social media, as the most comprehensive personal data collecting sites, is vital to the SCS. Social media users in China have reached 800 million by 2018, taking up more than half of the country’s population. Social media companies have to provide users’ online log and record upon the request of the government. In early 2018, Baihang Credit, led by the National Internet Finance Association and 8 other institutions including Sesame Credit, Tencent Credit and Koala Zheng Xin, was established to conduct personal credit rating service, which signals the establishment of a government-social media companies ally.

This study aims to investigate to what extent and in what ways the SCS will influence social media users in China; and to probe the implications for social media before the system to be completely established in 2020. Social media users are living the SCS and their attitudes and behaviour play a crucial role in shaping the future of social media. To answer the research question, web-based questionnaires were distributed to more than 600 demographically diversified social media users to get a comprehensive sketch of their attitudes and potential behaviour in the future. 50 semi-structured in-depth interviews with Chinese social media users were conducted to further investigate the underlying explanations. Results show that the majority of respondents support the principle of the System and are willing to hand in their online data to government to be watched in return for “a more regulated and secure cyberspace; and they accept to change their behaviour on social media for better credit score. Thus, this study concludes that the SCS will transform social

media in China to an entertainment content-oriented mobile participatory panopticon and eventually create moulded citizens.

Title: Engaging the disengaged: Examining the domestication of mobile telephony among the older adults in Trans-Nzoia and Bungoma Counties in Western Kenya.

Session Type: Individual submission

Authors:

Name: Leah Komen

Email: ledavid2002-at- gmail.com

Country: KE (Kenya)

Affiliation: Daystar University

Abstract: The world is growing older. Considering the increasing number of older adults, it is imperative to consider how technology design can meet the needs and wants of these important user groups. Mobile phones offer great potential in improving quality of life for senior citizens or older adults in the areas of health care, independent living, communication with family and friends as well as reduced isolation. There have been numerous studies on technology design for older adults (Fisk, Rogers, Charness, Czaja, & Sharit, 2004), but much of the work has focused on indoor and stationary applications such as desktop computers (Zajicek & Brewster, 2004). Older people, however, need support not only in stationary situations, but also in mobile situations inside and outside their homes (Goodman, Brewster, & Gray, 2004). However, challenges abound as noted by Lee (2007) who noted that older adults used limited number of mobile functions due to cost benefit analysis while Nimrod (2015) argues that older people use mobile phones extensively yet little is known about neither relevant domestication processes involved nor the extent to which older adults adopts and use mobile phones. This study sought contribute to this knowledge by conducting interviews with 30 older person all retired from public service aged 60 years and above in Trans-nzoia and Bungoma. With the help of domestication theory, this study examined the appropriation (Possession and ownership), Objectification (meaning and symbols), incorporation of mobile phone in older people's everyday life and conversion (unintended uses) process of the domestication of mobile technology by the said group. Findings showed that mobile phones had dual effect in older people's lives, for some it isolated them from their relatives and claimed their children rarely visited; others felt they are now closer to their children as many can call from distances. Yet majority felt mobile phones had become their 'extended family members' now since they can listen to news or listen to radio via phones and were in touch with the world more. Among the challenges they faced is the smaller font size of texts and the fact that phones were getting smaller in size making it difficult to use. Their favourite mobile phone application was the mobile money locally dubbed Mpesa as they could now receive cash transfers from the government

Key words: older adults, mpesa, isolation, connection , domestication.

Title: Digital Sovereignty' Past, present and future ideas about self-determination in times of digitalisation

Session Type: Individual submission

Authors:

Name: Julia Pohle

Email: julia.pohle-at- wzb.eu

Country: DE (Germany)

Affiliation: WZB Berlin Social Science Center

Abstract: "Digital sovereignty" has become one of the key concepts in debates on the digital transformation. Since the early 2000s, authoritarian regimes such as China have striven for "cyber sovereignty" – a concept used to justify the centralisation of regulatory powers at the national level and the call for more intergovernmental influence at the international level. But after the Snowden revelations in 2013, also democratic governments in Europe, Latin America and Asia have joined the chorus of those who wish to strengthen their sovereignty in the digital sphere. Using the term to refer to countries' and citizens' self-determination, these recent calls are dominated by discourses about the independence of national economies from foreign IT companies and the protection of civil rights. Hence, these recent calls differ regarding both their tone and substance from those of authoritarian countries. Nevertheless, they all add to the same tendency: the proliferation of policies and regulatory measures for digital issues at the national and regional level and, as a consequence, the alleged risk of an increasingly fragmented regulative framework for the global Internet.

This paper seeks to put the discourse on "digital sovereignty" into a historical perspective by retracing the recurrent tension between the concept of sovereignty and the idea of global digital networks since the 1990s until today.

In its first part, the paper builds on the document analysis of primary and secondary sources to identify four phases marked by different perspectives on sovereignty: 1) the cyber-exceptionalist view, which rejects the idea of governments as legitimate actors in cyberspace; 2) the Internet Governance perspective, which promotes an expert-dominated multi-stakeholder approach with limited influence by nation states; 3) the framing of the Internet as a legal vacuum that results from the irreconcilability between decentralized networks and national jurisdiction; and 4) the discourse on digital sovereignty as a means to foster national and regional independence. The paper discusses these different perspectives regarding three aspects: their normative understanding of sovereignty, their discursive framing of digital networks and, lastly, whether the claims for a right to self-determination inherent in these perspectives concern the individual level (e.g. the self-determination of users) or the collective level (e.g. the self-determination of a particular group or state).

In its second part, the paper focusses on the last phase and investigates the different levels of the concept of "digital sovereignty" and their implications for Internet policy-making. Drawing from an empirical analysis of the recent discourse on "digital sovereignty" in Germany, the paper shows how different conceptualisations of self-determination result in different policy approaches that focus either on security, economy or consumer protection.

Theoretically, the paper builds on existing reflections on the role of states in times of digitalisation and on differing interpretations of sovereignty by several disciplines. With its theoretical and empirical findings, the paper provides a historically founded perspective on the current debate on sovereignty in the digital age. Thereby, it aims to contribute to the broader academic and political discussion about the tensions between domestic and global Internet policy.

Abstract: PRESENTATION IN SPANISH

Actualmente, nos encontramos en un momento en el que una suerte de histeria colectiva en torno al copyright parece dominar nuestro mundo, un momento en el que se busca proteger desde un libro o una canción a una mera base de datos o un meme. Los autores y las grandes compañías buscan beneficiarse de todo lo que crean (y algunas cosas que no) coartando la libertad de expresión, la creación de contenido y la difusión del conocimiento.

Esta situación se pone de relieve en plataformas como Youtube, en la que contenido original creado por sus millones de usuarios convive con obras derivadas, piratería y contenido patrocinado por los grandes conglomerados multimedia. La historia de Youtube como plataforma social parte de un claro interés por situarse como un lugar en el que poder generar contenido de forma colectiva (los memes, remixes, mashups), con un carácter tanto profesional como amateur; siempre amparándose en el fair use, la reutilización y la creación de obras derivadas.

A partir de 2011, Youtube implementa su conocido sistema de prevención de piratería (ContentID), que registra de manera automática el contenido que se sube para comprobar si es completamente original o si contiene extractos de obras protegidas. A partir de aquí, los autores originales de las obras (normalmente grandes empresas) pueden elegir si monetizar, monitorizar o eliminar el vídeo subido, vetando en muchas ocasiones la subida de obras derivadas originales que se encuentran amparadas por la Ley de Propiedad Intelectual.

La balanza se ha desestabilizado: unos crean y generan contenido, mientras que otros son los que se benefician económicamente de este trabajo. El sistema de ContentID fue creado como respuesta a las preocupaciones de las grandes compañías por vulneración de copyright y pérdida de beneficios, o lo que es lo mismo: supone una muestra de la incapacidad de adaptación a un nuevo sistema de creación de contenido que beneficia a las grandes empresas y perjudica a los creadores individuales.

Esta propuesta parte del estudio de una pequeña muestra de contenido alojado en esta plataforma y su relación con la libertad y creatividad de creadores y consumidores. Se analizan por un lado los contenidos (tanto pirata como legales) presentes en Youtube de las diez películas españolas con mayor número de espectadores; por otro, una selección de cortometrajes con alto contenido original. La yuxtaposición de estas dos muestras nos permite analizar la efectividad del sistema ContentID y destacar la importancia del contenido generado por el usuario en un universo red en el que las grandes empresas cada vez cuentan con mayor influencia, lo que repercute en la (re)utilización de obras protegidas por derechos de autor y subidas a la plataforma.

Title: Del hashtag a la calle: comunidades en red y políticas comunicacionales en América Latina

Session Type: Individual submission

Authors:

Name: Malvina Rodriguez

Email: malvirodriguez-at- gmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de Villa María

Abstract: Desde los inicios de siglo XXI las políticas públicas de comunicación se enfrentan a los desafíos que implican las transformaciones cada vez más aceleradas que provocan las nuevas tecnologías. Algunas funciones inherentes a las políticas públicas, como el control y la regulación para promover la justicia social y el bienestar general, se encuentran en un proceso de reconfiguración de sus objetivos y sus alcances a causa de la dinámica que originan los entornos virtuales en el espacio público. La ciber militancia de los partidos políticos y de los nuevos movimientos sociales se presenta como un espacio de confluencia de la autocomunicación de masas (Castells, 2009) de la ciudadanía movilizadora, a la vez que una posibilidad de convergencia de los múltiples formatos y dispositivos de la cultura de la conectividad (Van Dijck, 2016). La deslegitimación de las políticas comunicacionales de los gobiernos así como la dependencia política y económica de los medios de comunicación masivos, entre otras causas, han habilitado la emergencia de la autocomunicación de masas en clave digital como un contrapoder a los poderes institucionalizados. En ese contexto, tanto la comunicación política como las políticas públicas de comunicación se debaten entre la preeminencia del conflicto (trolling, fake news, posverdad) y las posibilidades del consenso (comunidades en red para la participación ciudadana que influya en las políticas públicas).

Para comprender el proceso de construcción de nuevas ciudadanías resulta necesario interpretar el sentido de pertenencia que se origina en las sociedades a partir de las “comunidades sociodigitales” (Rodríguez, 2018). Estas comunidades en red refieren a nuevas expresiones de autocomunicación de masas que se manifiestan tanto en los espacios de conectividad digital como en los tradicionales ámbitos de participación en el espacio público (ej. la protesta callejera), con la intención de establecer agendas y promover el debate de cuestiones de interés social.

Esta investigación, iniciada en 2015 y en continuidad, se propone en esta etapa identificar, sistematizar y describir analíticamente los procesos de comunicación política sociodigital de comunidades en red en América Latina, tomando casos de estudio en Argentina, a fin de caracterizar la participación ciudadana en temáticas de género y derechos humanos. Para ello, se llevaron a cabo entrevistas a activistas digitales y se realizaron análisis de contenidos digitales. El principal impacto de estas movilizaciones digitales puede observarse en la difusión y confluencia internacional de consignas contra la violencia de género (#NiUnaMenos) o sobre derechos de género (#AbortoLegal). Asimismo, la participación sociodigital de las comunidades en red vinculadas a género y derechos humanos han provocado la inclusión de estas temáticas en el discurso político y en los debates parlamentarios, como pudo observarse en el período analizado. Los primeros resultados de esta investigación permiten inferir la preeminencia de un modelo de comunicación política sociodigital que privilegia la integración de las comunidades, la consistencia discursiva, la visibilización y el control de las fuentes de información – como intento de

contrarrestar el trolling y las fake news – así como el llamado a la movilización permanente para la participación en el espacio público.

Title: When Robots Become Colleagues: A Case Study of the Danish News Agency, Ritzau

Session Type: Individual submission

Authors:

Name: Marie Eriksen

Email: mariiefalk-at- hotmail.com

Country: DK (Denmark)

Affiliation: Hamburg University

Abstract: Modes of doing journalism have always been influenced, structured and constrained by technology whether this being analog or digital. With the emergence of automated journalism, the ways of doing journalism is once more being affected. In this regard, there is nothing new or unique about automation technology specifically as a new technological development affecting modes of doing journalism. However, while technological tools have long been assisting journalists in a wide range of stages in news production such as collecting, analyzing and communicating data, journalists have always been the authority of this entire process. This aspect of the journalistic practice is changing and is the focus of a rapidly growing body of literature on how automated journalism has the potential to alter journalism, the production of news and its related practices.

This study examined how and to what extent automated journalism contributes to the changing process of journalistic practices at the Danish news agency, Ritzau. In addition, the study sought out to examine how such changes relate to the different actors involved in the process. In order to examine this, the study has used Bruno Latour's all-embracing Actor-Network Theory as a theoretical framework to map and analyze the power relationship between the different actors around the technology who ultimately made up the actor-network. This study took on a case-study analysis by performing four in-depth interviews with different actors involved in the process of implementing the new technology at the news agency. The four interviewees were asked a set of open-ended questions regarding the use of automation technology, the extent to which computational tools and techniques were implemented as part of creating news content and business plans, changing professional standards etc.

The study found that there was an ongoing negotiation of whether to accept the new technological actor in the actor-network. But since automation technology had such positive impacts concerning the improvement of the news production, all the actors were more willing to accept and ascribe the actor with the same agency as the rest of the network. As a result, the study found that because automation technology made the entire actor-network stronger it was more likely to be accepted in the actor-network.

To put this into perspective, this study also found that, advocates of automation technology often point to speed and accuracy as two of the key advances in the context of news production. This is because automation technology allows for producing news in real time and algorithms do not make simple mistakes such as misspelling or calculation errors. These advances fit perfectly into the journalistic profession which is getting more commercialized and because of this, runs increasingly based on business logics rather than journalistic ideals. As a result, the Danish news agency are

adopting automation technology in order to, among many other things, aim for higher profit margins and lower production costs.

Title: Ordering sociality with rhythmmedia: Orchestrating people as rhythms in algorithmically mediated platforms

Session Type: Individual submission

Authors:

Name: Elinor Carmi

Email: Elinor.Carmi-at- liverpool.ac.uk

Country: GB (United Kingdom)

Affiliation: Liverpool University, UK.

Abstract: Research problem: Most media and communication scholars use terms such as flow, stream, traffic and channeling to describe the politics of internet arrangements without properly examining the temporal nature of these movements. This paper examines the policies and advertising logic behind the way social media companies order people's experiences in their algorithmically mediated platforms. Specifically, the paper shows that it is important for Facebook to understand people as rhythms, to convince advertisers that they know when users do things. The paper focuses on the Facebook Immune System (FIS) algorithm, which is an 'anti-spam' machine learning algorithm that scans all the behaviours within and outside Facebook and renders them as rhythms to create a dynamic database/archive. With this 'archive' the company categorizes behaviours and decides which ones are valuable (social) and which ones are not (spam), and orchestrates them accordingly. I call this practice rhythmmedia, which is the way media practitioners' render people and their relations as rhythms and (re)order them for economic purposes.

Theoretical framework: Drawing from Raymond Williams' 'planned flow' and Henri Lefebvre's 'rhythmanalysis', I propose rhythmmedia, which describes the ways platforms (re)order people's behaviours and their relations through media. It is the way platforms conduct repetitious training on people through orchestrating their mediated experiences towards more value.

Methods: To understand how Facebook orders people I undertook four methods: 1) I catalogued different term of use sections for one year, to examine what arguments Facebook makes, and how they change over time; 2) Analysing Facebook's research articles in a method I call platform reverse engineering, meaning that I analyse these articles by searching for specific information that can reveal the way the platform develops the policies that inform their algorithms; 3) I followed several pages that Facebook uses to announce news about its platform, mainly Facebook's News Room; 4) I analysed technology websites, which provided in-depth understanding about Facebook.

Findings:

This paper shows that Facebook's business model guides its advertising policies and influences the way it (re)orders people's experience towards more value by orchestrating a specific type of sociality. The more Facebook knows what people do in particular times and how frequently, the company can turn this data into a product. This data is then packaged for advertisers who pay and bid to intervene in people's mediated experience and shape it towards economic purposes. By using FIS, Facebook conducts rhythmmedia to regulate any problematic rhythms that can harm its business

model and filter/remove these spammy behaviours. Importantly, this paper shows that by rendering people as rhythms and ordering them, platforms can decide what is human, nonhuman and deviant. Because these advertising policies are hidden from 'ordinary users' and the ordering are conducted in the 'back-end' by high-speed trading systems, such procedures raise ethical, legal and social concerns. In particular, such algorithmic ordering shape the way people understand and experience sociality and hence influence their human rights and what they can demand from such companies and policy makers.

Abstract: Patterns of exclusion from and inclusion in digitalizing societies have been recurring themes of analytical interest in social science research ever since the Internet's big breakthrough in western societies in the 1990s (cf. Norris, 2001; Selwyn, 2004; van Deursen & van Dijck, 2014). As a consequence, we have rather good insights into what social groups have, and do not have, access to the necessary technology and skills to manoeuvre the fact that both commercial and public services to an increasing extent are offered through digital channels.

These analyses often identify elderly people as one of the groups that are at risk of becoming excluded (cf. Friemel, 2016; Olsson et al., 2018). Regardless of what sort digital divide we are referring to, either to “first order digital divides” (access to ICTs) or to “second order digital divides” (patterns of usage), elderly users, as a group, appear to have less access to and less varied usage of new ICTs than younger age groups.

There are, however, substantial differences between various groups of elderly users. They are not in any simple way a coherent category of ICT users, and in this paper we pay specific attention to a particular category – the so called silver surfers (Cody et al., 1999; Russell et al., 2008; Chondrie, 2010). A silver surfer is an elderly person who, contrary to the overall picture of elderly users, is both “confident and competent” (Russell et al., 2008) when it comes to ICT-usage. S/he has access

to the right technology and skills and is confident to make good use of the opportunities offered in the digitalized society.

What explains why some elderly users become silver surfers? This paper answers the overarching question by help of analyses of two sets of data covering Swedes above the age of 65. It draws on a) data from a national survey (N = 1264), and b) data from qualitative, semi structured household interviews.

By help of these data, the paper first analyses the silver surfers regarding their access to material, social and discursive resources (Murdock et al., 1992; Olsson et al., 2019). It will further pay attention to their online repertoires (Hasebrink & Hepp, 2017; Olsson et al., 2018), how the successful silver surfers typically navigate in the online environment. Finally, the paper will also track traits in their personal, technological histories (Selwyn, 2004) that have contributed to making them silver surfers.

Title: Ethical issues of Artificial Intelligence on Journalism: a Brazilian perspective

Session Type: Individual submission

Authors:

Name: Eduardo Pellanda

Email: eduardo.pellanda-at- pucrs.br

Country: BR (Brazil)

Affiliation: Pontificia Universidade Catolica do Rio Grande do Sul

Name: André Pase

Email: afpase-at- pucrs.nr

Country: BR (Brazil)

Affiliation: Pontificia Universidade Catolica do Rio Grande do Sul

Abstract: In our contemporary world, the majority of our daily routines flows through digital processes. To order the torrent of data and information according to the interests of users, algorithms emerged as concierges that saves our jobs to think and decide about what to pay attention. Along this, machines also decides for ourselves, from selecting the best pictures from an archive to the best route (and even time) to work. During the last years, a debate emerged about the issues of biased systems, that may reflect a not so fair work ethic and interests of the companies. Broussard (2018) discusses the issues that rises when computers take control, while Costanza-Chock claims that these systems should be designed to avoid any matrix of domination.

The debate should be extended to Social Communication. While the advertising systems used tracking data to present products related to the browsing history of the user, highlighting how privacy changed, Journalism is dealing in the recent years not anymore with combining related stories with others, but creating stories through sensors integrated to networks. It started with apps such as Waze replacing the habit of listening to the radio to hear about traffic and apps that works as news aggregators, and nowadays automation runs inside newsrooms, but it is only the beginning. It is not the case of becoming a digital luddite, but try to draw some lines to help us understand actual scenario and use it correctly.

This proposal is a consequence of the construction of a voice-based system for journalistic purposes in Brazil. During the last two years, a team combining researchers and reporters discussed how some data about the Brazilian presidential election could be automatically transformed into chunks of data and then “read” by Google after interactions with users. The project highlighted how routine decisions later replicated by a newsbot are important. The country is an interesting scenario to think about these limits. Even with the Brazilian Civil Rights Framework for the Internet, a bill created to protect the users, the appetite for technology adoption without proper discussion allows newsrooms to deploy bots without even the consent of the audience.

The study is composed by an initial state of the art about the usage of Artificial Intelligence in Journalism, followed by a multicase study scenario, according to Yin (2013). After this, with the support of contemporary discussion about Journalism in Latin America with ideas from Canavilhas

(2014), Salaverría (2016) and Canavilhas & Rodrigues (2017), the authors will discuss moments when automation may overlap ethical limits and its probable consequences.

Title: Media gender equality regimes: exploring media organizations' policy adoption across nations

Session Type: Individual submission

Authors:

Name: Claudia Padovani

Email: claudia.padovani-at- unipd.it

Country: IT (Italy)

Affiliation: University of Padova

Abstract: This paper contributes to our understanding of gender and media concerns, by focusing on an under-researched aspect: the policy dimension. By making use of a 'super dataset' that has been created in the context of a Swedish funded project - titled COMPARING GENDER AND MEDIA EQUALITY ACROSS THE GLOBE: A CROSS-NATIONAL STUDY OF THE QUALITIES, CAUSES AND CONSEQUENCES OF GENDER EQUALITY IN AND THROUGH THE NEWS MEDIA and lead by Prof. Monika Dierf-Pierre at Gothenburg University - it addresses the nexus between policies to promote gender equality adopted by media organizations across the world, and the broader socio-economic and cultural environments within which the media operate. In so doing, the chapter investigates the wide variation in the adoption of gender-sensitive policies in different countries and regions, relating them to contextual variables that may favour or hinder media organizations' commitment to gender equality through policy adoption. The chapter also explores if, within such variation, it is possible to identify patterns of policy adoption that may indicate different understandings of gender equality and gender mainstreaming, and signal the existence of different gender equality regimes in the media sector worldwide.

The study first acknowledges existing international frameworks that have recognized gender equality and gender mainstreaming as globally agreed upon norms (Finnemore & Sikkink 1998; Kardam 2004; Krook & True 2012) including for the media and communication sector (Gallagher 2011, Padovani & Pavan 2017, Padovani 2018); and reflects on the extent to which those frameworks have influenced both policy and research interventions over the last twenty-five years. Making an effort of conceptual clarification, it discusses the nexus between equality norms, policy developments and issue framing (Bacchi 1999, 2009) in the gender and media environment, and suggests elements for a research agenda based on media gender equality regimes as an analytical proposal (Section 2).

Building on previous findings from international studies that have investigated gender equality policies adopted by media organizations (Section 3) and working through data collected for the IWFM Global Report on the Status of Women (2011), the analysis focuses on 59 countries, representative of all world regions, and explores – through a cluster analysis - patterns of gender-related policy adoption by media organizations; as well as possible statistical correlations between policy developments and broader socio-economic, political and cultural conditions (Section 4).

In the IAMCR presentation we shall present the main findings (Section 5) concerning the interplay of contextual factors and the adoption of different types of gender-sensitive policy by media

organizations in specific countries; reflect on how different patterns of policy adoption may signal different understandings of gender equality and strategies to address them; and suggest directions for future operationalization of the media gender equality regimes approach. This is view of fostering a policy-focused research agenda, and making scholarly knowledge in this area more meaningful to policy actors and to the media themselves.

Title: Signals Intelligence meets Artificial Intelligence: Surveillance, disinformation and power in the public sphere

Session Type: Individual submission

Authors:

Name: Ronja Kniep

Email: ronja.kniep-at- wzb.eu

Country: DE (Germany)

Affiliation: Berlin Social Science Center (WZB)

Abstract: Recent debates on the nexus between artificial intelligence (AI) and surveillance have focused on the practices in the field of policing. However, also signals intelligence (Sigint) agencies like the National Security Agency (NSA) increase their budgets to expand the use of AI for their data intensive surveillance programs. Given that Sigint agencies have access to much more data than humans can possibly analyse, AI promises to be particularly useful to make sense of these large, unstructured data sets. Concurrently, intelligence agencies prepare to engage in or counter “deep fakes”, that is AI-enhanced disinformation.

This paper explores (1) how intelligence agencies use and could use AI to spy, (2) what is at stake for democracies when AI meets Sigint, and (3) what are possible responses in terms of intelligence governance.

On an empirical level, the paper makes two contributions. First, it helps understanding contemporary forms of communications surveillance by analysing leaked material, public government documents, and media coverage. For example, the NSA has introduced algorithms to decide whom to grant privacy rights, thus determining “algorithmic citizenship”. Other AI systems are implemented to decide what counts as suspicious behaviour that could infringe on the right to freedom of the press. Second, the paper builds on an explorative analysis of intelligence oversight regimes in different European countries in order to illustrate and discuss possible responses to automated surveillance. Examples of these regulatory measures or oversight arrangements addressing AI are the Netherlands, who introduced a “human-in-the-loop safeguard” for automated decision-making by intelligence agencies; or France, where the intelligence oversight body engages in an ex-ante review of AI experiments and other data analysis tools.

On a theoretical level, the paper draws on Titus Stahl who developed a critique of surveillance that focuses on political power in the public sphere instead of solely relying on a liberal privacy concept that is usually related to the idea of protecting individual freedom. Besides infringing privacy, contemporary forms of secret and automated surveillance interfere with communicative freedom, understood as a collective good of democratic societies that comprises a free public sphere and freedom of the press. Considering that intelligence agencies engage not only in surveillance but also take so-called active measures like hacking or disinformation, the concepts of communicative freedom and power in the public sphere represent an important addition to privacy concerns when addressing the problem of secret, automated surveillance.

Adding another layer of secrecy to an existing black box, the introduction of AI to intelligence activities increases the gap between technically complex, transnational surveillance on the one hand, and resource-poor, national oversight on the other hand. By collecting available information on secret practices, reflecting on their impact on democratic principles, and discussing the possibilities to increase accountability of AI in Sigint, this paper will make important theoretical and empirical contributions to address this gap.

Abstract: In this age of ubiquitous computing and big data, many aspects of our daily life are now turned into data. This process of datafication makes our lives subject of quantification (Cukier & Mayer-Schönberger, 2014) and algorithms increasingly impact our everyday life (Willson, 2017); they propose our next dating partner, how to drive and what movie to see. Next to preferences, algorithms also decide more important themes like credit worthiness, the current value of our market funds (Steiner, 2012) and predictive policing (Ferguson, 2017). In this way, algorithms are increasingly shaping how we see, experience and understand the world (Diakopoulos, 2014; Kitchin & Dodge, 2011; Willson, 2017). Beer (2017) shows the disruptive effects of algorithms on our social and economic life and calls for critical studies regarding their societal effects with other authors like Kitchin (2017). A significant amount of attention has been paid to algorithms in domains such as justice, finance, media and healthcare. But datafication has started to arise in our cities as well, making them subject to this algorithmic shaping which is not only affecting the city itself but also how we experience them (Shaw & Graham, 2017).

This paper therefore focuses on the emergence of algorithms driven by data from the public sphere, meaning algorithms driven by data about our cities. The growing body of digitally-augmented cities with every shop, traffic light and tree having its own representation in lines of code, means that the interaction between people and the city will gradually become mediated by algorithms acting upon this city data. However, we do not yet understand the reshaping of the city experience through algorithms and this begs the question, how are city algorithms shaping the experience of city dwellers and visitors?

By means of a structured literature review, this paper investigates theoretical perspectives on studying algorithms in their societal context in order to understand the current state of the art and identify possible avenues for further developments in this field.

The theoretical foundations of this research stem from software and media studies (Bucher, 2016; Gehl, 2014; Gillespie, 2017; Kitchin & Dodge, 2011). Since we assume that algorithms are reshaping city experiences and that algorithms are human made artefacts, this study approaches this topic from a social constructivist point of view. In order to scope our research, we will define smart cities, algorithms and the authors involved in algorithm studies, software studies and media studies.

This paper will present an overview of perspectives to look at the increasing influence of algorithms on city experiences and how this is tackled from different disciplines.

Title: Network effects as a determinant of digital services selection, and its effects on privacy considerations: a small scale study

Session Type: Individual submission

Authors:

Name: Eduardo Villanueva-Mansilla

Email: evillan-at- pucp.pe

Country: PE (Peru)

Affiliation: Pontificia Universidad Católica del Perú, Department of Communications

Abstract: Any potential new approach to digital media research and data justice activism leads towards a understanding that users should, at some point, start opting for services that provide them with more control over their privacy and data. Of course, these demands are subject to viability of using such services. As many people adopt digital media as a necessity to communicate and participate in cultural consumption, the question arising is how aware they are of the privacy / service tradeoff, and how network effects influence their decision-making.

In this particular case, a small group of highly connected young people from a private university in Lima, Peru, were asked about their decisions to use a given digital service; their awareness of the potential consequences, short and long-term, for their privacy, autonomy and future control of their data; and the network effects that shaped their decisions. After the results were tabulated and considered, volunteers were asked to consider using more privacy-oriented services, which will in many cases require that they act as promoters of these new connections among their friends and family.

There are at least three network effects identified, at different degrees: decisions taken at a very young age (most of the respondents started using digital services at 13 or around that age); information demands from services and content providers as available in specific digital services; and the amount of information already shared through the services, although this specific effect is weakening for “old-fashioned” services like Facebook. Transactional service history is not seen as particularly critical although it appears to be so after further discussion.

Results indicate that network effects trump privacy concerns in the short term, as the awareness of privacy related issues is low, based on the reality of such concerns being not immediately relevant to this young set, as things stand right away. Network effects are in fact so strong that the switch to a different service becomes a chore and the preference is to stop attempting to proceed, although there are some converts basically because they want to try new services, rather than based on an immediate concern for privacy.

While this is a small, exploratory study, it is the template for a larger, representative one, that can also be easily replicated anywhere where a significant number of people is being perceived as intense users of digital services. The results, even considering their exploratory nature, present interesting challenges for research: is there a way to break through network effects? Are these network effects the result of small-world networks, or rather a larger-world issue that shapes

perceptions and effective usage simultaneously? And finally, how to promote a strong privacy oriented data justice understanding of digital media if the immediate benefits of cultural consumption and communication are overwhelming any potential individual and social concern for the actual consequences of these actions?

Title: Análisis de calidad en sitios web desde la perspectiva de la comunicación y los cibermedios: automatización y aspectos éticos

Session Type: Individual submission

Authors:

Name: Alejandro Morales Vargas

Email: alejandro.morales-at- upf.edu

Country: ES (Spain)

Affiliation: Department of Communication, Universitat Pompeu Fabra

Name: Rafael Pedraza-Jimenez

Email: rafael.pedraza-at- upf.edu

Country: ES (Spain)

Affiliation: Department of Communication, Universitat Pompeu Fabra

Abstract: Este trabajo se sitúa en el ámbito de la calidad de los sitios web. Para su evaluación existen diferentes métodos y herramientas (Kurosu, 2015; Sauro, 2010). Algunos son de uso general, es decir, para evaluar cualquier tipo de sitio (Codina, 2008), y otros están especializados en un sector concreto (Pedraza-Jimenez, Codina, & Guallar, 2016). Asimismo, estos sistemas de análisis presentan diferentes niveles de automatización (Hasan & Abuelrub, 2011): desde ser aplicados de manera manual por humanos expertos (Quiñones & Rusu, 2017) hasta estar completamente automatizados mediante softwares con inteligencia artificial o Machine Learning (Jayanthi & Krishnakumari, 2016). ¿Cómo son los dedicados a evaluar los medios digitales o cibermedios? ¿Consideran parámetros propios del periodismo y las políticas de comunicación? En esta investigación se analiza la producción científica sobre calidad web, con el fin de identificar y caracterizar las propuestas realizadas desde la comunicación. Los objetivos específicos son: identificar cuáles son los trabajos académicos y autores más relevantes; realizar un análisis comparativo de las diferentes disciplinas que abordan la materia, dimensionando la presencia de las facultades y departamentos de comunicación; identificar los artículos sobre herramientas especializadas en sitios web de medios; examinar sus metodologías de evaluación; y, finalmente, revisar si en sus dimensiones de calidad consideran aspectos éticos o deontológicos y si hacen referencia a políticas internacionales de comunicación y tecnología. Para ello, se buscaron y recuperaron artículos sobre calidad web en revistas indexadas por las bases de datos Web of Science y Scopus, entre los años 2000 y 2018. En total, se revisaron más de ochocientos trabajos. En estos se estudiaron elementos tales como las citas recibidas y la afiliación de sus autores, y se clasificaron según su disciplina y el tipo de análisis que proponen. Además, se realizó una revisión sistematizada de literatura para detectar la mención a parámetros sobre implicancias éticas o sociales –como enlaces engañosos, protección de datos, corrección de informaciones, entre otros–, y referencias a directrices, estándares y políticas internacionales sobre comunicación y tecnología. Como parte de los resultados se puede mencionar que entre los autores más citados están Nielsen, Shneiderman y Krug, y una parte muy minoritaria del total pertenece a facultades o departamentos de comunicación, predominando los de otras disciplinas, como la computación, la informática médica y el comercio electrónico. Se detectó una treintena de herramientas específicas para evaluar calidad web en cibermedios, en las que predomina la evaluación experta (mediante test heurísticos)

frente a procedimientos automatizados. Además, se constatan muy pocas referencias a asuntos deontológicos, y que en ningún caso se citan políticas de comunicación y tecnología internacionales como las de UNESCO. Estos resultados revelan un escaso interés en el estudio de la calidad web por parte de los académicos del ámbito de la comunicación. También que las herramientas específicas para la evaluación de cibermedios son escasas y, en su mayoría, no consideran aspectos éticos. Este hecho llama la atención en un momento en el que la industria de los medios, y en particular la prensa, afronta una crisis de financiación y credibilidad a nivel global. Esta investigación forma parte del proyecto CSO2015-64955-C4-2-R (MINECO, España/FEDER, UE).

Abstract: The rights-based perspective on ethical and political questions presented by the new digital media recently has gained attention in academic and political debates. Calls for the protection of citizens' "digital rights" have resulted in reports and declarations by governments, international bodies, and activist organizations over the past two decades or so (Padovani & Calabrese 2014; Redeker et al. 2018). According to international surveys (Newman et al. 2018; Eurobarometer 2018), citizens expect governments, publishers, and platforms, to come up with solutions to communication challenges such as disinformation. However, thus far there are more academic, public, and policy debates than sustainable legal and policy solutions.

This is not surprising given the complexity of these rights: They have many context-based variations, they keep evolving with technological advances, and they are operating on the cusp of theory and praxis. Communication rights can refer to legal norms but are not principally legal constructs; instead they are related to the freedoms that have special significance to societies and individuals (Sen 2004; Jørgensen 2013). Yet, communication rights are not only abstract principles but they form the normative basis of media and communication regulation in many countries.

The working paper presents a way to operationalize communication rights, including a systematic framework for analysis, and a pilot study of comparative application in several national contexts. The study utilises the much-cited, and amended, model of media systems by Hallin and Mancini (2004) and the modelling of the Nordic countries as Media Welfare States (Syvertsen et al. 2014) as starting points for comparisons. For the pilot, four countries have been selected: Finland from Northern Europe, the United Kingdom from Western Europe, Spain from Southern Europe, and Hungary from Central and Eastern Europe. The aim is to look at differing media systems in Europe and examine how and to what extent the interplay between national capabilities, cultures, histories, policies, politics, resources, and structures, and global forces influences communication rights in the digital era.

Title: Data citizenship in Latin America: think globally, act locally

Session Type: Individual submission

Authors:

Name: María Segura

Email: maria.soledad.segura-at- unc.edu.ar

Country: AR (Argentina)

Affiliation: UNC / CONICET

Abstract: Even if data capitalism involves dynamics that transcend the North-South divide, it develops differently given huge political, economic, social and technological inequalities in the context of digital capitalism. This is why concepts about data capitalism and citizenship in the North need to be approached gingerly. Also, we need to carefully examine experiences in the South in support of control and emancipation, and to be cognizant of particularities and continuities. (Waisbord & Segura, 2019)

With these aims, I will discuss the dimensions of data activism in Latin America. The main question is: Which are the problems it faced, its demands, framework, kind of organizations, and impact? I will analyze how progressive actors of civil society press for the formulation of data rights-based public policies, which put limits on state and market abuses in public communication, and that protect and guarantee the citizen's rights to communication and culture.

Although in recent years there has been multiple works on telecommunication policies, and on digital divide in Latin America, there are still few research about digital and data activism that promote rights-based public policies in the region.

I will address this question considering that the formulation of public policies is a conflictive process involving various social actors with different interests, strategies, resources and powers. (Freedman, 2008) It is also necessary to remark that civil society is not an unified whole, but it is complex, conflictive and heterogeneous. (Sorj, 2010) Just like hacktivism, stactivism and information politics, data activism is a form of digital collective action. It politically uses technical expertise and online action to promote more egalitarian access and management of data, engages with new forms of information and knowledge production, and challenges dominant understandings of datafication (Milan & van der Velden, 2016).

The methods used in this research are: CSOs' documents analyzes, and interviews to their participants.

The main findings show that recent experiences in Latin America suggest two types of data activism differentiated by goals and spheres of action: Social data activism that uses various tactics, including data harvesting, data advocacy, and data-grounded reasoning, for social change; and Data-rights activism that is represented by social movements that promote rights-based public policies regarding data production, protection and management, and aim to regulate data extractivism by corporations and states. Their actions are analogous to media movements that championed communication rights in relation to broadcasting policies during the past decades. One of the theoretical contribution of this work is the following: Data citizenship in the South is not bounded by political geography or particular socio-histories, even if it is steeped in local cultures of knowledge and focuses on specific domestic concerns. Data activism represents a hybridization of perspectives, organization forms, and tactics. Just like other media movements in Latin America

(Segura & Waisbord, 2016), it is mindful of local problems and conditions and open to borrowing positions and tactics from other regions of the world, as they confront local and global aspects of data capitalism.

Title: [Panel] The increasing importance of competition law and policy in communications: Evidence from various fields, Panel description

Session Type: Panel Submission

Authors:

Name: Karen Donders

Email: Karen.Donders-at- vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Name: Natascha Just

Email: n.just-at- ikmz.uzh.ch

Country: CH (Switzerland)

Affiliation: IKMZ, University of Zurich

Abstract: The importance of competition law and policy in communications has steadily increased over the past decades. It was driven by liberalization and the convergence of communications markets and has peaked most recently in view of trends like platformization, datafication and the attendant commodification of users. Competition policy governs the behavior of companies and, at least in the EU, the behavior of national governments through instruments like merger control, as well as antitrust and state aid rules. Google has, for example, been repeatedly fined for abusing its dominant position in search and related markets such as ad services. When governments give subsidies to public broadcasters, invest in broadband schemes or exempt big multinationals such as Apple from taxes, they might find the European Commission deciding on the illegality of such State aids.

The application and increasing importance of competition law and policy in communications markets has, however, been controversial. At first mostly with regard to its scope and its adequacy for dealing with markets where also non-economic goals prevail, and increasingly regarding its general adequacy for coping with radically transformed media markets, among other things, with economically strong internet platforms and their business models.

Altogether, there seems to be a gap between what is needed and what is being done (or even what can be done) within the confines of competition policy.

Pressing issues regard the questions of whether competition policy as it is today is adequate to (1) promote pro-competitive effects and to chastise anti-competitive effects; (2) whether it can and should be employed for the safeguarding of public-interest objectives (other than economic) that have been more central to traditional (national) media policies, and (3) whether or not other areas may better be served by competition law than by regulation, e.g, privacy protection or net neutrality.

The goal of this panel is to work specifically on this gap between what is needed to ensure not only competitive markets, but also markets that deliver an added value for society. This is done with several contributions that cover varying aspects and parts of competition policy:

- 1) Competition law vs. competition regulation: Which suits platform markets best?
- 2) The way in which (or not) European State aid control of public broadcasters' funding takes into account the internationalisation of broadcasting markets.

3) What are the pro- and anti-competitive claims driving the European Commission's platform policies?

4) What are the effects of network neutrality regulation and competition policy on the evolution of the Internet

This panel responds in numerous ways to the CP&T section call. It deals with an important, yet often neglected policy domain in communication sciences that has massive effects on the media, electronic communications and ICT markets. Competition policy is a part of media and communication governance, it plays a (potentially) crucial role in terms of competition, but also in terms of other aspects like pluralism and diversity, data protection and privacy, fake news, online advertising and increasing targeting, or net neutrality.

The panel organizers (Karen Donders & Natascha Just) will act as moderators and discussants.

Title: Algorithmic selfie: on the right to assess algorithmic identity and to exercise Right of Access

Session Type: Individual submission

Authors:

Name: Ana Pop Stefanija

Email: anapopstefanija-at- gmail.com

Country: BE (Belgium)

Affiliation: Master student at Vrije Universiteit Brussel

Abstract: This paper aims to investigate two interrelated questions. The first objective is, based on empirical research and data gathered from "algorithmic devices" (social media, apps and data brokers), to investigate the datafication and profiling practices of the data collection ecosystem. The analysis of the data further serves to assess the assumed algorithmic identity and a database of intentions (Jarret, 2014) assigned by platforms and a selection of data brokers. This enables additional insights into the usability and the level of transparency offered through the available instruments made available by platforms themselves (such as Facebook's ad settings and "Why am I seeing this ad" section).

The second aim is to investigate, test and discuss the implementation of the GDPR, in particular the "Right of Access of the data subject" guaranteed by the Article 15 of the GDPR and related Articles and Recitals. This implies exercising the right to obtain data and meaningful information behind the processing purposes, categories of personal data processed, recipients of- and origin of the data and similar.

The methodological framework adopted is that of self-observation and technographic approach (Bucher, 2012), with data collected using both API-based tools as well as manual data recording. In opposition to the practice of dataism and reliance on Big data (Van Dijck, 2014), this research is grounded in "small data" (boyd & Crawford, 2012), as most appropriate data source to investigate the main research questions. Focus on small-scale data (where the researcher is the research/data subject) and adopting technography as a framework, enables an investigation into the operational logic behind datafication, ads personalisation and profiling, and provides insights to understand the workings of the algorithmic devices, without the methodologically difficult task to un-blackbox the algorithms. On the other hand, the exercising of the Right to Access gives insights into the applicability of the GDPR in practice and the (in)sufficiency of the instruments proposed.

In dealing with these questions, the theoretical framework and discourse of datafication and surveillance capitalism will be adopted. The issues of data protection, algorithmic transparency and accountability will be brought into focus as well, as interrelated and underlying concepts.

Preliminary results show that, although platforms offer some tools for better transparency regarding targeting, profiling and personalisation, the underlying algorithmic process is still very much obfuscated. With little offered to understand the reasons behind there is no real opportunity to object and contest the outputs. Exercising the Right of Access also shows tendency towards partial, lengthy and slow disclosure process, often being either incomplete or not providing meaningful information, thus not serving the purpose assigned under GDPR.

The contribution of this paper is in the innovative approach towards investigating datafication and automated profiling and personalisation. It will also significantly contribute towards the policy evaluation of the GDPR, as it will not only assess the effectiveness of the

instruments, but also it will discuss possible improvements in regulation for more transparent and meaningful explanation.

I wish to be considered for a joint CPT/ESN session.

Abstract: The internet provides a space for sharing digital information and communication. This space is built on a physical infrastructure owned by a variety of state and private actors, foreign and domestic, that reflect a multitude of interests. In consequence, internet services are no resource that governments or any other political actor have necessarily and automatically at their free disposal. This paper presents TOSCO, a new dataset on ownership of internet service providers (ISP) and control that allows for comparative large-N analysis of the determinants and effects of varying ownership structures in the transforming context of African countries from 2000 to 2016. Next to a detailed discussion of the conceptualization and operationalization of ownership as a variable, we explore the significance of this variable in explaining patterns of internet penetration across the African continent. Based on these findings, we briefly outline how TOSCO can be used to investigate the existence of ownership effects in the telecommunications sector, i.e. whether there are systematic performance and control differentials between state-owned ISP and privately-owned multinational ISP, among other categories.

Keywords: Africa; internet architecture; internet service providers; internet control; owner identity

Title: Regulating social media in China

Session Type: Individual submission

Authors:

Name: Xiaoyan Chen

Email: chenxiaoyan-at- xmu.edu.cn

Country: CN (China)

Affiliation: School of JOurnalism and Communication, Xiamen University

Name: Xiuqin Zeng

Email: zengxq_celery-at- 126.com

Country: CN (China)

Affiliation: School of JOurnalism and Communication, Xiamen University

Abstract: This paper examines the existing regulatory framework and the ways in which it applies to social media use in China, highlighting China's emerging internet regulatory models and challenges agencies face in implementing them, as well as implications for the development of social media in China.

This paper groups China's regulation of social media into five types: regulations and laws, administrative measures, technical mechanisms, agenda control, and industry regulation. Laws and regulations to some extent can be comparable to statutory regulation, which can include laws enacted by the People's Congress and the Standing Committee of the National Congress, judicial interpretations issued by the Supreme People's Court and the Supreme People's Procurate. Administrative measures include regulatory agencies and activities, such as the special Actions or campaigns. Technical mechanism includes the well-known great firewall, Filtering, licensing, data retention. Agenda control refers to measures employed to set the official agenda. With the expansion of social media and threatening stricter governmental control, more and more industry driven regulations impose impact on Chinese social media. This paper discusses all these five types of regulations and their implications to the development of the social media in China.

In general, this paper illustrates the following points.

1. China's social media policy is an offspring of its internet and media policies. Traditional Chinese media and internet regulations, ranging from licensing and registration, to data retention requirements, content prohibition and filtering, are theoretically applied to social media.
2. Chinese social media is multi-functional, it plays the role of information intermediary as well as economic platform (such as wechat can be used for e-commerce). To some extent, administrative and legal intervention come after social media crimes and misinformation, such as non-bank payment, social media advertising, social media pornography, and social media fraud.
3. Chinese traditional internet policies regulate internet portal more than individual users, thus, social media are required to shoulder gatekeeping liabilities as online platforms.

4. Chinese social media begin to take the initiative to regulate the industry. Some of the self-regulations, such as Wechat's measures on copyright, online rumors and false news, do help to discipline the market and to some extent lessen government intervention.

5. Much of research on China's media censorship and governmental internet regulation draws from Western perspectives of technology, socio-economics, and freedom of speech, this paper will investigate the social media regulation from cultural context as well as political-economic perspectives.

Abstract: Facing the current rush towards artificial intelligence (AI) by private tech companies such as Google, Facebook, Baidu or Alibaba and current public media attention for the subject, governments around the globe have proclaimed to partake in a global AI race. During the past four years national AI strategies have been popping up all around the globe, identifying potentials and risks that go along AI development, leapfrogging AI research through huge sums of investments and proclaiming the aim to steer AI future through policy measures.

In the present paper we identify these national AI policy papers as a peculiar hybrid between policy and discourse. They are at the same time tech policy, national strategic positioning and an imaginary of public goods. Conceptually the paper is informed by the the sociology of expectations, socio-technical imaginaries and myths. Empirically we analyse the sociotechnical narratives articulated by AI policy documents of four key players in the field, namely China, USA, France and Germany. The discourse analysis of the documents' rhetoric and argumentative structures show how contested and vague policy documents establish a seemingly inevitable technological pathway towards AI deployment across almost every societal sector. Although the final imagined sociotechnical orders differ across the compared countries, we identify the following themes that serve as shared building blocks in the process of AI imaginary construction in all four countries:

- (1) Situating AI in a grand historical legacy of technological progress and celebrating a "revolutionary" AI break-through moment, the strategy papers (re)create a myth of determinist technological development, and ascribe agency to a technology that "befalls" our societies.
- (2) Talk about an undecipherable AI future opens a window of uncertainty which invites for clarification and leadership intervention. National leaders coin uncertainty into an opportunity to take initiative and to mobilize societal attention in order to co-produce the very futures they envision.
- (3) AI Socio-technological imaginaries as a projection of political culture: The national AI visions unravel different national idealizations of social life and social order. Deconstructing the call for

leadership we identify visions of collectively desired lifestyles that are projected onto AI technology.

(4) Locked in path dependencies. Socio-technological imaginaries materialize in the drafting of policies, the mobilization of industries and the allocation of resources. Thus, the imaginaries are not only be understood as constitutive but as performative: they create situations of irreversibility as investments ask for return and political promises have to be met.

Notwithstanding the obvious differences between the substance of national AI strategies, this analysis identifies a surprising consistency in the narrative construction of the AI imaginaries. As societies and policy struggle to keep up with the perceived dynamic changes, the AI pathway seems to constitute a particular worrisome example of technology-driven, over-hyped development, that is rather fuelled by idealizations, projections and myths around AI than by normative and political reflections on how to serve public welfare.

Title: The datafied university: Critical questions about academic analytics and the production of student privacy

Session Type: Individual submission

Authors:

Name: Mihaela Popescu

Email: popescum-at- csusb.edu

Country: US (United States)

Affiliation: California State University, San Bernardino

Name: Javier Torner

Email: jtorner-at- csusb.edu

Affiliation: California State University, San Bernardino

Abstract: Higher education institutions have become important producers and consumers of big data. The global academic analytics market is expanding rapidly. Educational institutions increasingly incorporate data-driven predictions about students in areas as crucial as admissions, financial aid, advising, or student retention.

Several phenomena are converging to ramp up demand for student data. First, performance-based funding for public universities ties legislature-determined budgets to student success initiatives such as increasing retention and graduation rates. Embedded in the broader corporate school reform agenda, funding imperatives prompt universities to invest in predictive analytics that claim to identify the likelihood of failure among students and single them out for additional intervention. Second, trendy concepts such as “personalized learning” create a market for vendors of academic technologies whose business proposition is not only learning improvement but also (and often unbeknown to university partners) the marketing of secondary products that use student data (Roberts-Mahoney et al., 2016). Last but not least, data-driven predictions, such as the anticipated growth of a major, are in high demand as tools for more efficient decisions in all areas of academic administration.

As a result, academic technologies and enterprise systems currently used in campuses everywhere have become “calculative assemblages” (Rieder, 2017): they track, link, and aggregate student past and current activities across a variety of areas—course registration and attendance, learning activities online, housing and dining activities, health data, advising activity, or even physical movement on campus—and use such data to build predictive models of student success.

Scholarship on student privacy in a “datafied” school environment is at the beginning. This two-year study investigates how university data custodians negotiate and communicate the tension between student privacy, on the one hand, and student data collection and mining as an ingredient of campus efficiency and innovation, on the other hand. The study uses 26 semi-structured interviews with data custodians at every level (from LMS administrators to Chief Information Officers) collected from several campuses inside the California State University system. Our analysis employs a grounded theory approach to identify the main themes that encapsulate ethical tensions regarding student data handling.

In this paper, we focus on four major tensions extracted from the interviews and discuss their ethical implication: (a) the varied understandings of student privacy, from data security to privacy understood as a student’s ability to determine his or her academic trajectory; (b) the perceived balance of benefits and concerns involved in student profiling, and its implications on the creation of baseline expectations about students as a basis for intervention (including who those expectations are shared with); (c) the tensions between a data steward’s understanding of the complexities of a situation and the need to oversimplify a situation for decision-making and communication purposes; (d) the interplay between a normalized culture of student metrics and considerations of fairness in academic and administrative decision-making. We conclude with recommendations regarding transparency, data care needs, communication, and social justice considerations in university policies regarding student data.

Title: Which is to be master' Competition law vs regulation in platform markets

Session Type: Panel Submission

Authors:

Name: Natascha Just

Email: n.just-at- ikmz.uzh.ch

Country: CH (Switzerland)

Affiliation: IKMZ, University of Zurich, Switzerland

Abstract: Competition law and policy historically played a minimal role in the media and communications industries, because these markets were owned by the state and/or regulated as (state) monopolies, thus protecting them from competition. Liberalization ended monopolies and brought about a first wide array of sector-specific competition rules targeted, among other things, at opening telecommunications markets or at controlling the structure of media industries through ownership rules. At the same time, competition law gained in relevance, leading to a system of formal concurrent application of competition law and sector-specific (competition) regulation. There was a general agreement among policymakers that in due course, i.e. as markets become more competitive, there would be an increased reliance on competition rules, while sector-specific rules would be gradually phased out. This acknowledgement was contested, especially with regard to media markets, where deregulatory efforts worldwide were expected to result in concentration processes. For the first time, this brought to the fore the question of which instrument is to be master in communications. The dispute revolved around the different policy priorities and normative goals each instrument pursues: For competition law, the dominant, albeit critically discussed, view holds that its goal is to protect competition and to enhance consumer welfare and economic efficiency. To the contrary, regulation most often aims at public-interest considerations other than economic competition such as media diversity.

The question of relationship between regulation and competition law has recently re-emerged with regard to platform companies and, for example, privacy protection. In essence this is a question of whether data, consumer and privacy protection are a case for competition law or if and when they should be left to regulation. While these discussions are in a sense comparable to earlier debates on such relationships, e.g., the above-mentioned case of media concentration, they thus far do not involve a comparable struggle over normative standards and value choices. This is also due to the fact the former were predominantly focused on abolishing sector-specific competition regulation in favor of the sole application of competition law, while the discussions now center more on the efficiency and respective strength of each area of law and the allocation of competencies.

Drawing from these two instances of controversy over instruments, this paper theoretically (1) assesses the relationship between regulation and competition law in electronic communications in general and with regard to the increasing platformization of markets in particular, (2) pursues the questions of which instrument is adequate for what policy goal, and (3) assesses how a potential division of labor could look like. Altogether, this paper argues that instead of focusing on the instrument, the focus should be on the ends of communications policymaking. Communications policymaking pursues various ends—each with their own justification and legitimation—and there are diverse instruments available to do this. This paper calls for a concurrent application of both. The emphasis needs to be shifted to balancing the appropriate mix of competition law and regulation in

order to apply each instrument where it fits best, especially to adequately cope with economically strong Internet companies.

Title: EU State aid control of public broadcasters' funding: How is the European Commission evaluating public broadcasters' potentially market distortive role in an internationalising market place'

Session Type: Panel Submission

Authors:

Name: Karen Donders

Email: Karen.Donders-at- vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Abstract: Ever since the early 1990s, the European Commission has been evaluating the funding of public broadcasters across Europe. Whether funded on the basis of a license, subsidies or a combination of public and commercial funding, the assumption is that state aids may distort the internal market and can only be allowed in very exceptional circumstances. This concretely means that the European Commission determines on a case-by-case basis and setting out from the 'Broadcasting Communication' whether the funding of public broadcasters such as the BBC, NRK, France Télévisions, or RAI is in line with the Treaty on the Functioning of the European Union (article 107(1) specifically). So far, over 30 cases have been closed. Often, this comes with Member States adapting parts of their public broadcasting policies to meet European requirements. The so-called public value tests of new media services, the limitation of financial reserves accumulation to 10% of annual grants, the separation of public and commercial revenues in accounts, etc. are all examples of such requirements.

State aid assessments have had a largely national focus. Usually, the European Commission acts after a complaint of a competitor or multiple competitors of a public broadcaster. They investigate and engage in discussions with the national government (not the public broadcaster!). Media markets are not national anymore though. Public broadcasters increasingly deliver services in a market that is somewhat hostile to them. While pressure on advertising revenues might be less of an issue for public broadcasters that are mainly funded on the basis of a license fee or direct government subsidies, the intensification of merger and acquisition activities, the subsequent further internationalisation of markets and the organisation of media markets around fairly closed platform infrastructures owning data of users, is also an issue for public broadcasters. Is the European Commission aware of this or are they still analysing the possibly market distortive nature of public broadcaster funding in an exclusively national market analysis framework?

The question is relevant because public broadcasters might be one of the few governance tools to safeguard important non-economic values in an internationalising media environment. In case, the European Commission sticks to rather old-fashioned analysis paradigms, they might be missing the point and in fact not protect the interests of European consumers.

The analysis is based on a qualitative content analysis of European Commission decisions issued between the 1990s and the beginning of 2019. The analysis of 41 documents also allows to discern trends, if these are to be observed at all.

Title: What are the pro- and anti-competitive claims driving the European Commission's platform policies'

Session Type: Panel Submission

Authors:

Name: Adelaida Afilipoaie

Email: Adelaida.Afilipoaie-at- vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Abstract: The European Commission's digital single market policies are becoming increasingly concerned with the impact of so-called 'platforms' on competition in the internal market. Whereas the European Commission acknowledges the contributions of platform companies such as Amazon and Google to innovation and consumer welfare, it also sees actual and potential damages occurring from their powerful position in media, electronic communications, ICT, retail, social media, search, etc. markets. As a consequence, it has adopted a threefold approach to deal with platforms. First, it has introduced platform-related rules in existing legal frameworks such as the Audiovisual Media Services directive. Second, it has published a draft communication on 'platform to business' (P2B) behavior, spelling out transparency and fair trading rules. Third, it aims to strengthen the enforcement of its anti-trust rules in this area. It is particularly this latter domain that is focused on in this paper. We do not focus on the actual outcome of the application of anti-trust rules, but more so on the claims made about the pro- and anti-competitive effects of platforms that inform both agenda-setting and actual decision-making.

The main question asked in this paper is on what grounds the European Commission feels 'special attention' for platforms is needed under anti-trust policy? To answer this question, we, firstly, carried out a literature review on the pro- and anti-competitive effects attributed to platforms. A classification is made on the basis of this review. This classification is, secondly, confronted with the European Commission's view on the matter. Speeches, press releases, proposed soft or hard law, other European Commission interventions are subjected to a qualitative document analysis. We argue that the European Commission is (1) rather confused about what a platform actually is; (2) vague concerning the pro- and anti-competitive effects of platforms; (3) dominantly reliant on ex post enforcement of anti-trust rules; and (4) rightfully or not hesitant to move into extensive ex ante regulation of platforms. We, moreover, observe that the European Commission's stance is largely inspired by legal and economic experts. There is indeed a growing attention for privacy and data related issues. But, more wider concerns about the architecture of our media and communications industries, freedom of speech, cultural diversity, pluralism, local content, etc. are largely missing from the debate. Therefore, more research of communications scholars on this issue is warranted.

Id: 21598

Title: Effects of network neutrality regulation and competition policy on the evolution of the Internet

Session Type: Panel Submission

Authors:

Name: Johannes M. Bauer

Email: bauerj-at- msu.edu

Country: US (United States)

Affiliation: Department of Media and Information, Michigan State University

Abstract: This contribution explores the multifaceted roles of network neutrality regulation and competition policy in safeguarding an open, non-discriminatory Internet. Network neutrality policy pursues political and economic objectives that are challenging to reconcile and may require a mix of policy instruments. However, debates are often complicated by differences what the key attributes of the socio-technical system Internet are and how network neutrality can support them. The political goal to keep the Internet free of state or corporate gatekeepers is broadly shared but the specific forms such protections should take and how they can best be implemented are controversial. Similarly, while there is widespread acknowledgement that competition in the Internet ecosystem is an important tool to mitigate dominance and facilitate “permission free” innovation by application and service providers, there is disagreement as to what constitutes such effective competition and how its conditions should be enforced.

During the past decade, countries have adopted different policy approaches that may use both sets of instruments but typically privilege one over the other. In most cases, legislative and/or regulatory safeguards were established, with competition policy relegated to an ancillary role. One major exception is the United States, where, after the elimination of specific network neutrality regulation in 2018, competition policy and consumer protection are first instruments to address distortions of the marketplace while regulation plays a secondary role. Network neutrality regulation is typically rooted in the notion of strict neutrality. Supporters of “strict” neutrality assert that each datagram should be treated in exactly in the same way to assure an Internet that is agnostic to content, speakers, and devices. In most practical implementations, exceptions to this general rule may be granted, typically subject to regulatory scrutiny and approval.

Models that primarily rely on competition policy often support the concept of “weak” neutrality. Supporters of “weak” neutrality argue that differentiation of quality of service will be necessary to accommodate increasingly heterogeneous applications and services but that safeguards against undesirable discrimination are needed. This is in line with a basic tenet of competition policy, which has long recognized the importance of price and service differentiation as an inherent attribute of workable competition. Neither regulation nor competition policy have fully developed robust tools and practices of dealing with multi-sided and platform markets as are typical for the present Internet ecosystem. Of the two, competition policy offers a broader framework within which the dynamics of rivalry in such markets can be assessed.

There is considerable theoretical and growing empirical evidence that the best policy approach would combine insights from both policy domains by allowing differentiation (e.g., of service quality) and multi-sided pricing (e.g., contributions from players other than consumers) while establishing safeguards against anti-competitive discrimination. The currently implemented models

achieve this balance differently with interesting implications for the further evolution of the Internet. Since policy, technology, and business models co-evolve dynamically, it is likely that the Internet will evolve in different directions depending on the specific policies adopted for network neutrality. The contribution will explore these implications for the political and economic goals that are at the heart of network neutrality.

Title: [Panel] Internet surveillance and censorship in Russia : distributed control and agile circumventions, Panel description

Session Type: Panel Submission

Authors:

Name: Françoise Daucé

Email: francoise.dauce-at- ehess.fr

Country: FR (France)

Affiliation: EHES

Abstract: The Internet has become one of the main symbols and engines of globalization. However, in recent years, national regulations have been tightened as states have sought to maintain their grip and extend their control via digital means (Kohl 2017). Russia is a particularly salient case, insofar as its government firmly asserts its “digital sovereignty” both at home and abroad (Nocetti, 2015). Internet governance and policy can thus be seen as a key issue within a wider strategy aimed at establishing a closely supervised information and communication sphere. In Russia the first decade of the century was marked by both rapid development of a free Internet and the strengthening of vertical political governance. Since the early 2010s however, hopes of a Russian-style “Internet democracy” have been dashed (Oates 2013), as political tensions have risen at home (protest movement during winter 2011-2012) and abroad (Ukraine in 2014). Internet policy has become more restrictive, illustrating the government’s desire to establish national control within the digital arena.

This panel will examine the varied ways through which online surveillance and censorship have been set up and enforced in Russia over the past decade, but also the ways in which these new limits can be trespassed, circumvented or resisted. The contributions will draw on empirical work and on interdisciplinary approaches combining media studies, science and technology studies, and Internet governance.

As the papers will show, control over the digital realm involves coercive measures at the legal and technological levels (e.g. blockage of websites or services such as Telegram, data and server localisation within the Russian territory, VPN bans etc.), but also the promotion of closely monitored national digital champions (e.g. in the search engine industry with Yandex or social media with VKontakte), the enforcement of moral standards within the public sphere (through public speech regulation for both journalists and publishers), and the enrolment of volunteer vigilantes actively engaging in forms of online social control.

However, such policies do not follow a coherent hierarchical model, and the barriers they raise are not so clear-cut. The panel will demonstrate how the laws regulating online activity are numerous, varied, and constantly adapting. Their enforcement is often arbitrary or ineffective, and may be thwarted by the globalized dimensions of the Internet environment. Close examination shows not a centralized domination of the Russian web but rather a multiplicity of types of control that are partial, fluctuating and sometimes contradictory. The papers will show the specificities of establishing distributed forms of control over the digital realm in Russia but also the ways in which they can be trespassed, circumvented or resisted.

Abstract: A dominant theme of globalization is competition between transnational capital and national legal regimes for mutual accommodation. One such contest is the struggle over brand names and trademarks in the Internet domain name space; characterized by transnational corporations seeking to protect their intellectual property in jurisdictions governed by national law. To address increasing conflicts over domain names, including allegations of “cybersquatting” and “website spoofing,” the Internet Corporation for Assigned Names and Numbers (ICANN) formulated a Uniform Dispute Resolution Policy (UDRP), which national governments then duplicate within their own jurisdictions.

However, analysts have questioned whether the UDRP provides neutral and fair results (Armon, 2003; Bridy, 2017). A prevailing theme of criticism is that it favors transnational corporate interests over those of individuals and local entities. However, this criticism is based on analyses of individual cases, or anecdotal opinions of trademark specialists (for example, see Roy & Marsoof, 2016; Singh, 2018). Though some studies have examined UDRP decisions by WIPO (Simon,

2012), no systematic large scale study of the UDRP has been conducted in a developing country context.

This paper examines the operation of the Internet domain name dispute resolution policy in India, through a quantitative analysis of all domain name cases between April 2006 and December 2017. The question we seek to answer is: is the domain name dispute resolution procedure of India biased against any party?

Data including the type of complainant and respondent (individual, corporation, university, etc.); nationality (domestic, international); decision (cancel registration, cancel and transfer to respondent, reject petition); and the identity of the arbitrator, are collected from a database maintained by the .IN registry. Cross-tabulations are performed and checked for statistically significant differences. We predict that complainants will be more successful than respondents in arbitration, and corporations, as complainants or respondents, will be more successful than other types of entities in securing favorable results.

The analysis of the operation of the Indian INDRP deserves attention because the adaptation of international rules to a developing economy is a test case for the emergence of a “non-national” form of dispute resolution that can be applied to other areas with trans-border impact (Helfer & Dinwoodie, 2001).

Title: Global Approach, Dialogue and Collaboration: An Analysis of National, International and Private AI Initiatives

Session Type: Individual submission

Authors:

Name: Tao Fu

Email: futao-at- uibe.edu.cn

Country: CN (China)

Affiliation: University of International Business and Economics

Name: William Babcock

Email: wbabcock49-at- gmail.com

Country: US (United States)

Affiliation: Southern Illinois University Carbondale

Abstract: Artificial intelligence (AI) has become an issue of global significance and a national strategy in areas such as the United States, China, and the European Union. In 2018, The Age of Artificial Intelligence: Towards a European Strategy for Human-Centric Machines, was announced. Before that, the U.S. National Science and Technology Council also announced AI research and development plan under the Obama Administration in 2016. China came up with its three-year action plan for Internet + AI in 2016, stating the nation would particularly increase research in applying AI to smartphones, self-driving cars, and security. AI was also listed by China's State Council as part of the national plan for scientific and technological innovations during the 13th five-year plan (2016-2020). China expects to become the world leader in AI by 2030.

In addition to the states, global Internet stakeholders such as Google, Apple, and Baidu have made huge investment setting up AI labs. World-class prominent universities such as Stanford pioneer AI development with research teams led by Li Fei-Fei. Leverhulme Center for the Future of Intelligence was established at the University of Cambridge in 2016 to understand AI and relevant ethical issues by collaborating with academics from the University of Oxford, Imperial College London, and the University of California, Berkeley. In deep learning, a subfield of AI, published articles by Chinese researchers' have outnumbered their American counterparts in 2017, according to the Atlantic Monthly.

AI is planned or being applied to daily environments such as senior care, as well as life-and-death decision-making situations such as self-driving cars, automatic transactions in the financial market and surgical operations. Given the wide reach of future AI development in national security, international competence, and worldwide human welfare, governance of AI requires a global approach, dialogue and collaboration.

Using theories of machine ethics and AI ethics, this study aims to conduct a semantic network analysis of AI initiatives to examine the ethical and social concerns by governments, international organizations, and the private sector, and whether regional or national differences exist. The data of this study will be retrieved from OECD's website where there are 22 national AI initiatives by 12 European, North American and Asian countries, 10 international initiatives by the UNESCO and ITU, and another 21 initiatives by 18 private stakeholders including Internet companies and higher

educational institutions. The study will contribute to understanding the stance of different governments, organizations, businesses and researchers in dealing with AI development and provide a global scenario of how and what policies have been proposed to address issues related to this new change in communication technology.

Title: Guerra de bots, la lucha por la tendencia.

Session Type: Individual submission

Authors:

Name: Mayra Isabel Perez Martinez

Email: mayra.isabelpm-at- icloud.com

Country: MX (Mexico)

Affiliation: Estudiante de posgrado maestría Universidad Iberoamericana

Abstract: En tiempos de redes sociales, conceptos como post verdad, fake news, hashtags y más fenómenos de internet, la palabra bot resuena todo el tiempo en las conversaciones creando desconocimiento de qué es un bot, cómo funciona y para que se puede utilizar. Lo que es de conocimiento general es que se han vuelto una maquinaria a merced de grupos de interés político y/o económico que los usan para posicionar temas, disminuirlos o eliminarlos de la conversación digital.

El estudio que presento está centrado en la red social Twitter y analiza un fenómeno que denomino: Guerra de bots, la lucha por la tendencia.

A partir de la etiqueta #AMLOPresidente se explica cómo los bots interactúan en la conversación del ecosistema impactando en la agenda de temas con el fin de modificar el posicionamiento de los 10 primeros lugares de tendencia

Además de exponer quiénes integran la batalla y los diferentes frentes en los que se desarrolla. Se explica a partir de la teoría de Agenda Setting la importancia de ganar, mejorar o eliminar un hashtag de los primeros lugares de Twitter, la teoría es aplicable en este caso a la red social partiendo de lo que menciona Shaw (Citado por Wolf, 1987, p. 163).

(...) como consecuencia de la acción de los periódicos, de la televisión y de los demás medios de información, el público es consciente o ignora, presta atención o descuida, enfatiza o pasa por alto, elementos específicos de los escenarios públicos. La gente tiende a incluir o excluir de sus propios conocimientos lo que los medios incluyen o excluyen de su propio contenido.

La base de datos #AMLOPresidente fue monitoreada durante la campaña presidencial de 2018 en México; consta de un universo de 50 mil tuits, de esta se tomó una muestra mensual que fue dividida en tres periodos de tiempo: Campaña presidencial, periodo de transición y gobierno.

La muestra fue analizada para determinar el número de bots que participan, en dónde y se analizó el impacto que tuvieron en el posicionamiento de las tendencias de twitter y como jalaban a usuarios reales a la conversación.

El estudio demuestra como la teoría tradicional puede ser aplicada con sus diferencias en las nuevas tecnologías y nos ayudan a entender que los fenómenos comunicativos se replican en las nuevas plataformas.

Title: #NotMyDebt : Assessing the intersection of bureaucracy, social welfare policy, technology and social media in Australia.

Session Type: Individual submission

Authors:

Name: Collette Snowden

Email: collette.snowden-at- unisa.edu.au

Country: AU (Australia)

Affiliation: School of Creative IndustriesThe University of South Australia

Abstract: In 2016 the Australian Department of Human Services (DHS) introduced an automated welfare payment compliance system. Within months of the distribution of the first letters informing recipients of debts accounts of problems with the ‘Robodebt’ system began to circulate online. By late 2016 a social media campaign was collecting and tracking the stories of a large number people who had received debt notices in error or demands for erroneous amounts, and highlighting their frustration in communicating with the DHS. This campaign drew further attention to the problem with the new system and instigated significant broader media and public discourses about the intersection of technology, bureaucracy and government policy. In February 2017 the Australian Senate established an inquiry into the system, its failings, and its effects and consequences – including the traumatisation of people who challenged debt notices, or who spoke publicly about the debt system. By February 2019 the Department had removed, reduced or written off nearly one in six of the debt notices issued, and a challenge about the legality of the system was launched by the Victorian Legal Aid Service.

This paper uses media and social media content analysis to examine and assess how bureaucracy, punitive social welfare policies, automated technological systems, online social media and traditional media communication channels converged to make #NotMyDebt a national political issue. It examines how technology was recruited and designed to create a system of compliance, and how it relied on data from another department in the Australian government public service, thus raising issues about privacy and government data management practices. It also examines how information about debt was communicated to welfare recipients and explains the difficulties faced by people who received debt notices in communicating with the Department of Human Services. It assesses how the design and use of the technology and the methods of communication employed were defended by the DHS and the Australian government in spite of sustained criticism and clear evidence of errors. It also discusses how #NotMyDebt intersected with and drew on public concerns about the use of technology to deliver complex information and welfare services, and the problems of communication with government via technological systems.

The convergence of issues, systems, technology and media that occurred in the #NotMyDebt issue provides a case study that highlights some emerging and unresolved issues relevant to the use of data and communication technology by governments. It also illustrates some of the effects produced by this practice, the response to those effects by citizens, media, bureaucrats and politicians, particularly via social media platforms.

Title: Disinformation refutation of China's new media platforms

Session Type: Individual submission

Authors:

Name: Yik Chan Chin

Email: yik-chan.chin-at- xjtlu.edu.cn

Country: CN (China)

Affiliation: Xi'an Jiaotong-Liverpool University

Abstract: According to Collins Dictionary, fake news refers to “false, often sensational, information disseminated under the guise of news reporting.” Fake news tends to be disseminated faster than the authentic news because the fake news is generally more novel and it can invite more negative and robust human emotions such as fear and disgust, whereas true stories are more likely to generate anticipation, joy, and sadness (Vosoughi, Roy, Aral, 2018). And the reason fake news could successfully prevail among the social media is attributed to less cognitive efforts accepting information takes than evaluating the authenticity of information (Lewandowsky et al., 2012). However, disinformation can give people a strong false impression which would continuously influence people but is difficult to be corrected (Lewandowsky et al., 2012). An apparent proliferation of inaccurate and misleading news stories has led to calls for new policy interventions, from fact checking by social media companies to new laws imposing fines for posting or sharing fake news, some preliminary researches suggest that The example of China’s crackdown on “online rumours” since 2013 is a useful illustration of the dangers of (i) establishing structures of prepublication regulation and (ii) having too wide definition of what constitutes unverified fake news or “rumour” (Tambini, 2017). To have a comprehensive understanding of the complex online rumour refutation in China, besides the study of government's regulations, this paper will explore the methods of new media including local online news media portals, social media platforms, third party anti-rumour platform in China in detecting and refuting online disinformation. Three social science research methods are utilized in this research: documentary research, online observations, and in-depth interviews (online media companies, algorithm developer and academics). The findings suggest that 1) official online news media, especially the government affairs platform, have followed a strict process of disclosing news, which requires journalists and editors to verify and confirm the information continuously. They act as gatekeepers for the filtering of disinformation; 2) Algorithm is still far away from reality: current algorithms cannot achieve accurate identification of disinformation largely due to lack of data samples; 3) Manual verifications and algorithm need to be combined together in the misinformation refutation. In addition, the effect of rumour refutation on Internet users are also explored through online observation.

Title: Codes of conduct in the Russian search industry: the case of Yandex

Session Type: Panel Submission

Authors:

Name: Françoise Daucé

Email: francoise.dauce-at- ehess.fr

Country: FR (France)

Affiliation: EHES

Name: Benjamin Loveluck

Email: benjamin.loveluck-at- telecom-paristech.fr

Country: FR (France)

Affiliation: Telecom Paristech

Abstract: Russia is among the few countries in the world where Google does not dominate the search industry. The Russian-language equivalent Yandex, which has also diversified in many other businesses and services, holds over half the market share. Since 1997, Yandex is a private globalized company incorporated in the Netherlands. According to journalists “Yandex and the Kremlin do represent two different Russias with little overlap” (Osetinskaia, 2017). Since then however, the Russian government has increased its pressure on the company (Oates, 2013). Yandex is considered a national champion, ensuring a degree of independence from foreign (especially American) web companies. Its activities are constrained by political, legal, technical and economic means (Vendil Pallin, 2017). Yandex’s owners sold a ‘golden share’ to Sberbank, the Russian savings bank – giving the government veto powers over strategic issues. Although it has been criticized, loyalty towards the state has also brought the company certain benefits. For instance, Yandex won an anti-trust conflict with Google.

This double identity, between criticism and loyalty, places the Yandex company at the heart of technical and political controversies in contemporary Russia. It is also revealing of both the strategic nature of search platforms and algorithms today (Pasquale 2015) and the ways in which the Russian state increasingly seeks to assert its dominance over internet governance understood as a dimension of “information security” (Maréchal 2017). This paper will trace the different controversies associated with Yandex, and show how the authorities have attempted to regulate ‘code’ and search algorithms in order to shape the digital environment. It will focus on the Yandex News issue which developed in 2014-2016. The news aggregator was suspected of political bias in the context of the Ukrainian crisis (Daucé, 2017). The research will be based on interviews with current and former members of the Yandex company (such as the former head of Yandex News, Tatyana Isayeva, who moved to Spain) in order to present a socio-ethnography of conflicts and circumventions, between public justifications and private interests. The Yandex case will contribute to understanding the specificities of Russian Internet policy as an assertion of “digital sovereignty” and the new codes of conduct which may be set up in the networked public sphere in contemporary societies.

Title: The Telegram ban: how censorship 'made in Russia' faces a global Internet

Session Type: Panel Submission

Authors:

Name: Francesca Musiani

Email: francesca.musiani-at- gmail.com

Country: FR (France)

Affiliation: Center for Internet and Society. CNRS

Name: Ksénia Ermoshina

Email: ksenia.ermoshina-at- cnrs.fr

Affiliation: Center for Internet and Society. CNRS

Abstract: April 2018: the Russian Internet (RuNet) watchdog Roskomnadzor orders to block the popular Telegram messenger. RuNet users respond with an unprecedented wave of actions, ranging from satirical memes to flashmobs and rallies. The movement for the defense of Telegram, quickly baptized “Digital resistance”, has a rich “e-repertoire of contention” (Costanza-Chock, 2003; Rolfe, 2005), inspiring a burst of technical creativity, with dozens of new obfuscation and circumvention protocols, proxies and VPNs designed by tech-savvy users -- and by the Telegram team itself -- in order to help bypass governmental censorship.

Drawing from perspectives in science and technology studies (STS), infrastructure studies in particular (Bowker, Star, 1999; DeNardis, 2012; Musiani, 2013) -- and relying on a qualitative approach including interviews with Russian technical experts, ISPs, and Internet freedom activists -- this paper analyzes the Telegram ban in Russia as a socio-technical controversy that unveils the tensions between the governmental narrative of a “sovereign Internet” (Nocetti, 2015; Freiberg, 2014), based on Russian-made censorship and filtering technologies, and the transnational character of global Internet infrastructures.

Our analysis pays a particular attention to the “infrastructural battle” between Telegram and Roskomnadzor, and tracks the “cat-and-mouse” dynamics between protocols for filtering and circumvention. It shows how the Telegram circumvention technique, also known as IP-hopping, depends on Internet giants such as Amazon and makes the targeted blocking of Telegram very complex without also provoking collateral damage. This overblocking results in creation of new “concerned publics” (Geiger et al., 2014) including entrepreneurs, tech experts, previously depoliticized users.

Ultimately, the Telegram case is yet another arena where the “turn to infrastructure” in Internet governance can be observed (Musiani et al. 2016); it questions technical and geopolitical boundaries and challenges the approach to Internet governance currently adopted by Roskomnadzor. However, the paper also questions the role of Telegram as a “training ground” for Roskomnadzor for a more efficient filtering and global control over the Russian Internet. Indeed, the most recent developments of the “Battle for Telegram” show that new technical and legal tools deployed by the regulator can be further applied to other online services.

Title: [Panel] Internet surveillance and censorship in Russia : Distributed control and agile circumventions [Presentation] Digital vigilantism and the control of moral and legal frontiers on the Russian Internet

Session Type: Panel Submission

Authors:

Name: Anna Zaytseva

Email: clineau-at- gmail.com

Country: FR (France)

Affiliation: Toulouse University

Abstract: By contrast to some recent publications on vigilantism focusing on violent and law breaking aspects (Favarel-Garrigues, 2018) or those aiming at classifying the whole range of more or less disruptive cyber vigilantes' varieties (Loveluck, 2016), this paper will shed light on some more discreet forms of online crowd-sourced surveillance on the Internet et social networks. They target mainly the implementation of newly adopted laws of Russian federation and proceed to the denunciation of web sites and social network pages containing illegal information, aiming at their blocking.

This paper is based on a comparative research of different groups of vigilantes.

The Youth security service (MSB) in St. Petersburg seeks to protect young people by identifying pedophiles or organizers of suicide games online. They act in close collaboration with local police becoming even its subsidiary and playing a role of communicational human oriented interface between citizens (often reluctant to officials) and the police itself. Rather ideologically neutral, these grassroots police helpers develop an advanced technical expertise in order to investigate online crimes and build legal cases, sometimes using ethically disputable tools of social networks' surveillance such as big data agregators and API applications revealing hidden informations on users' profiles.

By contrast the Moscow-based 'League for a secure Internet', affiliates such as the 'cyber Cossacks' (emerging through several russian universities) and 'Media-gvardia' (the online division of the youth wing of the ruling party United Russia) have developed less technical expertise but rather a "microparticipation" in form of reiterative and simple tasks (Myles, 2016), as they control nor strategies neither final usages of the data collected. Therefore, they develop more explicitly pro-government stances. Another purpose appears to be the civic education of the young volunteers themselves, ensuring loyalty to a socially approved set of conservative values. Comparing these groups of vigilantes, will allow us to reveal different repertoires of action and an extreme diversity of the field of Russian cyber vigilantism, recently targeted by some new law projects aiming at taking it under a state control and bringing it closer to law enforcement authorities, through the tools and in the forms that are still to be defined.

Title: GDPR boundary objects for participation in smart cities

Session Type: Individual submission

Authors:

Name: Rob Heyman

Email: rob.heyman-at- vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT, Vrije Universiteit Brussel

Abstract: Most ongoing smart city projects are technical. They are most often proof of concepts aimed at paving the way toward citywide (social) innovations. For example, it fuses together sensors and the aim of the project is to see if they produce reliable data. What this data may enable or solve is vague, its potential is assumed. The focus on technology makes it hard to see what way they are paving for whom and in what direction. It remains debatable to say they are real social innovations and not just innovations.

Luckily, smart city innovations rely on data and a large part of this data is personal data. Here, the GDPR offers an opportunity to increase transparency and overcome technical aspects. In smart cities, GDPR obligations are most often seen as obstacles. This also provides opportunities for the GDPR to become more than a compliance procedure in smart city projects.

Could the GDPR contribute to creating more transparency and participation about smart cities in the form of boundary objects that use a language that is easily accessible to multiple stakeholders? Can we render GDPR-tools more relevant tool for smart city transparency and legitimacy? In this paper we assume that both the concept of smart city and GDPR are still interpretive flexible (Pinch & Bijker, 1984). Meaning that multiple actors give different interpretations of these concepts. They are therefore still malleable and changeable. But to get the widest relevance or biggest potential for smart cities and GDPR, we require boundary objects (Star & Griesemer, 1989) to bridge the different social worlds that divide or even exclude smart city stakeholders at this moment.

This paper builds on the STS concept of interpretive flexibility and defines GDPR and smart city projects (Walravens, Waeben, Van Compernelle, & Colpaert, 2018) as concepts in need of boundary objects. We adapt boundary objects of Star (2010) to fit the empirical needs of this paper.

Our empirical research comprises an overview of boundary objects proposed in the GDPR and boundary objects used in smart city projects the author is part of. It will describe to whose information needs the current boundary objects cater and what we should do to further improve these so they become relevant to more stakeholders.

This exploratory research provides relevance to GDPR as a tool to enhance participation in smart cities and it aims at rendering smart city development more participatory. On a scientific level it explores the use of boundary objects in a new setting, privacy and innovation in a multi-stakeholder environment.

Name: Ramón Salaverría

Email: rsalaver-at- unav.es

Country: ES (Spain)

Affiliation: Universidad de Navarra

Abstract: Digital native news organizations have been born into a ubiquitous media environment (Daubs & Manzerolle, 2018), which allows them to reach wide audiences, and are accessible to people who, otherwise, would be to some extent isolated by language, geography, or scarcity of resources. The headquarters of these digital media outlets might have a peculiarity in the geographical distribution where they are located, which affect their content production as well impact the people's lives.

So far, most of the studies that have investigated the concentration of media have focused on their ownership (Doyle, 2002; Marinoni, 2015) or have interrogated how the digital media companies challenge mainstream media (Harlow & Salaverría, 2016). Researchers have also explored how location-awareness influences mobility, spatiality, and sociality, in a research line known as, locative media (De Souza e Silva, 2013; Wilken, 2015). However, few studies have examined on how these media organizations are located and influence the life, economy, and urban concentration of the countries (Djankov et al., 2003; Winseck, 2010).

This paper presents a granular analysis of the geographical distribution of digital news media in Spain, which aims to explore the relationship between media concentration and geographical distribution of their headquarters. The digital news organizations were mapped in a database that gathers more than 3,600 digital media outlets, both native and legacy, that were carefully identified and located.

Therefore, this paper deliberately steps outside the usual way of studying media concentration and, instead, it focuses on exploring how the digital media organizations are distributed in Spain, a relatively big Western country with 47 million inhabitants and heart of the second most spoken language in the world.

To accomplish this, we predict two hypotheses. The first one is that the digital native media are concentrated in the major cities of the country and located in the most populated and wealthy areas; instead, the non-native digital media are more expanded through the country, with a lesser level of

urban concentration. The second hypothesis assumes that the specific content media have a higher geographical concentration level than the ones that cover general information. The assumption is that media organizations located in the major cities are in better position to cover more specialized information than those of small cities and less developed territories.

Based on the empirical evidence of the large database used for this study, this paper analyzes and visualizes the digital news media concentration in each and every of the 17 regions of Spain. The paper concludes with an agenda for future research.

Title: The development of Video Games policy within the EU - a comparative analysis

Session Type: Individual submission

Authors:

Name: Maria O'Brien

Email: mobrien-at- eaffi.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: The audiovisual industries operate within an environment that is increasingly subject to globalised flows; of production, of distribution and of consumption (Kerr 2017, Dyer-Witheford & de Peuter 2009). The video games production industry is an example par excellence of how an industry can mutate to take advantage of the multiple complexities of such a production environment, transcending physical and intangible borders to become a significant force in the cultural life of many.

However, despite the globalised nature of the video games industry, it is contended that the national continues to be of significance for the development of the industry. Of course, within member States, policy development at national level takes place within the supranational context of the European Union. The policy design and implementation process is subject to competition law regulations and to state aid rules, and further able to take advantage of the various support mechanisms in place in the EU for production.

This paper explores recent policy developments at EU level towards video games in the context of audiovisual industries policies. Simultaneously cultural and economic, the audiovisual industries are supported by a number of different policy developments within the EU, including the Creative Europe framework and the application of the cultural exemption for state aid as contained in Article 107(3)(d) of the Treaty of the Functioning of the European Union.

The policy framework for video games within the EU is put into comparison with the policy framework for more traditional audiovisual industries (primarily film and high-end television). This comparative analysis allows for consideration of the role of audiovisual industries (as widely defined to include video games) as both cultural and economic goods in both an EU and a national context. This approach questions the fundamental rationale for support of the production of cultural goods by both nation states and by the supranational institution that is the EU (Throsby 2010, Herold 2008). It interrogates how audiovisual policies can be theorised in the context of EU integration theories, given the increasingly significant role of the cultural and creative industries (Littoz Monnet 2007, Hooghe & Marks 2018, Jessop 2016).

Title: 'This is China's Sputnik moment': The politics and poetics of Artificial Intelligence

Session Type: Individual submission

Authors:

Name: Bingchun Meng

Email: b.meng-at- lse.ac.uk

Country:

Affiliation: Department of Media and Communications, London School of Economics and Political Science

Abstract: A seemingly perfect alliance is shaping up between venture capitalists, technology companies and the Chinese government in inscribing layers upon layers of significance into AI as the technology of the future. What is the historical lineage of this imagined future? What are the key components of a better life sustained by intelligent machines? What does this future entail for different social groups? Inspired by sociologists who study the social and cultural shaping of technology, by anthropologists who interrogate the everyday production of meaning in relation to technologies and by Marxist scholars such as Frederick Jameson who examine the relationship between Utopian desire and the social imaginary of science and technology, this paper endeavors to unpack the politics and poetics of artificial intelligence in the Chinese context.

By politics I am referring to the political economy of ICT development and communication governance in general and the recent government initiatives promoting AI industries in particular. As Larkin elaborated on Foucault's notion of technopolitics in his review of anthropological studies of infrastructure, more often than not, forms of political rationality underline technological projects and give rise to an "apparatus of governmentality" (Larkin, p.328). The poetics, on the other hand, highlight the combination of aspirationalism and ambivalence that allows the social imaginary of AI to register in popular discourses. Again drawing on Larkin (2013), who builds on Benjamin's contemplation in *The Arcade Project* to dissect the poetics of infrastructures, I intend to explore how current discussions of AI in the Chinese context 'emerge out of and store within them forms of desire and fantasy and can take on fetish-like aspects' (p.329).

Based on discourse analysis of both policy documents and media reports, I make three main points about the ways in which an AI empowered digital future is constructed as well as the political implications of such construction. First, elite discourse on artificial intelligence is yet another manifestation of what Wang Hui calls 'depoliticized politics', which seeks technocratic solutions to deeply political problems. The second layer of AI fetishism is reminiscent of Marx's familiar critique of how commodity fetishism substitutes social relations between men with 'the fantastic form of a relation between things' (Marx, 1915, p.83). What is rarely mentioned, in the eager anticipation and earnest celebration of the futuristic technologies, is the scale and intensity of human labor needed to sort out large quantity of data for building artificial intelligence. Third, AI, or the prefix of 'intelligent' is increasingly used to promote consumer products that conjure the spectacle of the future. As Harvey (2003) explains the crucial importance of sustaining consumer demand for the accumulation of capital, 'while the labor process produces the fantasy of the worker as an appendage of the machine (as robot), the consumption side induces the fantasy of the

insatiable consumer totally hooked into the circulation of capital and its endless output of products (the cyborg customer)' (p.17).

Title: From Crisis to Uncertainty: Ghana Broadcasting Corporation's Public Service Broadcasting future and the Digital Migration Process.

Session Type: Individual submission

Authors:

Name: Kobina Bedu-Addo

Email: Kobina.Bedu-Addo-at- my.westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: What future holds for the Ghana Broadcasting Corporation, GBC, after digital migration? The process, so far, has not seen any coherent policy to address GBC's and Public Service Broadcasting's, PSB, place in the coming digital multi-channel broadcast market. From a northern hemispheric perspective, particularly on Europe, there is an extensive and rigorous body of literature on PSB (Raboy, 1996; McQuail & Siune, 1998; Nissen, 2006; Carlsson, 2013), as well as the challenges convergence and digitalisation have brought to PSB systems across the continent (Losifidis, 2007; Michalis, 2016; Goodwin, 2018). Fuchs (2018) has gone further to argue for taxation to create public service internet platforms. Coming from a post-colonial African experience (Wedell, 1986), broadcasting has always been a state funded monopoly allied to the 'development' of newly independent countries on the continent, with the boundaries of what constitutes PSB, and what is State broadcasting blurred. Democratization processes on the continent in the 1990's raised the issue of how to convert State broadcasters into genuine 'Public' broadcasters, and the broader problem of regulating broadcasting (Article 19, 1995, 2003). The 1992 4th Republican Constitution of Ghana permitted, for the first time in the country's history, private ownership of broadcast media, but this was not accompanied by any legislation or policies to address GBC's role within the commercial broadcast market enabled by the Constitution. 26 years on, GBC finds itself in a crisis of identity, competition and public appreciation. Its once authority, audience and prestige has been lost to new commercial rivals. And yet governments, in public discourse, continue to imbue GBC with a Public Service ethos, even as its allure among the population is fading. This paper discusses the 'policy silences' during the immediate post 1992 period that have contributed to GBC not having a firm PSB footing in the commercialized competitive broadcast market in Ghana. It also analyses the inadequacies of the policy propositions on the digital migration process which has created further uncertainty about GBC's future and any desire to implant a strong PSB framework within the emerging digital multi-channel broadcast market. Data for this paper has been derived from primary and secondary documentary sources, online publications and broadcast media interviews. The analysis is framed from both a Political Economy of Communication (Mosco, 1996), and a Public Sphere Theory framework (Habermas, 1989). The central argument of this paper is that the historical policy failures over GBC's future, and the current policy uncertainty about the organisation and its PSB remit and role within the emerging digital multi-channel broadcast market, impoverishes the Ghanaian citizen's ability to have access to a constant dependable source of quality, culturally relevant and widely available information for their democratic needs, in the maze of market conditioned information, and thus requires urgent policy interventions to address them.

Title: High hopes, few achievements: A history of Mercosur's audiovisual policies

Session Type: Individual submission

Authors:

Name: Marina Fernandes

Email: marina.rossato.fernandes-at- vub.be

Country: BE (Belgium)

Affiliation: IMEC-SMIT, Vrije Universiteit Brussel

Name: Jan Loisen

Email: jan.loisen-at- vub.be

Country: BE (Belgium)

Affiliation: IMEC-SMIT, Vrije Universiteit Brussel

Abstract: Considering “profound commitments to policies are generally due to a mix of ideological factors (in the form of ideas and example), interests (as defined by politics and economics), and institutions (as they shape constraints and opportunities)” (Bhagwati, 1989, p. 17), one could argue that Mercosur and the EU share a profound commitment with regard to audiovisual policy. Notwithstanding historical, institutional and budgetary differences among the two regions, the mix of ideas, interests, and institutions concerning audiovisual policy is marked by similarities. In terms of ideas, both players largely dismiss the US-led ‘culture as commodity view’ that stresses the importance of free trade in global audiovisual flows. Both parties are more aligned with a ‘culture as dialogue’ perspective that is more tolerant of government intervention and cultural protectionism (Sauvé & Steinfatt, 2003). In terms of interests, the members of the blocs also share some features and objectives. These include the promotion of production and distribution of audiovisual content among members, while maintaining room for policy maneuver in light of US dominance in the audiovisuals markets. In terms of institutions, Mercosur and the EU established a dialogue in which the latter’s audiovisual policy was seen as a model for Mercosur. This cooperation raised high hopes in South America for a profound commitment to economic integration and growth in the audiovisual sector, while supporting cultural diversity as well (Canedo and Crusafon, 2014).

The main question of this paper is whether the audiovisual policies of Mercosur realized their objectives and to what extent the collaboration with the EU has created value for both policy-making and sector. The paper sets out from a historical-institutionalist perspective (cf. North, 1990) on the interplay between ideas, interests and institutions in audiovisual policy making (Loisen, 2012), and focuses on Mercosur-EU cooperation regarding audiovisual in particular. Guiding ideas and norms, power play and interests of actors involved (Sarikakis & Ganter, 2014), and institutional translation in policy development are analyzed on the basis of a literature review and policy analysis of relevant documents in the history of Mercosur-EU audiovisual policy cooperation. The data analysis is largely focused on the actual policies, the problems encountered and specific results of the collaboration between the EU and Mercosur. Our finding is that Mercosur’s impact on audiovisual policy and sector has been limited and high hopes were not met. Its policies have reproduced deficits of the EU’s audiovisual policies, including

budgetary constraints, the difficulty of aligning cultural and economic objectives, and nation state resistance to losing power in this domain. The policies also did not anticipate the digital turn in the audiovisual landscape.

Title: Parliament against government and industry: How neutral Switzerland decided to implement net neutrality against all odds

Session Type: Individual submission

Authors:

Name: Natascha Just

Email: n.just-at- ikmz.uzh.ch

Country: CH (Switzerland)

Affiliation: IKMZ, University of Zurich, Switzerland

Name: Manuel Puppis

Email: manuel.puppis-at- unifr.ch

Affiliation: University of Fribourg, Department of Communication and Media Research DCM

Abstract: Since its first mention in research in the early 2000s net neutrality has become a top policy topic, accompanied by enormous and – for a communications policy issue – almost unprecedented public attention. During its rise to fame the term net neutrality has undergone a tremendous metamorphosis, and stand now for a concept that also touches upon fundamental communication-related rights. Without it, some caution, the right to voice and visibility, and the right of access to information that support individual expression and social participation may substantially be hampered. Policy-makers therefore struggle to keep up with dynamic changes and to reconcile economic and socio-political objectives.

Research on net neutrality has thus far focused mostly on the US and the EU, while smaller countries' policies and regulatory activities have received scant attention. Furthermore, research predominantly focuses on economic and legal aspects, while it rarely investigates policy-making processes and political debates, therefore shedding little light on who precisely exerts influence and how.

With reference to the request of the CPT section for papers on “policies and debates around (...) net neutrality”, this paper investigates the net-neutrality debate and the attendant policy-making process in a small country, namely Switzerland. It addresses the question of what arguments were employed by the actors involved to advocate or prevent particular regulatory solutions. Altogether, it analyzes a decade of debates on net neutrality in Switzerland, from first parliamentary attempts at regulation to the most recent revisions of the Telecommunications Act (TCA).

The study uses a stage-based approach to decision-making and is methodologically based on a qualitative content analysis of all documents relating to net neutrality that were created as part of the policy-making process. These include official documents such as government reports, TCA drafts, parliamentary motions and postulates, select-committee press releases, minutes of parliamentary debates, and 151 comments filed during the public consultation.

Results of the empirical analysis show that early attempts to regulate net neutrality failed, but discussions about its handling were continued in the face of a proposed revision of the TCA, during which telecommunications service providers moved forward and introduced a self-regulatory mechanism to pre-empt regulation.

Regarding the ultimate outcome of policy-making, results show that the Swiss parliament eventually proposed a net-neutrality regulation in late 2018 that is essentially identical to EU legislation and includes exemptions for specialized services. This proposal was against the will of government, which favored a transparency obligation, and the telecommunications industry, which advocated self-regulation. When focusing on positions and arguments of actors in policy-making, it becomes evident, however, that the two opposing camps often discussed in research (CAPs and NGOs for, ISPs against regulation) are only identifiable during early stages of the policy-process. Furthermore, after an initial split along party lines, parliamentary debates showed agreement across the political spectrum. Evidently, the understanding of net neutrality has evolved in a way that allows for gathering very different policy objectives under the term's umbrella. Furthermore, the exemption for specialized services made it potentially feasible for MPs from across the political spectrum to agree to the principle.

Title: Implications of Data-driven Cities for Citizens' Privacy ' A systematic Literature Review of Impact Assessments

Session Type: Individual submission

Authors:

Name: Jonas BREUER

Email: jonas.breuer-at- vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT-Vrije Universiteit Brussel

Name: Jo Pierson

Email: jo.pierson-at- vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT-Vrije Universiteit Brussel

Abstract: Artificial intelligence, automation, machine learning, platforms and IoT increasingly impact every aspect of our communication and interaction. The roles of such communication systems raise new questions about privacy, also in urban environments. In so-called smart cities, embedded and ubiquitous ICT technologies shape urban environments and public space. Capturing and processing (personal) data becomes essential (Kitchin, 2014). Respective technologies are often controlled by private corporations, which are in a position to cause fundamental reconfigurations of relations between public institutions and citizens by doing so (Zuboff, 2018). Thus, while respective technologies certainly afford benefits for urban life, there also seems to be major potential for subverting the exercise of citizens' rights, if these rights become accepted only as long as economically feasible for those who control the data.

The GDPR (EU Regulation 2016/679) offers appropriate means to consider rights to data protection and privacy in (smart) cities, and to enable participation in the configuration of projects, their objectives and impact. Art.35(9) of the regulation allows an extensive interpretation calling for democratic legitimization by including citizens in decisions that cause a conflict between public interest and fundamental rights. We believe that in particular data protection impact assessments (DPIA), put forward in the same article, can become instruments to do so if orchestrated in the right fashion.

The question this paper therefore seeks to answer is: Which impact assessment approaches are most applicable for fostering privacy in cities, and how can they be expanded to stakeholder participation? Concretely, it consists of a systematic literature review (Jesson, Matheson & Lacey, 2011) conducted on Web of Science with combinations of the search terms impact assessment / cities - municipalities / privacy - data protection. This allows us to analyse the state of the art and to derive criteria and variables of applicable impact assessment approaches; to identify cross-disciplinary synergies that have been overlooked so far; and to assess possibilities for fostering stakeholder participation.

DPIAs are not yet adapted for complex, multi-layered urban contexts. This research can inform the necessary adaptation and support different stakeholders in complying with the law. Also, we go beyond tick-the-box legal compliance by providing first steps in establishing a cooperative multi-stakeholder responsibility for ensuring the right to privacy in the city, including concrete possibilities for participation (Helberger, Pierson & Poell, 2018).

The article is part of an extensive research trajectory on how we can actively shape cities to be places where the exercise of our rights and the achievement of universal dignity is not displaced by business models for maximising revenue.

Title: Towards a comprehensive perspective on data protection practices in organizations ' an interdisciplinary literature review

Session Type: Individual submission

Authors:

Name: Ine van Zeeland

Email: ine.vanzeeland-at- smitresearch.be

Country: BE (Belgium)

Affiliation: imec-SMIT, Vrije Universiteit Brussel

Name: Jo Pierson

Email: jo.pierson-at- vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT, Vrije Universiteit Brussel

Abstract: IAMCR section: Communication Policy & Technology + Emerging Scholars Network (joint)

The European Union's General Data Protection Regulation may be the most sweeping trans-national legislation protecting personal data to date, but it is certainly not the only influence on the way commercial, public, and civil society organizations handle informational privacy. As the 'information society' evolved and societal interest in the protection of personal data increased, researchers from various academic disciplines investigated what happens when different kinds of organizations are confronted with new data governance demands. For instance, privacy economists have studied how internet users' perceptions of online data protection influence their consumption behavior (Acquisti & Grossklags, 2005), psychologists have studied how employee training influences compliance with information security policies (Parsons et al, 2014), and scholars in media and communication studies and in management have studied how massive personal data-gathering gave rise to business models in which the audience and predictions of their behavior became the product (Van Dijck, 2013; Zuboff, 2019).

While the subject of privacy protection is clearly an interdisciplinary one, few have crossed the boundaries of their academic disciplines to integrate findings about organizations' data protection practices into a comprehensive view on what influences those practices. Yet, there is a clear need for an all-round perspective on data protection 'on the ground'. For different stakeholders in the digital economy – policy makers, watchdogs, privacy and consumer advocates, industries, technology developers – having a complete model of what actually influences practices means a better understanding of how to reconfigure personal data protection and meet privacy needs. Our main research question is therefore: Which are the dominant theories in various academic disciplines that explain actual practices of personal data protection in organizations?

As a first step towards a comprehensive model of influences on organizations' data protection practices, we have conducted a structured, interdisciplinary literature review, combined with a thematic review of the main theories found in the structured review (cf. Jesson, Matheson & Lacey,

2011). The research is part of the university chair on ‘Data Protection on the Ground’ at the Vrije Universiteit Brussel in Belgium. Our results show that researchers from over 100 different academic disciplines (as categorized by Web of Science) have studied practices of personal data protection, from nursing to robotics and penology, and that those studies vary from small-scale qualitative research to substantial cross-cultural comparisons. The resulting model thus incorporates insights from a large variety of disciplines, offering a holistic perspective to inform policies and hands-on approaches at the macro (societal), meso (sector), and micro levels (organization).

Title: Geodata: epistemologies of a metahuman presence

Session Type: Individual submission

Authors:

Name: Joan Ramon RODRIGUEZ-AMAT

Email: mon.rodriguez-at- shu.ac.uk

Country: GB (United Kingdom)

Affiliation: Sheffield Hallam University

Abstract: This article explores the epistemology of geodata as a political element that constructs place and reality, identity and belonging. This is an ongoing research that builds and develops theoretical framework from previously applied work on governance of communicative spaces.

To do this, this paper is organised along three levels of discussion that also form its three sections: the first part deals with the philosophical mediation and the epistemological value of geodata; the second, explores the disciplinary transformation activated by geodata both as an empirical opportunity and as a conceptual and heuristic territory; and the third, the four modes of analysis of the communicative spaces: representations and textures of place, and structures and connections of space.

Somewhere along the lines of the Derridean signature, the silent witness by Latour, and Foucault's heterotopia, geodata -a kind of metadata- certifies, translates, mediates and dilocates the human presence in the world in a disguised game of truth and appearance, of substance and footprint. The work by Derrida on the signature as an absence/presence and certificate offers interesting lines of reflection and interpretation to critically understand the weight and the role of geodata; similarly the notion of silent witness attributed to modern objects of scientific exploration by Latour opens a strand of thought that allows to understand geodata as hybrids that quantify and unify the spatial and the human. Finally Foucault, from his explorations of heterotopia can point at the exact spot in which to find geodata in the contemporary episteme.

While cities are flooded by wireless networks of internet access, geolocalization has seduced multiple disciplinary fields producing the so called "spatial turn" that opens seductive lines of research that still try their best name: geomedia, locative media, digital geography, digital urbanism, etc. Within this disciplinary landscape of transformation and fascination, the debate on the governance of communicative spaces emerges as a strand of research that integrates the virtual networked communication platforms and the physical spaces thanks and along a rather problematic notion of geodata.

To enable this discussion, the previous empirical research led by the authors will serve as example and as starting point for the understanding of the political and epistemological value of geodata in the context of the contemporary technological transformations.

Abstract: While measuring and segmenting media audiences is far from a new concept, the practice has taken tremendous flight with the onset of big data applications and the datafication of our social lives. Based on increasingly pervasive online tracking, consumer profiling has become more and more fine-grained in recent years, creating possibilities for advanced personalization in the online environment, both for recommending content and for targeted advertising. Such personalization efforts are often presented as an improvement of service towards consumers: it will be easier for them to find content of their interest and they will not be bothered with irrelevant advertising.

For all that, tracking Internet users also, and rightfully, raises privacy concerns. Privacy protection legislation, such as the EU's General Data Protection Regulation (GDPR), addresses these concerns, but may disproportionately disadvantage smaller players in local media markets. Larger (global) players are generally more resilient to regulatory intervention but can also drive downward price pressures and set standards to their advantage. If smaller competitors drop out of the market, the

consolidation of large personal data stores in fewer hands will increase, and perversely, negatively affect people's rights and freedoms overall.

The main question with respect to the position of these smaller media players is then: Can the advantages of audience measuring and profiling-based personalization be offered in a sustainable manner while protecting personal data to the utmost extent? In order to critically frame this question we integrate insights from audience studies and political economy of platforms, discussing the role of materiality and mediation in communication and technology studies (Turow, 2012; Gillespie, Boczkowski & Foot, 2014).

The findings are based on the outcomes of three research projects with a focus on measuring and profiling in media for personalization purposes: a European project (CPN) and a Belgian/Flemish project (DIAMOND), both studying possibilities for content personalization by news media providers, and a Belgian/Flemish project (EcoDaLo) that investigates challenges faced by smaller players in advertising confronted by market pressure from technology behemoths like Google and Facebook.

Based on the combined results of these three case studies, we will give a multi-level perspective on the specific challenges for national players in the online media market who are facing strong global competition, combined with stricter regulation. We have seen the same key trends develop in all three cases: smaller players struggling to invest the resources needed to compete in personalized online offering, while stricter legal requirements may tip the balance in favor of more privacy-invasive global players. Our analysis will conclude with reflections on new media audience configurations and recommendations for future policy and legislative developments, such as the forthcoming e-Privacy Regulation.

Title: Audiovisual platforms and content regulation. Long live the quota system'

Session Type: Individual submission

Authors:

Name: Maria Trinidad Garcia Leiva

Email: mtgleiva-at- hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid Department of Journalism and Audiovisual Communication

Name: Luis A. Albornoz

Email: lalbornoz-at- hum.uc3m.es

Country: ES (Spain)

Affiliation: Universidad Carlos III de Madrid

Abstract: One of the debates that has been calling the attention of scholars and policymakers in the field of communication and culture is the regulation of audiovisual contents offered by transnational online platforms through their catalogues (e.g. Picard et al., 2016; European Audiovisual Observatory 2017). Public intervention is usually invoked to legally guarantee that platforms offer a predetermined percentage of titles or hours of local production in a given market. The aim is to secure that locally produced works are available for domestic audiences.

For instance, a recent firm step in order to impose a quota system within the catalogues of digital platforms has been given by the European Union (EU) countries through the reformulation of the Audiovisual Media Services Directive (AVMSD) in 2018. This new regulation specifies that at least 30% of the contents offered by platforms like Netflix, HBO or YouTube, through its catalogues, must be of European origin. This quota can be filled through locally produced works as well as qualifying titles produced in other EU Member States or European states participating in the European Convention on Transfrontier Television.

The paper aims to analyse the potential implications of this change since some comments can be made in light of this reformulation. For example, it has already been pointed out that (e.g. Lobato, 2018; Albornoz, 2019): a) the imposition of content quotas related to the geographical origin of the works may hinder external audiovisual diversity; b) the obligation to include local or regional audiovisual works in certain catalogues will not automatically translate into their consumption; and, furthermore, c) it will certainly not translate into their visibility either.

Alternatively, it will be argued that more interesting than the obligation to comply with a content quota defined by the geographical origin of audiovisual work is the idea of making platforms part of every national audiovisual production and financing system. Such an industrially oriented approach would aim mainly, on the one side, to create or strengthen the audiovisual sector of a given country and, on the other hand, to secure the number of works produced per year. In line with recent studies (e.g. Albornoz & García Leiva 2019), different national policy responses will be presented and examined to support this idea.

From a methodological point of view, therefore, research will be based on documentary and bibliographical review and analysis (legislation, official and sectorial reports, etc.), as well as on the critical consideration of national policy initiatives.

It will be concluded that there are basically two ways that should be explored in order to involve platforms in national production and financing systems: (a) deriving, totally or partially, the money collected via taxes imposed on them – adapting existing obligations or creating new ones – to a fund dedicated to supporting the development of audiovisual industries, and (b) making them invest directly in the production of works and/or the acquisition of audiovisual distribution rights via the imposition of funding obligations in relation to their income in a given market.

Title: "Having our say": Strategies for public engagement in responsible AI research and policy development

Session Type: Individual submission

Authors:

Name: Marguerite Barry

Email: marguerite.barry-at- ucd.ie

Country: IE (Ireland)

Affiliation: University College Dublin

Name: Aphra Kerr

Email: aphra.kerr-at- mu.ie

Country: IE (Ireland)

Affiliation: Maynooth University

Name: Laura Grehan

Email: laura.grehan-at- adaptcentre.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: EU and national surveys on attitudes to new technologies, including artificial intelligence (AI), indicate that general confidence among the public in the benefits is tempered by concerns about how some aspects of life might be affected such as health, home life, social relations and employment (Eurobarometer 2015, 2016). Some concerns relate to unforeseen uses but others to the unequal access to the benefits of scientific and technological innovation. However, the most feared aspect is “a lack of control (dependence on technology, complete automation, deskilling), a lack of human contact, of privacy, and unemployment” (ibid). This suggests that public engagement in AI policy and research projects is essential if individual and universal rights and dignity are to be respected and public trust achieved.

Meanwhile, the concept of ‘responsible research and innovation’ (RRI) has taken hold in policymaking throughout the EU and the US. A number of studies explore and critique its potential for truly inclusive deliberation (Genus & Iskandarova, 2018, van Lente et al, 2017). For example, initiatives such as the Futurium platform used by the European Commission to manage public feedback, explicitly aims to combine scientific evidence and stakeholder participation in a new format described as “policy making 3.0” (Accordino, 2013). This configuration places emphasis on ‘visions of the future’ arising from ‘collective aspirations’ of stakeholders as ‘measurable through the social network’, suggesting that technology itself becomes the carrier of RRI, undermining the engagement effect (Genus & Iskandarova, 2018). Elsewhere RRI is seen to reflect discourses of technology assessment which structures the potential form and constitution of public engagement (van Lente et al , 2017), while others suggest that RRI configures the public merely as an approval or impact assessment body (Delvenne, 2017) rather than truly informing research and policy.

So how can citizens become involved and contribute to scientific policy and research? Does a public consultation really inform policy and does public engagement inform research? This paper draws upon the authors' collective experiences deploying two distinct approaches to public engagement in technology and policy development for AI – the public survey and the citizen 'think-in'. We situate these strategies historically in the context of different approaches to public engagement, and we place them on a spectrum from minimally engaged to active critical citizenship. We examine the challenges involved in both of these approaches, and the benefits obtained based on conducting and evaluating two such exercises conducted in 2017 and 2018. While having 'our say' might offer some of the public high visibility, it can have limited potential for inclusive deliberation due to the information and time burden on participants. It can also encounter resistance from researchers. In the conclusion we reflect on the potential for alternative and linked public engagement strategies which attempt to respect human and universal rights while fostering technological and policy innovation.

Title: How organizations exercise their responsibility to prevent harmful online communication

Session Type: Individual submission

Authors:

Name: Sabine Einwiller

Email: sabine.einwiller-at- univie.ac.at

Country: AT (Austria)

Affiliation: University of Vienna

Name: Sora Kim

Email: sorakim-at- cuhk.edu.hk

Country: HK (Hong Kong)

Affiliation: The Chinese University of Hong Kong

Abstract: The vision of the Internet as an electronic forum where a plurality of voices freely engage in rational debates is spoiled as plenty of highly emotional and quite often aggressive and hateful voices get about online. A Pew Research study finds that about four-in-ten Americans have personally experienced online harassment. Various approaches to tackle harmful online communication (HOC), and hate speech as its most severe manifestation, are being debated (e.g., Gagliardone et al., 2015). The debate revolves around conflicting rights and values —above all freedom of speech and the right to be protected against harassment and intimidation. This research focuses on the responsibility of private organizations whose business is based on or supported by people using their sites or platforms for communication. We call these organizations online content providers (OCPs). How OCPs exercise their responsibility in dealing with HOC by moderating user-generated content on their websites or platforms is the overarching research question. We define HOC as ways of expression in online environments containing aggressive and destructive diction, which violate social norms and aim at harming the dignity or safety of the attacked target (person, social group or organization). The notion of content moderation refers to the processes whereby OCPs decide on the boundaries for appropriate speech on their sites (Roberts, 2014). Our research builds on and extends theoretical discussions and frameworks on the possibilities for countering online hate speech from a civil and legal (e.g., Citron & Norton, 2011) and applied ethics perspective (Cohen-Almogor, 2011; Taddeo & Floridi, 2016). To gain a multicultural perspective, the empirical research was conducted in the U. S., Germany, South Korea, and China. In a first step, we analyzed the comments policies OCPs published on their sites (N = 152); secondly we explored how these policies are implemented in content moderation by interviewing representatives of 41 organizations. The most common actions against HOC mentioned in the policy documents are deleting a post without explanation (88%) and deleting or closing the account of a violator (68%). Interviews painted a more differentiated picture. Especially large platform providers mentioned to be cautious not to alienate their users and respect freedom of speech (except for Chinese OCPs that heavily use preventative blocking of so called illegal content). OCPs operating their own platforms (e.g., online communities), on the other hand, mentioned to be rather strict in removing HOC emphasizing their rights as the owner of the space. Regarding identification of HOC, manual inspection emerged as the “gold standard” for decisively identifying HOC regardless of organizations’ size. Even when

OCPs apply machine learning technology, which many large operators do, they all rely on manual inspection in a second step. Small(er) organizations often rely solely on manual inspection, often in combination with simple word filters. Based on our empirical insights, we derive recommendations for the design of written comments policies and their execution. Additionally, our findings can facilitate governmental policy making regarding OCPs handling of HOC.

Country: US (United States)

Affiliation: University of North Carolina at Charlotte, Department of Communication Studies

Abstract: Early research on the social implications of ICTs focused on the digital divide: the gap between those who have and those who do not have access to the internet. As internet penetration increased, scholarly inquiry moved to examining digital inequalities: inequalities related to equipment, skills, support and scope of use among those online. An important contribution of digital inequalities research has been the discussion of nuances in ways people (dis-)engage with ICTs, which displayed great complexities in peoples' digital engagement.

One such practice is proxy internet use (PIU): indirect internet access by asking others to do things online for them or on their behalf. Although a recent study has reported that people who activate PIU are rarely absolute internet non-users but make some, although limited, internet use (Selwyn, Johnson, & Nemorin, 2016), PIU is predominantly being examined among internet non-users (Dolničar et al., 2018; Friemel, 2016; Grošelj, Reisdorf, & Petrovčič, 2018; Reisdorf, Axelsson, & Maurin, 2012). While these studies provide important insights into demographic, personal and social characteristics of those who activate PIU, little is known about "proxy internet users" who provide PIU (Selwyn et al., 2016). Thus, we examine characteristics of proxy internet users in order to better understand factors in indirect internet access.

Analyses of nationally representative survey data (N=1,047), collected face-to-face in Slovenia in 2018, show that 78% were internet users, of which 51% reported to have acted as proxy internet users in the past year. Most common proxy activities are searching for products or services, sending emails, and buying products and services online. These activities are most often conducted on behalf of proxy users' parents or partners. Preliminary multivariate analyses (binary logistic regression, McFadden's $R^2=0.38$) show that internet users who are younger, better educated, and report higher levels of internet skills are more likely to act as proxy internet users. Considering that

access to online services through PIU may offer an important degree of digital inclusion to non-users and less-skilled internet users, the results of this study have important policy implications, which need to address issues of internet skills and their interplay with the social and socio-economic resources that less digitally included individuals have available.

Title: [Panel] Regulación privada de contenidos y concentración en Internet, Panel description

Session Type: Panel Submission

Authors:

Name: Gustavo Gomez

Email: gusgomez-at- chasque.net

Country: UY (Uruguay)

Affiliation: OBSERVACOM

Abstract: La consolidación del poder económico y político en unas pocas plataformas de contenidos las posiciona como gatekeepers privados con gran capacidad de incidir en la diversidad y pluralismo de informaciones y opiniones en Internet. Los aspectos regulatorios tradicionales anti-trust no son suficientes para enfrentar estos problemas, en especial desde un enfoque de derechos humanos, que exigen analizar la cuestión de la concentración no sólo desde la perspectiva económica sino también como un enorme poder que impacta en nuestras democracias y se opone a los principios de acceso, diversidad y pluralismo en Internet. En este sentido, si bien estas compañías tienen un papel clave para el acceso a una Internet abierta y libre por el rol que ocupan como intermediarios entre los usuarios y los contenidos disponibles en la red, este nuevo y vital papel de gatekeepers -paradojalmente- las convierte en un potencial riesgo para la libertad de expresión y la existencia de esa Internet libre y abierta.

Title: DeNaturalising Digital Platforms: Is mass individualisation here to say'

Session Type: Panel Submission

Authors:

Name: Robin Mansell

Email: R.E.Mansell-at- lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: This contribution will focus on how the prevailing assumptions about the market dynamics in which digital platforms operate work to create the assumption that their dominance and privileging of economic value is somehow inevitable and subject only to the restraints imposed either by the platforms themselves or by policy makers. It will be argued that even within a narrow view of the economic dynamics of digital intermediary companies, there is nothing inevitable about the way they have positioned themselves in the marketplace. In 'denaturalising' the neoclassical interpretation of platform market dynamics, it will be argued that this potentially opens a wider space for a consideration of alternatives to the drive towards increasing datafication of people's lives and for a more open discussion of alternatives even within the constraint of capitalism.

Title: Digital Dominance and Vampire Squids

Session Type: Panel Submission

Authors:

Name: Dwayne Winseck

Email: pheasant42-at- gmail.com

Country: CA (Canada)

Affiliation: Carleton University

Abstract: With public inquiries around the world are casting a critical eye on the economic and political clout of digital platforms such as Google, Facebook, Amazon, Microsoft and Netflix, there has been a great deal of consideration to describing the scale and scope of these entities' operations and what—if anything—should be done to bring them under effective regulatory control. Many observers have blamed them for, for example, decimating the commercial basis of journalism and much of the entertainment media and their corrosive impact on democracy and public culture. There have also been groundswell of voices calling for the internet behemoths to be regulated as publishers/media companies.

This contribution will focus on Google and Facebook and make five points. First, that these two internet giants significant economic and political clout continues to consolidate amidst the shift from the desktop internet to the mobile internet, as they vertically integrate up and down the internet stack, and leverage their control over technical interfaces/protocols to dominate multisided markets. Second, however, the scale of their reach and the effects of propaganda attributed to them is greatly overwrought. Third, claims about the economic scale and scope of the “digital duopoly” are also greatly exaggerated. Indeed, other than market capitalization, these companies, while huge, are not the colossal entities many assert based on revenue, the value of their assets, size of their labour force, etc. For example, the combined global total revenue in 2017 for Google (\$110.9 billion) and Facebook (\$47 billion) was less than AT&T's revenue of \$168 billion in the US alone (including Time Warner)! Their combined 71% share of the \$88 billion US online advertising market does mean that they have a duopoly in this market, but they control less than a third of total ad revenue spend across all media. The total ad market is not concentrated by any conventional measure. Their combined share of the total \$970 billion US media economy is even less: 7%. A similar story applies to Canada and, I suspect, other countries, too. Fourth, blaming the “vampire squids” for decimating journalism and “the media” ignores the fact that most media are growing, that the centre of the media economy is subscriber fees not advertising dollars, and that whatever advertising dollars have been lost to some media began way before Google and Facebook arrived. Therefore, the blame for their woes lies elsewhere. Fifth, the platform as publisher/media companies analogy neglects other, probably better analogies that would give us a much sturdier regulatory framework with which to bring the very real power that the digital giants do have to heel. Drawing an analogy to banks instead opens a pathway to an even stronger regulatory framework that would: recognize that the platforms's businesses are built on a new source of wealth, data; require that, like multinational banks, they establish national branches; impose line of business restrictions on them; require regular audits that would open up their black boxes infrastructures and algorithms to regulatory scrutiny; and impose information fiduciary responsibilities, i.e. privacy and

data protection rules, on them—all without bestowing speech rights on the platforms that would make them stronger and less vulnerable to attempts to reign in the power.

Title: Artificial intelligence and the anthropocentric outlook: an investigation of the European Commission policies on IA

Session Type: Individual submission

Authors:

Name: Antonella Napoli

Email: antonella.napoli-at-ymail.com

Country: IT (Italy)

Affiliation: University of Salerno, Italy

Abstract: Artificial Intelligence (AI) is a key issue in contemporary debate (see, among others, Tegmark 2018) and scholars largely examine it throughout the imaginary's products, from literature to fiction to art. The aim of the present research is to investigate instead the way the public discourse develops AI's frame by considering a specific corpus consisting of the European Commission documents about AI policies – ethical guidelines, communications and other documents.

The present research starts taking up the classic work of Langdon Winner (1978) about the relationship between power and the technological development and other works recalling the classical theme of the autonomous technology in order to discuss – by means of the European Commission policies – the discursive construction of AI and the representational strategies that transform it into a socio-technical artifact (Latour 1998; Bijker 1997) in the light of the political and economic scenario surrounding AI's research and the power over data.

The selected corpus is investigated according to the Critical Discourse Analysis (Van Leeuwen 2008) with the aim to find the policies' discourse topics about AI and observe the ethical and political issues which arise from them – such as reflections on the border between subjects' identification and tracking, between individual surveillance and mass surveillance, or the distinction between human and non-human (Madary & Metzinger 2016; Floridi 2015, 2018). The research findings return representational strategies moving between the two poles 1) of the risk of power loss over the technology and the consequent need to control AI aims through the algorithmic design and 2) of the idea of an AI as a new tool of the technological solutionism providing it is beneficial and trustworthy.

Thus the research findings seem to suggest that the ethical and political issues that are at stakes of AI policies show up in representational strategies of AI, which let emerge a specific idea of human being. Hence, throughout these strategies, the public discourse seems to show which is the cultural stakes: a reaffirmation of Humanism over the Technocracy and the need for a development of AI, which is human-centered. Indeed these policies seem to promote an intense anthropocentrism, which is legitimized by means of key concepts: security or human rationality among others. It seems to assist to the defense of an almost unrealistic image of humans, which appears to be anachronistic in the time of digital metamorphosis.

As it will be discussed, the heated debate on IA could indeed represent an occasion to discuss about a decentralization of the man questioning on the opportunities that AI could offer in delivering an increased but not undermined humanity: since AI evolution is ineluctable, it is perhaps more fruitful to discuss about the relationships between humans and AI throughout different perspectives, such as the post-human approach, which seems to suggest an idea of man as a hybrid integrated with

technology with the attempt to overcome the anthropocentric positions that however collapse in this world of digital experience (Marchesini, 2018; see also Coeckelbergh 2017).

Title: Gigantes de Internet: regulación privada y nuevos 'gatekeepers'

Session Type: Panel Submission

Authors:

Name: Gustavo Gomez

Email: gusgomez-at- chasque.net

Country: UY (Uruguay)

Affiliation: OBSERVACOM

Abstract: Los gigantes de Internet ya no son solamente soportes técnicos y “carreteras de paso”, sino que muchas veces afectan los contenidos que por ellas circulan. De hecho, no sólo son capaces de monitorear todos los contenidos producidos por terceros sino que pueden intervenir en ellos, ordenando y priorizando su acceso y, por tanto, determinando qué contenidos y fuentes de información un usuario visualiza y cuáles no. También filtran, bloquean, eliminan o desindexan contenidos –que pueden ser discursos protegidos por el derecho a la libertad de expresión-, así como cuentas o perfiles de usuarios, “generando riesgos para la libertad de expresión”. Esas acciones muchas veces son obligadas por presiones externas de autoridades gubernamentales u otros actores privados, pero también por decisiones propias.

Los algoritmos son responsables de decisiones fundamentales sobre los contenidos a los que podemos acceder efectivamente, facilitando u obstaculizando el acceso a los contenidos disponibles en Internet. Una arquitectura de algoritmos y el uso de formas de inteligencia artificial que seleccionen los contenidos que podemos visualizar en función de las predilecciones de las personas y que tenga como objetivo dejarlo “satisfecho” y “confortable” podrá tener buenas intenciones y ser una exitosa estrategia comercial para atraer clientes, pero no es necesariamente compatible con la diversidad y el pluralismo, un requisito fundamental para el buen funcionamiento de una sociedad democrática.

Title: Perceptions of Cybercrime within the Turkish Judicial System: A Crisis of Internet Governance'

Session Type: Individual submission

Authors:

Name: Nazli Bulay Dogan

Email: bulaydogan-at- yahoo.fr

Country: TR (Turkey)

Affiliation: Graduate School of Social Sciences and Humanities, Koç University

Abstract: This presentation explores the meaning-making process within the Turkish judicial system about cybercrime and asks how this perception shapes Turkish state's policy towards internet governance. Internet governance became a critical issue in Turkey in parallel with the authoritarian politics of Justice and Development Party (AKP), the political party in power since 2002. Several political crises during AKP government showed how digital media can be influential to make public political conflicts and dissidence. Mass popular uprising of the Gezi protests in 2013 and the political conflict between Gülen Community and AKP between 2013 and 2016 are the milestones of this history. The increasing importance of digital media provoked an impulse to control internet, especially social media. Legal and extra-legal methods were used by the Turkish government to control digital media, and especially social media. Alongside this strict control, criminalization methods are still used against the residual political activities in digital media. A specific digital activism type, political hacking, is also affected by this criminalization process in Turkey. I problematize this criminalization process in Turkey about cybercrime with a special focus on political hacking, based upon my field study. In this study, I conducted interviews with 25 people who worked in cybercrime related judicial processes in Turkey, including experts, law enforcement agents, and lawyers. In the analysis of this data, I followed works critically engaging with cyber-threat and cyber-warfare framings (Bowman-Grieve, 2015; Jarvis, Macdonald, & Whiting, 2016) and analyses focusing on crime frames about hackers (Nissenbaum, 2004; Vegh, 2005; Vlavo, 2015; Steinmetz, 2016; Tanczer, 2017). In this perspective, I question how the Turkish state perceives cybercrime and cyber-warfare through their framing of (political) hackers. Based upon the preliminary findings of the study, a repetitive expression of vulnerability from cyber-threat is highly observable within the discourse of the actors from the Turkish judicial system. This framing reflects the crisis of internet governance caused by the lack of knowledge about internet and computer technologies. I claim that this risk framing of cyber-threat is a rationalization for a more repressive policy for internet governance in the case of Turkey. Examining crime framings concretizes how nation-states – actors remaining to be non-negligible components of the global political system, make meaning out of the concepts belonging to the digital age. They are also important to exhibit how nation-states construct the risk of cyber-threat with different tools from the use of older crime frames, like terrorism, to the drawing of analogies between actual crimes and imageries of crime from popular culture products. In sum, meaning making processes among state-related actors are substantial because they deeply influence power relations through their control to shape the concepts of knowledge and “truth about crime” (Comaroff & Comaroff, 2016) in the digital age. I wish to be considered for a joint CPT/ESN session.

Title: Contested truths, affordable truths and the boundaries of state intervention: how should policy makers respond'

Session Type: Individual submission

Authors:

Name: Steven Barnett

Email: s.barnett-at- westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of WestminsterUniversity of Westminster

Abstract: New technology platforms have created huge problems around the world for one of the fundamental norms of a healthy democracy: promoting an informed citizenry armed with factual information, thus empowered to make considered decisions in democratic elections and referendums.

More specifically, the dominant aggregator and social media platforms – in particular Google and Facebook – have been primarily responsible for inhibiting access to accurate, verifiable information in two separate ways: first, facilitating circulation of demonstrably false or unsubstantiated rumours through unchecked algorithms; and second, extracting vast revenues from traditional publishers and broadcasters whose journalism is bound by long-standing professional norms, making their business models increasingly unsustainable.

While the first of these problems poses difficult regulatory and definitional issues in the quest to curb fake news”, the second raises even more difficult questions around the terms on which governments can or should intervene. Democracies throughout the world have been grappling with the policy dilemmas inherent in promoting sustainable models of professional journalism while simultaneously protecting independent, fearless journalism. This paper examines some of the policy interventions being advanced, and suggests ways in which these dilemmas can be reconciled.

Its theoretical roots lie in the contrasting approaches to press freedom and regulatory intervention across mature democracies. While libertarians generally support First Amendment arguments against any intervention in “free speech” (including the press), critical political economy theorists contend that mainstream media speech is dictated by dominant corporate interests, which inevitably compromises the policy agenda.

Other perspectives, particularly rooted in European traditions of social democracy and public service broadcasting, have encouraged public interest interventions to promote plurality and diversity of content, or to cater for a spectrum of political perspectives and demographics. Explicit subsidies for journalism, however, have been unusual, particularly in emerging democracies (such as eastern Europe) where government initiatives risk being equated with State-sponsored censorship.

These interventions are now being much more widely canvassed as a means of addressing the failing business models of professional journalism. In the UK, a government Review established

last year is about to report, with recommendations for new policy initiatives and “opportunities for innovation” in journalism. In Canada, the government has committed \$50 million over five years to support journalism in under-served communities. But all such interventions pose awkward questions about the regulatory and administrative frameworks required to implement decisions on where subsidies, tax exemptions or other corporate or organisational benefits might be directed; what definitional criteria are applied and by whom; and how accountability for expenditure of public money might operate.

This paper will first examine some of the intervention models being proposed in different jurisdictions, how and by whom contested journalistic “truths” can be properly assessed, and – on the basis of recent policy innovations in the UK – will outline a policy approach that can reconcile the conflicting demands of a free press and state intervention.

Title: Negotiating the digital boundaries of Russian public space. Journalists and publishers in Russia and abroad

Session Type: Panel Submission

Authors:

Name: Olga Bronnikova

Email: bronnikova.olga-at- gmail.com

Country: FR (France)

Affiliation: Université Grenoble Alpes

Name: Bella Ostromoukhova

Email: ostrob-at- gmail.com

Country: FR (France)

Affiliation: Sorbonne Université

Abstract: Since the beginning of the 2010s, new laws aimed at regulating public speech have been applied to both journalists and publishers in Russia (Daucé, 2017). Justified by the moralization of the Russian public space, these new norms develop in parallel with increasing and varied political control for the digital space (Nocetti, 2015). Professionals of the public space comply with these new requirements but also distance themselves by subversive practices. In this presentation, we will study the transformation of the publishing practices of journalists and publishers, both in Russia and those located abroad (EU countries), questioning the construction and negotiation of moral boundaries of the Russian public space.

We conceive the « abroad » as an extension of the Russian public space which allows circulations of professional practices. Journalists who come from Russia and work for online media (Meduza in Letonia, Grani.ru in France, journalists of OpenRussia in London and those of Opendemocracy Russia) are not exiled in the sense of being excluded from Russia's political life and media space. Internet and digital media have profoundly changed the way these journalists work by granting them more flexibility in determining their geographic location (Mercier, Pignard-Cheynel, 2014). While expatriated journalists actually escape the danger of being physically persecuted, as well as of being subject to arbitrary decisions taken by shareholders close to the country's political leadership, but they remain subject to Russia's law regarding the blocking of access to online contents. Actors staying in Russia who consider publishing abroad (for example, publishers selling translation rights) as a strategy of economic development and, at the same time, as a political escape route are also facing legal and moral rules influencing their ways of doing things.

Relying on approaches in sociology of migration, media and culture, including interviews with professionals of Russian public space and ethnography in their workplaces and during international forum and conference bringing together these professionals and international NGO and foundations, as well as the platforms of the professional interactions of Russian and abroad publishers (book fairs and surrounding events), this presentation examines the trajectories and justifications provided by these actors about the transformation of their work and their expatriation. Do they adapt the rules and values of the journalistic and publishing profession to this new political context ? Do they play

a role of mediator in the diffusion of new media models and technological innovations, both in Russia and in the countries where they are registered?

Abstract: Panel Chair: Gerard Goggin

Respondent/Discussant: Nick Couldry

An excellent contemporary example of the state of the art, and stakes, in communication, rights, and dignity when it comes to technology can be found in the area of disability — still relatively new to communications and media research.

The 2006 United Nations Convention on the Rights of Persons with Disabilities (CRPD) extended to people with disabilities key rights adumbrated in the 1948 Universal Declaration of Human Rights, as well as other rights articulated in other key treaties. At the heart of the CRPD and the present struggle to achieve rights for people with disabilities are rights relating to information, communication, media, and cultural technologies.

At the same time, over the past thirty years at least, disability has been in transformation across many global societies. Central to this process of disability transformations has been the role of digital technologies — where there has been a teeming range of new cultures of use, adapted social practices, everyday innovation, and work on inclusive design and accessibility of formats, practices, content, and policy. Highly diverse, often contradictory and ambiguous, disability has become a signature area for consideration of the role of technology in opening up and underpinning communication, social participation, and justice.

Across many scholarly disciplines researchers and theorists have responded with important conceptual, methodological, and other breakthroughs that go deeper still, and make it clear that disability calls upon us to rethink the nature of the human, and especially to require us to reconsider concepts of underpinning ideas of dignity, society and individuals, and indeed life itself — especially given the pervasiveness now of technology, which has an especially intimate and powerful set of relationships with disability.

Against this backdrop this panel considers disability and communication technology across different global, regional, and national settings, showcasing the ways in which questions raised by issues of rights, representation, social practices, and affordances concerning disability urgent require general consideration by communication and media researchers, as well as policymakers, media and technology organizations, governments, and civil society.

Title: The unbearable coloniality of being disabled: old and new media examples from South Africa and beyond

Session Type: Panel Submission

Authors:

Name: Lorenzo Dalvit

Email: ldalvit-at- gmail.com

Country: ZA (South Africa)

Affiliation: Rhodes UniversityDepartment of Media and CommunicationThe University of Sydney

Abstract: South Africa boasts an independent media system, a progressive Constitution and sophisticated regulation of digital communication. Overt discrimination against people living with disabilities, considered unacceptable in mainstream media, finds a space in the comments section of online platforms, blogs and social media. A limited set of local examples is analysed in terms of critical models of the digital public sphere in relation to an African context. In particular, I draw on the concept of coloniality of being, i.e. the persistent invisibility, dehumanisation and objectification of members of subaltern groups resulting from the colonial encounter. These can be overt (e.g. through derogatory language) or covert (e.g. through representation via tropes such as that of victim, hero or villain.). Reference to the scholarly tradition of decolonial studies is appropriate for the discussion of (digital) media and disability in South Africa, where the legacy of the colonial encounter and subsequent institutionalised racial segregation still affects every aspect of public life. Notable examples such as the murder case involving para-Olympic runner Oscar Pistorius and the fake interpreting into Sign Language during the memorial service for late former president Nelson Mandela highlight the blurred boundaries between the local and the global.

Title: Access and Representation: Disability and Australian Television

Session Type: Panel Submission

Authors:

Name: Katie Ellis

Email: katie.ellis-at- curtin.edu.au

Country: AU (Australia)

Affiliation: Curtin University Department of Media and CommunicationThe University of Sydney

Abstract: The United Nation's Convention on the Rights of People with Disabilities (UNCRPD) recognises the importance of television to the human rights of people with disability. According to this convention, both access to (Article 30) and representation on (Article 8) television are a human right for people with disability. This intersection is therefore an important site for analysis in disability and media studies (Goggin & Ellis, 2015, Ellcessor 2017, Ellis & Kent, 2015). This paper focuses on the embodied, contextual and lived experience of both stigmatisation and digital media usage by disabled Australians, and their intersection as television transitioned to digital formats. While disability analysis within media studies has historically focused on representation and the way this is shaped by policy and history, more recent theorisation recognises the mutually important area of access to digital platforms. This paper brings these two approaches together to discuss: 1, the approach taken to television within the UNCRPD; 2. the representation of disability within a sample of Australia television drama; 3, the way people with and without disability access television in personalised ways.

The paper begins by addressing the connections between disability, television and human rights. A human rights approach to disability proceeds from the assumption that people with disability have the same rights as everyone else but acknowledges that environmental, attitudinal and organisational barriers create obstacles to the enjoyment of these rights. The media is central to the creation of the social environment in which these rights are not realised (Dimopoulos, 2017) and, as such, documents like the UNCRPD play an important role in reducing these barriers. For example, in addition to Articles 30 and 8, Articles 4, 9 and 21 of the UNCRPD all make specific connections to the media.

Secondly, the paper addresses consistent criticisms of television for perpetuating stereotypes, prejudices and representing disability outside the boundaries of normality. Indeed, many theorists have noted the way disability is stigmatised, underrepresented and portrayed in stereotypical ways on television (Kirpatrick & Ellcessor, 2017, Ellis & Goggin2015, Schatz & George, 2018, Koppers, 2013, Haller, 2010). Drawing on both a content analysis of representations of disability in Australian television drama and research conducted by the Australian funding body Screen Australia, I argue that representations of Australian identity are mostly based on the concept of a strong, masculine, fighting body. As such, it is sometimes hard to imagine where – or even if – disabled images fit in, both in an historical context and also in today's understandings of national character.

Finally, the paper considers the notion of web capable devices to watch television as a way for everyone, not just the disabled, to personalise, and improve, their television access. The digitisation of television offers a unique opportunity to recast personalisation as an opportunity for cultural accessibility. Cultural accessibility (Ellcessor, 2017) refers to a multifaceted interaction among representation, alternative methods of access, and an environment that facilitates the telling of diverse stories.

Title: Internet, Neurodiversity and the Rise of Autistic Culture

Session Type: Panel Submission

Authors:

Name: Vered Seidmann

Email: seidmann-at-ntu.edu.sg

Country: SG (Singapore)

Affiliation: Nanyang Technological University Department of Media and Communication
The University of Sydney

Abstract: The autistic community, which started to form in the mid-1990s, was one of the earliest online communities. The evolution of the Internet was a turning point for the emergence of autistic communities, autistic culture and the formation of distinctive autistic identity. Technological development and the growth of social media provided new means and new opportunities to communicate and to socialize. The Internet provided tools that facilitated communication and created opportunities for social interactions and sociality among individuals on the autism spectrum, as well as between them and the non-autistic world. Furthermore, the Internet enabled the evolution of different forms of communities that created spaces for self-exploration and communal exploration that expanded the conceptualization of geographical boundaries (Davidson, 2008; Davidson and Henderson, 2010) to social geographies (Bertilsdotter Rosqvist, Brownlow, and O'Dell, 2013) and opened possibilities for marginal groups in society to form communities and to express their own voice.

The neurodiversity movement was originally established by online groups of autistic people and later expanded to include other neurological and neurodevelopmental conditions. Neurodiversity calls for “recognition and acceptance of (valuable) difference” (Runswick-Cole, 2014, pp. 1120-1121) and strives for neuro-equality based on the understanding that neurodiverse or neurotypical are both human variations and ways of existing. Neurological difference is as significant as one's skin color, gender, or sexual orientation and the autistic community is another example of marginalized groups in society.

Proponents of neurodiversity challenge the medical model by providing an alternative representation of autism through making, at least, two fundamental inter-related claims: First, autism is a natural human variation and therefore focus should be on neurological differences rather than brain pathologies. Second, the rights of autistic people derive from their specific needs and demands for acceptance and inclusion. Overall, then, the neurodiversity movement forced us to acknowledge the existence and versatility of neurological differences, and consequently, that the ‘normal’/‘abnormal’ (or pathological) dichotomy needs to be re-examined. Gannon (2007) challenges existing diagnostic labels of ‘pathologies’ and ‘mental disorders’, claiming that instead of focusing on the pathologies, researchers need to ask what counts as mental disorder and when the deviation from the general population becomes ‘neurological difference’ rather than ‘disability’.

This presentation examines the role of the internet in the evolution of a distinctive autistic identity through the neurodiversity movement and the rise of collective symbols that transcend space, time and culture.

Title: Disability Confronts AI

Session Type: Panel Submission

Authors:

Name: Gerard Goggin

Email: gerard.goggin-at- sydney.edu.au

Country: SG (Singapore)

Affiliation: Nanyang Technological University Department of Media and Communication
The University of Sydney

Abstract: Disability has emerged as a highly significant area of focus in contemporary work on technology, society, and culture (Roulstone, 2016). Waves of technology development — especially in areas of media, information, communication — have taken disability as a focus, and these relations have finally been receiving the kind of attention and critical reconsideration from researchers across a range of disciplines, especially cultural, media, and science and technology studies, they deserve.

In the last few years, the questions of equality, inclusion, participation, diversity, justice, and rights raised by disability have been increasingly articulated in relation to emergent technologies and their constitutive role in and challenges concerning social life. We see this in the Australian Human Rights Commission's 2018-2019 project on human rights and technology, which puts disability at the heart of its approach (Australian Human Rights Commission, 2018).

Against this backdrop, in this talk I explore the area of disability as it 'confronts' artificial intelligence (AI), and related developments (such as data and automated decision-making) (cf. Judy Wajcman, *Feminism Confronts Technology*, 1991).

AI has been hailed as a potential 'game changer' for people with disabilities, not least across various areas where accessibility is a problem (e.g. in work, communication, social connection, and so on) — with significant investment being put into new initiatives in this area by a range of powerful actors. Yet the deployment of AI is also raising issues of bias, discrimination, and insidious forms of 'automating Inequality' (Virginia Eubanks, 2018) concerning disability, as the infamous Australian government 'robodebt' scandal (automated welfare debt recovery program) illustrates.

In this paper, I analyse the ways that disability is being explicitly framed in relation to AI, and the ways in which emerging AI discourses and technologies are involved in social relations of disability — without this being widely realized. In particular, I look at emerging global policy norms and 'best practice' recommendations in AI to see to what extent they capture issues in disability, and threats to rights and dignity.

Title: Digital marginality in the city: Technology access and use among the homeless in Los Angeles

Session Type: Individual submission

Authors:

Name: Hoan Nguyen

Email: hoannguy-at- usc.edu

Country: US (United States)

Affiliation: University of Souther California

Abstract: Prior research found that innovative uses of communication technologies could facilitate marginalized populations in enhancing their livelihood, responding to social injustice, and more importantly, to achieving empowerment and agency. However, highly vulnerable residents might experience digital exclusion, facing struggles in gaining access to technology in the first place. This is especially problematic in the context of advanced cities where economic growth and high-tech infrastructure are associated with upward mobility for some but mean statis for others.

This paper examines the reality of digital access and use among homeless people in Skid Row, an urban ghetto located in downtown Los Angeles, California. I conducted a grounded field research that employed ethnographic approaches and in-depth interviews with 28 people in order to understand their lived experiences and digital practices. The study focuses on homeless adults mainly from the African-American communities who have resided at sidewalks and/or transitional housing in Skid Row. The study finds that while communication and the technologies facilitating it were highly valued by the marginalized, manifested in various communication practices employed to facilitate their daily lives, the condition of homelessness in a hostile living environment deprived from urban network infrastructure gave rise to a considerably precarious digital life. Specifically, with minimal financial resources, the homeless could only afford low cost phones acquired from assistance programs from the government or telecommunication companies. Also, they constantly struggled with protecting their phones amidst daily occurrences of mobile theft, searching for power to charge their digital devices, and finding Wi-Fi hotspots in public spaces that actively discouraged their presence. These struggles led to the frequent interruptions of their daily communication processes.

The dynamics of mobile phone ownership, phone charging practices and Internet access thus reveals insights into the digital precarity among the lives of the have-less. The study further highlights the broader social context that underlines these situations, particularly discussing forms of social inequalities, and the fragmentation of urban technology infrastructure that marginalizes underserved communities. Taken together, I comment on possible recommendations for communication and technology policies that aim to acquire reliable and equitable technology access and use for the digital have-less including but not limited to the homeless and communities of color in urban spaces.

Title: IRC is not dead: The role of "old" digital media in the contemporary communication technology landscape

Session Type: Individual submission

Authors:

Name: Maxigas .

Email: maxigas-at- lancaster.ac.uk

Country: GB (United Kingdom)

Affiliation: Lancaster University

Name: Guillaume Latzko-Toth

Email: guillaume.latzko-at- gmail.com

Country: CA (Canada)

Affiliation: Laval University

Abstract: In this paper we reflect upon the role “old” digital media that are still in usage today play in the current media and communication technology landscape. For that purpose, we focus on the case of a real-time chat protocol with a long history: Internet Relay Chat (IRC). Using media ecology and infrastructure studies as theoretical frameworks, we adopt a multi-method case study approach to understand the role and significance of protocol, infrastructure and communities in online communications, informational capitalism and communication policy.

Our empirical material is comprised of use cases, ethnographic vignettes and user testimonies gathered within a variety of communities. We look at how the Internet Engineering Task Force (IETF), free software developers, hackerspace members, Wikipedia editors, Anonymous hacktivists, and criminals who operate botnets use IRC. We find that in fact IRC underpins many current innovations in technology development, knowledge production, community organisation, political protest and market making. We close with an overview of currently fashionable design proposals, prototypes and projects for multi-party encrypted chat systems, noting that they take many cues from IRC.

Our findings have important implications for both policy making and communication theory. First, a use-centered approach has to counterbalance emphasis on innovation-centric narratives in understanding communications policy and technology. Second, it follows that communications policy has to support maintenance and repair, when the situation is that promises of breakthroughs get more funding than incremental improvements and infrastructure upkeep. Third, community operated communication alternatives are not impossible to implement, deploy and nurture in the contemporary media landscape: a finding that goes against current assumptions that new ideas need new business models to be sustainable. Finally, in order for them to be relevant for addressing the burning questions of the day, proposals and projects in communication policy and technology have to be informed by empirically grounded narratives based on historical experiences, as well as ethnographic data on actual use cases, rather than merely speculative visions of the future based on technological determinist imaginaries.

Title: Between free speech and public interests: Examining Taiwan's regulation proposal on fighting fake news from a global perspective

Session Type: Individual submission

Authors:

Name: Chen-Ling Hung

Email: hungchenling-at- gmail.com

Country: TW (Taiwan)

Affiliation: Graduate Institute of JournalismNational Taiwan University

Abstract: Joining the global action fighting against fake news, Taiwan, the full democracy sovereignty in Asia, proposed regulation on social media and arouse the debate between the protection of free speech and public interests. This study analyzes Taiwan's case from a global perspective. What are the regulation strategies Taiwanese government propose? In what context and with what rationale? What are the contested discourses around the proposal? To answer these questions, this study sort document including official report, research papers and public discussion appeared in media.

From the global perspective, western countries have changed their laissez-faire attitude toward social media since information manipulation a significant tendency over the online platforms. Niklewicz (2017) proposes that social media platforms should be considered media companies and should be regulated by modified versions of existing press laws, adapted to suit the new technology. The approaches of western countries can be identified as the European public interest model and the American free speech model. The European countries such as Germany and France take active actions by requiring online platforms to notice and take down unlawful content, when it counters hate speech or during election period. On the other hand, Canada and the US require transparency of the fund of political advertisements instead of intervening into content (Posetti & Matthews, 2018).

This study finds that Taiwan follows the strategy of European countries. In December 2018, the government introduced amendments which proposed punishments for people who disrupt social order or threaten another person's safety through false information. The most controversial one is the amendment to the Digital Communications Bill, that would reportedly require internet companies to take down disinformation within 24 hours or be fined.

The government argues that the nation has been threatened by a host of fake news including the election period. The online companies should take responsibility for public interests in addition to making money. Regulating social media to fight fake news is national security issue since Taiwan's tension with China (Lin, 2018).

On the other hand, critics from the oppositions and internet corporations argue that some rules would infringe on freedom of speech and the Manila Principles. The internet corporations argues that the obligations would add the heavy costs of screening fake information. Some scholars argue only when there is sufficient evidence that certain disinformation is from abroad and would affect national security,

While the amendments are waiting for the congress to prove, the debate shows the difficulty to regulate social media. There are still other strategies a country can apply. For example, Council of Europe Report (Wardle, 2017) suggests national governments to do research and regulate ad

networks. In addition, nations should support public service media and local news outlets and enforce minimum levels of public service news on to the platforms. However, it's vital that countries craft rules appropriate to their particular domestic social, legal and political contexts. (Tusikov & Haggart, 2018)

This study fits the conference theme. It also fits CPT section with its concerns on “;Media and Online governance regarding "fake news", social network bots, etc”. the study also fit the scope of Global Media Policy Working Group, therefore it can considered for a joint CPT/GMP session.

Title: Affective Targeting: Social Media Monetization and the Rise of the Influence Economy
2011-2018

Session Type: Individual submission

Authors:

Name: Jeremy Shtern

Abstract: Two prominent 2018 English-language documentaries interrogate the controversy around the Fyre Festival and the role played by prominent social media personalities whose seemingly authentic and personal- but nonetheless paid- endorsements ended up effectively selling a global social media audience on an essentially fraudulent product. The practices of social media influence marketing are suddenly the topic of heightened levels of public conversation and ethical scrutiny. Yet absent from these discussions, and largely from academic literatures on social media and platform monetization as well, are empirical accounts of the history and context in which this social media influence economy emerged rapidly, but deliberately, as a significant and problematic part of the political economy of contemporary media and communications. By drawing on a series of interviews with digital advertising executives, with social media creators, and with representatives from platforms and other intermediary services conducted between 2011 and 2018, this paper will ask about the conditions and choices that supported the rise of this influence economy and reflect on what this history and context suggests about existing theories and understandings of social media monetization.

Social media influencers are individual creators with large followings who produce personal content for various online platforms and monetize that content at least in part through marketing partnerships with brands and advertisers. The brand sponsorship of media content production that is achieved through the work of social media influence is emerging as a significant, but ethically murky, driver of the advertising industry's evolving global investment in the production of content for electronic media. Analyses of the practices involved in social media influence are increasingly both consequential and generative to normative understandings of the emerging social media entertainment industry and the monetization strategies of social media platforms themselves

This paper will use interview data from more than 50 interviews to outline how certain advertising professionals and industry practices began to pivot away from excessive reliance on data intensive targeting in digital advertising work and search for alternative approaches that would allow for greater application of their creative media skills and opportunities for them to differentiate their services. It will examine how both creators and advertisers viewed the influence transactional

relationship and its advantages to brands, impacts on content and implications for the audience/customer as these practices emerged, developed an industrial ecosystem and began to stabilize. We draw on this empirical historical narrative to theorize influence as a form of what we call affective targeting, and argue that it represents a crucial and normatively troubling form of social media monetization that warrants careful consideration from scholars of platforms and internet governance, from the public authorities and from internet users and media literacy specialists. As the motivations, editorial practices and monetization strategies of platforms are increasingly being called into question on a variety of fronts, this paper makes the novel and empirically-grounded case that seeming new controversies related to the influence economy can be traced back through the entire recent history of platforms and their monetization strategies and are in fact integral to understanding the political economy of platforms.

Title: Can data activism strengthen the agency of 'common' users' An empirical study of oppositional affordances and use positions toward Facebook

Session Type: Individual submission

Authors:

Abstract: Data mining techniques in social media are on the rise, turning many aspects of users' social life into algorithmic relations (Bucher, 2012). Data activism, as a grassroots response to (top-down) datafication, attempts to empower 'ordinary' users to reflexively modify their practices and affect the very algorithms that produce them as datafied subjects (Baack, 2015; Milan & van der Velden, 2016). In our previous work, we showed that data activism tools endorse oppositional use positions, by facilitating user actions that can modify designed affordances and encompass a subversive potential. However, a question that still bears empirical study is whether 'common' users will come forward to play the roles envisaged by data activists.

Situating data activism within Actor-Theory Network and affordance theory, this article attempts to address this gap through a user study of two data activist applications: a in-house built application that functions in similar ways to Data Selfie and Go Rando. The first uses Facebook user data and reveals to users the data traces they leave behind and the inferences that can be made about users' interactions, habits, interests, personality predictions and so on. In our prior research work, we argued that Data Selfie enables users to discover hidden affordances of Facebook's key functionalities directed at other types of users (e.g. owners, marketers) and reconstruct the meaning of Facebook's perceptible affordances. Go Rando is a web browser extension that randomizes the selection of the Facebook 'Reactions' (the extension of the Like button) to obfuscate the emotional profiles of Facebook users. Providing users with a tool to obfuscate their feelings on Facebook, it obscures the expression of Facebook users' feelings by removing its more valuable, in terms of their commercial value, quality, namely its authenticity, with a potentially disruptive effect. This function was conceptualized as negative affordance or anti-affordance, in relation to social media's intrinsic affordances.

Our current empirical study extends our previous work posing two questions: First, to what extent the oppositional affordances of these data activism tools, when used by 'common' users, enable the

construction of oppositional attitudes (i.e. increased awareness about Facebook's function in terms of the construction and manipulation of algorithmic identities)? Second, to what extent these tools enable the construction of oppositional use positions (Shaw, 2017) evident in users' subsequent use of Facebook? To explore these questions, 30 Facebook users (15 for each application) were invited to use the selected applications for one week. Next, we collected use data and conducted in-depth interviews with the users to investigate their impressions and experiences with the use of these tools. Our findings reveal the actual agentic possibilities of data activism for users other than activists, namely their ability to 'de-inscribe' (Akrich and Latour, 1992) Facebook's hegemonic affordances. At the same time, the limits of data activism for non-skilled or lay users are revealed, which relate to the embeddedness of Facebook sociality in users' everyday live and social relations as well as data activist tools' restricted ability to weave personalized acts of defiance into a collective representation of 'we-ness'.

Abstract: The University of Santiago de Compostela Research Group "Estudos Audiovisuais" (<https://estudosaudiovisuais.org/en/home/>), proposes in this manuscript a critical and comparative analysis between the Communication Policies in the European Community and the practices that are common in the audiovisual subtitling sector.

Starting from the research project entitled «EU-VOS. Intangible Cultural Heritage. For a European Program of Subtitling in Non-Hegemonic Languages», funded by Spanish Research Agency (Ref. CSO2016-76014-R), we intend to demonstrate the economic, social and cultural links that exist between audiovisual subtitling and the protection of minority languages in EU.

Our analysis focuses on identifying how culture is located in this political and economically-deterministic project which tries to come to terms with the European cultural manifestations. Our analysis takes into account the logic of the EU in this regard and the logic of the small European communities that have their own cultural identity, developed small-scale audiovisual media markets, and refuse to adhere to standardised cultural models: is the case of several European "Stateless Nation" (Schlesinger, 2000: 19-20).

Indeed, although Europe should sustain its material and immaterial heritage value over the rich mosaic of languages and cultures, the pressure of globalization (and its need to eliminate all kinds of barriers, especially linguistic and cultural) leads to the generation of "liquid content" (Bauman, 2007) and a narrative and cultural impoverishing.

As part of a wider research project that examines current European digital space (and, particularly, the role of audiovisual subtitling in minority-language film industries), this paper presents an examination of the ways in which the European Union has promoted its cultural development model for the 2014-2020 period. In order to achieve these objectives, we'll use in-depth interviews to experts and EU publications as sources of information and, in the same way, our work aims to highlight the need to promote the visibility and the access to audiovisual works in their original-language version, based on the case studies of several European audiovisual markets. Likewise and due to the European academic and professional outcry, it is urgent to address a complex issue: the redefinition of the "Europeanness" of the audiovisual work (an essential qualification, which gives an option to community subsidies), regulated by «European Convention on Transfrontier Television» (1989) and «Audiovisual Media Services Directive» (2010): regulations based on a calculation of percentages of territorial allocation of its financing and equipment, while ignoring elementary cultural elements such as linguistic choice. Regarding the methodological approach of our paper, our starting point is an intensive documentary analysis methodology, involving a critical and exhaustive review of essays, legislations and reports, as a result of applying controlled hermeneutics through inference, in the manner of Bardin (2013), Chevrier (2009), Krippendorf (2013) and López-Noguero (2002), in which we have sought to infringe standard deviations such as the «fetishism of empirical data» (Zunzunegui, 2007), to elaborate on linguistic and cultural diversities themselves (Ledo-Andión & Castelló-Mayo, 2013).

Title: A Smarter Toronto: Some Reassembly Required

Session Type: Individual submission

Authors:

Name: Bob Hanke

Email: bhanke-at- yorku.ca

Country: CA (Canada)

Affiliation: York University

Abstract: In 2017, the Toronto Region Board of Trade's "Framework for a Smarter Toronto" called for "collaborative action" to shape a smarter Toronto vision and respond to the Canadian government's "Smart Cities Challenge." On October 17, 2017, Waterfront Toronto announced that it had selected Sidewalk Labs, a subsidiary of Alphabet Inc. and sibling company to Google, to be its "innovation and funding partner" in the development of "Quayside," a 12-acre site on Toronto's eastern waterfront. Together, they formed "Sidewalk Toronto" and began a public engagement process. My research explores how the "smart city" vision has played out amongst various urban stakeholders in the initial phase of planning and consultation leading to a Master Development and Innovation Plan. "Quayside" is a site of contestation over the production of a future neighbourhood "code/space" (Kitchen & Dodge 2011) and global hub for the urban innovation industry in the age of "surveillance capitalism" (Zuboff 2019).

Aligned with recent scholarship that goes "inside smart cities" (Karoynen, Cugurullo & Caprotti, 2019), I take an assemblage approach (Haarstad & Wathne 2019) to this "project" (Picon 2018), actors, technologies and resources. The articulation of technological innovation and testbedding (for products, digital infrastructure, neighbourhood-scale software-defined networks, software-mediated systems and urban data architecture) and the political (data governance, government policy and regulation, citizens) is complex because it is contextual and contingent. On the one hand, there is a surging field of "urban informatics" that projects can draw on to help solve urban challenges (Barns 2017). On the other hand, selecting an Alphabet Inc. private company that could commit US \$50 million before having a plan risked solution misalignment and raised concerns about data governance and democratic principles of urban design, planning and development.

As Haarstad & Wathne (2019: 104) note, "actually existing smart city projects are negotiated (assembled) using resources and materials that already exist locally." From the beginning, this project to make Toronto smarter has provoked criticism. Due to various issues and concerns, there have been calls to slow down or pause the planning process. The initial year-long process leading to a draft plan has been extended into 2019. If we accept the idea that a smart city project is a "frame under which a whole range of interests, agendas and projects are continuously negotiated" (Haarstad & Wathne 2019: 105), what is the role of media in representing the actors, the process, opportunities and benefits, risks and consequences?

Rather than examining smart city discourse (Harrstad 2017), this paper focuses on the media discourse surrounding this project. What has been the media discourse and framing? What thematic issues have been emphasized, obscured or neglected? What visual representations of the project

have shaped the socio-technical imaginary? To supplement analysis of an archive of mixed media materials, I also draw on fieldwork of the public engagement process and the Digital Strategy Advisory Panel to understand the push-and-pull movement between Sidewalk Labs's project vision, solutions, strategies (including lobbying and "building influencers" to ensure support), and mounting criticism from various perspectives. The public debate reveals that some reassembly is required.

Title: The Materiality of Social Media-Based Payment Transactions

Session Type: Individual submission

Authors:

Name: Dhiraj Murthy

Email: Dhiraj.Murthy-at- austin.utexas.edu

Country: US (United States)

Affiliation: University of Texas at Austin

Name: Amelia Acker

Email: aacker-at- ischool.utexas.edu

Country: US (United States)

Affiliation: University of Texas at Austin

Abstract: Increasingly, social media technology is transforming payment technologies into social payment platforms. Networked payment technologies like US-based Venmo and Facebook's friend-to-friend payment involve layers of software updating, rolling out new social/platform integration features, security features, and mobile device operating system updates. The networked materiality of payment transactions is then increasingly a phenomena of importance for internet researchers to examine. While most previous studies about social payments focus on payment function, how users store value on devices, trust the technology rollout, make sense of social ratings (such as rating your Uber driver), or the financial practices of mobile banking in development contexts of the majority world, our research is concerned with the emerging social practices in the specific case of Venmo payments.

Payments on Venmo appear in a public transaction feed and a user must opt out of the public feed in order to make payments notifications private. While the public feed never includes the amount of money requested or paid between users, it will include user names and a memo field that usually includes a description of the transaction or charge. Early in the public feed, users began to use emoji in the memo field to indicate the purpose of payment (e.g., "thanks for the...[pizza], [beer], [gas]").

We are interested in the unfolding emoji/inscription practices of users and tracing the platform affordances for these ideographic notations that make Venmo payments social and by extension, a new kind of writing and networked data inscription. By following these changes historically, we can examine how users interact with the strong hand of the platform's autocomplete algorithms. "Listening to infrastructure" allows researchers to understand the hidden, ways in which these standards and how technology is made through users. Our study asks how are Venmo payment transactions a new form of social media data and what do they tell us about the distributed materiality of mobile networks? Many researchers have explored how cashless payments can impact the social function of transactions and can lead to emotional stress and fear about surveillance and control over personal data. Most research on Venmo has studied social network ties and types of payments. However, we are specifically interested in discussing how the Venmo public transaction feed makes mobile payments and receipts of those transactions unique social

media data traces documenting how people annotate and build a sociality around these payment memos in the public feed. As such, this case study specifically examines the platform ‘affordances’ including the public feed. Following Ellison’s vanguard work on social networking site classification, we approached the Venmo payments platform as a diverse but coherent category of social media that involves a user account with icon (i.e. Profile), platform integration with other networks such as Facebook, and a user network with a friends list. Our larger argument is that Venmo transaction feed with a variety of memo types gives internet researchers a broader perspective of theorizing how network technology is made in and through unfolding social networking features such as the distributed materiality of receipts.

Title: Developing a methodology for understanding urban behaviour: putting citizens in the focus by integrating urban data and urban citizenship dimensions

Session Type: Individual submission

Authors:

Name: Olga Tsoumani

Email: olga.tsoumani-at- imec.be

Country: BE (Belgium)

Affiliation: imec-SMIT-VUB

Name: Shenja van der Graaf

Email: shenja.vandergaaf-at- imec.be

Affiliation: imec-SMIT-VUB

Abstract: The key aim of the present paper is to introduce a methodology for understanding vast amounts of urban behavioural data by taking into account both the context in which behaviour unfolds and the citizen as the actor of behaviour. More specifically, it proposes a process map for integrating urban behavioural data as captured by various digital technologies, sensed contextual data and information about the broader, underlying dimensions of citizens' behavioural engagement with their urban space. Such a methodology serves the double purpose of minimizing the risk of addressing citizen needs and preferences based on purely quantified behaviours, disconnected from their context and actors, as well as maximizing the information granularity needed for better-informed city decision making and urban policy design.

In the present era of 'urban intelligence', the pervasive presence of ubiquitous and digital communication devices transforms the urban space into a system which aspires to be highly 'intelligent' and 'responsive' to citizen behaviour. In such urban settings, data on citizen behavioural patterns are being captured and communicated in massive quantities. Supported by innovative artificial intelligence analytics, the information included in such data serves as heavily weighted decision criteria in various sectors of urban life, including healthcare, mobility, safety, nature sustainability, and commerce.

Based on the assumption that such big data-driven knowledge is sufficient for understanding citizen needs and preferences, an array of services, technological solutions, urban policies and behavioral change interventions are developed accordingly. We content that over-reliance on quantified behavioural patterns, disconnected from their context and actors, is an inadequate approach to utilizing the vast amounts of data offered by digital communication and information technologies. As a result, the above developments fall short of fulfilling the goals of enhancing citizens' experience of their space and interactions, strengthening their inclusion in urban governance and improving their overall well-being.

As a solution, a process map is created towards a more comprehensive and coherent interpretation of urban data. We start by developing a method to assess and gain insights into citizens' broader,

underlying behavioural dimensions. The term ‘urban citizenship’ is used to describe these underlying dimensions, drawing upon the discourse of citizenship in terms of interaction with the urban space and the strong focus of ‘urban intelligence’ on citizen behavior. Next, we map the combination of domain-specific behavioural and contextual data (for example, mobility behaviour and weather conditions) on urban citizenship dimensions. As a final step, the knowledge derived from this multifaceted citizen approach is incorporated in recommendations to city governments and public institutions on how to address relevant urban questions. The application of this proposed methodology has the potential of bringing the urban citizen, whose behavior is now understood in a synthetic way, back to the focus of city decision making, urban policy development and ‘intelligent’ technological design.

Title: Exploring ethics and values in data science training

Session Type: Individual submission

Authors:

Name: Aphra Kerr

Email: aphra.kerr-at- nuim.ie

Country: IE (Ireland)

Affiliation: Maynooth University, Ireland.

Abstract: Data science is the study and application of data to inform decision-making, often in the belief that it can improve outcomes. While much attention is paid to artificial intelligence, sensors and computing, less attention is paid to the humans who work with the technologies – apart from a range of policies to increase the number of them. Yet, as Beer (2018) points out, the power of data is in the hands of those who can interpret it. Data is not neutral and outcomes depend on what data is being used, how it is gathered, who is making the decision, why they are making the decision, who the decision is being made about and who else may be affected, issues which lie at the core of big data and algorithmic culture debates (Kitchin, 2014; Kelleher and Tierney, 2018). As recent data scandals involving Facebook and Cambridge Analytica reveal, data science workers can create services which introduce new social and political inequalities with little to no recourse. Despite a visible increase in discourses about ethical frameworks, and the need for legal frameworks to protect data privacy, in Europe it is far from clear if these policy solutions are adequate to protect individual and collective rights from such behaviour.

To date there has been little exploration of the ethical or value based education and training of data science workers as they begin their professional formation. Emerging out of statistics and computer science staff and students have not traditionally had to concern themselves with human subject type ethical oversight in their research or training (Metcalf and Crawford, 2016). In this paper we examine the training and curriculum of a sample of formal and informal data science curricula to explore the attention given to ethical values, including human rights and dignity. We are particularly interested in the practical ‘real world problems’ and ‘creative solutions’ used to ground their ethical education. To what degree can their work be made accountable and transparent? To what extent does the social good and ‘bottom-up’ uses of data influence the agenda? Existing research highlights the highly contextual nature of the ethical concerns raised in practice (Kennedy, 2016, Turow, 2012). Are data scientists prepared to take on the mantle of data ethicists in the workplace, or in the academia? If not we may need more radical policy solutions.

Title: Is All Extremist Content Online Created Equal'

Session Type: Individual submission

Authors:

Name: Kate Coyer

Email: coyerkc-at- spp.ceu.edu

Country: HU (Hungary)

Affiliation: Central European University

Abstract: “Countering Violent Extremism” has become a sweeping term for a broad array of activities ranging from grassroots initiatives, to civil-society campaigns, to corporate responses, to governmental strategic communications. UN Special Rapporteur for Freedom of Expression David Kaye argues: “By ‘balancing’ freedom of expression and the prevention of violence, the programmes and initiatives aimed at countering ‘violent extremism’ have – often purposely, sometimes inadvertently – put at risk or curtailed the independence of media,” calling CVE programs that monitor content online for removal themselves forms of surveillance. For better or worse, CVE has become an industry unto itself, and a global framework for considering the different – and often contradictory – responses from governments, companies, and civil society.

Internet companies are under increased pressure to counter extremism online. Most of these efforts at the platform level have fallen under the realm of content and account removal. Other efforts focus on counter narratives- neither of which are supported by sufficient evidence as to their effectiveness. The Institute for Strategic Dialogue (ISD) defines counter-narratives responding to extremism as messages that offer “a positive alternative to extremist propaganda, or alternatively aims to deconstruct or de-legitimise extremist narratives” (see Tuck & Silverman, 2016). Counter-speech itself is as varied as the kinds of extremism it responds to. The assumption underlying counter messaging programs is that exposure to an alternative set of facts or interpretations, debunking myths, and exposing lies will alter attitudes and behaviors. These are long term impacts being sought that are not easy to measure or quantify. But what does that look like at the platform level? Google and Facebook have trained NGOs working in anti-extremism how to use keyword advertising, but current initiatives go much further by adding targeting, curating and video promotion.

One other avenue being explored is redirection. This paper explores the Redirect Method, a project of Moonshot CVE and Google’s Jigsaw, which uses Google’s Adwords targeting tools to deliver curated local content when internet users search for selected keywords identified as extremist. The project poses a wide range of critical questions, as well as exploration of the possibilities for alternative interventions from content and account removal. The Redirect Method also cycles back to the question of whether or not exposure has an impact when evidence points to the social network around exposed content is at the heart of informational power. However, the Redirect Method also subverts the model of advertiser driven search, presenting further challenges to Google’s claim of neutrality in its search algorithm. The method also raises a number of serious privacy and data protection concerns, as well as core questions about information access and online search, and fundamental questions of information freedom online.

Title: Uncertain Infrastructures and Volatile Territorial Formations: State Capture in Neoliberal Times

Session Type: Individual submission

Authors:

Name: Angela Arias Zapata

Email: aaz273-at-nyu.edu

Country: CO (Colombia)

Affiliation: New York University

Abstract: In this paper, I analyze the distinctions between rural and urban areas in Colombia in terms of their articulation around broadcasting and mobile telephony infrastructures. Official narratives indicate that the distinction between urban and rural is something municipalities decide -a consequence of the democratization process in the late 1980s and early 1990s and the subsequent recognition of regions' political and administrative autonomy. Further investigation on the matter (based on archival research and in-depth interviews) reveals that there is an awareness on the part of central national-level authorities that illegal economies and corruption make impossible to know what is the real state of communication infrastructures in rural areas. Electoral politics gets in the way of a genuine interest for accuracy and problem resolution in the context of vulnerable rural areas. Moreover, the definition of rural and urban is unstable and follows the convenience of local political elites, allied with illegal economies and corporate interests.

Based on these findings, I argue that, rather than being a force opposed to the state, illegality and cronyism associated with corruption in the context of electoral politics are a form of State power. Specifically, a neoliberal reformed State, instrumentalized by corporate power. In the wait for the market to arrive, market-friendly legislation appears as a volatile discourse that disavows the capture of state economic resources on the part of corporations. This reinforces a colonial notion of territorial formations; the idea that rural areas are wild lands and their inhabitants are either criminals or uncivilized communities, still disconnected from the Colombian nation. In this case, the illusion of wildness and uncertainty about what happens in rural areas is necessary for capital accumulation under Neoliberalism; it obfuscates the existence of precarious labor, as well as the connection between communities and their territories, portraying the latter as empty.

As a young scholar, I would like to be considered for a joint CPT/ESN session.

Title: #ViolentosComoAMLO: las semánticas de la insurrección ante la guerra sucia y las noticias falsas durante el proceso electoral mexicano en 2018

Session Type: Individual submission

Authors:

Name: Enrique Chaparro

Email: e_iturralde-at- comunidad.unam.mx

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: Los sitios de redes sociales son, entre otras cuestiones, espacios de disputa narrativa entre los diferentes sectores de una sociedad. Por ellos cruzan lo mismo las estrategias coercitivas desarrolladas por grupos de poder gubernamental y político que tienen el fin de manipular a la opinión pública, que los contra discursos de la protesta ciudadana.

En el presente trabajo se hace una revisión sobre una de las tendencias que circuló en Twitter durante el Proceso Electoral 2018 en México y cuyo título fue #ViolentosComoAMLO, Hashtag concertado desde múltiples cuentas de políticos y agrupaciones del entonces partido oficial, el Partido Revolucionario Institucional (El PRI) para atacar al candidato a la presidencia de México que entonces encabezaba las encuestas de popularidad, Andrés Manuel López Orador.

La pregunta que originó la presente investigación es:

¿Cuál fue la reacción de los usuarios de una red sociodigital como Twitter ante los ataques al candidato a la presidencia de México que más popularidad tenía en las encuestas?

Mediante un análisis de contenido de una muestra de los tuits del hashtag #ViolentosComoAMLO, trending tópic los días 15 y 16 de abril de 2018, se encontró que, paradójicamente, quien fuera el candidato más mediáticamente atacado durante el periodo de campañas, al mismo tiempo contó con el apoyo de muchos usuarios en esta red social.

Ellos lograron tener una participación activa en los ataques contra López Obrador en Twitter, en un fenómeno que, en este trabajo se denominó semánticas de la insurrección: giros semánticos en los que se cambió el sentido negativo original programado por quienes lanzaron los ataques en contra del candidato, para tornarlo en mensajes en su defensa o desestimando la legitimidad de sus atacantes.

Tal comportamiento fue análogo a la popularidad del candidato que mostraban las encuestas de periódicos y medios electrónicos, lo que permitió tener un panorama sobre la preferencia de los votantes.

Los simpatizantes de AMLO actuaron de forma crítica y organizada ante cuestiones como la guerra sucia y las noticias falsas en Twitter. Esta situación parece ser una constante que continúa en fechas recientes, en el terreno de Internet y las redes sociales, donde el ahora Presidente de México parece contar con una base de apoyo en usuarios del sitio, por lo menos mientras mantenga niveles altos de popularidad.

Title: Surgical Strikes: How Indian mainstream media and Kashmir's local media reported the border conflict

Session Type: Individual submission

Authors:

Name: Samartha Srivastava

Email: samarthasrv(at) gmail.com

Country: IN (India)

Affiliation: Jamia Millia Islamia

Abstract: India and Pakistan have been in a geopolitical tussle since independence from the British in 1947. One of the biggest issue of contention since the beginning has been the territorial dispute regarding Kashmir. This has led to multiple wars, agreements and pacts, and has constantly been raised at the United Nations. The rise of militancy since 1989 has led to many acts of cross-border violence. The most notable of these in the recent times are the 2016 Uri attacks perpetrated by Pakistan-based militant factions, and the subsequent retaliatory surgical strikes by India in Pakistan-Occupied Kashmir. This paper aims to study and compare the reporting trends by the Indian national media and Kashmir's local media in reporting the September 2016 surgical strikes. As media is the mirror of the public beliefs and also has the power to build opinions, the study will serve as an attempt to better understand the differences between the general public opinion of the State of Kashmir and that of the rest of India through a study of media consumed by the people of the region. This study is based on the Agenda setting theory (McCombs & Shaw, 1972), and Bernard Cohen's observation that the press "may not be successful much of the time in telling people what to think, but it is stunningly successful in telling its readers what to think about. The world will look different to different people depending on the map that is drawn for them by writers, editors, and publishers of the paper they read." This will also help us comprehend how this territorial dispute affects the local populace of the region. This research will study the reporting styles of Greater Kashmir (Kashmir's most widely circulated local newspaper), and Times of India (India's most widely circulated national newspaper) in a comparative perspective.

The study uses quantitative and qualitative data analysis for comparison. Quantitative analysis of the news stories involves recording down the number of Front page stories, Inner page stories and editorials that are carried out by both the newspapers and tabulating the results.

Qualitative research here involves data analysis through constant comparative analysis technique, which was first articulated by Glaser and Strauss (1967) and has subsequently been refined (Lincoln & Guba, 1985).

Title: Mediatization of Conflict in the Social Media Era - A Case Study of Sino-Indian Border Crisis in 2017

Session Type: Individual submission

Authors:

Name: Shixin Zhang

Email: shixin.zhang(at) nottingham.edu.cn

Country: CN (China)

Affiliation: University of Nottingham Ningbo China

Abstract: Please note that this article is currently under review at an academic journal for publication. Do not disseminate.

Inspired by the concepts of Arrested War and ANT (Actor-Network Theory), this study has traced and analyzed three main actors in the wars and conflicts in the social media age: social media platform, the mainstream news organizations and online users. These three human and non-human actors associate, interact and negotiate with each other in the social media network surrounding specific issues. The central argument is that social media is playing an enabling and constraining roles in contemporary wars and conflicts. Both professional media outlets and web users employ the functionalities of social media platforms to set, counter-set or expand the public agenda. Social media platform embodies a web of technological and human complexities with different actors, factors, interests, and power relations. These three actors and the macro social-political context are influential in the mediatization of conflict in the social media era.

In recent years, there have been growing researches and literatures that adopt the concept of mediatization of conflicts/wars. Cottle (2006: 8-9) emphasized the complex ways in which media are implicated within conflicts. McQuail (2006) pointed out that the historical conditions for war have changed. Hoskins & O'Loughlin (2015) argued that the process of mediatization is uneven and they divided the process into three phases: Broadcast War, Diffused War and Arrested War. Arrested War is 'characterized by the appropriation and control of previously chaotic dynamics by mainstream media and, at a slower pace, government and military policy-makers' (ibid). However research on mediatized conflicts is still at an early stage, awaiting theoretical and conceptual development (Mortensen, et al, 2015). And most researches in media and conflict are confined to the western democracies. To fill in these research gaps, this study will address two research questions:

RQ1. How do the professional media outlets frame the conflict/crisis on social media in China?

RQ2. How do the different actors in relation to crisis negotiate, act and interact via social media?

This study adopts both quantitative and qualitative research approaches on the basis of case study, content analysis and textual analysis. The Sino-Indian border crisis in 2017 refers to the Sino-Indian standoff in the Doklam region of the Himalayas where the borders of China, India and Bhutan converge. The target research subject is Global Times' (GT) news posts and users' comments on Weibo. Unit of analysis is each post/comment. The sampling time period was set for two months from 26 June to 28 August 2017. A total of 71 GT posts and 1,409 users' comments were collected.

This research has significant implications for the study of mediatization of conflict. Theoretically this project has proposed and tested a new analytical model by integrating mediatization of conflict concepts with ANT. It also provides up-to-date empirical evidence through non-Western lens.

Title: Eye tracking study of participant attention in Simulated Virtual Intergroup Contact as predictor of change in emotions, perceptions and positions toward the outgroup

Session Type: Individual submission

Authors:

Name: Nili Steinfeld

Email: nilisteinfeld(at) gmail.com

Country: IL (Israel)

Affiliation: Ariel University

Name: Ohad Shaked

Email: shakohad(at) gmail.com

Country: IL (Israel)

Affiliation: Haifa University

Abstract: One of the most influential theories in the field of intergroup relations is the Contact Hypothesis, according to which interaction between individuals of conflicted groups can reduce stereotypes, cultivate mutual understanding and lead to change in emotions, perceptions and even political attitudes (Allport, 1954; Dovidio, Gaertner & Kawakami, 2003; Jolly & DiGiusto, 2014; Pettigrew & Tropp, 2006). However, geographic, cultural and social segregation often set obstacles to coordinating positive physical contact sessions (Amir, 1969; Ellis & Maoz, 2007; Maoz, 2009; McKenna, Samuel-Azran & Sutton-Balaban, 2009). Recently, a new methodology was developed- Simulated Virtual Contact (SVC) (Author), in which participants watch prerecorded video messages by an outgroup member in a closed Q&A structure. SVC enables participation anytime, from anywhere, narrows psychological barriers preventing individuals from participating in a face-to-face contact and helps overcome complexities of gathering participants to a contact session, offline or online.

The study employed this methodology in an eye-tracking experiment, to measure participants' attention during the session. Previous research demonstrates that the eyes are drawn to informative areas in a scene and that cognitive processes influence and are influenced by ocular behavior (Boyer, Maouene & Sethuraman, 2017; Hoffman & Subramaniam, 1995; Rayner, 2009, Richardson & Dale, 2005; author, 2016; Velichkovsky, 1995). This has led researchers to study eye movements as a measurable marker of attention (Marquart, Matthes & Rapp, 2016; Williams, 2013).

89 Israeli students were requested to watch several video recordings of a Palestinian sharing his life story. Participants' eye movements were recorded throughout the experiment. 14-10 days prior to the experiment, and again after the experiment, participants filled a questionnaire measuring emotional and perceptual attitudes toward Palestinians and the Israeli-Palestinian conflict.

Several significant differences were found in participants' pre and post-session positions toward Palestinians: Negative emotions and lack of trust in Palestinians decreased, belief in Palestinians' ability for change increased.

Participants' eye movements reflected prior attitudes toward acquiring new information on Palestinians and will to engage in contact: The more will participants expressed to engage and learn about Palestinians prior to the experiment- the more they focused their gaze directly on the character on screen.

Furthermore, important correlations between participants' ocular behavior and change in positions toward Palestinians were found: Participants who tended to look straight at the Palestinian character expressed increased positive change in attitudes toward Palestinians after the session in questions concerning belief in Palestinians' ability to change, acknowledgment in a shared identity between Israelis and Palestinians and empathy, and increase in willingness to compromise in the context of the Israeli- Palestinian conflict.

Finally, the more participants perceived the interaction as realistic and interesting, the more they focused their gaze directly on the character.

The paper discusses the effectiveness of SVC and what can be learned from participants' eye movements on their attitudes toward the outgroup and the session itself. This study is a pioneer in applying eye-tracking methodology to the field of conflict resolution, as a measurement of participants' attention and experience of the session, and as a possible predictor of session effect.

Title: Sustaining Public Support in War on Terror: A Case Study of Pakistan's Military's Use of Social Media

Session Type: Individual submission

Authors:

Name: Muhammad Khalil Khan

Email: khan(at) zju.edu.cn

Country: CN (China)

Affiliation: Zhejiang University, Hangzhou

Abstract: The 21st century offers an illustration of a landscape for a new battle of winning hearts and minds. Insurgents, terrorists, and nonstate actors are more competent and more active than ever before in creating a master narrative to challenge the state's strategic narrative, political credibility and legitimacy of a public war. Therefore, the state and military must uphold the widespread public support in their struggle against adversaries to counter their virulent propaganda against the state. Strategic military narratives presumably influence public perception of the causes and prospects of wars. Such perception plays a central role in attracting public support and in reining in hostile national segments.

This study examines Pakistan's military's strategic use of social media in encouraging and sustaining public support for the fight against terrorism in Pakistan. Twofold methodology is used: analysis of the contents of military Facebook posts and public engagement analysis to answer the research question: how are different strategic patterns (frames and formats) used on social media to engage the Pakistanis in their institutional efforts to counter the master narrative (a narrative of Islamic jihad against infidels that is deeply rooted in Islamic culture) of terrorists in Pakistan? Its findings indicate that Pakistan's military used significantly different types of strategic patterns in response to a fast-changing security situation in the country. Patterns (both frames and formats) are used strategically to facilitate public-military and people-to-people engagement. Motivational frames and video posts are the most dominant patterns of communication used to enhance public participation in and to generate dialogue between military and public in the war against terrorism in Pakistan. This study also indicates that different formats and frames used by Pakistan's military on social media significantly mediated the public-military engagement among different segments of society during the critical phases of Pakistan's ongoing war against terrorism.

Title: The role of ICTs in Community Building and Reconciliation in post conflict Northern Uganda: A case of #Let'sTalkUganda

Session Type: Individual submission

Authors:

Name: Juma Kasadha

Email: jkasadha2-c(at) my.cityu.edu.hk

Country: HK (Hong Kong)

Affiliation: City University of Hong Kong

Abstract: There are relatively few studies that examine the use of ICTs media as tools that can be used or have been used to bring about reconciliation in war torn or conflict prone regions in Africa. In particular Uganda, that has positioned itself as a lead troop contributor to the UN-AU Regional Task Force in different conflict management and reconciliation initiatives. The #Let'sTalkUganda was a 2016 initiative that aimed at engaging people of northern Uganda and Kampala in dialogue, with a focus on the youth, on issues faced by post-conflict societies in order to promote understanding and reconciliation, to further transitional justice process in Uganda. In this study, we examine how use of ICTs such as social media platform of twitter was and is being used in post conflict societies to contribute towards community building and reconciliation processes in once war ravaged northern Uganda. Started in 2016 during the trial of Dominic Ongwen trial at the International Criminal Court (ICC), #Let'sTalkUganda has enabled post conflict societies in northern Uganda to share different viewpoints and also contribute to how best the community can recover from suffered war atrocities. Using NodeXL a social media analysis application, data of 27 months (June 12, 2016-September 9, 2018) was extracted to analyze how social media platform of twitter was and is being used by reconcile and build a post conflict community of Northern Uganda. Findings from a semantic analysis evidence that from the 1625 users/nodes present in the data collected, the interconnectedness of users was 0.00103 and modularity evidencing the separation of clusters at 0.681. The interconnectedness and modularity evidence that the use of twitter platform in the #Let'sTalkUganda enabled communities in Northern Uganda to follow ICC proceedings in the trial of Ongwen and also contribute on issues of transitional justice and reconciliation in Northern Uganda

Affiliation: Hankuk University of Foreign Studies

Abstract: Contemporary metropolitan cities are built on differences. The capacity to understand and deal with differences has become even more critical for individual and collective well-being in metropolitan cities. The purpose of this study was to develop a communication perspective (termed community-of-difference perspective) that will guide our understanding of various ways in which metropolitan city residents experience and manage (or fail to manage) differences in their residential places. As more specific aims, we discuss (1) types of differences and conflicts urban residents have experienced; (2) communication strategies leveraged to solve problems related to various types of differences and conflicts in urban places; and (3) how to classify urban local communities based on the ways in which differences and conflicts were dealt with through communication.

For this study, we conducted in-depth personal interviews (n = 30) and 12 focus group interviews (n = 96) between December 2018 and March 2019 from three study areas in Seoul—Sungmi-san, Haebang-chon, and Daerim-dong—as places experiencing unique issues related to differences.

Key findings:

- 1) Differences in urban local communities can be categorized into at least four types: identity-based (who they are and where they belong), value-based (what they believe), action-based (whether and how they participate), and socio-spatial (where and how long they have been in a place) differences.
- 2) Two types of conflict exist in urban local communities: (1) difference-reduction conflicts produced to reduce, avoid, or eliminate differences ultimately for one's own benefit; and (2) difference-management conflicts arising from concerns about how to find ways to live with and manage differences.

3) We can conceptualize two different types of communication for dealing with conflicts: (1) difference-reducing communication (communication among those sharing identities, values, and action plans as resources to find and strengthen in-group connectedness while reducing, avoiding, or eliminating differences between groups); and (2) difference-managing communication (communication among those with differences that does not avoid, reduce, or ignore differences among local residents).

4) Four different types of communities were determined that correspond to the ways in which differences were addressed by various types of communication strategies: (1) denial (top-down, repressive relationship between powerful and weak groups); (2) agonistic (competitive relations among different groups); (3) cohabitation (safe distance from different others for survival); and (4) coexistence (preserving singularities while recognizing the other's differences). The differences relate to perception, relation, behavior, and communication. Each type was not predetermined or fixed but constantly experiencing dynamic, complicated processes of changing, overlapping, and transitioning. These processes depended on the forms, functions, and contexts of the communicative activities taking place among different community groups and their capacity to utilize communication infrastructure to identify and solve problems arising from differences.

Title: Information disorder and Political Polarisation in a deeply divided society: The case of post-conflict Northern Ireland

Session Type: Individual submission

Authors:

Name: Paul Reilly

Email: p.j.reilly(at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Abstract: Much of the research on ‘fake news’ to date has focussed on how elections and referenda between 2015 and 2017 were affected by disinformation manufactured in ‘fake news factories’ in countries such as Macedonia, amplified by bots on social media in order to sow confusion and disunity (Shao et al, 2017; Woolley and Howard, 2017). In contrast, there has been relatively little discussion of the impact of mis-and disinformation within deeply divided societies. This paper deploys Wardle’s theoretical framework of information disorder, rather than the unhelpful term ‘fake news’, in order to examine these issues within the context of post-conflict Northern Ireland. Two decades after the Good Friday Agreement, there remains a ‘negative peace’ in the contested polity; while there has been an overall reduction in intercommunal violence, little progress has been made on the resolution of conflict legacy issues, with zero-sum perceptions of politics and space held by Catholic and Protestant communities largely undisturbed. In this context, moral panic discourses about social media have emerged after information flows on Facebook and Twitter were linked to the intercommunal violence seen during contentious episodes, such as the street protests that erupted in December 2012 after Belfast City Council voted to alter its protocol on the flying of the union flag over City Hall. Yet, there remains very little empirical or theoretical investigation of these information flows, or the contextual factors that explain why disinformation propagators use these platforms to inflame sectarian tensions during such incidents. This paper sets out to address this gap in the literature by exploring the distinctive characteristics of dis-and misinformation within the Northern Irish information ecosystem. Drawing on the key findings of a qualitative study of the role of Facebook, Twitter, and YouTube in the union flag protests and the Ardoyne parade dispute (2012-2015), it explores how these platforms were used to share mis-and disinformation that had the potential to increase the likelihood of violence surrounding such incidents. The contributions of so-called ‘Shinnerbots,’ volunteers mobilised on Twitter to drown out criticism of Sinn Féin, and parody accounts such as Loyalists Against Democracy (aka LADFLEG) to these partisan political debates will also be examined. Finally, the paper will analyse public opinion data, such as the Northern Ireland Life and Times Survey, to explore whether information disorder is a symptom of the decline in public confidence in both the news media and the dysfunctional power-sharing institutions in Northern Ireland. Results indicate that online information flows relating to mis-and disinformation have a very short lifespan due to the factchecking of citizens and professional journalists. While there have been few incidents of sectarian violence thus far attributed to false information shared online, the contestation of contentious political issues on social media is typically antagonistic and sectarian in nature. The high levels of political polarisation that persist in the deeply divided society mean that information disorder is likely to remain an ingredient of these contentious episodes for the foreseeable future.

Title: Personal and Social Risk-Taking as Survival Tactics: Conceptualizing Risk and Risk-taking Among Koreans

Session Type: Individual submission

Authors:

Name: Yungwook Kim

Email: kimyw(at) ewha.ac.kr

Country: KR (Korea, Republic Of)

Affiliation: Ewha Womans University

Abstract: Generations that lived through the Korean War still dwell, not forgetting the horrors they were exposed to, while the new generations live in fear of being secretly filmed by strangers. Young or old, financial difficulty is still one of the risks feared by most people. There is no doubt that historical, cultural and social factors play significant roles in building perceptions of risk among Koreans. Not only that, these factors would be the key elements used to differentiate comprehension of 'risk' by people from other cultures, which is why definition of 'risk' can only be subjective. Therefore, finding out how Koreans perceive risk is meaningful academically, as it will contribute in development of risk communication.

Despite Koreans' vulnerability of being exposed to various types of risks with repeated occurrence of risk-related fatalities, there are still lack of sensitivity on risks among Koreans. A phenomenon called 'safety frigidity' describes Koreans' numbness to danger or risks near them. In other words, Koreans response to risks is poor. Safety frigidity is one of the few words the Korean media use when describing the Korean society. Such phenomenon can affect people's risk-taking behaviors, as insensitivity in acknowledging risks could encourage people to take dangerous activities. These tendencies have been studied extensively in the scholarly area of risk-taking and edge-work.

There is an extensive literature done about Western people's perceptions of risk by Western experts, yet little empirical study has attempted to investigate how risk is perceived by Koreans. Definition of risk is dependent on cultural and social environments. Understanding people's perception on risk is a key element in comprehending individuals' risk-taking behavior. This study has two research goals. First, investigating Koreans' perceptions on risks, and second, based on the findings, examining why Koreans continue to take the risks that could possibly lead to life-threatening consequences.

In this paper we present findings from our qualitative investigation on a group of Koreans' risk and risk-taking knowledge and experiences using in-depth interviews. Interview content analysis to find out the roles played by risk epistemology in participants' daily lives following the open-ended coding is conducted using descriptive thematic analysis. Qualitative interpretations allow to understand components shaping concepts of risk by people. The analysis focuses on key

themes, narratives, definitions, discourses, rhetorical, expressive devices and personal histories, emerging from the transcribed interviews.

By doing so, we explore how Koreans define risk and the views used to express ideas about risk-taking. To find out perceptions on risk among Koreans, we tentatively conceptualized three major aspects of risk: physical, financial and social. Based on these aspects we tentatively found four dominant ideas on risk-taking in our interviewees' accounts: to be an in-group, to save face, to boost self-efficacy and for their livelihood. We then assessed how these lead to survival tactics as a consequence. Theoretical ramifications and practical applications will be discussed further based on the interview results.

Abstract: As one of the worst humanitarian crises in modern history affecting millions, the Syrian refugee crisis has been studied by scholars from various disciplines. This qualitative study adopts “a social perspective in the cross-cultural study of media texts” (Shirazi, 2013 p. 36), and utilizes Critical Discourse Analysis (CDA) to examine the discursive representation of refugees by newspapers in three countries, the UK, Bulgaria and Turkey between the years 2011-2014 to uncover and compare discourses within national contexts. The authors believe that such a qualitative study will help to gain a deeper understanding of the discursive media representations and coverage of Syrian refugees within a human rights perspective. The escalation of the numbers of migrants and refugees due to political pressures and conflicts poses new challenges for the representation and mediation of migrants and refugees' rights and human dignity. Thus, how journalism and communication can empower individuals to reinforce their rights, challenge stereotypes and discrimination, and foster acceptance of migrants and refugees needs to be studied extensively. Study of language is important to understand the representation of refugees by the media as language does not merely describe but in fact constructs versions of identities and social groups (McKinlay & McVittie, 2011).

The study covers the years 2011 to 2014, starting with the stories that cover the beginning of the civil war in Syria and include the most active first three years of the crisis. Two popular and highly reputable daily newspapers from Turkey (Hurriyet and Cumhuriyet), Bulgaria (Dneven Trud and Standard), and the UK (The British Guardian) were analyzed qualitatively to reveal the discursive representation of refugees and compare the major discourses utilized by media in the three countries. Van Leeuwen's (2008) discourse as social practice discursive categories were used in the analysis, which may be listed as collectivization vs. individualization, spatialization, nomination, relational identification, and classification. In addition, van Leeuwen's (2008) recontextualization of

social practice categories were used to further study the news stories about refugees, which included: substitution, rearrangement, deletion, and lastly addition. A total of 205 news stories (83 from Bulgaria and 65 from Turkey, 57 from the UK) have been analyzed.

Results reveal that although the discursive strategies used in the coverage of the Syrian refugees varied across the three countries from more positive and accepting to more negative and polarizing discourses, the significance of media's role for facilitating communication-related rights such as the right to voice and visibility and to have one's experiences and ideas fairly represented is paramount for protecting basic human rights and ensuring universal equality, dignity and mutual respect.

Title: FRAMING THE CONFLICT NARRATIVES: UNCOVERING THE VISUAL SEMIOTICS IN MEDIA REPRESENTATION OF KASHMIR'S UNREST

Session Type: Individual submission

Authors:

Name: Nookaraju Bendukurthi

Email: nookarajub(at) gmail.com

Country: IN (India)

Affiliation: Central University of Kashmir

Abstract: Kashmir based media generally perceives oft-repeated civil resistance in the Indian side Kashmir region as a political expression of Kashmiris for their self-determination. While, Indian mass media reports the same as an issue of national security, integrity, foreign policy, insurgency and cross border terrorism. However, every cycle of street protests in the Kashmir valley since the beginning of the present century precipitates/advances certain semiotic markers that remain to be powerful symbols of the season. They reflect the deep-rooted anger and long standing aspirations of Kashmiris. Images and slogans are the cultural paraphernalia and are integral part in any mass/social movement. In the given context, this paper attempted to delineate how agonising are the media images of pellet-bullet ridden faces/bodies of civilians vis-à-vis how print media visuals of the year 2016 unrest have come to symbolise as cultural artefacts in the region. It aimed to trace how regional and national print media, particularly the way the photojournalists embedded the journalistic and authorial intentions while framing the pellet victims of the season. With the help of Frame Analysis this paper explored to understand how different visual techniques of photojournalism signified the images of pellet victims and how such techniques have been instrumental in constituting such images as iconic, indexical and symbolic representations of collective suffering/expression of Kashmiris. This paper concluded by outlining how (photo) journalistic practices of signifying and signification of images authoring the dichotomous media narratives of both India and Kashmir on Kashmir conflict. In the context of dearth of literature on semiotic meaning of Kashmir conflict, this study finds its relevance in understanding the visual semiotic significance of both Medias' Agenda Setting and Medias' Framing of conflict.

Title: Examining Selected Newspapers' Framing of the Renewed Biafran Agitation in Nigeria (2016 ' 2017)

Session Type: Individual submission

Authors:

Name: Victor Eze

Email: viccjohnson(at) gmail.com

Country: NG (Nigeria)

Affiliation: University of Ibadan

Abstract: The renewed Biafran agitation headed by Indigenous People of Biafra (IPOB) and partly other groups, such as Biafra Independent Movement and Biafra Restoration Citizens, have been in the news since 2016. This is surprising when one considers the fact that the Nigerian-Biafran war was fought over 50 years ago with no victor and no vanquished stance. This research examines how selected newspapers (Punch and Daily Trust) frame the Biafran agitation from January 2016 to December, 2017 – a period which recorded a spike in the activities of Biafran agitators who called for a referendum to carve out the Republic of Biafra. Framing theory will be employed as the theoretical frame work for this research. Two hundred issues of selected newspapers will be sampled through Critical Case sampling technique. Frame analysis will be employed in analysing the issues of selected newspapers. Findings of this research will show how selected newspapers frame the Biafran agitation from political, economic, separatist, human right and conflict frames. The frame sources will also be examined. This study will highlight how concerned media perceive the Biafran agitation and how such media try to serve a conciliatory role or create more division in the face of reporting the crisis. The way the media frame the Biafran struggle, which has led to the loss of several lives, maiming of agitators and destruction of properties, has strong implications on the right and dignity of the agitators and an ethical judgment for the Nigerian government.

Abstract: We examine the formation of thematic patterns embedded in online governmental crisis response strategies and the resulting online word-of-mouth over food imports after the Fukushima nuclear disaster. We ask: How did major themes embedded in each strategy and online word-of-mouth form, evolve, and reach closure? What are the semantic characteristics of the online word-of-mouth across social media publics, online news media, and search engines? Following Hallin and Mancini (2004), we compare results from Hong Kong, a “democratic corporatist” society, with those from Mainland China, a “polarized political” society, and Taiwan, a “liberal model.”

Using a mixed-method case study, we identified 1) themes underlying governmental crisis response strategies using thematic analysis; and 2) the network of associations between concepts expressed in texts online word-of-mouth through computer-assisted semantic network analysis focused on debates on online news, search-based contents and social media messaging among different stakeholder groups over imports of Japanese food. We compiled an organizational corpus which included 17 Centre for Food Safety press releases from Hong Kong, 21 from Mainland China’s National Center for Food Safety Risk Assessment, and 20 Taiwan Food and Drug Administration press releases. The word-of-mouth corpus included more than 10,000 online comments from each region.

By following Braun and Clarke (2014)'s guidelines to thematic analysis in health risk and well-being research based on grounded theory tradition (2006; p.87), we 1) transcribed and re-read data for initial ideas; 2) generated codes to identify key features; 3) searched for themes by collating into potential categories; 4) reviewed themes to align coded data with themes; and 5) defined and named themes. Semantic network analysis (SNA) is a form of content analysis that identifies the network of associations between concepts expressed in texts. By taking advantages of network analysis software UCINET and Gephi, SNA was conducted to provide a representational framework to identify the relational structure of specific associations between the expressed language.

This study extends SCCT (Coombs, 2007; 2016) to interpret constructions of meaning in crisis response strategies and by incorporating a multi-stakeholder perspective and suggesting SCCT outcome variables beyond reputation.

Abstract: Even when the right to free movement of persons is included In the Universal Declaration of Human Rights, many States do not guarantee their full recognition. In the context of the current humanitarian crisis, this research is focused in how Spanish media frame immigration in the Mediterranean Sea, and how it shapes public opinion on the subject.

According to several authors (Entman, 1993, Goffman, 1986, Gitlin, 1980, Snow et al. al, 1986; De Vreese and Claes, 2005; Reese, 2007; Scheufele, 1999) framing is a process of generation of emphasis on a certain piece of information in news. For the theory of Framing (Entman, 2003) sources of information are a key element in the construction of the frame. Thus, the analysis deals preferentially with the presence of institutional and social actors who appear in the news and the values they appeal (Allen and Blinder, 2018).

Through a mixed method of content analysis in more than 2000 news a comparison is made between the last five months of the administration of former President Rajoy and five months of current President Sanchez's. From an inductive type approach we look for the frames which propose the selected media and the average treatment for the generation -or not- of a debate on public policies that seek face the alarming situation (Dekker and Scholten, 2017).

The results indicate that in the most read media in Spain the frame of the coverage changes between both Administrations. In addition, the topics are focus more on the information aspect of irregular immigration than in the political, economic and / or humanitarian conditions of migrants. The political actors present in the news are mostly governmental institutions or NGOs, and the presence of the voice of the protagonists is low. The framing on immigration as a problematic issue is hegemonic, and the potential benefits of the processes of circulation of people lack of presence in the media object of study. It is concluded that the role of the media in the construction of these minorities is detrimental to the responsibility of the systems media to ensure social integration and the recognition of immigrants.

Title: The role of audiovisual media versus social media for communications on catastrophe. A lesson for experts, authorities, and journalists.

Session Type: Individual submission

Authors:

Name: Soledad Puente

Email: spuente(at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile, Faculty of Communication

Name: Sebastián Valenzuela

Email: savalenz(at) uc.cl

Country: CL (Chile)

Name: Silvia Pellegrini

Email: spellegrini(at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile, Faculty of Communication

Abstract: At the time of this abstract, the Chilean people are facing floods in the north and fires in the south of the country. It has become a trend, as experts suggest (Altay and Green, 2006; Bouwer, 2011; Coumou and Rahmstorf, 2012), in the nation. It became in 2010 when an 8,8 Mw earthquake and tsunami shocked the population. Since then, these events challenge the authorities, experts, and journalists (Puente, Pellegrini, Grassau, 2013 a, b). This paper presents some of the main conclusions related to media consumption, primarily social and audiovisual, and points the importance of considering the people attached to the information given by journalism (Valenzuela, Puente, Flores, 2017). The results can be related to what Nicholls, Sykes, and Camilleri, (2010) after the Canberra fires at 2003, who point that the data from the press is not innocuous for the communities. Even the audiences may show psychological effects (Holman, Garfin, and Silver, 2014, Sugimoto et al., 2013, Nogami and Yoshida, 2014).

The data presented is part of the results of a census survey of 1621 people who live in the Chilean regions that suffered the 2010 and 2014 earthquake and tsunami and the 2014 fires. The universe was 166 experts and disaster managers, 254 journalists and 1501 audiences and done between 2015 and 2017. Most of the people surveyed had experienced the 1985 earthquake (53, 8%), the 2010 earthquake, and tsunami (81,2%) and the 2017 fires (34,9). On the question asked upon the media used for information during a disaster the answer was the audiovisual media (radio during the first moments and then television) with a 67,1 percent versus the responses on social media with 22 percent. The less valuable was the institutional sites (6,5%) and the newspapers (3,6%).

This result puts significant pressure on authorities and journalists. The official sources to value the importance of their communication through the audiovisual media represented by their journalists and journalists and authorities to realize that, even though social media can be a vital tool to have a voice, the message should have an intermediary call journalist from radio and television. For these

reasons, leaders should consider journalists to show their preparedness for the crisis and this way may contribute to the safety, health, and well-being of those affected by a disaster (Francis, 2015)

Title: Between Telling the Story and Publicizing the Terror: Ethics, Media and the 2019 Riverside Terror attack in Kenya

Session Type: Individual submission

Authors:

Name: Jacinta Maweu

Email: mwendejacinta(at) yahoo.co.nz

Country: KE (Kenya)

Affiliation: University of Nairobi, Kenya

Abstract: This paper examines the ethical challenges journalists often face as they strive to professionally break the terror story and avoid publicizing the terrorists' agenda. Kenya has been a victim of acts of terror and violent extremism in recent years. The killings of hundreds of innocent people and destruction of property at Westgate in 2013, Mpeketoni in 2014, Garissa University in 2015 and now the January 15th, 2019 attack in Riverside, Nairobi are some of the most recent examples. Acts of terror attract extensive media attention and coverage locally and internationally. Terror provokes fear and anxiety and the public expect the media to give timely information as the terror story unfolds. But terrorism also relies on the same media coverage to gain publicity for their heinous acts. There is always therefore an inherent tension between the journalist's search for the story and the terrorist's search for publicity to instill more fear in the midst of media coverage. There have been concerns and allegations that in the process of covering and reporting terror events, journalists often become the terrorists 'best friend' by giving them the much needed publicity thereby instilling more fear among members of the public. Maintaining professional ethics in such times is often difficult as journalists try to balance between sensational reporting, accurate reporting, respect for victims and breaking the story.

The advent of social media platforms has compounded these ethical challenges for journalists further. Terror attack news now breaks on social media. The public is then bombarded with all sorts of information on the terror attack some of which is fake and false engineered by the terrorists themselves. This puts more pressure on journalists to get their facts right from such sea of facts and fiction. This paper examines the ethical challenges that journalists face as they cover terror attacks in the era of social media using the January, 2019 Riverside attack as a case study. Data will be collected through a textual analysis of some of the visual and textual messages circulated on Twitter, Facebook and WhatsApp to establish the narratives spread through social media. The front pages of the leading daily newspapers for the three days following the attack will also be analyzed to establish how these papers framed the story. I will also conduct Semi structured interviews with journalists in Kenya to get their insights on the ethical challenges they face. The Key research questions are: What are the key ethical challenges that journalists face as they cover and report on terror attacks in Kenya? How has social media impacted on journalists' coverage on acts of terror? Key words: Terrorism, social media, Kenya, ethics, journalists

Title: Defining NDT-communication: between risk and crisis

Session Type: Individual submission

Authors:

Name: Dmitrii Gavra

Email: dgavra(at) mail.ru

Country: RU (Russian Federation)

Affiliation: St-Petersburg State University

Name: Ekaterina Akimovich

Email: akimovich.k(at) gmail.com

Country: RU (Russian Federation)

Affiliation: St-Petersburg State University

Abstract: Study of public authority's crisis communication in cases of natural disasters has become especially important in recent decades due to a number of factors. Firstly, because of the unfaltering growth of natural disasters as a consequence of the climate change. Secondly, because modern media landscape has constructed the conditions, in which victims and stakeholders are more likely to provoke political crises via social media. Thirdly, new communication technologies made media landscape more transparent: today every event is available on the net and well seen for the public. Consequently, practical urgency of the paper is defined by necessity of working out effective communication technologies for preventing a transition of a natural disaster into crisis for the government or public authorities.

Although there is a wide range of studies focusing on crisis communication, a significant part of the research is devoted to organizational crises solely. Among the classics here it is necessary to mention Coombs, Holladay, Heath, Fink, Benoit, Sturges, Fearn-Banks. The problems of public authority's crisis communication are less examined. Nevertheless, these subjects are studied by Ulmer, Sellnow, Seeger, Martin, Boyntone, etc. Crisis communication during natural disasters is analyzed in works of Quarantelli, Bazerman, Watkins. Theoretical insights concerning governmental communication in case of disasters are presented by Littlejohn, Stromback, Nord, Quenette, Cohen, etc. However the majority of up-to-date studies concerning governmental crisis communication are based on theories and models designed for organizational sphere. Our presentation is aimed to delete the gap and develop a public authorities' crisis communication model in natural disasters.

Basing on the approaches of Coombs and Quarantelli, the authors suggest new approach and the new term – NDT communication. It is based on the distinction and still similarities between classical crisis communication and disaster communication. In this regard a new designation of a natural disaster communication is proposed - NDT-communication (from "Natural DisasTer"). In the majority of theoretical publications these terms are often used as synonyms, while a firm differentiation would provide a basis for the improvement of theoretical schemes as well as the advance in solving real cases. Every natural disaster has a strong potential to trigger crises, but not all crises are instigated by natural disasters. Key point in the transformation of a natural disaster into a crisis is the upraise of critique and accusations against the government from political opponents, opposition or even media, functioning in public sphere.

SCCT theory and classical 3-staged approach to crisis management process were taken as a foundation of suggested NDT-communication model. SCCT model was modified and adopted to a political sphere by diversifying clusters of crisis communication strategies, adding such parameter as a duration of a natural disaster (dividing disasters into long-ripening and fast-developing types) and specification of a situational subtype «challenge» with a variant «government illegal activities». The authors are going to present based on our model empirical study of the Russian Federal Government communication strategies in case of the disastrous flood in Krasnodar region in 2012. Methods of the empirical analysis include content and frame analysis.

Title: Dominating the information sphere through violence and scrutiny in the 2014 Gaza war

Session Type: Individual submission

Authors:

Name: Michael Tasseron

Email: memrt(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: The 2014 Gaza war was a contest between Israel and Hamas militarily and in the media. The military outcome of the war was one-sided, as was evident by the devastation and death the IDF (Israeli Defence Forces) inflicted on Gaza. In contrast Israel suffered far fewer casualties and little damage to its civilian infrastructure. I argue that this military asymmetry extends to the information sphere. The sophistication of the Israeli government's communications apparatus has been documented in research on media coverage of the Palestinian-Israeli conflict (Philo and Berry 2011). During the war in 2014 this was evident as well. This was relayed to me by media professionals I interviewed for my research on the coverage of the war by select news organisations in Britain and South Africa. I am also using multimodal critical discourse analysis to analyse the news coverage produced during the war. The preliminary findings show extensive use of Israeli official sources, and images which depict the IDF largely as passive actors. Palestinian official sources are less pronounced, while the suffering of the civilians in Gaza is foregrounded.

Efforts by the Israeli government to control the flow of information about the war transcended all levels of society. Officials availed themselves at all times to the media organisations covering the conflict. Official statements were also communicated to the media by email and text messages. The IDF permitted extensive media access to its military operations in Israel. The Israeli government was also highly attuned to the English language coverage of the war. If coverage was deemed to transgress military censorship laws, media organisations faced the possibility of being sanctioned. Supporters of Israel have also established organisations which scrutinise the coverage of the conflict. Journalists producing coverage judged as unfavourable to Israel are targeted by these groups through email, blog posts and on social media. Those reporting on the conflict view this scrutiny as helpful at times. In other instances they see it as time consuming and a distraction. What I argue is that it deflects attention from some of the core issues of the conflict, which include Israel's occupation of Palestinian land and its blockade of Gaza. Israel's sophisticated media apparatus has been able to successfully sideline the Palestinian perspective in the mainstream media. What has emerged is what I refer to as an asymmetrical information context. The Israeli narrative thus dominates media coverage at most levels. The Internet and social media has to an extent disrupted the Israeli narrative. However, it has by no means provided an equal platform for the Palestinians to contest the media narrative projected by Israel. Furthermore, Israel has demonstrated its willingness to use violence to enforce its domination of the information sphere. During the war it targeted the Hamas leadership, and they thus had limited means to present their perspective to the news media. I argue, therefore, that technology in this context largely threatens communication processes.

Title: Power to Pronounce: Multivocality and contestation in television news representations of crime and policing in Australia

Session Type: Individual submission

Authors:

Name: Kathryn Higgins

Email: k.c.higgins(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: The power of police to unilaterally pronounce local security problems and prescribe their remedies, if ever it truly existed, is now facing a moment of significant and unprecedented disruption. In the context of the 'media manifold' (Couldry & Hepp, 2016) and hypertextual television news, the police voice, once the authoritative source in journalistic representations of crime and criminality (Mawby, 2003), now must reckon with the voices of others as it seeks to exercise its historical power of pronouncement (Loader, 1997): among them, that of the technologically-equipped citizen journalist, the Twitter-savvy politician, the Facebook-using criminalised Other, and journalists and editors themselves who, in the context of a renewed culture of public distrust of institutions (and particularly of the press), are struggling to discursively reposition themselves as 'of and for the people.'

Using multivocality (Bhaktin, 1983) as an analytical entry point, this paper interrogates recent television news media representations of 'Sudanese gang violence' in Melbourne, Australia, as sites of discursive struggle at which competing and often agonistic (in)security claims encounter one another and are dialogised into conflictual yet seemingly coherent accounts of (in)security 'truth'. Through application of audio-visual CDA, this paper unpacks how competing voices of security are both hypertextually and interdiscursively called together in television news narratives of criminal threat, with particular attentiveness to how the police voice struggles to retain legitimacy over others seeking to pronounce the 'reality' of (in)security in Melbourne.

This paper enriches our understanding of the role that mediated communication, and particularly multi-vocal television news narratives, play in the construction and reproduction of dominant (in)security knowledges in two key ways. First, it tempers more optimistic accounts of the 'new visibility' of crime and policing (for example, Goldsmith, 2010) by revealing how, within the confines of the television news genre, competing (in)security accounts – and in particular those articulated by criminalised Others – are limited in their capacity to meaningfully disrupt dominant institutional claims about the 'reality' of threats (as diagnosed by the press) and the necessity of police intervention (as prescribed by the police). Secondly, the paper excavates new tensions in the historically ambivalent relationship between the police and the press; specifically, an institutional contest for public trust fought through discursive struggles over the power to legitimately pronounce (in)security realities which, in the case of the so-called Sudanese gang 'threat' in Melbourne, presents in surprisingly zero-sum terms.

Title: Crisis Communication by Paid Professional Trolls through Memes: Disinformation and History Revisionism of the Ukrainian Famine (1932-1933) in the Context of the Ukraine-Russia Conflict (2013-2019)

Session Type: Individual submission

Authors:

Name: Ekatherina Zhukova

Email: ekatherina(at) hum.ku.dk

Country: DK (Denmark)

Affiliation: University of Copenhagen, Department of Media, Cognition and Communication

Abstract: This paper looks at crisis communication made by paid professional trolls for the sake of disinformation and confusion. It uses an example of the Ukraine-Russia conflict since 2013 and how the context of this conflict enabled history revisionism of the Ukrainian famine of 1932-1933. The focus is on visual crisis communication; that is, image-memes created, distributed, and engaged with by trolls in the Russian Internet (RuNet) to reinterpret the contested historical crisis (i.e., famine) in the context of the current crisis (i.e., conflict).

The empirical material consists of 98 memes selected from the comments section on posts (i.e., the habitat of trolls) from the Russian information website rusvesna.su between 25-30 November during 2015-2018. The analysis of memes is three-fold and focuses on cross-platform links created between memes on RuNet, user (troll) interaction when memes are posted on rusvesna.su, and common themes that memes convey.

The paper shows that by visually and discursively playing with the theme of hunger in memes, paid professional trolls have created a narrative that the “real” Ukrainian famine was not in 1932-1933, but is happening today, after the 2013 Maidan revolution, and that the West and the Ukrainian politicians are responsible for it. This narrative was created by posting humorous memes and memes imitating science. Memes imitating science correlated hunger to the population decline in Ukraine using pseudo-scientific tables, figures, maps, and infographics without sources of reference. Humorous memes linked hunger to the policies on welfare reduction in Ukraine by the European Union, International Monetary Fund, and Ukrainian politicians, as well as to hypocrisy and immorality of the Ukrainian people in demanding recognition of the famine and its commemoration.

The paper argues that disinformation and history revisionism created by paid professional trolls through memes represent the phenomena of subverted visuality (understood as an imperial country’s resistance to de-imperialisation of the subordinate state; Mirzoeff, 2013), subverted critique (defined as an antipode of critique in participatory culture used against the structures of power and domination; Bennett and Segerberg, 2013), and post-truth soft power (implied as an exercise of power in the cyberspace rather than on the battlefield; Surowiec, 2017).

Theoretically, the paper combines the studies from media and communication on memes (Milner, 2013; Miltner, 2018; Shifman, 2013) with research on disinformation and propaganda (DiResa et

al., 2018; Marwick and Lewis, 2017; Paul and Mathews, 2016). It aims to bring a novel way of looking at crisis communication by focusing on the problem of trolls and disinformation and the role of the visual (I.e., memes) in rewriting historical crisis.

Abstract: As central political institutions in Western democracies, parliaments have gained importance concerning foreign affairs issues in recent years. Specifically, parliaments have become key institutions with respect to wars and violent conflicts, given their increasing role as moral tribunals and discussion forums on conflict prevention and resolution and also, on democracy and human rights. Empirical research has proved that media's agenda has an impact on parliamentary agenda. However, particularly in wars and conflict situations, where traditional media usually have difficulties to develop their work on the ground, NGOs and other actors via social media play an important role in providing information to Members of Parliaments (MPs) and in shaping the parliamentary agenda, debates and resolutions.

This research identifies the sources of information used by MPs from five European parliaments when discussing violent conflicts in Africa, a very relevant question especially when information gathering is not an easy task for members of Parliament, as it happens when addressing peripheral international violent conflicts. Specifically, we study two specific cases: the post-conflict in the Democratic Republic of the Congo (between 2012 and 2015) and in Burundi (between 2010 and 2015). Given its unobtrusiveness, foreign affairs issues are a knowledge field where there is an obvious need for external sources of information. However, this need is particularly marked in the cases of Burundi and DRC's post-conflicts, situations which usually remain outside the public, media and political agenda.

Only very few researches have studied the information needs of parliamentarians from specific developing countries or from cases different from the European Parliament and the House of Commons. Much of this literature is interested in the role of parliamentary libraries, the sources MPs consult, or the information needs and services available to them. However, the research on the sources of information MPs actually use during the debates and questions to Government and its quality have not been enough addressed. This issue is crucial in the post-truth age where misinformation reigns in politics. Neither there are comparative studies available as the one we present.

For this research, we created a multilingual dictionary in five languages and we content-analysed all the debates from the European, British, French, German and Spanish Parliament including topics related to the post-conflict situation affecting the DRC and Burundi in the studied period. We carried out a computer assisted quantitative content analysis of 450 Parliamentary debates. Preliminary results show that NGOs and media are used as information sources in parliamentary debates in a similar level, and both of them are quoted more often than social media. Specifically, NGOs and media appear as more significant sources of information in EU Parliament's debates, compared with all the other four parliaments. Moreover, African media appear more often as a source of information than international media. However, with respect to NGOs, the presence of international NGOs is higher than African ones. In particular, Human Rights and Women NGOs are the most used sources of information.

Title: From 'Sofa' to Frontline: The Digital Mediation and Domestication of Warfare

Session Type: Individual submission

Authors:

Name: Gregory Asmolov

Email: gregory.asmolov(at) kcl.ac.uk

Country: GB (United Kingdom)

Affiliation: Russia Institute, King's College London

Abstract: Questions of dignity and human rights are particularly significant in times of military conflict. Information technologies can increase transparency around human rights violations, but they can also proliferate disinformation and engage people in warfare. So-called “sofa warfare” – an ironic description of Internet users who take a part in conflict without leaving their own sofas – became one of the major notions related to the role of the Internet during the recent Russia-Ukraine conflict. A literature concerning “remote warfare” (Crawford, 2015) highlights how digital mediation allows us to take part in conflict from a distant location. However, digital mediation not only increases the distance of participation. Laptops and mobile phones allow us to participate in warfare from our bedrooms or living rooms. The ways in which digital platforms can change the locations from which warfare is managed have so far remained almost outside the scope of discussion.

This paper explores the social and normative consequences of new digitally mediated forms of participation in warfare. The meaning of “sofa warfare” goes beyond an increase in the scope of participation in conflicts (Merrin, 2019). The paper offers an analysis of the notion of “sofa warfare” in the Russia-Ukraine conflict, presenting three datasets concerning: the representation of “sofa warfare” in online discussions, digitally mediated conflict-related practices, and semi-structured interviews with users who have participated in conflict-related activities online.

Relying on data analysis, the paper offers the notion of a “domestication of warfare”. This notion builds on the concept of domestication (Silverstone & Haddon, 1996), which discusses how technological artefacts transit from public to private spaces and have been appropriated within the home as a part of everyday routine. While the domestication concept is focused on the role of artefacts as physical objects and content providers, this paper highlights how domestication is related to what technology affords us from home (Bucher & Helmond, 2018) and how these affordances are realized through digitally mediated activity (Kaptelinin, 2014). In this light, domestication is related to the appropriation of various forms of activity mediated by an artefact in the user’s private space.

The phenomenon of “sofa warfare” also highlights the need for a more nuanced approach to private space. The concept of “mediated mobilism” (Hartmann, 2013) underlines the mobile nature of technological artefacts. Accordingly, the location of appropriation is not the household, but the “sofa” – a space that is commonly linked to relaxation and entertainment. Digital mediation allows the convergence of domestic environment and battlefield, through offering opportunities for participation in warfare without leaving everyday spaces and with minimal risk to participants.

The paper considers “sofa warfare” both as a discursive structure that offers a form of relationship between users and conflict, and as a set of digitally mediated domesticated practices that contribute to the convergence of everyday life and a conflict-related environment. It discusses

the moral implications of the digitally mediated militarization of domestic space, where warfare becomes a part of daily routines.

Title: Understanding War Reporting through Social Network Analysis

Session Type: Individual submission

Authors:

Name: Kaberi Gayen

Email: gayenkaberi(at) gmail.com

Country: BD (Bangladesh)

Affiliation: Department of Mass communication and Journalism, University of Dhaka

Abstract: In this paper the aim is to demonstrate how social network analysis (SNA) can be used to undertake a historical analysis of war reporting. Networks are constructed of proxy relations between journalists to explain how reporting at the time of the cold war and the hot war of Vietnam a 'constructed truth' about a war of independence in the global south changed to report not what the state machinery intended but what actually happened. It is shown that reporting on the Bangladesh War of Independence, which was started on 25th of March 1971 and ended on 16th December 1971, began as a 'communist inspired plot' changed to a 'heroic struggle for freedom' in the US Television news media. To undertake analysis, reporting by in studio and in field journalists of three major US TV news media (ABC, CBS and NBS) is followed and social network analysis is applied to explain how reports changed from reporting the insurrection of people in East Pakistan to increasingly questioning the legitimacy of rule by West Pakistan. To understand the process of change, social network ties between journalists were constructed on a monthly basis. The input data was short video clips of the TV news coverage of the war. The ties between journalists were measured by the similarity of reporting content, taking multivariate measures of bias to one side or another, degree of blame for the insurgence (East Pakistan), degree of sensationalism and degree of humanity displayed in the report. The measures from daily clips were aggregated to give monthly reports. From these, monthly sociograms were generated using the NetDraw package, and key network measures of centrality, power and cohesion were computed using the UCINET software. The monthly reports were then used to conduct a longitudinal analysis of network change over the ten month period. In this analysis it became apparent that although initial reporting views were diverse, perhaps explained by institutional ownership, regardless of initial views and media ownership, as the war moved on, a consensus or similarity of reporting emerged. This was not expected and challenged notions of institutional resistance to change. This, we interpret, endorsed journalistic integrity. This historical analysis contributes to social network methods and demonstrates the added insights that SNA gives in explaining the changing visions that the media presented of distant political and societal strife.

Abstract: As communication on social media become a part of our daily lives, it plays a vital role in communication between communities here in the Philippines especially when there is an occurrence of disasters. Philippines is one of the countries in South-East Asia which is vulnerable to typhoons. The researchers of this study focus particularly on how useful and effective Twitter, a social networking site, is regarding news dissemination during disasters. The vital part of this research examines the effectiveness of Twitter as a news disseminating platform during the Super Typhoon Ompong in Baguio City which hit the Philippines in 2017, leaving a massive destruction in the said area. Moreover, the study seeks to assess the positive impacts Twitter has brought to the community of Baguio City, in terms of communication before, during, and after the disaster. Associating a quantitative approach, specifically, creating a structured survey questionnaire and interview guide questions to further understand the effectiveness. The researchers used Media Dependency Theory to evaluate the dissemination of information amongst the respondents. Gathering a total of 400 Baguio residents as respondents in this study, the proponents found out that Twitter was effective in giving out essential and informative information/updates during the typhoon, to its users. Therefore, the proponents believe that Twitter has the ability to be used as a legitimate news disseminating platform.

Title: Funds, Flights, Affects: Conflict reporting in South Sudan

Session Type: Individual submission

Authors:

Name: Richard Stupart

Email: r.j.stupart(at)lse.ac.uk

Country: ZA (South Africa)

Affiliation: London School of Economics and Political Science

Abstract: This paper explores the practices of journalists working in contexts of armed violence, via a case study of South Sudan, in order to develop various responses to existing understandings of how the work of conflict journalists is changing. Specifically, I argue that the existing literature on reporting war and armed conflict is deficient in at least three respects. In the first, to extend a more general critique by Hanitzsch (2019), I argue that the canonical history of conflict reporting is still largely an Anglo-American, male history in which the practices and motivations of conflict journalists from in-conflict countries have not as yet been sufficiently considered. Second, accounts of the structural shifts in contemporary conflict reporting, such as those which emphasise the decline in funding for full-time conflict reporters and the role of technology in democratising access to conflict spaces bear further analysis in terms of actual cases. Research from South Sudan suggests that the effects of these shifts in practice may be different, and differently felt, to what may be conventionally expected. Third, the study of conflict reporting has not yet developed an account of the role of affect in structuring practices in conflict contexts. Without such an account, research on the work of journalists in dangerous environments risk 'looking past' one of the features of the social environment which most immediately affects both the work of conflict journalism and processes of forming an identity as a conflict journalist. I argue that Wright's (2016; 2018) moral-economic approach can be productively adapted to take into account affective dimensions of life in 'Aidland' in order to more usefully theorise the experiences of journalists working in it.

This paper is based on a combination of 48 semi-structured interviews with journalists covering the conflict in South Sudan who were based in Juba, Kampala and Nairobi, as well as ethnographic fieldwork observing the everyday activities of South Sudanese and foreign journalists in Juba and accompanying journalists to the Malakal protection of civilians site in Upper Nile state as they completed a project documenting potential war crimes by the South Sudan People's Liberation Army (SPLA). I explore structural constraints on the work of journalists that include the economics of the profession (and differences between South Sudanese and 'foreign' journalists), travel infrastructure, risk, and state regimes of control including the country's National Security Service (NSS) and Media

Authority. Theoretically, this critique is derived from empirical work exploring the material and discursive factors that enable and constrain the work of reporting on the suffering of others in the social context of South Sudan's 'AidLand' (Mosse, 2011; Autesserre, 2014a; Roth, 2015) and related

spaces. Additionally, I draw on a mix of work on the micro-sociology of humanitarianism and conflict management (Autesserre, 2014b; Roth, 2015) as well as work on moral economies in journalism (Wright, 2018, 2016) and affect theory (Massumi, 2002; Mazzarella, 2009) in an attempt to understand the material factors enabling and constraining the work of conflict journalists and the interactions of such structures with the affective experiences of those reporting from conflict environments.

Title: '(Re)think before Acting': Designing a Research Project that Tackles Violent Extremism

Session Type: Individual submission

Authors:

Name: Claudia Alvares

Email: claudia.alvares(at) ulusofona.pt

Country: PT (Portugal)

Affiliation: CICANT - Lusofona University

Abstract: This proposal gives a panoramic view of the ongoing 'Re(think) Before Acting – Alternative Narratives to Violent Extremism' research project, financed by the H2020 Civil Society Empowerment Programme of the European Commission (CSEP - ISFP-2017-AG-CSEP) (November 2018-November 2020). The project aims to carry out seven social media campaigns to dissuade communities vulnerable either to Jihadi Extremism or to the Far Right from violent action. As regards the experimental design of the social media campaigns to be created within our project, this project will attempt to construct film narratives that visually and discursively cater to the profile of the imagined audience (Nielsen 2009: 24) of extremist website contents. This is in synchrony with Tokar's suggestion that one ought to analyse the content of websites so as to understand who is being targeted (2007: 111), a particularly important objective taking into account the difficulty in carrying out ethnography in the context of violent and secretive groups (Eijkman & Schuurman 2013: 1). In this respect, we posit that the preferred encoded meanings of extremist website contents enable us to understand how recruiters try to impart their message to certain cohorts, thus shedding light on visual and verbal discursive strategies that cater to specific audiences.

The concept of valence frame – how any particular aspect is emphasized in a positive or negative light (Boomgaarden & De Vreese 2003: 362) – is important for the production of the film narratives and complements Moral Foundations theory (Wolsko, Ariceaga & Seiden 2016: 7), which is used in Social Psychology to understand how framing any particular issue in ideological and moral terms is of greater import to message persuasiveness than the issue itself. In this perspective, frames tend to cater either to an individualising frame of morality, associated with liberal values (harm/care, fairness/reciprocity) or to a binding frame of morality, associated with a conservative (ingroup/loyalty, authority/respect, purity/sanctity) values.

An interesting aspect that should be foregrounded is that despite emphasis on fairness and justice (both of which figure high among liberal values) by both Jihadi Extremist and Far Right groups, either group does so within a context of binding morality, reinforcing the ingroup loyalty which characterises a conservative outlook. This means that the emphasis on justice is framed as a need to seek atonement for past wrongs committed against the group, and not so much against any particular individual. Among the commonalities that were observed in the website contents of the two groups, the following stand out: righteous appeals for the restoration of a natural order, a 'chosen' people or community, as well as the legitimation of authority in the form of a greater force. While we propose to analyse the valence frames of these themes, we will simultaneously explore a conspicuous difference among these two Extremist groups: while the Far Right heavily privileges the Nation-State, Jihadism emphasises the importance of a supranational Ummah, or community of believers, which surpasses national borders, the latter being regarded as an invention of the 1916 Sykes-Picot agreement to divide the Muslim community.

Title: A Critical Discourse Analysis of 'Youth Radicalisation': A Case of the Daily Nation Kenya Online Newspaper

Session Type: Individual submission

Authors:

Name: Miraji Mohamed

Email: miraji.mohamed4(at) mail.dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: The purpose of this study is to critique 'radicalisation' and more particularly 'youth radicalisation' by exploring how it is used in online newspapers. 'Radicalisation' and 'extremism' have become the most common terms in terrorism studies since the 9/11 attacks. Regardless of the geographic location, when the word terrorism is used the terms 'radicalisation' and 'extremism' always follow to attempt to explore the journey of the perpetrators towards violence. Notably, 'radicalisation' and 'extremism' have been closely conflated with the term youth to form 'youth radicalisation' to refer to a discourse of 'youth at risk'. These terms have come to represent a discourse of dominantly pejorative traits often used to describe spaces, groups, and processes identified as problematic. Even though ambiguously defined the terms feature widely in government documents, political statements, newspapers, academic research, social media platforms, religious gatherings, and public discussions. This study is timely in the Kenyan context where there has been a proliferation of academic and expert research on 'youth radicalisation' (used as a neutral label) without considering the political, cultural and socio-historical contexts that inform this label. To fully understand these nuances this study focusses on a corpus of 283 Kenyan online newspaper by The Daily Nation between 2015 and 2018. The study employs a genealogical approach that historicises and deconstructs 'youth radicalisation'; then, uses NVivo software to analyse labels, narratives, assumptions and stereotypes deployed and the theoretical and political narratives they draw upon. Subsequently, the findings were subjected to a Critical Discourse Analysis which proceeded in two stages. The first-order critique focused on identifying inconsistencies, and internal-contradictions and used these to critique the discourse itself and identify perspectives the discourse fails to acknowledge with an aim to expose the political nature of the discourse. The second-order critique used the concept of representation to assess the political, ideological and lived consequences of the dominant perspectives. This study reveals that the use of 'youth radicalisation' as a discursive strategy disproportionately affects young people especially those from cultural/ethnic/religious minority groups. Also, the ambiguous use of 'radicalisation' and 'youth radicalisation' by the media reinforces the discourse of 'youth at-risk' which has become the major framework underpinning Countering Violent Extremism (CVE) interventions. Similarly, the findings indicate that the uncritical use of 'youth radicalisation' has served political interests; and has become an instrument of policing young people, thus contributing to their cultural shaping. From this, it is evident that the media could thwart rather than assist CVE efforts. By exposing the political nature of the three terms through evidence-based research, this study offers recommendations on how critical reflective reporting by the media could help to make CVE more nuanced.

Keywords— Discourse, Extremism, Media, Radicalisation, Terrorism, Youth.

Title: Communicative acts of citizenship: Contesting Europe's border in and through the media

Session Type: Individual submission

Authors:

Name: Ludek Stavinoha

Email: l.stavinoha(at) uea.ac.uk

Country: GB (United Kingdom)

Affiliation: University of East Anglia

Abstract: Situated at the intersection of media and communication and critical citizenship studies, this paper explores how refugees assert themselves as political subjects through "communicative acts of citizenship" – everyday forms of resistance against the EU border regime enacted and circulated through diverse media networks. How are refugees' communicative practices of claims-making mediated or silenced, online and offline, and to what effect? How are the possibilities of performing acts of resistance shaped by the shifting micro-politics of securitized humanitarian care at Europe's border? To what extent do these acts of resistance, and in particular those enacted within digital media spaces, carry the potential for interrupting dominant media and humanitarian discourses?

Empirically, the paper draws on 42 interviews with refugees and volunteers conducted on the Greek island of Chios between March 2016 and July 2018, as well as 12 weeks of participant observation during which I joined volunteer teams that play an integral role in the provision of humanitarian care. Taking part in daily activities such as shore patrols, sorting donations in the warehouse, and distributions in refugee camps facilitated a wide array of encounters and informal conversations with multiple actors on the ground. Furthermore, I was able to overcome some of the barriers to access which typically reinforce refugees' "invisibility" in academic research.

Conceptually, the paper takes Chouliaraki and Georgiou's (2017) work as the starting point of analysis, yet suggests that by neglecting the agency of refugees their framework effectively empties the "communicative architecture of the border" of a major source of political contestation. In response, the paper seeks to bring to the fore the ways in which social media in particular create spaces for claims-making and allow some refugees to circumvent the mechanisms of erasure or outright vilification whereby they are denied political voice.

The paper concludes, firstly, that despite their limited legal or policy effects, taking refugees' communicative acts of citizenship seriously is methodologically, analytically and politically imperative if we wish to avoid inadvertently reifying the figure of refugees as mute victims so deeply embedded in the humanitarian imaginary. Secondly, the findings pose a challenge to communications research which excludes the voices of refugees by methodological design.

Title: A Transatlantic Exploratory Online Media Analysis on the European Migration Crisis between 2013 to 2015

Session Type: Individual submission

Authors:

Name: Maria Avraamidou

Email: mariaavraamidou(at) gmail.com

Country: CY (Cyprus)

Affiliation: University of Cyprus; Vrije Universiteit Brussels

Abstract: European media discourses, perceptions and interpretations on migration during the so-called 2015 refugee crisis remained largely the same as before (Krzyżanowski, Triandafyllidou and Wodak 2018) and media coverage moved from an emphasis to humanitarianism, that is measures to help the refugees, to an emphasis of securitization, that is measures to protect us (Chouliaraki, Georgiou, Zaborowski, and Oomen 2017). All in all, migrants appeared as a largely de-humanized outgroup (Chouliaraki and Zaborowski 2017). While the literature vividly demonstrated migration othering in European media, it did not delve into the representations of the actors of the crisis or the ideological role of the seemingly pro-migrant content and did not pay attention to media content outside Europe. The study presented aims to contribute to the literature on the media/refugee nexus taking a transatlantic view and exploring how powerful media in the liberal spectra in the US and the UK represented the so-called European refugee crisis. Then it will elaborate on preliminary findings on how the readership read and subsequently reacted to these representations online. A transatlantic media analysis to the issues under consideration is important because international migration is de facto a global issue related to the world system, capitalist expansion and the power of coloniality (Rodriguez 2018). Additionally, the liberal media's ideological role in the meaning-making processes around migration, especially of those media with an international, transatlantic online readership, needs to be properly problematized because, unlike the often-self-evident role of the populist and extreme right-wing media, their role could go unseen in diffusing information content and shaping ideologies on global migration that could sustain existing world inequalities. After presenting a thematic analysis with reference to the empirical data under examination, the presentation will conclude with a discussion of a liberal media aporia of why Europe did not abide with human rights and democratic values and a subsequent nostalgia for a European past of democracy and human rights and transnational unity that never really existed. The argument made is that this media aporia although sympathetic towards migrants, it helped reproduce the existing repressive, restrictive global migration regime exactly because it did not see the summer of 2015 as a continuation of its coloniality but as an unfortunate rupture.

Title: Social Media and Politics of Representation: migrants and refugees in Libya

Session Type: Individual submission

Authors:

Name: Sara Creta

Email: Sara.creta(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: In August 2018, dozens of Ethiopian and Eritrean asylum seekers and refugees commenced a rare protest in a detention center, 20 kilometres away from Tripoli, Libya. Trapped in a country devastated by civil war, at daily risk of human trafficking, they asked for help to get out of Libya, as their requests to UNHCR were unheeded. Among them there was a 21 year old boy who was kidnapped, sold and exploited before ending up in detention after escaping from traffickers. The group posted photos and videos of the protest on Facebook on Sunday, August 12, with the hope that they would be shared widely. They articulated their message using UNHCR vocabulary: “human right”, “refugees”, “assistance”, “protection”, “justice”. In a few hours, their post reached activists and journalists around the world. A few days later they were transferred. For refugees and migrants in Libyan detention centres or in the main cities across the country, a phone marks the difference between life and death. This article explores the possibilities of interaction and connectivity among migrants and refugees in Libya and the new forms of ‘digital existence’ currently emerging through digitally supported processes of narrative. Theoretically, the article draws on concepts such as hybrid media, affective publics, networked framing, and voice. Little is known about the transnational communication used among those who are stranded or outside the European fortress. Digital media provide the means to recognise migrants and refugees in new ways as active narrators of their individual lives and struggles. Today a “narrative authority” is shifting the border of self-representation of migrant and refugees in digital platforms (Chouliaraki and Zaborowski 2017) and there is great need to explore these boundaries of connectivity and explain how new technologies enhance new forms of connectivity between the countries of origins and destination, but also across diasporas, in the context of the Libyan refugee crisis.

Affiliation: eQualit.ie

Abstract: In March 2018, Russians went to the polls to elect a president. This event can be classified as nothing less than “significant” as its outcomes traditionally influence affairs on national, regional and global levels. As previous research has shown, critical political events tend to influence information control operations, by increasing the amount of Internet censorship and changing the practices of traffic control and regulation (Deibert, Rohozinski, 2010). The elections provide an opportunity to study if battles on the political field will influence the "battle for cyberspace" (Deibert, 2013) by limiting the freedom of access to critical content online, and whether strategically important territories, such as Crimea, would be subject to different patterns in terms of information control operations, as compared to the Russian mainland.

Our interdisciplinary study on the intersections of STS, political science and network measurements, aims at investigating if and how Russian presidential elections affected Internet freedom in the country, and the territory of Crimea annexed in 2014. The following questions guided our research: is blocking of critical platforms in Russia and Crimea consistent or exclusive across the board? If there are differences in the filtering approaches, what factors account for them? How Internet filtering studied remotely is different from the actual experience of people on the ground?

To answer these questions, we conducted a comparative study of the Internet filtering in Russia and Crimea during the elections. To determine the quality of access to select critical platforms, we carried out extensive Internet network measurements in the region with the help of OONI Probes, developed by the OONI Project. Our goal was to collect measurements on a daily basis before, during and after the elections (February to April, 2018). In March alone, more than 200,000 measurements were collected. A secondary method was used to validate or contest our hypotheses, and get more details about experiences of censorship on the ground. For that we have used qualitative ethnographic method, in-depth semi-guided interviews with journalists, activists and IT experts working in or with Crimea. 45 interviews were conducted over the period between December 2017 and May 2018. These interviews, coupled with other qualitative methods, such as media analysis and web-ethnography (analysis of forums and chats where communities actively

discussing Internet censorship are gathering) helped us, on one hand, to improve our test list of URLs for measurements, and on the other hand, to obtain more detailed information about the actual application and experience of censorship.

Abstract: This communication describes the uses, opportunities and online risks for children with learning and behavioural problems, and other disabilities. The data corresponds to a part of the sample used in the Spanish fieldwork for the European project Net Children Go Mobile. In this project 500 Spanish children who are Internet users aged between 9 and 16 were surveyed, together with either their father or mother. Within our sample, a group of 61 children with behavioural and learning problems, physical difficulties or, mental illnesses were recognized. Although the problems identified were very diverse, we can assume that they all share a common characteristic, i.e. the vulnerability that these problems generate. We have no knowledge of any specific diagnoses, the only information we have is that their parents stated that children had learning, behavioural or health problems.

Research about this type of children shows that the use of the Internet as a social medium allows them to communicate with others, thereby promoting their personal relationships and creating or safely participating in virtual communities (Raskind et al. 2006). Nevertheless, these children are often rejected by their peers and have more difficulties establishing and maintaining friendships, and, in turn, are at greater risk of experiencing loneliness, low self-esteem, anxiety and depression (Margalit et al., 2002; Wiener, 2004). Regarding the risks which these minors may face online, a study by Yen et al. (2014) showed that adolescent boys, those specifically suffering from attention deficit and problems of hyperactivity, were more frequently either victims or perpetrators of cyberbullying than those without these problems. Moreover, Ryhueli (2017) showed that these deficits and disorders, among others, are themselves risk factors for Internet addiction.

Parental mediation is essential to prevent and manage Internet risks and inappropriate uses.

Deficiencies detected in this area are due, in many cases, to the low level of computer literacy of the parents (Palacios-Cruz et al., 2011).

Our evidence shows that these children also lack the necessary digital skills and computer equipment in their homes to enable them to successfully complete some of their homework and

school tasks. They also frequently visit websites with potentially harmful content and claim their friends usually help them when something upsets them or that they provide them with advice much more often than do their parents.

Although there are no very pronounced differences in the number of unpleasant online experiences that children with problems have in comparison with those who do not, there is a significant difference in the harm caused by these experiences. As 32% of children in the vulnerable group have been either very or slightly upset by these experiences, whereas only 22.3% of children without problems have been adversely affected. Regarding the level of exposure to sexual content (words, drawings or videos), it is higher in the case of vulnerable children (41.5% versus 30%).

Title: The third digital divide and Pierre Bourdieu: Dialectic transformation between economic, cultural and social capital into and from digital capital among young people in Madrid.

Session Type: Individual submission

Authors:

Name: Daniel Calderón Gómez

Email: danielcalderon(at) ucm.es

Country: ES (Spain)

Affiliation: Complutense University of Madrid

Abstract: In this presentation we will focus on the third-level digital divide, regarding offline outcomes of Internet use, in relation with the Bourdieu's theory of capitals. Digital divide theory has traditionally focused on how social stratification affects both accessibility to digital devices – first-level of the digital divide– and people digital practices –second-level digital divide–. Therefore, third-level digital divide is concern about the dialect process of feedback between social and digital inequality, focusing on how people use of digital technologies can be transformed in tangible outcomes that improve their living conditions. Therefore, Bourdieu's perspective is appropriate to fulfil the lack of sociological theorization among digital divide research, because the operationalization of the concept of digital capital allow us to connect social structure with micro-social interaction, as well as structural forms of inequality with the three levels of the digital divide.

Using a qualitative methodology based on 30 in-depth interviews among young people living in the region of Madrid, we will analyze the mechanisms of transformation between the three main forms of capital –economic, cultural and social– into digital capital, as well as the feedback mechanisms of conversion of digital capital into economic, cultural and social capital. We conceptualize the concept of digital capital as a specific form of cultural capital associated with the digitally mediated social world and with a dual dimension: (1) as objectified digital capital, related to digital devices, technological services and platforms; and as (2) incorporated digital capital, including people's dispositions, perceptions towards technology and digital skills.

Regarding conclusions, we state that economic capital is the most basic and original form of digital inequality, imposing material barriers to technological devices and spaces in which digital technologies are commonly used. Cultural capital is transformed into digital capital by people processes of technological socialization, in which motivation and previous dispositions towards ICTs are extremely important. Finally, social capital is converted into digital capital by means of social spaces of Internet use and social support provided by people around the subject. On the other hand, digital capital can be transformed into economic capital by means of job searching practices, professional promotion and by digitally buying and selling goods and services; it can also be transformed into cultural capital, specifically in terms of granting direct access to information and knowledge; finally, it can be converted into social capital by generation new social connections, aiding to maintain previous social relations beyond physical communication barriers and enhancing subject's presence in the digital realm.

Affiliation: University of Glasgow

Abstract: This paper reports on the initial statistical findings from the recently awarded “Me and my big data project” funded by the UK Nuffield Foundation. The project seeks to understand the levels of and variations in UK citizens “data literacy”, and to develop policy and educational materials to support improving this. A key component of citizens data literacy is an understanding of the uses of their personal data. Unfortunately, evidence indicates that many citizens have limited understanding of the data they share, its use by organisations, nor basic data protection behaviours. Nor are they aware of how they can utilise publicly available data to undertake both personal and civic action. This lack of data literacy opens citizens up to risks and limits their ability to operate as active citizens in a digital society. Also, evidence is growing of inequalities in data literacy that mirror broader social inequality. This paper reports on the project baseline findings from the re-analysis of UK Ofcom and UK Department of Digital, Culture, Media and Sport (DCMS) data sets. This analysis focuses on the differential levels of data literacy across a range of socio-economic and demographic variables to explore the intersectional aspects of data literacy. The paper will conclude with an outline of the next stage survey and focus group field work that build on these results. This work is the first element of four broad project activities: 1] exploring through survey data and citizen workshops the extent of citizens’ data literacy; 2] analysing the social basis of variations and inequalities in data literacy across a range of factors; 3] developing training and support materials for schools, universities and third sector groups in order to enhance citizen’s data literacy; and 4] developing policy recommendations for stakeholders on enhancing citizen data literacy.

Title: Digital divide as both technological and social problem: The case of Russian regions

Session Type: Individual submission

Authors:

Name: Anna Gladkova

Email: gladkova_a(at) list.ru

Country: RU (Russian Federation)

Affiliation: Lomonosov Moscow State University, Faculty of Journalism

Name: Massimo Ragnedda

Email: massimo.ragnedda(at) northumbria.ac.uk

Country: GB (United Kingdom)

Affiliation: Northumbria University

Abstract: Despite the fact that the problem of digital divide in different national contexts has been in the spotlight of many academics across the world (e.g. Chipeva, Cruz-Jesus, Oliveira, & Irani, 2018; Dilmaghani, 2018; Fuchs, & Novak, 2008; Ragnedda, & Muschert, 2013; Ragnedda, & Kreitem, 2018; Smirnova, 2017; Vartanova, 2002, 2013), little attention has been given so far to the problem of digital inequality in Russia (e.g. Bykov, & Hall, 2011; Delitsyn, 2006; Vartanova, 2018; Volchenko, 2016). The number of research on digital divide in Russian regions – federal districts, oblasts, okrugs, kraia and other territorial formations of different sizes – is even lower (e.g. Deviatko, 2013; Nagirnaya, 2015; Rykov, Nagornyy, & Koltsova, 2017). This study aims to fill in this gap by analyzing digital divide in eight federal districts of Russia (Central, Southern, Northwestern, Far Eastern, Siberian, Ural, Volga and North Caucasus), discussing their regional specifics together with the general trends, and approaching digital inequality in Russian regions as both technological and social problem.

While conducting research, we looked at three levels of the digital divide in Russia (access; skills; and benefits people can get through using ICTs) to ensure digital inequality in Russia is treated as a complex and multifaceted phenomenon. For this purpose, we examined such key criteria as the number of Internet users in Russia in general and in particular federal districts of Russia, monthly Internet audience, Internet penetration rate (broadband and mobile), the cost of Internet access, average speed, etc. Furthermore, we analyzed digital literacy in Russia in a comparative interregional perspective, analyzing similarities and differences across eight federal districts of Russia in this respect. Last but not least, in order to shed light upon digital inclusion process, we studied the index of Internet ‘openness’ of Russian regions (a measuring program implemented since 2017), and key directions of the state policy aimed at decreasing digital inequality in Russia on both federal and regional levels (Digital Russia Program, Digital Government Program, the Program of Eliminating Digital Inequality in Russia, etc.), as well as the availability and use of e-services in Russian regions.

As our research shows, Russian federal districts considerably differ on all three levels of the digital divide, with some regions (Central, Northwestern, Ural and (in a number of cases) Volga federal districts) taking up leading positions and other regions more or less lacking behind. We argue thus

that digital inequality in Russia is still on place and will require more time for complete elimination. However, the number of state and public initiatives aimed at creating a more balanced digital environment across federal districts and territorial formations, and overall positive dynamics of digitalization processes in the Russian regions make us believe that the process is going towards the right direction.

Title: Formations of the Unequal Subject in the Online Platform Economy

Session Type: Individual submission

Authors:

Name: George Maier

Email: g.maier1(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: The London School of Economics and Political Science

Abstract: The specificity of subject formation in the online platform economy is blurred into dominant progressions of subject formation in society more generally; The neoliberal turn since the 1970s has surely catalysed the entrepreneurial self, geared towards market success (Brockling, 2016), as well as the indebted self in an increasingly financialised and credit focused economy (Lazzarato, 2012, 2015). However, I argue that the mediating properties of sharing/gig economy platforms bring such formations into a particular moment of focus. These platforms emerge free from the restricted velocity of traditional industry (Srnicek, 2017) and often expand into unmapped regulatory space faster than policy can react (Katz, 2015). The result is capitalist interaction untethered from traditional labour relations and often beyond regulatory politics, approaching the neoliberal ideal of the freed market. I argue that this hyper-economisation extends to the subject who participates by seeking income in the 'Sharing Economy'. This subject is evaluated, assessed, ranked and categorised through platform algorithms and systems of rating acting on behalf of platform operators; but also, directly with 'the customers' in the context of their economic interactions where value judgement is persistently encouraged through rating functionality and, on some platforms, competitive pricing between income seekers; what results is a subject constantly aware of their market value. I therefore bring forward Bourdieu's (1986) conceptions of symbolic capitals to explain which different forms of capital become recognised as valuable within the fields of the sharing economy. But I also go further by calling upon the critiques of Bourdieu offered by Skeggs (2004) to ask who has the ability to be seen as a subject of value, reflecting dominant hierarchies of class, gender and race. This paper therefore interrogates the mechanisation of dominant normative expectations of subject value in mediatised environment of the platform economy and, secondly, how these normative horizons interact with offline inequalities in the perpetuation of outcomes (adding to the established digital inequalities "outcomes" debate (Helsper, 2012; van Deursen & Helsper, 2015, 2017)).

This paper constitutes a theoretical contribution arising from a PhD thesis focused on people who earn money using Uber, AirBnB and Amazon Flex within London, UK.

Title: Second Order Digital Divide: A case for Digital Social Capital

Session Type: Individual submission

Authors:

Name: Uma Shankar Pandey

Email: mailusp(at) gmail.com

Country: IN (India)

Affiliation: Surendranath College for Women University of Calcutta

Abstract: Digital Divide Research over the years has focused on the inequalities in the use of the information and communication technologies. However many recent experiences in the Information and Communication for Development (ICT4D) projects have busted the myth that information and communication technology access would lead to a linear attainment of the stated development goals. One of the reasons of the failure of the ICT4D paradigm is the design-reality gap between the information systems of the developed countries and the developing societies that they were sought to be transferred. The second order digital divide looks beyond the inequality in access and concentrates on the differences among users' skills and motivations for usage. The interaction between culture and technology and individual user and technology hence become important considerations. This has led to recommendations for digital literacies for all citizens encompassing the theoretical, operational and evaluational aspects of ICT literacy. One of the major theoretical paradigms for the digital literacy approach has been the Capabilities Approach which posits the importance of the freedoms or valuable opportunities (capabilities) for individuals to achieve the functionings they consider important. Digital Literacy thus looks at the capabilities and its corresponding functionings that users are able to achieve. It is no longer a question of access but more of what people can or cannot do with the information and communication technologies made available to them. Other recent theoretical approaches are concerned with both access and participation. The network society theory on the other hand maps how the information and communication technologies have constituted new social paradigms in which new social relationships are based. A similar theme has been that of the Digital Human Capital which sees investment in human capital as being analogous to investing in other forms of capital for social development. A related concept in some ways is the 'social capital' concept. According to Bourdieu, social capital is the cumulative resource from the possession of a network of 'relationships of mutual acquaintance and recognition'. The amount of social capital depends not only on the breadth of the network of connections, an individual has but also on the pool of resources possessed by those to whom the individual is connected in the network. Bourdieu further believes that social capital, cultural capital and economic capital can be converted from one type to another. Drawing on Bourdieu's theory, the present paper suggests a digital social capital paradigm as an index for second order digital divide. It goes beyond the traditional digital human capital arguments of digital literacy and considers social capital from a capability perspective. In other words it indicates the social capital an individual deliberately chooses to acquire is reflective of the functionings he desires from the digital world, and the connectedness which would entail other forms of symbolic and cultural capital as well. People with more digital social capital have both more freedom to access other social networks and more control over others' access to their network resources.

Title: Impacts of the digital divide on e-government portals of Nepal

Session Type: Individual submission

Authors:

Name: Bhanu Acharya

Email: acharya.bhanubhakta(at) gmail.com

Country: CA (Canada)

Affiliation: University of Ottawa

Abstract: Nepal is a landlocked country in South Asia with 29 million population (Zuberi et al., 2018). According to the Internet Live Stats (2016), less than 20% of the population in Nepal have accessed on the Internet. The Capital city and other major urban areas have a higher concentration of the Internet facilities with 3G and 4G Internet services, but most of the rural areas rely on limited access to the Internet with slow 2G Internet in GSM and CDMA technologies (Nepali Telecom, 2018). Most of the Internet users have access to the Internet through mobile devices and primarily used for social networking and interactions (Nepali Telecom, 2018).

Nepal is struggling to cope with the rapid evolution of information and communication technologies (ICTs) since the country has been facing a severe energy crisis (electricity shortages) for decades (Poudyal, Khadka, & Loskot, 2017). Most of the people in the country have limited access to ICTs due to low income, and they hardly find access to the high-speed Internet due to poor and limited infrastructure (Pun, n.d.). By introducing a number of ICT policies and programs, the Government of Nepal (GoN) want to provide government services through e-government platforms and contribute to the national economy by 2030.

There are, however, several barriers to Nepali users in accessing and using Internet services, including low income, illiteracy, limited digital literacy skills, and reluctance to new media. Consequently, Nepal's digital presence in terms of providing government services and opportunities to the public, participating e-government program, and creating digital content is very limited. Nepal's e-government service, among 193 UN member countries, is ranked 117th position that signals very poor progress in the ICT infrastructure and government service delivery through digital platforms (UN Survey, 2018). Each of the 22 federal government ministry websites, according to Lyane and Lee's (2001) categorization, are in the preliminary stage of development, meaning the websites display government intended information with limited interactive features and financial transaction facilities.

In this presentation, I would argue that the digital divide seriously affects Nepal's efforts of government service delivery through digital platforms, and consequently, efforts of government service delivery through digital platforms are inadequate and ineffective. By employing Layne and Lee's four-stage model of e-government development, this study observes the official websites of 22 ministries of the federal GoN that are expected to deliver government services to the public effectively.

After nearly two decades of political ups and downs, Nepal currently has a stable government with more than a two-thirds of parliamentary majority (Shakya, 2017). One of the major political agendas during the last election campaign was to transform Nepal into a digital nation by building a number of smart cities, making free Wi-Fi available across cities, developing digital infrastructure, and providing government services and opportunities through online. In this context, this presentation will be very relevant in assessing the state of the digital divide in the country, and the services and opportunities provided to the public through e-government portals.

Abstract: Does the level of promotion and protection of education -as part of human rights and dignity- have any relation to the level of technological development of the society? Is there any correlation between digital inequalities and social inequalities when it comes to the rights to education in social and geographical marginalised areas? This paper bridges both questions in order to answer them via quantitative and qualitative data referred to a specific context and on a specific educative policy: the Conectar Igualdad Programme (CIP) as a social policy applied in an urban and a rural secondary school located in Salta (Argentina).

In this way, this case study allows us to generate evidence on digital-inequality issues facing adolescent citizens among social and geographical marginalized communities; and promotes evidence- informed policy change for the improvement of the access, the use, and the implementation of ICTs for educational, social and cultural development (van Dijk, 2005).

Both in Latin America and in Argentina, inequality is a historical and severe structural condition (Kessler, 2010). In turn, the social uses of technology constitute an important field of debate in the area, and the technological equity conditions during childhood and adolescence are part of most of the political and educational agendas (Becerra, 2015; Morales, 2015; Reygadas 2008; Rivoir, 2009). We ask ourselves: What features does inequality acquire when questions are asked on the grounds of educational policies aimed at digital equity from a human rights perspective? To what extent is technological inequity part of wide and historical geographies of social inclusion/exclusion? How do digital inequalities relate with the public educational system and to what extent do they impact on the living conditions of the youth in diverse Latin American contexts?

First we work with comparative public statistical information, which allows us to address the presence/absence of various technological devices in Argentine households, pointing out the differences between regions and specifying the situation for the province of Salta. Said statistical

information is combined with an inclusive approach on the role, the valuation and the differential use of technologies according to contexts, regions and diverse socio-economic conditions. Our analysis indicates that CIP seem to have had a relevant impact in the educational system, though differences persist between sectors of different income levels and of rural or urban localizations. Positive variations indicate the extent to which public policies may positively influence the reduction of the material dimension of access. Fieldwork indicates that, even if the digital gap is narrower among the youth than among older-age groups, and among male students than among female students, it persists. Furthermore, the analysis shows that there are regions and sectors which remain disconnected, that there are digital services that are only accessed by the most favoured sectors, and that this disconnection has a growing weight in the general configuration of social inequality in Salta. Thus, the availability of a specific device incipiently reduces the structural fragmentation between incipiently connected and disconnected people, while it neither solves the connectivity issue nor those issues derived from digital literacy processes and the social uses of such technologies.

Abstract: In international statistics, the root causes of digital exclusion are still easily brought back to a series of sociodemographics such as income, jobs status, education level or gender (Van Dijk, 2005). Research, among others by Helsper (2012) and Reisdorf (2017) has shown that a more nuanced approach is needed in which aspects such as autonomy of use, personal daily practices and needs, participation in social networks and social support networks are taken into account as explanatory factors for digital exclusion.

The work of Mariën and Baelden (2015) proposes a conceptual model of eight media profiles, spread across a continuum between deep exclusion and deep inclusion, combining social and digital indicators, that explains the extent to which the various types of (non-)users are subject to digital exclusion. Moreover, the practical application of the conceptual model by e-inclusion initiatives in Flanders has proven to be worthwhile for developing a customized e-inclusion approach fitting each media profile (Mariën, 2016). It led to the insight that the strongest media profiles (cf. the Digital All-Stars) are in need of pedagogical support so as to more easily communicate and share their digital knowledge. It also showed that strong digital profiles are present among socially vulnerable groups, and moreover, that these 'Unexpected Digital Masters' are best equipped to become coaches for their peers.

This paper presents itself as an empirical application of the 8 media profiles and how they serve to develop customized e-inclusion strategies for secondary education in the Netherlands. A three-phased practice-oriented project was conducted in collaboration with ROC Leeuwenborgh (NL), a vocational training center for teenagers and adults. Firstly, the conceptual model was transformed into an automated online self-assessment instrument built upon 13 indicators, of which 5 relate to the social field and 8 relate to the digital field; and subsequently tested and validated with a group of 10 MBO students in ROC Leeuwenborgh, Maastricht. Secondly, the validated self-assessment instrument was filled in by 300 MBO-students. Thirdly, participatory workshops were conducted with students and their lecturers, aimed to build an e-inclusive and customized approach suited to each media profile.

The preliminary results of this study shows the importance of developing soft skills (cf. self-confidence, self-steering competencies, critical self-reflection...) as primordial for the development of digital skills within an MBO-context. Finally, the participatory methodology used within this project provides an invaluable toolkit to empirically respond to the experiences and the needs of students. This aspect is important insofar the teacher is no longer perceived as dispensing all the knowledge to students supposed to stay quiet while soaking it in; rather, we put forward an idea of skills development where pupils with the strongest media profiles can become the coaches of their peers and provide support.

Title: A widening digital divide and its impacts on existing social inequalities and democracy in Pakistan

Session Type: Individual submission

Authors:

Name: Sadia Jamil

Email: sadia.jamil(at) ymail.com

Country: PK (Pakistan)

Affiliation: PhD graduate, the University of Queensland, Australia

Abstract: In Pakistan, concentrated efforts have been made for the proliferation of Information and Communication Technologies (ICT) infrastructure by the government during the past decade. Consequently, in terms of internet users, “Pakistan is the fourth-largest country in Asia – behind Indonesia, India and China” (Hussain, 2017). However, a large proportion of the Pakistani people still cannot access and use internet. For example, a report released by Pakistan Telecommunication Authority (PTA) in late 2017, Pakistan has a total population of 200 million people. Within 200 million people, there are 46 million 3G and 4G subscribers, 3 million fixed line subscribers and 48 million broadband subscribers (Khalid, 2017). These statistics indicate a bit slow growth of internet users in the country.

The matter of concern is not only Pakistan’s slow progress towards the proliferation of internet access, but also there are various political, socio-cultural and other constraints that hinder the public’s access and their usage of internet. Government of Pakistan often restricts internet access or limit the provision of internet services in certain areas of the country that serves to curb the public’s right to freedom of expression and access to information.

In addition to government’s restrictions, social and cultural norms also considerably restrain the public’s access and usage of internet and thus are increasing digital divide. Particularly, the social milieu of Pakistan does affect the women’s use of internet and social media because “out of 35 million social media users, 77 per cent are male users and only 23 per cent are female” (Farooq, 2018). The women’s access to the internet and mobile phones is often restricted or monitored by male family members, resulting in their inability to effectively represent their issues online and participate in democratic process. And in majority of rural areas, both men and women neither have access to internet nor are they literate/or skilled enough to use it. Moreover, people with disabilities are also not capable to use internet due to a lack of provision of special needs equipments such as keyboards, screens and accessibility aids for sensory impairments.

Hence, there is no standardized access and usage of internet in Pakistan. Noticeably, there is a dearth of research by local academics within this area. Therefore, drawing on the theory of digital divide, this study identifies factors those are widening the digital divide in the country. The study also analyses how digital divide is reinforcing the existing social inequalities (i.e. income, gender and educational disparities) and impacts on Pakistan’s democratic process. To achieve these aims, the study uses the quantitative method of survey and qualitative method of in-depth interviews. The study uses relative frequency statistics and thematic analysis to analyse the collected data.

Title: Exploring the digital divide beyond access: A multivariate cross-country analysis of smartphone use and dependency in China, Singapore and Peru

Session Type: Individual submission

Abstract: The term digital divide initially referred to gaps in access to a computer. In contemporary information society, with the Internet and various information and communication technologies (ICTs), such as wireless and mobile computing, diffusing rapidly into society, the term has shifted to encompass gaps in these media access. Most of the early literature on digital divide focused on a binary classification of physical access. As the concept is reified and refined, an increasing number of researchers have recognized this limitation and argued that attention should be paid to more dimensions that may influence people's media use and thus potentially lead to different divides. Previous studies have identified a variety of factors, including historical, geographic, socioeconomic, demographical, educational, behavioral, and generation factors, that may explain the existence of digital divide. This study examines the issue of digital divide from this more comprehensive perspective, with specific attention paid to use and impact of smartphone. With rapid adoption of smartphones globally, smartphone use and the impact of smartphone dependency, especially among the young, has garnered more and more public attention recently. By reviewing the literature on the global digital divide, considerable research interest has been in the cross-country comparative analysis. According to the ICT Development Index (IDI) 2017 published by the United Nations International Telecommunication Union, China, Singapore and Peru are of upper, high and medium level respectively. Adopting the Individual Media Dependency (IMD) perspective, this study proposed an extended IMD model to examine the associations between six IMD goals, three psychological traits (self-esteem, leisure boredom, and sensation seeking), smartphone use, and smartphone dependency among the young in China, Singapore and Peru, with special attention paid to the use and impact of smartphone, especially the negative consequences of excessive smartphone use and dependency. Survey data were collected based on stratified random sampling from young smartphone users at one main public university in each of the three countries. Structural equation modeling was then

employed to examine the fit of the data to the model and compare the cross-country differences. Four smartphone dependency symptoms, i.e., inability to control cravings, escape, feeling anxious, and productivity loss were identified in the three countries, and revealed the mechanisms between IMD goals, psychological traits, and smartphone dependency. The results showed that across the three countries, different IMD goals had significant impacts on different aspects of smartphone use, and in turn have different effects on smartphone dependency. Through cross-national research in China, Singapore and Peru, this study is among the first few to go beyond simple binary differences between the haves and have-nots and investigate a substantive issue of digital divide by examining different use patterns and impacts of smartphone across three countries of different IDI levels. This study contributes to a deeper understanding of more dimensions of digital divide including differences in use and impact, which is critical to social inclusion in today's era for governments, companies, not-for-profit organizations, and educational institutions to bridge the divide.

Title: New digital divides. Political and social participation of the elderly in the information society

Session Type: Individual submission

Authors:

Name: Leopoldo Abad

Email: abad.fhm(at) ceu.es

Country: ES (Spain)

Affiliation: CEU San Pablo University Madrid

Abstract: This project continues the line of research initiated in two previous projects developed by this research team on various aspects of the relationship of the elderly with new information technologies and the Internet. The first of them, "Digital divide and third age: media literacy and e-inclusion (CSO 2012-36872)" addressed the training of older people in the field of ICTs as a means to limit this digital divide by promoting the e-inclusion of old people. The second "Elderly people, e-commerce and electronic administration: towards breaking the third digital divide (CSO2015-66746-R)" deepened some of the aspects of this generational digital gap, specifically in employment for this population group of e-commerce as of the electronic Government. In the development of these projects, a new element of the generational digital divide arose, the scarce political and social participation of the elderly in the information society through the different possibilities offered by digital tools, as corroborated by several published surveys by the CIS as by the INE. This limited participation through digital media contrasts, however, with the majority participation of this social group in the elections. Given the generalization of the political debate on the Internet, the present paper seeks to know the typologies of use of digital tools by the elderly for political participation as well as the motivations and problems that cause their limited use by this group. Through a bibliographic review of the main contributions of the theorists who have dealt with the subject, we intend to offer a proposal on criteria, conditions and environments that allow older people to access websites, social networks and other types of computer tools linked to political participation. To this end, a series of recommendations and proposals would be established that both public administrations, and especially the various private entities where older people develop their social activity, could set in motion to encourage participation in the digital environment of this social group in all those discussions on issues that affect them. The proper channeling of these forms of participation will make it possible to know the opinions, shortcomings and demands of a social group that will be the majority in the next Western societies demographic scenario. This involvement would also allow their collaboration in the design of public policies that affect this group, improving them and adapting them to their real needs.

Title: Comprehending the Digital Disparities in Africa

Session Type: Individual submission

Authors:

Name: Bruce Mutsvairo

Email: bruce.mutsvairo(at) uts.edu.au

Country: AU (Australia)

Affiliation: University of Technology Stdney

Abstract: The digital divide is having significant impact on the ways in which information across Africa is developed, shared and perceived. The importance of Internet literacy has been often underestimated when assessing the real impact technology, and particularly citizen journalism and social media. (Wall 2012). Moreover, not everyone with access to the Internet understands what it is and how to use it for. Salgado (2016) outlines problems associated with the African digital divide in her analysis of the Internet's role in advancing democracy in the continent's former Portuguese colonies. Worse still, even when they actually have access to citizen journalism platforms, it is still unclear how many are participating and to what effect. This paper seeks to analyze the problems and opportunities associated with the ubiquitous digital revolution, providing a cross-disciplinary examination of digital disparities inhibiting social, political and economic progress across Africa. The paper seeks to provide empirical and theoretical accounts proving why social media will not easily change Africa's political systems. It also attempts to conceptualize the digital divide in an African setting critically examining how digital disparities could impact potential participation of citizens online. It will introduce some of the main concepts associated with the digital divide and analyze them from an African perspective. The paper also provides specific examples on how various countries in Africa are dealing with problems associated with the digital exclusion of their citizens.

Title: "It's convenient, but" Imagined digital (dis)connections in a rural Japanese community

Session Type: Individual submission

Authors:

Name: Fabienne Darling-Wolf

Email: fdarling(at) temple.edu

Country: US (United States)

Affiliation: Temple University

Abstract: Scholars speak of the unprecedented opportunities for connection across time and space afforded by digital technologies as a set of affordances. In the context of media studies, this concept refers to both the design and material aspects of how the technology works and what it allows users to do (e.g. upload a video) and its social aspects (e.g. connect with friends through sharing the video). How people use technology, however, is always embedded in broader structures of power and shaped by individuals' expectations, perceptions and experiences — or by what scholars describe as the technology's "imagined affordances." Thus, in order to fully understand digital communication, scholars must engage with the ways in which individuals develop their own "vernacular affordances" in their use of technology in a variety of different and specific social contexts.

Research on the situated negotiation of digital media has, however, most frequently focused on Anglo-American and European environments. It has also tended to problematically skew toward urban middle-class (and, often, younger) communities. This latter tendency has been particularly true in the case of Japan, which is often associated with its large metropolises and a relative lack of class consciousness. Keeping this limitation in mind, this project explores how lower-class individuals living in a small rural Japanese community employ digital media in their everyday lives, and how this use of digital technology shapes their sense of place in the world.

Drawing from extensive ethnographic research in the community, it considers the multiple locally-specific ways in which individuals have embraced digital technology in their daily lives and how the technology's "imagined affordances" intersect with their cultural, regional, and class identities both locally and in relationship to national and global contexts. It argues that despite community members' active and frequent use of digital technology, and despite their status as citizens of a globally privileged nation, numerous barriers — both imagined and actual — continue to limit their ability to fully engage in digital culture. It further discusses how a sense of simultaneous connection and disconnection from both urban contexts and an imagined global digital community frequently led to complex feelings of fear and alienation when using digital media and to a nostalgic longing for pre-digital social relations.

Abstract: In the United States, prison reform remains the focus of policies and foundation efforts. High incarceration rates and a focus on incapacitation during incarceration lead to a “revolving door effect”, with more than two thirds of parolees rearrested within three years after release (Durose, Cooper, & Snyder, 2014). One aspect that is missing from this debate is how access to and use of information and communication technologies (ICTs) might improve the prisoner reentry process.

Although there are localized efforts, such as New York City’s Prisoner Reentry Institute’s “Tech 101” course, instruction of ICTs is not a core component of prisoner reentry practices. Some reentry training is computer-assisted (California Department of Corrections & Rehabilitation, 2017), and some prisons offer basic computer classes. Yet, most courses do not cover how to operate current technologies or the Internet, and there is little research on access to ICTs and the digital skills of returning citizens.

Therefore, we ask:

RQ1. What kinds of barriers toward ICTs do returning citizens encounter?

RQ2. How do they perceive the effects of these barriers?

RQ3. What kinds of strategies do they employ to cope with (barriers to) ICTs?

We conducted focus groups with 78 male and female returning citizens in a large Midwestern city between April and June 2018. The mean age was 52 years ($M=52.07$, $SD=19.4$). Participants had been released from prison within 4 months of the focus groups and they had served a prison sentence of at least 2-3 years, some as many as 20 or more, so unfamiliarity with new ICTs was fairly high. We used a semi-structured approach to ask questions about ICT use, use barriers, and the kinds of ICTs parolees need during reentry and collected basic demographic data from the participants. We conducted various rounds of thematic coding of the transcribed data using NVivo.

All participants had cellphones, mostly smartphones (62%), but only few owned laptops or tablets (8.2% and 9.6%, respectively). As most participants lived in temporary housing, access to computers and the Internet was limited. In addition, lack of skills was a main barrier, although this varied depending on age, length of sentence, and how much participants had engaged with ICTs before. The perceived effects of lack of access and skills were largely negative. Participants reported issues in using ICTs to search and apply for jobs, write emails or text messages, and use apps on their phones. Whereas some were able to learn from friends, family, shelter staff, community centers, or teach themselves, many were unsure where to ask for help or what kinds of help to ask for. The majority mentioned that technology classes before or immediately after release would be helpful in alleviating these issues—showing the importance of including ICT training into reentry practices across the country.

Title: Digital Bangladesh: A neoliberal project'

Session Type: Individual submission

Authors:

Name: ASM Asaduzzaman

Email: asad.goldsmiths(at) gmail.com

Country: BD (Bangladesh)

Affiliation: Mass Communication and Journalism Department, University of Dhaka

Abstract: Digital Bangladesh recently came to the forefront of political as well as development discourses. This paper critically explores the concept of so called “digital Bangladesh” in the context of the current global discourse of ICT for development. The analyses and arguments of this paper is situated in the broader context of how neoliberal macroeconomic orthodoxies have shaped approaches to development in the Global South, namely ICT4D which is rife with technocratic and instrumental assumptions that speculate on a unidirectional relationship between the use of new digital technologies and development. I argue that ICT4D reflects a variant of neoliberalism which is still very much in existence. “Digital Bangladesh” is a manifestation of ICT for Development in Bangladesh. Following on from Jan Nederveen Pieterse (2004), I argue that an important factor for the spread of ICT4D in the Global South has been the process of “neoliberal globalization”. Another argument of the paper is that ICT4D is not a novel approach to development in which communication technologies (in this case information and communication technologies or “new media”) are said to play a pivotal role in social change. Instead, ICT4D has its origin in the discussion regarding mass media’s role in national development, which became popular during 1950s and ‘60s. As a case in point, I have mentioned telecentres founded across South Asia including Bangladesh to provide benefits of ICTs to citizens. However, critical analyses and empirical research shows the discrepancy existing between the alleged success of many of these projects and the reality. Following on Pieterse (2005), I criticize different assumptions of ICT4D for promoting what he terms “digital capitalism” in the era of neoliberal globalisation. For example, in ICT4D “digital divide” is seen as a major obstacle to overall development of a country. I contend that digital divide should not be a concern for the rural masses of Bangladesh when deep-rooted structural inequalities (i.e. unequal socioeconomic, power and gender relations) remain unresolved within and beyond rural communities. As a whole, the paper posits the entire project of digital Bangladesh in the broader context of global digital economy, and connects it with neoliberal globalization which is the dominant trend in the political-economic scenario of the present world.

Title: Digital public services: A threat to citizens' rights' An insight into Belgian digital inclusion policies

Session Type: Individual submission

Authors:

Name: Chantal Wauters

Email: chantal.wauters(at) vub.be

Country: BE (Belgium)

Affiliation: IMEC-SMIT VUB - Free University of Brussels

Name: Ilse Mariën

Email: Ilse.marien(at) vub.be

Country: BE (Belgium)

Affiliation: IMEC-SMIT VUB - Free University of Brussels

Abstract: Keywords: digital inclusion, policy, public services, digital-by-default

Over the past ten years, public services are being digitized radically. Digital media have become an intrinsic part of the everyday lives of citizens. However, due to barriers such as a lack of access, a negative attitude, a lack of motivation or a lack of digital skills, not all citizens reap the benefits of these digital services, leading to an increase in digital and social inequalities among a vast part of the population.

Luckily, the interest in digital inclusion strategies has accordingly grown in academia. Different digital inclusion definitions and implementation strategies have been developed, moving from too much emphasis on the importance of physical access to computers and the internet to the development of practical digital skills, or the so-called button knowledge, to more advanced digital skills such as critical thinking, problem-solving capabilities, and more recently, data literacy (Asmar, Mariën & Van Audenhove, 2019). However, the question remains to what extent policy makers follow these conceptual and practical advancements made in digital inclusion research. Is there still a main focus on access and practical skills, or has focus shifted to other identified characteristics of digital inequalities such as social support structures, soft skills, learning ability or the media richness of the individual's environment (Helsper & Reisdorf, 2017)?

The theoretical part of this paper focuses on (a) how the concept of digital inclusion has evolved over time; and (b) how the existing conceptual digital inclusion frameworks differ. Empirically, the paper reflects a critical analysis of digital inclusion policies in Belgium at a federal, regional and community level. A close reading of 190 policy documents was realized, aimed at identifying the extent to which digital inclusion is mentioned, what the focal points are and what strategies of inclusion are developed. Two types of policy documents were analyzed: (1) policy documents that entirely focus on digitization (cf. Digital Agenda); (2) policy documents that relate to the life domains in which digitization has increased (cf. healthcare, work, mobility and public service).

The results show a conceptual chaos in which inequalities, inclusion and exclusion are used without distinction. Also, the mentioning of digitalization, innovation, ICTs in policy documents has imploded, whereas referral to digital inclusion related concepts remains scarce. Put differently, the policy agenda shows an extensive focus to digitalization without making the clear cut and necessary connection to mechanisms of exclusion caused by that digitalization. Though focus has shifted from access to skills, the policies remains driven by a strong liberal agenda aimed at increasing employment (cf. the current increase of attention to coding) and aspects such as efficiency of services, characterized by a lack of attention to the daily needs of citizens.

Title: Emerging Technologies, Changing Literacies: Becoming Literate in the Data Age

Session Type: Individual submission

Authors:

Name: Axelle Asmar

Email: axelle.asmar(at) vub.be

Country: BE (Belgium)

Abstract: With technological advances, everyday objects – from smartphones to home appliances such as vacuum cleaners – become increasingly equipped with various sensing systems which not only allow such objects to understand their environments, but endow them with the capacity to identify and precisely recognize the individual characteristics of users. As individuals incorporate these technologies in their daily routines, more and more data about them are being stored, used and sold, often without their accord. Moreover, when permission is asked for the collection and reuse of data, it is often done in such an impenetrable language that users, most of the time, neither read nor understand what they are expected to agree upon. (Van Deursen and Mossberg, 2018). As data increasingly mediate the everyday life, data and the processes associated to datafication mechanisms are, on the one hand perceived as opportunities (Data Revolution Group, 2014) and on the other hand apprehended as dangers to civil liberties (Boyd and Crawford, 2012). Yet, both sides agree upon the need to move beyond media literacy and focus on building an empowered citizenry through data literacy (Calzada and Marzal, 2013; Wolff, 2016).

This paper articulates itself in two main parts. Firstly, this paper critically looks at the current definitions of data literacy and argues that data literacy should not be viewed solely as a skill, which would legitimize the fact that some individuals might be more apt than others; rather, we advocate for a definition of data literacy that puts an emphasis on the concept of literacy as a right. Put differently, it is not so much about being data literate as it is about becoming literate in the data age. Secondly, it empirically considers the experiences and perceptions of users regarding issues of privacy and data collection. Concretely, this paper is based on 85 in-depth interviews with respondents equally distributed across three life stages: Life stage 1 (18-30 years); life stage 2 (31-50 years); life stage 3 (51-70) and distributed equally across gender and educational levels (no high school degree, obtained a high school degree, obtained a degree of higher education). Our results show the growing concerns of users across age and education regarding the new data age, and the new divides brought about by the increasing digitization of services – both private and public. As data continues to expand in volumes and styles, the risk of exclusion is no longer limited to people living on the margins, but gradual disempowerment risks affecting larger segments of the population.

Title: Digital Inequalities in the Age of Artificial Intelligence and Big Data

Session Type: Individual submission

Authors:

Name: Christoph Lutz

Email: christoph.lutz(at) bi.no

Country: NO (Norway)

Affiliation: BI Norwegian Business School

Abstract: In this theoretical contribution, I summarize key concepts and findings from the digital inequalities literature. I propose that digital inequalities research should look more into mobile communication, labor-related questions, and emerging technologies. Particularly, I point to fruitful avenues how digital inequalities scholarship can engage with the nascent literature on big data and artificial intelligence. For instance, unequal access to online labor markets and the negative effects of algorithmic decision-making for vulnerable population groups could become more prominent topics in digital inequalities research. The article explains the general approach to digital inequalities based on the distinction of first-level, second-level, and third-level digital divides. First, I will synthesize the key tenets of research on access to the Internet or the first-level digital divide. I will show how the theory of the mobile underclass (Napoli & Obar, 2014) offers useful guidance on exploring AI-based technology. Particularly, I argue that voice-controlled and AI-based technology such as virtual assistants (Siri, Alexa, Cortana) and their physical embodiments (Amazon Echo, Google Home) come with even stronger restrictions in terms of functionality, content availability, and openness of protocols than mobile Internet access. Second, I give an overview of the literature on the second-level digital divide, focusing on digital skills and Internet uses. I use recent literature on algorithmic literacy and everyday encounters with algorithms to show how digital inequalities could engage more with emerging technologies (Bucher, 2017; Eslami et al., 2017; Klawitter & Hargittai, 2018). Finally, I discuss the nascent literature on the third-level digital divide, where outcomes of Internet use – in the form of benefits and harms – are at the center of attention. Again, I argue that digital inequalities scholarship could be a stronger voice in shaping the discourse. Studying digital footprints and how they privilege certain population groups over others could connect digital inequalities scholarship to research in data protection, privacy and big data (Micheli et al., 2018; Marwick & boyd, 2018).

Title: Young People's Media Use and Social Participation in Hong Kong: A Perspective of Digital Use Divide

Session Type: Individual submission

Authors:

Name: Alice Y. L. Lee

Email: aliceleee(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Department of JournalismHong Kong Baptist University

Name: Klavier J. WANG

Email: klavier.wong5(at) gmail.com

Country: HK (Hong Kong)

Affiliation: The Education University of Hong Kong

Abstract: In Hong Kong, the digital divide scenario has changed with the introduction of digital and mobile technologies. With most young people have gained access to the Internet, this paper looks into how they incorporate the Internet into their everyday civic lives. It explores the shift from a 'digital divide' towards a 'digital use divide' that responds to high levels of basic access to Internet services. It engages with the theoretical discussion of the move from a 'first-level divide' to a "second-level divide" (Lee, Park & Hwang, 2014; Radovanovic, 2011; Van Dijk, 2002).

The paper introduces the findings of 12 focus group studies of students from eight universities, exploring their media use and social participation. The research results provide evidence to show that in a technologically advanced city, while the gap of the digital divide has been narrowed, the social challenge of the 'digital use divide' has emerged.

In Hong Kong, a digital use divide exists between the older and younger generation. Moreover, university students in Hong Kong also show a digital use divide among themselves in the context of political and social participation. Taking part in public affairs ranges from low-cost online expression to physically joining street activism, and from non-traditional digital-aided formats to traditional political action. This study found different levels of using digital media and different levels of social participation – the extent to which citizens use communication tools to facilitate their political participation better. Apparently, media and information literacy (MIL) skills have an essential role to play with the digital use divide. Young people with higher MIL skills could make use of the digital media better than the older generation, and active participants with enhanced MIL would engage more with current affairs than the less active ones.

The findings also found that the digital use divide manifests not only as a gap in media and information literacy skills but also as variation in purposes of social participation. Also, users' goals are very much shaped by their socio-technological and political environments. It is noteworthy that previous digital divide studies seldom pay attention to either the subject matter or the contextual background. In this study, the subject matter under scrutiny is social participation. Therefore, it is impossible to ignore the 'one country, two systems' political structure in Hong Kong. As shown by the findings, Hong Kong young people's media use and social participation are deeply shaped by the post-handover political situation in the city. Their attitude towards the government and their

aspiration for the community are also affected by the Umbrella Movement, which signifies the struggle for political autonomy after 1997.

Practically, findings of this study remind educators to strengthen young people's media and information literacy (MIL) skills. Theoretically, this study contributes to the digital use divide study by revealing that there is an interweaving relationship among the subject matter under examination, user's goal-seeking, and contextual background.

Title: Rewriting history: digital media, collective memory and mechanisms of power

Session Type: Individual submission

Authors:

Name: José Cláudio Castanheira

Email: jcscastanheira(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal de Santa Catarina - UFSC

Abstract: Historian Jacques Le Goff describes the collective memory as field of power. Rather than considering memory in its most common sense, ie, an ability to preserve certain information, which can reconnect past events when accessed later, Le Goff points that memory – and forgetting – is a concern of classes, of groups, and of individuals who control society. “History omissions and silences are revealing of these mechanisms to manipulate the collective memory.” (LE GOFF, 1990, p. 426) Social memory is a place of struggles for power.

Digital media have played a key role not only in creating new “facts” to be incorporated into the collective memory of certain social groups, but also in erasing or altering historical events. The effects of such phenomena have been especially related to the political context of many countries. The influence of different social media platforms or instant messaging applications like Whatsapp have been perceived and ingeniously targeted to meet multiple interests. Small groups of activists, political movements of different tendencies, representatives of political parties, and personalities with some kind of social evidence are some of the main creators/disseminators of those narratives. In Brazil, those forms of digital communication have acquired such a force that traditional media, represented by large journalism corporations, have tried to create mechanisms for controlling and differentiating “real facts” from “fake news”.

Besides the demoralization of possible political opponents, the most worrying aspect of this phenomenon is the increasingly intense attempt to rewrite official history. Facts already known and regarded as true by a large part of the population (such as Brazilian military dictatorship between the years of 1964 and 1985) may be transformed into newer and less “accurate” versions or may be simply denied.

The reinvention of history permeates several aspects of everyday life and does not concern just Brazilian reality. One of such new versions of public facts, for example, is about Pink Floyd’s former leader, Roger Waters, not being able to understand his own songs. Many of his fans argued via Tweeter or Facebook that his classic album The Wall was a critique to leftist indoctrination and not about totalitarian regimes in general. In another episode, the German embassy in Brasilia, in response to different posts from conservative Internet users denying the Holocaust and asserting that Nazism was a leftist regime, published a video online with more information about those historical facts. Even so, there were many replies asserting that German embassy was providing an incorrect analysis of the events.

This work proposes an initial attempt to describe different ways of rewriting collective memory through digital media as a form of political and social control. It presents some questions about the role of journalism in recent years in Brazil and other countries. This paper understands the overlapping of different narratives, often contradictory, as a symptom of deeper changes in the

notions of freedom, democracy and individuality, so that they may better suit a specific political and economic model that has been strengthened in recent times.

Title: Digital Inclusion Fighting Disability Stigma' Opportunities, Barriers and Recommendations

Session Type: Individual submission

Authors:

Name: Panayiota Tsatsou

Email: pt133(at) le.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leicester

Abstract: Digital inclusion research has broadly attempted to examine whether people with disabilities (PwD) are digitally included (Goggin and Newell 2003; Macdonald and Clayton 2013), related barriers (Caton and Chapman 2016; Chadwick, Wesson, and Fullwood 2013; Dobransky and Hargittai 2016; Ellcessor 2016) and the extent to which digital inclusion can ameliorate disability stigma (Chadwick, Wesson, and Fullwood 2013; Chib and Jiang 2014; Dobransky and Hargittai 2016; Goggin and Newell 2003). However, as this paper demonstrates, there is a lack of conclusive evidence on the role of digital inclusion in experiences of disability stigma.

This paper presents a focus group study that explores the stigma experiences of PwD and the role of digital inclusion in overcoming disability stigma. The study finds that PwD acknowledge the positive role of digital inclusion in stigma alleviation through helping them: a) manage everyday tasks that are not managed easily due to disability (i.e., bio-medical stigma); b) become more integrated into the society (i.e., social stigma) and; c) express more freely/be more confident (i.e., psychological stigma). At the same time, PwD suggest that disability stigma does not disappear in the digital realm, pointing to the risk of bio-medical aspects of disability driving technology design which worsens the social stigma assigned to their disability and generates new experiences of psychological stigma. The paper concludes that benefits from digital inclusion lie simultaneously at the bio-medical, social and personal/psychological levels and that prominent barriers to digital inclusion, such as low accessibility and usability and ineffective technology design, are determined by complex biopsychosocial factors.

Hence, the paper argues for the value of the biopsychosocial model of disability founded by George Engel and suggests the development of the biopsychosocial approach in the study of the role of digital inclusion in disability stigma so that more emphasis is placed on the psychological complexities of individual agency alongside bio-medical and social factors of disability stigma. It invites the appropriation of such a multi-level approach in order digital inclusion research to generate longitudinal insights into the actual and potential role of digital inclusion in PwD's social inclusion and welfare.

Title: Effect of smartphone on North Korean defector's cross-cultural adaptation: a digital divide perspective

Session Type: Individual submission

Authors:

Name: Yongsuk Hwang
Email: prohys(at) gmail.com
Country: KR (Korea, Republic Of)

Abstract: This study examines how the use of digital technology affects refugee migrants' cross-cultural adaptation to a new culture. Today, issues related to refugees face the challenge of the international community, not limited to specific individuals. Also, the successful settlement of refugee immigrants is very important not only for the individual but also for the entire range of politics, economics, society, and culture of the state. Especially, the success of cultural adaptation of the refugee migrants relies more on acquiring knowledge and information, forming social relations, and embodying social norms and cultures rather than on institutional support. While social support has a critical impact on the re-socialization of refugees, they lose existing social assistance when they exile the country. In this respect, the importance of information and communication technology and the Internet space is growing in that it plays an important role as a socialization agency.

In particular, the use of digital technology is more important than most migrants acquire relevant information such as residence and settlement, employment opportunities, health, and education through the Internet and adapt to new societies (Lloyd et al., 2013; Khoir et al., 2014). In addition, the use of this communication technology contributes greatly to the reformation of the individual social support system and serves as a key driver of cross-cultural adaptation.

Therefore, we explored how smartphones, which are the most prominent communication tools in digital society, have an impact on those adapting to the new society. More specifically, the study examined how North Korean defectors' smartphone adoption, skill and use influence on their social support and subjective well-being in South Korea. A path-analysis model is applied, based on concepts of the levels of the digital divide (access, skill & use, outcome). A total of 599 cases were analyzed from the 2017 data set of annual digital information divide survey conducted by the National Information Society Agency (NIA). Results suggest that the level of education, income and the entry time significantly affected the smartphone adoption. In addition, smartphone adoption

has a positive effect on smartphone skill, then it influences smartphone use. Finally, although the smartphone usage for economic and social purposes did not show a direct effect on the subject well-being, they have a mediating effect through social support.

Findings of the study suggest that social support gained from various information and communication technologies (ICT) would be one of the crucial factors predicting how successfully refugee migrants are able to assimilate to new cultural systems. As the refugees' perceived social supports becomes a key indicator to predict the success of assimilation to a new culture, multilateral approaches from the government are suggested in this global society. Therefore, technology-based policy needs to be improved in the process of adaptation of refugee and that digital technology has become a key driver of social integration.

Title: Digital Rites of Passage to Access Rights

Session Type: Individual submission

Authors:

Name: Niranjana Prem

Email: p.niranjana(at) gmail.com

Country: IN (India)

Affiliation: School of Social Work, Tata Institute of Social Sciences

Abstract: Information and Communication Technologies form the backbone for administrative excellence that Prime Minister Modi's Government has aspired for with his vision for Digital India. With a persistent move towards Digitisation of all data pertaining to its citizens, and disbursement of services through digitised processes, issues pertaining to the top down nature of Information and Communication Technologies need to be engaged with more persistently especially in the context of what are called 'developing nations'. Constant upgradation of technology, followed by consistent training and capacity building of permanent, contractual and hired by the day staff are essential for the efficient and consistent functioning and proper disbursement of services by the government. A sufficient amount of budget is consistently set aside for these processes within various projects. The key question here is whether all these provisions and visions translate to achieve the purpose of easy and accessible services to the citizens, especially those from the most marginalised sections of the community.

Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS) of the Government of India and The Public Distribution Scheme (PDS) under the National Food Security Act are two programmes implemented by the Government of India which have their origins in peoples demand for their Right to Employment and Right to Food. Both the schemes have heavily employed technology in their implementaion. The NREGS uses MIS for consolidationg and maintaing its data, Electronic Fund Trasfer to disburse wages to the daily wage earners, uses bio - login for authentification at various stages in the administrative process and disbursement of wages, a separate MIS for its Social Audit component and Aadhar authentification for identification of Job Card Holders. The PDS uses Aadhar based bio metric authentification that is internet dependent for the disbursement of the food grains.

This paper proposes a secondary analysis through studies published on NREGS and PDS to engage with the accessiblity of these technologies to the people. The schemes emerge from Rights based movements and have predominantly used technology claiming better transparency, accessibility and efficiency through the use of technology. Digital Divide in its primal form is evident in the implemetation of these schemes where issues like lack of access to electricity, internet and proper functioning technological equipment at the sites of disbursement are rampant and profusely recorded. Larger arguments related to data management and misuse of the technologies to sidestep processes leading to larger scale of corruption and extensive exploitation of marginalised communities are also recorded separately. The institution and implemetation of the ICTs themselves strongly colour the government reports in tones of achievements and accomplishments. This paper will be an attempt to record the range of issues that fall under the

spectrum of Digital Divide. For a nation that has consistently increased its technological dependency and vouches for digitisation, the actual accessibility that these technologies afford to its citizens needs to be consistently assessed, and a re-envisioning of technology and its relation to the people needs to be the focus.

Title: Homeless and on Facebook: Balancing Opportunity and Risk on Social Media

Session Type: Individual submission

Authors:

Name: Will Marler

Email: willmarler(at) u.northwestern.edu

Country: US (United States)

Affiliation: Northwestern University

Abstract: The purpose of this study is to understand how members of marginalized communities seek out social support on Facebook while experiencing homelessness. The study unites literatures split over separate emphases on the opportunities and risks of social media use for members of disadvantaged communities. Social network sites (SNSs) are presented in different lines of research as an opportunity for building social capital (Burke, Kraut, & Marlow, 2011; Ellison, Gray, Lampe, & Fiore, 2014; Li, Chen, & Popiel, 2015) and a liability in terms of the skills that low-income communities and older adults in particular lack in navigating the Internet without exposing themselves to privacy and financial risks (Gangadharan, 2015; Li, Chen, & Straubhaar, 2018). The literature suggests that members of marginalized communities may gain social support networking on SNSs insofar as they build large and diverse networks to whom they make direct requests for support while at once being skilled enough to avoid exposing private information and opening themselves to scammers. Two questions follow from divergent lines of research. First, how do the marginalized users themselves perceive SNSs in terms of opportunities for social support and risks to personal privacy and security? Second, what online practices follow as marginalized users seek a balance between expanding their social reach online and protecting themselves from online risks?

I spent time at a social service agency and in public libraries in north side Chicago observing and interviewing unstably housed adults about their Facebook use. I focus on six participants with whom I conducted interviews as I sat beside them at a computer or smartphone while they browsed Facebook. Connective ambition describes the sense that non-users and user alike had that their social reach on Facebook had a bearing on their paths out of homelessness. Unlike the literature would anticipate, levels of digital skill had an influence but did not determine whether connective ambitions translated into tangible support in the form of raising funds or finding new confidants for emotional support. Those participants who evidenced greater skill were the same that chose to not share their homeless status through Facebook, in the interest of avoiding stigma. Participants with experiences of offline violence or previous online harassment pursued minimal participation on the site in a way that precluded building broad networks from which to appeal for support. Other participants identified as homeless and sought to promote their struggle and that of other homeless through adding accepting thousands of friend requests, including from online strangers. The occasional advantages of exposure, such as donations to the local homeless community or a conversation with an empathetic stranger, were largely overwhelmed by the deluge of scam attempts and suspect communications from strangers requesting friendship on the site. Creative caution describes how, without an understanding of advanced features of Facebook, these unrestrained users developed atypical strategies to protect themselves from online risks, such as

establishing multiple accounts under different names. The study contributes to an integrated view of how marginalized users navigate opportunity and risk on social media.

Title: [Panel] Changing divides, changing policy: Two decades of change in telecommunications policy and the impact on mobile and urban/rural divides in India, US and Peru, Panel description

Session Type: Panel Submission

Authors:

Name: Cecilia Sumita Louis

Email: slouis(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon, Eugene

Abstract: In the last two decades, mobile telephony, broadband Internet, and other telecom services have rapidly proliferated with varied impact across the globe. Despite advances in super-computing, the cheaper costs of mobile devices, and rural access to the Internet, disparities remain in how people get online. The term “digital divide” was coined in the early years of the Internet to denote “inequitable access to computers and the Internet in America” (NTIA Report, 1995). As technology and research has advanced, the digital divide has come to refer to differences in people’s digital skills (Schradié 2011; Subramony 2007, 2014) as well as the impact of differential access and skills across mobile phones and computers and urban/rural geography (Katz and Rice 2003, Van Deursen and Van Dijk 2014).

Policy has an important role in expanding Internet access as technology and markets change. This panel offers a comparative approach across developed and developing countries to examine how governments are adapting policy to the changing nature of digital divides. The presentations suggest that mobile and rural initiatives continue to lag behind efforts to connect urban dwellers to computers.

The comparative approach of the panel benefits a literature in which developed and developing countries are not often considered in tandem. In attempting to adapt telecom policy as technology changes, where do policy regimes diverge and what approaches do they share across India, Peru, and the U.S.? Moreover, the lessons from disadvantaged communities in one country are likely to resonate with those in another. What do mobile users in Pondicherry and Chicago share in their struggles to take advantage of the Internet on their phones?

In addition to the comparative approach, the panel offers views of policy from above and from on the ground. We discuss both how Indian policy has evolved over two decades and what the results have been for rural women connecting to the Internet. We present Peru’s mobile-focused approach to telecom policy as well as the complications for U.S. mobile policy through the eyes of low-income people benefitting from phone subsidies. Across the presentations, there is a focus on the stakes of good governance for ensuring the rights of citizens to participate in society through equal access to the Internet.

MODERATOR: Professor Gabriela Martinez, University of Oregon, Eugene

PANELISTS:

Title: Fitting Policy to Practice: Mobile Phone Subsidies and the Insecurity of Phone Access for Low-Income and Urban Americans

Session Type: Panel Submission

Authors:

Name: Will Marler

Email: willmarler(at) u.northwestern.edu

Country: US (United States)

Affiliation: Northwestern University

Abstract: Is access to a mobile phone a rightful target for universal service policy? What kind of policies would advance the goal of equal phone access for disadvantaged communities? Qualitative research has shown that, despite its apparent ubiquity, access to a mobile phone remains unstable for economically marginalized communities in the U.S. and across the globe. Members of poor communities regularly experience breaks in their phone access and rely on sharing and limiting their use to maintain access to voice, text, and mobile data. Against this backdrop, I conduct ethnographic research with low-income, older adults in Chicago to explore the impact of a federal program to subsidize mobile phone access for low-income Americans, called Lifeline. The Lifeline Program has come under criticism in recent years for failing to prevent potentially millions of Americans from obtaining subsidies despite being ineligible, or from obtaining multiple subsidies per individual. Conservative media outlets put forward images of low-income and particularly Black Americans as entitled and criminal in their attempts to benefit from one or more subsidies. In interviews and observations with low-income adults at a social service agency, I find that reliable access to a single mobile phone with voice, talk, and data is lacking for many low-income Chicagoans. Phones obtained through subsidies fill in this gap for many low-income Americans, but often in ways not anticipated by policy. I find that it is practice among Chicago's poorest residents to keep multiple phones in order to manage breaks in their access and build up voice, text, and data capacities across devices. Subsidized phones fit into these routines of multiple phone ownership. Subsidized phones are backups when other phones lose service and they are more frequently shared with others in need. The study concludes that subsidized phones help low-income Americans stay connected to phone service, in line with the goals of the Lifeline Program. However, the ways that phone subsidies are put to use are at odds with policy expectations, which are not informed by the experience of maintaining personal technologies in the context of urban poverty. The study contributes to literature on digital divides and telecommunications policy by showing that phone access is precarious in the U.S. as in developing countries and that policy must take into consideration the atypical ways that members of poor communities adapt to maintain their access to personal technology. The study concludes with recommendations for adapting policy to the needs of low-income phone users.

Title: India's National Telecom Policies (NTPs): A historical analysis of Indian telecommunication policy initiatives and implications for the "digital divide"

Session Type: Panel Submission

Authors:

Name: Cecilia Sumita Louis

Email: slouis(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon, Eugene

Abstract: Today, India has the world's second-largest mobile phone user base with over 1 billion subscribers and 512 million broadband internet subscribers in the country (TRAI report, 2018). This paper re-examines the ongoing debate over the role of India's telecommunications industry which some scholars argue "has also supported the socioeconomic development of India and played a significant role to narrow down the rural-urban digital divide to some extent" (Gosh, 2018).

However, the story of Indian telecom's "success" reveals mixed results: while on one hand cheap mobile phone costs and subscription plans, the industry's value added services (VAS) and the network infrastructure for internet and broadband have been instrumental in the introduction of e-governance in India and helped deliver mass education programs for the rural citizens of India, slow Internet speeds and hurdles to last mile connectivity remain key obstacles in the country's thrust to level the technology divide between urban and rural India.

This paper adds to the current perspectives of scholars re-examining the discourse of "digital divide" and utilizes a historical and political lens to provide a closer examination of India's National Telecom Policy (NTP) from 1996-2016 and key challenges in implementation of targeted goals, the role of private carriers and the current national governmental focus on "ensuring last mile connectivity."

Title: Leapfrog telephony in Peru: Telecom policy in the 21st Century

Session Type: Panel Submission

Authors:

Name: Gabriela Martinez

Email: gmartine(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon, Eugene

Abstract: Most people in Peru, including many in rural areas, cannot imagine life without a mobile phone. How have telecom policies impacted market share and service penetration over the past 20 years? What companies are the main players? and What's their impact in helping to close the urban-rural digital divide? This paper will answer the questions posed, analyzing the history and evolution of mobile telephony in Peru by probing its Telecom policies and market forces.

Telecom policies and services have shifted since the 1990s when the telecom sector was privatized. Privatization meant to leapfrog from having no fixed line (or no phone at all ever) to owning a mobile phone/line. However, despite the leapfrogging, Peru remains one of the least developed mobile markets in the region with a substantial urban-rural divide even when the number of connections is larger than the population. In 2017 Peru's population was close to 32 million people, and as of 2018 there were more than 35 million active mobile lines. But, this doesn't mean less of a digital divide as the urban-rural gap remains. The larger concentration of mobile usage continues to be in the capital of the country, Lima, where 40% of the country's mobile connections are.

In an effort to improve services and to close the digital gap the telecom sector updated their policies, allowing since 2014 for more competition. More competition has meant market growth among urban lower income groups and in rural areas. The entrance of Entel and Bitel two mobile telephone operators broke the duopoly of the main two carriers--Telefónica and Claro. Breaking the duopoly of Telefónica and Claro, two transnational companies that have a stronghold on Peru's market since the 1990s, has forced them to comply with their contractual agreements and expand services to more semi-urban and rural areas. Having more competition has aided lowering equipment and service prices, and it is providing newer alternatives for mobile internet access at lower costs.

The lowering prices of equipment is also allowing more people to acquire smartphones, with a growing number of people being able to access the internet through their mobile devices. However, accessing the internet through phones remains mostly an activity of those who are literate and already have the skills and know-how to navigate the internet. Closing the divide still is a work in progress, and Peru's telecom sector has more work to do in order to provide better and more accessible services while also improve the level of education and skill set of its citizenry. It is clear that having access to digital technologies is not all there is if Peru ought to continue developing and improving the lives of citizens.

Title: What the digital capital is and how to measure it

Session Type: Individual submission

Authors:

Name: Massimo Ragnedda

Email: massimo.ragnedda(at) northumbria.ac.uk

Country: GB (United Kingdom)

Affiliation: Lecturer in Mass Communications, School of Arts and Social Sciences, Department of Media, Room 304 Squires Building, Northumbria University, Newcastle upon Tyne, NE1 8ST.

Name: Maria Laura Ruiiu

Email: maria.ruiiu(at) northumbria.ac.uk

Country: GB (United Kingdom)

Affiliation: Northumbria University, Newcastle

Abstract: This paper contributes both theoretically and empirically to the literature by (a) consolidating the concept of Digital Capital as a specific capital, and (b) empirically measuring it. It adopts the theoretical definition provided by Ragnedda (2018) who defines Digital Capital as the accumulation of digital competencies and digital technologies. Using this definition, a Digital Capital Index is developed and assessed through a representative sample survey of 868 UK citizens. This paper reports the results from an Exploratory Factor Analysis (EFA) showing the reliability of the model developed by Ragnedda and Ruiiu (2019) in measuring Digital Capital. The level of Digital Capital has relationships with socio-economic and socio-demographic patterns, suggesting that it plays a role in interacting with both digital and social inequalities.

Title: MIGRATION, ENTREPRENEURSHIP AND FRUSTRATION: When Migrants Become Portfolios

Session Type: Individual submission

Authors:

Name: Sofia Zanforlin

Email: szanforlin(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal de Pernambuco UFPE- Brazil

Abstract: In this paper we present the results of the study carried out between 2017 and 2018 on the relationship between NGOs oriented to the integration of migrants, asylum seekers and refugees into Brazilian society through training, professionalization and insertion in the labor market, through the opening of one's own business. The first part of the research accompanied the four modules of the "Roots in the Kitchen" project through participant observation and semi-structured interviews. The project was developed in São Paulo, in the second semester of 2017, by the NGO Migraflif and its partners, with the objective of training migrants to become entrepreneurs and sell food from their countries of origin as a means of "economic empowerment and social integration into Brazilian society". A total of 21 migrants were selected to participate in the event and 17 completed their training. At a second stage of the research, in-depth interviews were conducted with 10 migrants who participated in the training. The interviews took place in July 2018.

The objective of the article is to discuss the experience of accompanying training carried out by the NGO Migraflif in dialogue with the testimonies collected from its participants, starting from the problematization of the bet of entrepreneurship as a means of economic integration into society and questioning to what extent the vision that the partnership between private initiative and civil society can dispense with public policies aimed at the integration of migrants. The NGO bet is that the valorization of the migrant through their culture, specifically the culinary in that case, and personal history of immigrant / refugee, as an example of resilience can be configured as a way to mobilize affections and belonging are better negotiated (YÚDICE, 2004). In this way, the stimulus to entrepreneurship and the offering of the experience of an "authentic" gastronomy are presented as the possibility of the migrant to transform his social and economic condition as reworking personal and cultural attributes of his country of origin in which the personal narrative starts to singularize his "product", approaching the notion of cultural consumption (AGIER, 2016, COHEN, VERTOVEC, 2010).

We discussed how entrepreneurship for migrants in the context of the affirmation of neoliberalism and the retraction of the role of the State as manager of public policies aimed at the integration of migrants and refugees (FOUCAULT, 2010, DARDOT, LAVAL, 2016). On the other hand, this discussion is connected to the topic of the creative economy, in which diversity and experience are added to the creation of a new symbolic market of wealth generation and personal valorization, mainly through the figure of the autonomous worker, or entrepreneur (MILLER, 2010). The results obtained reveal that if, on the one hand, the commitment to entrepreneurship among migrants and refugees due to the urgent need to generate income for themselves and their families, on the other hand, revealed that there are limits to abdicating the participation of the State, since it does not subvert essential issues such as the need for guarantees to obtain loans and financing for the opening up of migrants' businesses.

Title: Categories, Technologies of control and Migrant subjectivities: The politics of survival and resistance in the borders of Europe

Session Type: Individual submission

Authors:

Name: Roza Tsagarousianou

Email: tsagarr(at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: CAMRI, University of Westminster

Abstract: Premised on a series of repeat interviews/conversations with 50 refugees and observation over a month and a half in two refugee camps (Moria and Kara Tepe) in the Greek island of Lesbos, the proposed paper will take issue with the categorization of people on the move as refugees or economic migrants. Such categories, defined within the contexts of current EU migration policies and practices, not only work around the principle of prioritizing ‘needs’ between migrants defined as ‘at risk’ or ‘a risk’ (Aradau, 2004; Pallister-Wilkins, 2015), but have also been used to justify policies of exclusion and containment (Crawley & Skleparis, 2018; Sigona, 2018). Using their mobiles as both archives of their past lives and as a means of access to current events in the countries they left from, and also through other non-digital strategies, interviewees resorted to often contradictory narrative strategies and practices when discussing their decisions to flee. On the one hand, by stressing the ‘risks’ to their lives, they often internalized and reproduced the categories attached to them and therefore reinforced the dichotomies imposed upon them. On the other, by stressing their ‘right to escape’ (Mezzadra, 2004) or the ‘right to have rights’ (Arendt, 1973), they also developed strategies of resistance to such categorizations. Following such findings, it will be claimed that such often contradictory narrative strategies and practices (digital and non-digital alike) can be best understood within the context of a broader exercise of governmentality, of biopolitical technologies of power (Foucault 1991;1993). In this sense it will be claimed, migrant subjectivities are formed both through acceptance of and resistance to the priorities set by a system of modern governance that attempts to control and restrict the right of movement, the right of entry and rights to citizenship.

Abstract: Los desarrollos tecnológicos y la movilidad digital ofrecen a los migrantes el potencial de controlar cuándo y cómo abordar la distancia, ya sea para estar en contacto instantáneamente y en tiempo real con sus comunidades de origen o para mantener prácticas y tradiciones (Wilding, 2006). En este contexto, las tecnologías de información y comunicación desempeñan un papel crucial en estas redes transnacionales y las configuraciones sociales (Vertovec, 2009). En otras palabras, permiten "hacer familia desde lejos" (Peñaranda et al., 2011, p.27) creando espacios que permiten la mantención de vínculos entre los miembros de familias transnacionales.

Basándose en esta premisa, este paper explora las tensiones y las negociaciones que se generan producto de estas nuevas prácticas y cómo influye en los roles familiares a pesar de no encontrarse en el país de origen. Más específicamente, este estudio indaga la forma en que las redes sociales permiten que los migrantes y sus familias transnacionales alcancen la co-presencia (Baldassar et al, 2016) y las negociaciones que estas implican.

Este fenómeno se aborda a través de una estrategia cualitativa que incluye entrevistas diádicas a 20 participantes de familias colombianas que experimentaron la migración de uno de sus miembros a Chile. El análisis se hace desde dos niveles: primero, desde el dispositivo de acceso y el rol que juega para lograr esta conexión; y, en segundo lugar, cómo la plataforma para comunicarse, en este caso las redes sociales, presentan ventajas y desafíos para dicha relación. Entre los resultados, se destaca que WhatsApp es la red social más usada por los participantes, debido a la riqueza de la plataforma respecto a la variedad de posibilidades para conectarse de forma síncrona y no síncrona, permitiendo la co-presencia en los participantes. Sin embargo, estas ventajas también aumentaron la sensación de separación y distancia entre los migrantes y sus familias, dando paso a una serie de negociaciones respecto de la responsabilidad de qué, cómo y cuándo comunicar aspectos de su día a día a seres queridos.

Estos hallazgos también permiten reflexionar sobre el papel de los teléfonos móviles y cómo la tecnología irrumpe en las vidas de las familias cuando uno de sus miembros migra.

Title: Black immigrants in Brazilian and South African media: a Critical Discourse Analysis through the conceptions of race and ethnicity

Session Type: Individual submission

Authors:

Name: Gilberto Alves Araújo

Email: gilbertoa.araujo(at) yahoo.com.br

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand / Universidade Federal do Pará

Abstract: This work aims to investigate how African/Afrodescending immigrants become part of the news media in Brazil and South Africa, and by what means are the representation on them constructed in terms of race. Under these circumstances, analysing the representations on migrants through media helps me better understand: (1) the attitudes, perceptions, intercultural dialogues and relations between different societies; (2) the functioning of transnational mobility as both a basic human right and a construction in the collective imaginary; (3) and these two nations' attitudes towards systems of protection, cooperation and solidarity concerning more vulnerable social groups. At the same time, working on discursive constructions of this nature allows me to scrutinize and challenge the centrality of the state-nation and the media power/public opinion in the treatment of immigrants, and in the migration processes themselves. In view of that, and considering this International Decade for People of African Descent (2015-2024) – in which the African diaspora is still in process, with millions of migrants leaving their homelands to go to Europe, the Americas or even to other nations inside Africa –, Brazil and South Africa stand out as destinations for black African migrants in the Global South. Accordingly, both nations are comprised by a remarkable number of black nationals and immigrants, who encounter unique socioeconomic asymmetries and other types of disparities in terms of race. Differently from Northern countries, which possess many more material conditions to fulfil vulnerable immigrants' needs, Brazil and South Africa already face a persistent socio-political and economic instability, in addition to many other internal problems with their own nationals regarding the scarcity and mainly the bad distribution of resources. Furthermore, what also makes Brazil and South Africa valuable cases for analysis is related to their distinct conceptions of race, alongside their particular constructions and treatments of racism, colourism, xenophobia, and the specific political economy of their media outlets; not to mention the opportunity I have to shift research focus from the Global North and its American-Eurocentric perspectives to the Global South, its Africanness and the representations of its internal migratory processes. At last, I must point out that the contrasts between Brazilian and South African realities likewise make them relevant instances for discussion: on the one hand, Brazil is regarded by many nationals as a 'racial paradise', a 'cordial' country, which is contradictorily a site for 'racism denial', and distinct degrees of discrimination based on sensitively different shades of blackness and socioeconomic class; on the other hand, there is South Africa, presenting a past of serious racial segregation, a current ascension of a 'black bourgeoisie' and relatively strong divisions based on colourism, extreme racialization, 'tribalism' and language, among so many other constructed differences connected to racial questions. Thus, in order to carry out this analysis, I resort to conceptions of news values and encoding/decoding, as well as ideology and hegemony. I also employ Critical Discourse Analysis-CDA, in its Dialectical-Relational Approach, to treat

discourse and verbal language; as well as the Theory of Multimodality to deal with visual materiality.

Title: [Panel] Human Mobility, connectivity and the cultural Politics of migration, Panel description

Session Type: Panel Submission

Authors:

Name: Roza Tsagarousianou

Email: tsagarr(at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: CAMRI, University of Westminster

Abstract: This panel brings together contributors of the recently edited volume The Handbook of Diasporas, Media and Culture edited by IAMCR as part of the Global Handbooks in Media and Communication Research series. The main objective is to provide an authoritative outline of the relevant intellectual terrain by presenting key debates and state-of-the-art research on the intersection of diasporic phenomena. The research presented in the panel focuses on the cultural politics in the diaspora. The papers discuss in different ways, not only the impact of mobility, but more crucially, of connectivity and focus on the ways in which dispersed populations develop networks and the crucial connections that turn them from merely dispersed populations, into political and cultural actors in an increasingly globalized world.

Through a series of case studies, the main issues that will be explored in this panel are:

- How have diasporic cultural politics been approached in research and public debates?
- How have issues such as the emergence of diasporic public spheres/spaces, identity politics, diasporic activism and voice been addressed by researchers in the area?
- What is the impact of the changing media, information and communication technologies on diasporic cultures, public spaces and processes of identity formation?
- How can we best understand demands for integration and the dynamics between broader transnational/translocal processes and the emergence of translocal cultural politics?

Title: Digital Diaspora: Social Alliances Beyond the Ethnonational Bond

Session Type: Panel Submission

Authors:

Name: Saskia Witteborn

Email: switteborn(at) gmail.com

Country: HK (Hong Kong)

Affiliation: School of Journalism and Communication, The Chinese University of Hong Kong

Abstract: Digital technologies and practices have become one, if not the way, of connecting dislocated people and changing the ways people can relate past and future. The networked migrant (Diminescu, 2008) is one of the metaphors to understand the changing nature of diaspora and what has traditionally been understood as a dispersed group of people, disconnected from a homeland. Diasporas are generally described as separate, ethno-nationalistic entities, which disguises the ways in which diasporas are constitutive of each other and how migrants create social alliances beyond the ethnic bond. Technologies have changed the ways migrant groups are forming societies around the globe. The connected migrant is one of the metaphors for this change (Diminescu, 2008; Diminescu & Loveluck, 2014). The paper argues that diaspora has to be rethought in terms of its explanatory power. It stipulates that one way of understanding diaspora is through the lens of loss as well as the digital. The paper advocates moving toward a phenomenology of potentiality. Digital technology is one of the drivers of this potentiality and the transformation of experiences of loss into experiences of participation, self-presentation, and social alliances. The mapping of these practices can be a creative exercise and empirical investigation into the complex textures of sociopolitical and historical relations, which rally migrants around shared goals and visions. The paper argues further that diaspora has to be linked to concepts like asylum seeker, refugee, new arrival, or newcomer in order to be meaningful to the displaced as well as for the academic debate in migration research. The paper will first discuss current trends in (digital) diaspora studies, provide a conceptualization of practice, and two case studies from Germany and Hong Kong for a practice-oriented approach to understanding diaspora through the angle of potentialities and technology.

Affiliation: Worcester State University, Massachusetts

Abstract: Millions of refugees around the world have fled violence in their hometown and have sought refuge in neighboring countries. As they relocate into new temporary homes, refugees experience many barriers to accessing relevant and important information that could impact their well-being. This in turn affects their overall relocation experiences and the degree to which they are able to adapt to their new environments. Research with Syrian refugees show that they experience information precarity, a condition where their access to information is unstable and thus potentially puts them at economic, political, and social risk that may result in them being exposed to violence. This research looks at how Syrian refugees in urban and in camp settings in Jordan rely on information networks to overcome information precarity.

Syrian refugees relied on three main networks to access information: family; friends and neighbors; and organizations. Through cellphone calls as well as face-to-face communication, these interactions with these three groups and the information they provided enabled some Syrian refugees to achieve a small level of social inclusion. Family members are essential in helping refugees find out information about housing, jobs, and healthcare. As refugees in urban areas tend to move, usually in search for cheaper housing, it is essential for them to form connections with new acquaintances and establish friendships and this respect, friends and acquaintances represent another key social network. The last group refugees relied on were organizations that work with refugees. At random occasions, those organizations might have donations available to them. Yet learning about such valuable resources was challenging. Generally, refugees registered their phone numbers with agencies and waited patiently for a phone call or a text message. Even though family, friends and neighbors, as well as organizations are valuable sources of information, Syrian refugees remain socially isolated for the most part and they continue to experience information precarity in urban and in camp settings in Jordan.

Title: [Panel] The affordances and limitations of digital platforms in mediating and managing racism and hate speech, Panel Description

Session Type: Panel Submission

Authors:

Name: Elizabeth Poole

Email: e.a.poole(at) keele.ac.uk

Country: GB (United Kingdom)

Affiliation: Keele University

Abstract: In response to the call for papers relating to this year's IAMCR conference theme, Communication, Technology and Human Dignity: Disputed Rights, Contested Truths, the papers on this panel aim to examine whether digital media can offer a space for voice and agency to marginalised groups. As activist groups with diverse politics harness technologies to extend their agendas outwards, this panel explores the complexities of their mediated practices, both in terms of the messy entanglements formed through interaction, but also the structural (political, economic and technical) affordances and limitations built into digital platforms. The panel also interrogates the methodologies used to analyse big data questioning the 'truths', particularly about marginalised groups, generated by their methods. In conclusion, the panel contends that in its current form, digital media is more likely to reinforce existing power relations and dominant ideologies suggesting that forging greater inclusivity will require structural change.

In the first paper Poole, Giraud and de Quincey examine the counter-narratives formed in response to Islamophobic discourses following the Brussels terror attack, 2016. This paper focuses on the strategies employed by activists to contend and appropriate thus claiming the meaning of #stopIslam as a discursive event. The authors question the ability of counter publics to contest hate speech given the organised networks of far-right activists who work vociferously to bury oppositional discourse. The strength of these connections is also demonstrated by Titley who adopts a network analysis to show how Finnish nationalists use Youtube to promote their anti-immigration messages. Titley adopts a media ecologies approach to illustrate the complex practices of social movements whose use of Youtube is part of a broader communicative strategy. Both Titley, along with Siapera and Viejo Otterro in the following paper, demonstrate the structural limitations that support and inhibit these movements. In particular, Siapera and Viejo Otterro critically deconstruct the governance structures of Facebook using a Foucauldian approach to analyse how Facebook orders and regulates the conduct of its users in relation to hate speech. The research shows that its policies and mechanisms not only limit its approach to hate speech, but allow it to profit from its current policies by moving the issue from a question of ethics to the sphere of profitable production. These power relations are further scrutinised by Nikunen through a critical appraisal of the epistemological premises inscribed in the practices of big data research which marginalize minority voices. The panel therefore concludes by making recommendations to ensure that this type of research incorporates inclusivity into its design.

Title: [Panel] Diasporic Identities and Belongings in a Global Postcolonial Space: Studying Transnationalism and Connectivity in the Digital & Social Media Age, Panel description

Session Type: Panel Submission

Authors:

Name: Jessica Retis

Email: jessica.retis(at) gmail.com

Country: US (United States)

Affiliation: California State University Northridge

Abstract: This panel brings together contributors of the recently edited volume *The Handbook of Diasporas, Media and Culture* edited by IAMCR as part of the *Global Handbooks in Media and Communication Research* series. The main objective is to provide an authoritative outline of the relevant intellectual terrain by presenting key debates and state-of-the-art research on the intersection of diasporic phenomena. This panel focuses on the social and political shifts that are part of human mobilities that have become even more relevant in the current political context. Drawing on theoretical discussions and a series of case studies from different countries, it explores challenges and opportunities on the study of diasporas in transnational contexts. Main research questions are:

- What are the main challenges in rethinking current patterns of diaspora's digital mediation and the way they are related within the digital firmament traditions, disciplinary engagements, and methodological approaches?
- How can we best explore the media's ability to construct a plural society challenging the configuration of separated public spheres?
- How to incorporate the geopolitical context in the analysis of diasporas in the global postcolonial space?
- How new technologies threaten or empower alternative communication processes in diasporic contexts?
- Why media representations are crucial not only in how they make diasporas visible, but also in how they represent the attributes of these diasporas?
- How to implement theories of hybrid and multilayered identities in the study of multigeneration immigrant families?

Affiliation: Utrecht University

Abstract: This presentation proposes a critical intervention in digital diaspora studies by foregrounding a relational approach that is inspired by feminist and postcolonial theory. This innovative framework allows us to grasp contemporary human mobility as shaped by and constitutive of an unevenly interconnected world. Relational implies taking into account different perspectives and methodologies on diaspora studies which defy ossified notions of 'here' and 'there', and of ethnic absolutism but sees diaspora as a continuum that needs to be critically scrutinized in its different manifestations. This holds also for the notion of digital diaspora. Recent buzzwords including 'digital diaspora', 'online diaspora', 'e-diasporas', 'the connected migrant', 'connected refugees' and 'smart refugees' commonly champion agency, particularly of non-white communities hailing from the Global South. This perspective risks glossing over the ways in which every day offline and online contexts are steeped in intersecting gendered, racial, classed, generational and geo-political power relations. We provide a genealogy of digital diasporas scholarship in order to counter this lack of critical attention for power differences and material, social and emotional contexts. We will do so by combining media and non-media centric paradigm shifts in internet studies with the several turns and takes in critical digital diaspora studies.

Email: e.de.quincey(at) keele.ac.uk

Country: GB (United Kingdom)

Affiliation: Keele University

Abstract: This paper presents the qualitative data from a ‘big data’ project which examined the dynamics of a racist hashtag on Twitter; #stopIslam. In a context of rising populist politics and a mainstream media environment where Muslims have had little opportunity to represent themselves, digital media appears to offer a space for the self-representation of marginalised groups. However, recent research has demonstrated the success of the far right in harnessing these technologies to further their agendas (Feshami, 2018). While this area of ‘big data’ or datafication is burgeoning in Media Studies, there have been few attempts to combine this with a more qualitative approach to activism which situates social media data in relation to a wider context of social movement tactics and media use (an approach that has been used extensively to investigate left-wing activism). Our project sought to combine these methods, and avoid the dichotomies that digital democracy debates often fall into, through a focus on the ‘entanglements and frictions’ (Shea et al, 2015) experienced by the ‘unpredictable effects of global encounters across difference’ (Tsing, 2005: 3).

Specifically, the project examined the dynamics of #stopIslam when it trended on Twitter following the Brussels terrorist attacks of 2016. It showed how, in this instance, a counter-narrative quickly formed in order to defend Muslims from an online attack that was disproportionately influenced by US far-right Twitter users. Due to mainstream media reporting of the trending hashtag, the counter-narrative gained visibility and was therefore somewhat successful in providing a platform for alternative frames about Muslims in the public sphere.

After presented some (quantitative) contextual data from the project (of 302,342 tweets) the paper will focus on tracing the interactions between various stakeholders in the discourse using a qualitative approach (from 150 tweets). We aim to demonstrate the tensions faced by activists in navigating this mediated terrain and how these tensions are negotiated in practice. Specifically, the paper focuses on three types of Tweets and the corresponding comments to demonstrate the tactics adopted by users to contest and ‘hijack’ the meaning of the event (Jackson and Foucault-Wells,

2015). We will argue that although more progressive actors were able to appropriate the original hashtag, they could not sustain this in the face of tightly-knit, right-wing networks who were able to reappropriate it through longer term usage. This seems to fit with existing evidence that suggest that online political discussions often exist in echo-chambers or, if brought in to contact with each other, do not engage in a sustained way (Karlsen et al, 2017).

Title: Minority media challenges for the twenty-first century

Session Type: Panel Submission

Authors:

Name: Alicia Ferrandez Ferrer

Email: aliciaff(at) hotmail.com

Country: ES (Spain)

Affiliation: University of Alicante

Abstract: After several decades of development, minority media targeting diasporic and migrant communities have proved their potential to introduce ethnocultural diversity into the contemporary media space, giving voice to the voiceless and visibility to their needs and claims for inclusion; introducing different actors and putting non-western countries in the center of attention; becoming platform for businesses and services addressing this new consumers; and turning into channel of communication between the host country's and home country's politicians and this mobile population. However, a thorough analysis of minority media production and consumption practices in contemporary societies shows that despite celebrations of their potential to construct a multi-ethnic public space (Husband, 1996), there are still many challenges to overcome. Are these media really introducing new perspectives, points of view and issues for discussion in the public space? My research results point at some limitations. First, economic and political fields are exerting great pressure upon media field in general, and upon minority media field in particular, leading to censorship and even auto-censorship, and therefore forcing minority journalists to publish attractive, frivolous news, and leave behind other topics that could bother advertisers. In addition, the profound effects of economic crisis have led to the disappearance of most of these media ventures, and have reduced dramatically the alternative discourses about social reality. As happens with the rest of the media sector, in the minority media field there exist 'mainstream' and 'alternative' media as well. Finally, it must be highlighted that the maintenance of segmented media spaces is a challenge to the construction of a multi-ethnic public space, as they do not always facilitate dialogue and exchange between minorities and host society. The inclusion of diversity in the mainstream media is therefore a necessary task to perform, although also here many challenges are awaiting. The goal should be to construct a multi-ethnic public space where diversity is recognised as an intrinsic characteristic of contemporary societies.

Title: Diasporas and intercultural communication in Spain: an approach from television, audiences, and experts

Session Type: Panel Submission

Authors:

Name: Antonio Pineda

Email: apc(at) us.es

Country: ES (Spain)

Name: Miquel Rodrigo Alsina

Email: miquel.rodrigo(at) upf.edu

Country: ES (Spain)

Affiliation: University of Barcelona

Abstract: In this presentation we explore how diasporas are socially constructed in Spain starting from the analysis of television news and the interpretation of audiences and experts. The empirical dimension of the research on which this communication draws from involved three consecutive phases, each applying a different methodology. First, our sample consisted of Spanish televised news stories, broadcasted in 2012 (May-July) at prime time. The results showed how television portrayed interculturality as an encounter centered on conflict (in 50.8% of the total sample) rather than a positive interaction (reflected in 41.4% of the total sample). Second, we conducted focus group sessions in which participants watched the same news stories as analyzed in the quantitative analysis. There was a high degree of polarization within the age groups, represented by differing stances for and against the ideological bias underlying the preferred meanings and leaving little space for the negotiation of meanings (Hall, 1993). Hall's encoding/decoding paradigm implies that the audience reads fictional and media texts on different levels: they may accept the story as put forth by the media, oppose it, or reinterpret it in a different sense altogether. However, our findings challenge the idea that the audience could negotiate the meaning of media stories (Livingstone 1999) on sensitive topics like those related to diasporas. Third, we conducted a Delphi analysis. The Delphi method (Landeta, 1999; Linstone & Turoff, 2002) appeared to be particularly suitable given both its characteristics and our objectives. Nine reputable intercultural communication experts from seven universities and two research centers participated in this research phase. The experts were very critical of the news stories, considering them to be ethnocentric. Interculturality is rarely viewed as a dialogue between equals; rather, an attitude of superiority is adopted regarding "we" — the natives — who interact with someone different, strange, and even inferior. The experts, overall, perceived that an intercultural relationship with certain diasporas, above all those from poorer countries, is eminently difficult. In sum, our analysis of the intercultural representation of certain diasporas show that the media are crucial not only in how they make diasporas visible, but also in

how they represent the attributes of these diasporas. In this way, media influence on audiences conditions the possibility of intercultural communication within society.

Abstract: Building on and expanding Georgiou's theory of "hybrid imagined communities," as well as her idea of multilayered belonging (Georgiou 2006), and the related concept of multi-layered identities (Straubhaar 2008), this paper examines qualitatively the impact of media on identity construction in several diasporic populations in Austin, Texas. Specifically, it investigates the impacts of family generation, generation of immigration, and language on the use of media in the construction of national identity. The evidence for the study derives from a series of interviews conducted in 2005-2016, building on a 17-year project to interview Austin families about their media use. The study found that second-generation Latinos and Asian youth are much more likely to refer to themselves that way, using a pan-ethnic label for their identity, compared to their parents. That reinforces research by the Pew Hispanic Project and others, which found similar trends. Study cases, which also reflect in their overall patterns a number of others that we interviewed, have drawn attention to a particular articulation of identity in the youngest generation of immigrant families to the US. This inherently hybrid "pan-ethnic" identification can be seen as unique from the identity conceptions of their parents, who tend to see themselves as Georgiou's hybrid imagined community of the new US and the homeland.

Title: What big data hides: methodological challenges of researching racism, migration and voice

Session Type: Panel Submission

Authors:

Name: Kaarina Nikunen

Email: kaarina.nikunen(at) tuni.fi

Country: FI (Finland)

Affiliation: University of Tampere

Abstract: Increased interest in big data analytics speak of the tendency to think that big data might be able to explain the world to us better than other methods. Indeed, through big data analytics we can identify prominent themes, topics and agents of public debate. We can also explore the dynamics between the mainstream news media and social media and the ways in which these dynamics shape and strategically amplify, for example, different racialized understandings of the migration and refugee issues in the society. While big data can show dominant trends and vocabularies connected with migration such as framing refugees as a threat and increase of racist expressions and hate speech, this research also risks repeating previous findings and echoing power relations inscribed in the epistemological practices of big data research. This points to what big data often hides: the biases in the data and the lack of voices of the marginalized - often inaccessible through computational methods. Based on a research project HYBRA (Racisms and public debate in the hybrid media system) this paper argues that there is a need for critical inquiry into big data analytics and their ethical and epistemological premises. To tackle these problems this paper introduces research, conducted in 2018, that combines (and critically assesses) big data and qualitative approaches, with the particular aim to explore the experience and participation of racialized subjects in the refugee debate. It is argued that expanding the approach to the experience of the marginalized, racialized subjects, is particularly relevant in the context of refugee issues and connected fundamentally to issues of justice (Mohanty 2003; Stevenson 2014).

Country: ES (Spain)

Affiliation: University of Salamanca (Spain)

Abstract: En un contexto en el que las políticas anti-migración están en aumento, y dado que el discurso de odio puede anteceder al crimen de odio (Muller & Schwarz, 2018), se aspira a conocer las actitudes hacia inmigrantes y refugiados de los hispanohablantes en Twitter. También se busca incorporar como metodología en la materia el análisis de redes sociales y usar los medios sociales como fuente de datos.

Se realiza un análisis de contenido de tweets en español, descargados con la herramienta Autocop (Arcila, Ortega, Jiménez & Trullenque, 2017). La muestra ascendió a 1469 tweets, el 67,7% de ellos sobre inmigrantes y el 32.3% sobre refugiados. El Alpha de Krippendorff obtenido para medir la fiabilidad de la codificación ascendió a 0.715.

Las preguntas de investigación son: PI1 ¿Cuál es el sentimiento mayoritario (rechazo o aceptación) en Twitter en español hacia inmigrantes y refugiados?; PI2: Cuando el sentimiento es de rechazo, ¿cuáles son las problemáticas asociadas a estos grupos?; PI3: ¿Qué marco o encuadre (amenaza, carga, victimización o normalización) reciben inmigrantes y refugiados en estos tweets?; PI4: ¿Qué tono (positivo o negativo) predomina?; PI5: ¿Hay diferencias en estos aspectos cuando se trata de refugiados frente a cuando se trata de inmigrantes?

Predominan los tweets de rechazo a inmigrantes y refugiados (45%) frente a los neutrales o de aceptación. En el 35.6% de los tweets de rechazo este se mostraba de forma explícita a través de insultos o manifestando hostilidad abiertamente hacia los grupos de estudio; en un 30.2% de estos tweets se señalaba la amenaza que estas personas suponen para la seguridad; y un 26.1% de los tweets destacaban su condición de carga económica.

Con respecto a los marcos se encontró que los dos principales son el de amenaza (31.78%) y víctima (29.11%), mientras que los encuadres de normalización (15.07%) y carga (15%) son menos relevantes. El tono de los mensajes, por su parte, es predominantemente negativo (71.8%).

No obstante, este análisis varía si se aplica a inmigrantes o a refugiados. La concepción de los primeros, de acuerdo con Verkuyten, Mepham y Kros (2017), suele ser más negativa. Así, la mayor presencia de un sentimiento de rechazo entre los inmigrantes es estadísticamente significativa [$\chi^2(2, 1465)=145.815$, $p=0.000$]. También el predominio del tono negativo es significativamente superior entre los inmigrantes [$\chi^2(2, 1464)=128.893$, $p=0.000$]. Entre los marcos, la victimización y la normalización estuvieron significativamente más presentes entre los refugiados, mientras los inmigrantes fueron asociados de una forma estadísticamente significativa con más frecuencia a la carga y la amenaza [$\chi^2(4, 1459)=182.110$, $p=0.000$].

Title: I Can't Say What' A Case Study of Policing the Palestinian Diasporic National Identity on Twitter

Session Type: Individual submission

Authors:

Name: Hadil Abuhmaid

Email: hadila(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: Following the relocation of the American Embassy from Tel Aviv to Jerusalem in May of 2018, the Palestinian-American supermodel Gigi Hadid tweeted: “I’ve said it before and I’ll say it again. For me, this is not about religion or one against the other - it’s about the greed #FreePalestine #freeGaza #coexist ☺” [(at) GigiHadid] May 15th, 2018). While most of her pro-Palestine followers saluted her support, others accused her of being an ignorant outsider. They argued she has no right to express her opinion about something she is not experiencing, especially while living in the relative safety of Los Angeles.

This paper answers the following question: How do lived and experienced spaces serve as a tool for policing the online imagined communities created in the diaspora? This paper focuses on a case study of Palestinian identity using the above tweet and the angry responses it received. I conduct textual analysis of opposing replies to examine the patterns the tweets shed in response to the supermodel. While this case study is unique to the Palestinian national identity, this paper contributes to the literature about long-distance nationalism and expression of national identity online.

A central frame for my paper is Anderson’s (1992) concept of long-distance nationalism, which argues that diasporic communities can easily participate in their “imagined Heimat,” a homeland where they participate in politics but don’t carry with them any responsibility or accountability (1992, p.11). This means that diasporic communities are able to transcend geographical borders to participate in their homeland politics through long-distance nationalism (1992). Palestinians in the diaspora have created new forms of connections that have successfully transcended the geographical borders of their host countries and have managed to connect with each other through different kinds of activities with one shared connection: a national identity. However, diasporic expression of national identity or long-distance nationalism sometimes fails to transcend the geographical borders based on the idea that they do not have the right to have an opinion regarding what they are neither living nor experiencing directly.

Based on the analyzed tweets, there is a pattern that connects national identity and the right of expression to lived, experienced geographical space. Most of the tweets argue that Hadid does not have the right to criticize what she is not experiencing first hand, regardless of her national identity. Those tweets also show that Hadid’s lived spatial experiences override her national identity and mitigate her right to express her politics and participate in her imagined Heimat.

Title: "MANY EUROPE'S" - THE MIGRATORY CRISIS IN EUROPE AND THE PERCEPTIONS OF THE PORTUGUESE CITIZENS

Session Type: Individual submission

Authors:

Name: Claudio Abdo

Email: claudioabdo(at) gmail.com

Country: PT (Portugal)

Email: britesmariajose(at) gmail.com

Country: PT (Portugal)

Affiliation: Assistant professor at the Lusófona University of Porto (ULP)

Abstract: The migratory crisis in Europe already counts 5,199,942 refugees and 1,397,587 asylum seekers over a period of approximately five years. However, due to the parallel events unfolding around this migratory crisis, there is a strong feeling that the European Union is not, perhaps, a union of fact. Brexit, the outgoing movement of the United Kingdom of the European Union, the rise of nationalist political parties and leaders in countries such as France, Germany, Italy and Hungary, and the fragmentation of a continent that is so diverse, is accentuated in discourses that signify the existence of "many Europe's" (South, East, North and etc.).

This research was conducted with Portuguese citizens living in the city of Braga (North of Portugal) aiming at analyzing how the refugees are perceived by local population. Participant's discourses point to "many Europe's". In fact the countries of the South (Portugal, Spain, Italy and Greece) are often referred to as displaced and even outsiders from Northern Europe.

For data collection, in addition to a literature review, we conducted 26 semi-structured and interviews. The interviews intended to capture the perception of the participants about refugees. They show that there is a fragmentation in the discourse of a single, equal and united Europe. There is a kind of consensus among the participants who often refer to Germany, Denmark and England as being countries belonging to a Europe other than the one where Portugal is inserted. The financial aspects are generally emphasized and, for the participants, the best jobs and the best salaries are not in Portugal, as the country is repeatedly remembered as having a low quality of work (both on offer and in salary paid), understood as precarious in financial conditions and this has an impact on the quality of life of its citizens. For the Portuguese participants in the interviews, there is a feeling that the countries of Northern Europe are the ones that should, as a rule, deal with the migratory crisis and welcome the refugees as they have greater financial capacity and social support.

Although the perception of the number of refugees hosted by Portugal is overestimated by the participants, who easily suggest exaggerated figures, the feeling is that the country does not have the capacity to receive refugees since, according to the participants, it can not provide a quality of life to his own citizens, a free road to xenophobic and exclusionary discourses. The feeling of “many Europes” is constant in almost every interview conducted. Fragmentation and inequalities among European countries are perceived, felt and have an impact on the lives of the Portuguese citizens living in the city of Braga. Always supported by the idea that national citizens should be priority over others, the outsiders.

Title: Elections, Representations, and Journalistic Schemas: Local News Coverage of Ilhan Omar and Rashida Tlaib in the US Mid-term Elections

Session Type: Individual submission

Authors:

Name: Maha Bashri

Email: bashrimaha(at) yahoo.com

Country: AE (United Arab Emirates)

Affiliation: United Arab Emirates University (UAEU)

Abstract: Communication research has systematically pointed to the disparities in news coverage of political candidates from women and minority groups. These differences may hurt the chances of these candidates at being elected. Recently more migrants are entering the political arenas in their adopted Western countries. Migrants have become the center of debates over the rights and wrongs of multiculturalism. In particular, Muslim women, in liberal democracies have been turned into an "allegory for undesirable cultural difference" (Bilge, 2010, p. 10). Western media portrays Muslim women either as passive victims oppressed by a patriarchal religion or as a threat to Western democracy and individual freedoms (Kilic, Saharso & Sauer, 2008 p. 404).

Schema theory is usually used to explain how gender and racial/minority stereotyping occurs. The theory posits that people create cognitive structures to organize knowledge about a given concept or stimulus from previous experience (Fiske & Taylor, 1984). Media coverage helps people develop schemas to understand events. The media make sense of the external world for audiences. They "frames issues and public deliberation in a particular way" (Reese, 2001, p. 25). Schemas are good when they help audiences process the deluge of information they are exposed to. However, when these schemas are negative and overgeneralized they can have undesirable effects.

Women and minority candidates running for public office often receive less media coverage and less respect from the public (Braden, 1996; Devitt, 1999). Furthermore, research has pointed to a dominant perpetuation of stereotypical portrayals of women and minorities in media (Craft & Wanta, 2004).

In view of the current political climate in the United States, one would assume that fewer minority candidates would be elected to office in the November 2018 mid-term Congressional election. Mid-term elections in the US are determined by popular votes in the individual states yet their resonance is felt at a national level. This round proved to be historic in many respects. First, voter turnout, at 50.3 %, was the largest since the 1914 mid-term election. Second, a record number of women (127) were elected to Congress. Third, the pool of candidates saw a significant increase in the number and diversity of minority candidates.

Ilhan Omar and Rashida Tlaib are among those "firsts". They are the first Muslim women elected to Congress. Omar won 78% of the vote in Minnesota, a state where 84% of voters are white and Muslims account for 1% of the population ("House Election Results", 2018). Tlaib won 84% of the vote in Michigan where 79% of the state is white and Muslims are only 1 %.

Omar and Tlaib had big wins supported by a voter base that for the most part shared no attributes with them. The following research examines if coverage of Omar and Tlaib was congruent to prevalent schemas in coverage of Muslim women and minorities in US media. One hundred and ninety-five newspaper articles/editorials from October 5 to November 5, 2018 were collected through Lexis Nexis. Articles were selected from the three top local newspapers in Minnesota and Michigan respectively.

Title: Reflections of Punjabi Diaspora in Films in India: Reel vs Real

Session Type: Individual submission

Authors:

Name: vir aggarwal

Email: virbala.aggarwal(at) rediffmail.com

Country: IN (India)

Affiliation: Himachal Pradesh University Shimla

Name: Happy Jeji

Email: emailage21(at) gmail.com

Country: IN (India)

Affiliation: Panjabi University, Patiala

Abstract: International migration of People from Punjab, north-western State of India, has remained a constant Phenomenon since ages. This migration has been making an important contribution to the population growth of important parts of the world and significantly transforming the social, cultural, economic and political scenario in the world. Against a backdrop of huge migration of people from Punjab, the growing interest of Bollywood (Hindi Cinema) and Pollywood (Punjabi Cinema) in making films on Punjabi diaspora becomes an important subject of a study. Since Punjabi diaspora is scattered in countries like US, UK, Germany, Australia, Saudi Arabia and Russian Federation and others, it is quite interesting to see how the films based on diaspora themes have been able to capture the realism of diaspora or create a panorama of life of people scattered at distant destinations.

Punjab, known for its rich cultural heritage and magnificent past makes its people always eager to venture out for a prosperous future and toil away at distant parts of world. The people who disperse to other countries have their own sets of dreams, struggles, aspirations, advancements, achievements, failures and challenges. Featuring a complex phenomenon of migration on screen is a complex task too. Both, Bollywood and Pollywood have rolled out a good number of films in the past few years on Punjabi diaspora. This study is based on thematic analysis of prominent films which have succeeded on box office, won acclaim, or gained attention otherwise in and outside India.

Hindi Films like Pardes, Apne, Crook, Out of Control, Aa Aab Laut Chale or all time famous Dil wale Dulhaniya Le Jayenge and Punjabi Films like Sajjan Singh Rangroot, Jindua, Jee ayaan Nu, Love Punjab and The Black Prince are just few of the films which present a wide array of Diaspora issues largely in Socio-Cultural contexts. Such films on Punjabi Diaspora present compelling reasons to find out reel vs real life issues. Since the migration is a complex phenomenon in itself, it is therefore pertinent to find out those issues also which have failed to attract the eyes of the film maker.

Title: Dichotomy of a Diaspora: Examining the Media Coverage of Indian-Americans in the Context of Trump's Anti-immigrant Rhetoric

Session Type: Individual submission

Authors:

Name: Sudeshna Roy

Email: roys(at) sfasu.edu

Country: US (United States)

Affiliation: Stephen F. Austin State University

Abstract: Within a few months after taking office, Donald Trump signed an executive order that called for a review of the H-1B visa program, the employment visa issued to foreign citizens working legally in the US. Given that Indians currently represent the largest source of new immigrants to America, surpassing Mexicans and Chinese, and given the size of the Indian diaspora already in the US, it is of significant importance how Trump's immigration policies might impact Indians who want to live and work in the US, as well as those already living in the country. This paper examines how media in the US is covering this issue and what such coverage reveals about the way the Indian-American diaspora is interacting with the ethno-politics of Trump's anti-immigrant rhetoric. The paper examines through critical discourse analysis, coverage of H1-B and H4 visas and issues pertaining to Green Card in three US newspapers – LA Times, Houston Chronicle and Washington Post – for a period of one year following Trump's signing of the executive order mentioned at the beginning of this abstract. Two faces of the diaspora community emerge as a result of this analysis. First, there are those who are opposed to Trump's and the Republican Party's position on immigration as it would deeply hurt their freedoms and opportunities made possible by their dedicated belief in the neoliberal policies that allowed them to increase their personal wealth and prospects. It is worth bearing in mind that Indian-Americans are famously the best-educated group in the US -- approximately three times more India-born residents have college degrees than the general population. They also have the highest average income level of any group in the country -- more than twice as high as the general US population. Second, there are those who have previously benefitted from pro-immigration policies from administrations before Trump but, who now see themselves best suited to align their conservative, Hindu sensibilities with the policies of the Republican Party. This second group, which is already wealthy, would further grow their financial prospects by supporting issues such as, Trump's tax cuts for the rich or Trump's racist attitude towards other minority communities in the US. Through analysis of media coverage of particular visas, this paper demonstrates how the Indian-American diaspora is either resisting or aligning themselves with Trump's anti-immigrant rhetoric so as to further the iterations of their own projections of neoliberal conceptions that help them maintain their positive financial and social status in the US.

Title: Aylan Kurdi: la "imagen-despertador" de la crisis de los refugiados

Session Type: Individual submission

Authors:

Name: Rafael Mangana

Email: rafael.mangana(at) labcom.ubi.pt

Country: PT (Portugal)

Affiliation: Universidade da Beira Interior, Portugal

Abstract: La Península Ibérica se enfrenta a un crecimiento respecto al número de individuos que llegan a sus fronteras procedentes de otros países. Esta tendencia se ha acentuado, desde 2015, con la llegada a Europa de refugiados de Oriente Medio y el Norte de África, que huyen del clima de inseguridad potenciado por la proliferación del fenómeno del terrorismo asociado al denominado Estado Islámico o Daesh. Estos refugiados se han esparcido por todo el continente europeo; sin embargo, su llegada no está siendo aceptada con facilidad y de la mejor forma posible por todos los países receptores. Así pues, esta animadversión ha sido, en algunos casos, manifestada a través de actos terroristas perpetrados en ciudades paradigmáticas del poder político y económico europeo, como por caso París o Bruselas.

En el contexto de la crisis de los refugiados, el 2 de septiembre de 2015 marca de forma manifiesta la atención dada a este fenómeno migratorio por parte de los medios un poco por todo el mundo. La aparición de un cadáver de un niño sirio de tres años en una playa turca contribuyó a transformar el encuadre de esta crisis, que pasó a tener un rostro, un nombre que se convirtieron en un icono de la misma: Aylan Kurdi. Hasta la aparición de este cadáver, los refugiados y sus muertes eran contados a los centenares, estas personas eran vistas como una masa que padeció en las aguas del Mediterráneo, pero sin rostro, algo que se altera con Aylan Kurdi. Su fotografía funcionó como un despertador de conciencias para la problemática de la crisis de los refugiados y apareció en la mayoría de los principales medios de comunicación de todo el mundo, en una cantidad sobresaliente de primeras páginas y noticias.

De este modo, el propósito del estudio presentado es analizar la forma en que la imagen de este niño influenció la cobertura mediática de la crisis de los refugiados en los momentos subsiguientes. Se expondrán, a través de una muestra de conveniencia, cuatro momentos específicos, reveladores de la forma en que la prensa ibérica procedió al encuadre de la crisis de los refugiados, apoyándose en la imagen de Aylan Kurdi y en lo que la misma pasó a representar. Por la proximidad geográfica y cultural entre los dos países, este trabajo analiza los tiempos específicos de las versiones online de dos periódicos clasificados como de referencia de Portugal y España (El País y Público), un período crucial de la crisis. A través del análisis de discurso de los elementos periodísticos recogidos asociado al estudio de los efectos de framing y de priming, se pretende explorar la posibilidad de añadir otro concepto a los que ya existen en el vasto campo de las teorías de los efectos de los medios: el concepto de "imagen-despertador", como elemento que detona un conjunto de memorias y de conocimientos latentes asociados a un determinado tema, asunto o protagonista.

Title: The (Un)-Making of Home: Paradoxes of transnational homesickness, familial longing, and belonging of young expatriates in Amsterdam

Session Type: Individual submission

Authors:

Name: Jeffrey Patterson

Email: jeffpatterson04(at) icloud.com

Country: NL (Netherlands)

Affiliation: Utrecht University

Name: Koen Leurs

Email: K.H.A.Leurs(at) uu.nl

Country: NL (Netherlands)

Affiliation: Utrecht University

Abstract: Young expatriates - individuals who can pursue career- or higher educational-related goals in a country of which they are not a citizen - are commonly “connected migrants” (Diminescu, 2008), using smartphones and social media to transnationally connect with pre-existing social networks (such as family and friends) and diaspora communities across geographical borders. Scholarship on expatriate youth often either: (1) celebrate them as “third-culture kids” who develop an “expanded worldview” (Pollock & van Reken, 2009, pp. 107-118); or (2) scrutinize them as privileged mobile populations for their elite “belonging” in a universal cosmopolitan imaginary which is disconnected from local communities (Calhoun, 2003). Analyzed from the feminist perspective of intersectionality, it is problematic to homogenize the experiences of young expatriates, thus we seek to ground these polarized viewpoints by investigating how age, race, class, nationality, gender, and sexuality differentially position individuals. Following a non-digital-media centric approach, we aim to become attentive to the relationalities between the on- and offline experiences of young expatriates residing in Amsterdam, the Netherlands. In doing so, we conducted 31 in-depth interviews with 25 females and 6 males between the ages 15-25, and conducted a photo-voice exercise. Participants were invited to self-select photos from their personal smartphone pocket archive to reflect on their migration trajectories. Conceptually, we build on critical and feminist understandings of emotional geographies and understand emotionality as a domain of “socio-spatial mediation” (Davidson, Bondi & Smith, 2005, p. 3). Through this lens, our investigation of the impact of changing social, spatial and temporal conditions of migration illustrates how bodies relate emotionally. This paper seeks to understand how young expatriates straddle “reactions of ‘towardness’ or ‘awayness’” (Ahmed, 2004, p. 8) in relation to their on- and offline everyday experiences. The emerging patterns from the data structure our empirical findings into three paradoxes:

(1) Transnational ties and paradoxes of homesickness

This occurs at the complex intersections of young expatriates’ on- and offline experiences. Their transnational connections are maintained through smartphone and social media use by exchanging text, audio and video messages creating a virtual bond, a sense of co-presence. However, an affective desire remains to return to familiar spaces such as bedrooms, cafes, and yoga studios

which are imbued with strong personal memories and embodied sensations of which the third-space cannot always fulfil adding further depth to Madianou and Miller's (2012) argument of physical co-presence.

(2) Polymedia affordances and the paradoxes of familial longing

We investigate informants' strategic selection from the variety of online communicative opportunities afforded by smartphones and social media to understand their emotional intent. Through the lens of intersectionality, we tease out how divergent preferences are reflective of distinct cultural norms and expectations.

(3) Global citizenship and the paradox of belonging

We explore the offline inter-ethnic social contact between the informants and members of the local Dutch community. To what extent are expatriates bound to their nationality? What is their positioning in various spatial locations in Amsterdam?

Title: Transnational journalism and Latino press in Spain: news contents and the creation of a Latino identity

Session Type: Individual submission

Authors:

Name: Ana Mendieta

Email: anamaria.mendieta(at) ehu.eus

Country: ES (Spain)

Affiliation: University of the Basque Country

Abstract: The origins of ethnic media as such can be traced back to newspapers published in the Netherlands and Mexico in the XVII century, and in the United States in the XVIII century (Park, 1922; Flores, 2008). From that point on ethnic media outlets have been growing in number and relevance, particularly in the United States due to the high numbers of Latinos living in the country (Matsaganis et al., 2011). The contents of ethnic media fulfill several roles in regards to their audiences, since they are a vehicle of information, cultural identity, social control and incorporation into the host country (Viswanath and Arora, 2000). In contrast with the traditional theories of incorporation of immigrants into the host country, transnationalism has gained much relevance as it refers to the multiple activities created by immigrants which allow them to live simultaneously in their countries of origin and destination (Blanco, 2007). In this context, many ethnic media outlets have transnational audiences through digital media and social networks, creating a transnational journalism that manifests itself in Latino press in Spain. Latino newspapers and magazines can function as transnational media outlets that link Latinos living in Spain with their home countries in Latin America, thus fostering hybrid identities that allow them to incorporate into Spain without having to dilute their national identities. Along these lines, the concept of *Latinidad* has arisen as an academic subject of increasing interest because of its media representations and its implications in the development of a common Latino cultural identity, independently from the country of origin, furthermore considering that Latinos can form a “nation within a nation” (Davila, 2000). *Latinidad* also extends to a hypersexualized image of Latina women, based in the media representation of Latina celebrities (Hurtado, 2017; Negrón-Muntaner, 2017; Lugo-Lugo, 2015). The goal of this paper, which derives from the author’s finished doctoral dissertation, is to show that the contents of Latino print media in Spain reflect the different pillars that shape the concept of *Latinidad*, which are the importance of cultural traditions, family and community, women, work ethic, music and Latin America. A content analysis of eight different variables applied to 1,500 news items from 14 Latino newspaper and magazines currently published in Spain concludes that six out of ten items are geared to the readers’ countries of origin, stress the gender gap with the predominance of men as protagonists, and reaffirm their common Latino cultural identity or *Latinidad*. In fact, the contents linked to the Latin American countries of origin multiply by four the contents linked to Spain as the country of destination, and the most repeated topics are situated within the sections of culture, life and Latin American politics. In sum, the objective of this research is to demonstrate that the content of the stories published by Latino print media in Spain are an example of transnational journalism because they foster the transnational ties of their Latino readers with Latin America, beyond the traditional models of integration and assimilation of immigrants in the country of destination.

Title: Is the smartphone always a smart choice' Beyond utilitarian approaches to the "connected migrant'

Session Type: Individual submission

Authors:

Name: Jonathan Tossell

Email: jonathantossell(at) gmail.com

Country: NL (Netherlands)

Affiliation: no current affiliation

Name: Isabel Awad

Email: awad(at) eshcc.eur.nl

Country: NL (Netherlands)

Affiliation: Associate professorErasmus Research Centre for Media, Communication and CultureErasmus University Rotterdam

Abstract: A growing body of scholarship conceives the relation between mobile phones and refugees in largely utilitarian terms: The mobile phone is characterized as a tool refugees use free and willingly to address specific practical and social needs, even if or despite the existence of structural factors limiting mobile phone use. Since being a refugee implies facing particularly pressing and diverse needs (something the literature commonly describes in terms of precarity), a resourceful, well-equipped refugee is assumed to substantially benefit from being as much and as freely connected as possible. There seems to be no question that “irregular immigration journeys” become “smart” when smart phones are involved (Zijlstra & Liempt, 2017).

This paper challenges this view of mobile connectivity as a purely utilitarian resource that refugees use at their individual discretion to resolve problems and cover needs. While the study is based on a relatively small sample ten Syrian men living in the Netherlands with a refugee status—it provides substantial evidence of a more complex relation between refugees and mobile connectivity and thus suggests valuable directions for future research. First, interviewees for this study refer to the symbolic value of their old (at this point, useless) mobile devices. Secondly—and here is where the paper’s main contribution lies— they point to various ways in which mobile connectivity is more of an uncomfortable imposition than (or in addition to) a desired toolkit.

Notably, what seem to be novel aspects of the relationship between mobile phones and refugees are of little novelty in the larger field of mobile phone use within and outside media and communication studies. Critiques of functionalist approaches to mobile communication and discussions about potentials and frustrations associated to “perpetual contact” are common in relation to phone users in general, as opposed to (forced) migrants in particular. As Hall & Baym (2011: 317) explain, the “tension between remaining closer through [mobile communication] technology and feeling entrapped by technology has been identified in diverse contexts,” by diverse authors.

Based on this study, we support calls for “a more nuanced conceptualization of smart phones” in research about forced migration and mobile connectivity (Gillespie et al., 2018). However, our main emphasis is on the need for a more nuanced conceptualization of refugees themselves, one that avoids what Malkki (2012: 9) describes as “[t]he tendency to universalize ‘the refugee’ as a special ‘kind’ of person.” If a functionalist and essentialist understanding of refugees was central to the transformation of refugees into “an object of [scholarly] specialization” in the 20th century (p. 9), Malkki’s critique is particularly valuable for communication and media research at a time when refugees are becoming a growing object of sub-specialization, most notably through “digital migration studies” (Leurs & Smets, 2018).

Title: American or Puerto Rican: How ethnicity, politics and media played a role in impacting the Puerto Rican experience during Hurricane Maria

Session Type: Individual submission

Authors:

Name: Sumana Chattopadhyay

Email: sumana.chattopadhyay(at) marquette.edu

Country: US (United States)

Affiliation: Marquette University

Abstract: Hurricane Maria hit Puerto Rico on September, 20th 2017. With sustained winds of 155 mph at landfall, Maria was so powerful that it devastated radar, weather stations and cell towers across Puerto Rico, leaving an information vacuum in which officials could only speculate about property damage, injuries or deaths. Some residents did not have power for over a year. The death toll directly or indirectly from the hurricane though originally reported as 64 was revised months after the hurricane to be close to 3000, much higher than the Katrina death toll in 2005 which was around 1800. Property damages of close to 55 billion dollars were estimated.

Yet, the U.S. Government's Maria response was starkly different from its Irma and Harvey responses. Starting with Trump's tweet criticizing Puerto Rico for its handling of Maria and non-action by Congress, his famous 'paper towel throwing incident' and other responses to the hurricane, Puerto Ricans started to feel like 'second class' citizens.

Post-hurricane publicity, can be racially biased as was the case with the Katrina framing of black survivors as looters and white survivors as victims (Gebreyes, 2015). Research shows that citizens sympathize with racial in-groups and are less willing to help out-groups (Brewer, 1999). Media portrayals indeed have the potential to both shape and reflect societal attitudes (Entman & Rojecki, 2001; Gandy, 1998). News reports also indicate that framing Puerto Ricans as 'second-class' Americans affected public opinion around government relief efforts and the Puerto Rican morale in general (Foran, 2018).

The current study uses a grounded theory approach to analyze twenty in-depth interviews done with Puerto Ricans living in the island during the disaster and the Puerto Rican diaspora living in the U.S. to better understand their experiences navigating the disaster. While Puerto Ricans living in the island during the hurricane seemed to talk more about their trauma through the whole process, being cut off from the rest of the world, how communities came together under situations of extreme stress and discomfort, intense heat, food shortages, property damages and deaths, the Puerto Rican diaspora living in the U.S. talked more about their pain and fear being so far away from their loved ones during this difficult time, how they relied on media and other kinds of information channels to try and get information from an island that had no communication with the outside world, the relief efforts the diaspora communities participated in to alleviate some of the struggles back home. Both groups of interviewees discuss the insensitive handling by the federal government of the relief efforts which made them feel like second class citizens of America, the Puerto Rican government being taken by surprise by the extent of the disaster, the loss of life in the island as they knew it, the

strong, proud and resilient Puerto Rican Boricua identity and how that would play a role in the island bouncing back and healing from this disaster.

Title: Virtual Gifting on China's Live Streaming Platforms: Hijacking the Online Gift Economy

Session Type: Individual submission

Authors:

Name: Yu Xiang

Email: yuxlovemayo (at) shu.edu.cn

Country: CN (China)

Affiliation: Shanghai University

Name: Xiaoxing Zhang

Email: xza111 (at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: The year of 2016 is regarded as the genesis of “short video and live streaming” age in China. It is estimated that the value of the markets of short video and live streaming industries in China have reached to \$903 million and \$6.4 billion respectively in the year of 2017. This paper presents an exploratory case study on the nascent “virtual gifting” feature of China’s live streaming platforms. At the nexus of technological infrastructure, social organization and interpersonal relation, the authors aim to explicate the complex dynamics between gift economy and commodity economy in the context of the increasingly platformized Chinese society. This paper will firstly discuss how platform infrastructure is geared towards maximizing content monetization through virtual gifting. It will then look into how in the corporatized environment of streamer guilds the money-making capacity of virtual gifting is institutionally foregrounded at the expense of its potential in building communitarian and reciprocal relationships. Amid such structural dynamics, the commodification of virtual relation will be further analyzed to demonstrate how the hegemonic construct of virtual gifting is perceived and reproduced at the individual level. In the end, the paper will conclude with a rethinking of the role of critical communication studies in turning the tide of China’s live streaming industry.

Title: Fashion Bloggers as Influencers in Decision Making- Case of Young Adults as Consumers

Session Type: Individual submission

Authors:

Name: Neha Miglani Vadhera

Email: nehamiglani11 (at) gmail.com

Country: IN (India)

Affiliation: Panjab University, Chandigarh

Abstract: The upsurge of fashion blogging, as a profession and leisure pursuit, has been unfathomable in the last couple of years in India. The Instagram posts by these bloggers almost serve as a dictum for youngsters and appear to heavily influence their purchase behavior and patterns. This study evaluates the impact of select fashion bloggers, through their Instagram posts and blogs, on consumer decision making. The study encompasses a survey of 60 young adults in Chandigarh region (includes 3 cities from 3 different states), who follow fashion bloggers avidly, mapping the impact of fashion bloggers on their purchase- be it online or through retail stores. The study is also backed by personal interview of young adults as consumers who explain their purchase pattern in detail vis-à-vis these bloggers. The result of the study shall give a quantitative idea on the upsurge of fashion blogging and a fair assessment of the surge in followers too in terms of 'influence' on their behavior as consumers. It shall also establish the degree of impact of fashion bloggers as an influence in consumer decision making in the fashion industry. The results of this study shall be extremely useful for fashion brands and labels to market their products through these fashion bloggers, who have a considerable follower base, and the result shall also serve as a road-map and beacon for young bloggers who wish to take up the career of fashion blogging professionally.

Title: Postcolonial Governmentality of Communication: Theorizing ICT Governance in a Caribbean Context

Session Type: Individual submission

Authors:

Name: Alpha Obika

Email: alpha.obika (at) gmail.com

Country: JM (Jamaica)

Affiliation: University of the West Indies, Mona Campus, Jamaica

Abstract: Title: Postcolonial Governmentality of Communication: Theorizing ICT Governance in a Caribbean Context

This paper will examine the concept of Postcolonial Governmentality of Communication (PGC). The theory builds upon Michel Foucault's notion of governmentality and applies it to a critical analysis of media and communication governance in the Anglophone Caribbean. More specifically, the ICT legislation, regulations and regulatory frameworks of Jamaica and Trinidad and Tobago will be assessed to make a case for the PCG in the Caribbean.

The language of the ICT legislation and regulations in Jamaica and Trinidad and Tobago will be decoded using a critical discourse analysis to reveal the philosophy of governance utilised by the Caribbean governments under investigation. Key International Telecommunication Union (ITU) and World Trade Organization (WTO) policies will also be assessed to confirm the existence of PGC and the resultant information cycles of dependency.

PGC, while generated from an analysis of ICT governance in the Anglophone Caribbean, will be useful in examining media and communications from a global south context. This study will examine the fundamental pillars of PGC and highlight how the concept works to facilitate the global inequalities fostered by the new technological era. It will also display a challenge that must be overcome by developing countries for meaningful existence and participation in the global information economy.

Keywords: Postcolonial Governmentality of Communication; governmentality; globalisation; Caribbean ICT policy; critical discourse analysis.

Title: Participación ciudadana en la esfera pública digital en Cuba. Análisis del debate sobre la reforma constitucional en los foros digitales de las plataformas de noticias Cubadebate, el Toque y Oncuba

Session Type: Individual submission

Authors:

Name: Luis Yaim Martínez

Email: yaim.acebal (at) gmail.com

Country: CU (Cuba)

Affiliation: Universidad Iberoamericana Ciudad de México

Abstract: La investigación tiene como propósito analizar el nacimiento y la fundamentación de la participación ciudadana en la esfera pública digital cubana, a través de la aplicación de conceptos claves sobre esta temática que, al relacionarse, dan origen a una nueva área de realidad y estudio para Cuba, la ciudadanía digital. El desarrollo del trabajo parte de una reflexión teórica sobre el papel de la democracia en la potenciación de la participación ciudadana en materia digital, pretendiendo identificar los diversos actores que participan en ella, así como describir las funciones que desempeñan en la construcción de una sociedad democrática. Dicho análisis está establecido sobre la base de identificar los cambios que Internet ha traído para la isla caribeña.

En Cuba, la práctica ciudadana en red se enmarca, aún, como un proceso lento, condicionado por una escasa permanencia de las personas en la esfera digital, entre otras causas debido a los altos costos, en comparación al salario medio del trabajador cubano, de las tarifas para conectividad y a la ubicación, en parques y avenidas públicas, de las zonas con conexión wifi, lo que imposibilita la protección ante las condiciones climáticas, privacidad y acarrea movimiento y aglomeración de las personas hacia y en esos lugares.

Sin embargo, cada vez más usuarios se suman al uso de nuevos medios digitales. En este sentido, lo novedoso del fenómeno es que se puede estar ejerciendo ciudadanía digital bajo peculiares condiciones y circunstancias que lo hacen un asunto polémico por sus avances y limitaciones en la sociedad.

Debido a esta situación de análisis surgen los cuestionamientos: ¿de qué se habla en la esfera pública digital que conforman estos tres medios de prensa en Cuba?, ¿existe una heterogeneidad de temas en estos tres medios noticiosos on-line?, ¿cómo es la participación ciudadana en estos medios?, ¿dónde habla más la sociedad que consume este tipo de medios?, ¿qué temas motivan mayor participación ciudadana en estos medios de prensa?

En este sentido, la participación ciudadana recrea una discusión sobre los proyectos llevados a la vida pública, en un país donde los principales motores de búsqueda señalan conflictos en el acceso a Internet, y dónde además se sustentan profundos cambios a nivel constitucional, debido a la reforma que vive la Carta Magna del país.

Title: Social communities and the geography of small cinemas: the Norwegian example of Bygdekino

Session Type: Individual submission

Authors:

Name: Silvia Bragagnolo

Email: silvia.bragagnolo.sb (at) gmail.com

Country: IT (Italy)

Affiliation: Ca' Foscari University of Venice

Abstract: Some socio-cultural rituals are able to persist over time, for their being deeply rooted in the country to which they belong. This is the case of a very special Norwegian phenomenon. Bygdekino is the only national travelling cinema which offers screenings in places that lack of permanent theatres; it is provided with its own mobile equipment, and shows films in all types of rooms, ranging from gymnasiums and community houses, to beautiful cultural houses with amphitheatres and permanent cinema facilities. Being one of Norway's crucial culture policy goals to enhance people's access to culture, the touring institution was born as a clear, direct result of a policy radically oriented towards the democratisation of culture (Bakke 2010; Nyhus 1984). Bygdekino recently celebrated its 70th anniversary, and it continues receiving a constant financial support from the Government; with around 120,000-150,000 visitors a year and 188 venues, Bygdekino is a major cinema in a country scale (Film & Kino 2017). The purpose of this paper is to examine the most peculiar features of the company, including its social side. Indeed, cinema represents a public space where people can meet and mingle; the trends of blurring the borders between the public and the private, which has become one of the central characteristics of media culture, started with the advent of cinema. People do not go to the cinema only to consume films, but also to meet other needs (Jenkins 2014). By commenting some of the answers to the surveys distributed to Bygdekino's audience during my stay in Norway, this perspective will be extensively examined.

Title: Framing the legalization of same-sex marriage in Canadian national print news

Session Type: Individual submission

Authors:

Name: Amanda Piche

Email: amanda.piche (at) ryerson.ca

Country: CA (Canada)

Affiliation: Ryerson University

Abstract: Since the Charter of Rights and Freedoms emerged in 1982, Canadian national print news was central to the complex networks in the establishment of same-sex marriage in 2005. Newspapers framed marriage equality as a human rights' issue, within conventions for balance and objectivity. However, LGBT-related issues have not consistently been approached this way by the media, which have traditionally created and regulated boundaries of gender and sexuality (Rubin 2007). This work-in-progress explores why Canadian mainstream press oscillated between anti-queer and pro-LGBT approaches in a post-Charter Canada and its' effect on public opinion.

I show how news reporting is symbiotically implicated in Canadian public perspectives through public sphere theory (Habermas 1989; Fraser 1992). Frame analysis demonstrates how the issue was ideologically positioned in print (Goffman, 1974; Entman 1993; McCombs 2004; Scheufele 1999, 2000).

A content analysis of over 2,000 national newspaper articles published between 1982 and 2005 reveal the frames used in stories about marriage equality. Semi-structured interviews with journalists and activists contextualize the analysis. Responses determine how media frames may have implicated understanding and support of the issue, and why and how certain frames were decided by journalists.

This work informs the history of LGBT rights in Canada by exploring how the national news industry contributed to the framing of marriage equality. Analyses of news coverage of marriage equality remains largely US-centric (Brewer 2002 & 2003; Tadlock, et. al, 2007; Liebler et al., 2009; Li and Liu, 2010; Pan et al. 2010). Research on framing marriage equality in Canada focuses on litigants (Smith 2007), courts (Matthews 2005), and newspapers in 2003 and 2004 (Bannerman 2012). Despite several studies concerning the politics of sexual diversity in Canada (Hogg 2006; Kinsman 1996; Kinsman and Gentile 2010; Pettinicchio 2010; Rayside 2008; M. Smith 2008, 2012), marriage equality has not been studied extensively.

Title: Has TV decreased impact on public opinion due to the transformations of the media environment in the 21st century'

Session Type: Individual submission

Authors:

Name: Daniela Grassau

Email: dgrassau (at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Catolica de Chile

Name: Nicolle Etchegaray

Email: netchegaray (at) gmail.com

Country: CL (Chile)

Affiliation: Universidad Diego Portales

Abstract: Two decades after the start of the 21st century, the evidence suggests that the access to new media has decreased the agenda-setting effect of traditional media on public opinion (Bennet & Lyengar, 2008; Chaffee & Metzger, 2001; Takeshita, 2006). The emergence of new communicational spaces (particularly social networks) has led to the development of parallel thematic agendas and to changes in the patterns of information consumption linked to a more selective (Zillmann, 2000) and less massive (Shehata & Strömbäck, 2013) content exposure. In this context, the objective of this study is to determine whether traditional media, mainly television, continues to have a significant role in the definition of the public agenda regarding 11 political and social issues and to explore which are the individual variables that better explain this relationship within a multimedia context (McCombs & Valenzuela, 2014; McCombs & Stroud, 2014). To that extent, we performed a longitudinal analysis based on media content and public opinion data collected in Chile over a period of 16 years (2001-2016). The data draw from two sources: a data base with the information about 500,000 news stories broadcasted by Chile's four main television networks and 33 public opinion surveys conducted by Centro de Estudios Públicos (CEP) which included the classic agenda-setting question: What do you think is the most important issue facing our country today? At the aggregate level, we compared time-series of the media and public agendas using Spearman correlations, and at the individual level, we used multivariate regression models. The research findings suggest that in the Chilean context, and probably the Ibero-American context as well, despite the growing use of new media, the impact of television as an agenda setter has not exhibit a sustained decrease for the overall population, however, its impact is moderate by age, gender, and socioeconomic level.

Title: Disrupting Bodegas: Corner Stores, Immigrant Mythologies, and the Consumption of Urban Authenticity

Session Type: Individual submission

Authors:

Name: Arlene C. Fernández

Email: arlenef (at) upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania, Annenberg School for Communication

Abstract: Corner grocery stores are a mainstay of urban neighborhoods across the United States. In New York City, corner stores are known as bodegas and dot many of the sidewalks and street corners across the city with characteristically bright, colored awnings announcing the availability of “cold cuts and cold beer.” Bodegas are a ubiquitous part of the cultural imaginary of New York City. They signify a particular brand of urban authenticity propelled by narratives of hardworking immigrants as living embodiments of the ‘American dream’ – the quintessential New York City immigrant story. The potency of this immigrant mythology became evident in September of 2017 when two former Google employees announced the launch of a start-up called Bodega, a human-less convenience kiosk designed with machine learning capabilities. The response on social media, blogs, and online news outlets was loud, swift, and extremely critical.

This paper explores the internet discourse on corner stores that emerges from the critiques leveled at the start-up previously known as Bodega. It suggests that the narrative constructed from the techno-deterministic panic that the Bodega start-up provokes serves to reify a brand of multicultural urban authenticity, community, and immigrant determination that corner stores have come to represent. The overwhelmingly negative reactions to the Bodega start-up enable a version of performative politics based on a romanticized view of bodegas as unique, idiosyncratic sites of consumable culture in New York City, and the connection to immigrant narratives is deeply imbricated in the affective construction of this brand identity. While the response to the Bodega start-up provides an important counter-narrative to the heightened nativist, anti-immigrant political discourse currently prevalent in the U.S., the branding of bodegas distances them from the very communities they were historically meant to serve and obscures the complex realities of invisible labor, precarity, and gentrification in New York City.

Title: Reading Community Newspapers as Radical and Critical Media: A Study of Namaskar's Advocacy Practices for Social Change in Puri District of Odisha

Session Type: Individual submission

Authors:

Name: Annapurna Sinha

Email: annapurnasinha111 (at) gmail.com

Country: IN (India)

Affiliation: Department of Communication, Sarojini Naidu School of Arts and Communication, University of Hyderabad, India

Abstract: Drawing on the case study of a community newspaper Namaskar, the paper discusses the potential of alternative media for social change. It explores the participatory advocacy activities of Namaskar and its 'impact' in the 'underdeveloped' areas of coastal Odisha in India by borrowing from the theoretical understandings of 'critical' and 'radical' approaches of alternative media. The paper draws on Christian Fuchs's idea of 'Critical Media' where he argues that 'critical media' do not accept the society as it is. Rather, through 'negation of negation' and 'dialectical realism' at the levels of content and form, it focuses on possibilities of social change by strengthening 'co-operation' and 'participation' in the society. Namaskar principally covers civic issues affecting the lives of people in their community that are usually ignored by mainstream media. It takes the development issues to the concerned authorities through a 'grievance escalation system' and brings everyone together to work towards the redressal in a co-operative and participatory manner. The paper also draws on John Downing's idea of 'Radical Media' where he emphasizes on the roles played by alternative media in strengthening of 'democratic culture' in everyday life by being more 'responsive' to the 'voices' and 'aspirations' of the people who are excluded in many ways. Working with the approach of volunteerism and the premise of 'every reader is a reporter', Namaskar provides equal opportunities of participation, and a platform to every member of the community to share her/his concerns of livelihood, development and justice. Through testimonies and evidence from the ground, Namaskar questions the prevailing economic situation and creates an environment to advocate for change. The paper supports its arguments by presenting examples of such change with the help of data collected through in-depth case study method involving various qualitative methods of data collection such as in-depth interviews, focus group discussion and participant observation. The paper analyses Namaskar's initiatives as a critical as well as a radical media to gauge its potential for bringing about social change.

Title: Dynamics of indexed scientific publications: Experiences of Latin American Communication researchers

Session Type: Individual submission

Authors:

Name: Joseph Livingston Crawford-Visbal

Email: jrcrawford (at) uninorte.edu.co

Country: CO (Colombia)

Affiliation: Universidad del Norte & Universidad de la Costa

Abstract: Communication in Latin America is a complex academic field which faces several challenges: underrepresentation of regional authors in international literature, disconnection between research practices and the global dynamics of scientific publication, shortage of indexed peer-reviewed journals, among others. The fact is, academic writing is an integral part of being a scientist: to be under constant pressure to research and make that newfound knowledge visible. Latin America is no exception to this dynamic of constant publication in indexed peer-reviewed journals.

Despite the increase of researchers and the fact that there are over 1.742 faculties of Communication across the region, there are no journals of this discipline indexed in the largest scientific databases: zero journals indexed in the Journal Citation Reports, as opposed to 9 journals indexed in the SCImago Journal & Country Rank. Of the 33 countries belonging to the Latin American region, only 4 of them have Communication journals indexed in these, the largest databases of peer-reviewed literature in the world. Which factors influence this underrepresentation of Latin American Communication scholars in the international scientific community?

The former question is part of the author's doctoral dissertation, which seeks to comprehensively analyze these publication dynamics. For this study, an inductive approach was employed, taking into account Grounded Theory precepts. Researchers and Journal Editors in field of Communication were asked to share their experiences through open interviews, as well as reviewer comments of their most recent published research. Resulting data was analyzed using QDA (Atlas.ti), contrasting the perspectives of researchers, editors and reviewers' feedback. Several patterns emerged that offer a picture of scientific publication dynamics in the region.

Standardization, Visibility and Lack of Scientific Training were categories found that encompass these experiences. The partials results expose a landscape in which regional scientists must adapt to the increasingly complex dynamics of knowledge generation whilst facing the disadvantages that arise of being a part the Global South, at the periphery of science.

Title: Selective self-presentation and technological affordances: Comparing two location-based mobile dating apps for men who have sex with men

Session Type: Individual submission

Authors:

Name: Jack Lipei Tang

Email: jack_tang (at) link.cuhk.edu.hk

Affiliation: The Chinese University of Hong Kong

Abstract: Location-based real-time dating (LBRTD) app is a primary online space for men who have sex with men (MSM) to seek casual sex or long-term relationship. Previous literature focused on how MSM present themselves on the app profile. Afforded by technological features, MSM carefully used the language to manage the stigma associated with casual sex and sexualities on LBRTD app (Birnholtz et al., 2014). Nude body picture was frequently used by MSM to attract attention (Miller, 2015; Lemke & Merz, 2018) while objectifying content was associated with the goal of sexual encounter (Anderson et al., 2018). As for gender roles, masculinity is highly privileged (Reynolds, 2015). Thus, dating apps not only provide a novel opportunity for MSM to construct identity and fulfil relational goals but also reinforce body typing, ageism, and racism (Fitzpatrick et al., 2015; Conner, 2018). Since homosexuality is considered as pervert in the public discourse in China (Chang & Ren, 2017; Xie & Peng, 2018), sociocultural context also matters. Recent two systematic reviews on gay dating apps studies have called upon further investigation on technological development (Wu & Ward, 2018) and international experience (Chan, 2017).

Adopting the hyperpersonal model (Walther, 1996), this study examined how interface attributes of the channel shape selective self-presentation of MSM on two most popular dating apps in China, Blued and Aloha. The two apps have distinctive matching algorithms and interface designs which can be informed by users to employ different strategies (e.g. deception) (Toma & Hancock, 2010) to present themselves selectively. A content analysis on the profile from a national sample (N = 600) suggested that the profiles on Blued tended to contain a sexual self-label, not to disclose a recognizable face, and to have a nude picture. Profiles on Blued also tended to mention masculinity, fitness, and their partner preference. A linear regression model indicated platform, sexual self-label, and relational goal significantly predicted the level of self-objectification.

Title: "How We Mourned": Memory Institutions in the Aftermath of American Mass Shootings

Session Type: Individual submission

Authors:

Name: Jeanna Sybert

Email: jeanna.sybert (at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: Within the past couple decades, the rise of mass shootings has shaken the foundations of American life. In the aftermath of these tragedies, memory institutions, or organizations that manage public knowledge, have become increasingly involved in the collection, preservation, and display of materials left at the shooting sites. In fact, memory institutions are now called upon to, not only preserve artifacts from mass shootings, but also to act as the very curators of mourning. This project is interested in how the public's response to mass shootings in the 21st century has altered the traditional role of memory institutions, who are more involved than ever in memorializing the victims and facilitating community healing.

This study begins by recounting traditional understandings of these institutions as sites of knowledge and state power. Then, after analyzing the 76 mass shootings since 2000, this paper outlines the memorialization practices that have now become customary following these incidents. Such an analysis will begin to illustrate how these practices are increasingly intertwined with memory institutions' response to mass shootings. This paper then considers six case studies in which museums and libraries were integral in preserving objects collected from Virginia Tech, Tucson, Newtown, Charleston, Orlando, and Las Vegas. The resulting analysis argues that, although memory institutions still retain their archival and educational function, their new role is to provide an additional site for ritualistic mourning. Here, exhibitions serve as spaces for visitors to perform customs that echo the funeral service. While this may have important benefits, like allowing the larger public to formally grieve these tragedies, it also raises concerns over who decides what is worthy of preservation and display. Ultimately, this study highlights the growing need for spaces to collectively mourn mass shootings and points to cultural institutions, like museums and libraries, as alternative sites for healing.

Title: Whenever, Wherever, We're Meant to Be Together: Complicating Cultural Hybridity in Latin American Popular Music through Case Studies of Shakira and Lila Downs

Session Type: Individual submission

Authors:

Name: Rachel Guldin

Email: rguldin (at) uoregon.edu

Country: US (United States)

Affiliation: School of Journalism and Communication, University of Oregon

Abstract: Cultural hybridity theory bears criticism for over-privileging Western perspectives. Scholars also criticize hybridity research produced by the Global North for homogenizing countries and regions in the Global South. This study offers a new, alternative approach to cultural hybridity using these criticisms as a foundation, globalization and hybridity as frameworks, and popular music as a site of inquiry. This study proposes market-driven cultural hybridity, a reorientation of hybridity that centers the global market as the force of hybridization instead of countries or nations. In this approach, market forces attract cultural production and drive cultural hybridization. It prioritizes the influence of market forces on global cultural industries. But market-driven cultural hybridity also gives agency to cultural producers in receiving or resisting hybridizing effects. Market-driven cultural hybridity proposes that hybridity manifests in two ways. Market-receptive hybridity readily incorporates cultural characteristics of the dominant market, whereas market-resistant hybridity limits the influence of the cultural characteristics of the dominant market on cultural products. This study employs case studies of Latin American popular musicians to illustrate this new theoretical approach. First, it considers the social, political, and economic contexts of Colombia and Shakira as a case study of market-receptive hybridity. Then it examines the social, political, and economic contexts of Mexico and Lila Downs as a case study of market-resistant hybridity. This juxtaposition exemplifies how market forces and cultural producers impact cultural hybridization. The outcomes of a market-driven approach to hybridity decenter the countries of the Global North and explain cultural hybridity in media as results of market forces, not national borders. This approach also allows hybridity to be scaled; that is, it allows hybridity to be considered within or across any region (not just between Global North and South) since the intervening factor is the industry market, not geopolitical borders.

Title: Who is the arbiter of truth? Mainstream journalists' responses to fake news during the military coup in Zimbabwe.

Session Type: Individual submission

Authors:

Name: Allen Munoriyarwa

Email: allenmunoriyarwa (at) gmail.com

Country: ZA (South Africa)

Affiliation: University of Johannesburg School of Communication, Republic of South Africa

Abstract: A political crisis, like a military coup, generates significant uncertainty about the unfolding event and the means and motivations of the actors. In the contemporary World of rapid and de-institutionalised information production and dissemination, fake news has an influence on how the event is understood and interpreted by the mass public. There is a paucity of research on how mainstream media journalists have responded to fake news, especially during fast-moving events like military coups. This is despite increasing research on the influence of fake news on traditional news production practices and its influence on elections. This study investigates how fake news influenced the daily operations of mainstream media journalists in Zimbabwe during the November 2017 'soft coup', dubbed 'Operation Restore Legacy'. The paper, anchored on disinformation theory and the social organisation of news theory, interrogates how mainstream journalists in Zimbabwe responded to the phenomenon of fake news during the 'soft military coup' that led to the 'resignation' of Robert Mugabe as they covered the story. Deploying qualitative interviews with purposively selected political reporters from mainstream daily newspapers, the study found out that faced with an avalanche of fake news, journalists responded by re-evaluating their news sourcing routines and engaged in collective efforts to identify sources and pressure points of fake news that interfered with their own work. Yet, overt reliance on unreliable websites and social media sources to produce news still persisted. Based on this and other related findings, we recommend that journalists should evolve their own platforms and mechanisms to verify and challenge fake news prevalent on social media and websites. We further recommend a "triangular approach" that can, in the long term, reduce the influence of fake news

Title: The cultural and economic sustainability of small media markets: Is size a good driver for media policy'

Session Type: Individual submission

Authors:

Name: Ivana Kostovska

Email: ivana.kostovska (at) vub.ac.be

Country: BE (Belgium)

Affiliation: IMEC-SMIT-Vrije Universiteit Brussel

Abstract: Ensuring cultural and economic sustainability of media industries' output is a goal of media policy in most EU Member States. This is considered particularly challenging for 'small media markets'. The concept implies that there is an impact of size on desirable outputs generated by markets and, subsequently, requires different government policies. Digitalisation, convergence, and internationalisation in media markets have prompted a revivification of the idea that small markets need more protection, especially against Internet platforms and the possibly perverse effects they might have on local content production, independent journalism, etc.

But is 'small media market', especially when defined in relation to population size, still a relevant concept to study and develop media policies against the background of converging and internationalising media and communication markets? Will it tell us anything about the cultural and economic sustainability of content production?

This paper, firstly, defines what a small media market is and, operationalises cultural and economic sustainability. Secondly, it applies a quantitative methodology to analyse media markets in eight countries. To this purpose, aggregated data, from among others, Eurostat and the European Audiovisual Observatory are used to look at different indicators in several media sectors.

The aim thereof is not only to have an overview of diverse media markets, but also to understand whether there are differences between these countries, which can be attributed to some of the features of small media markets. Accordingly, both big and small media markets were selected, with a varying level of GDP per capita. Countries selected are Germany, UK, Italy, Poland, Belgium, Ireland, Denmark and Croatia. We purposefully selected countries from each of Hallin and Mancini's (2004) models and the post-communist model (Terzis, 2007). This selection should allow us to draw conclusions on the relevance of size, other indicators of smallness and basic political economy elements when looking at cultural and economic sustainability.

Title: From Meaning-minding Approach to Empathy-minding Approach: Rethinking the Popular Phenomenon of Chinese Hip-hop "Based on the grounded research on the popularization production patterns of songs in The Rap of China

Session Type: Individual submission

Authors:

Name: Honglei Lu

Email: luhl12 (at) foxmail.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: Abstract:

Hip-hop used to be originally a kind of subcultural music of a small minority in China, but the great popularity of "The Rap of China" brought it to the popularized cultural industrial system. Based on the constructing grounded theory, this study makes a grounded analysis on the lyrics of all the songs presented in "The Rap of China", generalizing five main production patterns of Hip-hop music, which are Self-examination Pattern, Appeal-expression Pattern, Positive-gratitude Pattern, Diss-Pattern Self-immersion Pattern.

The study finds that Hip-hop singers can construct and expand the common sense space with the audience by localizing songs, reducing the criticality of songs, enhancing the social and instrumental roles of songs, catering to commercial needs and other means, so as to achieve the popularization and industrialization of Hip-hop songs. The whole process reflects how the capital and cultural elites influence the subculture and make the alienation of Hip-hop singers happen. In this meaning-minding approach of alienation, Chinese Hip-hop has lost its original "Aura".

Therefore, how to deal with the relationship between the market-narrative and meta-narrative? How to deal with the relationship between mainstream culture and Hip-hop subculture? How to deal with the problem of the subjectivity of Hip-hop music? How to construct the empathy-minding approach to a better usage of the social values and guiding roles of Hip-hop music? These questions are worthy of attention and rethinking, and this study tries to discuss and finally to present a proper answer.

Title: Social media manipulation for propaganda in authoritarian regimes

Session Type: Individual submission

Authors:

Name: Quynh Hoang

Email: tu.quynh.hoang (at) student.uva.nl

Country: VN (Viet Nam)

Affiliation: Research Master student of Media Studies at University of Amsterdam

Abstract: Formally organized social media manipulation by government and political party actors has dire implications for citizens in authoritarian countries where one of the very few spaces for them to express political views and facilitate collective actions, social media, have become polarized environments ideal for bolstering false perception and undermining civic organizing. Although in recent years a good number of research projects have documented the main strategies of cyber troop activity, they tend to give an overview of strategies and technical techniques for social media manipulation without an in-depth analysis of the pro-regime message framing and the context within which such information warfare successfully carried out to suppress dissenters and social movements. Therefore, the paper presents the various ways on which social media is being exploited to serve authoritarian regimes' interests. I argue that it is important to research and evaluate this phenomenon with reference to specific historical, cultural and political contexts in which it occurs. The argument is developed through detailed case studies on Vietnam and Philippines current administrations' uses of Facebook, the most popular online social networking site at these countries. This analysis is pursued from a sociotechnical perspective. It traces how specific technical and commercial affordances of social media are re-appropriated and exploited as a tool for authoritarian regime stability and waging war against a wide range of opponents, especially opposition parties, activists, and journalists. The social media manipulation strategies of authoritarian regimes can be conceptualized as practices leveraging social media affordances in four main ways: (1) undermining the opposition and dissidents, (2) bolstering the legitimacy of the regime and its harsh response to dissenting voices, (3) counter-mobilizing public support, and (4) abusing the social networking site's community standards to silence critical voices.

Title: The Dilemma of Transcultural Communication under China's Belt and Road Initiative ---
The case of Chinese Books' publishing in Russia and Nepal

Session Type: Individual submission

Authors:

Name: Qinyi Shen

Email: sqy17 (at) mails.tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University

Name: Jinbao Zhang

Email: zhjb_509a (at) 163.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: In this study, I discuss such publications' cultural impacts through two case studies. The first is Russian Chance International Publishing Group, a Chinese-invested private enterprise owning the only China-themed publisher and bookstore chain in Russia, Kyrgyzstan and Tajikistan. The second is the Nepalese Xinzhi Bookstore, Nepal's largest Chinese bookstore. The publishing efforts in both Russia and Nepal have received support from the Chinese central government and local publishers.

Focusing on the role of domestic and international capitals in both countries, this study explores the dynamics surrounding the overseas publication of Chinese language and China-themed books and how different forces shape the public representation of "Chinese culture". By attending to different cultural identities found in the Russian and Nepalese cases, I explicit the contradictions and dilemmas caused by various capitals' intervention in transcultural communications. I argue for a situated approach to address the ways political economy interact with cultural identities. While in Russia, publishing chain dominated by private capital as well as driven by market tries to get rid of the control of Chinese state and regional capitals and pursues the construction of logical Chinese culture and contemporary literature, in Nepal, Chinese books' publishing dominated by Nepalese capital with the collaboration of Chinese regional capitals is filled with Chinese regional books, regional culture, classic legends and other stereotypes, with few market-driven children's literature. Capitals are not fully integrated with foreign culture to realize transcultural communication influences. To this end, the study seeks to articulate a dynamic theoretical framework addressing how capital and power shape the overseas circulation of Chinese language and China-themed publications.

Title: Building International Brand Awareness via Omnichannel Marketing Communications: the case of Spanish Fashion Brands

Session Type: Individual submission

Authors:

Name: Louise McBride

Email: Louise.McBride (at) gcu.ac.uk

Country: GB (United Kingdom)

Affiliation: Glasgow Caledonian University

Name: Julie McColl

Email: j.mccoll (at) yorksj.ac.uk

Country: GB (United Kingdom)

Affiliation: York St John University

Abstract: The purpose of this paper is to investigate Spanish fashion brands' adoption of omnichannel marketing communications as a way to build brand awareness and enhance international market entry. Digitalisation has led to significant transformations in consumption habits, communication and distribution channels (Bai et al, 2018; Mosquera, et al., 2018). An omnichannel strategy providing a seamless shopping experience via integrated online and offline touchpoints has become a near necessity for fashion brands competing on a global level (Bonetti and Perry, cited in Vecchi, 2017). There is a dearth of research on the role of omnichannel Integrated Marketing Communications (IMC) in the context of internationalisation. Furthermore, Spanish fashion brands are early adopters of this new model and warrant further investigation.

Building on the work of Bai et al. (2018) and Payne et al. (2017) we adapt the omnichannel IMC framework to the context of fashion brand internationalisation, as the theoretical lens through which to study this phenomenon. This paper adopts an interpretivist approach that uses a qualitative multiple case study research design. Primary data were collected via qualitative in-depth executive interviews with four leading Spanish fashion brands. Secondary sources of information were used to triangulate information and increase the rigour of the method. Data were analysed via thematic analysis.

Findings suggest that Spanish fashion brands are showing signs of leadership in creating omnichannel experiences to enhance international expansion and create a cohesive brand image. However, challenges remain in the shape of resource allocation and investment and the different levels of digital infrastructure in international markets. This study contributes to the growing body of work on omnichannel communication strategy and provides empirical evidence of Spanish fashion brands' adoption of an omnichannel approach to internationalisation.

Title: Prácticas profesionales del periodismo de datos en medios nativos digitales latinoamericanos en función del interés público y la transparencia gubernamental. Casos de estudio: Postdata.club (Cuba) y La Data (México)

Session Type: Individual submission

Authors:

Name: Laura Barrera Jerez

Email: laurabarrerajerez (at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana Ciudad de México

Abstract: El Periodismo de Datos (PD) se configura como especialización emergente en Latinoamérica. Por encima de la asunción de tales rutinas productivas por parte de medios tradicionales, se evidencia en la región un incremento de medios nativos digitales fundados, precisamente, para hacer PD. Sin embargo, no fue hasta 2015 que se publicó el Manual de Periodismo de Datos Iberoamericano, estructurado fundamentalmente desde una arista experiencial. En la literatura científica publicada sobre el tema, en las últimas dos décadas, solo resaltan Brasil y Argentina como focos investigados en la región, lo cual evidencia la necesidad de estudios académicos referidos a esta práctica profesional.

Según el análisis de variables macro, meso y microsociales descritas por Shoemaker y Reese al referirse a sistemas mediáticos, factores como el Estado transversalizan significativamente ámbitos de orden organizacional del PD, pero, a pesar de ello, actualmente tal especialización es asumida como espacio de participación ciudadana. Por lo tanto, el presente estudio analiza cómo las prácticas profesionales en Postdata.club (Cuba) y La Data (México) responden al interés público y fomentan la transparencia gubernamental en cada uno de los contextos nacionales a los que pertenecen.

Para ello, nos auxiliaremos de métodos como la revisión bibliográfico-documental para describir el estado del arte del tópico en cuestión y los contextos en los que están insertados estos medios de prensa; la entrevista semiestructurada para caracterizar rutinas productivas y perfiles y valores profesionales; y el análisis de contenido en función de verificar la presencia de temas de interés público y transparencia gubernamental en sus productos comunicativos y su interacción con las audiencias.

Title: Representaciones y autorrepresentaciones de la clase privilegiada en México: discurso y legitimación de la desigualdad social

Session Type: Individual submission

Authors:

Name: DALIA CARDENAS HERNANDEZ

Email: daliacardenas (at) yahoo.com.mx

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana

Abstract: PRESENTATION IN SPANISH

De acuerdo con el informe Panorama Social de América Latina 2016, elaborado por la Comisión Económica para América Latina y el Caribe (CEPAL), México es uno de los países con mayor desigualdad social de la región. Definida como una sociedad plural y heterogénea, ya desde la segunda mitad del siglo XX se advertía la subsistencia en México “de grupos humanos colonizados, super-explotados y sub-empleados que no participan de la cultura nacional” (González Casanova, 1985, 175).

El objetivo de esta investigación doctoral es estudiar cómo la representación y la autorrepresentación de la clase privilegiada en los medios (prensa, televisión, cine) ha contribuido de manera determinante a profundizar las condiciones de desigualdad social en México al reproducir un discurso que legitima la posición de la clase alta frente a una población que ha asumido históricamente su condición de explotación y sumisión. Para ello, empleamos como método de investigación el análisis crítico del discurso (Richardson, 2007) y el análisis de textos visuales (Gonzalo Abril, 2012), ambos aplicados a la serie *Made in México*, producida por Netflix y que muestra en el formato de un reality show cómo es la vida de personajes que integran la alta sociedad de México.

El discurso aparentemente progresista que ofrece resulta en realidad elitista y conservador al subrayar las diferencias, la estratificación y la incapacidad de las clases menos favorecidas de reconocerse como ciudadanos con posibilidades verdaderas de ocupar otras posiciones que las designadas por la élite. A partir del concepto de hegemonía (Gramsci, 1975; Laclau & Mouffe, 1987), analizamos cómo este sistema de creencias realiza una función de adoctrinamiento cultural que conduce a la aceptación de esta posición subordinada, esto al carecer de una conciencia de clase, lo que profundiza las graves condiciones de desigualdad de aquellos grupos que históricamente han sido marginados.

Title: Framing the Central American Migrant Caravan: from Trump's tweets to the media

Session Type: Individual submission

Authors:

Name: Diana Juárez

Email: dianaju.to (at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana

Abstract: As part of a current doctoral thesis, this proposal enquires on how the Mexican and American media "frame" the Migrant Caravan issue, and the construction of a wall that separates the US - Mexico border based upon the tweets of President Donald Trump.

By reproducing the American President's tweets without proper context and analysis, the Mexican and American media do not always construct the reality of migrants based on their own research and data, which ends up configuring a very limited vision that results in inaccurate information or misinformation, in addition to a polarization among its readers, making of such communicative and political situation a clear contribution to the phenomenon of "post-truth".

From the perspective of "framing" from Robert Entman (1993), Scheufele (1996) and Iyengar (2003), both Donald Trump's tweets referring to the Migrant Caravan and the notes published in the subsequent five days in nationwide Mexican and US "portals" and are analyzed (Reforma, El Universal and La Jornada) and US (The New York Times, The Washington Post and USA Today) during the period from October to November 2018. This corpus serves to identify in what ways the media take up the tweets of the president of the United States related to the issue of migration.

In preliminary results for this investigation, it has been found that the tweet is cited within the note; Donald Trump becomes one of the sources that sustain and legitimize the journalistic content, which affects the construction of the frame. In addition, the media might prop up the construction of negative emotions such as the fear of the Migrant Caravan by positioning Central America as a place where violence and organized crime live.

Title: Mapeo bibliométrico del comportamiento de la producción de revistas científicas latinoamericanas en Comunicación

Session Type: Individual submission

Authors:

Name: Rafael González Pardo

Email: regonzalezpardo (at) gmail.com

Country: CO (Colombia)

Affiliation: Universidad del Norte

Abstract: Las revistas científicas hoy generan indicadores que miden cada vez más la productividad de universidades e investigadores. Si bien, existen posturas críticas frente a este tipo de publicaciones, desde allí se generan importantes aportes al conocimiento. En sus inicios la mayoría de publicaciones científicas se dieron en áreas de las ciencias duras. No obstante, hoy en día se han extendido a todas las áreas del saber, incluyendo humanidades incluyendo enfoque más cualitativos e interpretativos (Walter, Cody, & Ball-Rokeach, 2018).

En el contexto internacional, las bases de datos como Web of Science (WOS) o SCOPUS se han posicionado aunque han sido altamente criticadas por su carácter euro-céntrico y excluir las epistemologías y cosmovisiones del Sur Global. Diversos estudios han mostrado que autores de América Latina, África y países de Europa Central no son citados en los principales journals en las ciencias sociales (Gringas & Nathan; 2018). Se hace entonces indispensable analizar las dinámicas que se dan en estas publicaciones para efectos de comprender mejor que se publica en las revistas del campo de comunicación.

Hoy en JCR no existen categorizadas revistas latinoamericanas, en Scopus hay 9 y en ESCI 8, lo que demuestra que frente al universo de publicaciones, Latinoamérica no ha tenido un vertiginoso desarrollo. Existe artículos de corte bibliométrico o de análisis de contenido sobre el desarrollo de las revistas, los rankings en las que éstas se encuentran, entre otras variables; sin embargo, no se ha desarrollado una investigación que analice de manera integral la producción científica de las revistas en comunicación latinoamericanas.

Lo que se pretende, es mostrar los resultados preliminares de un mapeo bibliométrico del periodo comprendido entre el 2013 y el 2018, acerca del comportamiento de la producción de 17 revistas científicas latinoamericanas del área de comunicación que están en Scopus y ESCI.

Abstract: This study seeks to establish the relationship between the perception of graduates, communication and journalism programs in Colombia, on the training received in communication faculties and the demands and transformations of the work environment and the labor market.

Observing the challenges faced by professional in the communication and journalism fields given contemporary social transformations.

The study investigates the training received by professionals and labor demands according to their trajectory from the following variables: perception of training (work, professional and occupational profile) and perception of labor demands (socioeconomic profile, working conditions and emerging labor sectors). It also asks about the types of jobs that are performed, the modes of hiring, types of companies where they work, working conditions, sectors of greater or lesser demand, new job sectors, skills and abilities required by the labor market in the context of contemporary socio-technical changes.

The applied research technique used was an online questionnaire with open and closed questions. The observation window was from 2012 to 2017, covering a population of about 15 thousand graduates in communication and journalism throughout the country. A simple random sample was made covering a population of 1338 professionals throughout the country.

The paper is the product of a study carried out with the support of the Colombian Association of Communication Faculties and Programs in Colombia (Asociación Colombiana de Facultades y Programas de Comunicación en Colombia - AFACOM), which brings together some 65 training programs in communication and journalism throughout the country.

**The presentation will be made in Spanish.

Affiliation: Universidad del Rosario

Abstract: El avance de las tecnologías de la información y comunicación ha favorecido la producción y circulación de información en una escala sin precedentes; en consecuencia, hoy resulta más fácil acceder a grandes cantidades de datos. Sin embargo, la captura de estos datos suele ser tarea de corporaciones tecnológicas que favorecen modelos de negocio en los se explota comercialmente la información de los usuarios, siendo aún escaso su empleo en investigación social.

No obstante, los mismos defensores de los grandes datos (Big data), son cada vez más conscientes que para la comprensión de fenómenos sociales, los datos por sí solos no son suficientes, pues para ello es necesario profundizar en los contextos en los que se producen y recopilan; es por esto que desde allí mismo, en lo corporativo, emergen los datos densos (Thick data), una apuesta metodológica que, dentro de la euforia del mundo digital, apuesta por retomar el trabajo etnográfico para darle sentido a los grandes datos.

En ese contexto, esta investigación busca poner de manifiesto ¿Cómo el uso de grandes datos y datos densos puede enriquecer ejercicios investigativos en el campo de la comunicación y cultura? partimos de la hipótesis que esta integración metodológica potenciaría procesos investigativos, obtención de resultados y toma de decisiones.

Para responder esta pregunta se ha venido desarrollando un proceso de enseñanza-aprendizaje con comunicadores y gestores culturales que lideran proyectos con diversos grupos sociales en Colombia. Los estudiantes e investigadores pusieron a prueba la estrategia metodológica que integra grandes datos y datos densos en investigaciones con grupos sociales singulares en los que aparentemente la combinación metodológica no arrojaría información significativa. En ese sentido, esta ponencia busca compartir los resultados de dicho proceso y algunas reflexiones sobre los desafíos que supone la integración de datos en investigaciones socioculturales.

Title: Disadvantaged by data or not? Changing the power dynamics between disadvantaged young people and the public policymakers

Session Type: Individual submission

Authors:

Name: JILL ROBINSON

Email: jill.robinson (at) mail.bcu.ac.uk

Country: GB (United Kingdom)

Affiliation: Birmingham City University

Abstract: At a time when the growing domination of digital media and communications by global corporations threaten to undermine citizens' fundamental rights, I contend that researchers need to continue to pay attention to the influence of public sector officials over people's lives through the collection, analysis and application of Big Data in their policymaking. This is particularly important with regard to marginalised young people who may be experiencing additional inequalities arising from limited access to the internet as well as from their online activities (Robinson, 2009).

In this paper, therefore, I explore the relationship between Big Data-influenced public policies and the shaping of citizens' social and cultural inequalities through the lens of such marginalised young people. Through the reduction of individuals to anonymous 'types' within officially determined categories such as age, gender, ethnicity, place of birth and home address, Big Data enables officials to make policy and apply it in a 'one size fits all' approach which does not allow any discretion. This may add to young people's inequalities since they lack the power and agency as individuals to challenge decisions which may have an adverse affect upon them.

I draw on initial findings from research set within a reflexive, interactive collaboration with Beatfrecks (a collective based in Birmingham which use creative practices to empower young people). This includes ethnographically-informed fieldwork based on observations, interviews and conversations with members of the company as well as with young people.

By encouraging young people to identify and then give voice to their concerns in public fora and online, I argue that this company may enable them to challenge the normative public sector representation of young people at the margins and in so doing may then begin to reshape the power dynamics between them and policymakers.

Abstract: News media can influence the perception of salience of issues on the public agenda and can bring people's attention and thoughts to specific topics (McCombs & Reynolds, 2009). With growing use of social and individualised media, this role of news media faces a challenge from alternative and citizens' media. In repressive contexts—where mainstream media is predominantly state-controlled and there is lack of media plurality, alternative media can shape public agenda. The study examines how Zimbabweans used alternative and citizens media during the January 2019 internet blackout and how that affected people's attitudes and political opinions. Through a qualitative content analysis of information produced and shared during the blackout, and in-depth interviews with both producers and users of some of the alternative media, the study explores how alternative platforms were employed to circumvent information blackout and to focus the public's attention to particular topics. Limited access to information—worsened by lack of trust in the state-run media—during this period also characterised by violence created high uncertainty about what was happening across the country. Zimbabweans sought and learned about what was happening through SMS and alternative platforms like Telegram messaging application. However, the task of creating news and filtering and fact-checking information, that is normally done by professionals, was left to individual users helping the spread of unverified information, speculation and fake news. The study revisits significant elements of agenda-setting approaches by exploring alternative media use in a global South setting with limited media plurality and excessive control of traditional media. It proffers insights on agenda-setting, intermedia agenda-setting, the relationship between agenda-setting and disinformation, as well as the implications of all these factors on the public's understanding of their environment and each other.

Title: Cultural politics of the city branding: A case study of the Seoul Metropolitan Government

Session Type: Individual submission

Authors:

Name: Taeyoung Kim

Email: tka49 (at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: Since 1995, when the Korean state introduced a local self-governing system to its provinces and municipalities, all the mayors of this metropolitan city elected by direct elections proclaimed its city as a cultural hub of the nation. Indeed, they proclaimed slogans which names represented creativity such as Oh Se-hoon (2006 – 2011)’s ‘creative governance (Changeui Sijeong in Korean)’ exemplified. As cases of Digital Media City and Guro Digital Complex well-explain, terms that were relevant to culture were used in local redevelopment projects. Such instrumentalization of culture keeps in with a recent trend of ‘creative cities’ in other countries (Hesmondhalgh & Pratt, 2005; Bell & Oakley, 2015; Banks, 2017).

Considering criticisms of the vagueness and effectiveness of the ‘creative economy’, however, it is important to examine the political dynamics of these naming as creative (Belfiore, 2009; Kim, C., 2017). In particular, the discourse of ‘creative economy’ and its implementation in policies is subject to the local political dynamics (Kim, T. 2017). That being said, examining the political dynamics and orientations of the Seoul Metropolitan Government in introducing cultural and creative concepts is expected to shed light on how the discourse of ‘creative city’ is translated and manifested in conjunction with local contexts. In order to investigate the political fundamentals of the city branding, it analyzes texts of policy documents and press releases, and explain the results with the discourse analysis.

Title: Access, interaction and participation in the practices of public communication of science in Colombia

Session Type: Individual submission

Authors:

Name: Mabel Ayure

Email: mabelayure (at) gmail.com

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Name: Rosa Franquet Calvet

Email: mabelayure (at) gmail.com

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: Work in progress. This proposal is part of the preliminary results of the doctoral research "Practices of public communication of science in the museums Parque Explora (Colombia) and Cosmo Caixa (Barcelona)". The research presents the relationships generated from the analysis of three types of practices of public communication of science in the Colombian museum Parque Explora. This analysis takes as a starting point the concepts of access, interaction and participation and their possible combinations and transformations from the most recognized models of public communication of science.

The field of public communication of science is relatively recent and in Latin America it is an area with little research development, especially in relation to how museums and science centers create and develop specific practices that communicate science to the public.

The methodology of qualitative approach includes a review of literature that has considered studies in the field of public communication of science, studies of participation in museums and studies developed on science museums in Colombia, Latin America, Spain and Europe between 2013 and 2018. The data collection includes documentation of the museum, observation "in situ" of the three selected practices and interviews with the actors involved in them. The strategy for data analysis is the Qualitative Content Analysis combined with the application of evaluation instruments proposed by previous studies.

Title: Rise of the "Anthropocene": Assessing the Conceptual Contours of an Emergent Climate News Frame

Session Type: Individual submission

Authors:

Name: Hanna Morris

Email: hanna.morris(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: The enormity of climate change poses significant challenges for journalists because its complexities extend far beyond the confines of a photograph or single news narrative. Barbie Zelizer (2004) describes how journalists covering complex crises seek—and eventually establish—a shared, professional consensus of acceptable frames and images that are relied upon for reporting complicated phenomenon. These images and frames manage conceptualizations and visualizations of multifaceted crises that, in fact, require more complex engagements. Stemming from a critique of this journalistic practice of framing, many studies of climate journalism find issue with the establishment of the emaciated polar bear and melting glaciers of the Arctic as predominant images steering coverage. By restricting climate change to the “empty” North with zero relevance to people or everyday life, these scholars lament the lack of a “human” dimension in reporting. “Humanity,” according to these critiques, is largely erased from the journalistic coverage of climate change.

Candis Callison (2014), however, cautions such critiques by pointing out that the Arctic is not empty and is, in fact, home to an array of Indigenous publics. “Humanity” is not erased through the Arctic frame but rather, Indigenous publics and colonial histories of extractivist capitalism are. Rob Nixon (2011) discusses how both climate journalism and scholarly critiques continue to disregard Indigenous people from the climate crisis. The failure to both journalistically represent and conceptually link climate change with the violence of neo-imperial, extractivist capitalism is extremely consequential because it prohibits a fundamental resolution of the crisis. Despite Callison (2014) and Nixon's (2011) crucial interventions, one emergent and very vocal response to the limitations of climate journalism has been a call to replace the Arctic (a setting imagined as absent of “humanity”) with the “Anthropocene” (a “new epoch” imagined as dominated by “humanity” and a generalized “we”). But, indeed, this proposed adjustment of frame will stunt—as opposed to extend—coverage of the climate crisis by obscuring difference and silencing indigenous perspectives.

If climate journalism is to expand in both scope and rigor, reporters must specifically name and reveal the sources/perpetrators of climate change, identify the most severely impacted communities, and feature radical oppositional responses. But the emergence of the Anthropocene frame precludes this possibility by ignoring Indigenous knowledges and shunning radical opposition. In this study, I seek to determine the conceptual contours of the emergent Anthropocene frame in United States climate change reporting. I approach this inquiry through a combined visual and qualitative content analysis of all articles and associated images which contain the term “Anthropocene” in The New York Times, Washington Post, and USA Today. This study is crucial for assessing the composition of an emergent yet understudied climate news frame.

Title: LOUD: Merging the Arts, Music, and Political Economy in a Media Outreach Campaign about Noise Pollution (Video presentation)

Session Type: Video Submission

Authors:

Name: Mark Pedelty

Email: pedelty(at) umn.edu

Country: US (United States)

Affiliation: University of Minnesota

Abstract: This presentation is about LOUD (2018), a community-based music video project about noise pollution in the Salish Sea region of Washington State and British Columbia. As part of an outreach campaign, LOUD uses music and moving images to argue for stricter noise policies and regulations. LOUD is also part of a academic collaboration funded by Mellon's "Music in a Changing Climate" initiative in which ethnomusicologists, composers, and environmental communication scholars are conducting "field to media" experiments in Haiti, Bangladesh, China, Tanzania, and in this case, North America.

As the producer, director, and composer of LOUD, my goal was to actualize the decentering ethic Nuria Almiron develops in her article "Beyond Anthropocentrism" (2016). Speaking in reference to the Political Economy of Communication (PEC) approach, Almiron argues that "Decentering humanity to embrace a truly egalitarian view is the next natural step in a field driven by moral values and concerns about the inequality triggered by power relations" (57). As Paolo Friere argued, it is necessary to "codify" aspirational values so that they can be mobilized to create institutional change (2000, 114-121). That is the goal of LOUD, to aesthetically codify the decentering ethic for sake of achieving an environmental aim. In the video we feature human and more-than-human voices and images in an effort to communicate a basic message: excessive anthropogenic noise is disruptive to living creatures that rely on sound and thus reduces biodiversity.

While it might be unusual to use a political economic approach (Almiron 2016) as the theoretical framework for explaining the aesthetics and ethics of a music video, it is useful in this case. LOUD intervenes in a debate around sound that has primarily taken place in via scientific and technical policy discourses, taking the anthropocentric form that Almiron critiques in her enlightening essay. Using LOUD as a form of illustration, I will argue that aesthetics, economy, policy and institutions are integrally connected and that therefore the arts need to be part of our applied interventions as environmental communication scholars.

Music is essential to that effort. Mark Mattern successfully made that case in *Acting in Concert* (1998), demonstrating through case studies how small groups use music to come together to form communities, communicate shared values, and mobilize.

Because of the centrality of aesthetics to human action and institutions, to focus on science and policy alone so is to replicate rather than challenge the technocratic discourses we seek to critique as environmental communication scholars. Taking up Almiron's call, the LOUD project is an experimental effort to productively decenter the human for sake of fostering biodiversity,

sustainability, and environmental equity. While the results are limited and inevitably flawed, as an experimental arts intervention LOUD was also a revelatory experiment. In this presentation I will discuss the ways in which producing and distributing LOUD provided insights into the political economy of environmental communication at the local level.

0-2:00 introduce the LOUD project

2:00-4:00 introduce the argument for combining aesthetic and political
economic approaches

4:00-9:00 Screen LOUD

9:00-12:00 Complete the argument

Abstract: Fake news has been slingshot to the forefront of the research agenda. The potency of fake news makes it an important topic of research. With its roots in the political arena, little research have focused on fake news in the context of science. Individuals use science information to make health and daily decisions, and false information could result in dire consequences. For instance, false information on vaccinations have repelled parents from providing their children with the necessary vaccinations. Moreover, scientists are also victims of fake science news. False reports could jeopardize their credibility and reputation. With severe consequences at stake, we believe it is timely to expand the application of fake news to examine it in the context of science.

Applying the influence of presumed media influence (IPMI), this study seeks to examine how scientists' attention to fake science news would shape their support for education initiatives and legislations to tackle fake science news. We further introduced personal norm as a mediator between presumed harm on others and support for interventions to tackle fake science news.

To collect data from a representative sample of scientists in Singapore, we curated an exhaustive list of scientists in all 19 public research institutions and six public universities in Singapore. We sent out invitations to Singapore-based scientists to participate in the survey using random sampling. A total of 706 scientists completed the questionnaire, attaining a response rate of 40.9% (based on AAPOR formula 3). The final sample reflected opinions of scientists from different science disciplines and at different stages of their career.

We conducted structural equation modelling to test the extended IPMI model. The model achieved good statistical fit, and the data supported all the relationships proposed by the model. Overall, the model predicted 24.4% of support for education initiatives and 16.0% of support for legislation to

tackle fake science news. Further, the relationship between presumed harm of fake science news on other scientists was more strongly associated with personal norm ($\beta = .27, p < .001$) than it was to attitude toward tackling fake science news ($\beta = .09, p < .05$). On the other hand, the relationship between presumed harm of fake science news on the general public was more strongly associated with attitude toward tackling fake science news ($\beta = .22, p < .001$) than it was to personal norm ($\beta = .10, p < .01$).

Theoretically, this study provided support to integrating personal norm into the IPMI model. The study also validated the application of the IPMI in the context of fake science news. Future studies can test the extended IPMI model in other contexts and examine how other stakeholders perceive fake science news. Practically, the findings inform institutions on key communication messages they can design to boost scientists' support for interventions to tackle fake science news.

Abstract: Public engagement is essential in improving laypeople's daily decision-making processes. To that end, researchers can collaborate with journalists to inform laypeople about the innovations and developments in various research domains. Despite the positive implications of public engagement, literature have revealed a multitude of impediments toward researchers' public engagement. Considering the media's critical role in ensuring the success of public engagement, it is imperative to understand researchers' media perceptions and assuage any media-related concerns that may dissuade them from public engagement.

Majority of extant literature are premised in western contexts, yet the research communication landscape in Asia remains underexplored. Asian countries such as Singapore possess stark differences in their culture and media system as compared to countries in North America and Europe. Moreover, Singapore has invested substantially in different research domains and contributed significantly to the academic community. These factors potentially shapes researchers' public engagement behaviors, making Singapore a worthwhile study context.

This study seeks to compare media perceptions between science researchers and arts, humanities, and social sciences (AHSS) researchers in Singapore. Moreover, this study compares the types of media training that Singapore researchers wish to attend.

We conducted five focus groups (N = 38) with science researchers from different scientific disciplines and three focus groups (N = 25) with researchers from various AHSS fields. Participants were recruited from public universities and public research institutions in Singapore. Junior and senior researchers were recruited to capture the opinions of researchers from varying levels of seniority.

There were stark differences in media perceptions between researchers from science and AHSS disciplines. First, although most participants displayed negative attitudes toward media coverage of research, differences emerged among science and AHSS researchers in terms of their perceptions toward journalists. Science researchers were more antagonistic toward journalists, while the AHSS researchers were aware of the journalists' constraints and barriers. As a result, AHSS researchers expressed more favorable attitudes toward journalists than science researchers did. Second, researchers perceived unequal representation of disciplines. Science researchers perceived AHSS issues to receive more media coverage, while AHSS researchers perceived science issues to receive more media attention. Third, researchers had different concerns regarding the backlash from public engagement. Science researchers feared backlash from publicizing methods of findings that may be ethically controversial (e.g., animal testing, unnatural scientific developments), while AHSS researchers were concerned that their research would evoke societal upheaval (e.g., discrimination, threat to social security).

Researchers from different disciplines requested for different kinds of media training. Science researchers requested for training about the basics of public engagement. However, AHSS researchers were more adept at public engagement and sought personalized feedback about their performance.

The findings can inform research institutions in helping science researchers understand media routines, and organizing targeted training programs based on the researcher's discipline. Future research may consider conducting a content analysis of news articles and media interviews to identify any differences regarding media coverage of science and AHSS research.

Abstract: El cambio climático es uno de los males de mayor envergadura a los que se tendrá que enfrentar la población mundial en las próximas décadas, según la comunidad científica internacional. Además, la preocupación por este problema ha aumentado tras la decisión de Trump en 2017 de abandonar el Acuerdo de París y la reciente advertencia del IPCC del riesgo de incumplir el objetivo de no superar en 1,5 grados el aumento de las temperaturas del planeta en 2100.

A la hora de observar cómo se difunden mediáticamente los mensajes sobre un problema, en este caso el cambio climático, debe tenerse en cuenta que los medios de comunicación no otorgan a todos los temas que incluyen en sus agendas la misma relevancia. La relevancia (salience) es el

grado en que un asunto de la agenda mediática es percibido como importante (Dearing y Rogers, 1996). La investigación en base a esta teoría, que constituye la base de nuestro trabajo, se preguntaría cómo de importante es el cambio climático para un determinado medio analizando tres aspectos de su cobertura: el volumen (la cantidad y extensión de las noticias); la frecuencia (la asiduidad con que se publican y su posible relación con determinados hechos); y la ubicación (en qué medios se publican y en qué lugar dentro de cada medio).

Partiendo de la idea de que la relevancia que otorgan los medios a un problema viene determinada por factores como los tres mencionados, nuestra investigación tiene como objetivo principal describir y analizar la importancia que da la prensa española al cambio climático.

Para llevar a cabo el estudio, se hizo una selección muestral de las ediciones digitales de El País, El Mundo y ABC, que son los diarios generalistas de ámbito nacional de mayor difusión en España. Se analizaron las páginas de información y de opinión, así como los suplementos especiales, desde el 1 de enero al 31 de diciembre de 2017. Se hizo una búsqueda de los términos “cambio climático”, “efecto invernadero” y “calentamiento”, que si bien no tienen el mismo significado, sí son los más extendidos para referirse al cambio climático. La técnica utilizada para la búsqueda fue el análisis de contenido, que se llevó a cabo con el programa SPSS para el tratamiento estadístico.

Los resultados del estudio constatan que la prensa española otorga una importancia relativa al cambio climático; la presencia de este como tema noticioso es significativa, pero viene determinada en gran medida por hechos de relevancia internacional; los medios más progresistas dan una mayor cobertura a este problema; y este no solo tiene cabida en secciones dedicadas a la temática ambiental, sino que tiene una cierta presencia transversal en los diarios.

Title: News Representations of Climate Change in a time of Digital Transformation: A case study from Aotearoa ' New Zealand

Session Type: Individual submission

Authors:

Name: Saing Te

Email: saing.te(at) aut.ac.nz

Country: NZ (New Zealand)

Affiliation: Auckland University of Technology

Abstract: In a time of media mergers and acquisitions, the culling of media personnel has created a precarious outlook for journalism. Today, remaining journalists operate within an atmosphere of professional uncertainty, heightened political and public scrutiny, and a more interactive communication environment (Kovach & Rosenstiel, 2014; Shoemaker & Reese, 2013). Alongside the changes to journalism, news consumption behaviours have shifted. For researchers, the move towards social media and digital news has foregrounded the nuances of online journalism. As such, my content analysis focuses on how Aotearoa – New Zealand's digital news outlets depicted anthropogenic climate change in sampled stories during 2017 (Boykoff, 2007; Entman, 2007; Nisbet, 2010). In examining how the six leading online news sites, Stuff, NZ Herald, TVNZ, Newshub, The Spinoff, and Newsroom have constructed and positioned climate change and its associated issues over a one year period, this paper shows that the relevant news content overlooks the capitalist underpinnings of the ecological crisis and lacks social participation (Brevini & Murdock, 2017; Hackett, Forde, Gunster, & Foxwell-Norton, 2017; Malm & Hornborg, 2014; Moore, 2017). The content analysis reveals that news institutions still struggle to grapple with the enormity and complexity of global warming. My main empirical focus here is the selection of stories, news media frames, and the use of sources. Primarily, news reportage was comprised of technical reports, new scientific research, or assessments of current and future outcomes. News reportage also followed standardised patterns of news gathering, with a preponderance of authoritative figures and organisations used as primary sources (Hall, Critcher, Jefferson, Clarke, & Roberts, 2013; Tuchman, 1978). Of concern here also is the growing journalistic dependency on corporate and institutional sponsorship and the use of preassembled information like press releases, institutional websites, and blogs. These patterns of news construction suggest that the debate over climate change is top-down and this has political, economic, social, and ethical implications. Consequently, one must also ask whether economic and institutional pressures constrain journalists' ability to provide a critical and contextual account of unfolding climate change events. Overall, the findings suggest that in Aotearoa – New Zealand the digital media's coverage of climate change-related issues comports with traditional conventions of news construction and as such, reduces the communicative space for critical discussion and reflection on climate change and its connected issues. The failure of the news media to address the underlying relationships between global warming and capitalism, and the paucity of coverage containing stories, solutions, and ideas for reconstructing a more ecologically just society, serves to disconnect the public from engaging with climate change.

Title: Freedom of expression and public expertise challenged: scientists' views on hidden forms of censorship

Session Type: Individual submission

Authors:

Name: Esa Väliverronen

Email: esa.valiverronen(at) helsinki.fi

Country: FI (Finland)

Affiliation: University of HelsinkiDept. of Social Research

Abstract: The media have become an important arena where struggles over the symbolic legitimacy of expert authority take place and where scientific experts increasingly have to compete for public recognition of their expertise, authority and credibility. Recently the cultural authority of science and science-based expertise has been challenged to the extent that the present time has been termed the post-truth and post-factual era. Paradigmatic examples of this era and “a loud vote against expertise” are the Brexit-vote in the UK and the 2016 presidential elections in the US.

For some time, scientific expertise has been more prevalent and indispensable than ever before but at the same time constantly embattled. New disruptions within academia and new alliances between researchers and those challenging established academic institutions and scientific knowledge are being formed.

This new political climate, the rise of authoritarian and populist leaders in many countries and the growing importance of social media have fueled criticism against established scientific institutions and individual researchers. Public disparagement of expertise and aggressive feedback has left researchers and academics insecure: some feel that it is better to shut up.

The paper discusses the new hidden forms of censorship and self-censorship regarding scientists' roles as public experts. It is based on two web surveys conducted among Finnish researchers in 2015 and 2017. Since the surveys are not representative we will focus on the open-ended questions in these queries, making over 50 pages of scientists' reflection on freedom of expression and the role of expertise in society. Further, we have complemented this data with interviews among 'visible' scientists.

Based on previous research on academic freedom, freedom of expression, 'research silencing' and 'chilling effect' we argue that freedom of expression and academic freedom are closely connected. Scientists are concerned with increasing political and economic control, organizational control, and control from below, e.g. inappropriate feedback from ordinary citizens. This may contribute to self-censorship.

Title: Ireland's Citizen's Assembly, Deliberative Democracy and Environmental Literacy

Session Type: Individual submission

Authors:

Name: Pat Brereton

Email: pat.brereton(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: The Citizens' Assembly was an experimental form of governance, comprising ninety-nine citizens drawn from all walks of life, which afforded them the time, space, and structure to consider complex and important questions of Irish public policy in a comprehensive and deliberative way. Carrying out a content analysis of the complete online results of their activities over two weekends devoted to Climate Change, affords a useful corpus of deliberation using this form of public engagement. The paper will tease out the weaknesses and benefits of deliberative democracy in addressing Climate Change (e.g., Stevenson & Dryzek 2014).

Media and environmental literacy has become one of the key qualifications for active citizenship. Media literacy has been effectively defined as the ability "to access, analyse, evaluate and communicate messages in a variety of forms" (Aufderheide 1993: 6). Today communication scholars stress that both the media's offerings, coupled with social interactions, play a crucial role in understanding (digital) media literacy (Livingstone 2016). Following theoretical considerations around developing robust models of democracy, media literacy has a primary emphasis placed on "knowledge" (Potter & McDougall 2017), "information" (Buckingham, 2007), and "analytical competencies" (Koltay 2011: 217), while great emphasis is generally placed on the development of critical thinking around the complex nature of environmental issues. As acknowledged in the report by the Irish Citizens' Assembly, the development of a deeper form of environmental media thinking is essential towards creating active citizenship and helping to promote a comprehensive strategy for producing a sustainable environmental future.

Drawing on various forms of community engagement, this paper focuses on the production of a toolkit which will include models and strategies for developing "best practice" communication and deliberative democracy protocols and will draw upon studies from various disciplines including Planning, Political Science, Communication and Environmental Sciences. The toolkit will include the following themes (i) how to uncover the climate change concerns of the community or region and designate priority areas; (ii) criteria for identifying appropriate messengers and champions for different segments of society; (iii) how to establish an authoritative and legitimate local contact group or an actor forum for communities under examination; (iv) the importance of conducting open public deliberations on project alternatives and community benefits prior to the submission of a detailed plan; (v) how to develop a community engagement plan; and (vi) how to handle complexity and uncertainty in deliberative democratic settings. A draft of the final toolkit will be presented and elaborated as part of a wider context of political and environmental communications and a desire for citizen engagement in the climate policy space.

Title: Communicating Climate Change in the Post Truth/Post COP24 Era: New directions for media reception and public engagement studies

Session Type: Individual submission

Authors:

Name: Brenda McNally

Email: brenda.mcnally5(at) mail.dcu.ie

Country: IE (Ireland)

Affiliation: Trinity College Dublin

Abstract: ‘Losing the public’ on climate change and/or lack of sufficient concern about climate actions are longstanding challenges for climate change communications. Science and environmental communication researchers have responded by investigating ways of engaging citizens with climate change and have contributed a large literature on two-way communications drawing on dialogic or deliberative processes. These studies increasingly focus on ways of socialising climate change and developing initiatives to bring citizens into the conversation, to make climate change an everyday issue or, given the centrality of (news) media in public debate, by examining the social-shaping influence of media representations. However, the contemporary moment presents novel challenges for research in terms of i) moving public debate towards specific climate action plans and ii) the social impacts of the new media landscape.

Post COP24, international and national policy focus on climate mitigation actions indicates a need to extend communications research and practice to include citizen engagement with climate and energy transition. In other words, research needs to shift from socialising the debate about causes and/or impacts of climate change to engaging citizens with debate and decision-making about the multifaceted processes for reducing carbon emissions. Thus, understanding how citizens perceive and evaluate different levels of climate mitigation action is now urgent. Furthermore, whereas climate engagement studies promote engagement as ‘meaningful communication’ (Corner and Clarke 2017) aimed at overcoming barriers to expert knowledge, transitions and sustainability researchers prioritise ‘meaningful social change’ (Stirling 2014). They argue research needs to move beyond elite concerns with technological, market driven agendas for engagement. In particular, energy researchers, noting the absence of political analyses of transition processes draw attention to issues of justice, inequality and forms of exclusion that accompany societal decarbonisation (Barry et al. 2015, Stirling 2014).

Furthermore, as (news) media are one of the main platforms for public debate about climate policy, citizens’ engagement with mitigation policy takes place in the context of increasing public concern about the credibility of information sources and widespread lack of trust in media organisations (Reuters Digital News 2017). In other words, assumptions of media influence on public opinion or understanding need empirical support in the Post Truth era and new starting points for media studies of climate change. Researchers must now consider the implications of #fakenews and the rise of affective communication associated with social media platforms on public engagement. These conditions indicate that citizens information needs, their media consumption choices and

trusted sources are critical issues for understanding possibilities for public engagement with a just transition.

To address these issues, this presentation discusses key findings from a critical review of literature on media reception and citizen views on energy and climate action (2010 – 2018). The focus is on understanding how the diversity of inter-disciplinary frameworks for analysing citizen's views can advance evaluation and implementation of public engagement with climate action. In doing so, it contributes to conference interest in (in)equality and human dignity in communications, by reflecting on communications related rights with climate mitigation policy and advancing new directions for research to engage citizens with a just transition.

Abstract: Interest in green marketing has been steadily increasing in today's marketplace (Bailey, Mishra, & Tiamiyu, 2018), because as the awareness for environmental issues heightens, so does consumers' positive attitudes towards sustainable, conservation behaviors, like saving water and recycling (Royne, Levy, & Martinez, 2011). When adopting certain behaviors (like recycling and conserving water) in an ad message, consumers sometimes look at the ad medium (a type of communication used to convey an ad's message) itself to help interpret the message in the ad (Dahlén, 2005).

Entities like responsibility invoke more sustainable behaviors (i.e. views towards anti-materialism), and these behaviors are shaped by rewards and punishments (Minton et al., 2012). Altering these rewards can change motivational outcomes, and in addition to enhancing views towards anti-materialism, consumers with involvement-oriented motivations are more likely to recycle when compared to other consumers. Additionally, sustainable advertisements should allow the consumer to feel that he or she is playing a part in helping to sustain the environment (i.e. use a message that shows how the consumer is improving his or her lifestyle to sustain the earth, for example, by mentioning a statement like "uses 50% less water"). This can help to explain the motives for sustainable behaviors which can help explain why some consumers purchase sustainable products (and why they may purchase products like water-conserving shower nozzles).

Consumers could potentially view different ad mediums with sustainable ads at different levels of congruity (highly congruent, moderately congruent, or highly incongruent) when looking at different ad mediums (like magazine versus internet ads). Furthermore, the Limited Capacity Model is used to interpret these differentiating levels of congruence by looking at the potentially differing levels of cognitive encoding allocations.

Additionally, sustainable, water-conservation products are purchased by a particular target market of consumers who may have differentiating opinions (in regards to how digital ads are paperless and typical magazine ads are not), compared to everyday, main-stream consumers, on ad mediums based on their environmental, preservation-based mind-sets. Therefore, to help understand this phenomena, an experiment was conducted using a 2 (sustainable, water-conserving shower nozzle ads versus non-sustainable / regular shower nozzle ads) x 3 (internet ads versus magazine ads versus recycled magazine ads), between-subjects, factorial design via an online experiment. Data were collected (N=270) through the use of a Research Participant Pool that was located in a large Southwestern university.

Research that analyzes water-conserving products is lacking, and, furthermore, by paying attention to water use efficiency as well as water-conserving product performance, product components, source water, energy use, plumbing, and sewer infrastructure, practitioners will be able to create a more comprehensive domain for water conservation (Williams et al., 2013). This study also fosters a usage of both theories together to support an area of research (sustainable advertising) that is new and under researched. Lastly, the advertising industry will be able to use the findings from this research to better target sustainable products within the correct ad mediums to better reach relevant consumers.

Title: Forceful languages and their effects on persuasiveness: Using psychological reactance theory to examine the issue of microplastic contamination

Session Type: Individual submission

Authors:

Name: Huai-Kuan Zeng

Email: miazeng.aa07g(at) nctu.edu.tw

Abstract: Microplastic contamination has become a serious threat to the environment in Taiwan, which is caused by the use of plastics in our everyday life. Microplastics come from various sources, one of which is from plastic debris that will be gradually decomposed into tiny pieces. These tiny pieces are able to pass through water filtration systems, which in turn exist in the ocean, lakes, and rivers, and have a serious negative effect on human health. Therefore, it is important for the public to understand the urgency of this issue and to take collective actions for reducing the use of plastic-related materials in everyday life.

Using psychological reactance theory as the theoretical framework, this study aims to examine the relationships among forceful languages, psychological reactance, and a message's persuasiveness in the issue of microplastic contamination.

Psychological reactance theory (PRT) was developed by Brehm in 1966 with the purpose to understand the factors that result in the failure of persuasiveness of a message. According to Brehm (1981), when individuals perceive that their freedom is threatened, their psychological reactance that is characterized by anger and counter-arguments will occur. When individuals' psychological reactance is evoked, they will try to refute the viewpoints of the message and be less persuaded by the message. Studies on PRT have shown that persuasive messages containing the languages to threaten one's freedoms result in psychological reactance, which subsequently reduces the effectiveness of persuasive messages.

This study adopts an experimental design with two types of messages to understand the relationships among forceful languages, perceived freedom limited, psychological reactance (anger and counter-arguments), and messages' persuasiveness. The two types of messages differ in terms of the degree of perceived threat; one message uses highly threatening languages and the other adopts non-threatening languages. This study uses the following procedure to select the two types of messages: (1) this study content analyzed 128 news articles on the issue of microplastic

contamination that were reported by the two largest newspapers in Taiwan. Four news articles rated as high in perceived threat and the other four articles rated as low in perceived threat were selected as stimulus messages; (2) this study conducted a focus group with five communication graduate students as members. These students were asked to discuss the reasons why a given article was perceived to be high or low in perceived threat, and this study used the results from the focus group to select the high (HH) and low (LL) threatening messages; and (3) a pilot study was conducted to ensure the differences between the high and low threatening messages. The t-tests show that the high-threatening message differed significantly from the low-threatening message regarding their perceived severity ($t = 4.28, p < .000$) and perceived susceptibility ($t = 2.43, p = .021$). The experiment is conducted through an online survey with the HH and LL messages randomly distributed to the subjects. This study expects to receive more than 400 valid questionnaires with 200 for the HH message and the remaining 200 for the LL message.

Country: AT (Austria)

Affiliation: University of Vienna

Name: Ingrid Aichberger

Email: ingrid.aichberger(at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg

Abstract: Journalism has the potential to contribute to environmental protection by reporting on environmental issues. Accordingly, communication scholars are interested to investigate which kind of media coverage is best suited to foster engagement. For instance, research suggests that emotions in the media coverage on climate change can influence the willingness to sacrifice for climate change (Bilandzic, Kalch, & Soentgen, 2017). Hence, it is relevant to know how emotionalized media coverage on environmental issues actually is. However, surprisingly little is known so far in this regard. This is where our study comes in. We analyze emotionalization in the media coverage on environmental issues by using the case of the colony collapse disorder (CCD). CCD describes the syndrome of “large-scale, unexplained losses of managed honey bee (*Apis mellifera* L.) colonies” (vanEngelsdorp et al., 2009, p. 1). The case of the colony collapse disorder is especially interesting as it is less researched than other environmental topics that call for action such as climate change (Cho, 2010; Smith & Saunders, 2016; Suryanarayanan & Kleinman, 2012). Recent research shows an increasing emotionalization in the daily news (Donsbach & Büttner, 2005; Magin, 2017). Accordingly, this study aims to investigate whether this is also true for the media coverage on CCD. In literature, three forms of emotionalization can be distinguished (Leidenberger, 2015): visual, textual, and emotionalization transmitted through music. In our study, we focus on textual emotionalization. Following this framework, we pose the following research questions: RQ1: To what extend is textual emotionalization used in the media coverage on CCD? RQ2: Do the analyzed newspapers differ in terms of textual emotionalization? RQ3: Has the use of textual emotionalization increased over time? To answer these questions, we conducted a quantitative content analysis of news stories in Austrian daily newspapers. We selected the two leading newspaper in the quality segment and the two largest tabloids in terms of reach. The investigation period ranges from 09/2010 to 09/2018. The starting point was chosen because in that month the EU announced to increase the budget for financial support for beekeeping (European Commission, 2010). By using a keyword search in a digital newspaper archive database, we identified 599 relevant news stories. Emotionalization is assessed in two ways: (1) explicit incorporation of positive or negative emotions in the news story (e.g., anger, fear, hope, joy, etc., see Gerhards et al., 2011) and (2) based on rhetorical categories developed by Wittwen (1995). Results show that the media coverage on CCD is highly emotionalized right from the beginning. Interestingly, emotionalization occurs far more often by using rhetorical devices rather than by explicitly

mentioning positive or negative emotions. We identified a broad range of different metaphors (e.g., honey described as “sweet gold”) and neologisms (e.g., “bee killer”). As expected, tabloid papers use superlatives, exclamation marks, and “breathless” syntax to evoke emotions more often than quality papers do. The results are discussed in light of the often-assumed “duality” of factuality and emotions in news reporting.

Title: Communicating Sustainable Finance: Engaging the Public with Strategic Communication

Session Type: Individual submission

Authors:

Name: Nadine Strauß

Email: nadine.strauss(at) univie.ac.at

Country: AT (Austria)

Affiliation: University of Vienna

Abstract: Ever since the Global Financial Crisis 2007-2009 (GFC) and its aftermaths, various political, economic and public voices have been raised that have demanded a more sustainable economic system. Though up to now, recent developments and initiatives (e.g., UN Sustainable Development Goals) have only had a limited impact on the broad implementation of a financial system that is footed on sustainable investment criteria.

One of the reasons why sustainable finance has not reached widespread recognition and support among policy makers, financial experts and business people so far is the fact that the broader public remains fairly uninformed and disinterested about it, thus failing to put public pressure on key actors. To counteract this, one of the main recommendations by the High-Level Expert Group on Sustainable Finance by the European Commission was to “consider ways to empower citizens to engage with sustainable finance” (2018, p. 5). Yet, no large-scale institutional actions have been taken so far to put this endeavor in practice – probably because there is no clear communication and public engagement strategy available.

Although research in various disciplines has identified a range of communication strategies on how to effectively raise awareness for environmental topics (e.g., climate change) among the public (Leiserowitz, 2006; Maibach, 2018; Marx et al., 2007), these findings cannot easily be transferred to the communication of sustainable finance. First of all, sustainable finance is broadly unknown and can be rather considered a niche-theme among the general public. Secondly, financial literacy is generally low among the public, and both academics and practitioners have publicly called for more financial education in schools and universities (Pollard, 2016). And thirdly, changing one’s financial behavior (e.g., switching a bank, reallocating money in sustainable investment vehicles) can be considered a cumbersome hurdle for everyday financial customers.

Hence, the aim of this manuscript is to offer an extensive theoretical discussion and a practical guideline on how to successfully communicate sustainable finance to the desired audiences. By borrowing from disciplines such as environmental communication, psychology, and marketing, various communication strategies will be elaborated that offer gateways for an effective communication strategy within the field of sustainable finance.

While the literature review is still in process, some preliminary insights have already emerged: For example, following Leiserowitz (2006), we know that factors such as personal experiences, affect, imagery, trust, social values and worldviews play a crucial role in influencing the risk perception of climate change. Similarly, it can be argued that the attitude toward sustainable finance might be

affected by personal experiences with financial topics, one's attitude toward the financial sector (e.g., whether having been affected by the GFC), the image and trust someone holds towards the banking/finance sector, but also the social values and world views (e.g., sustainability, environmental protection, altruism) that are important to citizens.

Summarizing, this manuscript provides practical implications for communication professionals, scholars and experts to set the stage for spurring more interest and engagement for sustainable finance among the broader public, eventually aimed at bringing about attitudinal and behavioral change (cf. Kallmuss & Agyeman, 2002).

Title: Environmental Communication with Infographics in the 'Post-Truth' Era

Session Type: Individual submission

Authors:

Name: Lutz PESCHKE

Email: lutz.peschke(at) gmx.de

Country: TR (Turkey)

Affiliation: Department of Communication and Design, Bilkent University

Abstract: In the last decade, a new medial presentation form appeared beside text and image. In spite of all analogous precursors it became an autonomous and journalistic category of the digital epoch: the infographic. There are nearly no scientific news without statistical output. These find their way to the world in form of infographics. Infographics get increasing importance because of data flood and information overloads, supported and exponentiated by social and mobile online media. This holds true for the recipients as well: The request of the keyword “infographics” to search engines multiplied twenty times between 2010 and 2012.

Infographics are discontinuous form of expressions which contain text, image and diagrammatic components. They were subjects of manifold social researches. The author (2019) recently analysed how knowledge is received from infographics by recipients in their leisure time. For his research, he developed a media reception model which considers the voluntarily motivated relevance of recipients. But how effective are infographics with art and design elements for knowledge transfer in the post-truth era? According to Oxford Dictionary, in the post-truth era, borders blur between truth and lies and “objective facts are less influential in shaping public opinion than appeals to emotion and personal belief” (Oxford Dictionary 2016). Accordingly, it should be expected that art and design elements with their emotionalising potential are more influential in shaping public opinion than the objective facts of the diagram.

A recently started reception study analysed the transforming power of a poster exhibition with infographics about renewable energy with different kind of embedded artistic elements and objects. Considering Stengers’ approach of the ecology of practices (2005), the objects of the exhibition can be understood as tool for thinking. Stengers determines thinking as a practice which generates a relation of belonging and becoming. While belonging leads to history of conventions, becoming is the transforming power in respect of the future. She derives the request to resist conventional thinking and calls it, thinking in minor keys, escaping from major keys. This paper will present the contribution of artistic elements to the development of the transforming power. It will be shown that art disbalances the interaction with (digital) data via self-imposed rules and leads to the result, that own thinking habits are put to the test and certain situations in and outside media are rethought.

Title: [Panel] Climate change denial and interest groups in Europe: Political Economy and Ideological denial, Panel description

Session Type: Panel Submission

Authors:

Name: Nuria Almiron

Email: nuria.almiron(at) upf.edu

Country: ES (Spain)

Affiliation: Senior Lecturer at Department of Communication

Abstract: Climate change denial is usually defined as the discourse that questions any of the basic premises of scientific consensus and as mainly a US countermovement promoted by US conservative interest groups. However, climate change denial does exist in Europe and it implies mostly politics, not science. Climate change denial is therefore mostly about ideas and involves a type of implicatory denial which can be labeled as ideological.

This panel presents findings related to the THINKClima research project, focused on studying interest groups in Europe related to climate change denial and particularly to communication strategies and ideological denial. By ideological denial this panel refers to the rejection of an urgent need to address and reconsider the ideas driving both human-induced global warming and the solutions implemented to fight it. In this respect, ideological denial prevents us from addressing the unethical mindset that produces greenhouse emissions and failed solutions –as for instance human diet, human overpopulation or the myths of permanent economic growth and technology as a solution.

The panel includes to this end two papers providing findings on the political economy of climate change denial lobbies and think tanks in Europe, as top communication actors; and two papers on the strategic communication of advocacy interest groups and how they tackle ideological denial regarding climate change.

Abstract: In today's society think tanks (TT) are relevant and influential communication actors trying to shape public policies, the public opinion and the media. Perspectives on TT utility range from pluralist approaches considering the proliferation of TTs as a sign of progress in a democracy to elitist approaches deeming those organizations tools of the capitalist ruling class. Amongst them, critical political economy approaches to think tanks—that is, focusing on power relations—are rare but already include field theory or discourse coalition theories, which display TTs within a network of powerful links and dependencies and help adopting a sociological view to understand the spread of some discourses like economic neoliberal hegemony or climate change denial.

Also, particularly for climate change policies and public opinion, TT output, influence and political economy have been increasingly researched in the United States (US) to unveil the primary role those organisations have played in the promotion of climate change contrarianism and the creation of a right-wing countermovement opposing fighting against anthropogenic global warming. In part since explicit climate change contrarianism appears to be much more tempered in the EU, TT have not garnered a similar degree of academic interest in Europe.

This paper tries to fill both gaps, the need for more political economy approaches in research and the need of more focus in Europe. Particularly, it will present findings from a network analysis of the links of leading European think tanks (ETT) generating knowledge for climate policy decision-making that can be labelled as contrarian. To this end, we have (1) gathered a sample of the most influential multidisciplinary and environment-focused think tanks in Europe using English as the main language and including denial/contrarian/skeptical discourses in their websites; (2) collected all the individual actors linked to them (board members, trustee members and collaborators); and (3) applied a network analysis following the methodology applied in earlier work in the US by Farrell (2016), assessing the overall structure of this network, the links between all individual actors, and examining factors that predict why some actors are more influential than others.

As mentioned above, the analysis of think tanks networks is of great importance to understand the dynamics of discourse creation. However, these dynamics have proven to be very difficult to quantify and illustrate. Through this research we expect to identify relevant links amongst the most influential contrarian think tanks in Europe with all relevant actors linked to them, yielding new information about the structure and function of climate change contrarianism in Europe.

Title: Climate Policy and Strategic Communication: The Dairy Lobby in Europe

Session Type: Panel Submission

Authors:

Name: María Ruíz-Carreras

Email: maria.ruiz04(at) estudiant.upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: The climate change impact of the raising of animals for human consumption has been already highlighted by a number of experts and nongovernmental and governmental organizations (e.g. Steinfeld et al, 2006; UNEP, 2010; UNEP, 2012; Gerber et al, 2013). The role of the dairy industry is particularly important in terms of greenhouse emissions. According to Gerber et al (2010) it contributes to 4.0 percent of total anthropogenic emissions. Methane is by far the largest contributor to total GHG emissions from the dairy sector –accounting for over half of total emissions, while nitrous oxide contributes to between 30 and 40 percent of total emissions. Of all food industries contributing to global warming, the dairy industry is amongst the top ones.

At the same time, the European dairy industry is amongst the five most important industries of the food and beverage sector in the EU. Dairy production represents approximately 15% of the value of common agricultural production and is the first product industry in the EU (European Commission, 2016).

It therefore comes as no surprise that the European dairy industry is a sector with enormous political and economic influence. For this same reason, any climate change policy that may alter or just seen as a threat to the dairy business is highly contested by the dairy interest groups. We do actually know that the dairy industry (alongside the whole food industry) is having a huge impact on the climate change policies, mostly on the controversial and ethically problematic measures that are chosen as a way to reduce emissions (Sherma, 2016). However, who the dairy lobby is and how it uses strategic communication, is under researched.

This paper presents findings of an ongoing doctoral dissertation on the dairy lobby in Europe that attempts to assess its influence in the region. To this end, the political economy of the European dairy lobby is scrutinized in order to unveil the main stakeholders involved (lobbies and think tanks), their lobbying key data and main figures as interest groups lobbying environmental policies.

To collect data, a data mining procedure has been conducted on the Transparency Register database (the register of interest groups maintained by the European Union) with the aim of tracking patterns, classify and clustering data, made associations and identify the main lobbying efforts (targets and activities). This register has been criticized as being unreliable because it is not compulsory, and data is not checked by the European Commission. However, it remains as the main source for lobbying data and activities at the EU level. Overall, results measure the lobbying muscle of one of the industries more influential on policy makers, public opinion and the media through its use of strategic communication.

Title: Strategic visual communication and climate change. Confronting the agribusiness denial discourse by animal and climate advocacy

Session Type: Panel Submission

Authors:

Name: Laura Fernández

Email: laura.fernandez(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: It has been widely argued that the food system in general and the animal agriculture and aquaculture industries in particular play a decisive role in anthropogenic global warming (Goodland & Anhang, 2009; Leip et al., 2010, Scarborough et al, 2014, Steinfeld, 2006). Some of the main problems these industries contribute to include: water pollution and waste, soil degradation and deforestation, energy waste, bio-contamination and diseases, species extinction or greenhouse gas emissions and air pollution. The estimated contribution of the agribusiness to global greenhouse gas emissions goes from 14.5% (FAO, 2014) to 51% (Goodland and Anhang, 2009). Due to this, an increasing number of interest groups point at dietary choices as a crucial variable in climate change mitigation strategies. Amongst the most important interest groups promoting changes in food choices to reduce carbon emissions are climate and animal advocacy groups. These interest groups typically use visual communication as an essential tool to create awareness and attitude change on problems such as climate change and animal suffering, and to counteract representations that deny climate change or distort the realities of nonhuman animals' suffering. In this context, what are the most effective visuals in strategic communication is a common controversy and dilemma. This paper tries to contribute to this discussion in order to help improving climate and animal advocacy confronting climate denialism by the agribusiness.

To this end, the results of a literature review on research focused on audiovisual communication of climate and animal advocacy groups will be presented. The aim of this original review is to gather the main empirical data available to date on the strategic visual communication by animal and climate advocacy –particularly visuals used or identified as potentially useful to raise awareness on climate change and animal exploitation and promote climate change mitigation policies, especially dietary changes. To this regard, the paper will discuss whether visuals used by advocacy groups are able to disestablish the agribusiness discourse promoted by economic interests. Of particular interest is research on two main parameters used by communication scholars, salience and efficacy (e.g. O'Neill, 2013), to measure the effectiveness of visuals in both climate and animal advocacy. Different strategies researched by scholars, focusing especially in those of animal suffering visuals of free-living and farmed animals directly and indirectly affected by agribusiness and climate change, will also be considered (e.g. Swim & Bloodhart, 2015; O'Neill et al, 2013; Scudder & Mills, 2009).

Findings suggests that appealing to emotions and its connections with attitude change (especially regarding dietary choices) is strategic in the promotion of climate change mitigation and the abolition of nonhuman animal exploitation. The use of explicit violent images and moral shock

techniques in relation to nonhuman animal exploitation (Jasper & Poulsen, 1995) seems to be especially remarkable in counterbalancing the hegemonic discourses by creating a sense of outrage “which in turn leads individuals to react in response to it” (Jasper & Poulsen, 1995). The empirical research to date shows that effectivity is strongly related to challenging the agribusiness narrative.

Title: The role of environmental NGOs in Spain in the fight against climate change: discourse and ideology.

Session Type: Panel Submission

Authors:

Name: Xuxa Kramcsak

Email: xuxa.kramcsak(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: Climate change denial can be defined as the stance grounded on discourses that question the scientific evidence about climate change existence and its anthropogenic causes. This view also denies the need of rethinking the capitalistic economic production model, and, therefore, the global challenge and the moral responsibility linked to it. Previous research has shown that climate change denial, at least in the US, is promoted by economic interests and values aimed at perpetuating privileges and power through interest groups, mostly think tanks.

More recently, the concept of ideological denial has been suggested to point out at the refusal to rethink the ideas underlying the causes and proposed solutions to mitigate global warming, which are conditioned by anthropocentric beliefs and which are reported by the Intergovernmental Panel on Climate Change (IPCC). It is necessary to understand that although mitigation plans and strategies have been increasingly promoted by all the IPCC reports, there has not been a significant reduction of global warming emissions in the last decades.

This paper will present the preliminary results of an on-going doctoral research aimed at unveiling whether green non-governmental organizations (NGO) in Spain, identified as interest groups that fight against climate change denial, fall into ideological denial. In particular, the paper will introduce results of a frame analysis regarding the three themes identified in ideological denial by the project THINKClima (2018) following IPCC reports: the denial of animal-based diet and human overpopulation as problems and the trust in technology as a major solution. To this end, a frame analysis following Entman's methodology has been conducted on the four main green NGOs in Spain according to visibility, prestige and importance in relation to their activity and membership. These are: Greenpeace, World Wildlife Fund (WWF), Friends of the Earth and Ecologistas en Acción.

The main goal of the frame analysis was to examine whether the sampled green NGOs contribute with their discourse to disseminate the solutions aligned with the problems detected by the IPCC or, on the contrary, they neglect them. Thus, the three themes (the problems of animal-based diet and human overpopulation and the faith in technology) have been coded to see whether they have been taken into consideration and how in a sample of 1,209 documents.

The hypothesis of the research is that the main green NGOs operating in Spain are impregnated of ideological denialism and thus neglecting to disseminate the information that can objectively be more effective in the fight against climate change. Since these organizations are interest groups who

can be considered disseminators of knowledge regarding climate change, they are thus relevant communication actors which can have an impact on policies, media and the public opinion.

Title: Is There a Medialized Science in China? Findings from Media Coverage on Smog Crisis, Climate Change and GMO Issues

Session Type: Individual submission

Authors:

Name: Lin Shi

Email: lin.shi(at) outlook.com

Country: CN (China)

Affiliation: Beijing Normal University

Abstract: With respect to the relationship between science and society, the most intuitive and direct observation is the increasingly close connection between science and society. On the one hand, science is gradually penetrating into other social fields, providing scientific analysis and scientific judgments for various decision-making; on the other hand, science itself is “more tightly coupled” (Weingart, 2002) with other social systems in terms of connection and interaction. Thereinto, the influence of political, economic and media systems on science is particularly prominent.

Based on this, this study focuses on the coupling relationship between science and media, using “medialization of science” proposed by Peter Weingart (1998, 2001) as a theoretical framework, to investigate how the media (especially the mass media) presents scientific issues and how science news is medialized through this process in the context of China. Three issues, smog crisis, climate change and GMO, from two scientific fields, climate science and biotechnology, are chosen. Combined content analysis and textual analysis on four well-known newspaper, results show that there does exist a medialized science in Chinese media while the degree of medialization varies among different issues. The smog crisis is a case of significant medialization, and the GMO presents a partial medialization case, while the climate change is less medialized. In addition, this study finds that media coverage on science follows an issue-attention cycle and forms a medialization cycle; competition for multiple discursive spaces exists across different media.

This study contributes to the field of science communication in two ways. First, it’s the first attempt to examine the medialization of science framework in the context of China, where scientific literacy and science communication has obtained intensive attention from the academia. Second, it’s helpful to better understand the interaction between science and media, and promote science-related policy-making in a long run.

Title: Datacentres and the press: How the digital sublime obscures critical media reporting on data infrastructure

Session Type: Individual submission

Authors:

Name: Mikkel Eskjær

Email: Eskjaer(at) hum.aau.dk

Country: DK (Denmark)

Affiliation: Aalborg University, Copenhagen

Abstract: Digital communication relies on energy heavy infrastructures which usually have remained discursively invisible. ICT has been enveloped in the myth that it can change “the world without changing the Earth” (Maxwell & Miller, 2012, p. 9). Consequently, the material basis for ICT has, until recently, rarely been a topic in the public sphere. Even media studies have largely ignored this aspect of its own domain (Brevini & Murdock, 2017, p. 11).

The development towards cloud computing, internet-enabled devices, and video streaming has resulted in an explosive growth of data consumption. Datacentres have become the “factories of the digital economy” (Cook, 2017, p. 17). They are estimated to consume 3% of global electricity and accounting for 2% of global greenhouse gas emission resulting in a carbon footprint equivalent to the airline industry (Bawden, 2016). Datacentres have become the symbol of a “black box society” where corporate and public actors collect and store enormous amounts of data about citizens, “while we know little to nothing about how they use this knowledge” (Pasquale, 2015, p. 9).

This study looks at media coverage of datacentres. Since 2015 tech giants like Google, Apple, and Facebook have announced plans to construct six hyperscale datacentres in Denmark. So far, Apple is constructing two datacentres; Facebook is building one with another on the drawing board, and Google has purchased two plots for future datacentres.

Danish news coverage has been mostly celebratory and technical illustrating the lure and fascination with the technological and digital sublime (Mosco, 2004). In addition, new stories frequently report that Big Tech is drawn to Denmark by technical and socioeconomic factors. This includes a high reliability of electric supply, connection to transatlantic communication cables, and access to green energy, allowing Big Tech to run datacentres on renewable energy. Nevertheless, the combined demand for electricity by these datacentres is estimated to require a 10-20% increase in national electricity consumption and 8-10% in CO₂ emission. Few news stories have critically investigated the overall sustainability of attracting international datacentres.

Two research questions guide the study:

RQ1: What are the dominating frames (e.g. technology, economy, environment) in media coverage of datacentres in Denmark?

RQ2: How does traditional media (the press) and digital media (blogs, tweets, etc.) differ in reporting datacentres?

Based on a probability sample (from 2015 - 2018), and combining content analysis and digital methods (Rogers, 2013), the study investigates the distribution of thematic frames and generic frames across Danish press and online reporting.

As Denmark is set to become a hub for international datacentres, the study explores to what extent the traditional and digital public sphere manage to cover underlying implications of this development. This includes questions of tax breaks for tech giants, and environmental issues of how (and to whom) renewable energy is distributed. But it also implies questions of privacy and surveillance (Hogan, 2015), and the environmental consequences of digital lifestyles based on endless data consumption.

Title: DISCOUNTING INDIGENOUS KNOWLEDGE SYSTEMS: FOOD SECURITY AND CULTURAL SURVIVAL IN THE ANTHROPOCENE

Session Type: Individual submission

Authors:

Name: Tyrone Hall

Email: TYRONE.HALL876(at) GMAIL.COM

Country: CA (Canada)

Affiliation: York UNiversity

Abstract: The intensification of unprecedented anthropogenic climate change lays bare the existential implications of discounting the value of indigenous knowledge. As indigenous scholars such as Agrawal (1996) observes, focussing on indigenous knowledge shifts from the West's enlightenment-infused preoccupation with centralized, technically oriented solutions, which continues to fail to improve the prospects of the world's poor and near poor. Likewise, Brokensha (1980), notes that ignoring people's knowledge is akin to ensuring failure in macro-societal planning and development. My paper draws upon fieldwork from seven rustic hamlets from across Andhra Pradesh, South India to highlight how indigenous knowledge gains vitality from being deeply implicated in people's lives, which has enabled these societies to cope with waves of geologic change over centuries. It then highlights how a lack of regard for the holistic knowledge systems in traditional and indigenous contexts results in the current wave of climatic change confounding well honed and adaptable knowledge systems. My paper explores key cultural and existential implications of the destabilization of the integrity and utility of indigenous knowledge systems in the seven resource dependent contexts. The paper also illustrates how the homogeneity induced by the Green Revolution and the limitations of ex situ conservation as a means of preservation foments and exacerbates fissures in the traditional social order, which further undermines adaptive capacity amidst climate change. The primary conclusion is that a deeper socio-cultural purview is needed. Thus, the paper highlights how religion, the traditional order, as well as, the collective risk perception and motive might be leveraged to enable agency to sufficiently tackle the existential implications of crop failure and broader livelihoods implications of climate change.

Title: Exploring the antecedents and behavioral outcomes of scientific consensus on climate change: An extension of the Gateway Belief Model

Session Type: Individual submission

Authors:

Name: Tsung-Jen Shih

Email: tjshih(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chengchi University

Abstract: Uncertainty is an important characteristic of the post-truths era, where a reality may be contested or perceived differently by groups with distinct purposes. Understanding how the general public makes sense of uncertainty and how uncertainty should be communicated, therefore, is vital. In the case of climate change, the uncertainty surrounding its evidence and the perception of consensus among scientists may affect how people perceive the issue. The Gateway Belief Model (GBM), which posits that people's scientific beliefs are heavily influenced by their perception of whether scientists agree with each other, provides a pertinent framework for the examination of the impact of uncertainty.

Research supportive of the model has been found in issues such as climate change (Ding, Maibach, Zhao, Roser-Renouf, & Leiserowitz, 2011), genetically modified food (Dixon, 2016), and the association between autism and vaccine (van der Linden, Clarke, & Maibach, 2015). For example, Ding et al. (2011) found that people who perceived higher disagreement among scientists were more uncertain about climate change and were less supportive of climate policy. However, although the GBM stipulates the impact of perceived scientific consensus, it does not attend to the predictors of such consensus. In addition, this line of research primarily focuses on the attitudinal consequence of scientific consensus, such as attitudes toward climate change or policy support. This study, therefore, extends the GBM by investigating the antecedents and behavioral consequence (i.e., civic actions related to climate change) of perceived consensus.

This study employs a nationally representative survey of Taiwanese adults. Conducted between June 29 and July 5, 2018, the survey interviewed a total of 1,111 respondents, including 907 from landlines and 204 from cell phones. The margin of error was $\pm 3.32\%$, based on the 95% confidence interval. The final sample size was 1,046 after removing respondents who have not heard about climate change.

The results showed that the perception of science as a debate between alternative positions (i.e., higher scientific uncertainty) was negatively associated with perceived consensus, whereas knowledge was positively related to it. In line with the GBM, the scientific consensus negatively predicted belief uncertainty about climate change. In terms of civic actions, which is the potential behavioral outcome examined by this study, the results fail to confirm its relationship with perceived consensus. On the other hand, the more uncertain people were about science in general, and about evidence in relation to climate change specifically, the less likely they were going to take civic actions. Further analysis indicated that the effect of perceived consensus on civic actions was mediated by uncertainty about climate change.

In conclusion, this study corroborates the GBM by linking perceived consensus directly to belief uncertainty, and indirectly to civic actions. This conforms to previous research which suggests that

people's action may be delayed because of the uncertainty inherent in science or among scientists. Moreover, this study suggests that, by increasing people's level of knowledge and by avoiding presenting science as only temporarily tenable, people's perception of scientific evidence may be closer to that of the scientific community.

Title: THE PRESIDENCY OF THE PORTUGUESE REPUBLIC AND THE FIRE OF OCTOBER: ANALYSIS OF CRISIS COMMUNICATION ACCORDING TO SCCT

Session Type: Individual submission

Authors:

Name: BIANCA TONIOLO

Email: bianca.toniolo(at) ubi.pt

Country: PT (Portugal)

Affiliation: UNIVERSITY OF BEIRA INTERIOR

Name: GISELA GONÇALVES

Email: gisela.goncalves(at) labcom.ubi.pt

Country: PT (Portugal)

Affiliation: UNIVERSITY OF BEIRA INTERIOR

Abstract: The object of this study was the communication produced by the Press Office of the Portuguese Presidency (PRP) for the October Fires. We investigated whether the adopted communication strategy produced the appropriate response to the type of crisis according to Coombs Situational Crisis Communication Theory (SCCT) (2007).

As theoretical framework, we studied the concept of public relations applied to crisis management. From there, we present a brief bibliographical review about the pure asymmetric model or public information model and about the press office as a tool of public relations. The data were analyzed according to Coombs' Situational Crisis Communication Theory (SCCT) (2007), which proposes a set of guidelines that facilitates the identification of the type of crisis, its respective dynamics and indicates the most appropriate crisis response strategy to protect the reputation of the organization involved. We used the content analysis as methodology for this study. The PRP communication during the October Fires was categorized according to Coombs SCCT (2007), delimited by the observation of press releases and press conferences made available by PRP's press office. The selection of content was done through the search tool available on the PRP website with the keyword "fires" covering the categories News, Interventions, Messages and President of the Republic. The review material covered all publications between 15 and 28 October 2017, which was two weeks after the outbreak of the crisis.

The October Fires crisis belongs to the Accidental category, since there was no intentionality on the part of the PRP. As a subcategory, the most appropriate framework was Challenge, with minimal liability impact and moderate reputation threat. By sharing responsibility for the crisis with the Government and other stakeholders, the potential impact on PRP's reputation has been moderate. In relation to the crisis response strategy, the PRP adopted the Meaning Management, an efficient strategy to minimize the effects of the crisis, as it acts on the stakeholders' perception. In addition to an Adjustment Information strategy, the PRP communication reflected efforts to manage the meanings of the crisis, reduce the ambiguity and the psychological effects caused. The positive PRP assessment of over 69% between May and November 2017 indicated a reputation for PRP's positive relationship with the Portuguese population.

The analysis of the crisis according to Coombs (2007), as well as the characteristics of the content of the PRP crisis communication for the October Fires, were sufficient to confirm the appropriation of the chosen response strategy. The messages issued by the President of the Republic, through his Press Office, have generated positive effects for the information of the portuguese population and for the preservation of the institutional reputation of the PRP. The hypothesis that only the publication of press releases and the holding of press conferences would not be sufficient to produce adequate responses and preserve the institutional reputation has been refuted. We concluded that press counseling was a sufficient public relations tool to positively communicate and influence public opinion due to its rhetorical perspective and character persuasive.

Title: From 'Life Takes Energy' to 'Keep Canada Working': The Evolvment of Canadian Petro-Rhetoric (Video presentation)

Session Type: Individual submission

Authors:

Name: Siboc Chen

Email: siboc(at) sfu.ca

Country: CA (Canada)

Affiliation: School of Professional Communication, Ryerson University

Abstract: As Barney (2017) argues, “infrastructures that enable the extraction, storage, and transportation of resource commodities [...] have been idealized not only as instrumental to the Canadian economy but, moreover, as materializing the Canadian nation” (p. 79). Indeed, Canadian politics since the beginning of the 21st Century have been characterized by continuous public controversies over fossil fuel infrastructures, such as the Northern Gateway Pipeline, the Energy East Pipeline, the LNG Canada Project, and the Trans Mountain Pipeline Expansion.

In response, there has been a growing body of critical communication scholarship addressing the communication aspect of Canadian extractivism. Drawing upon the theoretical insights offered by this research stream, this study examines the evolvement of Canadian petro-rhetoric as exemplified by two high-profile public campaigns: “Life Takes Energy” and “Keep Canada Working”. Launched back in 2014, “Life takes Energy” was arguably the most prominent public campaign focusing on legitimizing the Northern Gateway Pipeline among the Canadian public, especially those living in British Columbia. Meanwhile, “Keep Canada Working” was funded by the Alberta government in 2018 with a focus on recruiting national support for the Trans Mountain Pipeline Expansion.

By attending to the semiotic constructions of ordinary Canadians’ relationship with fossil fuels from the two campaigns, this study seeks to contribute to the ongoing scholarly discussion on Canada’s petro-nationalism. Specifically, the discursive tactics found in “Life takes Energy” suggested the omnipresence of petro-modernity, with the traditional “job versus environment” rhetoric being replaced by narratives that emphasize the centrality of fossil fuel to everyday life and downplay the urgency of radical post-carbon transition (Szeman, 2013). By contrast, “Keep Canada Working” sought to mobilize Canada’s petro-block by framing environmental disputes as a conflict between “foreign-funded radicals” and “ordinary working Canadians”. What makes this trend worrisome is its adoption of right-wing populism. Although such shift can be considered as the oil and gas sector’s defensive mechanism under mounting public pressure on sustainable development, it nonetheless creates an extremely powerful wave of attacks on anyone who oppose Canadian extractivism. As such, I argue that discourses found in “Keep Canada Working” fundamentally weaken the deliberative aspect of a valid legitimation process and should raise concern among critical communication scholars.

Affiliation: An Nguyen is Associate Professor of Journalism in the Faculty of Media & Communication. He has published four books and about 40 papers/chapters and industry reports, in several areas: * digital journalism, * digital news consumption/citizenship,

Abstract: Based on in-depth interviews with twenty-one science reporters and four senior editors in Vietnam, this paper uses this country as a case study to illuminate the many professional issues and challenges that science journalism in the Global South faces. Like any developing country, Vietnam depends heavily on an informed adoption and proper local appropriation of science and technology from scientifically advanced countries to progress, grow and develop. The news media, as the major and most effective communication channel to inform and engage public and policymakers with new science developments, play an instrumental in such development. This is especially crucial in areas of contested science developments that carry crucial benefits but also pose huge risks for developing societies, such as GM technology, stem-cell research, nanotechnology or artificial intelligence. Yet, our initial findings show that, while Vietnamese journalists lack the essential professional knowledge and skills to deal with science events and issues, having reported science for some time, several still struggle to define what science journalism is or should be about. They generally disregard the local relevance and importance of controversial science developments, and when they pay attention, they rely heavily on foreign sources and are uncritically skewed toward benefits at the expense of proper reporting of risks, including risks that are highlighted in the country's development. Also, with less than enthusiastic support from science-unqualified editors and news executives, they tend to sensationalise science to attract the audience, with some disastrous consequences that we will examine through several case studies. Added to these are a number of challenges and obstacles from outside the newsroom, including insufficient and reluctant cooperation of local scientists, political control on science and policy reporting, and commercial influences. Discussing the implications of such problems in the general literature about science journalism in developing countries, we will discuss how the situations could be changed for the better and who should play the central roles in that process.

Title: Climate of the Anthropocene: A Historiographic Analysis of Anthropogenic Climate Change Discourse

Session Type: Individual submission

Authors:

Name: Ryan Wallace

Email: ryanwallace(at) utexas.edu

Country: US (United States)

Affiliation: University of Texas, Austin

Abstract: Climate science, politics, and even economics are widely present in contemporary discussions of human-caused climate change, but one component is often ignored—history. Borrowing from the traditions of environmental historians, this study seeks to blend communications methods of textual analyses with historiographic methods to investigate how anthropogenic climate change is discussed in modern literature. Comparing the works of historians with those of journalists and public intellectuals, this study gives a uniquely interdisciplinary view into how climate change is framed by diverse authors with different epistemological and methodological approaches. While the books analyzed in this corpus primarily deal with events of the past, they also have significant roles in guiding today’s media landscape on the topic, and informing policy-making of the future. Ranging from deep histories that have a global span, to brief histories with only one species at the center of the narrative, books written on the subject by environmental historians show a wide variety in topics with similar methodological approaches. They share archives, references, and most importantly a common vocabulary. Journalists and public-intellectuals, on the other hand, tackle similar historical narratives amongst themselves—particularly focusing on those since the period known as the “Great Acceleration”. Without strong scholarship or training in the methodological approaches of any one discipline, but a familiarity with many, these generalists adopt vocabulary and strategies from others, but lack the ability to critically examine their sources of information. Instead, they rely primarily on the words of experts in the field to develop their narratives. They bring with them their own stylistic traditions, their own bias for living sources of information rather than archives, and an ability to forecast into the future in a way that most historians would not do. Ultimately, although they may share similar timelines and at times similar methodologies, the climate change literature put forward by journalists is distinctly different from that of official historical texts. The value of these works is immense, and though journalistic works or those of public intellectuals may have larger public appeal, this study illustrates the strength of narratives that are constructed by environmental historians and historians of science. This is not to say that authors should leave history to the historians—but rather, that in the future it will be important that journalists and other academics work with historians to provide more comprehensive, critical, and cogent histories of humanity and its impacts on global climate change.

Title: Media use and public perceptions of artificial intelligence in China: Evidence from an online survey

Session Type: Individual submission

Authors:

Name: Di Cui

Email: cuidi2009(at) gmail.com

Country: CN (China)

Affiliation: Fudan University

Name: Fang Wu

Email: wufangwf(at) sjtu.edu.cn

Country: CN (China)

Affiliation: Shanghai JiaoTong University

Abstract: Artificial intelligence (A.I.) is a fast growing area of innovation that draws worldwide attention. Having benefited substantially from developing Internet-related technologies, the Chinese government makes new commitments to boost the A.I. industry. With enormous investment from government and business, China is already among the global leaders in the research and development of A.I.. Though A.I. has increased in applied relevance, it is still an ambiguous and perplexing phenomenon in the public eye. Most of the Chinese public feel optimistic about A.I. and its potential benefit to the society, but they also have concerns that A.I. might bring risks (CISTP, 2018).

In contemporary societies, media play a main part in interpreting scientific progress for the public. Use of scientific media shapes how the public think and perceive new technologies. This pilot study explores the way Chinese people's risk/benefit perceptions and policy support of A.I. are linked with communication factors (i.e., traditional media and new media), cognitive factors (personal relevance, perceived knowledge) and affective factors (negative emotions and deference to scientific authority), and demographics. Data were obtained from an online survey based on a national sampling pool, from which we randomly recruited participants in November 2017. A final sample consists of 738 valid respondents.

Results show that respondents' score of benefit perception is higher than risk perception. Policy support is also high among respondents. This indicates that the Chinese public perceive A.I. to be a technology with more benefits than risks and have supportive attitudes towards it. Demographic variables have little to zero influence on dependent variables. Regarding cognitive factors, personal relevance is a consistent predictor of risk perception, benefit perception, and policy support. Perceived knowledge is not associated with any dependent variables. Deference to scientific authority can positively predict benefit perception and policy support. Negative emotions towards A.I. seem to drive people to elaborate more on the technology and therefore increase both risk and benefit perceptions. Overall, emotional factors played a more important role than cognitive factors in shaping respondents' perceptions of A.I..

Results showed that no media sources are significantly correlated with respondents' risk perception. Both traditional and online media must report major issues in favor of the government policies. Since the Chinese government is supportive of A.I., the media agenda is likely to portray

the technology in positive lights. However, media channels vary in their effects on benefit perception and policy support. Specifically, use of television and WeChat for information about A.I. are positively associated with benefit perception and policy support, but the association between newspaper use and these two dependent variables are negative. Regarding the interaction effects, a tenable conclusion is that personal relevance moderates the effects of newspaper and television use on benefit perception and the effects of newspaper use on policy support. For those with higher personal relevance, they receive less influence from television and newspaper than respondents with lower personal relevance in attitude formation. Personal relevance as a cognition-related factor could mitigate the influence of television and newspaper use.

Title: The visual imagery of climate change induced migration: NGOs representations of human mobility in the context of a changing climate.

Session Type: Individual submission

Authors:

Name: Maria Sakellari

Email: sakellari(at) gmail.com

Country: GB (United Kingdom)

Affiliation: School of Media, University of Brighton

Abstract: Migration is one of the most profound impacts of climate change on the human population, but there has been little action by international policy bodies and national governments to address the issue. In the absence of government action, non-governmental organizations (NGOs) can play important roles, both raising awareness of climate change induced migration and advocating for policy reforms on this issue. Visual narratives are particularly important as most people have never experienced physically human mobility in the context of a changing climate. In this regard, this study aims to delve deeper into the underexplored but critical role that NGOs visual representations play in constructing a public narrative of climate change induced migration. It seeks to fill a gap in current scholarship on the importance of NGOs visual imagery in climate mobility discourses. The first question asked concerns the meanings of the images themselves: What do images used on NGOs dedicated websites and online blog postings show? The second question asked concerns the interplay of words and images: What is these campaigns are trying to communicate? Are the dominant discourses of climate migration in NGOs online campaigns different from those communicated by the news media, policy, and other arenas? For this purpose, this study first explores the nature of the public discourses of climate change induced migration. Then, through critical discourse analysis and using the paradigmatic case of the United Kingdom, it explores NGOs online campaigns' imagery, and how it connects with accompanying texts to construct climate migration as a discursive object. Findings show how NGOs are framing the narrative about consequences rather than causation of climate change induced migration. This limits openness to multiple ways of thinking about human mobility in the context of climate change. It also puts in question the ability of NGOs climate advocacy campaigns to affect the root causes of social vulnerabilities to climate change.

Title: Japanese View of Nature and Environmental Communication

Session Type: Individual submission

Authors:

Name: Miki Kawabata

Email: kawabata(at) mejiro.ac.jp

Country: JP (Japan)

Affiliation: Mejiro University

Abstract: The purpose of this research is 1) to identify Japanese view of nature with a survey data, and 2) to discuss the effective environmental communication, especially focusing on media frames about environmental issues for the sustainable future. According to the National Institute for Environmental Studies in Japan, the nation-wide opinion survey about environmental issues in 2016 showed that 39.6 percent of the respondents answered that journalists and pundits in mass media are the most trustworthy sources for environmental issues. Although mass media has been one of the main sources of the information about the environmental issues in our daily life, there is a debate if it serves as the effective environmental communicator for promoting audience's eco-friendly attitudes and behaviors. Neuman et al.(1992) found out that mass media and audience tend to employ different frames to describe and understand the same political issues in the society. If we apply this result to the environmental issues, there might be a discrepancy between the media frame and the audience frame about the issues. The attitude toward nature may affect the audience frames to understand the information about environmental problems in the media. Hayashi et al (1994) conducted a nationwide survey about Japanese view of nature in 1993 and found that those who had nature-oriented way of thinking tend to have the opinion that humans should not trim out or change the nature even for the maintenance. They argued there were more people who think nature should be untouched by humans and less people who think nature should be controlled by humans than 10 years before. When mass media brings up the issues about environmental exploitation or preservation, it covers the issues mostly without considering those audience's views and attitudes. In order to identify the attitude structure toward nature and environment in Japan after 25 years from Hayashi et al.(1994) 's study, an online survey was conducted to the sample of wide range of age groups in Japan in early 2019. The author analyzes the result and discusses the current Japanese view of nature and attitude toward environmental issues, and compares the result with Hayashi et al. (1994). Conclusively, the author discusses what kind of media frames should be used for better environmental communication in Japan.

Title: New media, new practices' The potential to bridge gaps in public understanding of environmental issues through critical digital practices

Session Type: Individual submission

Authors:

Name: Trish Morgan

Email: trish.morgan(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: This paper reports on findings from a project, funded by the Environmental Protection Agency of Ireland, that engages with alternative digital media perspectives on communicating environmental issues.

In terms of public understanding of environmental matters, this paper acknowledges that the media are key drivers. However, they have been revealed to be compromised in terms of commercial and content-related pressures (Morgan 2017; Hansen & Cox 2015; O'Neill 2013). Furthermore, the 'framing' of environmental stories in the media can be problematic, with issues of 'false balance' diluting the perception of the scientific consensus on climate change (Ashe 2013; Boykoff 2013; House of Commons Science and Technology Committee, 2014). However, perhaps the most significant recent and developing threat has been the rise of right-wing nationalism and populism, and its effects on communication of environmental issues (Carmichael and Brulle 2018).

Therefore, knowledge gaps in the public understanding of environmental matters are complex, with questions around the efficacy of traditional and digital mainstream media to bridge those gaps. As critical communication perspectives show, there exist significant and growing power relationships between the industrial and commercial producers of culture, and the audience. Critiques of such commercialisation are well-established, ranging from Adorno (1991/1936), in relation to so-called 'mass' media, to Fuchs (2012) and Shimpach (2005) who critique the enclosure of user data for the purposes of selling it for profit in digital contexts.

This paper contends that there exists an opportunity to bridge a knowledge gap in public understanding of environmental issues, by using digital cultural practices in ways that are engaging and informative. The project also argues that the threats posed by ecological crisis are vast enough to challenge ideas of the 'two cultures' (Snow 1956) of separate disciplines of the 'affective' humanities and the 'rational' sciences, and require problem-solving on both fronts. Therefore, there exist opportunities to increase public awareness of environmental issues by working with scientific or environmental data in non-commercial ways. Cohorts such as 'critical makers' engage with issues of enclosure, they champion free and open-source software and are concerned with collaborative practices and sharing (Morgan 2012; Parikka 2013; Dieter 2014; Wakkary et al 2015). They are a cohort of technically skilled practitioners who also have concerns with the social, economic, environmental and ethical dimensions to technology (O'Neill, forthcoming). Such practitioners are therefore in a unique position to investigate the role of urban data and sensing

including 'smart' infrastructure, while also communicating environmental issues in alternative ways.

From the critical communications perspective therefore, the relationship between digital media and the environment is potentially positive, once we acknowledge certain digital practices as a cultural domain that can use technology as a tool, yet also be critical of it. Makers, hackers, and critical engineers can contribute to discourses of the role of technology (networked and physical) in societal contexts. Such practices can move beyond traditional discourses of the role of media in communicating environmental issues, and consider radical alternatives to digital communication of such urgent issues.

Title: #mybloodywaste Environmental activism with tampons, pads and no blood and the potential of Ecoculture Jams in pedagogy and practice

Session Type: Individual submission

Authors:

Name: Franzisca Weder

Email: franzisca.weder(at) aau.at

Country: AT (Austria)

Affiliation: University of Klagenfurt, Dep. for Media and Communication Studies

Abstract: As media and communication scholars we're fascinated by frames, practices, and symbols used in public discourses. Culture jams are acts of creative resistance to hegemonic messages and dominant claims in the public sphere, are a form of activism that relocates existing connections of power, meaning and common ways knowledge is represented, perceived, and practiced (Lasn, 2000; Milstein & Pulos, 2015). With Milstein, we position ecoculture jams as specific forms of "envirosocial activism" to inform creative and playful activist tactics and engage students as well as teachers in change agent-focused learning. Thus, an ecoculture jam can be described as higher education assignment in environmental studies but as well in communication studies with a focus on environmental issues, sustainability and climate change or risk communication. Furthermore, this specific problem-based learning project collaboratively generates transformation in environmental communication (Woodside, 2001; Nome, 20012; Dery, 1999).

In 2018, after debating a variety of communication strategies to engage the public in raising awareness about environmental problems as well as solutions, mainly debating waste and problematizing plastic packaging, a group of students in my environmental communication class used an ecoculture jam as creative mean to "create cracks in underlying systems of power, and to promote unsettling moments of reflection and debate" (Milstein & Pulos, 2015, p. 397; de Certeau, 1988). Over the two-semester course, the students became acquainted with the issue of female hygiene products, practices of wasting the (plastic) packaging, negative framing as well as stigmatization and taboos communicatively woven around this issue in the public. With the ecoculture jam entitled #mybloodywaste, the students got engaged to create an "unsettling moments of reflection and debate" and stimulate further communication.

With a funding from the University we bought 17.000 products, more precisely 311 boxes of tampons and pads (amount an average woman needs throughout her lifetime) and stapled it in the inner city of our town, together with an invitation to all people passing by to join in (direct communication) and stimulation of the discourse via social media and comments in newspapers (indirect communication). Afterwards, the products were donated to a social organization and the stimulated discourses were analyzed.

Overall, with the ecoculture jam, students were supported and motivated to take action, mobilize, and actively engage with their environment by creating moments of disequilibrium where change can happen, stimulating consciousness, reflexivity on contested truth and critical awareness of human rights (Darts & Tavin, 2010; Harold, 2007).

In our contribution and with the #mybloodywaste-example, we put ecoculture jams up for discussion as being particularly relevant for environmental communication scholars, pedagogues, and practitioners, feeling their “ethical duty” (Cox, 2009) in search for innovative teaching methods with a social and environmental impact.

Abstract: L'importance de la communication portant sur les changements climatiques fait intervenir une multiplicité d'acteurs en compétition pour l'interprétation légitime des observations faites par la science du climat. Lorsqu'on analyse les discours sociaux sur cette problématique, l'impression première est que les contenus discursifs ordinaires sont beaucoup moins consensuels que les discours savants et institutionnels sur la question des changements climatiques. La manière dont ce fait a été analysé a été prioritairement de pointer un déficit de compréhension. Par conséquent, un travail d'information, d'éducation et de vulgarisation a été identifié comme la solution au problème que constitue le « manque d'informations » lié à la question climatique contemporaine (Wolf et Moser, 2001).

Cependant, d'autres chercheurs ont montré que la dimension cognitive ne saurait à elle seule rendre compte des attitudes puisque dans certains contextes, des individus éduqués et bien informés sur la question adoptent malgré tout un déni des changements climatiques. Dès lors, la corrélation entre information et attitude ne saurait être inférée de manière systématique. C'est pour remédier à ce problème que certains chercheurs ont critiqué la thèse du déficit de compréhension pour proposer à la place un modèle du cadrage socioculturel en vue de rendre compte de manière plus circonstanciée des différentes attitudes. Dans le cadre d'une étude menée par le Yale Program on Climate Change Communication sur plusieurs années, les chercheurs ont ainsi pu segmenter la population américaine en six profils spécifiques relativement à leurs croyances et attitudes face aux changements climatiques (Leiserowitz et al., 2009). L'intérêt de cette partition est de ne plus mettre uniquement l'accent sur l'accès à une information factuelle, mais également de tenir compte des croyances et des cadres interprétatifs des personnes.

Dans notre communication, nous partirons de l'important travail de Hulme (2014) pour analyser les différentes visées éthiques portant sur les changements climatiques. Ce chercheur soutient que le

changement climatique est plus un phénomène politique et culturel qu'environnemental et distingue quatre thèmes récurrents dans les discours portant sur le climat à l'heure actuelle : la perte (du passé), la peur (du futur), le désir (de maîtrise) et la justice (sa poursuite). Cette dimension symbolique servira de trame en vue de déterminer dans quelle mesure elle est susceptible de rendre compte des récits identifiés dans notre corpus. À travers ces tropes narratifs, il s'agirait ultimement de lire les discours analysés comme des instanciations éthiques d'un métarécit dans une conjoncture historique où les individus et les communautés effectuent une transition à la fois matérielle et symbolique en réponse à un contexte de crise majeure.

En recourant à une analyse de contenu thématique, nous analyserons ensuite cette typologie symbolique à la lueur des différentes éthiques de l'environnement identifiées que sont l'anthropocentrisme (centré sur les intérêts de l'être humain), le biocentrisme (centré sur la préservation de la vie) et l'écocentrisme (centré sur l'interdépendance des systèmes naturels et sociaux).

Title: Transgenic Maize vs. Organic Farming: An Analysis of Greenpeace Mexico's Discourse on Food Security, Food Sovereignty and the Right to Food

Session Type: Individual submission

Authors:

Name: María Luisa Azpíroz

Email: mazpiroz(at) up.edu.mx

Country: MX (Mexico)

Affiliation: Universidad Panamericana

Abstract: At the World Food Summit convened by the Food and Agriculture Organization of the United Nations (FAO) in 1996, it was established that “food security exists when all people, at all times, have physical and economic access to sufficient, safe and nutritious food that meets their dietary needs and food preferences for an active and healthy life.” The concept of food sovereignty was developed as an alternative to the neoliberal model of development and industrial agriculture based on free trade, where some critics have placed the concept of food security. The initial definition of food sovereignty is attributed to the transnational organization Vía Campesina which, at the Alternative Forum to the 1996 World Food Summit, described it as “the right of peoples to healthy and culturally appropriate food produced through ecologically sound and sustainable methods, and their right to define their own food and agricultural systems”. Other critics have associated the concept of food sovereignty with a Marxist view of the political economy. For its part, the human right to adequate food is a legal concept that protects the rights of all human beings to feed themselves with dignity, either by producing their own food or by acquiring it. This right is included in the Declaration of Human Rights of 1948 and in the International Covenant on Economic, Social and Cultural Rights of 1966, and has been recognized in various national constitutions, including the Mexican Constitution since 2011.

Scholars have stated that Greenpeace often takes a double position in the face of confrontations between the supporters of liberal globalization and the alter-globalist militants. For example, it is present as a negotiator at WTO summits and economic forums such as Davos, but also as a participant in the corresponding counter-summits (Fréour, 2004). This research analyzes Greenpeace Mexico's discourse on the concepts of "food security", "food sovereignty" and "right to food", to determine their position at this regard. The methodology consists of a qualitative and quantitative analysis of Greenpeace Mexico's press releases and articles that include these concepts. First, the approach to framing of Benford & Snow (2000) is applied. These authors consider that the framing process addresses three functions: diagnostic framing (describing the current situation); prognostic framing (describing what should be done); motivational framing (clarifying why the suggested measures are necessary). The analysis also includes the allocation of responsibility (guilt and responsibility to act). In a second process, the terms that are most repeated in each framing function are identified. The analysis, which covers a period of ten years (2007-2017), reveals that in the case of Greenpeace Mexico, the three concepts are employed in parallel to argue about a very specific and still current topic: the threat that transgenics crops (especially transgenic maize) from big biotechnological companies represent for Mexico, and the solution that lies in ecological agriculture.

Abstract: Discourses as scientifically sharp and socially influential as the IPCC reports raise the question of their relationship with non-specialists discourses on climate change. IPCC reports are officially aimed at governments (IPCC, 2019), and their reception by the general public is certainly filtered by legacy media (O'Neill et al. 2015; Painter, 2014; Kunelius, 2017) and shaped through social media (Pearce et al., 2014; O'Neill et al., 2015). Social media discourses are known to be sometimes polarized and over-simplified, and one can expect such discourses to focus only on some of the IPCC reports topics.

In this research, we use natural language processing (NLP) techniques as well as a qualitative analysis to identify the main concepts and topics in the Special Report Global Warming of 1.5 °C by the IPCC (2018) and track their presence and recycling in a sample of the general public discourses on social media. Our aim is to understand how topics covered in the last published IPCC report are represented in social media discourses, as a step towards a deeper understanding of the appropriation of specialized discourses on climate change (like IPCC documents) by the general public.

The contribution of this communication is twofold. First, whereas other NLP-based investigation of climate discourse have mainly relied on Twitter data (O'Neill et al., 2015; Newman, 2017; Yagodin et al., 2018), our approach will make use of a different type of digital media data, namely Reddit. Reddit is a social platform where news and opinions are shared and debated. As such, it can be a valuable source of data on climate change discourses, and also provides new perspectives in relation to Twitter-based analyses. Second, previous studies have carried out rather limited topic analyses of Tweets, either manually classifying a small sample of Tweets into a few categories (Newman, 2017) or using the most frequent hashtags as topics (O'Neill et al., 2015). In this study, we have developed a system able to detect all concepts listed in the official glossary of the Special Report Global Warming of 1.5 °C (<https://www.ipcc.ch/sr15/chapter/glossary/>), which offer a much more representative outline of the topics occurring in IPCC reports than hashtags (which already reflects biases). The distribution of these concepts will first be compared across the whole IPCC 1.5 °C report, the 1.5 °C report's "Summary for Policymakers", and the subreddits threads related to climate issues. In a second step, we will automatically cluster these concepts into larger themes, based on the Doc2Vec similarity methods (Le et Mikolov, 2014) and compare their distribution on the three above corpora. Finally, a sample of threads will be manually analysed in order to shed light on the results obtained by the automatic approach.

Title: News Construction of Community Resilience: Comparing National and Local Responses to Hurricane Florence.

Session Type: Individual submission

Authors:

Abstract: In an age of accelerating climate change, extreme weather events have caused tremendous economic, social and emotional losses and have also brought public attention to the need for increased community resilience in coastal areas (Lumbroso et al., 2017). More challenging tasks will be posed on coastal communities as the frequency and intensity of extreme events and their associated threats such as storm induced flooding may drastically change from historical levels (Spanger-Siegfried et al., 2014). Across the world, communities vulnerable to such events face challenges in terms of their abilities to withstand and recover from such events. The term “community resilience” has gained traction in recent years by risk management scholars and practitioners to mean the ability of a community to prepare for, respond to and recover from disruptions (Lumbroso et al., 2017).

Yet whether news accounts discuss dimensions of resilience or bring attention to the agency of individuals in making their communities resilient in the face of a devastating storm is less understood. Not only do news media serve as sources of information for vulnerable populations, but also understanding how their socially constructed news content discusses resiliency can provide a lens into the portrayals of socio-ecological realities published to global publics during times of natural disasters (Dhakal, 2018; Gortner & Pennebaker, 2003).

The goal of this study is to understand how community resilience was constructed and framed by both national and local media outlets during the event of Hurricane Florence, which struck the U.S. East Coast in September 2018, leaving numerous communities devastated not only by the force of the storm, but the ensuing storm-related flooding. By analyzing language surrounding community resilience in news accounts from CNN, USA Today and the Wilmington Star News, we examine how different dimensions of resilience were constructed and discussed, including dissemination of

risk information, public perception of potential risks, community readiness and capacity, and the adaption and learning process at different stages of the storm. Moreover, we are able to identify differences in narratives and perspectives taken by media outlets at different scales and for differing audiences.

Title: "Menyama Braya" on Digital Media: A Study of Disaster Communication in Bali, Indonesia

Session Type: Individual submission

Authors:

Name: Dian Tamitiadini

Email: diantamitiadini@ub.ac.id

Country: ID (Indonesia)

Affiliation: Universitas Brawijaya

Name: Pratama Yudha Pradheksa

Email: pyudhap@vt.edu

Abstract: In disaster communication, local wisdom has an important role in emerging successful cultural mitigation. Menyama braya is a local value of Balinese traditional society that emphasizes living in harmony with social life and environment. This spirit is driven by Balinese's belief in dealing with disaster. Since the eruption of Mount Agung in November 2017, the Bali local government together with Indonesia disaster management agency promoted menyama braya as a disaster communication approach. Along with Information Communication Technology (ICT), menyama braya has been emerging to greater possibilities of integration of the different communication systems. This paper aims to discuss how menyama braya spirit encounters ICT. In addition to intensive interview with the Bali Regional Board of Disaster Management (BPBD), head of Klian Banjar, and the local society and the document analysis, the author conducted content analysis on the internet, related to the Mount Agung eruptions. The result of the research has demonstrated the shift of menyama braya as disaster communication. Before using ICT, indigenous communities adopted menyama braya as face to face communication as well as their main and genuine channel. Menyama braya was a direct communication practice in order to reduce potential risk through spiritual belief. However, rather than reducing risk, it placed the society at high risk situation which is closed to the eruption. Lately, the Bali local government initiates ICT as supporting channel. the Bali local government and indigenous communities adopt menyama braya spirit in a new ICT platform. With the development of computer mediated communication theory, I found a phenomenon in digital society that emphasizes "click and share" about the disaster information which is also well known as slacktivism in online media to show their empathy and solidarity. This research argues that communication technology can shift the public perspectives and participation on menyama braya. Lastly, this paper highlights public involvement on disaster communication through digital media has become a new presentation of menyama braya.

Title: We are not white men: A visual discourse analysis of websites from companies with bad environmental reputation

Session Type: Individual submission

Authors:

Name: Priscila Medeiros

Email: prismuniz(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal de Alagoas (UFAL)

Name: Isaltina Maria Gomes

Email: isaltina(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal de Pernambuco (UFPE)

Abstract: In the present study we aimed to visually analyze the institutional websites of multinational companies with bad environmental reputation. Our main goal was to identify common strategies of image repair. Methodologically, we decided which enterprises would integrate the corpus first by choosing three lines of business that are commonly considered environmental harmful: biotechnology, petrol and mining. As a second step, we examined the Harris Polls reputation quotient from 2015 to 2018, listing the biotechnology/petrol/mining enterprises that, in any of the studied years, had less than 65.00 points, what is considered a low quotient (poor, very poor or critical). We reached a list of four multinationals: ExxonMobil, Halliburton, Monsanto and BP. The first common feature between the websites has to do with the fact that, because of the chosen lines of business, such websites are not focused on selling final product to the consumers, what explains why the images used in its communication are not similar to advertisement images (creation of dreams). Rather, such images have the aim of building an identity to the company, to humanize it and to represent it for the world. A first result was that all the companies tend to try to associate their images to an idea of diversity by choosing pictures that shows both men and women of different ethnicities as workers/consumers. They rarely show images of white men alone, what can indicate an attempt to escape from an image of elitism and privilege. Still, in the sections about leadership or management, almost all the pictures show white men. All the enterprises have sustainability sections or topics in their websites, and, in our research, we identified that most of the human images in such sections are from women. Such result shows that the studied enterprises tend to associate environmental issues to the female figure. Theoretically, we connected such tendency to a historically perceived division between male and female that associates the first to culture and the second to nature (Merchant, 1989). Also, popular culture and advertisement have created another dichotomy: men-violence versus women-fragility (Katz, 2003). Since such enterprises are often accused of violence against nature, the women images could soften such reputation. Our theoretical approach focuses on the fields of environmental communication, public relations and image repair and image studies.

Abstract: Climate change mitigation using market solutions and technological solutions (such as carbon trade, financial credits) has been frequently covered in climate change debates particularly in intergovernmental organizations like UN, and the developed countries that have had mitigation obligations since the Kyoto Protocol. We are interested to analyze if this mitigation discourse is reproduced in the news media of the developing countries, which did not have mitigation obligations in Kyoto. It is expected to see mitigation covered extensively in developing countries media, as they had the obligation to mitigate. Hence, the literature on media coverage of climate change focussed extensively on developed country cases, leaving developing world understudied (Thaker et al., 2017, p. 2; Uzelgun & Castro, 2015, p. 734). But if Nigerian and Turkish newspapers also use mitigation frame more than adaptation and system transformation frames, it is an unexpected finding. Nigeria and Turkey are both emerging economies with high carbon emissions, both with similar climate change vulnerability rankings, both with similar freedom of the press scores. They are however different as Nigeria is a carbon exporter country while Turkey is a carbon importer. As carbon importing could lead a country to advocate adaptation and system transformation solutions, and carbon importing could lead a country to advocate mitigation measures we chose these two countries to be able to have two countries with a key difference while most other conditions are controlled. If they both cover mitigation more than the other solutions, and if they rely on foreign sources in their coverage it means they reproduce hegemonic discourses on climate change mitigation. We conduct content analysis of the adaptation, mitigation, transformation frames used in the online editions of Turkish and Nigerian newspapers. We choose

the newspapers according to their click rates. We also code news attribution to see if foreign or domestic sources are used in the climate change-related news that we analyze. Our initial findings indicate that both Turkish and Nigerian newspapers that we analyzed cover mitigation more than adaptation or system transformation. Therefore, we contribute developing country data to the literature on hegemonic discourses on climate change (Horta, Carvalho and Schmidt 2017).

Title: Contesting Drought Risk Policies in Israeli Newspapers (2001-2010): Delegitimization of Farmers and Marginalization of Environmentalists

Session Type: Individual submission

Authors:

Name: Shai Kassirer

Email: S.Kassirer(at) brighton.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Brighton

Abstract: This paper uses a risk conflict perspective (Maesele, 2015) to analyze contesting discourses over hydro-policies in Israeli newspapers during drought periods, to identify strategies of depoliticization and delegitimization of political actors and social groups participating in the policy debate.

The risk conflict perspective examines public debates over definitions of environmental risk and responses to uncertainty by social actors selectively using competing knowledge statements motivated by the convergence of scientific/economic rational claims, values and interests (Maesele, 2015). Coming from a politicized approach which understands risk conflicts as a form of political conflict, and its media representation as another arena of contestation, this paper is interested in revealing aspects of the coverage contributing to depoliticization of the debate. Depoliticization is the process of transforming an issue of ideological contestation into a matter of administration, when expert rationales (economic, scientific or legal) navigate decision making instead of political positions or values (Wilson & Swyngedouw, 2014). In recent years, emerging literature has started to identify and critique the depoliticized nature of environmental discourse, especially in the news (Hammond, 2018). The focus in this study upon Israel offers insights from an understudied area in both the field of environmental-risk communications and depoliticization.

This paper examines discursive practices of depoliticization through a case study of Israel's hydro-policies and their newspapers' representation. Since the turn of the century, the Eastern-Mediterranean has experienced three long droughts (1999-2002, 2004-2011 and 2014-2018), which increased existing national and regional tensions caused by already scarce water resources. Employing the risk conflict perspective, this paper asks which political actors, policies and ideologies enjoyed privileged positioning in the press and which voices were silenced? Moreover, it examines discursive elements in the coverage which contributed to delegitimization and depoliticization of the marginalized voices. This paper introduces selected findings from a longitudinal analysis of newspaper coverage of droughts in Israel during 1990-2017. The analysis was conducted by using critical discourse analysis and data included 850 of articles published in Yediot-Aharonot (a popular paper) and Haaretz (an elite broadsheet). This presentation will concentrate on findings from two pre-identified critical discourse periods (2001-2002 n=433; 2008-2010 n=417), during which two state commissions of inquiry operated to re-evaluated Israel's hydro-policies.

Four competing discourse-coalitions were identified in the press: Economic, Nationalistic-Agricultural, Environmental and Local-Social, each offering different paradigms for understanding the origins of the water crisis and possible solution for it. This paper will focus on findings of discursive elements in the newspaper coverage that contributed to delegitimization and marginalization of the Nationalistic-Agricultural and the Environmental discourse-coalitions. While members of these two coalitions have presented themselves as guardians of public-goods, they were represented by journalists and the contesting coalitions as protectors of illegitimate and irrational privileges and interests. This positioning was more focused on Israeli farmers and their representing bodies, and was discursively built on the privileged position in the press of economic rationales over other values.

Title: From catastrophe to economic driver: The curve of coverage of the Brumadinho and Mariana disasters in Brazil

Session Type: Individual submission

Authors:

Name: Nivea Bona

Email: bonanivea(at) gmail.com

Country: US (United States)

Affiliation: Independent

Name: Juliet Pinto

Email: Jzp726(at) psu.edu

Country: US (United States)

Affiliation: Pennsylvania State University

Name: Paola Prado

Email: pprado(at) rwu.edu

Country: US (United States)

Affiliation: Roger Williams University

Abstract: On Jan. 25, 2019, the tailings dam #1 at Córrego do Feijão (Feijão Stream) that held waste from iron-ore mining activity collapsed near the town of Brumadinho, located in the Brazilian state of Minas Gerais. The collapse allowed a river of muddy toxic sludge to cascade down the hillside; the disaster left dozens dead and hundreds remain unaccounted. The contamination so far has polluted the Paraopeba river, destroyed uncounted animals and impacted urban, riverine, and indigenous communities who depend on the river and its waters. The dam collapse at Brumadinho happened just three years after a similar tailings dam collapse in the town of Mariana disaster that killed 19 people, left thousands without homes, and decimated the Doce River ecosystem; the ensuing contamination left thousands without drinking water or work centered around fishing industries, as it flowed miles down beyond the Atlantic Forest biome and into the Southern Atlantic Ocean's most pristine preserved area of biodiversity conservation (Fernandes et al., 2016).

In both instances, the collapsed tailings dams were operated by the Vale group, a private Brazilian conglomerate that operates in over 30 countries. One of the world's top producers of iron ore, pellets and nickel, Vale posted annual revenues of US\$34 billion in 2018 and, prior to this second disaster was valued at US\$82 billion. The two mining collapses in the span of three years garnered intense international news media attention: news accounts of the gruesome search and recovery efforts at Brumadinho reference the previous disaster at Mariana, even as others continue to discuss lingering legal and financial battles over the reparations, clean up and settlement for damages wrought in Mariana in 2015.

Whereas the preponderance in the use of official sources and episodic reporting in news accounts of environmental issues has been well established in the literature, (e.g. Anderson, 1991; Hansen, 2010), less is known of how news reporting patterns of disasters compare and contrast, use similar narrative arcs to depict suffering, invoke blame, or reposition industry claims and political fallout. We examine the patterns of source inclusion and framing practices for both disasters to provide a

model for news media narrative arcs that are presented to global publics as a means of building a framework for international disaster coverage.

We examine news stories about the tailings dam collapses at Mariana and Brumadinho published in the digital editions of major news dailies Estado de Minas and Folha de São Paulo in Brazil, and abroad in The Guardian (U.K.), The New York Times (U.S.A.), El País (Spain) during the first three months in the immediate aftermath of each mining collapse. We compare nuances across international coverage as a means to ascertaining commonalities in narrative arcs, with discussion of implications for public understanding and opinion.

Title: News framing, argument type and public engagement in rooftop solar energy: A population-based survey experiment in Taiwan

Session Type: Individual submission

Authors:

Name: Mei-Ling Hsu

Email: mlshiu(at) nccu.edu.tw

Country: TW (Taiwan)

Affiliation: National Chengchi University, Taiwan

Abstract: Renewable energy has been considered effective means to help reduce greenhouse gas (GHG) emissions around the world. In 2018, the Taiwanese government started a nationwide program to promote and subsidize residential rooftop solar installations. Despite strong support for renewables, most Taiwanese public was poorly informed about the issue. Local news analysis also reveals that stories on renewables were mostly framed as positive economic development. This study is thus interested in exploring whether news framing and argument type could affect public engagement of renewables differently. It also aims to investigate to what extent could crucial socio-demographic and -cultural factors influence public engagement of the issue.

A population-based survey experiment was conducted on 1,009 Taiwanese adults in October, 2018. A stratified random sampling was adopted to ensure the participant representativeness of the target population by gender, age and region. A 2 (GHG emission reduction vs. economic development frame) x 2 (one- vs. two-sided argument) x 2 (gender) factorial design was used, with openness to change and altruism as the covariate. Participants were first randomly assigned to 4 (2 frame x 2 argument type) conditions to read a story on building rooftop solar community. Manipulation check showed that the conditions significantly differed: Frame $\chi^2(1, 948) = 31.43, p < .001$; argument type $\chi^2(1, 948) = 51.98, p < .001$. Two dependent variables were measured next, including willingness to learn more about solar energy and a two-item composite on willingness to install rooftop solar energy and to lease rooftop space to investors ($r = .72, p < .001$). The covariate was measured by a three-item construct on willingness to help others, concern about environment, and valuing new ideas and creativity (Cronbach's $\alpha = .61$). The above dependent variables and covariate were all measured on a 5-point scale from 1 = strongly disagree to 5 = strongly agree.

Two separate ANCOVAs were conducted to test public engagement in rooftop solar energy. Although framing and argument type did not reveal any main effects on both dependent variables, a significant interaction was found on participants' willingness to install and lease their rooftops to investors, $F(1, 1009) = 5.46, p < .05$. For participants assigned to the frame of GHG emission reduction, one-sided argument induced stronger willingness for actions than two-sided argument. The pattern was the opposite for the economic development frame. Arguments emphasizing both the benefits and weaknesses of solar energy triggered stronger willingness for actions than one-sided positive argument. Consistent with the findings on engagement in environment-friendly behaviors, women demonstrated stronger willingness to learn about solar energy than men did, $F(1, 1009) = 4.45, p < .05$. The covariate was positively correlated with both two dependent variables: Learning $F(1, 1009) = 156.34, p < .001$; Action $F(1, 1009) = 108.90, p < .001$, echoing studies extending Schwartz' values theory in predicting environment-friendly behaviors by altruism and openness. This finding implies that depending on the argument type, both economy- and

environment-related news frames could encourage public engagement in solar energy, which may lead to more effective advocates for clean energy development.

Title: No such thing as a dead reef: Communicating climate change through crisis

Session Type: Individual submission

Authors:

Name: Claire Konkes

Email: claire.konkes(at) utas.edu.au

Country: AU (Australia)

Affiliation: University of Tasmania

Name: Kerrie Foxwell-Norton

Email: k.foxwell(at) griffith.edu.au

Country: AU (Australia)

Affiliation: Griffith University

Abstract: The image of Australia's Great Barrier Reef (the Reef) as a dead or dying reef has informed global understanding of the Reef since the earliest campaigns for its protection. For instance, in 1967, the first campaign for its protection challenged proposals to mine "dead" coral for agricultural fertiliser on the grounds that there was 'no such thing as a dead reef'. The campaign was notable for challenging orthodox scientific understandings of reef ecology which went informed the listing of the world's largest collection of coral reefs as a single World Heritage property in 1981.

More recently, the spectre of a 'dead Reef' after coral bleaching in 2016 and 2017 was used by journalists, environmentalists and scientists as a harbinger of the ecological devastation wrought by climate change – the Reef even had its own obituary! But the Reef is not dead and the reports of its demise, and the resulting despair and plummeting tourism numbers, makes an interesting case study to examine the relationship between contemporary trends in the nexus of global digital media, environmental policy and ecological understanding. This paper discusses how the mediated idea of a dead Reef continues to inform our understanding of contemporary environmental issues, such as climate change.

Id: 22000

Title: Social Media, Parks and Protected Areas

Session Type: Individual submission

Authors:

Name: Alison Beale

Email: beale(at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: News reports abound of the damage to national parks, protected areas and hiking trails caused by excessive and sometimes illegal visitation. The "culprits" are Instagram users and influencers who Geotag their selfies and other photos and incite great numbers of visitors to do the same. The managers of parks and other environmentally sensitive sites want increased but at the same time selective, managed tourism. Some parks managers have adopted an "if you can't beat them join them" approach in creating partnerships with volunteer social media "brand ambassadors" and with paid collaborators such as popular nature photographers, to control visitation and redirect tourists to less frequented locations.

This paper summarizes both the global scope of the problems social media are reported as posing to park administrators, and some of their efforts to turn social media into a tool for managed visitation. It acknowledges the usefulness of social media analytics in producing more accurate visitor and visitor-location data, and in remote monitoring of the condition of key environments. The paper then discusses the social media challenge and related responses to it in the context of key frameworks in the establishment, promotion and management of lands designated as parks, protected areas, etc. The frameworks to be addressed are:

- a) parks and protected areas as "spectacular", "beautiful" and "unique". Social media are not a phenomenon apart, but perpetuate an emphasis on the visual and visual technology that has been fundamental to the institutionalization of these places.
- b) social media as disrupting the legitimate management of parks, in which parks managers are the representatives of the public interest, and social media users and influencers are both consumers and commercial exploiters of a common resource. This framing overlooks the already porous boundaries (literal and figurative) between parks and commercial activity, and fails to examine exactly what "public" has been represented by parks authorities (and may be effectively challenged by social media).
- c) social media as encouraging human-centric, narcissistic behaviour that sacrifices environmental protection to technology and self-promotion. This framing calls up a particular Euro-centric view that separated humans from nature, and legitimated the eviction of (some) humans and their subsistence, and their technologies, from lands that became parks. This view is now explicitly discredited in many parks systems and is challenged in others. The framing also references the romantic (again, Euro-American) belief in the redemptive power of low-tech individualised immersion in nature, which fails to acknowledge the considerable economic and environmental cost of the technology (railway, road, air) and the reliance on institutions (park management, emergency services) and economic privilege that enables this transcendental experience.

Our nature-focussed institutions and the claimed "disruptive" capacity of social media deserve our attention together for the questions they raise about how we live with/in nature. We

need to overcome our blindspots about such fundamentals as the blurring of public and private interest in both parks and in social media, about the separation between humans and nature, and about the space between humans and our technologies.

Title: Negotiating discursive spaces for food sustainability in the production of MasterChef Australia

Session Type: Individual submission

Authors:

Name: Luke van Ryn

Email: luke.vanryn(at) unimelb.edu.au

Country: AU (Australia)

Affiliation: The University of Melbourne, Parkville, Australia

Abstract: The environmental sustainability of food production, distribution and consumption is becoming increasingly pressing in everyday life (Goodman, Johnston and Cairns, 2017). Scholars such as Fischer, Haucke and Sundermann (2017), Holbert, Kwak & Shah (2003), Nulman and Özkula (2016), and Muñoz-Erickson & Cutts (2016) pose investigations into how practices of television production shape discourses of food sustainability such as ethical consumption, animal welfare, and food waste. This research presentation complements the field of inquiry into food media through the study of production techniques for MasterChef Australia, one of the most popular and long-running food television shows in Australia, with a substantial influence on purchasing habits domestically and internationally (Kirkwood, 2017).

Based on qualitative interviews with workers engaged in the production of MasterChef Australia, this paper specifically addresses the dimensions in which they negotiate issues of food politics in their daily work. This research combines actor-network theory (Latour, 2005) with pragmatic sociology of critique (Boltanski & Chiapello, 2005; Boltanski & Thévenot, 2006) to understand the food values of media professionals. A particular focus of the analysis was understanding the repertoire of justifications used by MasterChef Australia's production team, the team's responses to critique of the program's production practices, and their construction of normative discursive spaces.

Results reveal that the Coles supermarket chain was a crucial component of the production, determining many aspects of the program's environmental politics. The program may be reformed in the direction of sustainability, so long as this conforms with the needs of program sponsors. The inclusion and exclusion of particular ingredients, animal cruelty, and accessibility were key areas where informants were sensitive to food politics. The production's response to food politics is generally one of silently shifting suppliers: operating largely through market signals rather than explicitly criticizing other modes of production. MasterChef Australia's "aspirational" aesthetic provide a type of political anesthetic, numbing the production to a more explicit engagement with issues of food politics.

This paper analyses informants' justifications for the decisions they have made in specific stages of the production process of MasterChef Australia. The paper also studies where producers' values align with concerns of environmental sustainability. Informants were more engaged with artistic critiques (and questions of freedom and individuality) than social critiques (and questions of alienation and equality). This research is used to present a picture of the professional ethics at work

in informants' self-presentation, and to explore the idea of "good television" that they share, as well as what this idea omits, obstructs and precludes. Assembling a diagram of the normative frames deployed by informants is necessary to identify opportunities to align these with environmental sustainability. Overall, this paper shows how production staff on MasterChef Australia justify their approach to their work, explores vulnerabilities to critiques within the production, and illustrates opportunities for negotiating between the demands of media production and environmental sustainability.

Title: Scientific and Technological Images in Popular Culture--An international Comparative Study of Scientific TV Drama

Session Type: Individual submission

Authors:

Name: Chun Ju Huang

Email: cjhuang(at) ccu.edu.tw

Country: TW (Taiwan)

Affiliation: National Chung Cheng University

Name: Miao Ju Jian

Email: mjjian(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chung Cheng University

Abstract: How science merged with life is an important indicator for promoting science communication and public science participation within various societies. A TV program is one of the cultural forms closest to the general public's life and is an important research topic. This article focuses on two research questions: First, to compare the science-related TV drama series in Taiwan, the US, the UK, Japan, and Korea, and then explore the extent to which scientific knowledge is integrated into popular culture. Secondly, to interview the practitioners of Taiwan's TV dramas to investigate the difficulties encountered in the popular culture industry for the integration of science into popular culture.

In terms of research methods, for the first question, the collection period was from January 2011, to December 2014, being a total of four years. A total of 105 science-related programs including seven in Taiwan, 45 in Japan, 21 in Korea, nine in the UK, and 23 in the US, were analyzed for the distribution of scientific knowledge and the image of scientists through the content analysis method. In addition, four representative medical dramas were selected, including House in the US, Medical Dragon in Japan, Emergency Men and Women in Korea, and Wake Up in Taiwan. Each of the first six episodes were analyzed, with a total of 982 scenes. For the second question, we interviewed 20 TV drama practitioners, including screenwriters, producers, directors, actors, and scientific consultants, to explore the considerations and problems of placing scientific knowledge into the programs.

The research results showed that the science-related TV drama series from different countries present different types of scientific knowledge preferences. For example, Taiwan's content subject matter is single, and all the dramas are related to medical issues. When compared to the UK and the US, there are many other different themes, such as basic science information science, natural disasters, and gene duplication. In the narrative style, there are different faces of science emphasis, for example, Taiwan and Korean highlights in scientific knowledge is relatively low, however, the US and Japan attach greater importance to the presentation and elaboration of scientific expertise in the medical scenes. In the part of drama production, the TV producers tend to think that the main essence of the drama is feelings and emotions, as science is only a possible marketing strategy, and the imagination of "science" is close to Instrumentalism. The problems of modern scientific content

are less touched on, such as the uncertainty of medical knowledge, professional barriers, and social influences, etc., which are far less included in the drama.

From the results of this study, we have grasped the basic picture of science in popular culture, and these images could make a huge impact on the public's participation in the technological society. In the next stage, we hope to further explore how the audience can perceive the scientific content presented in related programs.

Title: Does storytelling help adolescents to engage in sustainable consumption' (Video presentation)

Session Type: Video Submission

Authors:

Name: Anna Sundermann

Email: anna.sundermann(at) leuphana.de

Country: DE (Germany)

Affiliation: Leuphana University Lüneburg

Affiliation: Leuphana University Lüneburg

Abstract: Although it is contested how strongly knowledge influences behavior change (Kollmuss & Agyeman, 2002), there is broad agreement (as expressed e.g. in SDG 4.7) that basic knowledge about sustainability is a necessary condition for citizens to act in an informed way. Media coverage is a critical means to raise awareness about sustainability issues. However, patterns of media reception are in flux, especially among adolescents (Newmann et al., 2018). Studies show a lack of interest in and understanding of traditional media news depending on personal characteristics (Eastin et al., 2015). It is thus necessary to explore alternative formats to engage adolescents in sustainability challenges.

Storytelling has been shown to be a promising approach when it comes to engaging adolescents with general news (Machill, Köhler & Waldhauser, 2006). Unsurprisingly, interest in storytelling is growing in different fields of sustainability communication (e.g. journalism, corporate or science communication). However, there is a paucity of empirical research substantiating the effectiveness of storytelling in a sustainability context, in particular regarding audience characteristics (e.g. affinities, educational background).

The SusTelling project explores how effectively narrative-style vs. reporting-style communication engages adolescents (18-22 years), and whether and how personal characteristics are influential. Informed by research in environmental psychology, journalism studies and sustainability science, it explores three questions: First, can narrative journalistic texts on sustainable consumption increase consumption- and sustainability-related intentions among adolescents compared to reporting style journalistic texts? Second, do narrative journalistic texts have different impacts on adolescents with different sustainability affinity? Third, do narrative journalistic texts have different effects on adolescents in dual vocational training?

The study employed a self-reported paper-pencil survey for data collection. Data from N=500 university freshmen from one university and N=500 vocational training students from two schools

(18-24 years) were gathered. Participants were randomly assigned one of two experimental conditions (reporting-style vs. narrative) of the same local newspaper article dealing with engagement in a Zero Waste Initiative. The effects of the storytelling approach are examined in a between subjects design: 2 journalistic style types (reporting-style, narrative) x 2 sustainability affinity (high, low) x 2 education (university, vocational training). Multivariate variance analysis (MANOVA) assesses the influence of narrative vs. reporting-style communication on behavioral intentions (i.e. individual consumption, pro-environmental engagement) and communication factors (i.e. involvement).

At the time of submission, data analysis is still ongoing. At the conference, we will for the first time present preliminary findings from our SusTelling study.

Title: Understanding Corporate Environmental Communication in Greater China: A Comparative Study of Mainland China, Hong Kong and Taiwan

Session Type: Individual submission

Authors:

Name: Mengmeng Zhao

Email: sarahzhao(at) hsu.edu.hk

Country: HK (Hong Kong)

Affiliation: The Hang Seng University of Hong Kong

Abstract: In this increasingly competitive market and transparent information era, good corporate reputation has become one of the most important intangible assets for businesses. Being environmentally responsible is regarded as a strategic issue than merely an ethical consideration (Charter, 2017; Curkovic & Sroufe, 2016). Reporting pro-environmental endeavors to stakeholders has become an essential part in corporate communication (Arena, Bozzolan, & Michelon, 2015; Bhattacharyya, 2016; Chelli, Durocher, & Fortin, 2018) and one of the deciding factors of corporate environmental performance. However, as Chinese corporations play major role on the global stage, studies on environmental disclosure are still quite scarce in Chinese context.

This study examines how the leading companies in Greater China (i.e. Mainland China, Hong Kong and Taiwan) communicate their environmental values and practices on their corporate websites, which have become a primary source for companies to communicate their positions regarding environmental issues to stakeholders (Bortree, 2011; Capriotti & Moreno, 2007; Chaudhri & Wang, 2007). This research selects the three convergent-yet-divergent societies – Mainland China, Hong Kong and Taiwan – for investigation for several reasons: First, these three regions are highly interconnected for historical, cultural and economic reasons. Second, due to their particular eco-social systems, environmental responsibility could be perceived and practiced differently. Third, as Greater China has become increasingly important to global business, understanding its communication strategies will have significant implications on other countries' practices.

This study aims to compare and contrast the environmental policies and practices displayed on the websites of 338 leading companies in Mainland China (233), Hong Kong (58) and Taiwan (47), examining the commonalities and disparities of environmental values in these three regions. Data are collected from 2018 Forbes Global 2000 List (Forbes, 2018) to ensure the equivalency in company size and revenue. The focus tends to be on leading and large companies because they often wield more influence (Carroll, 2010). The eight analytical focuses are as follows:

- 1) Presence of information (Capriotti & Moreno, 2007);
- 2) Prominence of information: the position the companies display the information;
- 3) Extent of information: the number of the pages devoted to environmental disclosure (Chaudhri & Wang, 2007; Wanderley et al., 2008);
- 4) Top management support;
- 5) Elaboration on environmental values;
- 6) Environmental issues;

- 7) Institutionalization of environmental concerns (Alon et al., 2010; Chapple & Moon, 2005; Maignan & Ralston, 2002); and
- 8) External validations or certifications of environmental programs (Jose, 2007).

As the first comparative investigation of environmental communication in Greater China, this study fills the research gap in both corporate communication and corporate social responsibility fields in Chinese context. It also contributes to the growing discussion about environmental practices in emerging economies, and provides significant implications for environmental communicators.

Title: Shopping online: digital platforms, networks and environmental impacts

Session Type: Individual submission

Authors:

Name: Aneta Podkalicka

Email: aneta.podkalicka(at) monash.edu

Country: AU (Australia)

Affiliation: Monash University

Abstract: Digital platforms for trading goods and services, such as popular eBay, Airbnb or Uber, have become a significant part of everyday life contexts, at the same time sparking growing public and academic debates about their real beneficiaries, business models and regulatory conditions needed to support ‘a fairer sharing economy’ (Graham and Anwar 2018). In terms of environmental impacts, they have been discussed, on the one hand, positively – through their potential to encourage re-circulation and re-use of goods and to curb material consumption by displacing ownership with access and sharing (Botsman and Rogers 2010). On their other hand, they have been critiqued for ‘corporate co-option’ of the discourse of sharing, commercialisation (Martin 2016: 157) and leading to over-consumption (Parguel, Lunardo and Benoit-Moreau 2017). More broadly, media scholars with interest in environmental studies have argued to consider media technologies as material objects – and to include media industries’ contribution to carbon emissions and waste in commentaries about the climate and environment (Maxwell and Miller 2012).

This presentation will focus on digital platforms for buying and selling physical goods and their environmental impacts. While there is much business and marketing literature available, cultural and media studies disciplines have paid less attention to online shopping and its networked infrastructure despite the practice’s ubiquity in everyday life, mediatisation and wide-ranging implications for consumption. Drawing on comparative case study research of digital retail platforms in Australia functioning at different scales and under different governance structures (e.g. Gumtree versus Facebook’s Marketplace), I will discuss their nature, organisation and practices, framing my empirical study within contemporary cultural and media studies debates on digital retail, datification (Turow, McGuigan and Maris 2015) and consumer-citizen dynamics in the contested sharing economies. The presentation will include (i) the analysis of data collected from the selected platforms alongside a review of annual reports and media commentary, and (ii) methodological reflection, to contribute to the emergent academic studies of digital retail and its environmental footprint.

Title: Non-human voices and human communication: the raising ventriloquism effect.

Session Type: Individual submission

Authors:

Name: Céline Espuny

Email: celine.pascual(at) univ-amu.fr

Country: FR (France)

Affiliation: IRSIC - Aix Marseille University

Name: Andrea Catellani

Email: andrea.catellani(at) uclouvain.be

Country: BE (Belgium)

Affiliation: Université Catholique de Louvain la Neuve, LASCO

Abstract: At a conference in 2016, Peter Jackson, Sea Shepherd's president, said that we spend millions to go to Mars, but we're not able to understand non-human voices. Quite surprisingly, vegetal communication and plants as "communicators" represent today a raising theme in the media. From December 2017 to December 2018, we collected more than 15 best-selling books, documentaries, and special issues of popular scientific magazines. This opens a new field in environmental communication practice and research. In this paper, we focus on how non-human vegetal voices are given place and visibility in human communication, in connection with the questioning concerning the rights and place of non-human beings. The notion of "ventriloquism" (Cooren, 2007) can be useful in this case.

Environmental communication research has developed knowledge about the relation between non-human voices and human communication. On the one hand, there has been a slow but sure conversion of the vision of nature as "wild" and sublime into a vision in which nature is much more "entangled" with human culture (Williams, 1972). Haraway (1989) proposed a vision of nature close to an eco-centric animist vision. Cantrill and Oravec (1996) focused on the origin of the concept of the "environment", and Crone (1996), Abram (1997), Davis (1997), Sowards and Stibbe (2001) worked on the place of man in relation to nature. On the other hand, Cox (2007) and Milstein (2007, 2009) proposed a completely different analysis, which is still relevant today, pointing the importance of the reference to the "mega fauna" (emblematic mammals species) in the discourses on nature. They identified also biases, like the "Bambification phenomenon" (Milstein, 2007), which is an angelic conception of wild animals and the attribution of human characteristics to their behaviour. These various researches underline the entanglement and links between nature and culture from the point of view of communication. The works of Latour (2004, 2005) and Descola (2013) are other important contributions on this subjects from other disciplinary points of view, as is the philosophy of antispecism (Singer, 1975).

The conceptions of Nature are changing today. Berger (1980) had already pointed out to what extent the media representations of a "vibrant and lively" nature have transformed the animals into objects of observation and spectacle. Cheryl Lousley (2016) extends this comparison, using the term "charismatic life" to translate the evolution towards a permanent emphasis or even a "fetishization" of living beings: nature becomes a "collection of souvenirs" and biodiversity becomes a spectacle.

We propose in this paper to analyze in the first part the place of non-human voices communication in environmental communication research. The second part will discuss the basic findings of our content and semio-pragmatic analysis concerning the actual emergency of the theme of vegetal beings as communicating beings in media communication, using the scope of semio-pragmatics. Our semio-pragmatic analysis is applied to our corpus of more than 15 different media contents, including more than 1300 pages and 80 minutes of audiovisuals, including off and on-line media. Finally, the third part develops a discussion on a potential ventriloquist effect (Cooren, 2007).

Title: Identifying and understanding attitudes towards Science of TV Professionals

Session Type: Individual submission

Authors:

Name: María T. Soto-Sanfiel

Email: maite.soto(at) gmail.com

Country: ES (Spain)

Affiliation: Departament de Comunicació Audiovisual i Publicitat. Universitat Autònoma de Barcelona

Name: Isabel Villegas-Simón

Email: isamarvillegas(at) gmail.com

Country: ES (Spain)

Affiliation: Departament de Comunicació Audiovisual i Publicitat. Universitat Autònoma de Barcelona.

Abstract: We present the results of a study funded by the Spanish Foundation for Science and Technology (FECYT/ FCT-15-9831), which aims to advance the identification and understanding of the attitudes of Spanish TV professionals with managerial responsibilities in creative, organizational and productive fields about programming and consumption of scientific content in television.

We carried out a study of mixed methods, which is presented in two subsequent and consecutive phases. The first was exploratory and qualitative (two discussion groups containing 5 participants each). It sought to know the perception of a sample of TV professionals about different aspects of science on television. This phase also allowed generating questions for the instrument applied during the second phase, quantitative and confirmatory. In turn, the aim of this phase was to magnify the perceptions obtained during the first for determining their degree of generality among members of the industry. The sample of the second phase was formed by 450 professionals (50.4% men) from 6 Spanish regions. Out of these professionals, 56.3% had university studies, 19.6% postgraduate studies, 14.5% only professional training, 5.6% a PhD and 4% secondary school training. Of these professionals, 85.5% worked in a TV channel, 7.1% in a TV production company and 7.4% in both. Finally, 72.3% declared having a productive/creative position and 24.8% a directive/ organizational position.

The main results of the study show that, generally speaking, the professionals of the sample manifest a neutral-positive attitude in most of the Likert scales used to measure their attitudes. However, the respondents show a favorable positive attitude to consider the presence of science in television to be important. They also have a positive attitude about the ideas that science in TV must offer a different vision of social problems, that it must improve the degree of literacy of society or that it must awaken scientific vocations. On the other hand, there are detected significant differences in the participants' attitudes about the role of television in scientific dissemination according to the type of audiovisual enterprise the professionals of the sample work for (production company or television channel) and the level of academic education they hold. Regarding the role

of new technologies, the professionals show a very positive attitude about the idea that science is interesting for all audiences and that the state of the science in a specific country reflects its technological development. Besides, the participants show a neutral attitude when considering that the best place for showing science content is Internet and that the proper audiovisual scientific content niche remains outside of mainstream TV. In addition, there are differences in the attitudes of the professionals according to their gender, the type of audiovisual industry they work for (production company or television channel), their level of education, the ownership of the company that employs them and its coverage/audience.

These and other results are discussed to the light of a complex theory formed by different approaches: cultivation theory, studies about the role of professionals in television, studies of attitudes as predictors of behaviors and the deficit model of scientific communication.

Email: miyilee(at) pu.edu.tw

Country: TW (Taiwan)

Affiliation: Providence University

Name: Chun-Fu Chen

Email: maco2057(at) mail.fju.edu.tw

Country: TW (Taiwan)

Affiliation: Fu-Jen Catholic University

Abstract: Risk governance is the structural response to risk, while risk communication is a crucial part of risk governance. However, there is always a discrepancy between experts and laypeople's perceptions of scientific risks. The mistrust of laypeople to scientists also increases the difficulties of risk governance and communication. Using the food safety issue as an example, this study explored the dialogue and consensus between experts and laypeople and examined the role of social media in connecting the two groups' perceptions.

Two focus group interviews were conducted in September 2016 in Taiwan to create an interactive setting for seeking dialogue and consensus among different stakeholders. The goal of focus group interviews was to develop strategies that embody civic participation in risk communication and provide important references to the government for future risk governance and communication. Each focus group consisted of the representatives of experts and laypeople, so as to stimulate more cross-group discussion and opinion sharing.

The focus group interviews yield several significant findings. Firstly, laypeople admitted the limitations of the scientific standards regarding food risks. However, they were able to actively looking for more information to eliminate the fear of uncertainty. Secondly, laypeople did not take the "absolutely safe" propaganda that the government or experts claimed with no doubt. On the contrary, clear and accessible messages can help laypeople to comprehend complicated scientific terminology. Thirdly, when experts claimed the existence of uncertainties in food safety, laypeople expressed no doubt to the experts' profession. What the laypeople care was sufficient information about the risk involved, from which they can make their own decisions in food consumption. Fourthly, civic participation was necessary for achieving consensus in risk communication. Social media were regarded as the effective platforms in building the bridge for message transmission, information exchange, rumor, and fake news clarification, food consumption guidance or food safety policymaking.

This study provided a profile of risk perceptions and a consensus between food safety experts and laypeople. Very few, if any, empirical studies have gathered the heterogeneous groups in the same setting for focus group discussion. In addition, this study should be one of the few studies that discovered the experts-laypeople consensus in the food safety issue. Future research should take a closer look at social media effectiveness in promoting experts-laypeople agreements towards scientific disputes.

Abstract: Recent changes in territorial and digital capabilities of communication pose new challenges for environmental communication, with particular impacts and consequences at the local level. On one hand, a redefinition of environmental problems is called for from the well-known maxim “think globally and act locally” to the new “think locally and act locally”. On the other, social media and the emergence of collaborative platforms having an impact on the local level are exposing multifaceted realities. In the intertwining of the local and the digital, new injustices arise but also new opportunities. Social media such as Facebook and Whatsapp trigger the emergence of social movements and local platforms to fight the effects of decisions sometimes taken at distant territorial levels and in digital spaces disconnected from the local. Apps and spatial media with georeference affect local decisions and social relations, and can provide an alternative scenario for activism, participation and risk communication. This panel explores the interplay of the local and the digital in environmental communication by addressing the following questions:

- How are digital media influencing environmental communication in the emergence of local environmental activism, networking, and political and social participation?
- What is the role of new media applications and social networking sites in navigating the local and the digital in environmental and risk communication?
- How are local environmental and social movements created or redefined in response to the new scenarios originating in digital spaces?

By presenting different answers to the above questions, the panel identifies relevant environmental communication challenges and opportunities for activism, risk and everyday practices at the local level. It examines the digital turn in environmental communication especially seen from a local perspective.

The rationale and participants of this panel are involved in a book volume with the same title that will be published in the IAMCR/Palgrave Global Transformations in Media and Communication Research series. This book volume is a joint collaboration between the Environment, Science and Risk Communication Working Group of IAMCR and the Science and Environment Communication Section of ECREA.

Title: Local community development and public understanding of ecological conservation via science exhibitions: The case of Taiwan

Session Type: Individual submission

Authors:

Name: Ming-Ying Lee

Email: miyilee(at) pu.edu.tw

Country: TW (Taiwan)

Affiliation: Providence University

Abstract: Various biological species live on the earth, which maintains the relationship of interconnectedness and interdependence. Many studies have paid attentions on the environmental issues such as global warming, climate change and so on. However, most of contemporary environmental discourses seem to be on the way toward ‘modernity of ecology’, indicating the sustainable development on the conditions of technologies and economy for human beings. Speak of which, live of humankind was ultimate and only thing. Such a perspective was restricted to benefits of human beings, while was less concerned with other species in ecosystem.

For a long time, the compromise between ecological conservation and community development was an endless dispute. The ecological conservation paradigm has changed from central management to local community participation, including the approaches of community based conservation and tourism. In particular, the latter integrated science activities and tourism was expected to promote local economy as well as ecological conservation.

The aim of this study is to discuss the relationship between biological species and human beings presented via science exhibition and further analyze its implications to science communication, drawing the case of 2018 World Flora Exposition from November 2018 to April 2019 held by Taichung City government in Taiwan. The central theme of the exposition was ‘Green, Nature and People’.

Research questions were asked: what content of biological species presented in the science exhibition? What was the relationship between biological species and human beings portrayed in the science exhibition? Research methods deployed include: ‘secondary analysis’ of publicity materials such as news coverage, pamphlets, advertisements and posters; ‘participating observation’ on available visual displays and technology-assisted communication devices in the scenes; and ‘in-depth interview’ with 2 officials who were in charge of the exposition and 20 visitors who have been there. Also, this study interviewed 4 local opinion leaders who lived in surrounding communities of the exposition.

This study found that the exposition intended to advocate the intimate relationship between humanity and nature. Conservation of wildlife, for example leopard casts, was particularly addressed. In Taiwan, leopard cats were critically endangered species which once appeared in planned areas of the exposition. The exposition then utilized leopard casts as a symbolic related to conservation and heavily applied to public consumption. A cheerful and harmony future was

created in the scenes. However, the public only saw leopard cats as cute animals. They were not aware of risks and crisis of leopard cats. Therefore, this study argued that ecological conservation was transformed as commodification to benefit local community economy. Public imagination and cognition on ecological conservation of leopard cats was in need of re-construction.

Id: 22684

Title: Unlocking the power of digital storytelling for community resilience building in disaster risk communication: A case study from Australia

Session Type: Individual submission

Authors:

Name: Jenny Zhengye Hou

Email: jenny.hou(at) qut.edu.au

Country: AU (Australia)

Affiliation: Queensland University of Technology

Abstract: Multi-hazard disaster risk communication has for long been characterised by one-way information transmission from authorities and experts to public in general. While social media allow public participation in government-led disaster communication, the user-generated and shared information can be flawed in authenticity, accuracy, and lack unified coordination. In such situations, there has recently emerged a call for a ‘narrative turn’ (Kent, 2015) to disaster risk communication based on the benefits that storytelling offers. Compared to non-narratives (e.g., information summaries, reports, profiles) with explicit intentions to either persuade or inform, narratives (e.g., stories, anecdotes, testimonials) are more likely to draw audience interest, evoke emotional resonance and reduce counter-arguing. Narrative accounts of individual experience can also facilitate creating shared values within communities, and therefore enduringly change public attitudes and behaviours in disasters. Despite the usefulness of narratives, research into disaster risk communication has not yet fully explored storytelling as a particular genre to engage and empower the public and wider communities.

To remedy this deficiency, this study applies Australian ‘Resilient Queensland Stories’ as a case study to examine the use of digital storytelling for building community resilience in disaster preparedness, response and recovery. It draws on Coombs and Holladay’s (2018) Transmedia Storytelling Narrative Transportation (TNT) approach, which involves analysing how organisations (i.e., Australian Government) use multiple media to tell a series of stories around the central theme of ‘resilience’, as well as to prompt audience to contribute their own stories and co-create meanings of disaster events. Data were derived from narrative analysis of the Queensland Reconstruction Authority’s (a State government department) internal media (e.g., newsletters, publications distributed to employees) and social media (e.g., Facebook, LinkedIn, YouTube) featuring stories about ‘Resilient Queensland’ during 2017.

Based on the findings, this study argues that ongoing disasters and risks require a long-term, sustainable approach to storytelling to mobilise audience agency in building community resilience. For this purpose, government agencies and public organisations need to combine both planned (e.g., organisation-led meta-narratives) and emergent storytelling strategies (e.g., encouraging audience story contribution) to not only inform citizens of prescriptive response plans, but also educate them to be self-sufficient and resilient in disasters. To reduce compassion fatigue by telling ‘sad stories’ in disasters, it is advisable to tell full stories in ways that balance the need for facilitating audience realistic understanding of risks and also inspiring their positive attitude and behaviours.

This study contributes to enriching the existing scholarship of disaster risk communication through revealing the power of digital narratives and storytelling. It also provides practical implications to assist other nations' governments shifting from the conventional and didactic message dissemination, to strategic transmedia storytelling that engages and empowers communities in an authentic and memorable way. This submission fits well with the aim and scope of the Environment, Science and Risk Communication (ESR) Working Group.

Affiliation: University of Warwick

Abstract: Brazil has become a field of water governance experimentation where power-sharing designs are being fostered, making the inclusion of forms of representation of a number of civil society actors, who must have parity with state officials. This paper will present and interpret preliminary results of our research on how the High Tietê River Basin Committee, Sao Paulo, has been struggling to strengthen its roles in the context of climate change adaptation and declining democratic values. The core objective of our research is to understand the shareable experiences, methods and messages of participatory water governance for the benefit of communities at environmental risk with the aim to transform understanding of water through digital memory work. The main contribution will be given through the creation of actionable knowledge capable of assisting decision-making and environmental governance, developed based on organizational memories of water management and water activism stories and memories, and taking the form of contents in digital media on how personal and collective involvement with actions and policies aimed at mitigation and adaptation to climate change has been developing in the country in terms of hydro-citizenship. The Scientific and Technological Challenge is to gain access to stories, memories and narratives on two scales: the personal and the collective experiences of floods, droughts, water shortages and other potential climate change effects. This involves participatory processes involving government, regulators, stakeholders and communities in decision-making within the High Tietê River Basin Committee. Methods of research include content analysis of web based media platforms and interviews with a number of representatives of communities, businesses, water companies, municipal and state officials. Interviews use techniques borrowed from journalism, oral history and social memory. Interviewees are selected from three domains: current and former members of the river basin committee; individuals distinguished by their role in leadership of communities, businesses, water companies and public authorities; individuals directly affected by floods, droughts, water shortages and other potential climate change effects. Initial findings suggest that former and current committee members have an accurate perception of the challenges they are facing, but there is room to develop the democratic model of science communication within their management practices through advanced communication and memory work techniques.

Title: Contesting truths in green criminology: Discursive deletion of responsibility from corporate crime vs opposition reading through social media.

Session Type: Individual submission

Authors:

Name: David Katiambo

Email: dkatiambo(at) gmail.com

Country: KE (Kenya)

Affiliation: Technical University of Kenya

Abstract: The news media attention to victims of corporate environmental crime vary, often, more attention is given to victims portrayed as ‘ideal’. This is worsened by the fact that many destructive practices are legal and powerful offenders are able to mute the mainstream media and shape policy definitions to condone harmful practices. This means the news media is among forces that construct social and institutional responses to corporate environmental crime and victimhood. Despite the ability of social media to substitute some mainstream media truths, no in-depth study has been done about the struggle between mainstream media ‘othering’ of victims of corporate environmental crimes and oppositional reading of such othering through social media. This presentation analyses mainstream media representations of a corporate environmental crime that led to several deaths and how this representation was challenged by Facebook users. On 10th May 2018, an embankment dam in a rural village 250 kilometres west of Kenya’s capital city, Nairobi, failed due to flood overtopping, releasing a deluge of 600 million cubic meters that killed 48, injured over 500 and caused massive destruction of property. Victims of such an environmental crime are not always recognized as victims of “crime” because their collective victimization challenges the traditional victimology approach. Although the burst dam was a non-criminal event, the incident was not an act of God as tort law can remedy to such crimes. Even with the influence of the news media over framing of white collar environmental crimes, discourses on effectiveness of tort law lack interdisciplinary approaches with efficiency of tort viewed from legal and economics perspectives, overlooking the communication fields. Using literature from green criminology, victimology and media studies, this presentation brings tort law into communication scholarship by describing how the mainstream news media attempted to delete tortfeasors liability and construct victims as underserving and how this process was contested by social media users through oppositional reading. Using burst dam case study, I describe how social media can contest mainstream media’s representations of corporate crime victims. To achieve this purpose, I use Critical Discourse Analysis (CDA) to examine how headlines of news articles in three leading newspapers in Kenya discursively deleted, suppressed, substituted and abstracted responsibility for white collar environmental crimes through nominalisation: the use of noun phrases instead of verbs and the passive voice rather than active voice to conceal tortfeasors from criminality. Secondly, I use the same approach to describe how oppositional reading by Facebook users expose discursive deletion of responsibility. Hence while mainstream media deletes responsibility through nominalisation, Facebook users re-allocate responsibility by conveying information on culpability of powerful offenders. I discuss the meaning of these findings in relation the struggle between mainstream media’s hegemonic discourses that disempower victims and the counter-hegemonic social media discourse on victimization.

Abstract: Research suggests that media are the primary information source for knowledge on many scientific topics (Hofstetter, Schultze, & Mulvihill, 1992; Miller, Augenbraun, Schulhof, & Kimmel, 2006). Taddicken, Reif, and Hoppe (2018) identified that different operationalizations of factual science knowledge are used interchangeably in studies and that it was unknown if one measurement was more effective. Using recoded data from an online study, they analyzed three response scales representing varying degrees of confidence and found that a 5-point scale yielded the best results. The authors acknowledge that recoding the variables after data collection limited their findings and called for future experimental research to test their findings. Here, we respond to that call by presenting data from an experiment embedded in an online survey (N = 1,502). The between-subjects experimental design assigned respondents to one of two

conditions. In both conditions, respondents answered seven general textbook scientific knowledge questions, sometimes referred to as the Oxford Scale (Allum, Sturgis, Tabourazi, & Brunton-Smith, 2008). However, in one condition, responses were recorded on a 3-point scale (True, False, Don't Know); in the other experimental condition, responses were recorded on a 5-point response scale (Definitely True, Likely True, Likely False, Definitely False, Don't Know). For comparison, we recoded the 5-point scale by combining the two true categories and the two false categories. We then tested the distribution of correct, incorrect, and "Don't Know" responses by assigned condition on both a combined knowledge index and the seven individual knowledge measures.

We found evidence that participants provided with the 5-point response scale were more likely to report incorrect responses, while those with the 3-point scale were more likely to offer "Don't Know" responses across several of the individual measures. This general pattern of results was present among knowledge items with differing levels of difficulty, indicating that the pattern is not necessarily tied to the complexity of the question. We also found variations when assessing differences across demographic indicators. For example, respondents who reported higher levels of religiosity typically performed better in their factual knowledge when they were offered the 5-point rather than 3-point response scale. In a similar pattern, those with fewer science courses in their educational background generally performed better with the 5-point response scale. These findings imply that measuring factual science knowledge is more complex than previous studies suggested. Furthermore, we argue that the goals of knowledge assessment must be considered when determining a knowledge measurement as different methods result in more or less guessing and reliance on the "Don't Know" response. The implications of the significant differences in knowledge measures and findings are discussed.

Title: Competing Voices: A study of the mediated conversation about access to clean water in the US agricultural heartland

Session Type: Individual submission

Authors:

Name: Kajsa Dalrymple

Email: kajsa-dalrymple(at) uiowa.edu

Country: US (United States)

Affiliation: University of Iowa

Name: Joanna Krajewski

Email: JKrajewski(at) flagler.edu

Country: US (United States)

Affiliation: Flagler College

Abstract: The U.S. heartland has become increasingly scrutinized for the negative environmental impacts of industrialized agriculture; with a primary concern being excess pollution (mainly from fertilizers) running off fields into waterways. Locally, excess nutrients from fertilizers can make it difficult for water treatment facilities to provide communities safe water for consumption; globally, these excesses result in hypoxic conditions such as those devastating the Mississippi River's outlet to the Gulf of Mexico (U.S. Environmental Protection Agency [EPA], 2016; Schnoor, 2010). Compromised water quality is a chief concern in Iowa, the state with the largest percent of its land used for agriculture in the U.S., with over 50 percent of the state's water bodies classified as impaired in 2012 (Osterberg & Kline, 2014).

Iowa's impaired water has garnered much state media attention as policy makers, environmental groups, the agricultural industry, and academics are actively communicating about the problem, and deliberating about how best to resolve it. While this breadth of attention seems beneficial by increasing public awareness, various stakeholder entities are promoting the issue differently. Rather than increasing nutrient mitigation practices, this divergence in messaging may be increasing uncertainty—possibly leading to inaction among the agricultural community (Arbuckle, Morton, & Hobbs, 2013; McGuire, Morton, & Cast, 2013). However, little empirical research exists to document and analyze these potentially competing narratives. Therefore, this study investigates the differing portrayals of Iowa's water quality and nutrient problem in prominent mainstream and agricultural media sources through thematic textual analysis. The sample consisted of 305 online news and editorial articles published between March 2015 and September 2016. A combination of qualitative and quantitative data was collected documenting the key themes related to water quality and nutrients; as well as the organizations and key spokespeople cited as informational sources. Additionally, because mass media are a key source of risk information for the public (Ashe, 2013; McCallum, Hammond, & Covello, 1991) subthemes related to the way risks and uncertainty are conveyed were also documented.

Overall, Iowa's water and nutrient issues are reported on discordantly between the agricultural and mainstream media. The agricultural media describe the problem as natural, to be expected,

completely weather dependent, uncontrollable, and not anthropogenic. These messages are stated definitively and are often backed by scientists from the state's land grant university—many of whom have strong agribusiness ties. Virtually absent are messages related to the ecological or public health threats posed by nutrient excesses. These findings should serve to remind us that depending on the media source individuals choose to consume, their understanding of environmental degradation and belief in expert consensus will be vastly different. The results of this analysis have far-reaching implications for the study and practice of environmental, science, and risk communication; and are especially relevant given the new media landscape where factual reporting seems increasingly optional. For Iowa, these contradictory messages are likely to continue to result in harsh divisions between the urban “city slickers” and rural farmers, and will do little to improve the each group's access to clean and safe water.

Title: Media and climate migration: Transnational and local reporting on vulnerable island communities

Session Type: Individual submission

Authors:

Name: Anna Roosvall

Email: anna.roosvall(at) ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Name: Matthew Tegelberg

Email: mtegel(at) yorku.ca

Country: CA (Canada)

Affiliation: York University, Toronto

Abstract: Climate change and migration are two core challenges of our times. Increasingly they merge and constitute climate-induced migration. While both climate change and migration are global challenges, they affect local communities unevenly. Thus climate-induced migration needs to be discussed as an issue of climate justice. Here, we integrate theories on climate justice with theories on communication and justice (Fraser, 2008; Roosvall & Tegelberg; 2018; Shue, 2014), and zoom-in on media coverage of (impending) climate migration. Media coverage of climate-induced migration is severely under-researched (although see Dreher & Voyer, 2015; plus, on communication but not on media coverage: Farbotko & Lazrus, 2012; Gemenne, 2011; Methmann & Rothe, 2014). We draw on three cases concerning US islands: Sarichef Island, Alaska, home to Iñupiaq indigenous people; Isle de Jean Charles, Louisiana, home to Biloxi-Chitimacha-Choctaw Native American people; and Puerto Rico. The cases have been chosen due to their similarities and differences. There are high degrees of poverty on all islands. The indigenous peoples enjoy (potentially) specific minority status but at the same time often lack proper political representation. Puerto Rico, in turn, is characterized by politically weak status and lack of proper political representation since it is not a US state while being controlled by the US Congress. These conditions correspond to Fraser's (2008) three dimensions of injustice in varying ways: maldistribution (of economic means), misrecognition (of identity/status), and misrepresentation (lack of political representation).

The aim is to explore how (imminent) climate migration from three US islands is understood in local and transnational media; how issues of justice inform reporting on places, peoples, and perceived problems. RQs: How are connections between climate change and migration understood in the coverage and what does it have to do with media geography (local/transnational news), political geography (status issues, representation issues) and natural geography (island vulnerability, islands as parts of a global problem, etc.)? How are people who (may) migrate covered concerning redistribution, recognition, and representation (political) in local vs. transnational journalism?

We apply multimodal critical discourse analysis (Machin & Mayr, 2015) on a small selection of long articles (5/case). Results show that the transnational journalism (The Guardian) tends to infuse

global perspectives, which are crucial for climate change. These are sometimes missing in local journalism. Local journalism includes however uniquely: local geographic specificity, infrastructure and political processes; connections between diverse aspects of justice for affected peoples; and scalar integration. The latter means that a focus on the needs of people in disaster-affected areas are not motivated by what the rest of the world can learn, but rather viewed as crucial factors in themselves. There are also differences between the Puerto Rico coverage and coverage of the indigenous peoples in Louisiana and Alaska. These indicate the need for further studies exploring why climate change is recognized as cause for migration in some areas but not others (Puerto Rico), as well as what this has to do with class variations among local inhabitants, and with distribution, recognition and political representation more broadly, in stories and in policies.

Title: Framing 'Biofortification' to Combat Hidden Hunger in Jamaica

Session Type: Individual submission

Authors:

Name: Colleen Connolly-Ahern

Email: cuc15(at) psu.edu

Country: US (United States)

Affiliation: Penn State

Name: Lee Ahern

Email: laa182(at) psu.edu

Country: US (United States)

Affiliation: Penn State

Abstract: Hidden hunger, or a deficiency of critical nutrients in the diet, is a scourge in several Caribbean countries, including Jamaica. The major non-communicable diseases (NCDs) associated with hidden hunger seem like something from the past: scurvy, beriberi, rickets. Sadly, many countries are seeing a reemergence of similar symptoms due to consumption and overconsumption of processed and nutrient-poor foods, especially in the developing world. Since 2004, HarvestPlus has been developing and promoting more nutritious varieties of staple crops more vitamin A, iron and zinc (the micronutrients identified as most critical by the WHO).

HarvestPlus scientists develop more nutritious crop varieties using traditional breeding techniques (no GMOs), and provide leadership in promoting adoption of these new varieties in the countries where they are most needed. HarvestPlus calls this breeding process “biofortification.” In the Caribbean, HarvestPlus is working with CARICOM, which promotes cooperation among 20 member countries in the region. In Jamaica, the initiative is coordinated through the Inter-American Institute for Cooperation on Agriculture (IICA). However, little is known about how Jamaicans might react to “biofortified” staple crops. This is critically important because of food’s relationship to culture.

In order to assess potential communication challenges, the IICA invited us to conduct in-depth focus group interviews with 24 stakeholders from social sectors that will be critical in promoting adoption of any new staple food—government agencies, education, farming, food processing, food retail and the media.

Research has shown that acceptance of food innovation are hard to predict. Negative consumer responses to food innovations occur at the organizational level, in the form of boycotts and organized protests (including active media campaigns), and at the individual level, where consumers shift behavior patterns to avoid innovations (Cavusoglu et al., 2010; Blue, 2010). Past research has shown that message-framing factors will interact with existing worldviews on public acceptance of pro-science solutions (Ahern, Connolly-Ahern, & Hoewe, 2016). The need to better understand how different message strategies resonate with different audience segments, also referred to as message tailoring, was emphasized in a recent National Academy of Sciences report,

“Communicating Science Effectively: A Research Agenda” (National Academy of Sciences, Division of Behavioral and Social Sciences and Education, Committee on the Science of Science Communication, 2016): “Research on audience segmentation needs to be replicated and extended for researchers to understand how much of an effect science communication can have, for whom, and in what contexts” (p 3-5).

Results of the 24 focus group interviews were eye-opening. The term “biofortification” proved highly problematic—participants equated it with genetic modification. Beyond the conflation with GMOs, there was strong resistance to any changes seen as “putting something into” staple foods that is “not natural” or “unbalanced.” The data provide critical insights into more productive and promising approaches to promoting more nutritious staple crops in Jamaica, the Caribbean and the world.

Title: RED CIUDADANA DE SENSORES: Juntos monitoreamos la calidad del aire en Bogotá ' Colombia

Session Type: Individual submission

Authors:

Name: Oscar Fonseca

Email: ofonseca(at) javeriana.edu.co

Country: CO (Colombia)

Affiliation: Teacher

Abstract: Palabras clave: Derechos ambientales, comunicación digital, ciudadanía, comunicación móvil, datos abiertos, desarrollo colaborativo de apps.

Esta investigación se centra en la comprensión de nuevas formas de incidencia ciudadana y defensa de derechos ambientales a partir de las posibilidades que ofrece la comunicación móvil, las redes sociales y el análisis de datos abiertos obtenidos de manera colaborativa.

En Bogotá la entidad encargada del monitoreo de la calidad del aire es la Secretaría Distrital de Ambiente, a través de la Red de Monitoreo de Calidad del Aire de Bogotá – RMCAB, recolecta información sobre la concentración de material particulado (PM10, PST, PM2.5), de gases contaminantes (SO2, NO2, CO, O3).

Todo ello lo realiza con una red 12 estaciones de medición fijas y una estación móvil, es decir 13 estaciones de monitoreo, que resultan insuficientes para una ciudad con un área total de 1.776 km² y un área urbana de 307 km² y con 7.150.000 habitantes. Adicionalmente las 13 estaciones en varias oportunidades están dañadas o la página que permite el monitoreo en tiempo real está fuera del servicio, como lo reportan varios medios de comunicación.

De otro lado se ha incrementado el índice de enfermedades respiratorias por la baja calidad del aire (1).

Desde 2017 un colectivo de ciudadanos preocupados por la baja calidad del aire en Bogotá, empezaron a contactarse a partir de redes sociales y construyeron un sensor de bajo costo que permite medir la concentración de material particulado (PM2.5) uno de los más nocivos para la salud humana. Adicionalmente el sensor se conecta a un teléfono móvil y a través de una aplicación, es posible compartir los datos obtenidos en tiempo real, de manera georreferenciada, permitiendo a los ciudadanos conocer las zonas más contaminadas de la ciudad en tiempo real y de manera mucho más detallada a como lo viene haciendo las entidades oficiales. Los datos obtenidos, son abiertos, se comparten de manera colaborativa permitiendo la información, divulgación, investigación, la exigencia de derechos ambientales.

Esta investigación se esfuerza en comprender estas formas emergentes de ejercicio de la ciudadanía y ciberactivismo ambiental, mediadas por tecnologías móviles que permiten obtener grandes cantidades de datos que confrontan los datos y comunicaciones de las entidades oficiales.

Title: Framing Deep Geothermal Energy on Twitter

Session Type: Individual submission

Authors:

Name: Alison Anderson

Email: aanderson(at) plymouth.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Plymouth, UK

Name: Nicola Langdon

Email: amelyj+nic(at) gmail.com

Country: GB (United Kingdom)

Affiliation: University of Plymouth

Abstract: Geothermal energy has considerable potential as a renewable technology but its widespread adoption will depend upon social acceptance, shaped in part by media framing and the local context (Stauffacher et al., 2015). The way in which media frame geothermal energy projects and the choices about what information is presented, how, and by whom, can have a critical effect on public awareness and attitudes (Entman, 1993). In the past some controversy has been generated with regard to geothermal sites such as those at Landau (Germany) and Basel (Switzerland) which were closed in part due to negative public perceptions concerning seismicity (Reith et al., 2013). Other studies have highlighted concerns over potential noise and groundwater pollution (DECC, 2013)

This paper presents initial findings from the first in-depth study examining news media framing of geothermal energy in the UK. To date scholarship on the social aspects of energy production has been dominated by public perception studies with scant consideration of the role of the media, especially digital media (Djerf-Pierre et al., 2016), so this study fills a key gap. The analysis focuses on the United Downs Deep Geothermal Power (UDDGP) project in Cornwall, South West England, examining the first two weeks following the start of drilling in November 2018. We focus here on findings from a detailed sentiment analysis of Twitter over this period, using COSMOS software. Initial analysis suggests that the geothermal project was largely seen in positive terms and framed in terms of technological progress.

Title: Writing Off Nature: Tracing the Past and Future of Environmental Journalism in India

Session Type: Individual submission

Authors:

Name: Maitreyee Mishra

Email: maitreyee.mishra(at) manipal.edu

Country: IN (India)

Affiliation: Manipal University and Heidelberg University

Abstract: As India's environmental woes continue to reach unprecedented levels, the role of environmental journalism should ideally be to inform, educate, and challenge the status quo. However, particularly for the mainstream media, this is not the case. On the one hand, while most developed countries saw a decline in print publications, India saw a 60 percent increase in newspaper circulation between 2006 and 2016 (Audit bureau of Circulations, 2017). Despite this growth, in 2015, Reporters Without Borders named India (and Cambodia) as the "deadliest countries" for environmental journalists. For a country with a long history of environmental movements, particularly those triggered by the struggles and diminishing rights of the country's poor (see Guha, 2014), the shrinking space available to environmental stories is rather alarming. Friedman (2015) has argued that environmental journalism has been impacted by three factors: the internet, downsizing, and mainstreaming. The general decline in mainstream media's environmental interest (Cox, 2013) can be extended to India as well.

Media coverage of environmental news is shaped by socio-cultural, economic and political factors. India's 1991 economic reforms paved the way for neoliberal policies that have degraded natural spaces, given over control of India's environments to multinational corporations, and as Guha (2006) has argued, neoliberalism has led to seeing environmentalists themselves as an impediment to growth. Covering environmental news may sometimes mean challenging powerful corporations, governments, and others, as well as offending potential advertisers.

'Development' continues to dominate public discourse with many in India's middle class and the media viewing environmental impacts of development as less important than development itself. Media coverage of conflicts between indigenous peoples and mining corporations, for instance, has been shaped by existing perceptions of the place of indigenous (tribal) people within Indian society (the media often reiterate the view that tribal people are 'backward' and need to move closer to mainstream society) (see Mishra, 2013). The physical and cultural distance of journalists from indigenous (tribal) peoples and their environments, and the lack of emotional and cultural connection, ultimately dictates the way stories about tribal struggles against environmental change are woven.

This paper, while charting the history and nature of Indian environmental journalism, and drawing from interviews with environmental journalists, contemplates on its future. I argue that Indian environmental journalism can be divided into four phases: (i) pre-Bhopal (before the 1984 Bhopal disaster where a Union Carbide plant released toxic gas killing thousands in the Indian city); (ii) post-Bhopal (the aftermath; shaped media responses to environmental disasters); (iii) post-1991 (the

economic reforms and beyond); and (iv) post-2000 (includes the shift to digital platforms). Today, few newspapers and news media have a dedicated environment section, and Down to Earth is the only Indian magazine to focus exclusively on environmental issues. A dearth of environmental stories in the news media may not necessarily mean indifference towards environmental issues, but may instead highlight the lack of resources, financial and other pressures, and over-reliance on 'official' sources of information, among other challenges facing environmental journalism.

Title: Blame the Victims If Bad Things Cannot Be Turned Good: A Framing Analysis of How Chinese Official Media Reported the Quangang Pyrolysed Carbon Nine Leakage Event of 2018

Session Type: Individual submission

Authors:

Name: Zhan Li

Email: 389059679(at) qq.com

Country: CN (China)

Affiliation: Xiamen University

Abstract: As Entman (1993) summarized, although many disciplines in the social science and humanities involves the concept of framing, the communication field is the most suitable discipline to offer a unified theoretical framework to engage in framing analysis because the modern is a mediated society that people inescapably perceive the world through the media text. Through presenting or omitting certain pieces of information, sources and ways of structuring the narrative of media text, media content producers frame the social reality for the audience. For communication researchers, to reveal how the media define problems, identify whom to blame, judge the nature of the event, and recommend solution by the media through content analysis can provide much insight of the power relationship that defies the assumed objective role of mass media in western societies. In a media system like China where journalistic objectivity is subjugated to the overtly claimed propaganda role of mass media serving the government, the official media have always framed environmental disasters as a case of “bad things turn good” because it is the exact moment that the government achieves success by correcting the bad situation (Sun, 1994; 2004). Previous research found that the most authoritative newspaper, namely the People’s Daily, has almost never covered on-going environmental disasters, but rather reported such events after the crisis is over, when news reports can sing praise of the local government (Li & Pei, 2007). Then, how would the Chinese media frame on-going environmental crisis when it is too difficult, if not impossible, to present the “bad” nature of the disaster? Adopting Entman’s (1993) theoretical framework, this paper analyzes how the Chinese media covered the Pyrolysed Carbon Nine leakage event that happened in Quangan of Fujian Province on November 4 of 2018, by identifying the frames of the problem definition, the subjects to blame, and the resolutions of future risks. Through a content analysis of all relevant news reports from Chinese newspapers and television news, the findings of this paper will show how the Chinese media framed the disaster as not serious enough and pointed the finger to the victims living near the culprit petrochemical company for not willing to move from that area in the past years. The relationship between the Chinese media system and media reporting logic of environmental disasters will also be discussed.

Title: Framing and Sources: Environmental Justice in Bangladesh Newspaper

Session Type: Individual submission

Authors:

Name: jahnnabi das

Email: zamanak36(at) hotmail.com

Country: AU (Australia)

Affiliation: University of technology Sydney

Abstract: With the rapid economic development and growing population, Bangladesh is one of the most environmentally vulnerable countries in the world. In this country, news reporting of environmental issues is vibrant and vigorous, although it attracts scant scholarly attention. In fact, environmental journalism in this South Asian country is one of the least studied topics in the area of journalism research. The current study attends to this country and examines news sources in two newspapers in Bangladesh, focusing on their coverage of river systems and climate change in 2009 and 2015. This study explores various sources, such as politicians, bureaucrats, activists, and citizens, and the patterns of emphasis in the news by using these sources to understand the framing of river degradation and climate change. The aim here is to illustrate the journalists' influence in defining these environmental problems against various news sources and social actors. The analysis reveals an emphasis on political and bureaucratic sources in 2009 and on expert and citizen sources in 2015. Additionally, the analysis also demonstrates that the journalists—as actors in defining the reality—have exerted 'influence' on accentuating environmental concerns by shifting their source emphasis over time from politicians and bureaucrats to experts and citizens, thus upholding the discourse of environmental justice from varied contexts.

Title: The View from Here: Global Environmental Protest in an Age of Mediatisation

Session Type: Individual submission

Authors:

Name: Libby Lester

Email: Elizabeth.Lester(at) utas.edu.au

Country: AU (Australia)

Affiliation: University of Tasmania

Abstract: This paper explores environmental protest as it occurs within the evolving conditions of mediatisation, and how such protest forms communities that inhabit – consciously, if not physically – the places that are pressured and threatened by human activity. These protests, places and activity are simultaneously local and global, shaped as much by the translocal and transnational movement of resources, goods, people and ideas as they are by the ways each of us experiences a place, an anxiety, a loss. So too are the communities of protest, consciously formed and shaped by their members who identify as affected and/or responsible, and who claim rights to influence and interfere in outcomes. The members of these communities are ‘here’, whether they are wanted or not.

The connection between people and environment is changing. As more governments, companies and individuals scan the globe for access to primary resources such as minerals and timber, for food, power and water, and for destinations for work, holidays and homes, pressures on places and communities grow. At the same time, global environmental risks – most notably, climate change – produce new networks and unfamiliar forms of politics. We know that media and communications are integral to this change. They interact with the geographically diverse groups and individuals that now seek to influence the negotiations and decisions that affect often far away landscapes and communities. Together, they push and puncture the boundaries that contain the ‘local’ and distort the form we apply to the ‘global’. Consciousness of and empathy for other places is reconfigured by knowledge of shared risks and impact, even by a sense of belonging. ‘Communities’ are formed that transcend local places and national boundaries.

Drawing on extensive fieldwork of resource procurement and trade in the Australia-Asian region, the paper highlights ways in which this shared sense of ‘here’, with its accompanying privileges and responsibilities, is evoked, and to what outcomes for local landscapes, people and conflicts. What role do transnational corporations, NGOs and governance forums play in the formation and recognition of the ‘here’? It also asks to what extent the formation of such communities is now a pre-condition for political visibility of issues, and if so, what happens to those places, risks and conflicts that go unnoticed, are ignored or are deliberately made invisible to outside audiences? Or is it possible that these global ‘communities of concern’ are simply spectres, conjured by marketers and activists to alter our buying behaviours and pressure corporations and governments into shifting their practices?

Title: [Panel] Sports journalism ethics in the contemporary landscape: challenging or reinforcing the 'toy department' label', Panel description

Session Type: Panel Submission

Authors:

Name: Xavier Ramon

Email: xavier.ramon(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Name: José Luis Rojas Torrijos

Email: jlrojas(at) us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: Special joint session between the Ethics of Society and Ethics of Communication (ETHWG) Working Group and the Media & Sport (MES) Section

In the current cluttered and increasingly complex media environment, sport content is “available from a growing range of digital, mobile media and telecommunications companies and intermediaries” (Hutchins & Boyle, 2017, p. 505). Far from traditional consideration as the ‘little brother’ of the profession, sports journalism is now a pivotal asset to attract audiences across the board and has a huge impact in society. Therefore, its task should be guided by the same professional values, ethical standards and demands for quality that apply to all journalism. The role of ethics and accountability is now deemed exceedingly important in order to counteract the notions of sports journalism being the ‘toy department’ or the ‘sandbox’ of the newsroom.

Following up the discussion from recent events such as Sports Journalism: ethical vacuum or ethical minefield (2017) or Changing the rules of the game? (2018), this IAMCR panel seeks to examine the widespread deficiencies that still erode the credibility and legitimacy of sports journalism. Current debates around ethics in sports journalism include: the dissolution of the frontiers between facts and comments, the pervasiveness of sensationalism and warlike language, the limited range of sources, the lack of diversity or the interplay between media and the sports industry. The panel will allow researchers to broaden their understanding of the many interlinked factors, constraints and tensions that currently impact on sports content, such as the escalating pressures, the expansion of practices such as clickbait or the growth of the PR industry. The session will also stimulate the dialogue on how traditional and innovative media accountability instruments can play major roles in offering guidance and helping journalists and citizens monitor and assess the quality of sports content.

Through the combination of theoretical contributions and case studies, the panel will serve as a valuable springboard to rethink the values, practices and expectations in sports journalism. It will also be an ideal venue to assess how accountability and education can help to challenge the long-held ‘toy department’ label.

Panel Chairs: Xavier Ramon (Universitat Pompeu Fabra) and José Luis Rojas Torrijos (Universidad de Sevilla).

Papers:

- 'The Worldwide Leader in Sports' under scrutiny: Analyzing how the Public Editor (2005-2018) held ESPN accountable (Xavier Ramon and José Luis Rojas Torrijos)
- Gender inequality of sports journalism in regional newspapers: an analysis of content and decision-making by sports editors (Thomas Horky)
- Ethics, commercialisation and control in Australian sports journalism (Peter English)
- Closing down the toy department? An expertise framework for how professional sports journalists can achieve good practice (Simon McEnnis)
- Violence and Gender in Sport Journalism: Some Troubling Ethical Questions (David Rowe)

Title: ARTIFICIAL INTELLIGENCE (AI) AND ROBOT JOURNALISM ADOPTION:
ETHICAL CONSIDERATIONS FROM A DEVELOPING COUNTRY'S PERSPECTIVE

Session Type: Individual submission

Authors:

Name: Olusegun Ojomo
Email: ojomoo(at) babcock.edu.ng
Country: NG (Nigeria)
Affiliation: Babcock University

Name: Victor Ikem
Email: victorikem81(at) gmail.com
Country: NG (Nigeria)
Affiliation: Babcock University

Abstract: The last two decades have seen Artificial Intelligence (AI) assuming growing roles globally. It flaunts attractive prospects for society in general and journalism in particular, a situation which has led to the adoption of robot journalism by several media and allied organizations. Narrative science, as it is called, employs automated journalism software to produce news stories in niche fields like sports, finance and real estates, and is now making a bold entry into the political arena. (Morozov,2012)

The reality of artificial intelligence is not without some apprehensions and panic by communication scholars and practicing journalists who have raised concerns about conceding the critical job of news gathering and reporting to sophisticated computer algorithms. (Levy, 2012).

Although automated news reports have proved to be 99% reliable, (Crespo, 2018), a number of issues with particular peculiarities to developing countries still exist.

This work is a discourse of cultural and ethical issues of adoption of Robot journalism in a developing country like Nigeria. It explores the positives, the negatives of AI-enabled journalism, taking into account known socio-cultural variables of developing countries' environments.

Using the Technology Determinism, and Diffusion of Innovations theories as backdrops, the authors obtained secondary data from online and library sources for analysis.

Preliminary results show that the imbalance in global technology and infrastructure is defining the state of the mass media and the use of artificial intelligence, thus, there have not been compelling and urgent motivations to adopt AI in journalism practice in Nigeria.

Automated news writing and distribution is a capital-intensive project which media organizations in Nigeria and several developing nations are currently unable to execute due to lack of funds. There is also the absence of requisite training programmes and systems to produce experts capable of developing and deploying appropriate local-needs-based technology for Robot journalism. The

paper has some suggestions for accelerating the adoption of artificial intelligence in journalism practice in developing countries.

Title: Destination Babel: communication and responsibility

Session Type: Individual submission

Authors:

Name: Isaac Nahon-Serfaty

Email: inahonse(at) uottawa.ca

Country: CA (Canada)

Affiliation: Department of Communication, University of Ottawa

Abstract: In this paper, we propose a contemporary reading of the Tower of Babel myth based on three interpretative keys: the particular translation of the Hebrew text by André Chouraqui (1989), the rabbinical comments of the Biblical story (the so-called Midrash tradition but also the Talmudic interpretations) (Elkaïm-Sartre, 1982; Maruani & Cohen-Arazi, 1987), and the Ethics of responsibility of the philosopher Hans Jonas (1984). The main objective of this hermeneutic exercise is to set the foundations of an ethic of communication that takes into account the notion of a global community formed by those who “speak the same language”; the foundation of the city and the construction of the Tower as the deployment of the technical knowledge that claims to be “supernatural”; the desire to dominate God or the Nature, as the expression of a will to achieve total or totalitarian domination; and the consequences of such enterprise of global communication where the community united by “one language” becomes impossible. This reading of the Tower of Babel myth is especially relevant in the context of the emergence of powerful communication technologies based on artificial intelligence, algorithms and the manipulation of big data, that threatens to make humans irrelevant (Harari, 2015).

Title: Ethics and Journalism in Central Asia: How Journalists Act

Session Type: Individual submission

Authors:

Name: Bahtiyar Kurambayev

Email: b.kurambayev(at) kimep.kz

Country: KZ (Kazakhstan)

Affiliation: KIMEP University

Name: Eric Freedman

Email: freedma5(at) msu.edu

Country: US (United States)

Affiliation: Michigan State University

Abstract: A great deal of research has been done about ethics in journalism and media studies globally but Central Asia has been largely omitted from these peer-reviewed debates. To help fill this gap and reduce the imbalance in ethics scholarship, the main objective of this is to comparatively analyze professional ethical perspectives in Central Asian journalism. Specifically, this study seeks to understand regional interpretation and practice of ethics in journalism by examining and comparing the three former Soviet republics of Kazakhstan, Kyrgyzstan and Tajikistan

Journalism faces a series of ethics crises (Ward, 2010) and this is particularly true in Central Asia. This is because journalism in the region is marked by a wide ethical misbehavior. That includes failure to provide facts and sources, lack of balance and impartiality, breach of secrecy and privacy (OSCE, 2013), using multiple fake names, selling and/or buying news, bribing journalists, publishing anything and everything without verifying, plagiarism and putting one's own byline on stories copy-pasted from elsewhere, and exploitation of journalists by news organizations that fail to pay them.

The significance of this study lies in revealing the gravity of ethical misbehavior in Central Asian journalistic standards. This is the region where journalists call ethics a "Western luxury" (Mould & Schuster, 1999, p. 218) in the context of where public life until the collapse of Soviet Union in 1991 was "full of falsehood and lies" (Roudakova, 2017, p. 9) and journalists routinely fabricated information and "facts" (p. 41).

Although the U.S. and wider Western context provide a rich source of scholarly works on journalism ethics (Wasserman, 2017), there has been too little attention paid to journalistic ethics in non-Western, authoritarian countries where press freedom is non-existent. Thus this study aims to provide scholarly insights on an under-researched area.

In this project, the authors ask the following research questions: Do journalists and media organizations in each of these countries adopt similar or different ethical perspectives? How do these ethical perspectives impact potential democracy and transparency within the larger region of Central Asia? To answer these questions, the authors employ qualitative in-depth interviews with working professional journalists in Kazakhstan, Kyrgyzstan and Tajikistan for comparative analysis that allows for a more in-depth understanding of journalism in the region.

Title: Gender inequality of sports journalism in regional newspapers: an analysis of content and decision-making by sports editors

Session Type: Panel Submission

Authors:

Name: Thomas Horky

Email: thomas(at) horky.de

Country: DE (Germany)

Affiliation: Macromedia University of Applied Sciences

Abstract: Since the beginning sports journalism is undermined by several ethical threats. Journalism is based on norms that are enshrined in guidelines on journalistic quality (Deutscher Presserat, 2006; Principles of Journalism, 2012). However, sports reporters are coming more and more under scrutiny: sport as portrayed by the media is turning increasingly into a circus, sports journalists have turned from critical eyewitnesses into entertainment vendors, often lack distance and behave more like fans than neutral observers. Sports journalism bears specific risks, which lead to questions about quality (Bucher & Altmeppen, 2003). The discrepancy between journalistic norms and their hazards for sports journalists can be illustrated by the examples of doping, involvement, and constraints. The case of gender inequality is well known in the literature (Barnett, 2013; Bernstein & Kian, 2013; Hartmann-Tews & Rulofs, 2002) and can be seen in many ways in different countries and media (Horky & Nieland, 2013; Schaaf & Nieland, 2011). Beside TV one of the main issues of research is print media, based most of the time on huge media sports events like the Olympic Games (Hartmann-Tews & Rulofs, 2010; Ramon, 2016).

Related to journalistic accountability sports journalism seems a special field due to strong regulated reporting based on results and current topics like doping or corruption. Concerning these problems, a journalist also has to be simultaneously recognized as an editor and user, but research on reasons for editorial decisions is very rare. Related to big events, these decisions seemed often based on success of national athletes and newsworthiness (Hardin, 2005; Hardin & Whiteside, 2009). But, looking at local or regional surroundings different reasons might be responsible for editorial decisions: local sports stars, friendships between journalists and athletes or political demands. Related to this, our research question asks for gender equality and editorial decision-making in regional newspapers.

We examined sports reporting in the two main regional newspapers in Hamburg/Germany for three weeks in October and November 2018 by a quantitative and qualitative content analysis looking in particular on the textual and pictorial coverage of gender. The Hamburger Abendblatt is a traditional regional newspaper, the Hamburger Morgenpost is partly tabloid, both papers got highest circulation in town. In a second step, the two chief editors of the sports department were faced with the results of the content analysis in in-depth-interviews and were asked about their reasons for editorial decision-making.

Preliminary results show differences in extent of coverage on female compared to male sports, the tabloid covering less than the traditional paper. Surprising, concerning the success of some regional

female athletes with a gold medal winning beachvolleyball team. Additionally, the way of reporting differs between men and women athletes, who were shown very often in personal surrounding and not in an athletically scenery. Asked for reasons the editors pointed out the supposed user preferences and a lack of female sports writers in their department.

Title: 'The Worldwide Leader in Sports' under scrutiny: Analyzing how the Public Editor (2005-2018) held ESPN accountable

Session Type: Panel Submission

Authors:

Name: Xavier Ramon

Email: xavier.ramon(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Name: José Luis Rojas Torrijos

Email: jlrojas(at) us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: ESPN, the self-proclaimed “Worldwide Leader in Sports”, has long realized it was much more than an entertainment company. In 2005, ESPN assigned George Solomon the title of first “Ombudsman,” functioning much like a referee who ensured that sports journalism exhibited the standard of being accountable to the ethical norms of the profession. For 13 years, six ESPN ombudsmen collectively served in this role. However, in the same vein that The New York Times or The Washington Post, on May 2018 the company decided to eliminate this position on the basis that it had outlived its usefulness against the real-time feedback provided by social media.

With the role of ombudsman discontinued, this paper reflects on how it fostered both criticism and transparency while helping fans understand ESPN’s journalistic culture and the editorial criteria behind the content. The body of material on which our qualitative analysis rests refers to all the columns (N=153) written by the representatives in the post between 2005 and 2018 (George Solomon, Le Anne Schreiber, Don Ohlmeyer, The Poynter Institute, Robert Lipsyte, and Jim Brady). The articles composing the sample were systematically collected from the ESPN website and then examined through the qualitative content analysis technique (Bryman, 2016). Doing so provided insight into the range of issues covered by ombudsman representatives.

Throughout this 13-year period, its representatives acted as internal critics and audiences’ advocates. They opened “a window on the inner working” (Mayes, 2004, p. 69) of ESPN, reflecting on the core ethical concerns and larger problems inside the company (conflicts of interest, the boundaries between news and entertainment, the separation between reporting and commentary, sensationalism, sourcing, transparency, diversity, and the use of social media). In doing so, they all set very high standards about what ESPN should be and what audiences should expect from the organization in its myriad platforms.

After performing content analysis, the last three ESPN Ombudsmen/Public Editors (McBride, Lipsyte and Brady) were interviewed to ascertain their impressions of the impact of their role. According to interviewees, the ESPN ombudsman offered a honest attempt at integrity. There were always so many questions about what ESPN’s true stance was for any variety of journalistic actions

that they took. Their role as ombudsmen was to sort through those questions, figure out which ones were really interesting and could lead to revelations about the organization, and then pursue the answers to those questions so they could do two things: hold ESPN accountable and educate the public about how ESPN operates. While the public is sort of a “dermatologist”, they were “cardiologists” that knew what was going on the inside. Despite that ombudsmen are dwindling worldwide (Ferrucci, 2018), the quality rather than the volume of voices still matters. According to interviewees, “a horde of watchdogs” cannot substitute the critical, independent and informed analysis provided by a public editor.

Title: Ethics, commercialisation and control in Australian sports journalism

Session Type: Panel Submission

Authors:

Name: Peter English

Email: PEnglish(at) usc.edu.au

Country: AU (Australia)

Affiliation: University of the Sunshine Coast

Abstract: The expanding commercialisation of the media and the rise of sports organisations have created a range of ethical issues for mainstream sports journalists. Traditionally, sports journalism was the conduit between athletes and fans, but the changing environment is weakening these links and exposing the potential for softening approaches to journalistic norms and responsibilities. Factors including fragmenting audiences, the prominence of social media, reduced budgets in many Western newsrooms, and a greater influence of sports and corporate organisations have created this shift. This highlights the potential for sports journalists to alter their roles to ensure they cope with the often conflicting demands. The situation has led to sports journalism's reduced potency for critical analysis and investigation (English 2016).

Utilising a representative survey of mainstream Australian sports journalists, this paper highlights preliminary results from more than 100 sports journalists across print, online, radio and television. Sports journalists are the largest single speciality in Australian journalism but research into this major area of the industry has often been over-looked (Boyle 2006; Boyle et al. 2012; Henningham 1995; Nicholson et al. 2011). While previous surveys of Australian sports journalists have focused predominantly on profiling practitioners (see Henningham 1995; Nicholson et al. 2011), this paper examines issues affecting sports journalists in the contemporary environment. Specifically, this occurs across a range of ethical contexts, such as corporate influences, cheerleading and fandom in reporting, and journalistic roles.

Employing field theory, this paper also explores the forces operating in newsrooms and the broader industry in relation to pressure and control from commercial and sports organisations, and their impact on the practitioners' ethics and responsibilities. This involves how the sports journalists operate as individuals within organisational and macro structures. For example, journalists in the survey respond to questions about the importance of ethics in their work and their approaches to cheerleading, their home country winning, and receiving gifts. Roles and responsibilities, such as interviewing sources on and off the record, including opinion in reports, using personal pronouns, and producing detached and unbiased reports, are also considered. However, the sports journalists also provide data on organisational issues, such as the pressure experienced from within their own companies through advertisers, approaches to news content, and metrics. In broader terms, the influence of PR representatives, athletes and external corporations are also explored.

The results from this paper advance previous descriptive approaches to surveying sports journalists in Australia, providing a greater analytical focus through the lens of field theory. As a result, they highlight the pressures, forces and controls affecting Australian sports journalists. This indicates an

environment in which commercial, organisational and personal factors can lead to changing approaches to ethical issues.

Name: HE GONG

Email: hegong(at) xmu.edu.cn

Country: CN (China)

Affiliation: XIAMEN UNIVERSITY

Abstract: Chinese families always attach great importance to "filial piety", emphasizing that children should "tell good but not bad news" as communicating with their parents. Over the past two decades, with the gradual urbanization in China, more and more young people of higher education moved to other cities away from their parents for work. Mobile media became the dominant means for these white-collar immigrants to communicate with their parents. Compared with other adult children, white-collar immigrants usually face greater work and life pressure, needing more supports from their families. The focus of this study is thus on how the white-collar immigrants observe "filial piety" while sharing negative information with their parents for supports via mobile communication. In-depth interviews with 20 white-collar immigrants in Xiamen indicate that the changes in family forms and communication means have an impact upon traditional family ethics: The strategies of white-collar immigrants in telling their parents bad news vary with the negativity of topics, listeners and conversational situations; while following the traditional family ethics of "filial piety", they also endow it with new meanings; mobile communication is not the original impetus for the reconstruction of traditional family ethics, but it lays a technological foundation for the latter and therefore restricts its possible paths and modes to a large extent.

Title: Identidad periodística en Latinoamérica ¿cuáles son los desafíos ético-jurídicos de la profesión' Análisis a partir del caso de Chile y Colombia.

Session Type: Individual submission

Authors:

Name: Fernando Gutiérrez Atala

Email: fgutierrez(at) ucsc.cl

Country: CL (Chile)

Affiliation: Universidad Católica de la Santísima Concepción (Chile)

Name: Liliana Gutiérrez Coba

Email: liliana.gutierrez1(at) unisabana.edu.co

Country: CO (Colombia)

Affiliation: Universidad de La Sabana (Colombia)

Abstract: El 10 de diciembre de 1948 fue promulgada la Declaración Universal de Derechos Humanos (DUDH), texto fundamental para la profesión informativa, pues allí se sentaron las bases para el Derecho a la Información que sostiene el periodismo actual. El Artículo 19 indica: “Todo individuo tiene derecho a la libertad de opinión y de expresión; este derecho incluye el de no ser molestado a causa de sus opiniones, el de investigar y recibir informaciones y opiniones, y el de difundirlas, sin limitación de fronteras, por cualquier medio de expresión”.

Tal y como queda de manifiesto, el titular del derecho a la información es la propia persona, el ciudadano, el público. Hasta ahora, el periodista ha convertido el ejercicio de este derecho universal en una actividad y un deber profesional mediante una delegación tácita de la sociedad ¿Y si aquella delegación tácita se esfumara, fruto de la presión social y del impacto global de fenómenos que dañan la imagen del periodismo como la pos verdad y las fake news (noticias falsas)?

Esta ponencia deriva de la presentada en 2018 en Oregón (Estados Unidos), donde uno de los autores profundizó en la siguiente pregunta: ¿es el periodismo una profesión con futuro?, una duda que se repite frente al modelo de negocio de los medios, que actualmente presenta señales de crisis. Las formas de entregar las noticias no innovan y no se adecuan a lo que el público consumidor de información necesita, a pesar de que éste va mutando y transformando continuamente y teniendo nuevas necesidades informativas. En vista de dicha situación y según Robert Picard (2009), los periodistas no pueden seguir informando de la forma en que tradicionalmente lo ha venido haciendo o limitarse a hacer un refrito con noticias que ya han aparecido en otros canales. Deben añadir algo novedoso que aporte valor.

Entonces ¿cómo cumplir con ese cometido sin antes diagnosticar la situación y establecer las bases de la identidad profesional en la región?

La presentación apunta a reflexionar en torno a los desafíos éticos y legales de la profesión a partir del reconocimiento y análisis de casos emblemáticos que tensionan la profesión: la relación de los periodistas entre ellos, con la audiencia, con los cuerpos legales, códigos éticos, con los medios de

comunicación y con una ciudadanía empoderada, vigilante y activa. Algunos de los puntos que se abordarán serán el derecho al olvido digital, el derecho a la propia imagen, libertad de expresión, entre otros, sus alcances y colisiones.

Title: Role of Ethics in the Reconstruction of Emotional Aspects of Computer-mediated Communication in Family Relationships in Lagos, Nigeria.

Session Type: Individual submission

Authors:

Name: Stellamaris OKPARA

Email: nokpara(at) pau.edu.ng

Country: NG (Nigeria)

Affiliation: School of Media and Communication, Pan-Atlantic University, Lagos, Nigeria

Abstract: With the evolution of human communication processes and technologies, attempts have been made to express emotions via media communication technology. Computer-mediated communication (CMC) plays a major role in family relationships and makes it easier for family members to stay connected to each other. One can, therefore, argue that computer-mediated communication has transformed family relationships in time and space. With the aid of electronic devices, people now have effective interpersonal relationships in families irrespective of the time or space involved. However, without the communication of emotions, the conveyance of meanings expressed using electronic devices is rendered incomplete and, at best, ambiguous. As such, in the evolution of known human communication processes and technologies, there have been attempts to accommodate emotional communication via all communication media. Facial expressions and some other body-centered cues are intrinsic components of body language situated within non-verbal realms in communication. These views emphasize the argument that non-verbal cues and signs are important in human relationship and communication, especially family communication. It is therefore clear that the same non-verbal cue and its extent of involvement in a human relationship would be required within spheres of CMC in order to gain a full understanding of messages sent and received on CMC platforms. In line with the theories adopted herein (social information processing theory, social presence theory, emotion process theory) this paper will build on the understanding that CMC platforms have not been able to totally replicate the successes of face-to-face communication. In essence, identifying elements that make face-to-face communication effective, and attempting to transfer all the observed emotional and some important non-verbal aspects of face-to-face communication into a CMC platform, may help in reconstructing and ensuring that CMC replicates the successes of real-life interactional and transactional moments in families. Being a theoretical review the study will adopt a qualitative design that is descriptive in nature. The implication is that this work will be borne out of consultations of both empirical and theoretical studies carried out by scholars in this field of study. This paper, therefore, aims to identify the role of ethics in the reconstruction of emotional aspects of computer-mediated communication in family relationships in Lagos, Nigeria. The researcher will, therefore, depend solely on secondary sources of data to arrive at the conclusions and recommendations to be made in this paper.

Abstract: Journalism is being “caught in a whirlwind of changes” (Neveu, 2019: 198). A number of intertwined challenges and threats impact on news quality, including commodification and the prioritization of metrics, greater demands, and the expansion of practices such as fake news and sponsored content. Journalism, though, is not a “game without rules” (Fengler et al., 2014). Therefore, accountability towards society at large (McQuail, 2003) is deemed as exceedingly important in the contemporary landscape.

Accountability and its three core values (transparency, self-regulation and users’ participation) can be promoted through a wide range of established and innovative instruments (Bertrand, 2000). Scholarly literature has scrutinized the advantages and failures of traditional tools such as ethical codes and in-house stylebooks, letters to the editor and ombudsmen, as well as the opportunities delivered by online mechanisms, including editorial blogs, error tools, and criticism via comments, email, chats and social media. Yet the research on how journalists evaluate those instruments is rather limited. Fengler et al. (2014) conducted a comparative survey with 1,762 journalists from 14 different countries, revealing that European journalists consider stylebooks to be the instruments created by media organizations that have a greatest impact on their professional performance. Findings within the Spanish landscape rendered similar results. Nearly a decade after this seminal study, there is a need to update these results and go beyond to interrogate Spanish citizens about their knowledge, expectations and usage of Media Accountability Instruments (MAIs).

As part of a larger project on media accountability, this research has two main objectives: to examine Spanish journalists' perceptions of how effective in-house accountability instruments are (O1); and to analyse citizens' knowledge and understanding of those mechanisms (O2). A mixed-method approach was employed to fulfil these goals: an online survey was administered to Spanish journalists (N=228) and a total of 6 focus groups with citizens (with 38 participants overall) were conducted in different Spanish regions (Andalusia, Basque Country, Catalonia, Galicia, Madrid and Valencia). To reinforce and contrast this data, 18 in-depth interviews were conducted with experts and representatives from professional associations across the country.

Results indicate that stylebooks continue to be the in-house tools with a higher impact for Spanish journalists, followed by chats and digital meetings, ombudsmen, comments on social media and letters to the editor. Despite that journalists claim that MAIs contribute to foster responsibility, their evaluation of the aforementioned tools is remarkably modest, scoring 5.82 out of 10 points in the highest case. From the citizens' perspective, there is a central problem with accountability instruments: their overwhelming lack of visibility. Participants believe that stylebooks are important, but they contend they are not effective. In addition, they argue that comments generate clutter rather contributing to the debate on the quality of media output. Tools such as ombudsmen, online meetings and error buttons are largely unknown. This double 'disconnect' from accountability (both from the professionals' and citizens' perspectives) reveals the need to rethink and reinvigorate the existing MAIs so that they can effectively contribute towards the goal of rebuilding trust in journalism.

Title: Violence and Gender in Sport Journalism: Some Troubling Ethical Questions

Session Type: Panel Submission

Authors:

Name: David Rowe

Email: D.Rowe(at) westernsydney.edu.au

Country: AU (Australia)

Affiliation: Western Sydney University

Abstract: Much sport necessarily involves legitimate, illegitimate and accidental violence, and the media (especially television) ascribe considerable news value to violent moments in sport. These incidents can be endlessly replayed and dissected, offering spectacular moments that might involve deep ethical debate, but also offer snippets of broadcast action and ‘showreels’ of collisions and confrontations that are the visual equivalent of fun fair thrill rides. This coverage can lay claim to involving journalism because it is, in some ways, both witness and record of actual events, however confected, accompanied by commentary of varying depth. Violent moments in the media have also come to define and celebrate a form of masculinity that has been classified as ‘hegemonic’. By this it is meant that men’s propensity to excel at sporting violence that can be voyeuristically enjoyed is a key feature that is emphasised as appealing to media audiences, and is a pivotal means by which men’s sport can be claimed to be superior to women’s in deference to a hierarchy of sporting violence. Women from this perspective are either clustered in so-called decorous sports lack violent appeal, or, when they do enter into the male-dominated domain of contact sport, are likely to be dismissed as a pale imitation of the ‘real thing’. However, with the rise of women’s sport in general, and contact forms in particular, it is important to examine how journalists respond to the perpetration of legitimate and illegitimate sporting violence in this increasingly conspicuous, highly mediated domain.

But this is only one aspect of violence in the sporting sphere. The news media are also required to address domestic (spousal) violence by sportsmen (males being, as in the wider society, the vast majority of perpetrators). How have journalists treated such off-field violence in relation to that committed on the field, as well as by male sport fans during and immediately following sport events? In addition, other modes of gendered violence, widely conceived, in which journalists themselves are implicated need to be addressed, including the intrusive sexualisation of sportswomen, their ‘symbolic annihilation’ through neglect and trivialisation, and their potential complicity in unleashing sexually violent ‘trolling’ of women within social media. This panel presentation, then, will range freely across the gendered representation of sport by the news media, analysing its role in countering and reinforcing modes of masculinity and femininity as they relate to multiple, diverse forms of sport-implicated violence. In particular, it asks some uncomfortable ethical questions about those sports journalism practices, loosely defined, that savour on-field violence while purporting to condemn it; and downplay off-field, especially gendered violence, while professing to abhor it.

Title: The datafied home: Ethical considerations on voice assistants in private settings

Session Type: Individual submission

Authors:

Name: Caja Thimm

Email: thimm(at) uni-bonn.de

Country: DE (Germany)

Affiliation: PhD, Professor University of Bonn
Department for Media Studies
Poppelsdorfer Allee
47D-53115 Bonn
Germany

Abstract: Voice assistants (VAs) - or smart speakers - are technologies that process voice commands and execute them according to their capabilities. They can be defined as “software agents that can interpret human speech and respond via synthesized voices” (Hoys, 2018). Due to the fact that these VAs are located in people’s homes, voice assistants pose a severe risk for privacy breaches, data collection, and surveillance (Lau et al., 2018). Apart from privacy issues, the usage of such ‘new machines’ can also be regarded as an important first step into a ‘machine enhanced lifestyle’. With the aim to shed light on the ways why and how individuals adopt these technologies into their homes, we conducted a set of studies in order to assess individual’s overall attitudes, usage patterns, and daily routines with a selected brand of smart speakers (Alexa). Following the model of the ‘domestication of technology’ approach (Berker et al., 2006), we conducted three studies:

- Study (1): Online survey (n=408) on user attitudes in respect of practicability, acceptance, data safety, surveillance, and privacy of VAs
- Study (2): Case study with users’ media diaries on daily practices in the home (10 households)
- Study (3): Cooking with Alexa (one selected cooking skill with 5 participants)

Results show that most participants are conscious of the ethical implications of data collection when using the devices. In order control for data privacy, they reported limiting their activities in the beginning. Results from the observational and self –report study (2) showed, however, that some participants became surprisingly emotional about their Alexa and soon adopted the technology fully into their lives. Some even regarded Alexa as a companion. In contrast, users express few privacy concerns, but their rationalizations indicate an incomplete understanding of privacy risks and a complicated trust relationship with speaker companies. Many of our users in the media diary condition traded privacy for convenience with different levels of argumentation and privacy resignation. The presentation will discuss further results and reflect on ethical solutions to the ‘datafied home’.

Title: PepsiCo 2017 Ad: when image garbles reality

Session Type: Individual submission

Authors:

Name: Mónica Codina

Email: mcodina(at) unav.es

Country: ES (Spain)

Affiliation: School of CommunicationUniversidad de Navarra

Abstract: Advertising campaigns should respect the sensitivity of the public, but it is easy to fall into a misunderstanding. In April 4, 2017, PepsiCo premiered a new Pepsi advertisement. This short film performed by the star Kendal Jenner had to be removed 24 hours after its release. PepsiCo and Kendal Jenner had to apologize due to the unintentional misrepresentations this advertisement made.

In the ad story, Kendal Jenner appears in a photo shoot, when a demonstration is passing near her. Activists of all ethnicities are carrying peace symbols and posters calling to “join the conversation” and asking for “love”. The crowd stand in front of a row of police, when Jenner offers a Pepsi can to a police official, who drinks from the can. This seems to stop a possible action by the agents, thus the crowd shouts approval. This advertisement apparently links together the core values of PepsiCo and all the ingredients to be a great success. However, the movie was catalogued as a misrepresentation of the social movement “Black Lives Matter”. Kendal Jenner walking toward police with a can of soda, brought to mind the image of Leisha Evans, an Afro-American woman, standing in front of the police at the Baton Rouge protest in Louisiana a year earlier. This image became an icon of the protests organized by the movement Black Lives Matter challenging violence and police brutality against black people, after the death of two African-Americans. The public were disturbed about the way this commercial uses the imaginary of social movement protests to sell a can of soda. The ad compares a celebrity to a grassroots protester; It oversimplifies what protests were about; and it doesn't really pick a cause. Even more, a deep analysis of the movie reveals an image of what Peggy McIntosh has called “white privilege”, which contributes to perpetuating racial stereotypes.

Abstract: Con la llegada del entorno digital, los medios de comunicación han potenciado de forma progresiva la participación del público, especialmente en los sitios web de los diarios y redes sociales. Teniendo en cuenta las transformaciones que esta participación conlleva, parece necesario preguntarse si ésta ayuda a mejorar la rendición de cuentas de los medios de comunicación. Esta investigación parte del concepto participatory transparency enunciado por Karlsson (2010) para analizar cómo afecta el papel activo de las audiencias en la rendición de cuentas a través de las secciones de contenido generado por los usuarios (UGC) o comentarios en redes sociales. La metodología seguida es triple: se han realizado 228 encuestas a periodistas en activo de España junto con seis focus group a usuarios de medios, para conocer la opinión de los principales actores del proceso informativo. Asimismo, se han realizado entrevistas en profundidad a varios expertos del sector periodístico con el fin de contextualizar las opiniones anteriores. Los principales resultados muestran que los periodistas no son optimistas con respecto a la eficacia de los instrumentos de rendición de cuentas en los que participa la audiencia. Destaca que, entre los periodistas consultados, son los más jóvenes los que se muestran más reticentes a pensar que la participación de los lectores ayude a que los medios mejoren su rendición de cuentas respecto a la audiencia. En cuanto a la opinión de los usuarios, estos valoran la participación de la audiencia en el proceso periodístico mediante los comentarios a través de las redes sociales o el envío de material informativo al medio, pero consideran necesario el papel del periodista como fact-checker de ese UGC. Por último, los expertos entrevistados muestran, en general, cierta cautela sobre la

participación de la audiencia en el control de calidad periodístico y en la influencia de las redes sociales en el ecosistema mediático.

Title: The Ethics of Water

Session Type: Individual submission

Authors:

Name: Beate Josephi

Email: b.josephi(at) ecu.edu.au

Country: AU (Australia)

Affiliation: University of Sydney

Name: Jahnnabi Das

Email: Jahnnabi.Das(at) uts.edu.au

Country: AU (Australia)

Affiliation: University of Technology Sydney (UTS)

Abstract: In order to study the media's dealing with water rights and resources, we examine the reporting in two major papers in two countries that are in many ways diametrically positioned with regard to water resources: Australia and Bangladesh. Australia, after Antarctica, is the driest continent on earth, whereas in Bangladesh its 163 million people (Word Bank, 2016) are in frequent danger of flooding and threatened by rising sea levels. In each country, we focus on the reporting of the largest river system, the Murray-Darling river basin in Australia and the Ganga-Brahmaputra river system in Bangladesh. By choosing these two countries, we combine examples from the western and the developing world. This will enable us to view water rights and resource ethics not only as understood in a country that is developmentally advanced and monetarily in a safe position, but also from a country that does not enjoy these privileges. Our analysis will allow us to arrive at a more rounded, global understanding of how journalistic ethics intersect with environmental justice. We are drawing on relevant literature with regard to environmental reporting, and on media ethics, in particular on an empirical study that provides a global picture of journalistic ethics (Worlds of Journalism, 2019). Our results highlight the inadequacy of traditional media and traditional media ethics when dealing with water rights and water resources, and call for a new conceptualization of media ethics that includes actors from outside the formal institutions of journalism.

Title: Periodismo Bajo Fuego:Asesinato de Periodistas e Impunidad en Mèxico :El Caso de Javier Valdèz(15-Mayo-2017)'.

Session Type: Individual submission

Authors:

Name: Hugo Sànchez

Email: hugosgudino(at) yahoo.com.mx

Country: MX (Mexico)

Affiliation: Profesor-Investigador de la Universidad Nacional Autònoma de Mèxico(UNAM)

Abstract: Pregunta Principal o Problema a Investigar: En México ser comunicador parece más una sentencia a muerte que una profesión.Los periodistas se han convertido en protagonistas de la nota roja en un país que ve con preocupación el repunte de la violencia y la impunidad. El homicidio de Javier Valdez el 15 de mayo de 2017--- el sexto periodista asesinado en 2017 en el penúltimo año de Peña Nieto como Presidente---demuestra la poca protección que tienen los periodistas en Mèxico.A plena luz del día,y frente a la inoperancia de las autoridades fue acribillado: Pero que escribió Valdez que irritó a quienes decidieron asesinarlo?La disputa por el control del Cártel de Sinaloa de los Chapitos(hijos de el Chapo) contra Damaso Lòpez (a)"El Licenciado". Esta lucha colocó en medio al periodista Valdez(que había entrevistado a Damaso).Cuando asesinarón a su colega Miroslava Breach meses atrás,Valdez,corresponsal de la Jornada,escribió:"Que nos maten a todos,si esa es la condena por reportear en este infierno".

¿Por qué nadie se ocupa con responsabilidad de la muerte de Periodistas en México?;¿Qué mecanismos legales de protección existen o cuales hacen falta?;¿Puede sobrevivir una democracia sin libertad de expresión?;---estas son las interrogantes centrales que nos planteamos y que nos conducen al problema central de la investigación:Las Ejecuciones y Asesinatos de periodistas como parte de la escalada de violencia que se vivía en el año previo a la contienda por la Presidencia de México.

Marco Teòrico:

A partir de un marco teórico que tiene como soporte la Sociedad Red,la Comunicaciòn Política, la Cleptocracia,el Cartel y la Sociedad Narca nuestro objetivo será establecer las bases para analizar el asesinato del periodista Javier Valdez,corresponsal de la Jornada y director del semanario Rìodoce en Cualican Sinaloa, en el contexto de las relaciones Prensa,Poder,Etica,Violencia Contra los Periodistas y Narcotràfico en Mèxico durante el penúltimo año de gobierno de Enrique Peña Nieto. Mètododo Utilizado: Contextualizar el tema en un marco histórico que se basa en la Comunicación Política,la Ciencia Política y la Sociología. En especial de aquella que tiene contenidos de corte analítico y valorativo sobre el ejercicio del periodismo crítico en la sociedad conectada, la violencia desatada en contra de los informadores,y la narcopolítica como el principal impulsor de estas agresiones.

Resultados Empìricos: Actualmente en muchas ciudades de Mèxico,los periodistas,reporteros,fotografos y redactores son amenazados,asesinados,secuestrados,torturados e intimidados por narcos y sicarios.En ocasiones no son criminales únicamente quienes silencian la libertad de expresión en Mèxico:la mayoría de las agresiones tiene como autores a un funcionario público,un policía,un soldado, y a un burocràta de la seguridad.Frente a esta perspectiva,el gremio

periodístico ha exigido y demandado al gobierno mexicano garantías mínimas para el ejercicio libre de su trabajo, sin que hasta el momento se hallan obtenido resultados favorables.

Affiliation: University of Salamanca

Abstract: After defining fake news (Allcott & Gentzkow, 2017; Bakir & McStay, 2018; Bennett & Livingston, 2018), this text analysis the opinions of 383 Spanish journalists about this phenomenon, filling the knowledge gap about the topic in Spanish academia. The main goals are a wider understanding of the problem and to look for possible solutions, paying special attention to journalistic ethics –seen it as the professional rules voluntarily assumed by journalists– as a possible way to help fighting fake news.

This will be articulated in four research questions: RQ1: What are the causes and the level of importance of fake news for Spanish journalists?; RQ2: Do they see journalistic ethics as an effective tool against fake news?; RQ3: How would journalistic ethics gain effectiveness in order to fight fake news?; RQ4: What measures are seen as most effective to avoid the spread of fake news by Spanish journalists?

Fake news are considered a serious issue ($M=4.18$; $SD=0.81$). The most relevant causes in the spread of fake news are the new online communication context ($M=3.88$; $SD=0.74$), followed by economic aspects ($M=3.77$; $SD=0.96$).

The relationship between journalistic ethics and fake news is obvious ($M=4.28$; $SD=0.82$), so is the relevance of ethics for journalists ($M=4.55$; $SD=0.58$). However, its presence in the companies where they work is smaller ($M=3.43$; $SD=1.04$), what may help explaining why the kind of measures related to deontology are not seen as effective against fake news ($M=2.86$; $SD=1.10$).

This may be changed with an increase in the level of compliance with the deontological norms and standards ($M=4.18$; $SD=0.86$) and also with an update of these norms ($M=4.05$; $SD=0.94$).

Non-deontological measures considered the most effective against this phenomenon are those focused in consumers ($M=4.17$; $SD=0.95$), something that Tandoc, Lim and Ling (2017) had already pointed out, and that should be further analysed in the future.

RQ1 shows how relevant the spread of fake news is for journalists and points at online communication –not just journalism– and economic causes as responsible for their ascent. RQ2 proves how journalists see fake news clearly as ethic problems, but deontology is not considered the most effective way to fight them. According to RQ3, a stronger compliance with ethic norms and their update would make them more useful against this matter. RQ4 offers a more practical use of the study, by finding that measures applied to consumers are seen as the most effective against fake news.

Title: Ghost Writing, Ethics and Risk Communication ' The Case of the Monsanto Papers

Session Type: Individual submission

Authors:

Name: Martha Kuhnhen

Email: martha.kuhnhen(at) uni-greifswald.de

Country: DE (Germany)

Affiliation: University of Greifswald

Abstract: Until Bayer's purchase of Monsanto, the U.S. company based in St. Louis was the leading producer of the world's most used herbicide, namely roundup. However, the active ingredient of roundup, the chemical glyphosate, is subject of a contested discourse regarding the question whether it is carcinogenic to human beings. As it became evident, Monsanto influenced the public as well as the scientific discourse with un-ethical means, like ghost written studies and evaluations regarding glyphosate. In 2017, the first "Monsanto Papers" got published. These, originally internal documents, show how Monsanto influenced scientists and, thus, the academic and political evaluation of glyphosate (Krimsky/Gillam 2018). The company influenced strategically the academic discourse in order to meet its own goals. The term "Monsanto Papers" became a synonym for industry's influence on science and politics.

Based on a content analysis of U.S.-American and German newspaper articles covering the Monsanto Papers, the paper will discuss the case of the Monsanto Papers regarding contested truths and the ethics in risk communication. Subject of the Content Analysis are the newspapers New York Times, Wall Street Journal, Washington Post, Frankfurter Allgemeine Zeitung, Süddeutsche Zeitung and die tageszeitung (three U.S.-American newspapers and three German dailies).

Title: Nuevo modelo de comunicación política en México. Gobierno popular valores y ética en el Estado Mexicano

Session Type: Individual submission

Authors:

Name: Leonardo Figueiras Tapia

Email: figueirasl(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: Coincidiendo con la crítica a la propuesta teórica de la Agenda Setting así como a la Agenda Building, para el estudio de la relación Gobierno-Prensa, me dispongo a establecer algunas bases conceptuales para el inicio de la revisión de dicha relación en México, a la luz de un régimen distinto.

En el ensayo se explicarán algunas de las condiciones en que el viejo régimen, así como su derivación en el neoliberal sostenían y su contubernio con la prensa y medios en general en México. Durante el régimen del nacionalismo revolucionario 1919-1996, lo que imperó fue la subordinación de la prensa escrita, así como la radio y la televisión al poder político monopólico constituido. Se trataba de un Estado Corporativo.

El poder político sustentado por el nacionalismo revolucionario derivó en 1988 en la apropiación del poder político por parte de elites comprometidas con el proyecto neoliberal en México, trajeron cambios en la relación Prensa-Gobierno al fortalecerse los grupos económicos incluidos los capitales de los medios concesionados.

En el año del 2006 cuando se da la gran confrontación entre el proyecto de las izquierdas y/o popular, y el proyecto de las derechas, la actuación de los medios en general fue de abonar para la elección de Estado.

No obstante, lo anterior, 12 años después la construcción de un proyecto popular por parte de el líder carismático y tesonero del Movimiento de Regeneración Nacional (MORENA), ya había calado lo suficiente en los gobernados, para que cualquier descalificación o manipulación de los medios ya no surtía gran efecto.

Le he llamado junto con algunos otros intelectuales y teóricos, la Revolución de las Conciencias, en donde convergen desencantos con el viejo régimen, enojos y necesidad de tener otra opción o cambio político, así los electores el primero de julio decidieron en una cifra de 30 millones otorgar todo su apoyo al nuevo régimen.

Si bien hay otros temas de debate importantes, el presente es de tal gravedad no sólo por los miles de millones de pesos, sino por la estructura de poder del crimen, que sirve para analizar también la estrategia de comunicación del nuevo gobierno, la cual si bien, pudo ser deficiente, con una severa desinformación de los ciudadanos, la acción gubernamental produjo el respaldo popular al gobierno, a pesar de las críticas de integrantes del poder mediático.

Aquí aparece nuestro objeto: La prensa ya no estará en la nómina gubernamental, los millones de pesos para imagen presidencial ya no existirán, el gobierno ya no incidirá u ordenará ningún trato preferencial hacia él, el propio presidente de la República López Obrador se encarga de informar personalmente todos los días a primera hora de los acontecimientos y las políticas que se aplicarán

para enfrentar los conflictos. Esta estrategia y sus consecuentes decisiones impactarán toda la concepción de comunicación política del régimen, así como los valores y la ética de la Nación.

Title: El papel de la comunicación política en la construcción de una ética democrática para una sociedad más justa

Session Type: Individual submission

Authors:

Name: Daniela Lemus Muñiz

Email: dlemus(at) politicas.unam.mx

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Name: Patricia Martínez Torreblanca

Email: patriciatorreblanca(at) politicas.unam.mx

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: El presente trabajo realiza un acercamiento entre la visión de una sociedad justa y la concepción político-normativa de la ciudadanía contemporánea, desde la especificidad de la comunicación política. Busca responder a dos preguntas: ¿cuál es el papel de la comunicación política en el desarrollo de una sociedad política democrática más justa? Y ¿qué responsabilidades tiene el comunicólogo político con estos procesos de construcción de sentido colectiva?

Parte de la propuesta de John Rawls acerca de la justicia, discusión que propicia una problematización en tres sentidos: 1) la persona en su concepción como sujeto; 2) la persona en su concepción política como ciudadano con autonomía política; 3) la sociedad política como un sistema de cooperación justo sin fines ontológicos. En una lógica dialéctica entre una identidad moral y una identidad pública, entre procesos de definición racionales dados por los propios fines y razonables en el entendido de valores colectivos.

Siguiendo el interés de Rawls de proponer una teoría de la justicia de corte liberal, como una concepción política, no moral, religiosa o filosófica, se sostiene una concepción política que dialoga con las teorías contemporáneas de la democracia, que reconoce la igualdad entre individuos y un compromiso político público, llamado justicia, que tiene como objetivo preservar esa condición de igualdad.

Se entiende que esta construcción pública de sentido es mediada por procesos diversos de comunicación política, por lo que se conceptualiza como el proceso primordial para el establecimiento de una razón pública plural en un sistema democrático; en virtud de que el espacio público es el campo de expresión de la ética, ya que se constituye por una doble mediación: la de la naturaleza social y la de la vida colectiva. Siendo la justicia una construcción emanada de las instituciones que regula la vida de los ciudadanos en sociedades concretas, se encuentra por tanto en esta interrelación de la praxis de la vida social.

En ese sentido, el comunicólogo político tiene también un papel primordial en la construcción de un sistema democrático y una sociedad más justa. Y debe reconocer su responsabilidad ante la

sociedad política como un proyecto, en diversos sentidos: 1) en el diseño de procesos que propicien la participación plural; 2) en el diseño y elaboración de mensajes que ayuden al desarrollo de procesos de razón pública; 3) en el análisis de los procesos ya existentes y sus carencias; 4) construir un aparato teórico que dé parte de la comunicación en los diversos procesos políticos.

Abstract: La obesidad ha sido identificada como un problema de salud pública en México, que se fue gestando a lo largo de más de 30 años, derivada en parte del crecimiento de la venta de productos ultra procesados, a raíz de la firma del Tratado de Libre Comercio entre México, Estados Unidos y Canadá. México ocupa el primer lugar en obesidad infantil, y el segundo en obesidad en adultos, según indicadores de la OMS. Los productos procesados con altos niveles de azúcar, calorías, preservativos, grasas, sal, carbohidratos, se sumaron al consumo de refrescos, en el cuál México es uno de los principales mercados en el mundo.

A esto se suma un entorno de insuficiente normatividad, una amplia inversión publicitaria, la promoción de productos ultraprocesados, con alto contenido calórico y de fácil disposición con numerosos sitios de venta y precios.

En este contexto, el gobierno mexicano inició la implementación de medidas orientadas a restringir la venta en las escuelas, la limitación de la publicidad en radio y televisión y la imposición de un impuesto a los productos de bajo valor nutritivo.

Sin embargo, los anunciantes y la industria publicitaria habían iniciado previamente un proceso que pugnaba por la autorregulación y los códigos éticos, para oponerlos a las medias legales. Así en 2003, el Consejo de Autorregulación Publicitaria elaboró el Código para la Publicidad de alimentos y bebidas dirigida al público infantil (PABI).

Los anunciantes han adoptado diversas estrategias para evadir restricciones y conservar su mercado, desde la reducción de envases y empaques, la incorporación de nuevos productos con menores contenidos de azúcar, sal o grasas. Una de las medidas ha sido la relativa a las estrategias publicitarias, cuando se reglamentó la reducción de publicidad en horarios infantiles en radio y televisión.

Este trabajo se refiere a las estrategias publicitarias adoptadas, que en muchas ocasiones contravienen los principios éticos del Código PABI, donde podemos identificar dos características: la manera en que la publicidad sale de los horarios de audiencia infantil, pero se ubica en los programas para mayores de 15 años, donde los niños continúan viendo la televisión, el Instituto Federal de Telecomunicaciones señalaba que en 2017 la audiencia infantil en televisión pasaba 4 horas 46 minutos frente al televisor y los programas que más veían los niños se encontraban en los horarios para adultos. La publicidad continúa relacionando productos con emociones, personajes y deportistas.

Por otra parte, la principal estrategia es direccionar la publicidad de estos productos a internet, redes sociales y videojuegos, donde encuentran un campo propicio ante la falta de regulación en estos espacios. La publicidad dirigida a los niños está ahora en páginas de Facebook, en you tube y en el

advergaming, espacios donde los niños ocupan parte de su tiempo de esparcimiento y en espacios recreativos en zonas turística, deportivas o en sitios como kidzania.
Este trabajo es continuación de la investigación que venimos realizando en la UNAM en el proyecto Publicidad y obesidad, regulación y autorregulación.

Country: MX (Mexico)

Affiliation: UNIVERSIDAD PANAMERICANA

Abstract: La violencia hacia periodistas en México y en especial en el estado de Sinaloa, ha aumentado sus cifras a través de los años. ¿En este entorno es posible ejercer un periodismo de paz propuesto por Galtung (2002)? Más aún ¿se puede informar sobre la violencia ejercida contra los periodistas con el enfoque del peace journalism? En este artículo se analizó la cobertura informativa dada al asesinato del periodista Javier Valdez Cárdenas, hecho que revolucionó a periodistas y medios de comunicación de todo el país. A través del análisis de contenido (Berelson 1952; Krippendorff 1990) se revisaron los enfoques noticiosos de 366 noticias de los periódicos locales, en su versión en línea, Noroeste y El Debate, y de los nacionales Reforma y El Universal. Los resultados mostraron que, en general, la cobertura fue con un enfoque hacia el war journalism.

Title: La renovación de la imagen de Coca-Cola como Empresa Socialmente Responsable (ESR) en su combate contra la obesidad.

Session Type: Individual submission

Authors:

Name: Elsa Irene Pimienta Alcántara

Email: elsapimienta10(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México (UNAM)

Abstract: Las empresas transnacionales (ETs) son actores con relevante preponderancia en la arena internacional. La penetración de estas corporaciones en el mercado se ha traducido en la incorporación de marcas y productos en la vida cotidiana de las personas, lo cual ha contribuido en la modificación de hábitos de consumo.

Dentro de los productos con mayor irrupción en el mercado y en la vida de los individuos están las bebidas azucaradas. No obstante, la adopción de este tipo de bebidas en la dieta diaria ha resultado contraproducente para la salud de los seres humanos, debido a que estos productos al poseer un alto contenido de azúcares inciden en un incremento de grasa corporal que deriva en sobrepeso u obesidad.

Hoy, la obesidad es un problema de salud pública catalogado por la Organización Mundial de la Salud (OMS) como epidemia, debido a su magnitud y severidad a escala mundial. Por ello, este organismo internacional ha exhortado a los Estados Miembros, asociados internacionales, organizaciones de la sociedad civil, y organizaciones no gubernamentales, así como actores del sector privado a colaborar con ella, para trabajar conjuntamente en la disminución del índice de personas con sobrepeso y obesidad.

La OMS ha hecho especial énfasis en la planeación de estrategias y ejecución de medidas que contribuyan a reducir el consumo de bebidas azucaradas, especialmente de sodas. Por tal motivo, ha sugerido a los Estados miembro, específicamente a aquellos donde la obesidad es un problema de salud pública, implementar un impuesto a este tipo de bebidas a fin de reducir la demanda.

En el marco de esta lucha contra la obesidad, Coca-Cola, empresa líder en el mercado de refrescos, ha sido la corporación mayormente señalada como responsable de contribuir en gran medida en el aumento de casos de niños y adultos con obesidad alrededor del mundo. Por tanto, Coca-Cola como parte de su ética corporativa y de su compromiso social ha formulado y ejecutado diversas estrategias publicitarias para renovar su imagen con el propósito de posicionarse como una Empresa Socialmente Responsable (ESR) que está en armonía con un estilo de vida saludable. Si bien Coca-Cola se ha situado como la industria de la felicidad, actualmente ha recurrido a implementar estrategias de marketing y publicidad basadas en la ética, para mostrar su compromiso y adherencia al combate contra la obesidad.

Para estudiar la problemática planteada es preciso identificar e interpretar, bajo el enfoque metodológico de la hermenéutica profunda, planteado por J. B. Thompson, la ideología presente en la estrategia publicitaria que ha construido e implementado Coca-Cola para posicionarse como ESR comprometida con el desarrollo humano, la salud y calidad de vida. Así como, realizar un análisis contextual de los fenómenos que han tenido cabida a nivel nacional e internacional, y que incidieron en la modificación de la ejecución de las estrategias de la empresa para renovar su imagen, al

considerar y resaltar su ética publicitaria y de marketing, a fin de promover un estilo de vida saludable que favorece el bienestar en las personas.

Palabras clave

Empresas transnacionales, Responsabilidad Social Empresarial, bebidas azucaradas, obesidad, salud, ética.

Title: Reconfiguring the Individual with Ubuntu: An Examination of Human Rights Language from the Perspective of the Global South

Session Type: Individual submission

Authors:

Name: Rachel van der Merwe

Email: rachel.vandermerwe(at) colorado.edu

Country: US (United States)

Affiliation: University of Colorado Boulder

Abstract: The individual is a concept that many who grow up in the West take for granted. Progressive movements championing human rights tend to insist on the sovereignty of the individual and the absolute rights of said individual to their own body, their own desires, and their own decisions. Regardless of political stance, the foundational concept of the individual is typically unquestioned, though its expression and responsibility to the community may appear slightly different depending on who you ask. The individual, as we now understand it, however, has not always been in existence. “Until the 18th century, individual was rarely used without explicit relation to the group of which it was, so to say, the ultimate indivisible division,” (1985, p. 163) Raymond Williams points out in his Keywords entry for the term. Enlightenment thought stressed the value of rational, scientific thought that endowed the individual with the capacity to make logical decisions for himself. It used the notion of the individual to frame ideas about society as an intentional social contract made between separate individuals emerging from a state of nature.

In this paper, I challenge such a hegemonic understanding of the individual as the foundation for our codes of ethics and human rights endeavors. Various Western scholars such as Bruno Latour, Gilles Deleuze, Félix Guattari, and Niklas Luhmann have proposed reconfigurations of the individual in the last century. I choose, instead, to highlight a plethora of other traditions and understandings of the individual from the Global South, which have long been in existence while the West was simply not listening. In particular, this piece focuses on the sub-Saharan Nguni philosophy of ubuntu/botho, and how it defines the individual. Ubuntu has become trendy in the last decade, both within South Africa and globally, usually deployed as an ethics of compassion and defined in the heartwarming expository phrase: “I am because we are.” However, ubuntu is more fundamentally an ontology that shapes how we define what it means to be human; ubuntu observes that, “No person is complete in him/herself; s/he is fully human in as far as s/he remains a part of the web of life, including creation and the earth” (LenkaBula 2008, p.378). Within ubuntu, the individual is distinct but not autonomous, and community serves as the state of nature—not the individual.

This reconstitution of the individual manifests in new ethical formations, and it has a significant impact on how we understand and communicate the nature of “human rights”. Most of today’s humanitarian efforts stem from a commitment to the inherent, “self-evident” rights of the autonomous individual, while ubuntu argues that this individual doesn’t exist. In this paper, I examine the relationship between the philosophy and rhetoric of human rights. Using existing human rights discourses as case studies, including the Universal Declaration of Human Rights and

PR material from organizations such as UNICEF and the Global Fund for Women, I speculate on how alternative ontologies from the Global South, like ubuntu, might transform the language and assumptions within such human rights narratives.

Title: La función del periodista, empresario y público frente a los desafíos del periodismo digital

Session Type: Individual submission

Authors:

Name: Ignacio Bel

Email: ignaciobel1947(at) gmail.com

Country: ES (Spain)

Affiliation: Professor of Communication Law

Abstract: El periodismo desde punto de vista de la acción informativa, sigue inmerso en un proceso de cambio muy importante, derivado del nacimiento y desarrollo del periodismo digital o sea de los medios on line, que conviven con los medios off line. Una mínima ojeada a su forma de desarrollo profesional, nos muestra las profundas diferencias que existen entre ambos campos. La primera se puede establecer en la relación que estos medios tienen en el triángulo clásico informativo, expuesto por el profesor español JMa Desantes, o sea sujeto profesional (periodista), sujeto organizado (empresario) y sujeto universal (público)

El campo on line ha roto las tradicionales características existentes en los tres sujetos en relación con la información, incluso podríamos afirmar, sin temor a exagerar, que el nacimiento de los medios on line, ha provocado un cambio sustancial en las relaciones entre dichos sujetos. Uno de los objetivos de esta comunicación es analizar dichos cambios, que están suponiendo unas modificaciones de la profesión periodística de gran calado y que en ocasiones, aún son difíciles de detectar y definir.

Otro gran problema es lo relativo a los derechos y deberes profesionales del informador, que repercuten de manera inmediata en los deberes y derechos del público. La inmediatez, el afán de exclusividad informativa, la falta de elaboración de las noticias, la exclusiva orientación al dato y no al contenido global, y otros muchos aspectos propios de los medios on line, sobre todo de los que viven más bien del sensacionalismo que de la verdad, provocan en muchas ocasiones situaciones conflictivas con los derechos de los ciudadanos.

A esto se une, aunque ello sea común a toda clase de medios, un fenómeno muy en boga en nuestros días, como es la postverdad y su compañero de viaje, la falsedad en las noticias. La falsedad es un tema terminológico, porque la mentira, esta unida, desgraciadamente, a la historia de la información desde su nacimiento.

Una cuarta dimensión para analizar en el campo de la prensa on line, es el de la ética, el de la deontología profesional en relación a esa nueva forma de hacer. Es un campo difícil, complejo, porque su análisis no está unido exclusivamente a los contenidos, sino es la propia base tecnológica de esos medios, la que exige una respuesta ética, deontológica, que pueda dar respuestas claras y válidas a este punto. Debemos preguntarnos, y respondernos, si estos medios, como nuevos, necesitan una nueva ética, unos nuevos principios deontológicos. La respuesta breve, pero que deberá ser justificada, es que no.

Es necesario volver a los principios básicos de la ética informativa que queremos profundizar, analizar y esclarecer. Sostenemos que siendo los únicos válidos para afrontar el desafío que estos medios producen. Fundamentalmente la verdad. Escribí en otro lugar (Prensa Digital en España, 2016): “la información y el trabajo periodístico entienden de verdad o mentira. De trabajo bien o

mal hecho. De coherencia o de seguidismo. Dependencia o independencia. La buena información se abre camino, sea la estructura que sea”.

Title: Fake news and Democracy in Brazil: misinformation around the "gay kit" during the 2018 presidential elections

Session Type: Individual submission

Authors:

Name: Maiara Garcia Orlandini

Email: maiaraorlandini(at) hotmail.com

Country: BR (Brazil)

Affiliation: Federal University of Minas Gerais

Name: Vinícius Nogueira Torresan

Email: vinicius.vnt(at) gmail.com

Country: BR (Brazil)

Affiliation: Federal University of Paraná

Abstract: Brazil is facing an increasing political polarization that accumulates records of incivility and intolerance. The intensification of this process is perceived by many authors (Stroppa & Rothenburg, 2015; Pereira, 2016; Rossini, 2017), especially regarding the use of social media platforms on the Internet for the proliferation of hate speech and fake news.

The analysis of the Brazilian democracy takes place in two perspectives: the first from 1988 to 2014 recorded a cycle of progress in the transitional justice process, accountability and expansion of human rights instruments, which gathered indicators that pointed to the consolidation of democracy in the country. (Avritzer, 2017; Sanglard, 2017). The second one from 2013 on when a series of demonstrations accentuated the intolerance amongst distinct social groups that escalated to Dilma Rousseff's impeachment process. Some scholars consider the latter as the conservative turn or also called democratic backsliding. Moreover, other researchers (Bermeo, 2016; Toth, 2017; Levitsky & Ziblath, 2018; Runciman, 2018) punctuate to democratic losses and conservative advances as of 2010 under other perspectives and contexts in other countries.

Recently, Brazil confronts an unprecedented level of intolerance: politicians and artists verbally attacked, tolerance speech misused in the anti-equality agenda and censorship of cultural projects are just a few examples. The presidential election of 2018 was consolidated as the most violent in history marked by cultural and moral disputes with examples of fake news such as the "gay kit". Gay kit is a pejorative term attributed to the teaching material School without Homophobia that was supposed to integrate a nationwide federal initiative to combat homophobia. The material that was geared towards the respect for diversity would be distributed in the Brazilian School System but was vetoed in 2011 under the pressure of the conservative wing of the National Congress. Jair Bolsonaro, current president of Brazil and one of the greatest representatives of the far-right politics in the country was one of the first to criticize the material for allegedly stimulating homosexuality and pedophilia. During 2018 election, Bolsonaro repeatedly stated that his opponent, candidate Fernando Haddad was a menace to gender binary by being this material's mentor. In other words, this fact designed the strategies of political campaigns in 2018, i.e. the organized spread of misinformation through social networks that made it seem more credible. Hence, the gay kit has become an important example of how false information can be used to manipulate public policy in Brazil.

Therefore, this article aims to analyze and identify the different frameworks adopted by organized political groups, civil society, and the media about the gay kit hashtag on Twitter in the period of the presidential election of 2018. The methodology was inspired by content analysis based on the codebook made by us and motivated by the current literature that respects the coding reliability proposed by Krippendorff (2004). We argue that the contention for repertoires involving the LGBTQ issues can be apprehended as an index of a moral and cultural nature, capable of being used to identify democratic recessions.

Abstract: In this paper we analyzed the effectiveness of the measures of protection of both the image and the dignity of the victims of sexual assaults by the Spanish press. Gender violence is a subject of great social concern and one of the news topics that generated more debate and code of ethics within the self-regulation organizations and journalists associations in Spain (Fagoaga, 1994; Aznar, 2005; FAPE, 1993; Diario Público, 2008, Aran and Medina, 2005, López Díez, 2002). It is globally a critical issue, as 35% of women around the world have suffered physical or sexual violence at some point in their lives according to the United Nations Global Database on Violence against Women. Our research questions were: RQ1. Do professional reporters comply with the codes of ethics of reference when covering news on sexual assaults?; RQ2. Do the users comply with the guidelines for participation within the newspapers in the comments of news of sexual assaults? and RQ3. How do the code of ethics and the user's guidelines compare in terms of scope and effectiveness? To answer these questions we carried out a content analysis, a "research technique designed to formulate, based on certain data, reproducible and valid interferences that can be applied to its context" (Krippendorff, 1990: 25) of 285 news stories related to the sexual assault case "the wolf pack", published by El Mundo and El País, the most visited Spanish news websites (Comscore, 2018), from July 7 2016 - when the first story was published by the press- to April 28 2018 -when the court sentence was made public - and 8671 comments (up to 50 comments for each story). The unit of analysis for RQ1 was the news story and for RQ2 the comments to the stories (we took into account up to 50 comments for each story, a total of 8671 comments were analyzed. We found that the code of ethics, contrary to our H1, were not challenged by the coverage; on the

other hand, corroborating H2, the users' guidelines by both El Mundo and El País were not an effective mean to protect the victim's dignity, suggesting other means should be implemented in the future to safeguard this fundamental value.

Title: Posicionamiento político de las OSC, transparencia y rendición de cuentas: consideraciones éticas desde los actores. El caso del Gobierno Abierto en México.

Session Type: Individual submission

Authors:

Name: Ernesto Gomez Magana

Email: dgm01(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autonoma de Mexico UNAM

Abstract: En la literatura y práctica latinoamericanas se reconoce a la transparencia de las organizaciones de la sociedad civil (como un primer momento de la rendición de cuentas) como un ejercicio que deliberadamente se realiza ante el derecho que tienen, principalmente, cuatro tipos de audiencias: a) el público en general; b) los destinatarios de sus acciones; c) los donantes o las autoridades y d) sus propios integrantes de conocer todo lo referente a su ser y modo de ser en cuanto entes de interés público. Al mismo tiempo, esta transparencia (o los ejercicios de rendición de cuentas a que se dan origen) puede tener como punto de partida la exigencia en las propias audiencias (transparencia bajo demanda) o bien, la acción espontánea de los propios actores (transparencia proactiva).

La principal pregunta que deseo postular en este trabajo es si acaso el posicionamiento político de las organizaciones de la sociedad civil (OSC) funciona como un tipo de transparencia proactiva que da a conocer a diferentes audiencias (principalmente los donantes/autoridades y el público en general) en qué consisten las acciones de estos entes en cuanto a temas de interés público, en sus contenidos, motivaciones y justificaciones. Asimismo, me interesa convocar a los actores a una reflexión de carácter ético acerca de las implicaciones de estas posturas en la esfera pública (por ejemplo, en el caso expreso de una confrontación sociedad civil-gobierno, que refiero más adelante).

De manera secundaria, deseo explorar si esta manifestación se puede circunscribir como un tipo de acciones de comunicación de transparencia proactiva que, sin embargo, no tienen la transparencia como objetivo principal, es decir, que resultan secundarias. Todo ello, como continuidad a mi trabajo de tesis de maestría que se ha dedicado a identificar y caracterizar prácticas de transparencia en las OSC que pueden ser percibidas como tales pero que no necesariamente se realizan con ese propósito deliberado.

En este trabajo en concreto, analizaré el caso del mecanismo de Gobierno Abierto en México, el cual sufrió un período de crisis al final de la administración federal pasada a propósito de supuestos casos de espionaje gubernamental en diferentes a prominentes figuras de la sociedad civil organizada. En su momento, el mecanismo de coordinación entre sociedad civil y gobierno dejó de funcionar hasta en tanto no se resolviera la situación de conflicto, lo cual dio lugar a diferentes pronunciamientos en medios y otros espacios públicos, nacionales e internacionales. Además de desarrollar la cronología del caso desde la perspectiva de la comunicación realizada por parte del Núcleo de Organizaciones de la Sociedad Civil, entrevistaré a los actores de la sociedad civil involucrados y desarrollaré un ejercicio de reflexión colectiva sobre la experiencia, a la luz del cambio de administración federal y la probable reactivación del mecanismo. El documento,

entonces, expondrá los resultados de este ejercicio, analizándolos conforme al marco teórico ya esbozado.

Title: La vejez y su representación en series de TV. La expectativa del retiro y la muerte en "El método Kominsky"

Session Type: Individual submission

Authors:

Name: Lourdes López

Email: Mllopezg(at) up.edu.mx

Country: MX (Mexico)

Affiliation: Universidad panamericana

Abstract: La vejez como objeto de estudio ha sido abordada desde la biología y la medicina atendiendo a los cambios naturales en las personas en diferentes estadios y edades. Pero desde la perspectiva social ha demandado mucho más atención el proceso mismo del envejecimiento que está articulado a una serie de expectativas de vida poco alentadoras, tales como el deterioro físico, la pérdida de ciertas facultades, el retiro, la jubilación, la dependencia económica y la propia muerte. (Bruno y Acevedo, 2006)

El envejecimiento, entendido como proceso universal, que lleva al deterioro y la muerte (Marín, 2003), encuentra perspectivas diversas. En este trabajo, la construcción del marco referencial son las recomendaciones emitidas en el Plan de acción internacional de Viena sobre el envejecimiento, documento emanado de la Asamblea Mundial sobre el envejecimiento realizada en 1982.

Este trabajo aborda el tema del miedo a la vejez, tomando en cuenta la confrontación con dos expectativas complejas: el retiro de la actividad productiva y la muerte. El abordaje tiene lugar a través del análisis de los personajes de la serie *El Método Kominsky* (Netflix, 2018), que narra, en tono de comedia, la vida de dos hombres septuagenarios, uno de los cuales acaba de perder a su esposa después de una ardua lucha contra el cáncer y el otro es un actor de mediano éxito que se mantiene de una academia de actuación.

El análisis de estos personajes está realizado a la luz de los principios de la narratología, tales como los ejes semánticos del personaje, las unidades de significación que permiten la identificación de unidades funcionales e indiciales en el relato, la construcción y trayectoria como actantes, pero también en la identificación de los indicios que permiten dilucidar la representación social de la vejez que se construye en la serie. La literatura revisada para el sustento teórico del análisis integra textos de Mittel (2015), Barthes, et.al (1972), Jodelet (1993) y Mieke (1990), entre otros, para delimitar el marco teórico y las categorías de análisis.

La historia tiene lugar en el competitivo mundo del cine de Los Ángeles. Los personajes viven la disminución de las posibilidades de integración social, vida familiar e inserción en la lógica de las actividades productivas, marcadas por el vertiginoso desarrollo tecnológico y por un principio de competencia en el que la vejez resulta poco pertinente.

El análisis pretende el acercamiento al personaje en su dimensión humana para extrapolar las condiciones de la ficción a la situación real de la vejez en el mundo contemporáneo.

Title: Privilege vs. Privilege: The Strategic Communication of 'Privilege' as a Floating Signifier to Neutralise Accusations of Privilege

Session Type: Individual submission

Authors:

Name: Thomas Owen

Email: towen(at) aut.ac.nz

Country: NZ (New Zealand)

Affiliation: School of Communication Studies, Auckland University of Technology

Abstract: In recent years, multiple social movements advocating greater equality have captured public and media attention across the world; including #MeToo, Black Lives Matter, and the campaign for same-sex marriage, to name only a few. Such campaigns highlight the unequal distribution of privilege and disadvantage in society, thus revealing structural inequalities that fundamentally challenge liberal notions of meritocracy and equal freedom of opportunity. For some social actors – especially those inhabiting historically privileged positions – such movements present an awkward challenge: not only critiquing the existing power inequality; but fundamentally questioning the ethical legitimacy of the now highlighted privileged positions. How, then, do privileged groups and individuals respond to such challenge?

This paper uses a case study of one political organisation in Aotearoa New Zealand known as “Hobson’s Pledge” to examine an effective - and, potentially, characteristic - response to challenges of “privilege.” In particular, the study uses the Hobson’s Pledge case to illustrate how signifiers of “privilege” can be strategically re-articulated in political and media discourse to neutralise and deflect accusations of entrenched privilege and structural inequality. In Laclauian discourse theoretical terms, “privilege” becomes a ‘floating signifier’, articulated by antagonistically opposed political projects to convey starkly different meanings, and to disempower rhetorically potent ideological critiques. This paper examines Hobson’s Pledge’s “privilege” discourse in order to reveal its strategic construction, and to identify potential responses to it.

Hobson’s Pledge is a political lobby group established in 2016 to advocate against what it defines as a “separation framework” of “race-based laws” in Aotearoa New Zealand, that unfairly privilege Māori (the indigenous population) to the detriment of non-Māori. “One law for all of them” is the group’s slogan, expressing a ‘colour-blind’ discourse underlined by liberal assumptions of equal rights, equal opportunity, and colonial neutrality for all citizens. The group’s most prominent spokesperson, former Governor of the Reserve Bank and former leader of the main opposition political party, Don Brash, received considerable media and public attention when he first publicly articulated the “one law for all” discourse in 2004. Brash and Hobson’s Pledge continue to receive media attention following high profile speeches in 2018 and 2019, one of which was cancelled amid public debates over hate speech and freedom of expression.

This paper combines Laclauian discourse theoretical analysis of Hobson’s Pledge publications and Brash speeches with corpus-assisted discourse analysis of mainstream news media coverage to examine the divergent constructions of “privilege”, within a context of ideological contestation over

entrenched inequality in Aotearoa New Zealand. It argues that by converting “privilege” into a floating signifier with indeterminate meaning between opposing discourses, Hobson’s Pledge effectively neutralised the accusation of institutional colonial inequality implicitly encoded in “affirmative action” policies tailored towards Māori. Ultimately, the paper argues that Hobson’s Pledge is an exemplary case of this strategic response to critiques of privilege - one that is applicable to similar cases in Canada, the United States, Australia, and other sites where “affirmative action” special measures are used to address structural inequalities and mitigate historic privilege.

Title: AI, algorithms, and journalistic ethics

Session Type: Individual submission

Authors:

Name: Natali Helberger

Email: n.helberger(at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Name: Mariella Bastian

Email: m.b.bastian(at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: Traditional normative approaches to the media and the ethics and values journalism are not prepared to deal with the increasingly important role of data and data analytics, the arrival of new roles in newsrooms and the automation of (part of) the journalistic production and distribution process. This situation leads to calls for algorithmic transparency and accountability (Diakopoulos & Koliska, 2017; Ananny & Crawford, 2016). So far, there is no encompassing theoretical framework that could serve as a point of reference for determining the societal impact and ethical and normative consequences of the use of algorithms in the realm of journalism. In the light of growing technological possibilities, and the emergence of new ethical concerns, we see an urgent need for revisiting traditional approaches to journalistic ethics, and relate them to the growing body of literature on algorithmic ethics from other sectors.

Thus, we propose a theoretical framework building on algorithmic news distribution as a highly topical example for the integration of algorithms in the journalistic sphere, arguing that the journalistic algorithmic process consists of several steps of which each one comes along with different ethical challenges. For example, after a journalistic entity has identified and formulated goals and values, these (sometimes vague and abstract notions such as diversity) have to be translated into input and output metrics, causing new organizational and ethical challenges.

In our framework, these principles will be structured according to several levels: inside the organization (both regarding single staff members and from an institutional perspective), and concerning the relationship between the media and the individual user, and the media and society. Firstly, we argue that a number of (journalistic) values such as diversity, privacy, accuracy or objectivity are of utmost importance in the context of algorithmic journalistic processes; however, their definition, interpretation, and application has to be renegotiated. Secondly, other values, for example truth or fairness, should be reaffirmed.

Based on this framework, the growing body of literature on algorithmic ethics from other sectors, the new legal obligations from e.g. the GDPR but also accountability theory and theories about the democratic role of the media, we will propose a first set of principles of algorithmic journalistic ethics.

Affiliation: University of Navarra

Abstract: Quality journalism has an ethical and social dimension based on the credibility of content and public service, but its share of time and space in the media marketplace has been shrinking. The causes are mainly the abundant supply of free media online and the flight of advertisers to the lower-cost and more efficiently targeted digital advertising offered by technological platforms. This paper will show how the scarcity of quality journalism has aggravated many societal ills and undermined the role of the press as a pillar of democratic society, the Fourth Estate. This paper will use deductive and critical methodologies to identify the most promising examples of media that are counteracting this trend with innovative funding models as well as innovative products, processes, distribution methods, and collaboration networks.

The examples will come from five continents and from traditional as well as new digital media. We are bringing an international and diverse approach to call attention to paradigmatic models from different countries in the world.

The criteria we will use to select them are mainly four: sustainability, social impact, transparency and independent from undue influence of actors with self-interested agenda. We will combine three prestigious sources to guide a representative media selection: a) Media Development Investment Fund that invests in media in countries where free speech is endangered. Its criteria for investment measures sales, reach, financial results and Civic Impact; b) The Newsguard project of Steven Brill and Gordon Crovitz has developed nine criteria of credibility that they use to rate news organizations and they publish ratings of 2,000 media organizations that provide 90% of the use consumed in the U.S., and c) "Publishing for Peanuts" looked at more than 30 media startups, mainly digital, around the world in 2014 and is in the process of updating their data. Their findings about what kinds of sustainability models work is key.

Title: AI Anchor as a Brand New Media Presentation Interface: A Chinese Case

Session Type: Individual submission

Authors:

Abstract: Reeves and Nass (1996) raised the theory of Media Equation, that is, media is equivalent to real life. As long as the source of information is intelligent enough, people will treat computers like humans. This theory has gradually become a reality. In 2018, China's state news agency Xinhua News Agency, in conjunction with Internet company Sogou, launched the first composite news AI Anchor, which appears to be the “first time robot journalists have graced TV screens” (Chung, 2018). AI composite anchor combines voice, lip shape, expression and motion features in real-life anchor news broadcast video, and in-depth learning technologies for modeling and training. The input Chinese and English texts can be automatically generated into video broadcast in the presentation of the anchor image, very natural assembles the real-life anchor.

Although this AI anchor currently only broadcasts manually entered news content, the maker stated that in the future, it will strive to automatically determine the broadcast content of the anchor through algorithms. With the development of the ICTs, the role played by robots begin to coexist and multiple participate in the media communication, gradually replacing the chain of media production, from news discovery to news distribution interface. When the new interface of AI anchor is brought into use as a quasi-man entity, it will have a foreseeable impact on the society. First, AI anchor, as a new media presentation interface, has changed the process of production and processing of information, and has impact the media criterion originally followed; second, compared with the real anchor, the image of AI anchor is no longer unique, and its duplication mode also threatens the authenticity and credibility of information; third, when robots like AI anchor exceeds a certain degree similarity to humans, according to the “uncanny valley” (Jentsch, 1906), it will cause recognition difficulty and the human feedback to them will suddenly become extremely disgusted; lastly, when machines replace all aspects of news production, it will become an urgent issue to cultivate their moral ability to follow the general ethical standards of human society.

From the above four perspectives, this paper focuses on the media production changes and ethical issues brought about by the emergence of AI anchors, and refers to the ethical methods and rules of other types of artificial intelligence robots that are currently involved in human life, through the comparative study of cases. This paper discusses how to embed social and media ethics into AI

anchors to ensure that their behavior conforms to the norms of human society and puts forward theoretical and feasible suggestions.

In brief, Kelly (2011) said that when we create and use a new technology, we are actually involved in something bigger than ourselves. After the emergence of AI composite anchor, in order to better realize man-machine coupling, safeguard human rights, promote news information circulation , in which human, technology and society adhere to the four principles of innovation, moderation, balance and pluralism (Pang, 2018) and participate together, and actively support the orderly development of AI technology.

Title: Ethics for journalists and ethics for all

Session Type: Individual submission

Authors:

Name: Joaquim Fidalgo

Email: jfidalgo(at) ics.uminho.pt

Country: PT (Portugal)

Affiliation: University of MinhoBraga - Portugal

Abstract: Trust, trust, trust – the cornerstone on which the credibility of media (and especially of journalism) was built is being seriously undermined almost every day, almost everywhere. And the consequences of this erosion process are serious for the health and the strength of democracy in the societies we live in. If we can't trust what we read, or watch, or listen, either in the legacy media or in social media (where journalism also finds new opportunities to play a role), the possibility for us citizens to be well informed and to make good decisions is at stake. In an environment where different actors of public communication bet precisely on the confusion – confusion between advertising and editorial content, confusion between information and entertainment, confusion between real events and 'alternative facts', confusion between true and fake –, the difficulty to 'separate the wheat from the chaff' is bigger and bigger, and therefore the great challenge for us all is to master the tools that help us to find out what is what. The critical need for more expanded (and deeper) media literacy in the digital landscape that surrounds us at every corner of daily life goes together with the necessary demand for more transparency in public communication, and particularly in journalism (wherever it happens). Transparency is a pre-condition for an ethical approach to journalism. And an ethical approach to journalism seems to be the only way to recover its lost credibility in so many stances. To make it trustworthy.

Journalism, we know, no longer concerns exclusively professional journalists and the so-called legacy media. Timely information in the public sphere flows through many channels and is handled by many actors (which is a good thing), although part of them don't have the knowledge or the will to do it in an accurate and responsible way (which is a bad thing). In this paper, we'll try to analyse the different 'layers' where journalism occurs nowadays and to discuss the ethical demands that must be present in all of them, even in various degrees. Furthermore, since ethics is not only a question for 'producers', but also for 'users' – actually most of us are more and more 'producers'... -- we will reflect on possible ways to improve a more ethical ability to recognize and to denounce pieces of misinformation and/or disinformation, thus contributing to improve fairness, honesty and trust in journalism.

Key-words: journalism, trust, credibility, transparency, ethics

Title: UN NUEVO PARADIGMA DEL FUNCIONARIO PÚBLICO: LA TRANSPARENCIA Y MORAL ADMINISTRATIVA EN LA COMUNICACIÓN CON LOS CIUDADANOS

Session Type: Individual submission

Authors:

Name: Manuel SANCHEZ DE DIEGO

Email: msdiego(at) ucm.es

Country: ES (Spain)

Affiliation: S. Dptal. Derecho Constitucional - Universidad Complutense de Madrid -España

Abstract: Las tecnologías de la información y la comunicación, esencialmente la informática y las telecomunicaciones, han propiciado un nuevo sistema de relaciones de las Administraciones Públicas con los ciudadanos. Ese fenómeno va a traer diferentes consecuencias como el control informático de la ciudadanía, el derecho a la protección de datos personales, la reutilización de la información pública, el derecho a relacionarse digitalmente con las Administraciones Públicas o, la transparencia pública, por citar algunas de ellas.

Una de las líneas esenciales del nuevo siglo, de la democracia evolucionada en los países occidentales es precisamente la democracia participativa y transparente. Esto se refleja a nivel internacional en la Alianza para el Gobierno Abierto (www.opengovpartnership.org). La transparencia del sector público y de los fondos públicos, así como el derecho de los ciudadanos a demandar información, obligan a un cambio en la mentalidad de los funcionarios. Se trata de abandonar el poder del funcionario descrito por Max Weber, para alcanzar la caracterización de la función pública al servicio del ciudadano.

Precisamente en esa nueva caracterización es esencial la formación y, por tanto, el desarrollo de una moral administrativa, en donde bajo la denominación genérica de “buen gobierno” encontremos una comunicación fluida hacia los ciudadanos. Somos conscientes por haber participado en ella, de la labor desarrollada en España para fomentar la transparencia en la formación de los funcionarios. Para ello se han incorporado temas de transparencia en los programas de oposición a la función pública España. Además el Instituto Nacional de la Administración Pública (INAP) ha desarrollado acciones formativas en donde se integran sesiones de transparencia pública. Este será el contenido esencial de la comunicación: determinar como la formación puede configurar una nueva moral administrativa en donde la transparencia sea un elemento esencial.

Affiliation: Department of Media and Communications - London School of Economics and Political Science

Abstract: The Internet of Things (IoT) has been one of the main drivers in the design and development of technological devices in the last decade. Ethical inquiries about the IoT have become urgent as technologies such as smart fridges and voice assistants increasingly populate our homes, working spaces, and cities. However, the lack of clarity about what the IoT is, along with the multiple technical components that are necessary to build ‘connected’ devices, make it hard for researchers exploring the type of society and values underpinning this complex sociotechnical formation. In my presentation I will propose an approach for ethical inquiries of sociotechnical configurations —such as the IoT— that draws on a theoretical framework developed in the light of the ‘material turn’ in social sciences and the empirical work of the Virt-EU research, an multidisciplinary project looking at the ethics of IoT entrepreneurs in Europe.

In theoretical terms, and drawing on the work of John Law, we will understand complex technologies as those comprising an articulation of multiple human and non-human agencies and logics. After that, we will argue that the value-first approach usually employed in the field, and that draws on strong branches within social constructivism, might not be the more appropriate for ethical inquiries of this type of technologies. Instead, we propose a framework that puts the focus on the ethical opportunities and challenges afforded by the technical components that make up complex technological devices. As a consequence, ‘the ethics of technology’ is understood as the unpredictable outcome produced by the interaction between technological affordances and the values held by the people involved in the process of development. This framework builds upon the ‘material turn’ in social sciences advocated by authors such as Noortje Marres that highlights the

relevant and active role of ‘things’ and ‘objects’ in areas such as communications, politics and, in this case, ethics.

In empirical terms, our presentation builds upon empirical examples from ethnographic work carried out by researchers at the LSE, ITU and CIID as part of the Virt-EU research project. For more than two years, we interviewed IoT designers, programmers and business managers and carried out participant observation in cities such as London and Belgrade. Our method of analysis consists of an inductive re-reading of our notes with particular attentiveness to the technical difficulties faced by IoT developers. As a result, data, network architectures, hardware components, power, maintenance systems and interfaces came up as sources of technical and ethical challenges. In my presentation I will describe some of these concerns and show a few examples of innovative proposals seeking to tackle them.

I hope that this approach can be helpful for initiatives and policies seeking to advance a more ethically-sensitive technological landscape. Unlike the dominant consequentialist-determinist logic, this proposal addresses the undetermined character of ethical practice and technological development. In addition, it puts forward a grounded and methodical framework coherent with research and theory stemming from fields such as studies of science and technology, moral philosophy and anthropology.

Title: The dilemma of family identity: A textual analysis of 'returning' stories in social media posted by fostered excess children

Session Type: Individual submission

Authors:

Name: Yinxue Xie

Email: 30620171152916(at) stu.xmu.edu.cn

Country: CN (China)

Affiliation: Xiamen University

Name: Tian Gao

Email: 1175261563(at) qq.com

Country: CN (China)

Affiliation: Xiamen University

Abstract: China advanced the policy of birth control in 1980s, since then the newly married couple live in urban areas gave birth to more than one child will face large fines and/or administrative penalty. To avoid these negative consequences, some of the couples will farm out their excess children temporarily on others, most of whom are their relatives, such as grandparents, cousins, etc. Unlike their counterpart in western countries, China's fostered excess children usually maintain contacts with the foster family even after they return to live with their biological parents and siblings. It means that they will have to deal with double family identities, which may cause a bunch of problems. This study thus focuses on the difficulties that the fostered excess children need to overcome to form a new family identity after they return to live with their biological parents and siblings. Traditional research methods, such as survey and in-depth interviews rely on self-report to a great extent, which may lead to a lower reliability as applied for a highly sensitive topic. Nowadays, social media are becoming an indispensable sphere for marginalized people to counsel about life issues, share experiences, and obtain social supports. Fostered excess children are also using social media to share their experience, especially the difficulties they have in creating new family identity after returning to their biological parents and siblings. This renders the posts of social media an important access to information we need to explain such an extremely sensitive topic reliably.

The textual analysis of 56 posts in Zhihu and Sina Weibo (two of the most popular social media platforms in China) indicates that fostered excess children face severe challenges in forming new family identity after they return to their biological parents and siblings; they have trouble in walking out of the memories of childhood during which they were sent away from their parents and siblings, while very few of the latter have discussed with them about this experience after they return; they seldom call their biological parents as father or mother in real life; biological parents' favoritism and being left out by siblings also hinder the formation of family identity among the fostered excess children.

Abstract: As of 2015, the convergence of a series of technologies has allowed the emergence of a new journalistic modality, which we have called immersive feature with 360° video. Based on the use of a stereoscopic visualization system combined with a smartphone, it is able to create the representation of an event through a spherical stage, whose point of view is controlled by the spectator. This generates in him the illusion of being actually inside a reality that is only being represented.

This peculiar way of storytelling greatly brings the viewer closer to the context and their protagonists to the point that "it offers the participant unprecedented access to the sights and sounds, and possibly to the feelings and emotions that accompany the news" (De la Peña et al., 2010: 291). In turn, the possibility of generating an emotional bond with the viewer has been considered as something especially beneficial for journalism since it opens the opportunity to establish a relationship of identification and empathy with another person who can be better understood.

The numerous features that media outlets from all around the world have produced in recent years on issues regarding immigration, wars, refugees or catastrophes certify the potential offered by these immersive narratives to show human interest issues or to denounce some kind of social injustice or suffering.

However, this ability to bring human suffering to a first-person perspective can also become an instrument of manipulation due to the rapid emotional response that it generates in the viewer. Given this possibility, we wonder whether there is any principle of action that should be specially taken into account when producing this type of immersive features.

Through an exhaustive literature review, the conduction of 6 in-depth interviews and after viewing more than 1,000 immersive features, we have tried to structure a list of best practices based on the ethical principle of responsibility. These practices raise the need to well understand the limits of empathy, to establish an adequate distance between the viewer and the characters and to prudently

limit the use of emotional persuasion techniques. We illustrate this collection with examples to better show the convenience of each of these best practices.

Title: Filosofía organizacional, códigos deontológicos y respeto a los derechos humanos en las 100 empresas más innovadoras del mundo

Session Type: Individual submission

Authors:

Name: Rebeca Arévalo Martínez

Email: rebeca.arevalo(at) anahuac.mx

Country: MX (Mexico)

Affiliation: Universidad Anáhuac México

Abstract: Las organizaciones son una comunidad de personas (Llano,1997), que comparten valores, creencias, actitudes y conductas (García y Dolan, 1997) que constituyen la filosofía organizacional. Ésta se complementa con un código deontológico que integra principios regulativos para una realización justa de la comunidad (Del Prado, 2018); es decir, es una guía ética que señala actitudes y comportamientos deseables y no deseables en la organización. La filosofía organizacional y el código deontológico permiten a la organización potenciar el compromiso en sus distintas dimensiones conforme a los bienes humanos que recibe (Ruiz de Alba, 2013); pero, aunque parece intrínseco a su razón de ser, no siempre tienen como eje rector el respeto a los derechos humanos, los cuales tienen como fundamento a la antropología, a la ética y a la política en la medida que sostienen la búsqueda de la realización de la persona y del bien común. La persona se realiza en la participación junto con los otros (Wojtyla, 2017). Es decir, la organización debería ser un lugar ideal para lograr el bienestar y el crecimiento económico de quienes la conforman, sin que esto signifique anular la dignidad de las personas (Cortina, 2008).

En el caso de las organizaciones líderes por su prima de innovación, ponderada a partir de rentables beneficios para sus inversionistas (Solex, 2018), se hace necesario revisar si también integran en su filosofía organizacional y códigos deontológicos el respeto a los derechos humanos y la dignidad de la persona consagrados en seis documentos: 1) Declaración Universal de Derechos Humanos (ONU, 1948), 2) Pacto Internacional de Derechos Civiles y Políticos (ONU, 1966), 3) Convenio Europeo de Derechos Humanos (Tribunal Europeo de Derechos Humanos, 2010), 4) Carta de Derechos Fundamentales de la Unión Europea (Diario Oficial de las Comunidades de la Unión Europea, 2000), 5) Declaración Americana de los Derechos y Deberes del Hombre (OEA, 1948), y 6) Convención Americana sobre Derechos Humanos (OEA, 1969).

Con base en lo anterior, esta investigación cuantitativa tuvo como objetivo analizar la filosofía organizacional y el código deontológico de las 100 organizaciones más innovadoras del mundo (Forbes, 2018) a la luz de 13 categorías de derechos humanos, con el fin de establecer la correlación entre éstas y la prima de innovación. Las categorías de derechos humanos fueron: 1) derecho a la vida; 2) integridad personal; 3) igualdad salarial; 4) no discriminación (discapacidad, religión, nacionalidad, género o edad); 5) libertad (circulación, expresión, asociación, investigación, participación cultural); 6) honor; 7) privacidad; 8) recibir información; 9) seguridad (personal y social); 10) salud; 11) educación y formación; 12) matrimonio, familia y maternidad; 13) gozar beneficios del progreso científico.

Los resultados muestran una correlación diferenciada entre categorías de derechos humanos y la prima de innovación según el sector de la organización y su país de origen. Los hallazgos permiten reflexionar y proponer una serie de principios de actuación para reconfigurar el foco de la innovación organizacional, incluyendo no sólo los indicadores económicos, sino el respeto a la dignidad de la persona y sus derechos.

Title: Beyond 'love-hate' stereotype: Reflecting on the new dimension(s) of relationship between public relations and journalism in the 'post-truth' era

Session Type: Individual submission

Authors:

Name: Jenny Zhengye Hou

Email: jenny.hou(at) qut.edu.au

Country: AU (Australia)

Affiliation: Queensland University of Technology

Abstract: Considerable research has for long characterised the relationship between public relations and journalism using a 'love-hate' motif (Tilley & Hollings, 2008). On one hand, journalists have increasingly relied on public relations leads, contacts and content. On the other hand, journalists have been continually concerned, even to the extent of hostility, about the sheer volume of public relations information and its manipulative intent (Macnamara, 2015). In the digital age, the prevalence of 'fake news', either derived from algorithms based on economic interests or constructed by individuals through social media, presents new threats to both professions being able to maintain integrity and authenticity of news production. Despite the common challenge of declining public trust and reputation risk to both journalism and public relations (Allcott & Gentzkow, 2017), little research has interrogated and reflected on how the relationship between them has evolved.

To narrow this research gap, this study aims to understand how public relations practitioners and journalists might rethink or re-evaluate their relationship, and whether and how they can collaborate innovatively and realistically in this chaotic 'post-truth' era. Qualitative data were drawn from 24 in-depth interviews with PR practitioners (n=12) and journalists (n=12) in Australia through purposive 'snowball' sampling. Two focus group studies were conducted with both public relations practitioners and journalists to collect information on mutual perceptions and expectations between the professions.

The results show four divergent views about the two professions' relationship evolution relating to what is now widely called 'fake news'. First, mistrust between the two professions becomes deeper as journalists strive to improve their fact-checking and thus their independence, while PR practitioners prefer to navigate their own social media communication, thus bypassing traditional media. Second, the relationship and depth of collaboration between the two professions is contingent upon personal relations between individual journalists and public relations practitioners. Third, fake news environment brings new opportunities for the two professions to jointly combat fake news. Fourth, the two professions will continue to be in conflict given their fundamentally different missions and values.

This study extends the 'love-hate' motif by revealing the complexities and new dimensions of public relations-journalism relationship as mediated by the fake news challenges emanating from the increasingly commercialised and politicised digital environment. Its findings should also motivate both professions to reflect on how they can renew their ways of collaboration to

collectively improve ethical communication, facilitate information flow, and serve the public interest. The study's focus on news integrity and mutual trust fits well with the aim and scope of the Ethics of Society & Ethics of Communication (ETH) Working Group.

Title: What is happening with Ethics in the Immersive Journalism' Malpractices while producing and editing 360° video and VR experiences

Session Type: Individual submission

Authors:

Name: Sara Pérez-Seijo

Email: s.perez.seijo(at) usc.es

Country: ES (Spain)

Affiliation: Universidade de Santiago de Compostela, Novos Medios Research Group

Name: Xosé López-García

Email: xose.lopez.garcia(at) usc.es

Country: ES (Spain)

Affiliation: Universidade de Santiago de Compostela, Novos Medios Research Group

Abstract: The internet has opened new fronts to the journalistic practice (Bilbeny, 2012) and this, combined with the technological innovation, forces media to adapt and reconsider the traditional ethical standards in order to deal with the novel story formats (webdoc, meme, newsgame, 360° video,...) and emerging storytelling technologies (VR, AR,...). However, technology can under no circumstances be an impediment to renege on the fundamental principles: honesty, diversity, compassion, accuracy, accountability and independence (Filak, 2019).

Although the Immersive Journalism (De la Peña et al, 2010) or VR/360° storytelling has opened new possibilities to tell news, it has also brought manifold new ethical challenges, many linked to the decisions taken by journalists both during the production and the editing of the content (360° video or VR experiences). The aim of this storytelling is to allow viewers to experience place illusion thanks to the use of a VR headset. But couple this with the thought that some immersive works can enhance empathy (Sánchez Laws, 2017), manifold ethical challenges have emerged because some practices and procedures that journalists carry out to encourage those aspects prove controversial: digital elimination of elements from the image; manipulation of the scene by adding people or objects; create situations that never happened; use of music or sound effects; stage; minors to tell social and complex realities; exposure to graphic and sensitive content without warning; etc.

This said, the authors of this work reflect on the ethical needs, limits and problems related to the production of non-fiction immersive content. It should be noted that this study belongs to a larger research about Ethics and Immersive Journalism that the authors started in 2018. In a first phase, they developed a proposal of good practices' indicators after exploring and observing the non-fiction immersive videos published and produced by media companies from all over the world (Associated Press; Radiotelevisión Española; The New York Times; Smart News Agency; etc.). Taking also as a reference the Codes of Ethics of three renowned professional entities (Society of Professional Journalists, Radio Television Digital News Association and The National Press Photographers Association) and the specific guidelines of each medium, the authors set 13 indicators based on a previous identification of five main ethical challenges (Pérez-Seijo & López-García, 2019): image integrity; recreation/reconstruction of news; sources and staging; role of the journalist/recording team; sensitive content. However, this work represents the second stage: the

indicators have been adapted to an analysis data tab to examine and study each immersive news video and therefore to detect potential malpractices. Thus, the authors carry out a (“ethical”) content analysis of 360/VR videos published by two reference media, and with a prominent immersive production: British Broadcasting Corporation and The New York Times. It was selected a newspaper and a broadcaster to examine how each type of media produce the content/story and if its format has some particular effect. The results, so the malpractices founded, will be contrasted with the professional association’s Codes of Ethics and with their own guidelines.

Title: Will technology really save us' Socio-technical imaginations of social good and justice in Internet of Things

Session Type: Individual submission

Authors:

Name: Funda Ustek-Spilda

Email: f.ustek-spilda(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics

Name: Alison Powell

Email: a.powell(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics

Abstract: From smart home devices secretly recording conversations and sending it to people in one's contact list, to the ease of hacking into baby monitors, the everyday creepiness and dystopian features (and futures) of internet of things (IoT) have come to dominate the media landscape of how IoTs are discussed and imagined. This imaginary forms the basis of the increasingly common attitude of "Tech will save us" as technologies provide the ability to 'scale' social and economic interventions and act faster in moments of need, such as environmental disasters, violent conflicts or mass displacement. Tech for good companies and projects are framed as capable of solving existing societal problems at scales that benefit businesses (and consequently investors) while also benefiting disadvantaged individuals (or regions). Such positionings blur the boundaries between what is for business and what is for good.

At Virt-EU: Values and Ethics in Innovation for Responsible Technology in Europe (Horizon 2020 project), we have been studying values and ethical thinking that guide developers when they are designing, building and marketing internet of things products and platforms in Europe. In this presentation, our aim is to provide a grounded analysis on how ethics are being enacted by IoT developers, and how 'social good' is imagined, as well as who tech needs to help and why. These questions help us investigate the shifting control over the organisation of social policy away from public policy and governments to corporations and venture capital firms. We propose a situated framework to study data (and connected devices), which integrates Virtue Ethics, Capabilities approach and Care Ethics. This situated understanding of ethics based on how it is practiced makes a key contribution to pushing away from thin 'ethics' of dystopian scenarios to deeper concern about justice, while also providing a situated understanding of social and political polarisation mediated through emerging technologies, such as internet of things.

This presentation outlines this approach and its differences from the externally imposed ethical frameworks that are common within this field. It also explores the challenges of developing this kind of framework and the tensions between the different strands of virtue, capability of care through a case study we participated in at Virt-EU – the community-led development of a trustmark for 'Open Internet of Things'. The interplay between efforts of community members, expectations

about ethics and the pressures and power structures of the “tech for good” innovation space within the larger business context. As a developer we interviewed stated: “You cannot be a business and a charity at the same time. You can only be one.” But does that mean trying to ‘do good’ with technology is a futile undertaking?

Title: El desafío de la promoción de la dignidad humana en periódico-laboratorio impreso brasileño: debates y soluciones de periodistas en formación durante la instalación de redacción convergente

Session Type: Individual submission

Authors:

Name: Ben-Hur Demeneck

Email: b.demeneck(at) uol.com.br

Country: BR (Brazil)

Affiliation: State University of Ponta Grossa (UEPG)

Abstract: Este paper discute cómo noticias y reportajes materializan la promoción del abstracto valor de "dignidad humana" durante la producción y edición de "periódico-laboratorio" impreso en una universidad pública ubicada en sur de Brasil durante el primer año de instalación de una "redacción integrada" en los 25 años de historia del periódico. Se discute cómo las prácticas y conceptos de convergencia digital (JENKINS, 2009) afectaron la producción de periódico impreso en pautas sobre diversidad en los aspectos racial, de género, sexual y religiosa en contexto tecnológico que amenaza la existencia de los periódicos (MEYER, 2004) y en ecosistema informativo que favoreció la emergencia de la post-verdad (MCINTYRE, 2018).

La "redacción digital" del "Foca Livre" permitió coordinar esfuerzos de alumnos de todas las clases de Periodismo de la UEPG (Universidade Estadual de Ponta Grossa) y publicar ocho ediciones mensuales en formato Berliner sólo con el uso de software libre. En 2018, el periódico fue reconocido en premio promovido por el Sindicato de Periodistas de Paraná, en Curitiba. Para contextualizar dos de los temas presentados en el periódico: Brasil es considerado el país que más mata transexuales en el mundo (TMM ANNUAL REPORT 2016). En el aspecto religioso, entre 2015 y el primer semestre de 2017, Brasil había registrado 1.486 denuncias de intolerancia religiosa (Ministerio de Derechos Humanos, Brasil); siendo las religiones de matriz africana objetivo de 60% de los ataques.

A partir del educador Paulo Freire, para quien la lectura de mundo antecede a la lectura de la palabra (FREIRE, 1998), discutimos cómo los universitarios desarrollan su lectura de la realidad social. El referencial también considera la importancia de la pluralidad dentro de las redacciones (KOVACH & ROSENSTIEL, 2007) y tiene el periodismo como formador de la esfera pública (HABERMAS, 2014) y de la democracia (TRAQUINA, 2004). Para realizar nuestro artículo empleamos como método: descripción y análisis de contenido (portadas, secciones y de los géneros y formatos utilizados); cuestionario y entrevistas con alumnos.

En el cuestionario y en las entrevistas se pregunta: a) Durante la producción y edición del periódico impreso, cuando usted consideró haber mayor entendimiento y promoción del concepto de 'dignidad humana'?; b) ¿Cuál es la importancia de publicar impresos en un contexto dominado por tecnologías que transmiten noticias en tiempo real?; c) ¿Usted cree que su práctica periodística promovió temas consagrados en la Declaración Universal de Derechos Humanos?

Más que abordar el tema de la conferencia "Comunicación, tecnologías y dignidad humana: derechos controvertidos y verdades contestadas", este paper considera los temas del WG - "Dignidad humana, sociedad y comunicación" y "Derechos humanos en las noticias". Se considera que 2017 en Brasil fue la víspera de elecciones marcadas por la acción de las "fake news" en las elecciones que consagrarían a Jair Bolsonaro como presidente, político que personifica la aversión a los derechos humanos.

Sin descuidar de la renovación de los marcos del periodismo profesional (ANDERSON, BELL, SHIRKY, 2012), este texto reconoce la relevancia histórica del periódico impreso en la formación de periodistas, sobre todo en países en desarrollo, donde importan la materialidad, la fuerza como documento y por figurar como canal propio al estímulo a la reflexión y a la literacia.

Title: [Panel] Towards a Code of Ethics for Social and Behavior Change Communication, Panel description

Session Type: Panel Submission

Authors:

Name: Thomas Jacobson

Email: tlj(at) temple.edu

Country: US (United States)

Affiliation: School of Media and Communication Temple University

Abstract: This panel will aim to advance the production of a Code of Ethics for the field of Social and Behavior Change Communication (SBCC), sometimes called communication for development and social change. SBCC engages in social change, behavior change, information and knowledge sharing, social engagement strategies and action for informed and engaged societies. SBCC efforts include communication for development, media for development, health promotion, health communication, digital media and development, children's rights advocacy, civil society self-organizing and other communication processes. Organizationally, the field comprises operational arms of foundations, multilateral organizations, non-governmental organizations, and civil society groups, among others. Considerable effort has been devoted over the years/recent decades to understanding the nature of communication and its use for these purposes, as well as applied skills in social and behavior change communication. This panel will comprise three presentations and then responses. 1) One presentation will review the recently launched Global Alliance for Social and Behavior Change and some of the ethical challenges faced by members of the Alliance, focusing on the United Nations Children's Fund (UNICEF). This presentation will also review the Global Alliance's project on ethics, an effort to develop a code of ethics for SBCC. 2) A paper will analyze philosophical and professional foundations suitable for an SBCC code of ethics. 3) A second paper will present a draft code of ethics, including a general values statement and a plan for rolling out an using the code with the SBCC field. 4) The chair of the Ethics Working Group, María Teresa Nicolas Gavilán will serve as a discussant and will also place the Global Alliance's ethics project in relation to the work of the IAMCR Ethics Working Group. She will also serve as panel moderator. María Teresa Nicolás Gavilán <mnicolas(at) up.edu.mx>.

Title: Ethics and the Global Alliance for Social and Behavior Change Communication

Session Type: Panel Submission

Authors:

Name: Rafael Obregon

Email: robregon(at) unicef.org

Country: US (United States)

Affiliation: United Nations International Children's Emergency Fund

Abstract: This presentation will begin with a brief characterization of the field of Social and Behavior Change Communication and the recent launch of a Global Alliance for Social and Behavior Change. It will outline the Global Alliance's purpose and membership, including the importance attached by the Global Alliance to the ethical conduct of SBCC work. The approach to ethics taken with the Communication for Development program of the United Nations International Children's Emergency Fund (UNICEF) will be discussed in some detail to provide a practical context to the Global Alliance's ethics project. The project itself will be introduced.

Title: Selected Principles for Ethical Social and Behavior Change Communication

Session Type: Panel Submission

Authors:

Name: Thomas Jacobson

Email: tlj(at) temple.edu

Country: US (United States)

Affiliation: Klein College of Media and Communication Temple University

Abstract: This paper begins with a brief characterization of the SBCC field. This will establish the practical terrain. The need for a specific SBCC approach to ethics will be argued. Following this is a survey of a standard array of philosophical approaches to ethics that might be relevant to this exercise will be surveyed, including utilitarianism, Kantianism, and communitarianism. Strengths and weakness of these approaches for the purposes at hand will be identified. The ethical relevance of recent advances in the fields of behavioral economics and nudge theory will be discussed. After this survey of standard approaches to ethics, and some issues, two approaches to ethics will be examined on the basis that they might be especially promising for thinking through the ethical dimensions of SBCC work. These are approaches to ethics based in the works of Amartya Sen and Jurgen Habermas.

Title: Proposal for a Code of Ethics for Social and Behavior Change Communication

Session Type: Panel Submission

Authors:

Name: Nicole Lemire Garlic

Email: nicole.lemire.garlic(at) temple.edu

Country: US (United States)

Affiliation: Klein College of Media and Communication Temple University

Abstract: This paper will propose a draft code of ethics for Social and Behavior Change Communication. It will outline a statement of values, including both philosophical commitments and expressions of values that are common among ethics codes in other communication fields. Some of this will be drawn from the preceding paper on “Selected Principles.” It will briefly survey codes of ethics used in fields related to SBCC work, such as humanitarian organizations, health communication, journalism, and others. It will present a code of ethics that has been developed with input from members of the Global Alliance for Social and Behavior Change as well as a globally distributed group of “interested individuals,” who have provided ideas, input, and criticism during development of this draft code. It will consider pros and cons of the draft code. Finally, the paper will consider matters of implementation such as promulgation, use of the code by individual SBCC organizations, use by the Global Alliance as a whole, and promotion of ethical reflection and practices in the SBCC field at large.

Abstract: La crisis económica que tan directamente ha incidido en la delicada situación por la que atraviesan gran parte de los medios de comunicación, que han visto disminuir dramáticamente los ingresos por publicidad, y los cambios estructurales y de gestión de contenidos que ha impuesto la generalización de internet, han puesto sobre la mesa nuevos modelos de negocio que puedan garantizar la supervivencia de las empresas periodísticas. El crowdfunding, las suscripciones, la búsqueda del apoyo de un sponsor o el intento de involucrar económicamente a los lectores son algunas de las medidas que unos y otros han tomado para asegurarse los medios económicos necesarios para la edición. También está cobrando fuerza el branded content o la creación de contenidos que benefician a una marca concreta que los financia para mejorar su imagen y conseguir fidelizar clientes, hasta el punto de que aumentan los medios que han puesto en marcha un departamento que se ocupa únicamente de esta cuestión. Y la Branded Content Marketing Association se autodefine como el organismo mundial de la industria para profesionales de contenido de marca, y pretende promover las mejores prácticas, compartir conocimientos y hacer crecer la industria de este sector.

No se trata sólo de vender un buen producto (Lang, 2015), sino de afianzar los valores y la filosofía de la compañía y mejorar su reputación online y offline (Cartes y García, 2017). Pero la realidad es que son textos pagados, intencionales e interesados que sirven siempre a causas comerciales muy concretas pero que se presentan como noticias captando a sus públicos objetivos sin que estos se detengan a pensar qué están leyendo (González, 1996). Puede llegar a ser verdadera publicidad encubierta, pues el consumidor, aunque accede al contenido voluntariamente, lo hace sin ser consciente de que se trata de publicidad disfrazada de información (Megías, 2014), como reflejan algunos autores: There's no such thing as brand journalism, or innovation journalism, or anything-else journalism. Journalism is journalism. When you see it you'll know it (Foremski, 2012).

En este contexto, nuestras preguntas son las siguientes:

QR1: ¿Es aceptable hablar de brand journalism cuando nos encontramos con prácticas más cercanas al marketing?

QR2: ¿Hasta qué punto es ético utilizar un contenido con apariencia informativa para vender un producto o una marca?

Para aportar datos relevantes nos hemos centrado en las revistas femeninas, que son las que más facturan en publicidad, con el fin de mostrar como ayudan a las marcas a publicitar sus productos disfrazándolos de noticias. La muestra seleccionada abarca las cuatro revistas mensuales con mayor número de usuarios únicos según los últimos datos del EGM: Vogue (4,8 millones), Telva (3,1), Glamour (3,7) y Elle (2,7). Y estamos analizando los contenidos durante un período determinado, a la vez que hacemos un seguimiento de los titulares de las noticias publicadas en las ediciones digitales que incluyan el nombre de alguna marca.

Abstract: In the past decade, debates about the trustworthiness of media have spread around the globe, and the accountability of media content has become a key issue of media policy in many countries. Fundamental shifts regarding the patterns of media use and the structures of revenue markets have made journalism more exposed to criticism from various stakeholders. While many “Western” media professionals have reacted to these challenges by new initiatives to highlight their credibility, policy-makers even in the “Global North” have tightened their grip on independent media and weakened the concept of self-control. At the same time, ongoing democratization in many parts of the world, along with deregulation of media markets have created a demand for media quality monitoring in countries formerly characterized by rigid press control. Concepts of media accountability (MA) have spread to emerging democracies, also through media assistance by international donors. However, research on MA beyond the West is scarce, particularly in terms of comparative approaches. So far, most academic models of MA are though rooted in the context of liberal Western democracies, guaranteeing press freedom and in return expecting media self-regulation and journalists to take over social responsibility (e.g. Bertrand 2000; McQuail 2003). This concept poses enormous difficulties to properly evaluate and compare media accountability structures beyond the West, but also in some increasingly polarized and fragmented societies of mature democracies. Yet, hybrid and frequently innovative forms of MA also exist in countries with limited press freedom and open spaces for critical debates have evolved in countries dominated by state media, where traditional instruments of media self-regulation like press councils have for long been captured by the state. The MediaAcT project (Fengler et al. 2014) was the first study to provide comprehensive empirical data on MA in different European media systems, complemented by two Arab countries. The European Handbook of Media Accountability (Fengler, Eberwein and Karmasin 2018) contains qualitative country reports on the status quo of MA in 30 European states. Bastian (2019) has compared MA infrastructures in Brazil, Argentina and Uruguay. By taking into account the results from amongst others these studies, the presentation aims to propose a

framework for mapping and assessing MA on a global level: What is the concept and value of accountability in other (media) systems and (journalism) cultures? What are actors to consider? What are factors limiting or pushing MA beyond the West? How to reflect local values contributing to specific manifestations of MA properly? Literature

Title: Media accountability and good practices of quality journalism

Session Type: Panel Submission

Authors:

Name: Danilo Rothberg

Email: danroth(at) uol.com.br

Country: BR (Brazil)

Affiliation: State University of Sao Paulo

Name: Bibiana Alcântara Garrido

Email: bibiana.garrido(at) hotmail.com

Country: BR (Brazil)

Affiliation: State University of Sao Paulo

Abstract: Editorial guidelines, codes of ethics, management systems, media accountability practices and their impact on organisational routines that generate quality journalism are paramount in establishing principles, norms, and practices to be followed by the media corporations and journalists. The development of quality practices takes on a special role in the strengthening of democracy, due to the public and social character of journalism, according to which diversity and plurality become parameters of credibility. In this sense, quality journalism practices tend to be subjected to media regulation and self-regulation. While in the public broadcasting systems statutory regulation has often been the prevalent practice in contemporary democracies, in print media self-regulation has been the most common path. Moreover, even in regulatory regimes there is a self-regulatory component, supervised by statutory structures, so that media accountability systems, led by non-governmental organisations, has been frequently the way forward. This context leads to the formulation of relevant research questions. How are editorial guidelines, codes of ethics, journalistic quality systems and media accountability practices designed and executed, both in public broadcasting systems, in which regulatory practices bear statutory status, and in printed media, which in contemporary democracies do not depend on licenses to operate? What are the boundaries and intersections between regulatory and self-regulatory practices in contemporary democracies? What kind of self-regulatory practices, when supervised by statutory bodies, can prove adequate in encouraging diversity and plurality? We present the results of our research that brought a contribution to answer these questions, by investigating the central features of regulation and self-regulation as a force for quality journalism from a comparative perspective between Brazil and the United Kingdom, regarding editorial policies, codes of ethics, channels of relationship with the public and procedures of recognition and correction of errors. The analysis sample consisted of 42 organisations from Brazil and the United Kingdom. The methodology focused on the analysis of documents related to codes of ethics, quality management systems and media accountability practices, by verifying the content and availability of these documents. We indicate three ways of interpreting the results, which suggest the understanding of: a) quality as a result of normative policies: the organisations best placed in the general classification are those which operate in contexts regulated by independent or self-regulated agencies; b) quality as a result of market competition: medium-sized organisations do not always operate under a regulatory or self-regulatory supervision regime, but are seeking improvements due to the market competition; c)

quality as a simulacrum: poor performance organisations adopt quality just as a strategy to reach visibility, since there is no correspondence between the management policies expressed in editorial documents and effective performance indicators.

Abstract: Journalism should provide citizens with the information they need in order to participate in decision-making processes in society. The quality of the journalistic information used for these processes can be measured through a series of different criteria, among them the adoption of “Media Accountability Instruments”. That is because “the ‘systems’ as used by Bertrand (2002) are, in fact, instruments to assure the means of communication’s responsibility and promote its transparency” (2011, p. 8). The incorporation of such instruments by journalistic organizations can contribute to the quality of their work and, consequently, to the strengthening of its editorial credibility. Fengler et al. (2014, p. 10) affirm that the investment in quality and transparency can translate into a possible competitive advantage to other media organizations that have not implemented actions in that sense.

The paper analyzes the degree to which accountability instruments are incorporated in the Brazilian journalistic environment. To proceed that analysis, a research group with scholars and students developed two types of procedures: an evaluation of journalistic outlets to identify the adoption’s degree of those instruments; and a survey with journalists to understand how they perceive, practice and evaluate those instruments in the Brazilian context.

For the evaluation of journalistic outlets, we selected 24 Brazilian online outlets (which are affiliated to print products) out of the ones with the highest circulation in the country. To those we applied eight indicators of editorial performance. For the journalists’ perception of the topic, a survey was conducted based on the design developed by the Media Act project (available at www.mediaact.eu), which collected information from 110 journalists in 23 countries.

The data obtained from the analysis of the online versions of newspapers indicate a low degree of adherence to Media Accountability Instruments: only two are situated at the score range B, 11 at the score range C and 11 at the score range D – the lowest one). None achieved the highest score range A.

The data obtained from the survey with 110 journalists indicates that, even though a certain range of journalists are aware of their accountability towards the Brazilian public, journalists recognize that political and economic influences affect their work, especially within news organizations that rely on public investments. Moreover, 79% of the journalists agree that concentration of ownership is a factor that damages the quality of journalism.

The general analysis of the data allows to conclude that in Brazil, Media Accountability Instruments are not yet significantly incorporated to the media ecosystem. The accounts for the fragility of the institutional processes that are capable to promote a responsive editorial posture and that could contribute to elevate, in a consistent way, the credibility of the Brazilian news organizations. This scenario speaks for itself concerning the offer of quality news products to society, and gets worse in the light of the current political conjecture, marked by attacks of political agents in power who seek to weaken both economically and ethically the more autonomous sectors of Brazilian journalism.

Title: Représentation sociale des minorités raciales et ethniques dans la publicité télévisuelle de Côte d'Ivoire

Session Type: Individual submission

Authors:

Name: Julien Laurent Michel Adhepeau

Email: Jadhepeau(at) yahoo.fr

Country: CI (Côte d'Ivoire)

Affiliation: Université Félix Houphouët-Boigny

Abstract: Cette étude examine la représentation sociale des minorités raciales et des ethnies présentes dans les contenus de la publicité télévisuelle diffusée en Côte d'Ivoire. Les recherches sur les stéréotypes de race dans le champ de la recherche en publicité ont relevé l'importance du discours publicitaire dans la consolidation des stéréotypes dans les sociétés industrialisées (Taylor and Stern, 1997). Une importante littérature (Goffman, 1978; Furnham et al; Taylor et al, 1995; Mastro, & Stern, 2003) s'est intéressée à la représentation des races et du genre dans la publicité en relevant que les influences de la publicité sont liées non pas à la publicité elle-même mais plutôt au contenu construit dans le message publicitaire (Pollay, 1986). Très peu ou pratiquement pas d'études se sont focalisées sur ces questions dans un contexte sociétal subsaharien. La définition des minorités établie par Wirth (1964) permet d'intégrer dans le contexte de cette étude à la fois le groupe des occidentaux, des libanais, des chinois et des africaines résidant en Côte d'Ivoire. Dans la société ivoirienne, chaque communauté est perçue différemment en fonction des impératifs culturels, économiques ou encore anthropologiques. La méthodologie repose sur une analyse de contenu de la publicité télévisuelle diffusée sur la principale chaîne (RTI1) de la télévision publique ivoirienne. Un total de 57 spots publicitaires ont été analysés de juin à novembre 2018 à partir de la grille d'analyse adaptée du modèle de codification de Smith (1994) et de Schneider et Schneider (1979). Les résultats de cette étude montrent l'existence de stéréotypes raciaux et ethniques particuliers dans la publicité ivoirienne en relation avec les différentes spécificités anthropologiques, culturelles et sociétales imprégnées dans la société ivoirienne.

Title: Migration coverage and media accountability

Session Type: Panel Submission

Authors:

Name: Marcus Kreutler

Email: marcus.kreutler(at) tu-dortmund.de

Country: DE (Germany)

Affiliation: TU Dortmund

Abstract: Migration is the challenge of our century: In 2017, numbers of migrants and refugees worldwide have reached an all-time high since World War II, as 68.5 million people are estimated to have been displaced or fled home countries by UNHCR. Surging migrant and refugee figures are the reality of our time across continents and cultures (UNHCR 2018). While the causes and consequences of refugee movements have steadily dominated the media agenda since 2015 (Krüger 2015), the mass media, for their part, influence the phenomenon of migration: through journalistic reporting, the media shape the images of the audience in the countries of origin and destination of migration (see Herrmann 2015). As a result, journalists as “translators of meaning” (Hafez 2001: 692) have a fundamental mandate to integrate migrants (see Pöttker 2006: 251ff.). So far, there are only a few internationally comparative studies that focus on the reporting of the “refugee crisis” and thus provide an empirically sound basis for the current debate on the different perceptions of refugee policy in various countries. The rare comparative studies available so far are usually limited to few countries (see Berry et al., 2015, Viera 2015, Fotopolus / Kaimaklioti 2016, Georgiou / Zaborowski 2017). This is where our study starts, examining coverage in two leading news media (online news portals or newspapers) in as many as 16 western European (France, Germany, Italy, Portugal, Spain, Switzerland and the UK) and East-Central/Eastern European countries (Albania, Belarus, Czech Republic, Hungary, Poland, Romania, Russia, Ukraine) as well as the USA over six one-week periods between 2015 and 2018 using a quantitative content analysis (n=2381 articles). The study therefore includes relevant target and transit countries in Western and Southern Europe and, secondly, states whose political leaders have profiled themselves with a negative attitude towards the admission of migrants. The study also highlights migration reporting in key countries facing specific problems (migrants from Mexico in the US, refugees from the Ukraine and Central Asian republics in Russia, internally displaced people in Ukraine), which gives a perspective on migration reporting in different cultural contexts. In this presentation, selected results of the study focusing on the ethical quality of migration coverage will be discussed in the context of comparative research on media accountability (Eberwein et al. 2017): How does media coverage of migration in countries ranking low in the European Index of Media Accountability differ from media coverage of migration in countries ranking high in the European Index of Media Accountability? Do we observe noticeable differences in the quality of migration coverage with respect to ethical treatment of migrants between news media from countries with different media accountability systems, implying that some journalism cultures provide a professional context more sensitive to ethical issues?

Title: Public Relations Ethical Codes: Reflecting Global or Local Values'

Session Type: Individual submission

Authors:

Name: Gisela Gonçalves

Email: gisela.ubi(at) gmail.com

Country: PT (Portugal)

Affiliation: University of Beira Interior. Covilhã. Portugal

Abstract: The topic of ethics has received significant attention in the business ethics literature as well as in the public relations literature (for a review see Bowen 2009). Public relations practitioners and scholars want the practice of public relations to be viewed as an ethical profession worthy of organizational and public respect. However, many critics argue that there can be no ethical public relations because the practice itself is akin to manipulation and propaganda (Moloney, 2000; 2006).

Professional public relations bodies have internationally established ethics codes in an attempt to regulate members' ethical behaviour. The codes of ethics are a moral reference in regard to both the duties and rights of a profession. They establish the minimum moral norms for an activity.

In 2018, the Global Alliance for Public Relations and Communication Management, launch a call for a new global code of ethics. The Global Alliance is the confederation of the world's major PR and communication management associations and institutions, representing 160,000 practitioners and academics around the world. The 2018 Global Alliance Code of Ethics lists 16 principles deemed to be universal and fundamental to the practice of public relations and communication management.

This paper discusses the ethics of public relations in the light of the codes of conduct promoted by professional associations of public relations, at a national and international level. In the first part of the text, the leading international public relations ethics codes are analysed in order to map the main values defended. In the second part of the text, the analysis is focused in the Brazilian case. The ethical code and the institutional presentation of CONFERP – The Federal Council of Professionals of Public Relations in Brasil will be the subject of a comparative analysis, in relation to the values previously identified in the international codes. Honesty/truth, loyalty, integrity, transparency, free flow of information and enhancing the profession are identified as the values and guiding principles of public relations that contribute to their professional affirmation. In the end, we aimed to discuss if the global values emphasized by the Global Alliance are reflected in the mission of the Brazilian professional council or if other values emerged in the latin-american context.

Key words: international codes of PR, professional values, CONFERP-Brasil, Global Alliance.

Title: Contested narratives, endangered rights: the non-ratification of the Istanbul Convention in Slovakia and Bulgaria

Session Type: Individual submission

Authors:

Name: Maya Nyagolova

Email: mayanyagolova(at) gmail.com

Country: BG (Bulgaria)

Affiliation: Independent scholar

Abstract: With murders of journalists and non-ratification of the Istanbul Convention (IC), Bulgaria and Slovakia, at least twice each, headlined for a short span of time the international news feeds in 2018. For many observers and scholars, these events signaled or confirmed worrisome trends and tendencies manifested lately in all Central and Eastern European countries. Some analysts saw the developments around the (non)ratification of the IC as “further evidence of widespread resistance among the more socially conservative countries of the former Eastern bloc to the liberal values of wealthier Western Europe.” “Democracy is at risk in the East”, social activists warned, not least because the space for independent media is shrinking, thus depriving the progressive and liberal voices from meaningful representation.

Waves of hostility and resistance to the so-called “gender ideology” led Bulgaria and Slovakia in February 2018 to oppose ratifying the Council of Europe’s Convention on preventing and combating violence against women and domestic violence. In July, Bulgaria’s Constitutional court ruled that the IC violates the constitution. Slovakia postponed the ratification indefinitely. This paper is revisiting the now infamous cases of non-ratification of the IC in these two countries. Why Slovakia and Bulgaria? Apart from the similarities in size of population, in political parties’ configuration, in widespread corruption, and in oligarchic ownership and modes of media management, it is tempting to compare Catholic Slovakia to Eastern Orthodox Bulgaria if only to find out that clerics from both denominations had their defining say in a secular debate about a human rights issue.

The paper ventures to answer the following research questions: (i) To what extent, in the aftermath of the public debates around the ratification processes, journalists and their professional organizations were able to self-assess their roles. What – if any – lessons they have learned? Responses will be sought after in secondary sources: analytical papers, reports, reflection notes, produced by professional organizations, think tanks or other institutions or private entities. (ii) What was the voice of civil society organizations (SCOs)/NGOs coalitions and their representation in traditional and on-line media? National and European-wide coalitions of NGOs and CSOs faced a fierce backlash from coalitions and platforms that opposed the Convention. The media presence and social networks’ visibility of the anti-IC coalitions were often more prominent than the visibility of the pro-IC platforms. In addition, “the opposition forces were coordinated movements that not only oppose the Istanbul convention but that maintain anti-feminist, anti-migration, anti-European sentiments”. Why pro-IC coalitions failed to craft a narrative that is socially acceptable and convincing enough to ensure a smooth ratification process? (iii) Who were the main leaders of opinions and influencers who dominated the debates and how they positioned themselves through public speeches, personal blogs, and social media accounts? Where did the public debate take place

and is a return to propaganda and myth-making tactics a new normal in public and political communication? (iv) How international media reported, reflected and stereotyped the anti-IC stance in Central and Eastern European countries and especially in Bulgaria and Slovakia.

Abstract: The revelations of Edward Snowden and the ensuing political discourse surrounding the topic of whistleblowing formalized a significant juncture in international relations. The upsurge of challenges regarding the ethics of information security and the increased scrutiny of U.S. security agencies prompted the U.S. federal government to exercise a number of initiatives to protect its own systems of information and technology. One of those measures was the Whistleblower Protection Enhancement Act (WPEA) of 2012, which provided protected channels for federal employees who wished to expose governmental misconduct. The Snowden revelations ignited public discourse on whistleblowing and the protective measures of the WPEA. Given the polemics over whistleblower distinctions throughout mediated exchanges between U.S. officials and the press, this manuscript constitutes a synchronic ideographic analysis of pertinent, recognized ideographs as they interreacted within the discursive tension of whistleblower classification. The manuscript critically evaluates the U.S. government's response to Snowden through an overview of U.S. whistleblower protection laws while considering prominent historical U.S. whistleblowers and a comparative analysis of the whistleblower protection laws of other nation states. Through synchronic ideographic analysis, this chapter progresses by discussing the discursive ideological manifestations of Snowden in accordance with whistleblowing vocabulary. The synchronic analysis is formulated into two primary sections. The first part engages the intersection of Snowden and whistleblowing terminology within the greater Snowden discourse. The second section analyzes the engagement between whistleblowing terms and other discursive ideological manifestations, namely security, democracy, privacy, liberty, freedom, and terrorism.

U.S. officials have criminalized Snowden for not following governmental protocol for whistleblowers, although Snowden contends that protocol was followed. U.S. officials touted the WPEA and its internal channels as the means for whistleblowers to actively protect themselves and the security of U.S. citizens in general. By denying Snowden whistleblower distinctions, the U.S. government holds Snowden in exile as an accused felon. The U.S. government's denial of Snowden's whistleblower status elucidated covert ideological power. The <Snowden> discourse demonstrates how whistleblowing is the quintessence of democracy. Whistleblowing, existing both within, and outside of, <democracy>, necessarily functions paradoxically, and the recognition of this is vital to the conceptualization of democracy. The Snowden disclosures afforded the institutions of the U.S. the opportunity to assist in the progression of democracy. A primary utility of whistleblowing is the initiation of public deliberation. The most significant revelation surrounding the U.S. government's response to Snowden was not the disclosure of covert government surveillance, nor the emphatic denial of governmental culpability by state officials, but rather the painfully evident ethical crises that democracy innately creates for itself. As U.S. officials

funnel whistleblowers through governmentally protected channels, whistleblowers, and the democratic populace writ large, become further discursively neutralized. In the wake of Snowden, international communities should be cognizant of how state actors within democratic societies are approaching whistleblowing. It is argued that removing whistleblowers from the public forum, while packaged as a protective measure for whistleblowers, is functionally a protective measure for state officials and authoritarianism writ large.

Title: RIESGOS, DESAFÍOS E IMPLICACIONES ÉTICAS DEL PERIODISMO ROBOT

Session Type: Individual submission

Authors:

Name: Moisés Limia

Email: mlimia(at) gmail.com

Country: CO (Colombia)

Affiliation: Universidad Jorge Tadeo Lozano

Abstract: Las rutinas productivas y las condiciones materiales del periodismo han estado siempre modeladas e influenciadas por la tecnología (Pavlik, 2000; Parry, 2011). Con la entrada de los algoritmos y de la computación en las etapas de producción, distribución y consumo de noticias, tanto las estructuras editoriales como las rutinas periodísticas están experimentando cambios sustanciales en su configuración (van Dalen, 2012; Pavlik, 2013; Broussard, 2014; Napoli, 2014). Asimismo, la aparición de nuevos desarrollos tecnológicos afecta notablemente a los roles, valores y responsabilidades tradicionalmente asignados al periodismo y a los periodistas (Culver, 2016). Este fenómeno encarnado por la creación de contenidos a partir de algoritmos y su aplicación en el periodismo por parte de robots ha sido conceptualizado como “Periodismo Robot”, “Periodismo de Algoritmos”, “Periodismo Automatizado”, entre otros términos. Con la expansión y sofisticación de las nuevas tecnologías y de la investigación en lingüística computacional ya es posible producir textos automáticamente a partir de datos digitales estructurados (Reiter y Dale, 2000).

Este texto reflexiona críticamente en torno a la problemática instaurada por la irrupción de la inteligencia artificial, los robots y los algoritmos en el ámbito del periodismo. Nuestro objetivo consiste en realizar un análisis crítico sobre cómo afectan estos robots a la profesión periodística y los riesgos y desafíos éticos de esta nueva coyuntura.

En esta investigación hemos llevado a cabo un examen pormenorizado de ejemplos significativos y paradigmáticos de utilización de robots e inteligencia artificial en las redacciones de los medios más importantes del mundo. Desde 2014, agencias de noticias y medios de comunicación como Associated Press, Bloomberg, Forbes, The Washington Post o Los Angeles Times han venido utilizando la inteligencia artificial para la publicación de noticias y contenidos informativos.

Por último, una vez analizados los peligros, los errores, las transformaciones y los desafíos futuros planteados por la irrupción de estos robots, planteamos de modo sistemático cuáles son los principales riesgos y desafíos éticos asociados a la utilización de robots periodistas en las redacciones. Sustancialmente, los riesgos éticos se sitúan en el ámbito de la transparencia, la proliferación de noticias falsas y la pérdida de valores. En cuanto a los desafíos, anotamos la necesidad de una mayor “transparencia algorítmica” del periodismo robot, una mejor comprensión algorítmica por parte de periodistas, editores y audiencia en general y, finalmente, abogamos por la necesidad imperiosa de reflexionar sobre las implicaciones legales, éticas y sociales derivadas del empleo de periodistas robots en las redacciones.

Title: Communication and Dignity in Early Antiquity

Session Type: Individual submission

Authors:

Name: Anthony Löwstedt

Email: lowstedt(at) webster.edu

Country: AT (Austria)

Affiliation: Webster Vienna Private University

Abstract: Just as the Universal Declaration of Human Rights (Preamble and §§1-2) and the International Covenant on Civil and Political Rights (§§ 2-3) make dignity as something that all humans possess automatically central to human rights law on the supranational level since more than 70 years, there may have been a similar emphasis on dignity and equality in ancient Egypt. The Teachings of Ptahhotep (around 1850 BCE) declared: “If you are a man who leads, listen calmly to the speech of one who pleads; Don't stop him from purging his body of that which he planned to tell” (17). It addresses class as well as gender: “A perfect word is hidden more deeply than precious stones. It is to be found near the maid-servants working at the mill-stone” (1). In particular, Ptahhotep looks at humiliation as something unethical. Affording dignity to an “inferior” adversary is not seen as a concession, but as a mutual benefit: “Do not attack him because he is weak. Let him alone, he will confute himself. Do not answer him to relieve your heart. Do not vent yourself against your opponent. Wretched is he who injures a poor man” (4). But this view would not prevail through antiquity. Dignity was instead mostly a concept associated with social status. Nevertheless, Stoicism, Christianity and other traditions, not only in western philosophy but also, for instance in Islam and Buddhism, would continue to present egalitarian alternatives to dominant conceptions. Especially Kantian moral philosophy, whose categorical imperative prohibits the instrumentalization of fellow human beings, is today seen as the systematic establishment of human dignity as a central principle (Debes, 2017, pp. 3-4). This paper aims to provide evidence of an early concept or prototype of dignity, not spotted by Debes (2017), who starts the conceptual history with Homeric Greece and its unequal distributions of dignity. Ptahhotep also deals with inequality but bases his norms on a complex grid of horizontal and vertical solidarity, the latter being a specific ancient Egyptian meritocratic notion that more privilege must entail more duties and responsibility (Assmann, 1995, pp. 92-121). Ptahhotep, it is true, does not make an explicit universalist claim such as Kant's or the 20th century pillars of international law. But his ideas are especially relevant to communication ethics, as they also include the duties to be truthful, sincere and honest; an abhorrence of falsehood (especially intentional falsehood and falsehood designed to injure); respect for privacy; rejection of reliance upon rumor, hearsay and gossip; demands for freedom of expression and information; refusal to accept hate speech, greed and incitement to violence; and condemnation of defamation (Löwstedt, 2018b).

Title: What are people talking about in moral outrage': Communication processes of online firestorm in Japan

Session Type: Individual submission

Authors:

Name: Hiroki Kato

Email: d.vnc415(at) gmail.com

Country: JP (Japan)

Affiliation: The University of Tokyo

Abstract: Abstract:

Every society has the function of generating deviance by collectively labeling an affair as immoral or problematic, which is called societal reaction (Durkheim, 1895/1960). Representative examples of societal reaction are policing and sanctioning of a criminal behavior by social control agencies such as the police and courts and the construction of social problems by the legislator and mass media. In the age of the Internet, in addition to these formal agencies, anonymous online users can form a societal reaction by posting large quantities of critique and insulting comments against (perceived) norm violations on social media. These so-called online firestorms, or Enjō in Japanese, tend to include aggressive behavior against the target; therefore, they have been threatening companies, organizations, celebrities, and even ordinary people. Although former research has discussed how online environment such as anonymity and echo chambers amplifies emotional and aggressive outrage (Reicher, Spears, & Postmes, 1995; Sunstein, 2001), little has focused on the dynamics of Enjō itself. According to the interactionist approach of collective behavior, the dynamics of collective behavior are produced by the interaction and dissemination of meaning among the participants (Turner & Killian, 1957/1987). Based on this perspective, this research aims to reveal the dynamics of Enjō and explores how people communicate with each other in the formation process of Enjō by conducting a comparative case study. In this study, I collect tweets posted in five Enjō cases, analyze them, and compare each case in order to create conceptual categories of the communication process of Enjō. Results show that the participants of Enjō interact with each other to define the problem of concern through exchange of their opinions and information and negotiate with the target of Enjō over validity of the definition. Moreover, it is revealed that there are two types of process in the escalation of Enjō, “social problematization” and “villainization”. In the discussion, I consider the implication of these findings and how to avoid the expansion of Enjō.

Title: [Panel] Ethics, Media & Accountability, Panel description

Session Type: Panel Submission

Authors:

Name: Fernando Oliveira Paulino

Email: fopaulino(at) gmail.com

Country: BR (Brazil)

Affiliation: University of Brasilia

Name: Mariella Bastian

Email: m.b.bastian(at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: Panel proposal "Ethics, Media & Accountability". Moderator: Fernando Oliveira Paulino; Discussant: Mariella Bastian. Participants: Susanne Fengler; Dominik Speck, and Tobias Eberwein: "De-Westernizing Media Accountability Research"; Danilo Rothberg & Bibiana Alcântara Garrido: "Media accountability and good practices of quality journalism"; Josenildo Guerra, Fernando Oliveira Paulino, Renata Gomes, Liziane Guazina, Ébida Santos, Luma Poletti Dutra, Marcos Santuario, Fernando Molina, and Rogerio Christofoletti: "Journalism and Accountability in Brazil"; Jairo Faria, Lenin Martell, Laura Águila, and Madalena Oliveira,: "Ombudsman as Media Accountability Instrument"; Marcus Kreutler & Susanne Fengler: "Migration coverage and media accountability".

With five presentations the panel seeks to stimulate the debate about Ethics, Media, and Accountability with the participation of scholars from Germany, Portugal, Mexico, Netherlands, Austria, and Brazil.

Manifested in different ways, we have witnessed a growing awareness of the public regarding ethical behavior of the media across countries. Heated debates about misinformation or so-called "fake news" as well as the proximity of media professionals and political actors and the potential influence of media coverage on election outcomes have been in the center of an increasing number of publicly visible demands for setting ethical standards for the media. In this open and ongoing debate, accusations of ethical misbehavior are closely linked to the quality of journalism, which is in many cases repeatedly questioned by a variety of political stakeholders and representatives of civil society. Thus, stakeholders are in search of ways of how to hold the media effectively to account. However, the tightened and sometimes hostile relationship between the political and the media sector frequently hinder open discussions and impede approaches to media accountability which do not interfere with important rights of the media sector such as press freedom or absence of censorship. The slowly growing number of scientific work investigating Media and Accountability (MA) on a broader (comparative) level have revealed new challenges and a high need for a continuous monitoring and advancement of the field. For example, research on media accountability in different national settings (Bastian, 2019; Eberwein, Fengler, Karmasin, 2018; Paulino, 2009) has shown the importance of taking contextual factors into account when designing possible measures for holding the media accountable and calling for more media responsibility –and to broaden the

view beyond the so-called “Western World”. Additionally, there are specific issues which are both covered and debated in rather polarized ways and which are simultaneously of huge societal relevance.

Title: White Feminism, the Bitch Manifesto, and 'New' Femininity

Session Type: Individual submission

Authors:

Name: Kim Hong Nguyen

Email: dr.kim.hong-at- gmail.com

Country: CA (Canada)

Affiliation: University of Waterloo

Abstract: This paper explores how liberal feminism functions as a mode of jouissance, if you will, the price for having it all, and a productive therapeutic outlet for white women to thrive within white patriarchal structures. Beginning with a conversation between Adrienne Rich and Audre Lorde, where Lorde recalls a time when Rich impatiently requests Lorde to develop her argument with evidence and documentation, I analyze how liberal feminism transforms the affective structure of white patriarchy. By virtue of its inclusion, liberal feminism enables white supremacy to be transformed by the participation of white women who can continue to love it, to love within it, and to love to complain about their attachment to it. I turn to Lauren Berlant, who argues that femininity functions as a genre that helps cultivate a feeling and a fantasy of belonging to an intimate public, “allowing complex audience identifications,” and enabling “the affective capacity to bracket many kinds of structural and historical antagonism.” I show how Berlant’s theorization of femininity as a form of cruel optimism and moral ambivalence that adapts and bargains with what one has to survive, is dependent upon maintaining and accepting white supremacy. A rhetorical form of embourgeoisment, Berlant’s notion of femininity guarantees not only that structural and historical antagonisms remain, but also that femininity and its discursive form, complaint, will have been the condition of possibility for the status quo’s difference and maintenance. A counterpart to this logic of widening the affective structure of white supremacy is the feminist attempt to challenge the meaning and interpretation of the word, “bitch,” as made famous by Joreen (Freeman)’s “The Bitch Manifesto.” Angered by femininity as a social construct that motivates patriarchal judgment, the term “bitch” is worth reclaiming, for it highlights how those who have been labelled “bitch” refuse to be ‘enslaved’ and are meaner and better than the category of women who have subjected themselves to femininity. I argue that the resignification politics of “bitch” fits the liberal feminist logic and notion of social justice, where affective inclusion does nothing to disrupt the underlying enslavism and white supremacy but only to further align white women with white supremacy.

Abstract: En reacción a feminicidios brutales ocurridos en mayo de 2015 en Argentina, un grupo de periodistas activistas viralizaron el hashtag #NiUnaMenos en las redes sociales online y offline hasta convocar una marcha multitudinaria el 3 de junio. Movilizaciones análogas se repitieron el mismo día en los años siguientes, inclusive en otros países latinoamericanos.

Esta investigación analiza las conversaciones de Twitter que llevan el hashtag #NiUnaMenos para explorar si, cuánto y cómo el feminicidio (y el relacionado movimiento argentino) ha sido comentado por los usuarios en ocasión de las marchas de 2015, 2016 y 2017, y si y cómo ha sido “disparador” con respecto al problema de la violencia de género.

Adoptamos un marco teórico que, por un lado, incluye la literatura producida desde la acuñación del término inglés femicide (Radford y Russell, 1992; Stout, 1992; Russell y Harnes, 2001; Russell, 2012; Corradi et al., 2016) hasta su traducción al castellano feminicidio (Lagarte y de los Rios, 2004, 2005, 2006; Monárrez Fragoso, 2002, 2010). De esta manera, no nos referimos solo al asesinato de una mujer por su ser-mujer, sino que incluimos también la desigualdad de género y todas las prácticas culturales e institucionales de dominación masculina sobre las mujeres. Por otro lado, nos basamos en la literatura sobre el rol de las redes sociales en los movimientos sociales de los últimos años (Bennet, 2003; Chadwick, 2007; Castells, 2012; Bennet y Segerberg, 2012; Penney y Dadas, 2014; Teocharis et al., 2014; Papacharissi, 2014; Bakardjieva, 2015; Treré & Mattoni, 2016). Así, rechazamos cualquier perspectiva tecno-determinista, y consideramos las tecnologías digitales y las luchas políticas como mutuamente moldeadas, lo que hace que los medios sociales sean espacios privilegiados donde analizar las reivindicaciones del NiUnaMenos.

La investigación integra métodos cuantitativos (esto es, análisis automatizado de datos, métricas de actividad, análisis de contenido, patrones de influencia y difusión de información) con un análisis cualitativo de una muestra de tweets (“lectura cercana”, Brummett, 2010). Específicamente, a través de GNIP “Historical Power Track”, recopilamos el conjunto completo de los tweets con el hashtag

#NiUnaMenos que se han producido en lengua española en la zona horaria de Buenos Aires entre el 1 y el 3 de junio de 2015, 2016 y 2017 (más de 320.000).

Los resultados devuelven una dimensión y caracterización del fenómeno social, mediático y político del NiUnaMenos. El hashtag demostró involucrar los usuarios más en 2015 que en los años siguientes (en términos de usuarios únicos involucrados, número total de tweets y métricas de participación de los usuarios). De hecho, es el año de “lanzamiento” del término feminicidio que, delimitando conceptualmente la realidad, parece dar una visibilidad inédita a este problema social. Las conversaciones en Twitter apelan principalmente a las emociones y al carácter universal de la violencia de género. El año 2016 es de transición: las conversaciones mantienen la misma connotación artístico-emocional de 2015, pero inauguran también cierto recrudecimiento que luego caracteriza al año 2017, cuando los usuarios dan rostros y números al problema específico del feminicidio para humanizarlo y dimensionarlo.

Name: Emelina Galarza Fernández

Email: meligalarza-at- uma.es

Country: ES (Spain)

Affiliation: University of Malaga

Abstract: El pasado 8 de marzo de 2018 el movimiento feminista en España convocó a una huelga de mujeres a la que se sumaron diferentes colectivos. Destaca entre ellos la participación de “Las Periodistas Paramos” (LPP), grupo conformado por profesionales de la comunicación, cuyas acciones en torno a la convocatoria han tenido un impacto desde el punto de vista organizacional. Los estudios de mujeres, en tanto perspectiva teórica de análisis, se desarrollan en distintas áreas, incluida la comunicación, con el objetivo de visibilizar las desigualdades estructurales que se producen en la sociedad y que dan lugar a movilizaciones, reales y virtuales, en defensa de uno de los Derechos Humanos internacionalmente reconocido: la igualdad entre hombres y mujeres. La complejidad del estudio obliga a tener en cuenta las implicaciones de la irrupción de un colectivo liderado por emisoras privilegiadas como son LPP, en un entorno de realidad comunicacional cambiante, cuya presencia virtual afecta a todas las esferas sociales.

Esta investigación descriptiva combina técnicas e instrumentos de estudio mixtos como la entrevista semiestructurada, el cuestionario, el análisis de contenido y la revisión bibliográfica documental. Se utiliza como diseño metodológico el estudio de caso bajo el propósito de analizar los resultados inmediatos y consecutivos de la acción colectiva de LLP en el 2018, a nivel interno, asociativo y comunicativo. De manera específica, el estudio se propone examinar perspectivas teóricas para el análisis de acciones colectivas desde el paradigma de los movimientos sociales, la teoría crítica feminista y de comunicación; describir la acción colectiva de LPP en el contexto de la huelga feminista del 8M de 2018 en España; identificar las formas constitutivas de LLP; y conocer cómo se han generado en ellas los procesos de participación.

En la investigación se constata que la acción colectiva de LPP tuvo una gran repercusión en España, al alcanzar más de 8.200 firmas en su manifiesto y obtener el apoyo de la Federación de Sindicatos de Periodistas. La iniciativa resultó ampliamente difundida por medios convencionales y digitales, a partir de una estrategia ciberactivista, de alcance transnacional. Uno de los principales resultados de

LPP fue la creación de redes territoriales, que se configuraron en un primer momento como apoyo a la acción y movilización hacia la huelga y la firma del manifiesto, pero que tras el 8M han evolucionado hacia diferentes formas constitutivas como asambleas, grupos de trabajo y apoyo a la comunidad de mujeres periodistas, a partir de una política de reconocimiento profesional desde una perspectiva de género. También se detecta a nivel nacional el aumento y consolidación del tejido asociativo vinculado con el ejercicio profesional protagonizado por mujeres, tanto de la comunicación en su sentido más amplio, como de la práctica del periodismo en particular. De este fenómeno se deriva un fortalecimiento de las redes de mujeres dentro del ámbito de los medios de comunicación en España.

Title: Media coverage of women in Politics: Mexican Local Politicians in Campaign.

Session Type: Individual submission

Authors:

Name: Fernanda Vidal-Correa

Email: mvidal-at- up.edu.mx

Country: MX (Mexico)

Affiliation: Escuela de Comunicación, Campus México, Universidad Panamericana.

Abstract: Changes in laws in Mexico have resulted in an increase in the number of women running and being elected. With greater representation, press coverage of women has increase as well. Past studies have found that in other countries, male candidates have received more and better coverage than female candidates. In these same contexts, more recent work has found that coverage for women has improved over time. However, the lack of work in the Mexican case, combined with changes observed in other countries, makes it necessary to ask if media coverage in Mexico is creating new opportunities for sexism and gendered stereotypes, affecting women's running for office. To answer this, coverage of men and women candidates running in Mexican local elections are analysed. Specifically, on content analysis on election coverage of the running candidates for governor in Estado de México, Aguascalientes and Distrito Federal between 2012 and 2015.

The objective is to question first, the attention women running for office have received in the recently democratised Mexico. Second, the research studies the type of coverage women have in comparison to that of men. Third, it analyses the ways in which printed news media cover stories about women politicians and the issues journalist highlight in their stories.

Findings suggest, in general, that male candidates are equally visible than female nominees. Additionally, newspaper coverage does not vary in tone and female coverage with focus on personal traits is minimal and only in op-eds. Finally, evidence shows that issues covered are mostly "male" portfolios, and male candidates tend to focus on "female" issues only when more women candidates run and are viable nominees.

Title: Facebook & women participation in elections in Uganda

Session Type: Individual submission

Authors:

Name: Florence Namasinga Selnes

Email: florencn-at- gmail.com

Country: UG (Uganda)

Affiliation: Makerere University

Name: Kristin Skare Orgeret

Email: kristo-at- oslomet.no

Country: NO (Norway)

Affiliation: Oslo Metropolitan University

Abstract: Women comprise 52% of Uganda's population but largely remain on the margins in politics and elections despite measures to change the status quo. While the legal framework does not discriminate against women, participation in elections as candidates and as commentators on electoral-related issues remains low due to social, economic and cultural set up of the country. Additionally, empirical research shows that women in Uganda are marginalised as sources in mainstream media coverage of elections and that female candidates receive the least coverage across all media platforms .

Social media may allow users to create and share information and interact with each other without inhibitions of gatekeepers as is the case with conventional media. Social media may serve as channels through which the citizenry may talk back to politicians during political campaigns and after elections since they enable citizens to participate in political discourse by contributing ideas, questioning and holding them accountable. In doing so social media may enhance democracy to the degree that some scholars have called them a 'Liberation technology'. However, gender digital divides do persist, and the gender gap is particularly large (23%) among internet users in Africa .

Grounded in theories of gender, social media and political communication, the proposed chapter interrogates social media's potential to facilitate women's participation in discussing election-related issues in Uganda. Analysing Facebook as a potential enabler of communication between and among people of different backgrounds, the leading research questions are: What is the extent of women's deployment of Facebook to discuss electoral-related issues in Uganda? How do women use Facebook to address politicians about election promises? Do these discussions draw the attention of politicians to the issues raised by the women?

Using the case of Pads for girls' campaign, we examine how one woman, Stella Nyanzi, used Facebook in the aftermath of the Ugandan 2016 elections to rally fellow women and the Ugandan citizenry to demand that government fulfil an election campaign promise to supply sanitary towels to all girls. Using quantitative and qualitative content analysis, we will study the Facebook posts related to the pads for girls' campaign between February and June 2017. In addition, qualitative in-depth interviews will be carried out with the central participants in the Facebook campaign.

The deliberations will have a direct bearing on debates about social media's potential to contribute to political change and electoral democracy. The findings will feed into discussions of mobilising attention and accountability to women's rights, how to bring women issues to the attention of the public, and finally how this may increase women's participation in electoral processes as well as democracy.

Abstract: La Declaración Universal de los Derechos Humanos iluminó la idea de que toda persona es merecedora del mismo respeto, derechos y libertades sin importar su condición. Para alcanzar esta situación, resulta fundamental dar voz a las minorías, que históricamente han tenido un menor acceso a la definición de significados en el espacio público y académico. Por este motivo, el objetivo de esta comunicación es dar visibilidad y propiciar la acumulación del conocimiento científico producido dentro del área de los estudios culturales denominada LGTBI o queer studies.

La investigación sobre procesos, discursos y elementos del proceso comunicativo llevados a cabo en torno y desde las comunidades LGTBI es uno de los campos de estudio más vibrante en el ámbito anglosajón liderado por Estados Unidos (Sam Chan, 2017), un campo que tendría sus orígenes en los años 80 del siglo XX (Henderson, 2016). La Internacional Communication Association cuenta con un grupo de interés específico y en el caso de la National Communication Association llega a ser división. Otros indicativos que muestran la buena salud del área en el contexto anglosajón es la revista editada por Intellect *Queer Studies in Media & Popular Culture*, las numerosas entradas en la *Oxford Research Encyclopedia of Communication* (Baldwin, 2017; Hajek, 2017; Fasoli, 2017; West, 2018) o el special issue en el journal de referencia *Critical Studies in Media Communication* (Shaw y Sender, 2016). Los estados de la cuestión producidos hasta la fecha muestran también una interesante madurez epistemológica (Yep at al., 2003; Gross, 2005; Capuzza y Spencer, 2015; Sam Chan, 2017); recordemos cómo la metateoría, el reflexionar sobre lo producido, permite la acumulación del conocimiento científico y la construcción de comunidades epistémicas (García Jiménez, 2007).

Sin embargo, esta efervescencia no sería extrapolable al caso Iberoamericano (España, Portugal y América Latina), donde el área se encuentra en un estado en ciernes y de aridez epistemológica.

Han sido muy pocos los estados de la cuestión realizados sobre estudios LGTBI (Ventura, 2016), lo que hace que la labor de mapeo de tendencias en este ámbito cultural y geográfico sea un reto mayor que en el caso anglosajón.

Por todo ello, este trabajo analiza la identidad y principales tendencias de los estudios LGTBI mediante una triangulación metodológica basada en: 1. una revisión crítica de los estados de la cuestión en el ámbito anglosajón; 2. un análisis de contenido cuantitativo de la producción científica en Iberoamérica a partir de las tesis doctorales defendidas y los artículos publicados en las 150 revistas con mayor índice de impacto SJR entre 2007 y 2017; y 3. un estudio Delphi a expertos/as iberoamericanos/as. Los resultados muestran el buen estado de salud del área en el mundo anglosajón y la debilidad de investigaciones de impacto en Iberoamérica. Debido a la alta incertidumbre en este último caso, la consulta a expertos tipo Delphi ha permitido trazar algunas de las estrategias y tendencias a seguir para potenciar los Queer Studies en Iberoamérica y ayudar a la visibilización y a la promoción de la dignidad humana de esta minoría.

Title: "Rooting' for domestic violence: Backlash of Information Communication Technologies and Celebrity Endorsement on Intimate Partner Violence in China

Session Type: Individual submission

Authors:

Name: OUYANG CHUNXUE

Email: annouyang-at- aliyun.com

Country: CN (China)

Affiliation: School of International Studies, University of international Business and Economics

Abstract: In Western societies, the definition of domestic violence has been expanded to include not only violence that occurs in family settings but also acts committed by non-family members (Clark, 2013). In China, the concept of domestic violence (Jiatingbaoli) was first introduced in 1995 in the official government report Program for the Development of Chinese Women (1995-2000) (Zhao, 2000). Since then, the scope of the concept has evolved to include both physical (including sexual) abuse and psychological violence, and to violence inflicted between those who live together but are not family members (Zhao & Zhang, 2017). Between traditional Chinese culture that regards domestic violence as a private matter and a research tradition that is largely descriptive and theory-based, the study on domestic violence in China is considered rudimentary and of low priority (Sun, Su, & Wu, 2011; Zhang, 2014).

On November 22, 2018, Jiang Jinfu, a model turned actor in China, admitted to committing domestic violence and apologized to his cohabited Japanese girlfriend Haruka Nakaura for his "impulsive behavior" on Weibo, the Chinese equivalent of Twitter, on which Jiang has more than 17 million followers. The confession came after Nakaura posted pictures of her bruised face and body on Instagram, and her further disclosure of miscarriage directly linked to Jiang's domestic violence, which quickly went viral in China after being reposted on numerous Chinese social media platforms. An overwhelming number of Chinese netizens in China justified and supported Jiang's behavior, for reasons that Nakaura was a Japanese national and was living by a lifestyle that was not "in line with" traditional Chinese expectation of a 'good' wife/girlfriends. The backlash fermented until Jiang was later arrested by Japanese law enforcement, when numerous A-listed celebrities in China appealed to their followers on Weibo in defense of Jiang's behavior and framed it as an issue of individual "character", "ethics" and "truth".

This incident was particularly of theoretical and empirical significance since it departed from the current ideological and social framework of gender equality research, even with the consideration of China's traditional Confucian patriarchal influence (L. Chan, 2000; Lasley & Durtschi, 2015). The "surprising" support of domestic violence on social media needs to be examined from the intersection of intimate partner violence (IPV) in relation to Information Communication Technologies (ICT) and celebrity's endorsement of political and social issues, which in this case was domestic violence and possibly a wider inference to gender equality and power relations under the increasing visibility of "#MeToo" movement in China, and the sentiment of national identity and nationalism.

This study employs critical discourse analysis (CDA) since language can be seen as ‘action’ (Van Dijk, 1997; Wodak, 2009) and ‘interaction’ (Chilton, 2004), and the ‘use of language can produce the effects of authority, legitimacy, consensus and so forth’ (Chilton, 2004: 6). Specifically, under Fairclough (1995)’s framework of ‘textual description’, ‘interpretation’ and ‘explanation’, this research will sample all the Weibo posts and comments of Jiang Jinfu as well as celebrities including Hu Ge, Lin Gengxin, Yu Haoming and Jiang Mengjie (according to the number of followers and trending of their posts) from the period of November 20, 2018 when Nakaura disclosed the violence to November 29 when celebrities endorsed Jiang’s behavior online.

Title: The Construction of Maternity in Discourse - How do Discourse Positions in Science and Media correspond'

Session Type: Individual submission

Authors:

Name: Natalie Berner

Email: natalie.berner-at- ifkw.lmu.de

Country: DE (Germany)

Affiliation: IfKW, LMU Munich

Abstract: This study examines the scientific discourse on the contemporary construction of motherhood. Background of this analysis is a larger research context, which asks what kind of power relations do shape the current discourse on motherhood. This also includes the question where limits of what can be said lie and, consequently, which discourse positions do not emerge in the public debate. It is evident, that the idea of motherhood is a negotiable object, which combines tensions and contradictions regarding issuers like gender, employment, or child-welfare. At the same time the interpretation of maternity is strongly driven by interests, which must be critically questioned.

Based on discourse theory (Foucault 1981) a category system was designed and is leading the research process. The study design contains various levels of public discourse (media, daily life, science, politics, and economy), which differ regarding the methodical attempt (media content analysis, document analysis, guided interviews, systematic literature review). This submission wants to specifically focus on the scientific discourse level and asks the following questions:

- (1) How do different academic disciplines construct motherhood?
- (2) Which discourse positions result from the scientific discourse level and are taken up or omitted in the media discourse?

And furthermore:

- (3) What is the state of research on studies dealing with the medial construction of motherhood?

In order to answer the research questions a systematic literature analysis was conducted. The material base contains of 200 scientific publications (journal articles, monographs, contributions to anthologies) dealing with motherhood (search terms: motherhood, maternity). The investigation period ranges from 2008-2018. In order to make the research process intersubjectively comprehensible all steps are documented in detail. Various databases have been included, hits were structured by relevance/peer-reviewed/most-cited. Results show how maternity is discussed in the scientific discourse. Whether specific discourse positions do correspond to the media discourse or are rather underrepresented/dominant will be outlined.

Title: Gender and Politics in China's Digital Public Sphere

Session Type: Individual submission

Authors:

Name: Yuzhu Peng

Email: 74altman-at- gmail.com

Country: GB (United Kingdom)

Affiliation: Newcastle University, Newcastle upon Tyne

Abstract: In this article, we aim to determine the extent to which the representations of Western women politicians reflect a gendered nature in Chinese Internet users' discussion about international politics in a similar way to the West. In doing so, we examine these representations by unpacking how they intersect with the patriarchal values of contemporary China, allowing Chinese users to justify the achievements of women in an international political context, and negotiate the hierarchical gender power relationship within their own country. The article presents a netnographic research conducted on the most popular Chinese Community Question-Answering (CQA) Site – Zhihu. Specifically, we scrutinize all answers to the questions, which prompted Zhihu users' discussions about three high-profile Western women politicians, Angela Merkel, Theresa May, and Jacinda Ardern. By employing a mix-method research design consisting of a Content Analysis (CA) and a Critical Discourse Analysis (CDA), our analyses show that the representations of these Western women politicians in the sampled answers are indeed gendered. This gendered nature not only reflects the gendered stereotyping of women politicians as identified by existing literature in the Western context, but also involves a patriarchal rationalization of women's achievements in politics unique to the Chinese context. It is intersected with the (re)evaluation of gender differences in the post-reform era, adding another layer of evidence showcasing the revival of patriarchal values in contemporary China.

In contemporary Chinese communication studies, existing theoretical approaches are largely developed upon a Western-centric or Western-Chinese dualistic research paradigm (Zhao, Y. (2014). Communication, crisis, and global power shifts: An introduction. *International Journal of Communication*, 8(1), 275–300.). By developing a gendered approach to the stereotyping of women in politics unique to the Chinese society, we re-evaluate the communicative practice in China's digital public sphere by examining its relationship to the rise and fall of Chinese women's social status. The findings of the present research are enlightening, helping us to recognize the dynamic interplay between international politics and gender inequality in contemporary Chinese society. The outcomes enable us to revisit the transformations of communication in contemporary China with a focus on its patriarchal traditions, and to develop a Chinese approach to re-examine the field of communication studies from a gender perspective.

Title: Periodismo y violencia estructural: un análisis sobre cómo las desigualdades de género y las agresiones contra periodistas afectan la autonomía periodística percibida en Colombia

Session Type: Individual submission

Authors:

Name: Miguel Garcés

Email: miguelefren-at- gmail.com

Country: CO (Colombia)

Name: Jesus Arroyave

Email: jarroyav-at- utb.edu.co

Country: CO (Colombia)

Affiliation: Universidad del Norte

Abstract: La autonomía periodística se ha estudiado tradicionalmente en países con democracias seguras desde los controles e influencias que ejercen los asuntos individuales, políticos, económicos y organizacionales en la libertad percibida por los periodistas para tomar decisiones editoriales. Basado en variables objetivas y en una encuesta nacional diligenciada por 546 periodistas colombianos, este artículo analiza cómo las agresiones en las salas de redacción y las desigualdades contra las mujeres periodistas influyen en la forma cómo los periodistas perciben su autonomía profesional en Colombia. Asimismo, se analizó en esta investigación, qué tipos de influencias en el periodismo colombiano explican la relación entre la violencia directa y de género y la disminución en los niveles de autonomía percibidos para producir y publicar noticias. Usando regresiones múltiples y modelos de mediación estadística basados en técnicas no paramétricas (Hayes, 2013) se logró establecer que las agresiones y el impacto que éstas producen en la autonomía periodística percibida en Colombia tanto por los hombres como por las mujeres periodistas, se deben a razones políticas y económicas; mientras que el efecto de la desigualdad de género en la autonomía percibida se debe más a razones socioculturales. Finalmente se identificaron los temas informativos más sensibles donde las mujeres periodistas perciben menos autonomía profesional que los hombres para publicar noticias en el contexto colombiano, y se ofrecieron algunas recomendaciones para la realización de futuras investigaciones en este campo.

Title: Ser madre y esposa ¿obstáculo o requisito' Reflexiones de las mujeres en la propiedad y en puestos de toma de decisiones en las compañías de medios de comunicación en México en torno al ejercicio de la maternidad.

Session Type: Individual submission

Authors:

Name: Mónica Amilpas García

Email: monica.amilpas-at- gmail.com

Country: MX (Mexico)

Affiliation: UNAM FCPYS

Abstract: Los estudios e investigaciones feministas sobre la maternidad y el trabajo de las mujeres son numerosos y han hecho aportaciones relevantes. Sin embargo no es un tema agotado. El caso de los medios de comunicación en México se vuelve un escenario necesario dado que desde sus inicios en 1920 se han caracterizado por estar concentrados en pocos actores, masculinos en su mayoría, y cuyos industriales han tenido una influencia considerable en las decisiones políticas del país. Además de que dicha concentración sigue recayendo en las mismas familias, es decir, se ha ido heredando de una generación a otra el manejo de los mismos. Interesante es que las mujeres siguen siendo minoría tanto en la propiedad como en puestos de toma de decisiones pues no constituyen más del 1% de quienes tienen la titularidad de la concesión del medio en televisión, apenas el 13% en radio y el 16% en televisión restringida.

Son diversos los factores estructurales que han dado pie a esta situación, sin embargo, se vislumbra la práctica de la maternidad como un factor determinante para el acceso y participación de las mujeres en los puestos de toma de decisiones y en la propiedad de los mismos. En México de 19.9 millones de mujeres que realizan alguna actividad productiva remunerada, 14.7 millones son madres de familia y 4.3 millones son jefas de hogar de acuerdo con datos de la Secretaría del Trabajo y Previsión Social. En los medios de comunicación se tiene una tendencia similar.

Es por ellos que desde la perspectiva crítica feminista y con base en una metodología cualitativa, se hicieron entrevistas semiestructuradas a mujeres que actualmente están en la propiedad y en puestos de toma de decisiones en las compañías de medios de comunicación en México. Se reportan sus reflexiones y se visibiliza cómo la identidad genérica femenina sigue estando anclada al concepto tradicional de madre esposa y cómo dentro de las estructuras organizacionales de los medios de comunicación el ejercicio de la maternidad se vuelve un obstáculo para quienes desean acceder a puestos de toma de decisiones o es un requisito previo para el acceso a la propiedad de las mujeres que heredan el medio.

Title: The likeability of implicit visual gender stereotypes in advertising.

Session Type: Individual submission

Authors:

Name: Patrick Vyncke

Email: Patrick.Vyncke-at- UGent.be

Country: BE (Belgium)

Affiliation: Department of Communication Sciences - Ghent University - Belgium

Abstract: Over the years, gender stereotyping in media has been a much researched topic, assuming that those stereotypes have a clear impact on the gender representations media consumers create in their minds, and that they are therefore worth our attention. A special focus has been on analyzing advertisements, often showing that gender stereotyping has decreased over the past decades (Eisend, 2010). However, although women are no longer simply and solely depicted in the private sphere, in housewife roles, or as sexual lust objects, subtle and implicit gender stereotypes in advertisements are still common (Mager & Helgeson, 2011).

However, not only did past research (for an overview, see e.g. Eisend, 2010; Wolin, 2003) focus mainly on explicit gender portrayals (i.e., in terms of professional roles, socio-economic contexts, etc.), most studies also investigated male and female gender roles in isolation, while plenty of real-world ads depict both genders in a specific relation to each other (Orth & Holancova, 2003, 2004). Moreover, past research projects mainly relied on content analysis as their main methodology (see e.g. Furnham & Paltzer, 2010; HajiMohammadi, 2011; Knoll, Eisend & Steinhagen, 2011; Royo-Vela et al., 2008; Wolin, 2003), not investigating the reactions of real media consumers to these gender portrayals. Finally, the few studies that did involve real respondents are very inconsistent, with some showing a preference for stereotypical portrayals (e.g. Infanger, Bosak & Sczesny, 2012), and others showing just the opposite (e.g. Hupfer, 2002; Jaffe & Berger, 1994; Whipple & Courtney, 1985; Zawisza & Cinnirella, 2010).

In contrast to this 'classic' research tradition, we set up an experimental research project focusing on implicit gender role portrayals, on the relations between males and females in advertisements, and on specific reactions of real respondents to these gender portrayals. Our large-scale experiment involved 315 respondents (50,8% males and 49,2% females; 50,5% aged 17-27 and 49,5% aged 37-57; with varying educational levels). The stimulus material consisted of 20 sets of advertisements for a large variety of gender-neutral products and involving models of different ages, depicted in different contexts. Each set contained one stereotypical (i.e., male dominance and female subordination) and one a-stereotypical (i.e., male subordination and female dominance) version of the same ad. To create the impression of dominance or subordination, we used the nonverbal cues Goffman described in his highly influential study on the nonverbal and implicit portrayal of gender in ads (Gender Advertisements, 1979), such as proxemic, kinesic and haptic cues, and mutual gazing, as part of 'ritualized submission'. To avoid order effects, half of the respondents got an AB-version of the sets, while the other half got a mirrored BA-version. For each set respondents had to indicate which ad version they found the most appealing one: the stereotypical or the a-stereotypical.

Our findings show that media consumers hardly differ significantly, and certainly not consistently, in their preferences for either an a-stereotypical or a stereotypical implicit portrayal of gender roles. Moreover, no significant gender-related, age-related, or product-related, and only a few education-related preferential differences were found.

Title: Inmate (In)Visibility: Wentworth's Portrayal and Inclusion of Australian Indigenous Women

Session Type: Individual submission

Authors:

Name: Lauren DeCarvalho

Email: lauren.decarvalho-at- du.edu

Country: US (United States)

Affiliation: University of Denver

Abstract: Indigenous peoples comprise only two percent of Australia's total population, yet account for roughly 27 percent of the total adult prison population (Walters & Longhurst, 2017). At a rate greatly outpacing their male counterparts—both Indigenous and non-Indigenous men—since 1991, Indigenous women currently comprise 34 percent of the total women's prison population despite only representing two percent of the overall female population (Walters & Longhurst, 2017). Back in 1991, Indigenous women represented 17 percent of the total women's prison population in Australia (Walters & Longhurst, 2017). According to the Aboriginal and Torres Strait Islander Social Justice Commissioner June Oscar, Indigenous women account for most of the 77 percent increase in women's incarceration in Australia in recent years ("Imprisonment Rates," 2018, para. 6). With this overrepresentation of Indigenous women in the Australian prison system, it is crucial to consider on-screen portrayals as visual representations impact public perception and, in turn, policy.

Given this, I examine the representation of Indigenous women, specifically three inmates, in Foxtel's Australian prison drama, *Wentworth* (2013-Present). As a reimagining of the beloved Australian soap opera *Prisoner* (1979-1986), *Wentworth* has received both commercial and critical success. It recently aired its sixth season in June 2018 and wrapped up the filming of its seventh season the following month (Hirst, 2018). In July 2018, *Wentworth* made history at the 2018 Logie Awards by taking home three awards, which is the most of any drama program (Bayley, 2018). In November 2018, much to fans' delight, it was announced that *Wentworth* has been renewed for another two seasons with "at least another 20 episodes" (Carmody, 2018).

From its onset, *Wentworth* has showcased the lives of Australian women from a variety of intersectional identities. In the first season, viewers are introduced to several main characters, including Doreen Anderson (played by real-life, Indigenous actor Shareena Clanton). Five seasons later, *Wentworth* has introduced two more main characters who are Indigenous women: Ruby Mitchell (played by real-life, Indigenous actor Rarriwuy Hick) and Rita Connors (played by real-life, Indigenous actor Leah Purcell). Employing feminist textual analysis of all six seasons to date, I carry out close readings of episodes, paying special attention to the latest season. While most of my previous scholarship around representational issues has focused on problematic depictions of the Other, this paper instead recalls feminist media scholar Hocker Rushing's call to action twenty years ago—that the process of critique tends to be masculine and predatory and to instead humanize the process by not automatically tearing a text apart but instead pushing us, as cultural critics to look beyond. Unlike existing scholarship on depictions of Australian Indigenous women, which highlights how this demographic has been routinely gendered, racialized, and sexualized by media,

I instead point to the ways in which the three Indigenous women inmates are prominent, dynamic characters who are humanized and reflect female (as well as sisterly) solidarity. In a cultural climate that is bent on incarcerating real-life Indigenous Australian women, *Wentworth* serves to complicate usual depictions of this demographic.

Title: Communication affordances of social media for a feminist critical discourse analysis of power: Communication power in fighting for Chinese Feminist Voices

Session Type: Individual submission

Authors:

Name: Xiao Han

Email: han.xiao-at- cuc.edu.cn

Country: CN (China)

Affiliation: Communication University of China

Abstract: In this year's International Women's Day (March 8th, 2018), Feminist Voices, a leading Chinese feminist group, was forced to shut down both their official Sina Weibo and WeChat accounts without giving any specific reasons. Feminist Voices, however, did not choose to keep silent and withdraw from public life; rather, the group shifted to their private WeChat account to encourage like-minded people to express their solidarity with them. Consequently, the collapse of Feminist Voices not only attracted sharp criticism within the Chinese feminist circle but also gained considerable support from the group's worldwide social media followers. More importantly, in this context, Feminist Voices can be seen as an actor, realising the potential, to a larger extent, of social media to render Chinese feminist discourse prevailing within the relatively conservative Chinese society.

Focusing on social media, this article aims to examine the process in which Feminist Voices challenges the patriarchal power and state control in Chinese discourse through their practices of communication. The theoretical framework combines Allen's (1998, 2005) feminist conception of power with insights from the field of media and communication and particularly from social media theory. On the one hand, Allen's feminist critique of power indicates that power is, indeed, a communicative process whereby female actors recognise their subordinate status, raise consciousness, express their standpoint, make decisions, participate in actions, and build solidarity. On the other, the extensive use of social media for contemporary feminist politics has brought communication into a central place, leading to communication as an important entry point to explore the relationship between power and social media. In this way, the proposed theoretical approach in this article allows us to conceptualise power as a communicative process that is constructed through storytelling, performance, social networks, and collective action, which, in turn, casts a new light on the perception of power within critical discourse studies (CDS).

Drawing on a two-phase ethnographic study, before and after the closing down of social media accounts of Feminist Voices, the article investigates how the leading Chinese feminist group makes use of online communicative practices to constitute themselves as a power actor. The empirical data is derived from in-depth interviews with the core organiser of Feminist Voices, as well as the textual analysis of Weibo and WeChat posts produced by the group, and supporters' comments. Meanwhile, taking the discourse-historical and dialectical-relational approaches to CDS, I will analyse the ways in which the Chinese political structures, social norms, and cultural values shape feminist discourses within the online space of the Feminist Voices, and how the group uses these online discourses to gain power. In addition, the design, protocols, and ownership of social media

platforms will be taken into account. In conclusion, this article addresses the importance of developing a feminist critical discourse analysis of power within the new media communication environment.

Title: Are Women Making News in the Media'

Session Type: Individual submission

Authors:

Name: Mary Wambaria

Email: marywambaria-at- gmail.com

Country: KE (Kenya)

Affiliation: Kenya Institute of Curriculum development

Abstract: This paper focuses on the framing of women news in the media. It investigates who delivers/writes news in the newspapers, who reports which news topics, how women are portrayed as sources of news and finding out whether the sex of the reporter make a difference for the gender dimensions of a story. Media are a major source of public information about the social, economic and political issues and remains the most influential in shaping public opinion for most people around the world. It is a key element of the public and private space in which people, nations and societies live. Therefore, who and what appears in the news and how gender issues and events are portrayed matters. In 1978, Tuchman, propagated the view of symbolic annihilation to determine sexism in the media. The study used the content analysis method conducted on two highly circulated newspapers in Kenya that is; the Daily Nation and Standard in the month of November 2017. The findings indicate that on delivering the news, women journalists are fewer at 18% compared to male journalist who dominate the by lines at 76%. The scope of the coverage was at both the county and national level where male journalists dominate in reporting for hard news such as politics, economy and business at over 70% while female journalist are less than 20%. As persons interviewed or heard in the news, women are still fewer at less 20%, in contrast to men who continue to predominate in the 'expert or spokesperson' categories at 80%. In a few instances where women do show up as sources in the news, it is often in topics on gender based violence, fashion and relationships thus reinforcing stereotyping. In addition there was no significant difference found on the gender dimension of the stories covered by male and female journalists.

Title: Decoding patterns of violence in women's glossy magazines: A cross-cultural study of UK and Greece

Session Type: Individual submission

Authors:

Name: Rafaela Orphanides

Email: r.orphanides-at- lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Loughborough

Abstract: Studies which focused on gender-based violence representations (GBV) in mass media forms emphasized on medias' tendency to portray women as passive victims of abuse and reinforcing gender oppression (Gallagher, 2011; Mujkic, 2017). During the past decades, women's glossy magazines have been extensively researched due to their broad circulation and high readership levels (McRobbie, 1995;2007; Gill, 2007;2009). However, most of these studies either focused on the exploration of discourses circulated in articles which are predominantly concerned with relationship and sex topics, or the analysis of specific sections of the magazines. During a thorough examination of the current literature, a gap was identified towards the analysis of representation of GBV incidents in women's glossy magazines and perceptions of readers of the magazines.

Through a content analysis of 575 articles obtained from British and Greek versions of Cosmopolitan and Marie Claire magazines produced during 2012-2016, it was noted that GBV is one of the most recurrent themes which concern the glossy mediums. This raised the need for examining how GBV incidents are depicted in an entertainment medium which is predominantly consumed by women and how such representations are perceived by women who comprise the core target audience of these magazines. This research used repertoire analysis (Hermes, 1995; Gill, 2009) as an organizing principle of analysis for examining how GBV-related topics are depicted in women's glossy magazines. Two interpretative repertoires which are representative of the main discourses circulated in articles predominantly concerned with GBV-related topics were identified. In addition, a total of eight focus groups with British and Greek participants were actualized for examining readers' perception towards the inclusion of GBV-related topics in glossy magazines.

The first repertoire identified is 'Risk management'. A main element of this repertoire is the heroization of women survivors of GBV and suggesting self-surveillance as a prevention measure. The second repertoire is 'Dynamics of exclusion' and through the utilization of four 'othering' techniques, explores how discourses which interlock the geographical, social and cultural context with incidents of GBV contribute to the construction of the 'distant other sufferer'. I conclude that through emphasizing on women's post-traumatic empowerment and through utilizing 'othering' techniques, women's magazines do not merely abdicate community's responsibility (Gilbert, 1988) for the perpetuation of these incidents, but also implies that gender equality is purely a woman's issue.

Title: Gendering Political Conflict: Gender Perceptions and Public Opinion in the Israel-Palestinian Conflict

Session Type: Individual submission

Authors:

Name: Yossi David

Email: davidyossi4-at- gmail.com

Country: DE (Germany)

Affiliation: Johannes Gutenberg University Mainz

Abstract: To what extent do gender perceptions shape conflict situations? To what extent might gendered perceptions of outgroup and ingroup undergird support for violence and human rights abuses? These questions are addressed through analysis of data from a series of public opinion polls that examined Jewish-Israeli perceptions towards Palestinians in the context of the asymmetrical protracted conflict between the sides. This study suggests and is based on a different approach to analyzing gender: not simply as a dichotomous category based on sexual difference but as a measurable perception of groups. The findings of this study offer a new reading of the role of gender perceptions and constructions in political conflicts and communication. These findings indicate that gender perceptions and constructions might play an important role in creating and reinforcing categories and dichotomies that enable excluding and delegitimizing outgroups as well as justifying the violation of their basic human rights. From a more optimistic point of view, the findings indicate that challenging gendered perceptions could open new avenues for working toward justice and human rights in asymmetric political conflicts.

Title: Perceiving gender stereotypes when there are none: An exploration of candidate photographs and their paradoxical perception

Session Type: Individual submission

Authors:

Name: Tobias Rohrbach

Email: tobias.rohrbach-at- unifr.ch

Country: CH (Switzerland)

Affiliation: University of Fribourg

Name: Philomen Schönhagen

Email: philomen.schoenhagen-at- unifr.ch

Country: CH (Switzerland)

Affiliation: University of Fribourg

Abstract: Recent empirical evidence from content analyses shows that gender stereotypical (mis)representations of female politicians are disappearing from present day media coverage (Lavery, 2013; Hayes & Lawless, 2015). However, concerns about pervasive gender stereotypes in politics contest this new truth of seemingly gender-neutral media coverage. First, voters continue to rely on gender stereotypes when they evaluate politicians (Bligh, Schlehofer, Casad & Gaffney, 2012). Second, women candidates keep reporting experiences of a hostile media environment when running for office (Ross 2017). And third, candidates even anticipate perceived stereotypical voter expectations when planning their campaigning strategies (Sapiro, Cramer Walsh, Strach & Hennings, 2011). We thus face a discrepancy between apparently less gender-stereotyped media content and persisting stereotypical candidate perception, which remains largely unexplored. We explored this discrepancy by means of a qualitative in-depth analysis of 250 candidate photographs in the media coverage of the Swiss parliamentary elections 2015. Based on theoretical and methodological reflections on the polysemic character of visual images (Geise & Rössler, 2012), we trained eight coders to describe, on a first level of visual analysis, manifest elements of stereotypes in the photographs (i.e. categories reflecting the dominant “traits and issues” approach, including photograph composition, facial expressions, gestures etc.; e.g., Meeks, 2012). On a second level of analysis, coders added their subjective interpretations within brackets. These inferences were separately analyzed with categories from the stereotype content model (Fiske, Cuddy, Glick & Xu, 2002), i.e. perceived warmth and competence, to capture the photographs’ latent elements of stereotypes. In addition to extensive training, the soundness of the separation between descriptions and interpretations was accounted for by having multiple coders unknowingly analyze a subsample of identical photographs with overall high convergence.

The results are striking: On the first level of manifest elements, nearly no gender-stereotyping was found while quite a lot of stereotypical patterns in the coders’ warmth and competence perception emerged on the second level of latent elements. Even if this gap between the two levels goes along with the theoretical reflections on visual image analysis, it raises methodological and theoretical issues with the analysis of (non-)stereotyped media coverage: If media content deemed non-stereotypical through the “traits and issues”-lens gives rise to gender-stereotypical perceptions, how meaningful are state of the art content analyses? Are gender-stereotypical perceptions driven by

holistic, culturally shared “pictures in our head” (“top-down”) and therefore (at least in the short-term) rather independent of the analytical details of the single candidate photograph (“bottom-up”) (Shea, 2013; Chanés et al. 2018)? Are there more subtle elements in the photographs that lead to stereotypical perceptions, but which are not captured by commonly measured categories? If so, how could they be found (e.g. by experimental designs)? These questions and their implications will be further discussed during the conference presentation.

Title: Representando la violencia, telenovela contemporánea en el Perú

Session Type: Individual submission

Authors:

Name: Giuliana Cassano

Email: gcassano-at- pucp.edu.pe

Country: PE (Peru)

Affiliation: Pontificia Universidad Católica del Perú

Abstract: Los relatos de la telenovela van construyendo y consolidando los imaginarios de una sociedad, particularmente los de género. Sabemos que el género como construcción cultural, condensa los significados -que desde la diferencia sexual- cada sociedad elabora, planteando qué significa lo femenino, lo masculino, lo trans; qué valores, roles, tareas se asignan a mujeres y hombres de acuerdo a su identidad genérica. Estos significados estructuran la percepción y establecen un conjunto de mandatos y expectativas sociales, configurando sistemas de género que establecen a su vez diversos tipos de relaciones. Hall (1997) nos plantea que en el escenario contemporáneo, donde la cultura está dominada por la imagen, el concepto de representación es central porque las representaciones expresan cadenas de significados, asociaciones discursivas, y conjuntos semánticos que se ubican al centro de la dinámica cultural.

En un contexto de tensiones y disputas alrededor de la mirada de género, derechos igualitarios, reconocimientos ciudadanos y auge de feminicidios, la telenovela peruana contemporánea está dialogando con ellos para representarlos y evidenciarlos, señalando lo que somos como sociedad pero también reflejando lo que queremos ser.

Objetivo de la investigación

Identificar y analizar los discursos sobre la violencia contra la mujer en las telenovelas peruanas Valiente amor, Mujercitas y Ojitos hechiceros.

Pregunta de investigación

• ¿Cuáles son los discursos sobre la violencia contra la mujer que nos ha entregado las telenovelas Valiente amor, Mujercitas y Ojitos hechiceros?, ¿Qué tensiones y disputas de poder evidencian?

Hipótesis de la investigación

La telenovela en el Perú del siglo XXI es un producto cultural femenino que pone en escena los afectos, las emociones, los sentimientos, los retos, las desigualdades, la sujeción, la violencia y los sacrificios que las mujeres enfrentan en su cotidianeidad. Estos relatos ofrecen representaciones de mujeres inicialmente sumisas, subalternas y violentadas que realizan un recorrido identitario hacia la libertad y la autonomía, convirtiéndose en mujeres luchadoras, emprendedoras, autónomas. Este recorrido es importante porque pone en escena las tensiones y disputas en el ámbito de la violencia contra la mujer. Este recorrido expresa también hegemonía y resistencia frente al orden social heteronormativo peruano. Hegemonía que dialoga con el poder y el sistema patriarcal; y resistencia que se va construyendo a partir de la conquista de diversos y nuevos espacios de las mujeres, y del quiebre del sistema patriarcal.

Metodología de la investigación

En esta investigación voy a realizar análisis de personajes y situaciones dramáticas, desde la teoría de la dramaturgia audiovisual, para trabajar cadenas significantes que nos permitan observar y analizar los discursos sobre la violencia contra la mujer y las posibilidades de cambio que los propios relatos nos ofrecen.

Title: Unseen warrior women: the representation of Shining Path female members on Peruvian films

Session Type: Individual submission

Authors:

Name: James Dettleff

Email: jdettleff-at- pucp.edu.pe

Country: PE (Peru)

Affiliation: Pontificia Universidad Católica del Perú - Pontificia Universidad Católica de Chile

Abstract: Peru endured in the last twenty years of the 20th century the most violent chapter of its history, when the internal armed conflict (IAC) took place between Peruvian armed forces and the insurgent groups Shining Path and MRTA. The main figure of Shining Path was its leader Abimael Guzman, but the group's command unit had female leaders, and several action troops were under female leadership.

In this Century the IAC has been represented in several cultural artifacts such as films, which have portrayed members of the armed forces and of Shining Path, but the female presence in those representations is scarce.

Since these representations are part of the cultural memory of the country, it is important to analyze how the female members of Shining Path are being represented and what these films are saying about them. That is why the main research questions for this paper are:

Are there representations of the female members of Shining Path on Peruvian films set on the IAC era? How important are their characters on the film plots? How are the female members of Shining Path represented on Peruvian films?

In a country like Peru, where its recent traumatic history is still trying to settle, media and cultural products help build the country's memory of what happened in those days, and the way social actors are represented shape the way things are learned about that era. Female characters on Peruvian history are scarce, most of the times as aides of men who take the leading roles of what shaped the country's life. Women had an important role during the IAC, but their representation doesn't answer to that reality.

Using a mixed methodology, this paper analyzes the presence of the Shining Path female characters on Peruvian films showing how they are underrepresented -an answer to patriarchal structures that denies their visibility and importance- being their characters seldom portrayed as strong and independent individuals, taking them back to female roles that are measured by the male's eyes and patterns. The research analyzes twelve Peruvian fiction films produced in the 21st Century, identifying in how many they are represented, their roles and importance on those films. Through discourse analysis we identify the power structures that underlie those representations, which puts women on second place, behind male characters in the nation's history.

Title: [Panel] MeToo's Global Ontology, Panel description

Session Type: Panel Submission

Authors:

Name: Alicia Kozma

Email: akozma2-at- washcoll.edu

Country: US (United States)

Affiliation: Washington College

Abstract: More than the contemporary zeitgeist, MeToo is a global rebuke of heteropatriarchal control over consent, bodies, and voice. Although mediatized as a moment, the MeToo movement rests on intersectional and intermedial pasts, presents, and futures while growing globally in impact and scope. To articulate these changes, this panel advances two strategic goals: 1) to expand the historiography of MeToo by exploring the voices that incubated and/or continue to nurture the movement and 2) to refocus the MeToo conversation around the intersectional struggles and resistance of peoples across the globe, challenging and decentering privileged narratives of whiteness, heterosexuality, and celebrity.

The papers in this panel address gender, voice, and visibility in global social movements to construct a historiographic continuum of the movement. To demonstrate the persistence, pervasiveness, and flexibility of the movement, we examine the intersection of advocacy and media through a variety of mediums including podcasting, social media networks, newspapers, and cell phones. Critically, we construct a global ontology, moving between India, the United States, and Spain.

Looking first to the past, paper one examines how #metoo—originally a social media advocacy tool for women of color—was co-opted by white celebrity, erasing the victimization and resistance of women of color. Paper two acts as a corrective to the whitewashing exposed in paper one by examining how MeToo India used cellphones to transform a Western-centric movement into a massive shift in that country's gender history.

Following these historical accounts, papers three and four examine the movement's present moment, highlighting its broadened in scope and is regeneration across populations. Paper three narrates how podcasting and other online technologies incubate the movement's goals of voice, visibility, and advocacy, while reproducing its U.S.-specific problematics around whitewashing. Paper four connects the hypervisibility of MeToo to the spike in social media conversations around same-sex domestic violence in Spain. Examines the impact of victim-centered storytelling advocacy versus newspaper reporting, paper four articulates how MeToo has widened to include, and empower, marginalized populations across the globe.

Title: #Metoo: Tales of Origin and Intersectional Negotiations

Session Type: Panel Submission

Authors:

Name: Angharad Valdivia

Email: valdivia-at-illinois.edu

Country: US (United States)

Affiliation: University of Illinois, Urbana-Champaign

Abstract: Unsurprisingly, and indeed continuously within mainstream US feminism, when social movements gain salience, their intersectional origin and the labor of those who contributed to their formation initially becomes whitened. Representation of agency is attributed to white actors despite evidence to the contrary. Just as histories of US feminism under-represented the contributions of African American women, #blacklivesmatter coverage often ignores the fact that it was founded by three African American women and that many of the victims of racialized violence are women, whose stories seldom appear in the news. #metoo similarly was created by an African American activist yet entered mainstream consciousness through Harvey Weinstein and his many accusers, especially Rose McGowan. This presentation seeks to map out the presence and nature of Tarana Burke, as the creator of #metoo as the individual who created this hashtag to pursue social justice on sexual harassment issues, which impact women of color disproportionately. As well, I will examine the inclusion of intersectionality within the ongoing #metoo movement and coverage, now that it's reached the mainstream through award seasons as well as highly publicized cases of major media figures.

Title: Wings of Fire: #MeTooIndia Marks Historic Faceoff with Entrenched Patriarchal Order

Session Type: Panel Submission

Authors:

Name: Koeli Moitra Goel

Email: koelig21-at- gmail.com

Country: IN (India)

Affiliation: Independent Researcher

Abstract: The “Me Too India” Movement has followed an erratic but combustible pathway. A monumental marker for the rise of woman power, it articulates a significant turn in gender relations, pushing struggles for gender justice to levels not experienced earlier in India. In historicizing the Me Too India movement, I propose that the current mobilization is an organic, teleological progression drawing strength from several ground-breaking events which as precursors had enduring impact on public memory and led up to this moment. The “Not in My Name” protests which spread across the country following the horrifying Nirbhaya rape in 2012 or the “One Billion Rising: No more Violence against Women and Girls” in 2016-2017 nurtured the seeds of discontent lying fallow for centuries. The ground matured slowly, but the Nirbhaya case may be seen as germinating the seeds, invoking unprecedented mobilization not simply because it was a gruesome, inhuman rape and mutilation of a woman valiantly fighting sexual violence till her end, but it evoked public shame in an “honor-driven” society. India’s embarrassment at being publicized as the “rape capital of the world” agitated the general public, so intellectuals and the educated middle classes finally got involved in the resistance. Sexual violence and harassment, henceforth a victim’s burden and largely hushed up, circulated in the 21st century’s connected world. Through a media blitzkrieg, discourses and images of sexual exploitation spread like wildfire so no more denial was possible. Me Too India illustrates the face-off between two mega forces: a supremely powerful patriarchal order and a viciously oppressed female population finally turning around to speak up, speak out, speak back and speak truth to power. The introduction of cellphones in India has played a significant role in women’s empowerment and strengthened their demands for freedom of speech, access to knowledge and to information, giving the Me Too India wings of fire and marking quantum shift in India’s gender history. If the initiation of fight against oppression is to confront the oppressor and speak out that his power over you is not absolute and will not remain unchallenged, then #MeTooIndia has done that.

Title: The Feminist Podcasting Voice as #MeToo Continuum

Session Type: Individual submission

Authors:

Name: Alicia Kozma

Email: akozma2-at- washcoll.edu

Country: US (United States)

Affiliation: Washington College

Abstract: The eruption of “MeToo” as social media hashtag in October 2017 singled a shift in the way women’s voices were heard and archived through online and digital media technologies. While primarily associated with social media, the practice of women and other victims telling their own stories coincided with a rise in U.S. feminist podcasting – including shows like *The Black Joy Mixtape*, *2 Dope Queens*, *Call Your Girlfriend*, and the subject of this paper, *My Favorite Murder* (MFM). Debuted in 2016, MFM is a true crime comedy podcast that quickly skyrocketed in popularity. The show currently has 19 million monthly downloads; is regularly ranked as one of the top 25 podcasts on Apple’s iTunes; recently set the record for the largest podcast live show at 8,000 attendees; and has held live shows for fans in the U.S, the Netherlands, England, Sweden, Scotland, Ireland, Norway, Australia, New Zealand, and Canada. Most recently, a listener began translating the podcast for a Japanese audience.

Connecting the resurgence in interest in the true crime genre (Boiling and Hull 2018; Bruzzi, 2018) and the near ubiquitous popularity of podcasting (Berry 2015)— as evidenced in television shows like *The Staircase*, *Making a Murderer*, and *The Jinx*, and podcasts such as *Serial*, *S Town*, and *Dear John*—MFM has made its mark by telling victim-centered stories with an explicitly feminist voice. It is here where the show intersects with the #MeToo movement: MFM uses podcasting as media technology to mirror #MeToo’s strategies of empowering women’s voices to tell their own stories while constantly reflecting on the everyday struggles of silencing and oppression. Resultantly, the podcast acts as a continuum of the movement, maintaining a constant focus on gendered victimhood in all forms, and bypassing the predictable burnout of #MeToo in mainstream mass media.

This paper, then, explicates how the podcast leverages strategies foundational to #MeToo to move past the mainstream constructions of the movement as a moment. This includes examining MFM fan advocacy efforts—including fundraising around comprehensive rape kit reform legislation in the United States—while articulating the problematic ways the show has co-opted a movement created by women of color (Duchemin, 2017; Frank, 2018). In doing so, this paper will articulate how the feminist podcasting of *My Favorite Murder* incubates a continuous space for the physical, psychological and affective work of the #MeToo movement while upholding the whitewashing of its victimhood and advocacy.

Title: UsToo: Portrayal of Same-Sex Domestic Violence in News Media

Session Type: Panel Submission

Authors:

Name: Arnau Roig-Mora

Email: roig.arnau-at- gmail.com

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: The MeToo movement, and the debates it has wrought into the public sphere, has brought to light the pervasiveness of sexual harassment and assault. The movement enables victims to raise awareness and increase visibility of this situation while simultaneously empowering their voices and connecting with a larger group of people with similar experiences. By using social media, this movement counters the inherent misogyny of big media outlets and elevates the voice of the victims. How can this movement inspire other groups to reclaim their voices? What can we learn from it to stop the media from speaking for us instead of letting us speak? Is it possible to do so from any position, regardless gender, race, class, etc.?

Research suggests that same-sex couples are as likely to commit abuse on their partners as heterosexual ones (Puzone et. al., 2000; Burke & Follingstad, 1999; Mize & Shackleford 2008). However, the underreporting of such abuse leads this problem to a silence that perpetuates its existence. Furthermore, intimate partner violence in same-sex couples has particular power relations, in which gender inequality does not play the same role than in heterosexual ones. This complicates the applicability of existing knowledge on the topic and calls for new perspectives and research that acknowledge its uniqueness. Luckily, although still insufficiently, the MeToo movement has also allowed same-sex abuse to gain some visibility as in the case of Kevin Spacey, bringing to the forefront the need to find alternatives to toxic masculinities and reframe the debate of sexual abuse.

In order to analyze the prevalent discourses around this topic, and due to the lack/scarcity of personal testimonials, this presentation explores contemporary representations of intimate partner violence in gay and lesbian couples in the media, specifically in news media (online, paper and television). By analyzing such news, and in comparison with the treatment of this violence in heterosexual couples, this paper unpacks the interactions that gender and sexuality have with violence and the ideological discourses around it. Furthermore, we can also see how news media use race and ethnicity to scapegoat this sort of violence onto foreign cultures/people, using homophobia and patriotism to justify racism and enacting discourses of homonationalism (Puar, 2007).

Abstract: The Colombian brand Masglo is the most popular brand of nail polish in Latin America (Bolaños, 2017), with a presence in 12 countries, including the USA and Spain. In a departure from the norms of the international industry, Masglo's nail-polish colors are branded with adjectives and nouns that supposedly say something telling about the women who use them. Some of these terms have caused great offense –such as Rash, Slutty, Flirtatious, Controlling, Domineering- among others associated with what activists know as 'slut-shaming,' and other misogynistic concepts (Tanenbaum, 2015). It claims a direct correlation between the ambitions of Colombian women and the names of its various polishes (Pla, 2018). In 2015, it was estimated that over 500,000 women were working as manicurists in Colombia. 60% of them uses Masglo.

Twitter has hosted a significant debate about these names, involving positions from across the political spectrum. This study analyzed the content of 794 tweets with the hashtag #YesToDaringMasgloNames and 228 with #NoToDaringMasgloNames, published in 2015. We aimed to scrutinize the opinions of the participants in the online discussion to characterize the discussion about these varieties of nail polish; relate to the status of women in Colombian society and explore how might this conversation transcend the limits of consumerist position-taking and move into substantive feminist activism.

Results showed that the controversy was an exchange between enraged feminist users of nail polish and satisfied non-feminist ones and indicated ambivalent attitudes both to emphasized femininity

and specifically to slut shaming—one group was appalled, the other left cold by such controversies. The conversation was dominated by women (86.8%) while 8.7% of users were men, and others (4.3%). The messages were in a vast majority in favor of the use of these names as a marketing campaign (70.3%), and to a lesser extent, presented an opinion against (21.9%) or neutral (7.7%). The “negative” names were the most popular among the Twitter conversation, such as Prostitute, Glutton, Slutty or Layabout. Women supporting the strategy disarticulated the pleasure they derived from the product from its marketing. There is a relationship between the ambivalent responses of women customers and activists to these shibboleths indexes and the wider set of contradictions confronting women over makeup, from labor relations to occupational health to imagery.

We conclude that the Twitter Masglo debate changed little—a major Colombian firm continued to exploit invidious stereotypes that demean women, in a way that is in keeping with the nation’s machismo culture and limited range of commercially-endorsed beauty and desire, which are in turn linked to the subordinate situation of women across the country. This also illustrates the powerful paradoxes, at the heart of emphasized femininity and its reflection in nail polish. One of the world’s principals ‘high femme signifiers,’ colored nails are both profoundly traditional and yet laden with the power of sexual difference expressing itself in the social sphere and disrupting male physical normativity within public life (Lerum, 2015; Kang, 2017).

Id: 20200

Title: From Secretiveness to Reconstruction: Online Interaction and Identity Construction of 'Tongqi' in China

Session Type: Individual submission

Authors:

Name: Xiang ZHOU

Email: juliewuhan-at- 163.com

Country: CN (China)

Affiliation: Cheung Kong School of Journalism and Communication, Shantou University

Abstract: In contemporary China, tongqi, gays' female wives in Chinese, have been the silent presence of homosexuality. Tongqi find no place to express themselves in reality. They, in turn, choose online communities, characterized with anonymity and divergence, to look for female peers with similar experiences and common needs. Selecting the Baidu Tongqi Post Bar as a case study, the current paper aims to analyze the communication characteristics of the online community and the identity construction of the group of tongqi. In a three-year online ethnography, the author participated in the bar to make observation notes. The original posts and links to relevant posts were extensively read and downloaded for text analysis. In addition, 16 tongqi posters who were actively engaged in online discussion during the last period of participatory observation were interviewed.

Identity is taken as the key conceptual framework for this paper, with a focus on how individual tongqi perceive the group they belong to as "a self of reflective understanding" (Giddens, 1998), which in turn amplifies their individual uniqueness that distinguishes from 'the other', other normal wives or girlfriends. As the literature review suggests, identity is used both as a link connecting between 'us', those who have similar background and experience, to form a social group with common characteristics highlighted (Hogg & Abrams, 2011; Zhang & Bin, 2006), and as a weapon to carry out symbolic resistance during the process of self-awakening (Hall & Gay, 1996).

The Tongqi Bar functions as a spiritual community and a network of social support. Taking the online community of the bar as a communication space, tongqi are able to construct their social network for information exchange, friend support and emotional dredge. Cyberspace broadens the channels of information sources and has the utility of tools to access information, share experiences, and exchange knowledge, such as knowledge of homosexuality, marriage law, gender, parent-child, etc., helping tongqi, a derivative group of gays, find 'sisters' to freely voice out their secrete and often painful life, and get legal assistance from a senior wife or volunteer. Thanks to its advantage of cross-region, the bar also helps tongqi integrate online and offline resources.

For tongqi, this identity is neither innate, nor is an initiative demand on their own. Different interviewees express different attitudes towards this identity from the strongest negation to the complete integration. However, the dynamic process of establishing identity of tongqi in online interaction and dialogue is similar, going through three stages, namely, identity confusion and refusal, identity reference and comparison, and identity confirmation and acceptance. A key point of tongqi's self-identity is the reference group, other wives with normal marriage. Tongqi constantly differentiate themselves and other groups to achieve the recognition of the group from the outside to

the inside, laying the foundation for the final identity confirmation. With mutual care and support, tongqi in the online community have gradually deconstructed the 'stigma' labeled to them and regain self esteem. Some tongqi are no longer addicted to their grief and hostile attitude towards gays, gradually developing supportive interactions with their gay husbands or boyfriends. Moreover, they start to actively seek out more important things and meanings in life.

Title: Doing Gender in Advertising Agencies

Session Type: Individual submission

Authors:

Name: Ayse Binay Kurultay

Email: binaykurultay-at- khas.edu.tr

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: Women in male-dominated occupations have many challenges. Although the advertising industry seemingly welcomes women globally, sex segregation takes on a unique form. Alongside glass ceiling and sticky floor issues, a strong horizontal segregation resulting in feminization and masculinization of certain departments exists. The pervasive and global underrepresentation of women in creative decision-making positions in the advertising industry is a distinctive issue in advertising agencies. Taking this into account, it is important to explore how women negotiate their existence through gendered work experiences in organizations.

This study explores how women do gender in the advertising industry in Turkey based on the experiences of women who were able to pass beyond the glass ceiling. As a developing country integrating into global capitalism, Turkey's advertising industry is mainly made up of international network advertising agencies. Mass media in Turkey is important in terms of acting as the bearer of cultural modernity with its complementary nature of the image of westernization. Turkey is an interesting case in women's media involvement as a secular republic with a predominantly Muslim population. Tracing women's growing place in Turkish advertising is important in terms of presenting a model for gender equality and women's rights in developing countries. As organizations are promoting women's entry into the workforce globally, it is important to develop research in creative industries such as advertising where women get formal schooling but do not seem to stay or move up to decision-making positions in the industry. Thus, this study aims to fill the gap further in this respect.

In-depth interviews were conducted over 2 months with 12 informants with more than 15 years of experience in the Turkish advertising industry. Semi-structured open-ended questions were used with snowball sampling as the researchers gathered names of potential informants from each interviewed informant.

Results show that women advertisers in creative departments learn to perform unfemininity. The disregarded reality of women's gendered struggles, lack of resistance to employer demands, a consensus on women being equally creative as men exist. Informants believe women are better at organizing, listening, multitasking and detailed-oriented thinking. However, a woman in a man's suit is better received in managerial positions. Breaking free from institutionalized norms such as changing the traditional copywriter-art director team (Mallia and Windels, 2011), becoming a "maternalancer" (Kazenoff and Vagnoni, 1997) in other words a freelancer mother, or use of flexible and part-time schedules (Ensher, E. A., Murphy, S. E. and Sullivan, S. E., 2002) might be innovative ways to develop an actual work-life balance. As women in advertising slowly identify and embed such individual strategies based on their own needs and values, it might be seen as a slow step in changing the cultures of advertising agencies. Advertising agencies and clients need to

understand that the underrepresentation of women in advertising compromises creativity and make accommodating changes for women as a smart business decision (Grow and Deng, 2014).

Title: Media Representations of Intimate Partner Violence in the Case of Oscar Pistorius

Session Type: Individual submission

Authors:

Name: Margaretha Geertsema-Sligh

Email: mgeertse-at- butler.edu

Country: US (United States)

Affiliation: Butler University

Name: Nancy Worthington

Email: Nancy.Worthington-at- quinnipiac.edu

Country: US (United States)

Affiliation: Quinnipiac University

Abstract: In 2014, South African Paralympic athlete Oscar Pistorius was found guilty of culpable homicide for killing his girlfriend, Reeva Steenkamp, on February 14, 2013, in his Pretoria home. Pistorius said that he thought Steenkamp was an intruder in his bathroom. He was sentenced to five years in prison. In 2015, the Supreme Court of Appeal overturned the conviction of culpable homicide and instead found Pistorius guilty of murder. His prison sentence was extended to six years. However, in 2017, the state appealed for a longer sentence, and Pistorius was sentenced to 13 years and 5 months. This case made headlines around the world and offers a unique opportunity to study how the news media represented intimate partner violence. Published scholarly research has looked at how the news media represent violence against women in general (Alta, 2006, Halim & Meyers, 2010), as well as how rape cases are covered (Benedict, 1992, Fadnis, 2017, and O'Hara, 2012). However, there is little published research on how the news media cover intimate partner violence, especially in South Africa, where the murder of women is on the rise. Published research on the Oscar Pistorius case has focused on a variety of issues, including masculinity (Langa, Kirsten, Bowman, Eagle, and Kiguwa, 2018) and disability (Brennan, 2017, Harvey, 2015, and Swartz, 2013), the trial as a media spectacle (Johnson, 2016), political economy of media coverage of the trial (Chuma, 2016), and Twitter coverage (Scott, 2016, Knight, 2017), but no published research on this case has looked at media coverage through a gender perspective. Nor has research considered the case since the 2017 re-sentencing, which occurred amid the worldwide #MeToo movement that galvanized calls to take violence against women more seriously. Guided by feminist theory, this research project will determine through a qualitative content analysis of South African news articles how the news media represented intimate partner violence in this case. In particular, the research question is: To what extent did South African news media coverage of the Oscar Pistorius murder trial include gender-sensitive elements pertaining to intimate partner violence? The analysis will use a three-phase comparison to see how the court cases were covered and whether the discourse shifted over time. This type of analysis will consider reasons why the discourse may have changed or not. Our analysis will be guided by the following questions: What are the central themes during each phase of coverage? To what extent does coverage include gender-sensitive elements, such as quotes/paraphrases from experts on violence against women, references to relevant statistics, and an absence of context that mitigates suspect responsibility? An inductive open-coding system will be used to find emerging themes and topics. Violence against women is a worldwide

problem and research on media coverage of this topic has revealed systematic problems in the news media. As such, this study aims to make a contribution to literature about news media coverage of intimate partner violence. We also hope to provide insights for potential improvements of future coverage of intimate partner violence.

Title: Debatiendo la violencia con estrategia. Análisis de las estrategias retóricas de feministas costarricenses en el debate público sobre femicidio en Facebook

Session Type: Individual submission

Authors:

Name: Yanet Martinez-Toledo

Email: yanet.martinez_t-at- ucr.ac.cr

Country: CR (Costa Rica)

Affiliation: Centro de Investigación en Comunicacion Universidad de Costa Rica

Abstract: El objetivo de esta ponencia es analizar las estrategias retóricas desarrolladas por activistas feministas costarricenses en el debate público sobre el femicidio en Facebook.

Se parte de que la distribución de noticias de medios de comunicación en Facebook posibilita la discusión sobre temas de agenda feminista y visibiliza su oposición a la reproducción de la violencia.

La discusión sobre la discusión sobre femicidio en Facebook confronta la noción de que la deliberación se produce de forma racional y respetuoso (Lee, et. alt., 2017; Tiidenberg y Siibak, 2018; Papacharissi, 2011).

Las interacciones en Facebook permiten tipificar 1) actores, actos violentos, actos solidarios (Benhabib, 1993; Lucas, 2016); 2) construcción de un discurso contra-hegemónico (Fraser, 1997; Lucas, 2016); 3) exposición a audiencias desconocidas.

El análisis se realizó en Costa Rica en enero-abril 2018 en campaña electoral.

Se empleó enfoque mixto que incluye:

Estructura narrativa de noticias sobre femicidios.

Estrategias retóricas empleadas por activistas feministas para debatir, criticar o reformular las noticias.

Estrategias de solidaridad en apoyo frente a la violencia en Facebook

Se analizaron noticias de diarios nación.com. y CRhoy.com re-publicadas y comentadas por activistas y grupos feministas. La estructura narrativa de las noticias se mantiene tradicional: brevedad, poca contextualización, la agencia se otorga al agresor.

Estrategias retóricas halladas: las activistas y grupos feministas tienen a monitorear los medios periodísticos. Hay una revisión constante de cuándo los medios de comunicación ejercen violencia simbólica contra las mujeres al narrar hechos noticiosos.

Las activistas y grupos feministas no se limitan a comentar en la página del medio. Tienden a criticar y modificar el abordaje de las noticias desde una perspectiva de pedagogía feminista. Hacen referencia a normativa nacional e internacional, referencia a expertas feministas nacionales, editan los titulares de las noticias.

La solidaridad entre activistas se aprecia fundamentalmente en contención y confrontación de comentarios violentos mediante: argumentación racional en favor del post que se defiende, explicación y sensibilización de audiencias, e interpelación directa y violenta frente a agresores en los comentarios.

Title: Nappy is Crappy: A post-colonial intergenerational phenomenological narrative about hair and identity in South Africa

Session Type: Individual submission

Authors:

Name: Janell Le Roux

Email: janell.leroux-at- ul.ac.za

Country: ZA (South Africa)

Affiliation: University of Limpopo

Abstract: What do autobiographical narratives of five Cape Coloured women of three generations reveal about issues of race and identity in postcolonial South Africa? This question is the essence of my study on hair and identity in South Africa.

Hair has been a marker of identity that communicates issues of race, acceptability, class and beauty. Colonialism and apartheid created a cultural belief system whereby the colonised's beauty, character and intelligence was criticised. During apartheid, South Africans framed their identities in terms of race which was defined by physical characteristics such as the texture of one's hair, and the colour of one's skin. Other bodies were defined as part of a particular narrative that saw them as inferior to that of white bodies. This resulted in them attempting to hide their natural identity and race, and pass for another race because of the benefits that whiteness offered. In postcolonial, post-apartheid South Africa however, where colonial dictates no longer have relevance the following questions arise: How has the coloured identity changed in a postcolonial South Africa? Understanding the colonial history of hair in South Africa, has the Coloured identity with regards to hair and the perceptions of hair changed in a liberated postcolonial democratic South Africa? How does the Coloured population navigate its identity within the dominance of hegemonic blackness? This study explores first-hand encounters of the historical context and current hair trends that influence the South African Coloured female's choice of hairstyle. Intergenerational phenomenological narratives of five biologically-related Capetownian Coloureds representing three generations were used. The women's ages range from 48 to 104. With a theoretical intersection of Goffman's Impression Management, my theoretical contribution namely, (Post)colonial Impression Management Theory, and critical postcolonial discourses about race and identity, this study explores Coloured females' choice of hairstyles teasing out issues of self-presentation, race and identity. A critical finding of the study reveals the psychological and symbolic sphere of racist ideologies of colonialism and apartheid which shape the perception that Coloured females have about themselves and the racist narrative of inferiority of the African identity, culture and body continues to be perpetuated from generation to generation.

Keywords: Coloured, female, hair, (post)colonial, apartheid, identity

Title: Desigualdad de género en la profesión periodística: análisis del entorno laboral de la mujer en la prensa española

Session Type: Individual submission

Authors:

Name: Belén Cáceres Garrido

Email: caceresgarridob-at- gmail.com

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: A pesar de que seis de cada diez graduadas en periodismo en España son mujeres, son muy pocas las que consiguen un puesto de alta responsabilidad en la prensa española. Problemas como la brecha salarial, la falta de paridad y la violencia machista han tomado especial importancia en este último año, y están siendo objeto de debate más que nunca en los medios de comunicación, en la política y en la opinión pública. Diversas investigaciones confirman que la situación que vive la mujer en general es todavía muy mejorable, y todo esto nos ha llevado a pensar que las periodistas en España, y particularmente las de prensa (sobre las que no existen estudios específicos), no son una excepción de esta realidad. El trabajo que se presenta aquí, y que se encuentra en fase de realización, tiene como objetivo describir las características sociodemográficas de dichas periodistas y sus circunstancias laborales; analizar las percepciones que ellas tienen sobre su entorno laboral con respecto a sus compañeros varones; y conocer las actitudes de los periódicos para los que trabajan hacia la igualdad de género, y hacia la mujer dentro el gremio periodístico.

A través de la encuesta como método de observación directa, se han recogido las opiniones de las mujeres periodistas de las ediciones de Madrid de los diarios ABC, El Mundo y El País. La metodología utilizada es la cuantitativa y el instrumento de observación es un cuestionario individual de 30 preguntas, dirigido a una muestra representativa de 157 periodistas (95% de confianza) de un total de 262 contratadas.

Los primeros resultados obtenidos revelan que un 88% de las periodistas considera que la mujer lo tiene más difícil que el hombre para crecer en periodismo y un 63% afirma no tener posibilidades de ascender en su trabajo. También se ha podido conocer que casi un 90% cree que hay presencia de machismo o sexismo en su trabajo y el 94% de ellas piensa que es necesario un plan de igualdad laboral.

Si bien este trabajo no investiga en profundidad sobre los aspectos determinantes de la desigualdad de género en todo el gremio periodístico, sí podrá establecer unas conclusiones que sirvan de antesala de próximas investigaciones respecto a la figura de la mujer periodista en España.

Title: #MeToo and Intersectionalism: "Radical community healing" or "voyeuristic trauma porn"

Session Type: Individual submission

Authors:

Name: Verity Trott

Email: verity.trott-at- monash.edu

Country: AU (Australia)

Affiliation: Monash University

Abstract: In October 2017, millions of people reflected on their experiences of sexual abuse and harassment, publicly sharing their testimonials in an expression of global vulnerability using the hashtag #MeToo. However, amongst all of the testimonials emerged an undercurrent of those who were absent from the movement. Many of the tweets portrayed the angst and distress individuals experienced in their decision to participate, indicating the emotional and psychological costs of engaging with online feminist campaigns. Further, some tweets questioned the efficacy of the movement; expressing frustration at the re-appropriated nature of the campaign and the collective feeling of an “intersectional betrayal” by white women and feminists who dominated the mainstream media reporting of the movement. This article examines the intersectional struggles of the #MeToo movement, drawing attention to those absent from the global conversation and highlighting the additional risks of participating in online feminist protests. The paper adopts an intersectional framework, as conceptualised by Crenshaw (1991), to further an understanding of how race, class, and gender collide within the #MeToo movement and how subordination can be reproduced within feminist protests. The paper draws on a large data set of 241,361 tweets collected on the platform DiscoverText from the first three days of the #MeToo movement and combines content, discourse and social network analysis to examine the narratives related to participation. Specifically, the paper highlights the experiences and reflections of users who self-identified as queer, disabled, or a person of colour within their tweets. In addition, a social network analysis is used to visualise a snapshot of the affective publics that arose at the beginning of the movement and to illustrate how systems of oppression converged. This research foregrounds the intersectional concerns that result from the scale and reach of the millions of testimonials suspended online that constitute the #MeToo movement. It further highlights how the many voices and stories that have circulated the online sphere obscure the absence and recognition of marginalised women and those who are already more vulnerable in regards to experiencing sexual assault.

Title: Qatari Women's Absence in Media: Violation or Protection of Human Dignity'

Session Type: Individual submission

Authors:

Name: Christina M Paschyn

Email: christina.paschyn-at- northwestern.edu

Country: QA (Qatar)

Affiliation: Northwestern University in Qatar

Name: Susan Dun

Email: s-dun-at- northwestern.edu

Country: QA (Qatar)

Affiliation: Northwestern University in Qatar

Abstract: Qatar, a small, Islamic GCC country, can rightfully be described as conservative, although it has recently undergone enormous modernization and development. Among its efforts to advance its stature on the international stage, Qatar has openly promoted gender empowerment as part of its 2030 National Vision, including increasing the number of women in the workforce, public ministries, and sports, among other areas, as well as supporting additional human rights initiatives. But one area where gender equality continues to lag is in the media sphere.

Qatari women face cultural and familial constraints that discourage them from showing their faces in media. This is true for both legacy media (traditional newspapers, published photos, and TV reports) and on social media. For instance, advertising houses must often resort to using foreign models and actors who can pass as Qatari. Local universities likewise have been forced to remove promotional images of female Qatari students from their websites and brochures in cases where the woman's family discovers it and objects, resulting in some students preemptively choosing to opt out of any potential public photo, including graduation group shots. Some Qatari women who do choose to appear in published media or share their images on social media have been harassed and even physically assaulted by male relatives. It is routine for news media professionals to query local women before taking their photo as otherwise doing so is not allowed.

What this shows is that despite the fact that Qatar has experienced rapid growth and internationalization in a variety of sectors, there still exists tension between the country's traditional Islamic and Bedouin values and modern life. Qatari men and women are wrestling internally with these seemingly contradictory goals.

"The right to voice and visibility... is now established as a basic human right alongside rights of access to... individual expression and social participation on a basis of equality, dignity and mutual respect" (IAMCR CFP, 2019). We analyze and explore whether the cultural constraints Qatari women face in sharing their image violate these basic rights, asking:

1. Do Qatari women themselves embrace or reject (or a mix of both) the cultural and familial proscription against appearing in published traditional media or sharing their own image on social media?
2. How does the ongoing tension between modern aspirations and adhering to traditional Bedouin/Islamic values play out in traditional media and informal media (i.e. social media)?

We are using survey methods because of the anonymity afforded, which is crucial with a sensitive topic. Both closed and open-ended items combine to give comparable results with individual input. We anticipate completing the survey in March and analyzing the data in April.

The paper will contextualize the findings within the historical development of the cultural and familial proscription. This will contribute to the understanding of how internationally recognized human rights and dignity are understood and either embraced or rejected in a country in the throes of massive modernization, shedding light on the challenges faced by the Qatari media in an increasingly globalized context.

Title: Making (no)sense of Rape Culture in social media: From the sexist status quo to women's sexual agency

Session Type: Individual submission

Authors:

Name: Maria Silveirinha

Email: mjsilveirinha-at- gmail.com

Country: PT (Portugal)

Affiliation: Universidade de Coimbra and ICNova

Name: Rita Simões

Email: bas.ritajoana-at- gmail.com

Country: PT (Portugal)

Affiliation: Universidade de Coimbra, Ceis20

Abstract: Although it is now generally accepted that rape is a grave wrong and one too often ignored, how people make sense of what rape is and how it should be characterised is still a matter of dispute. Previous meanings around the concept of rape were mostly around the “victim” and not the perpetrator. Today, the definition of the line between assault and consensus seems to be what makes up the “hard border” of rape in its public discussion, but there is yet another (hard) border to cross: the one separating women’s sexual agency from the sexist status quo.

A great deal of literature explores the content of media and its role in the reproduction and maintenance of ideologies that assert dominant power in society, relating to the media and its capacity to perpetuate gender inequality, post-feminist ideas of sexual agency and rape. However, there is much less research (with exceptions such as Zaleski et al 2016; Kosloski et al. 2018) that seek to understand how people make sense of rape in their discussions on social media. Against this relative lack of prior studies on the topic of social media, sexism and rape, we set out to understand how a culture of institutional and everyday sexism took women and men to social media to discuss and make sense of the meaning of rape.

We therefore focus on two cases that spurred fierce discussions in the Portuguese media: one concerning assault legal cases and court decisions and the other involving the accusation of rape directed to the national football player and national hero Cristiano Ronaldo. What unites these cases is the fact that at the very heart of its media discussions was a dispute over components of a feminist understanding of rape crime: consent, mens rea, and women’s sexual agency. These were competing views about women, power and sexuality that help us to understand how a sexist culture is built and ultimately overcome on the intersection of news and our use of social media to discuss them.

In light of the above, we adopt a feminist perspective to map the ways in which a) recent sexual assault legal cases reported by the news and b) the ongoing case of Ronaldo’s accusation of rape, were discussed in the media landscape, interrogating to what extent they challenged sexist cultural understandings of gender based violence. More specifically, we aim to answer the following research questions: How do the two case studies establish an understanding of rape in terms of the definition of sexual assault, consent and women’s sexual agency? How do various news and commentators of the case studies develop deeply held social beliefs about sexual violence and

sexual agency, namely in how they label the women involved in them? How do different forms of sexism inform the general understanding of the cases?

Methodologically, we draw on data collected from Portuguese newspapers, social media platforms and feminist websites which will be examined through Critical Thematic Analysis (Brandi Lawless & Yea-Wen Chen, 2018, Braun and Clarke 2006), as an effort to tease out how intersecting macro-forces enable and constrain everyday discourses.

Title: "Nasty Witch" versus "Perfect Grandpa": The representation of older adults on a children's television show

Session Type: Individual submission

Authors:

Name: Galit Rovner- Lev

Email: rovnerle-at- post.bgu.ac.il

Country: IL (Israel)

Affiliation: Department of communication, Ben Gurion University of the Negev

Abstract: Previous research indicates that between the ages of three and five, children begin to express stereotypes of older people; by the time they reach elementary school age, they already hold rigid negative beliefs, perceiving older adults as “lonely,” “scary,” “ugly” and “neglected”. Moreover, the literature systematically emphasizes preschoolers' limited ability to differentiate effectively between fiction and reality and to critically evaluate stereotypic representations of different social groups. Despite these observations, however, little is known about the prevailing stereotypes associated with older adults in television programs targeting younger children, especially preschoolers.

To fill this gap, the present study examined the salient gendered and ageist stereotypes embedded in the storylines of the well known Cbeebies television show “Grandpa in My Pocket” targeting preschoolers. By applying qualitative content analysis to 28 episodes, we aimed at answering the following questions: What images of older men and women does this show convey to young children; and what models of social interaction the older adults maintain with other characters. Our three-phase deductive process enabled us the identification and descriptive mapping of the following themes:

1. Older women’s weirdness, that emerged following analysis of older characters’ physical appearance, accent, habits and behaviors.
2. “Nasty witch” versus “Perfect grandpa,” based on analysis of characters’ personality, manners and actions.
3. Professional devaluation, based on analysis of professional background and skills.
4. Social isolation and exclusion—analysis of meaningful and well-founded social relations, as well as occasional interactions with other characters.
5. Between humiliation and physical violence—analysis of means used by the show’s protagonists to stop other characters from carrying out their harmful intentions.

The findings show that this program misses its opportunity to present preschoolers with more positive images of older adults, as it relies heavily on ageist and gendered stereotypes reaffirming to young viewers an erroneous image of the inherent dissimilar challenges older men and women allegedly face as they age. For example, older men are portrayed as aging gracefully while gradually reconciling with their new life circumstances, whereas older women are constantly characterized by their weird and repulsive physical appearances and grotesque personal habits. Similarly, in sharp contrast to the family-oriented, charming, warm and cheerful older men featured in the show, older women are presented as the embodiment of the “nasty-witch” archetype shown to be bitter, lonely, socially inept, overbearing, and vicious individuals whose actions are framed as “malicious intentions” designed to make everyone around them feel miserable. Moreover, in order

to thwart these women's "devious plans" (e.g. performing domestic tasks, coordinating a fashion show or a singing contest) they are systematically subjected to three forms of "comic violence": humiliation, intimidation and physical harm.

Consequently, these findings emphasize a need to raise awareness towards negative stereotypes embedded in the preschool television programs, which will be a first step in creating more realistic and balanced representations of older adults in general and older women in particular. This, in turn, would encourage young viewers to engage in positive interactions with older adults and to internalize non-stereotypical attitudes towards them.

Title: An exploration of gender-based violence perpetuated in online print stories against prominent and professional women in Kenya

Session Type: Individual submission

Authors:

Name: Robi Koki Ochieng

Email: rochieng-at- usiu.ac.ke

Country: KE (Kenya)

Affiliation: United States International University- Africa

Abstract: Digital media have provided public spaces for women to share professional and personal stories and life experiences to online audiences. In spite of the increased digital presence of women, this spaces houses content that is generated from gossip and rumours that translate to online violence against them. This is perpetuated through online discussion that leads to the public ridicule and shaming of women online. The study submits an analysis of extractions of gossips and rumours from online newspaper content that provided the context, in which, Technology Based Violence (TBV) facilitates indirect acts of online violence through the traction in online conversations of these stories.

This is a qualitative content analysis study that uses sentiment analysis from extractions from various online print stories of 40 prominent and professional women in Kenya to explore the nature, types and trends of online violence that they faced in digital media spaces. The study isolates the issues that generate discussions that aim at ‘radio silencing’ women from speaking to societal issues online or those that perpetuate the ‘chilling effect’ aimed at discouraging them from participating in public life in society.

Criterion sampling through Search Engine Optimization (SEO) process create a list of 40 prominent and professional women who are politicians, academics, artists, activists, legal professionals in Kenya based on their digital footprint. The unit of analysis were extractions that facilitated opinion mining based on rumours or gossip from online prints stories about each one them harvested from a variety of online magazines, blogs and social media platforms that were downloaded and saved as PDF documents which were saved as data-sets in the qualitative statistical software, NVIVO 12.

A sentiment analysis based on the process of opinion mining was used to establish patterns of judgments, emotions and private thought about the women or substance of the of the content of stories. The negative sentiments from the extraction of the online print stories were which were a replication of rumours and gossip about the women were examined and provided a basis to describe the context and substance of the texts can be categorized as online violence.

Title: Gendering Mobile-mediated Dating through Intimate Commodities

Session Type: Individual submission

Authors:

Name: Wei-Ping Chen

Email: pinger.c-at- gmail.com

Country: FR (France)

Affiliation: École des Hautes Études en Sciences Sociales (EHESS Paris)

Abstract: This study explores how intimacy in the United States is shaped through mobile-mediated dating, which is seasoned with culinary preferences and gendered conventions. I focus specifically on dating apps such as Dine and Dindr, two examples of a rapidly growing subcategory of mobile-mediated dating that has not yet been explored. These apps match partners based on their location and restaurant choices and advertise same-day and face-to-face dinner dates as their primary goal, using slogans such as “more dates, not swipes” or “find your #LoveAtFirstBite.” They have pricing systems that encourage male daters to pay the first restaurant bill. Drawing on the sociological concept of mediated intimacy and attending to emotionalized culinary experiences and gendered individualism, this study asks three questions. First, how is intimacy represented by dining-dating apps? Second, how do these dining-dating apps approach “being single”? Third, what gender relations and what contradictions between romance and consumerism can be identified in dating that is managed by an app and that trades in intimate commodities?

By analyzing the advertising text, testimonials, and reviews posted online, I demonstrate that individuals are not only invited to manage their intimate life through cultural consumption but are also compelled to adopt accelerated and mediated ways of engaging. I reveal that the limited and regulated access to communicative exchanges and the extended follow-up dinner dates in dining-dating apps is related to concerns about personal and relational investment. Furthermore, I argue that dining-dating apps participate in the mediation of emotions and gender relations by introducing intimate commodities that blur the borders between individualist aspiration and gendered and classed ways of experiencing intimacy. Together, these findings provide a particularly interesting context and open up new avenues for studying intimacy, gender, and cultural consumption in sociology and media studies.

Email: kxue-at- sjtu.edu.cn

Country: CN (China)

Affiliation: Shanghai Jiao Tong University

Abstract: Bangladesh is the fastest-growing economic country in South East Asia. A prominent number of Bangladeshi women participating in the workplace as a leader compared with the ratio of male and female. Being half of the population, women are evolving the sustainable economic development through empowerment efforts. The uprising women empowerment encouragement and efforts keep steady progress of gender equality and ranked Bangladesh the first position for gender equality among South Asian countries in the Gender Gap Index of 2018. To sustain this middle-income status, women equal rights are now defined by women economic empowerment, and the ultimate empowerment is through entrepreneurship. So, Government and private-sector interventions have generally accelerated income-generating activities for urban and rural women by small entrepreneurship. Recently, women are influenced by enormous opportunities for 24/7 business through social media, specifically by Facebook. 48.4% of the population is emerging internet users and 93.34% Facebook users build the confidence of women entrepreneur to generate new ideas and earn from home. The purpose of this study is to gain in-depth insights into Bangladeshi women entrepreneurs' behavioural intention through Facebook. This research extended the Technology Acceptance Model (TAM) with the additional four contrasts. 235 self-administered questionnaires were collected through convenience sampling from Bangladeshi women entrepreneurs who have an active online store in Facebook. This paper examines individual behavioural intention of using Facebook based on the perceived ease of use (EU), users' accessibility (UA), users' capability (UP), consumers' relationship (CR), perceived cost (PC), and perceived usefulness (PU). Confirmatory factor analysis (CFA) and structural equation modelling (SEM) was employed to analyze the relations between these constructs. Findings confirmed that perceived ease of use and users' capability have a significant impact on the perceived usefulness of Facebook for entrepreneurship store. In addition, users' accessibility and perceived cost is most influential among these variables for store implementation. Furthermore, consumers' relationship

was not positively verified for Facebook as an entrepreneurship tool. The results recommend that women entrepreneurs can keep continuing the use of Facebook for their sustainable economic development. Moreover, they can emphasize virtual community activity and live promotional features of Facebook. This study theoretically contributes to the external factors validity with the Technology Acceptance Model. Finally, policymakers and social media marketers can implement the research results for future prospects.

Keywords- Bangladesh, entrepreneurship, economic sustainability, Facebook, women empowerment

Title: "Imagined" Brazil in the media consumption of LGBTIQ+ immigrants and refugees in the city of São Paulo

Session Type: Individual submission

Authors:

Name: Hadriel Theodoro

Email: hgtheodoro-at- gmail.com

Country: BR (Brazil)

Affiliation: Superior School Advertising and Marketing

Name: Denise Cogo

Email: denisecogo2-at- gmail.com

Country: BR (Brazil)

Affiliation: Superior School Advertising and Marketing

Abstract: The present study is linked to a doctoral research, currently under development, that aims to analyze the experiences of sociocommunicational (in)visibility of LGBTIQ+ immigrants and refugees in the city of São Paulo. As one of its steps, the central objective of this work is to investigate how these immigrants and refugees construct representations about Brazil as a destination country for them. We seek to understand specifically how they (de)construct representations of Brazil as a receptive and open country to sexual diversities, (re)signifying them from their experiences in the city of São Paulo. The qualitative research methodology is based on six semi-structured interviews with LGBTIQ+ immigrants and refugees residents in São Paulo (from different nationalities, all from the countries of the global South), carried out during the year 2018. The analysis of the interviews is divided in two axes: a) media consumption, whose focus is on the consumption of media by these immigrants and refugees in their countries of origin and their relationship with an "imagined Brazil "; b) communicational interactions, especially in relation to the transnational migratory networks in which they participate. The theoretical contributions have an interdisciplinary nature, aiming at embracing reflections on the plurality contained in the migratory experiences, including not only their "objective" causes, but also aspects of subjectivity implied in the experiences of those who migrate. Gender studies, with contributions from feminist and queer theories, are extremely relevant to the research, since gender identity and sexual orientation are taken as a fundamental variable in relation to migratory movements. With regard to the media, we understand it in its socio-cultural dimension, being an essential device to the migratory movements, both in network and imaginary structuring. In relation to the Brazilian sociocultural context, it is necessary to consider that the ideal of respect for diversity that hangs over the country and that is often mediatically reinforced contrasts with the fact that Brazil presents one of the highest rates of murders of LGBTIQ+ people in the world. In this sense, the representations of LGBTIQ+ immigrants and refugees about Brazil as a destination country (strongly rooted in media consumption) help us to have a better understanding of the complexities of this paradox.

Title: Prime-time protest' Screening the news coverage of transnational women's protests in global TV networks (2017-2019)

Session Type: Individual submission

Authors:

Name: Florencia Enghel

Email: florenghel-at- gmail.com

Country: AR (Argentina)

Affiliation: Jönköping University, Sweden

Abstract: On 8 March 2017 and 2018, women's protests were held in various parts of the world to coincide with International Women's Day. The actions were spurred to a significant extent by Latin American feminist collectives that have been mobilizing regularly since late 2015 and seeking to coordinate efforts regionally and internationally under the motto "Solidarity is our weapon". Protests were profusely documented by activists themselves via social media, and covered in varying ways by national news outlets. But were they televised internationally? Based on footage from the flagship news programs of eight global newsrooms (BBC, CNN, Deutsche Welle, Euronews, France24, Al Jazeera, Russia Today and China Central Television), I analyse how the protests, which have grown in extent and digital-local visibility, were covered in international TV news year-on-year. Specifically, I examine how the prime-time coverage of global TV news networks may promote or hinder greater understanding of, and solidarity with, the claims of women's movements.

Although the prime-time news broadcasts of global television networks are arguably one among other sites where meaning regarding protest movements is produced and circulated in digital times, understanding the ways in which they recorded and represented the international women's strike is nonetheless important given their symbolic power. Moreover, unpacking their politics of representation regarding ongoing women's struggles can serve to inform the strategic design of counter-strategies for the feminist movement to strengthen its appeal for international solidarity. To this effect, this study takes a qualitative descriptive-interpretative approach. Building on the analytical approach put forward by the "Screening protest" study, I screen the data in three senses: 1) by focusing on representations of women's protest on television screens; 2) by comparing coverage across global broadcasters, identifying which (and how) made the protest visible and which screened it out, as well as similarities and differences in their journalistic and popular culture narratives; and 3) by providing insights into how global TV networks may or may not be meeting the challenge of representing an increasing number of women who find that political representation has failed them, and have thus taken to the streets of the world to seek. Based on the analysis of the content and the quality of their news coverage, can we expect global TV networks to foster international solidarity towards, and greater understanding of, women's efforts?

The study was developed with data provided by the Screening Protest Project (a study funded by the Swedish Research Council and based at Stockholm University's Department of Media in Sweden; see <http://screeningprotest.com/>) and constitutes the first step towards further research that will compare the scope and reach of protests' global TV coverage with the scope and reach of

independent coverage generated by women's movements themselves. Theoretically, it will contribute to updating existing indicators for the analysis of gender portrayal in news and current affairs, and problematize earlier propositions according to which gender misrepresentation in the news media could be solved, at least partly, by incorporating female journalists into newsrooms. At the time of submitting this abstract, new protests are expected to take place on 8 March 2019, and I therefore expect to have data from this year as well to introduce at the IAMCR Conference.

Title: Political women in the news. An analysis from a gender perspective discourse in the Spain's female-majority cabinet

Session Type: Individual submission

Authors:

Name: Cristina Perales-García

Email: cristina.perales-at- upf.edu

Country: ES (Spain)

Affiliation: University of Pompeu Fabra

Name: Carles Pont-Sorribes

Email: carles.pont-at- upf.edu

Country: ES (Spain)

Affiliation: University of Pompeu Fabra

Abstract: Spanish women who dedicate themselves to politics face great challenges when presenting their projects and professional validity to a society that is fed by media coverage that emphasizes, beyond its political management capacities, its gender condition.

This study analyses the representation that the main generalist newspapers of greater diffusion in Spain make about political women. Two left and two right-wing newspapers have been chosen, in addition to analysing their digital and printed versions (El País, El Mundo, La Vanguardia and El Periódico de Catalunya). The study is based on the days when the new government -mainly female with 11 women and 6 men- led by the socialist Pedro Sánchez is presented in society (from June 1 to 10, 2018). It is the first time in the history of contemporary Spain that a government is dismissed through a motion of censure proposed by the main leader of the opposition, who wins it in minority (gets 180 supports out of a total of 350). In addition, an analysis of the Twitter accounts of the media of our sample, will be carried out to assess the interaction of the users.

On June 7, all the Spanish PM were invested to new cabinet. For the first time in Spanish political history, it is a majority of women who occupy the government's cabinet. The study of the occupation of the public sphere by women is a relatively new area in the analysis of the treatment of the media. The objective of the research is to study the content of the journalistic discourse on the visibility that political women have and to discuss what degree of legitimacy women have in the media analysed by their personal qualities and not by their gender.

The research is developed through the methodology based on the Critical Discourse Analysis understood as a theoretical framework that allows us to understand how language forms the worlds of people and their knowledge. We share with Wodak & Meyer (2012) that the ACD requires understanding language as a social practice that is formed in the use of language and the choice that is made, constantly, of such language.

The analysis will be based on Discourse Historical Approach (DHA) proposed by Wodak (1996; 2006) and Krzyzanowski (2010) applied to covers, editorial articles, opinion columns and informative news. The articles are subjected to two levels of analysis: (1) semantic, where the different topics in which women ministers are involved are extracted; and (2) pragmatic, to analyse the discursive strategies and the representation of the social actors.

Affiliation: University of Salamanca

Abstract: This study analyzes, from the visual framing theory, the way female refugees are visually depicted in 500 journalistic photographs published on 10 major European digital newspapers from France (Le Monde, Le Figaro), Germany (Der Spiegel, Süddeutsche Zeitung), Italy (Corriere della Sera, La Repubblica), Spain (El País, El Mundo), and UK (Daily Mail, Reuters), collected between 2013 and 2017. The main goal is to know if women are underrepresented in those media, and to check if they are visually represented with victimization frames, in contrast to men who are depicted as burden or threat.

First, there is empirical evidence of underrepresentation of women in media, through which they are prevented from being fully approved as part of society and, therefore, rejected from cultural citizenship in a society dominated by the media (Klaus and Lünenborg, 2012). In this sense, we pose that there is an underrepresentation of the female refugees in European press photography (H1).

Secondly, this study focuses on the four most recurrent connotative visual frames about refugees and migrants in refugee situation identified in scientific literature. These are the victimization frame, that depict them as vulnerable and innocent individuals, the normalization frame, that favours a more assimilationist and integrating position, the burden frame, that represent them as economic or cultural burden for western societies, and the threat frame, associated with security notions, often related to terrorism. Of all these frames, Roggeband and Vliegenthart conclude that the victimization frame “is mainly applied in relation to women” (2007, p.531). Thus, we state that female refugees are portrayed more often in victimization frames, while male refugees are more frequently represented in burden or threat frames (H2).

This content analysis found that, effectively, there is an underrepresentation of female refugees in major European newspapers. While they represent roughly 50% of all the forcibly displaced people coming to Europe, they only were portrayed without men in 10% of the 500 analyzed photographs, and in roughly 20% of all the photographs showing only one gender. On the other hand, as

expected, photographs representing female refugees generally transmit victimization frames. Meanwhile, men are more frequently associated with frames that represent them as burden or threat, in a more negative and violent way, but also more active and capable.

As for the normalization frame, it seems to be more associated with female refugees, but the difference is not statistically significant. Therefore, it can be concluded that the European media continue to reinforce hegemonic sexist representations of refugees by condescendingly portraying women as weak, vulnerable, submissive and harmless.

Title: Feminism's current moment in South Korea: An analysis of the media discourse of feminism in South Korean newspapers

Session Type: Individual submission

Authors:

Name: Jungyoung Kim

Email: juk028-at- ucsd.edu

Country: US (United States)

Affiliation: University of California, San Diego

Abstract: This paper examines ways in which feminism is manifested and experienced in the contemporary South Korean media discourse. It demonstrates that South Korean manifestations of feminism, while connected with increasing prevalence to feminism on a global scale, are tightly intertwined with South Korea's specific sociopolitical and economic conditions.

Since the 2010s, feminism has become one of the hottest topics in South Korea. Faced with increasing violence against women—such as revenge porn, hate crimes, and dating violence—feminist groups have mobilized political power and, through the global MeToo movement, feminism has acquired more public visibility. But the growth of feminist movements has also brought a public backlash. Amidst these current conditions, this paper shows how “feminism” was represented in recent South Korean news media. I conducted a textual and discourse analysis based on approximately 2,500 news articles from six national newspapers from 2015 to 2018.

The findings of this study indicate that feminist movements in South Korea have been going through an important transition as the media discourse of both feminism and anti-feminism have exploded during the past several years. Unsurprisingly, as previous studies (Jaworska and Krishnamurthy 2012; Lind and Salo 2002; Marling 2010) have revealed, feminism was primarily represented in South Korean newspapers as a social force for disrupting the status quo. Highlighting rising hatred toward the opposite sex, news media tended to portray feminism as the main source of conflict between the sexes. However, despite these negative and inadequate representations, the news media discourse also suggested that feminism has grown to be one of the most significant social forces in contemporary South Korean society in just a few years. As feminism emerged into collective movements both online and offline due to the augmented political and economic power of women, the news media could not simply avoid feminist voices. In fact, there has been increasing media coverage of women's issues from feminist perspectives. That being said, it is important to note that the growth of feminist movements was entangled with the change in the political environment of South Korea—especially, the regime change after the impeachment of Park Geun-hye. Responding to the prevalent political sentiment of longing for a more democratic society, feminism grew into a prominent social movement which is forcing gender equality on South Korean society.

In short, my analysis shows that feminism is gaining more strength and a wider reach than ever before because of this discursive explosion. Yet, feminist movements in South Korea are now at a critical and challenging juncture. Anti-feminist aggression is perpetually increasing, and the news

media is continuously spotlighting feminism as the cause of social antagonism between the sexes. With the absence of discussions of the patriarchal heteronormative structure which undergirds the misogynistic, sexist culture, the news media merely consume feminism in order to illustrate the battle between the sexes. Ultimately, this study questions the role of feminist scholarship at this critical juncture of feminism in South Korea. Following the tradition of activist feminist scholars such as Audre Lorde, bell hooks, and Sara Ahmed, this study explores the ways in which feminist scholarship engenders stronger feminist movements.

Title: Measuring and Bridging the Gaps: Addressing Gendered Digital Inequities in African Contexts

Session Type: Individual submission

Authors:

Name: Janet Kwami

Email: janet.kwami-at- furman.edu

Country: US (United States)

Affiliation: Furman University, USA

Abstract: While access to ICTs such as mobile phones and the Internet has risen in the last couple of years, new digital inequalities are emerging with regards to gender, socioeconomic backgrounds and among users with different levels of digital literacies and education. The gendered nature of access to and use of digital technologies continue to affect existential opportunities (van Dijk, 2005) for many African women and negatively influence the process of social inclusion (Warschauer, 2003), and thus contribute to several disadvantages (Robinson et al., 2015; Kwami 2016) that exacerbate social inequalities. This paper interrogates the interrelationships between gender, new digital technologies, socio economic development among marginalized groups in different contexts in countries on the continent of Africa. There is a growing body of work focusing on the everyday use, domestication and appropriation of the mobile phone in reshaping development discourses, gendered interactions, mobilities, and negotiating existing global and local power structures at the margins (Burrell, 2014; Ling & Horst, 2011; Steeves & Kwami, 2017; Tacchi et al., 2012; Wallis, 2011, 2013). These studies focus on the interplay of marginality, mobilities and social networks as reflected in the mobile phone practices and livelihood strategies in the African context. Drawing from ethnographic studies and surveys on the nature of digital inequities among marginalized groups, this paper focuses on measuring and bridging the rising gendered digital inequalities in communities in Africa by presenting a comparative analysis of the nature of digital inequities among marginalized communities. This paper makes the case for comparative studies of gendered digital inequities and differences as important for understanding and bridging the existing gaps. By focusing on marginalization, attention is paid to the relationships between people, locales, and institutions rather than focusing on poverty, which tends to yield a more static framing around assets and accumulation. By focusing on how distributed groups connect through digital tools the paper hopes to raise some new questions about the nature of digital inequities in today's networked society and addressing gender empowerment through inclusive ICT policy-making and practice.

Title: Examining the influence of geo-social networking (GSN) applications on the sexual identity development of young Taiwanese gay men: A theoretical exploration

Session Type: Individual submission

Authors:

Name: Cheng-Nan Hou

Email: masao-at- isu.edu.tw

Country: TW (Taiwan)

Affiliation: I-Shou University

Abstract: For gay men, the geo-social networking (GSN) applications on smartphones are a relatively new and ubiquitous form of online dating that has gained widespread popularity among men who seek men. Meanwhile, gay youth are turning to the smartphones as they develop their sexual identity and come out in Chinese society, yet little research has been directed towards understanding this phenomenon in Taiwan, particularly regarding how participation in the GSN applications might facilitate the development process, and even the coming-out process.

In this study, the GSN application chosen for the study is 9 Monsters—a gay social dating application invented and first launched in Japan, Asia. Significantly, 9 Monsters is one of the most popular gay dating applications in Taiwanese gay community. Compared to the Asian-based 9 Monsters, the earliest Western-based applications using this mobile technology which had a profound influence on the development, in both form and function. The aim of this study is to investigate how the application provides a set of possibilities and limitations on developing sexual identity and how these interact with sexual identity knowledge possessed by the users. Additionally, the sexual identity development and the coming-out experiences of young Taiwanese gay men who participate in the GSN application will be examined. However, the evidence of this study will highlight the need for researchers to investigate the on-line experience of young Taiwanese gay men, who come to terms with their new sexual identities, and to explore the potential for related problems with online activities. The finding will also serve as an intellectual reference for further research on the use of the GSN applications among young gay men in society, and expand the way the researchers study the process of gay sexual identity development for Taiwanese gay youth in general.

For the theoretical framework, this study relies on the Models of Gay Identity Development and Stage Theory, and to understand the implications of how emergent technologies such as the GSN applications can be understood as a venue for exploring sexual identity. From the perspective the applications may provide an important social context in which questioning and young gay men can reach out and connect with other gay men, both on- and off-line. This study aims to provide an important research into the participant's lives to interpret the process of sexual orientation development, especially the self-exploration experiences of young gay men who participate in the socio-sexual context of the applications. The study is in the process of interviewing, and will provide descriptive data to answer research question. The study will also provide insights into this understudied area in the Asian LGBTQ literature on the sexual identity of young Taiwanese gay men. The result of this study will fit the gaps of the Asian local literature on the mobile technology-mediated spaces and the impact on sexual identity by searching into the behaviors of the Asian-

based GSN applications utilized by young Taiwanese gay men such as the popular social networking platform.

Keywords: GSN application, 9 Monsters, the sexual identity development, young gay men, Taiwan.

Title: Catcalling, misogyny and victim blaming: online framing of street sexual harassment legal developments

Session Type: Individual submission

Authors:

Name: Rita Basílio Simões

Email: rbasilio-at- fl.uc.pt

Country: PT (Portugal)

Affiliation: University of Coimbra/CEIS20

Name: Maria João Silveirinha

Email: mjsilveirinha-at- sapo.pt

Country: PT (Portugal)

Affiliation: University of Coimbra/ICNova

Abstract: Since September 2015, unwanted verbal sexual proposals addressed to women or men are considered crime by the Portuguese law. This legal development around street sexual harassment brought this issue to public attention, triggering intense online debates. While only the proposals of sexual nature were targeted, much of the discussions focused on the idea of the overall criminalization of “catcalling”, commonly known in Portugal as “piropo”. This research proceeds from a feminist perspective to map the ways in which these developments were framed and counter-framed in social media. By focusing on alternative and mainstream media texts and readers’ responses on Facebook, we analyze the public discourses that shaped the reform, interrogating to what extent it challenges cultural understandings of gender-based violence and of gender inequality in the social world.

In general and with only a few exceptions, street sexual harassment has not received adequate or purposeful attention from scholars (Logan, 2015). Nevertheless, it is part of a culture of everyday sexism” (Bates, 2014; Johnson & Ebony Bennett, 2015), widespread trivialized and ignored.

Research indicates that street sexual harassment limits women’s presence in public space and that women think about harassment, fear it, and plan for it, even in its absence (Gardner 1995; Fairchild & Rudman, 2008; Kearl, 2010; Wesslemann & Kelly, 2010; Logan, 2015). It is indeed internationally recognized as a type of gender-based violence, namely by the Istanbul Convention. Against the lack of prior research studies on the topic, we questioned if online media discourses helped to legitimize the seriousness of this offense and promote the social change targeted by the law reform.

Methodologically, we focused on Facebook as the platform where we c see framing interactions being defined and coming together around the issue of street sexual harassment. Drawing on data collected from Portuguese newspapers and feminist Facebook pages, as well as readers’ comments, we combined frame analysis (Gamson & Modigliani, 1989; Entman, 1993; Bird & Dardenne, 2009) with Feminist Critical Discourse Analysis (Lazar, 2018). If identifying the framing packages and devices help us to establish how the perceived reality of street sexual harassment was defined, feminist critical discourse analysis helped us to connect these frames to the main power relations and ideologies of gender implicated in the discursive representations of harassment.

The research shows that the legal developments, prompted and welcomed by feminist struggles, were framed by backlash discourses against the politicization of street sexual harassment, the recognition of women's socially structural oppression, and the claims for gender justice overall.

Title: Recent Online Debates over Homosexuality in Austria: two Cases of 2018

Session Type: Individual submission

Authors:

Name: Irmgard Wetzstein

Email: irmgard.wetzstein-at- univie.ac.at

Country: AT (Austria)

Affiliation: University of Vienna

Name: Yvonne Prinzellner

Email: y.prinzellner-at- gmail.com

Country: AT (Austria)

Affiliation: Independent researcher

Abstract: Our study aimed at identifying recent public perceptions of homosexuality and respective public knowledge repertoires in Austria. It centers two recent cases of online discourses focusing on homosexuality in Austria:

Case 1: In mid-August 2018, news media reported heavily about an Afghan man whose asylum application was denied by the public authorities. The responsible official had evaluated the man's homosexuality, which he had stated as the flight reason, as implausible. The stereotypical justifications used in the rejection notification triggered news coverage in and beyond Austria and vivid debates on social media.

Case 2: At the same time, the Austrian Federal Railways launched new advertising posters promoting the "family card", with one of the subjects depicting two men holding a baby. Again, intensive debates centering homosexuality started online, when a local politician and member of the Austrian right-wing Freedom Party (FPÖ), which is currently part of the Austrian government, reacted to the poster using homophobic vocabulary.

Being connected to either a forced migration or an advertising context, those cases are obviously incomparable. However, due to their heterogeneous nature, respective online debates form excellent material to identify recent communication and perception patterns of homosexuality in Austria. For this purpose, public online debates emerging from the mentioned cases on Facebook were analyzed using the sociology of knowledge approach to discourse, which allows to structure extensive (social media) discourses and reveal respective patterns that shape social practices (Keller, 2005).

Concretely, we were interested in common patterns between the two online debates over homosexuality and underlying narratives as well as conceptualizations of homosexuality in both debates. Our analysis corpus consisted of 2,359 subsequent Facebook comments to 14 news stories published and posted on Facebook by 12 nationwide newspapers.

Our research was informed by previous studies focusing on discourses of sexual and gender identities and respective results highlighting the hetero-normative character of those discourses (see for example Wetzstein & Huber, 2016; Zimmermann, 2013) and by the concept of intersectionality. The latter helps to see that life experiences in terms of discrimination, privilege and oppression are fostered and probably intensified due to the interplay of multiple dimensions of social identity (Gopaldas, 2013). For our analysis, intersectionality also provided the fundament to acknowledge the formation and reinforcement of social expectations through identity structures, such as possible

perceptions of gay male eroticism as an alternative, interference or even violation of masculine gender norms (Owen, 2003).

In our presentation, we will *inter alia* give an overview of the results, connect them to the gay rights situation and implementation in Austria and address the limits and potentials of our study. We will, for example, explain that homosexuality is largely talked about as part of a person's (changeable) character, while it is denied as an identity category potentially leading to political persecution (case 1). We will also address that in both cases it is less the stereotypical and homophobic statement that is discussed, but legitimacy of homosexuality itself.

Title: "You preach feminism" ' The Entanglement of Women's Rights and Racism in Right-Wing Identitarians Movements

Session Type: Individual submission

Authors:

Name: Ricarda Drüeke

Email: ricarda.drueeke-at- sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg/Austria

Name: Elisabeth Klaus

Email: elisabeth.klaus-at- sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg/Austria

Abstract: Our talk addresses contested truths and disputed rights as regards to racism, sexism and feminism. We focus on right-wing publics that extensively use digital media to spread their messages. Our case study involves a “women’s rights campaign” carried out by the Austrian-based right-wing “Identitarian movement”, which now operates in many other countries, including Germany, UK, Romania and the USA. The Identitarians, who portray themselves as part of a hipster-right youth movement, use digital media intensively in conjunction with spectacular public actions (Bruns/Glösel/Strobl 2014). At the beginning of 2018, the Identitarians started a campaign called “#120 Decibels”, in reference to the volume of a pocket alarm, a device without which (always portrayed as white) women supposedly no longer leave the house due to the threat posed by migrant men (see Mast 2018). At the heart of the campaign is a video published on YouTube that has received enormous media and public attention and has gone viral among far-right and ethnonationalist groups.

Two research questions guide our analysis of the video: Firstly, how can the exclusion of migrant men be justified as “legitimate”, given that acts of sexual violence are in their majority perpetrated at home or in the working environment – and migrants are not disproportionately involved in them? Secondly, how is “façade emancipation” (Dietze 2018: 38) legitimized, thus justifying the assertion on which this pattern of argumentation is based: “We in the West have equal rights in contrast to Islamic societies and people”?

In order to answer these questions, we first present background information on the right-wing Identitarian organization and position them in the context of the “New Right” and its gender ideologies (Sauer 2017; Mayer/Sauer 2018). We will then discuss the content and visual form of the video. Drawing primarily on semiotic analysis we discuss how the wording used in the video and the topics addressed therein are linked to other social discourses and are firmly embedded in right-wing politics.

Our analysis reveals that the video links into four discourses. (1) It draws on discourses on nation-building and the gendering of war that encompasses assumptions about a homogenous population threatened by foreigners and draws on gender stereotypes about the presumed weakness of women who need to be protected by heroic men. (2) Despite its claim to the contrary the video is firmly rooted in right-wing anti-gender politics. (3) It links into discourses of mass media that ponder the

presumed threat posed by migrant men marking “them” as different from “us”. (4) The message of the video is connected to current political debates on border security and violence protection in Austria, currently governed by a coalition of a right-wing (FPÖ) and a conservative (ÖVP) party. Concluding our talk, we will discuss some of the contradictions arising from the masking of a gender-conservative and racist agenda and a stress on women’s rights for self-determination. Such contradictions open up spaces for resistance and counter-activities (see Hark/Villa 2017).

Title: Tres décadas de estudios de género en las revistas de comunicación españolas: Objetos y características de la investigación

Session Type: Individual submission

Authors:

Name: Irene Liberia Vayá

Email: iliberia-at- us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Name: Lorena Cano-Orón

Email: lorena.cano-at- uv.es

Country: ES (Spain)

Affiliation: Universitat de València

Name: Belén Zurbano-Berenguer

Email: bzurbano-at- us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: ¿Cuáles son los objetos de estudio más comunes y las metodologías más utilizadas en los trabajos sobre género dentro del campo de la comunicación en España? ¿La autoría de estas investigaciones es mayoritariamente femenina? ¿Qué nivel de colaboración nacional e internacional existe entre las personas autoras? Respecto a estas y otras variables, ¿cómo ha sido la evolución de la investigación en comunicación relacionada con los Estudios de Género en España? Para responder a estas preguntas se ha analizado la producción científica de las revistas españolas recogidas en el Journal Citation Reports (JCR) y el Scimago Journal Rank (SJR) dentro de la categoría “Communication”, donde se ha evaluado la presencia y desarrollo de los trabajos sobre género, feminismos y Estudios de Mujeres.

El periodo contemplado cubre desde 1988 –año en el que aparece la primera revista científica española en comunicación– hasta 2017 –último año natural completo antes del inicio de la presente investigación–, con un universo de 8.300 artículos. De este universo total se han extraído como muestra para el análisis aquellos artículos que abordan temáticamente algún aspecto relacionado con el género (178). La selección de estas unidades muestrales se ha realizado manualmente, descartando la utilización de técnicas de búsqueda aleatoria o mediante procesos de indexación con el fin de asegurar una mayor exhaustividad y descartar posibles errores o ausencias.

Los principales resultados revelan que: 1. Existe una escasa presencia de los trabajos sobre género en las revistas españolas de comunicación; 2. La mayor parte de estas investigaciones han sido realizadas individualmente, y cuando hay colaboración entre investigadores/as de diferentes universidades, es mayoritariamente de tipo nacional; 3. Principalmente se trata trabajos firmados por mujeres; 4. Las metodologías utilizadas son eminentemente cualitativas, y 5. Temáticamente se han centrado en el estudio de las identidades y los estereotipos. En conclusión, pese al aumento

progresivo de este tipo de investigaciones en España, el presente artículo pone de manifiesto que existe una potencial contradicción entre el interés social, político y académico creciente por las cuestiones de género y su todavía escasa representación en las revistas de comunicación españolas.

Title: [Panel] Communicating Gendered Luxury in Africa, Panel description

Session Type: Panel Submission

Authors:

Name: Mehita Iqani

Email: mehita.iqani-at- wits.ac.za

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand

Abstract: This panel brings together papers that explore different aspects of the links between gender, communicative forms and luxury in African contexts. It comprises of four papers reporting on original research. Each looks at a different aspect of gendered luxury, ranging from a consideration of the role of high fashion in drag pageants in South Africa, to an analysis of post-feminist luxury cooking celebrity, to what marketers of luxury say about how gender influences their perceived markets, to the sensibility of spectacular consumption by upper class women. Together, the papers can be seen as contributing from a feminist and queer theory perspectives to an emerging body of work that brings together African Media and Cultural Studies and Luxury Studies.

Title: Looking Good, Feeling Fabulous: A Critical Discourse Analysis of Queer Consumer (Sub)Culture and Kinship at Club Simply Blue, Johannesburg.

Session Type: Panel Submission

Authors:

Name: Katlego Disemelo

Email: katlego.disemelo-at- wits.ac.za

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand

Abstract: Ideas about luxury are intimately connected to affective notions of desire and aspiration. The display of luxury is not only about individual longing, but also about shared, communal values, practices, and social mores. This paper explores how the desire for and aspirations towards “the good life” take material form in the drag subculture at Club Simply Blue, Johannesburg. While theoretical analyses of drag and beauty pageantry have foregrounded their semiotic implications with regards to sexuality and gender, few studies have paid critical attention to the material culture which undergirds these ritualized practices. This paper provides an ethnographic account as to the significance of material objects such as make-up, wigs, high-heeled shoes, jewelry, tiaras, and evening gowns in shaping the subcultural constructions of queer desire and kinship. By positioning Simply Blue as a queer subcultural world of goods, this paper reveals that the desire and consumption of consumer goods exist in close interrelationship with the construction of sexual and gender identity categories. This paper demonstrates how drag and beauty pageantry evidence the spectacular performance and embodiments of these desires towards “the good life.” By providing thick descriptions of the circulation of consumer goods within this subcultural space, I aim to show how queer forms of kinship are forged and navigated therein. A critical discourse analysis of ethnographic field notes and interview material is deployed in order to demonstrate the dialectic relationship between consumer desires and practices, and the performances of queer kinship at Club Simply Blue. The arguments herein foregrounded look beyond the current literature’s general preoccupation with the putative subversion of binary sex/gender categories which are embodied through drag. These arguments posit not only the performativity of non-normative sexual and gender categories, but also the doing, of kinship through shared desires, aspirations, and consumer practices.

Title: Siba's Table: Food Television, Postfeminist Domesticity, and African Luxury

Session Type: Panel Submission

Authors:

Name: Alexia Smit

Email: alexia.smit-at-uct.ac.za

Country: ZA (South Africa)

Affiliation: University of Cape Town

Abstract: Siba's Table is a globally syndicated food television show featuring South African celebrity chef, Siba Mtongana. The show has been broadcast in over 128 countries throughout, Africa, Europe, the Middle East and the United States. This paper considers Siba's celebration of cooking as a luxury. Siba prepares her meals in an opulent mansion in the affluent Cape Town suburb of Hout Bay. Siba's celebration of domestic bliss calls upon a postfeminist imaginary in its apparent return to 'traditional' values of femininity. In her self-aware performance of domestic delight Siba is comparable to postfeminist celebrity chefs such as Nigella Lawson, Ina Garten and Martha Stewart. However, while most western criticism of postfeminist television focuses on the retrogressive politics of reclaiming the kitchen, theorists have seldom considered the importance of historical, racial and class privilege to this framing of the kitchen as a leisure space. Drawing on the work of Simidele Dosekun, I argue that this question of class is particularly salient in African postfeminist media. This paper explores how Siba's upper middle class lifestyle aligns her with a global community of class-privileged postfeminist women. But this representation of Siba's bourgeois lifestyle is also structured in opposition to another identity circulating in the global imaginary. Where African women have historically been represented through images of poverty and desperation or through images of domestic servitude, Siba's Table offers an alternative vision of African domesticity as site of luxury and indulgence.

Title: 'You Can't Roll Up Looking like the Maid': Empowered and Entitled to Consume Spectacularly in Lagos

Session Type: Panel Submission

Authors:

Name: Simidele Dosekun

Email: s.dosekun-at- sussex.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sussex

Abstract: This paper draws from a larger project on the kinds of femininities being fashioned and communicated by young, class-privileged Nigerian women in the city of Lagos who dress in 'spectacularly feminine' style – a style of dress comprising the extravagant use and combination of normatively feminine technologies of adornment and beautification, from cascading hair extensions, to false eyelashes and nails, to the highest of heels. The paper concerns the practicalities of how the women put together their spectacular and certainly not inexpensive look. The style being predicated on the reiterative acquisition, use and management of a growing basket of feminine goods and services, the women position themselves as agentic, knowing and skilled consumers; subjects who, at a glance or touch, can discern 'real human hair' from the 'fake' say. They also position themselves as both empowered and entitled to their luxurious practices of self; as having earned them, in various senses of the term. The paper offers a discourse analysis of the women's justificatory talk of their consumption practice and consumerist sensibilities. It draws on and develops Michelle Lazar's notion of 'entitled femininity' as a new, postfeminist consumer subject position, showing how, this discursive, material and mediated position, and the ability to take it up, are co-constituted by both local and transnational landscapes of poverty and of cheap, feminized labour.

Title: Watches for men, handbags for ladies: The gender politics of luxury marketing in African cities

Session Type: Panel Submission

Authors:

Name: Mehita Iqani

Email: mehita.iqani-at- wits.ac.za

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand

Abstract: This paper explores how narratives about gender fit in the professional practices of luxury marketers working to sell their products to African consumers. Drawing on in-depth interviews with marketing practitioners from South Africa, Nigeria and Kenya, all of whom work in the luxury sector in large cities, the paper explores how they talk about men and masculinity, women and femininity in relation to their perceived markets. Interview participants were situated at a key cultural interface between Western cultural economies and the so-called “rising” African consumer markets. In their talk about who buys their products (and indeed, who they want to buy their products), marketers easily slipped into highly heteronormative language that fixed masculinity and femininity to certain types of high-end consumer products: luxury watches for men, luxury handbags for women. The paper considers the ways in which luxury marketing discourse is gendered, with strong heteronormative gender roles accentuated and deployed, and asks to what extent this is unique to luxury markets, as narrated by those defining them, in Africa. The empirical discussion is framed with scholarship about gender, luxury and marketing in relation to African contexts, and argues that within accepted theories of gender as performative and shaped by power relations, it is crucial to introduce ways of thinking about capital itself as gendered, albeit in different ways in different contexts.

Title: Situating Cyberfeminism in the MENA Region: Public sphere, Networked Authoritarianism, Activists' Doxing, and the Digital Divide.

Session Type: Individual submission

Authors:

Name: Kenza Oumlil

Email: k.oumlil-at- aui.ma

Country: MA (Morocco)

Affiliation: Al Akhawayn University

Name: Maha Tazi

Email: Maha.tazi-at- concordia.ca

Country: CA (Canada)

Affiliation: Concordia University

Abstract: This paper explores the emergence of cyberfeminism in the Middle East North Africa (MENA) region during the context of the Arab Spring, which was a series of uprisings that followed the self-immolation of Tunisian Mohamed Bouazizi in December 2010 and spread through several countries in the MENA region. The uprisings protested authoritarian regimes and called for democracy, freedom, and social justice. Within the context of the Arab Spring, feminists in the MENA region contributed significantly to the public debates and discussions online to call for mass mobilization as well as raise awareness about gender issues and discrimination. They have thus actively participated in cyberfeminism, which can be defined as “the largest innovation in feminism in the last fifty years that harnesses the power of online media platforms to discuss, uplift, and activate gender equality and social justice” (Stern & Henderson, 2014, p.128).

Taking as objects of analysis three case studies of feminist interventions from Egypt, Tunisia, and Lebanon, the paper examines the ways in which the selected activists in the region respond to their contemporary context by advocating for gender equality at the same time that they seek to promote a wider social justice agenda for their respective countries. The case studies were selected because their creators self-identify as feminists who attempt to harness the power of information and communication technologies (ICTs) to end authoritarian rule and promote a human rights agenda, with specific attention to achieving societal gender equality. Furthermore, the selected case studies also benefit from a significant follow-up and fan-base (ranging from 2400 fans to 12 660 followers for the Facebook pages). The analysis is based on conducted structured interviews with the women activists, and is complemented with a content analysis of the activists’ own online interventions, which include a feminist blog and Facebook pages, as well as relevant contextual information found in the public domain.

Whereas the analysis demonstrates that cyberfeminism facilitates women’s access to the public sphere and enables them to take voice, these interventions’ potential is also mitigated by networked authoritarianism. Rebecca McKinnon initially coined the term “networked authoritarianism” in 2010 to denounce the Chinese government’s effective use of ICTs to censor and suppress dissent. Furthermore, the activists’ doxing, in the form of life threats directed at them and attempts to reveal their identities and delete/block their platforms online, threaten the viability of their interventions. Finally, the enduring digital divide in the region makes it so that significant segments of the

population who do not have access to ICTs and lack digital literacy cannot be exposed to this content. The analysis revealed that the selected activists were not initially always able to anticipate the existing constraints and backlash against them in the form of both online and physical harassment. This paper argues that raising awareness about techniques of silencing dissent might lead to better protection and optimization of the opportunities that ICTs offer to promote women's rights and social justice advocacy.

Title: Who Would Participate in Online Discussion of Gender Issues: A Case Study of MeToo Movement

Session Type: Individual submission

Authors:

Name: Yang Zhang

Email: tdzhangyang-at- 163.com

Country: CN (China)

Affiliation: School of New Media in Peking University

Name: Tong Ji

Email: 1601111811-at- pku.edu.cn

Affiliation: School of New Media in Peking University

Abstract: Keywords: social media, gender, MeToo movement, power, social movement

Abstract

Due to different social identities, the micro-blogging users would have to make more efforts when discussing about gender issues. What kind of people would follow related topics is really important but seldom studied before. This research tried to find out who would participate in the online discussion of gender issues and what they focused on by studying MeToo movement.

MeToo movement used Twitter to illustrate the widespread prevalence of sexual assault to woman, and spread in Chinese micro-blogging Weibo. The movement was chosen to be studied because it represented women's problems, besides, it changed the dilemma of woman in the real world by micro-blogging (it was 'hidden' from the public since the phrase "MeToo" was used for sexual assault in 2006 and influenced widely after using Twitter to promote in 2017). In China, the gender problems were often discussed by a small group of people, but the MeToo movement changed the situation. Women from all walks of life spoke out for their sufferings and it was widely discussed by public.

We collected posts about MeToo movement on Weibo from October 15th, 2017 to August 30th, 2018 which was the main time of the event. The posts matching the keywords "MeToo" (in both English and Chinese) and "anti sex assault" (in Chinese) were classified. The users' demographic information online and all their other posts were crawled. Machine learning technology was used to deal with effective information presented in Chinese microblogging Weibo.

Combined with regression analysis (a series of logistic regression analysis using R 3.5.1.), three aspects of features (independent variable) were found to be the reasons of becoming topic participants (dependent variable): demographics variables (gender and age), personality (authoritarian personality), related knowledge (power knowledge and integrated related knowledge).

As the regression result showed, male and older people, the ones with anti-authoritarian personality, and the ones who care about power, would be more likely to voice in Weibo. As for the discussion content, we used typical opinion clustering and found that the opinion focused on human right and power. We believe that the high power distance (Hofstede, 2011; Oudenhoven et al., 1998) structure of Chinese society triggered the localization of MeToo movement. The participants are of vital

importance to helping victims gain public attention, eliminating misunderstanding, and improving social relationship.

Abstract: Esta ponencia intenta describir las estrategias efectivas para la enseñanza universitaria y la formación en igualdad de género y medios de comunicación y Tic's. Para lograrlo, propondremos recomendaciones para la enseñanza universitaria y la formación en igualdad de género en medios de comunicación y Tic's. Nuestra interrogante se enfoca a determinar ¿cuáles son las estrategias necesarias para la enseñanza universitaria y la formación en igualdad de género, y medios de comunicación y Tic's? Empleamos la noción de efectivas con el objetivo de construir vínculos entre la educación universitaria y el campo profesional e impactar favorablemente en el desarrollo de una perspectiva de género en los medios de comunicación y las industrias de Tic's.

Tomando en cuenta que en las universidades en Chile, en particular en las carreras de periodismo y comunicación, no ha sido incorporada plenamente al currículo la enseñanza de igualdad de género en medios de comunicación y Tic's, se puede sostener que este déficit en la enseñanza se traslada al desarrollo profesional y constituye una de las causas de la prevalencia de la desigualdad de género y el sexismo en los medios de comunicación y Tic's (Tuchman, 1978; Gallagher, 1985; Van Zoonen, 1994).

La metodología se diseñó desde un enfoque holístico y consideró el empleo de técnicas cuantitativas y cualitativas. En una primera etapa se contempló la elaboración de un mapeo nacional de las iniciativas de enseñanza de educación superior en igualdad de género, medios de

comunicación y Tic's ofrecidas por las universidades chilenas en distintos niveles –cursos universitarios, diplomados dirigidos a estudiantes y/o profesionales y representantes del sector público, talleres, etcétera-. En una segunda fase el objetivo fue analizar las estrategias educativas en igualdad de género, medios de comunicación y Tic's reconocidas por informantes claves para identificar prácticas transformativas y elaborar criterios para un diagnóstico efectivo. Así, la muestra quedó constituida por 555 unidades (programas de cursos) para la fase cuantitativa y 16 docentes entrevistados para la cualitativa.

Palabras clave: género, periodismo y estrategias educativas.

Title: Dignidad y derechos de las mujeres: regulación de la publicidad con perspectiva de género en países iberoamericanos

Session Type: Individual submission

Authors:

Name: Camila Ordóñez Laclé

Email: camila.ordonezlacle-at- ucr.ac.cr

Country: CR (Costa Rica)

Affiliation: Centro de Investigación en Estudios de la Mujer (CIEM), Universidad de Costa Rica (UCR)

Abstract: En Costa Rica existe una ley para regular “todo tipo de propaganda comercial que ofenda la dignidad, el pudor de la familia y en la que se utilice la imagen de la mujer impúdicamente para promover las ventas”, sin embargo, concurren importantes vacíos que limitan una efectiva regulación de las malas prácticas publicitarias detectadas por el Observatorio de la Imagen de las Mujeres en la Publicidad del CIEM UCR, lo que apunta la urgencia de efectuar una revisión integral de la norma.

En este contexto, se emprende un estudio que realiza una revisión documental y un análisis por categorías de diversas leyes aprobadas en 19 países iberoamericanos de habla hispana concernientes a la regulación de la imagen de las mujeres en la publicidad y/o en los medios de comunicación. A partir de esta exploración se identifican los países con un nivel más avanzado de regulación, al contar con uno o varios instrumentos que favorecen de modo más directo la protección de los derechos de las mujeres con respecto a los contenidos mediáticos o publicitarios, aquellos con instrumentos de alcance moderado, y los que se encuentran rezagados al no disponer de normativas que contemplen este aspecto.

El caso de los países con mayor rezago permite visualizar que, el hecho de que la dignidad humana y la igualdad entre hombres y mujeres estén reconocidas en sus respectivas Constituciones, no es suficiente para que exista una protección efectiva contra la discriminación y otras malas prácticas que se reflejan en los discursos publicitarios con base en el género, la identidad y/o la orientación sexual. Los países con regulaciones más avanzadas contemplan en sus definiciones términos como publicidad ilícita, publicidad abusiva, violencia mediática y violencia simbólica, así como integran valiosos principios orientadores como la igualdad y equidad de género, la no discriminación, el enfoque de derechos, la interculturalidad, la interseccionalidad, entre otros.

Asimismo, entre las normas más avanzadas los contenidos publicitarios denigrantes se enfrentan a sanciones económicas y medidas orientadas a la reparación, mientras que las moderadas se limitan a potenciar la autorregulación o suspender la publicidad.

Finalmente, en todas las legislaciones revisadas se identifican retos para su más efectiva aplicación, incluyendo los retos que implica la regulación de los contenidos publicitarios denigrantes difundidos por medio de las nuevas tecnologías y en redes sociales, sin embargo, a nivel general se concluye que los países avanzados en la materia aciertan en comprender el impacto que tienen los

discursos mediáticos y publicitarios en la cultura, favoreciendo o no el pleno ejercicio de los derechos de las mujeres, y por ello ameritan tener regulaciones específicas.

Title: #AbortoLegalYa: El uso estratégico de redes sociales en el debate por la legalización del aborto en Argentina

Session Type: Individual submission

Authors:

Name: Claudia Laudano

Email: claudialaudano-at- gmail.com

Country: AR (Argentina)

Affiliation: Universidad Nacional de La Plata Argentina

Abstract: Se desarrollan las principales características del uso de redes sociales durante el debate legislativo por la legalización del aborto en Argentina durante 2018. Durante 6 meses, la Campaña Nacional por el Derecho al Aborto Legal, Seguro y Gratuito, que nuclea a 500 organizaciones, utilizó una estrategia de movilización en dos frentes: en las calles y en redes sociales. Para ello, se diseñaron ciberacciones periódicas con hashtags que resultaron trending topic en Twitter y concitaron la atracción mediática y del mundo político.

Title: Gender violence and media coverage: whose fault is it'

Session Type: Individual submission

Authors:

Name: Mariana De Maio

Email: mariana.demaio-at- lehigh.edu

Country: US (United States)

Affiliation: Lehigh University

Abstract: Mass media play a key role in shaping perceptions of social issues. There is substantial research about media's portrayal of violence against women, but few studies examine femicide (murder of women by their partners). Even fewer studies take a look at Latin America, particularly Argentina, where femicides are increasing substantially.

On January 2019, there were 27 femicides reported in Argentina. That means that one woman was killed almost daily. The #NiUnaMenos (#NotOneLess) movement that brought thousands of people to the streets of Buenos Aires on June 3, 2015, to protest against gender violence and to demand institutional commitments to stopping femicide, began a process of awareness and empowerment at many levels; one being media coverage. Moreover, media coverage of these crimes is under scrutiny in Argentina.

Using second-level agenda setting and frame analysis, the current study analyzes newspaper coverage of violence against women from January 2015 to January 2019. Included in the sample, there are stories of one news outlet criticizing the coverage of other outlets. This time frame was selected because it includes coverage a number of months before the #NiUnaMenos movement started until today, four years later. In order to answer the questions on how news media in Argentina reports about femicides, this study focuses on some paradigmatic cases that had a significant press conference during the years chosen for the present paper. This paper looks into sources cited in femicides reporting, regardless of how the crimes were contextualized as individual problems or were presented as part of a larger societal trend or phenomena, and the newspapers' use of direct and indirect victim-blaming language.

Preliminary results show that in the majority of cases the newspaper coverage of femicides contributes to promoting gender stereotypes, uses victim-blaming language and does not contextualize these crimes as a broader social issue; where the woman is in a fragile position vis-à-vis her violent partner.

Title: Circles of Discourse: Gendered and Racialized Bodies in Sexual Violence Discourse

Session Type: Individual submission

Authors:

Name: Mary Grace Lao

Email: mglao-at- yorku.ca

Country: CA (Canada)

Affiliation: York University

Abstract: For women and girls who come forward with their experiences of sexual violence, there is the trauma of not only having to re-visit the event but also the additional trauma she experiences. She questions her credibility, her past and present reputation, and her own insecurities. Is her experience valid? Recent public discussions suggest that societal attitudes are changing, with a recognition that sexual violence is systemic, yet we often go back to outdated attitudes towards survivors.

Current digital practices are rooted in feminist activist practices of previous generations, who were at the margins of public discourse. The women who make significant contributions to public discourse are often white, middle-class, women. This was particularly salient in the #MeToo movement, where initially actress Alyssa Milano was credited for starting the movement rather than black activist Tarana Burke. This paper, which is part of a larger project on rape culture, considers the intersections of race and class and its effect on creating a narrative that only includes white, middle-class women as the victim/survivor. I argue that to eliminate gender-based violence, we must address the intersections of race, class, etc. in addition to gender. The flattening of identities erases the multitude of different lived experiences that women encounter as a result of their bodily experiences. This is particularly important in a Canadian context, given Canada's own history of colonialism and white supremacy, in which black, Indigenous, women of colour (BIWoC) are often left at the margins, without a care for their well-being. Yasmin Jiwani (2015) notes that violence towards Muslim women in Canadian news media are often framed as an "honour killing," creating a narrative in which this type of violence is only seen in other (that is, non-white) cultures while ignoring the overarching issue of gender-based violence that remains hidden.

Scholarly research on feminist media practices tended to focus on feminist discourses and its contribution to the public sphere. Habermas's notion of the public sphere has been criticized as privileging particular groups of the bourgeois public, composed mainly of white, educated men (Calhoun, 1992). Nancy Fraser (1977) proposed rethinking of what we consider the public sphere. She contends that what Habermas originally proposed was no longer an adequate critique that takes into account the nuances of our current cultural practices.

I continue the work that Fraser first proposed and argue that re-conceptualizing the public sphere includes having to consider the media in which discourse takes place and recognizing the importance of subjectivities to public discourse. To address this, I look to media archaeology, which Jussi Parikka (2012) states is concerned with media as "remediated, resurfacing, finding new uses, context, [and] adaptations" (p. 3). Media archaeology reminds us that we must consider the ways

that history is recorded (Ernst, 2011) and thus, can be “read as an alternative to the dominant writing of media history” (Kluitenberg, 2011, p. 51). By addressing who and what discourses are ignored, I uncover the ways that dominant discourses continue to be reinforced in mainstream ideology.

Title: Branding, Objectivity, and Political Reporting: Female ambient journalists' voices in a hostile landscape

Session Type: Individual submission

Authors:

Name: Jaime Loke

Email: jaimeloke-at- gmail.com

Country: US (United States)

Affiliation: Texas Christian University

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Abstract: A seismic shift in the landscape of reporting that journalists have long been accustomed to has occurred. From the beginnings of online news readers' comments that thrust journalists into the same space as anonymous-and-unchecked reactions from readers, journalists now find themselves in a constant form of existence in front of their audience — thanks to social media. Before the advent of ambient journalism (a term coined to describe the “omnipresent nature of news in society” (Hermida, 2010)), which inevitably produced ambient journalists— a byline and perhaps at most, a headshot, accompanied a journalist's article. Today, ambient journalism, we argue, has resulted in ambient journalists — reporters having to constantly exist on a plethora of evolving platforms.

While some research discovered that social media has allowed for journalists to be better connected to their audiences (Hedman & Djerf-Pierre, 2013), the downside is also having to be the recipient of bullying, stalking and harassment simply for having a profile. While no journalist is immune from public attacks, female journalists are disproportionately experiencing gender-related threats, harassment and intimidation online. A 2014 study on Twitter found that female journalists receive roughly three times as much abuse compared to their male counterparts (Bartlett et al., 2014). Additionally, when female journalists are the target for online harassment, the vile quickly descends into sexualized hate and threats (Ricchiardi, 2017). Women are more likely to be the subjects of graphic sexual and physical violence (Ricchiardi, 2017).

As a result of the requirement to constantly have a voice on social media by news organizations coupled with the current hostility against the press in the United States, this paper seeks to investigate how female political journalists negotiate their professional roles as objective reporters with their personal views of an administration that openly condemns feminism, all contained within

a hostile social media environment. The authors will conduct in-depth, semi-structured interviews with 30 political journalists working at the online newspaper outlets — excluding ones with a stated political stance — with the largest audiences across the United States.

Topics covered in the interviews will include: (1) journalists' experiences with branding themselves on social media (use of voice, employer rules/guidelines, expectations for social media use, curation, obligations); (2) journalists' experiences with audience replies on social media (strategies for responding, types of responses they ignore/refuse to respond to, if/when they block individuals, how replies inform their reporting process and/or sourcing); (3) the role diversity plays in social media interactions (dealing with harassment and threats with regard to gender/race/sexuality, presence of online support, extent of employer support); and (4) to what extent the aforementioned strategies and interactions with regards to branding, audience, and diversity have changed under the current administration.

Based upon findings from the female journalists' interviews, we anticipate that how journalistic norms are intersecting with social media through the lens of the current U.S. political environment will strongly contribute to the evolving landscape of ambient journalism.

Title: Dying in Silence: U.S. media coverage of the maternal mortality crisis

Session Type: Individual submission

Authors:

Name: Jaime Loke

Email: jaimeloke-at- gmail.com

Country: US (United States)

Affiliation: Texas Christian University

Name: Tania Rosas-Moreno

Email: tcrosasmoreno-at- loyola.edu

Country: US (United States)

Affiliation: Loyola University Maryland

Abstract: Dying in Silence: U.S. media coverage of the maternal mortality crisis

The media are not often considered to be a key player in health literacy. But, research has shown medical conditions with greater media coverage are considered to be more serious and more representative than other conditions with lesser and/or no coverage at all (Young et. al., 2013). When the press shines its spotlight onto a medical condition, the public deems it to be more of a pressing health issue even though it may not necessarily be a condition that requires immediate attention and resources.

This research looks at a global public health issue which we suspect has been long ignored in the media: maternal mortality. More specifically, we focused on maternal mortality in the United States as it is the developed nation with the worst rate of maternal deaths in the world. In 2013, the U.S. maternal death rate was 26.4 per 100,000 live births (GBD 2015). This rate was more than double the 1987 U.S. rate of 7.2 deaths per 100,000 births (CDC, 2016.) Even more disturbing is that the state of Texas currently exceeds the maternal death rate for the entire developed world at 35.8 per 100,000 live births (MacDorman et. al., 2016).

Aside from the detrimental effects maternal mortality has on the personal front, it costs billions of dollars each year in the United States (Ellison & Martin, 2017). According to a September 2017 report in the American Journal of Obstetrics & Gynecology, the cost alone for caring for mothers with pre-eclampsia (a leading condition associated with childbirth complications) exceeded \$1 billion.

Thus, we questioned: How much coverage has maternal mortality had in the United States' media? And, more importantly, how has the coverage been framed? The central logic of framing is the construction of symbolic representations that allows the frame to deliver to the receiver of the frame an understanding of issues. Gitlin (1980) viewed frames as "persistent patterns of cognition, interpretation, and presentation, of selection, emphasis, and exclusion, by which symbol-handlers routinely organize discourse..." (p. 7).

This study will look at the top 15 U.S. newspapers by circulation from the decade of 2008-2018. We will look at the prevalence or lack thereof of coverage on maternal health and explore the frames that have emerged from the coverage. Through qualitative and quantitative descriptions, we aim to explain how news about this issue has shaped people's understanding of the problem. The findings could inform strategies to improve coverage of an important, yet somehow invisible health issue.

Title: Gendered Robotic Images and Human-A.I. Collaborations in WALL-E (2008) and Sori: Voice from the Heart (2016)

Session Type: Individual submission

Authors:

Name: JaeYoon Park

Email: jaeyoon.park-at- uafs.edu

Country: US (United States)

Affiliation: University of Arkansas-Fort Smith

Abstract: Memories, emotions, and agency are no longer the qualities that define humanity in the postmodern, posthuman era saturated with endless simulacra and mechanical reproduction. They have become a privilege of sort, rather than a birthright of human beings, which artificial intelligence can also replicate. Since the seminal sci-fi film Blade Runner (Ridley Scott, 1982) raised such philosophical questions as “what does it means to be human?” and “how human are replicants or androids?” the past few decades have witnessed multiple cinematic representations of robots with artificial intelligence having success in conveying the three aforementioned qualities that used to be exclusively granted to humans. WALL-E, in particular, is not a mere trash-compacting robot in the 2008 Pixar animation film cleaning up the mess that the human race left behind after environmental catastrophe. His memory or data program is not only a source of efficient labor, but also allows room for nostalgic feelings, romance, and agency. A 2016 South Korean film pushes this dynamic even further as Sori decides to ditch her assigned duty as a surveillance satellite and willingly travels to the earth to help out struggling, troubled humans after years of eavesdropping on human communications in the contexts of wars, man-made disasters, espionage, and international conflicts.

This presentation provides a comparative analysis of WALL-E (Andrew Stanton, 2008) and Sori: Voice from the Heart (Ho-jae Lee, 2016) in order to investigate the intersections of gender, identity, humanity, and technology. Drawing on a queer theory, special attention will be paid to the ways in which these robots “perform” specific gender roles. Their gendered communication with other robots and surroundings articulates their emotions and agency in a way that asserts their distinct, yet socially acceptable, identity. In their interactions with humans, they are clearly coded as a “boy” (WALL-E) and a “girl” (Sori) while expressing love, compassion, and empathy for others, which makes them look more “human” and “humane” than “humans.” In the process of analysis, the presenter will also apply Susan Sontag’s notion of “camp” in an effort to explore how these robots’ “artificial” intelligence and their “desires” to solve “human” problems serve to put everything in quotation marks. Linda Hutcheon’s discussion of “parody” will guide this comparative analysis as well in terms of exploring how the postmodern form of parody portrayed in the two films destabilizes and reveals the artifice of humanity while also helping us rediscover humanity’s contradictions vis-à-vis gendered robotic images.

Title: It's About Bloody Time: Understanding Women's Perceptions of Diversity in Menstruation Advertising

Session Type: Individual submission

Authors:

Name: Andrea M. Smith

Email: asmith73-at- syr.edu

Country: US (United States)

Affiliation: Syracuse University

Name: Adriana Mucedola

Email: asmucedo-at- syr.edu

Country: US (United States)

Affiliation: Syracuse University

Abstract: In October 2017, the U.K. based company, Bodyform made headlines for its advertising campaign entitled, #BloodNormal. The campaign promoted putting an end to damaging stereotypes, stigmas, and misinformation about menstruation and menstrual bleeding. A variety of media outlets covered the story and praised Bodyform for its body positive messages about menstruation.

Although the Bodyform campaign raised important issues about the changes needed in menstruation advertising and concerns about media portrayals of females on their periods, an important question remains at large; How has pro-period messaging influenced the ways in which age, race, ethnicity, body shape, and gender identity is portrayed and understood in menstruation advertising?

While there is a plethora of research surrounding the topic of menstruation advertising, there is a lack of research focusing on how diversity is represented in such advertising. Previous literature on menstruation advertising has focused on content analyzing the product or how advertisers perpetuate the stigma associated with a woman being on her period (Backe, 1997; Erchull, Chrisler, Gorman, & Johnstron-Robledo, 2002; Havens & Swenson, 1988; Mandziuk, 2010; Merskin, 1999). Beyond the scope of advertising, other studies on menstruation have surveyed adolescent girls or young adults on their behaviors, attitudes, and experiences about menstruation (Brooks-Gunn & Ruble, 1982; McPherson & Korfine, 2004; Chaturvedi, & Chandra, 1991; Cronje, & Kritzinger, 1991).

A large body of literature provides evidence that the media has the power to shape what we see and what we don't see, as well as reinforce our overall attitudes and behaviors (De Zengotita, 2006; Bleakly, Hennessy, Fishbein, & Jordan, 2008; Saguy, Frederick, & Gruys, 2014; Armstrong, 2004). Therefore, this study not only fills the gap in literature, but it also raises important implications for understanding how advertising aimed at women cultivates representations of women's bodies, messages about gendered norms, and examples of how media pedagogy teaches heteronormative portrayals of menstruation.

To that end, this study interviewed a diverse cohort of 19 women to understand their perceptions of menstruation advertisements. The study utilized one-on-one, in-depth, semi-structured interviews ranging from 45 minutes to one hour over a four month period. The participants ranged from 28 to 45 years of age and were U.S. residents, but had grown up in either; England, China, Taiwan, Russia, Bulgaria, Bangladesh, or the U.S. As a way to gain insight into participants' reactions toward menstruation advertisements, participants were shown four current menstruation advertisements prior to the interview.

After asking participants to look at the ads, they were asked a series of questions about their experiences and perceptions of menstruation advertising. Once the interviews were complete, NVivo software was used to determine common themes across each of the interviews conducted, which were: gendered stigmatization, portrayals of diversity, and heteronormative ideologies in menstruation advertisements. While the #BloodNormal campaign sought to promote pro-period messaging, this study concludes that gendered stereotypes, a lack of diversity, and dominant patriarchal images of a woman on her period of still persist in female-targeted advertising and offers tangible solutions for future advertising to eliminate social stigmas and encompass inclusivity.

Title: Female Competition-Video-Game Webcast Host in China: A Case Study of "Arena of Valor"

Session Type: Individual submission

Authors:

Name: Hao TIAN

Email: ththu94-at- 163.com

Country: CN (China)

Affiliation: TSINGHUA University

Abstract: Along the increased usage of PC and mobile phone, the size of China's video game market exceeded CNY 8.7 billion in 2017, and the number of players exceeded 400 million. As more and more teenagers got interested in video games, webcast host who live stream their video games online became an attractive job in China.

2016 is seen as the first year of "live broadcast" in China, when thousands of webcast hosts appeared online. There are two different kinds of hosts in the industry, professional ones and amateurs, both of which are mostly males. However, professional hosts who have contract with broadcast platforms are mostly female. Unlike their male counterparts who mostly drew audiences' attention with their superb gaming techniques, female hosts drew attentions with their "body beauty", usually along with sexual connotation.

It is generally perceived that female hosts had to do this because their gaming techniques aren't as good. However, we think that, instead of a forced action, this is an intentional choice that has no correlation with their gaming techniques. The main questions we put forward in this research are, 1) What is shown in the live webcast? 2) What are the motivations of the hosts when they choose this occupation? 3) How do the hosts benefit from the webcast?

The methods of this research mainly include content analysis and in-depth interviews. Content analysis method is used to understand the contents of the three representative live broadcast platforms named Yingke, YY and HUYA, and to explain the difference between male hosts and female hosts. In-depth interviews method is used to understand the meaning of "body beauty" and to find out the psychological motivations of female hosts.

We selected 19 female webcast hosts of a game "Arena of Valor" to understand their living conditions, webcast pattern, and motivations to do webcast. All of the hosts are between 18-29 years old, 6 of them are professional hosts and have contract with webcast platform, and most of them didn't have higher education.

The research concludes: 1) The female hosts intentionally choose to utilize "body beauty" instead of being forced to. The motivations behind the action can be one or a combination of three things, feeling like a star, making money, and killing time. 2) Economic interest is the main reason that led to the choice of increasingly utilizing "body beauty", which in turn gradually made their entire interaction with audiences about "body beauty". 3) Moreover, this interaction mode formed in the live webcast world impacts behaviors of the hosts in the real world.

Title: Murders of Transgender People: A Discourse Analysis of Coverage of Turkish Newspapers

Session Type: Individual submission

Abstract: This paper aims to explore transphobic media discourse against transgender people by focusing on murders of transgender people in Turkish online news articles featured between August 2016 and January 2019. Trans people are pariahs in Turkey. As such, there is no existent space for trans people. Violence is the quotidian part of trans people's lives, and Turkish mass media merely add on this collective violence through either the implementation of silence or continual scapegoating of trans people. What is more, the language of mass media tend to misrepresent transgender people and promote discrimination, transphobia, virulent hate speech and anger. Reported news associate trans lives with topics such as venereal diseases, public decency and prostitution, disregarding their rights severely which raise human rights questions.

According to Transgender Europe's (TGEU) transgender murder monitoring report, between 2008 and 2016, 43 trans murders were recorded in Turkey. Turkey ranks highest as the number one country in Europe and ninth in the world in reported trans murders. In addition, Gay and Lesbian Cultural Research and Solidarity Association (Kaos GL) conducts annual media monitoring reports on hate speech, hate crime, prejudice and discriminatory discourse subjected to LGBTQI+ people. Hrant Dink Foundation, as well, conducted a research on discriminatory discourse in news on murders of transgender women between 2013 and 2016. As these research reports have shown, news stories mostly cover trans murders with the imposition of hatred and prejudice towards transgender people.

In this study, we analyze news stories reached via online newspapers about trans murders through discourse analysis to examine the stories in detail. The paper is composed of two main sections. Following Hrant Dink Foundation's methodology, the first section reveals and examines the sources, structures, and linguistic choices in the articles which reinforce further discrimination of and prejudice against transgender people. In the second section, we provide alternatives to these negative discursive practices to contrast them with positive ones that prioritize human rights and

highlight the violations that are deployed against transgender people. The paper ends with recommendations for a humanitarian perspective in news reporting of transgendered individuals.

Title: Análisis de las imágenes, con perspectiva de género, en el Twitter de los medios deportivos

Session Type: Individual submission

Authors:

Name: Alba Adá Lameiras

Email: albaadalameiras-at- gmail.com

Country: ES (Spain)

Affiliation: Universidad de Vigo

Abstract: España es la sociedad más conectada de Europa con 20.6 millones de usuarias/os diarios. La ciudadanía española invierte una media de dos horas al día en el uso de las Redes Sociales y, de todas ellas, Twitter se considera: la red social de la información por excelencia. Por eso, dada su importancia en la sociedad actual y los pocos estudios existentes sobre el tema, es necesario analizar el tipo de imágenes que se publican, específicamente, en los Medios de Comunicación deportivos, para determinar cómo las nuevas tecnologías, como Twitter, influyen en mantener el gap de género reproducido, a lo largo de la historia, en los medios deportivos tradicionales, en dónde las noticias publicadas son por, para y sobre hombres, y en los que las mujeres aparecen en un segundo plano y representadas de forma estereotipada y sexualizada. El objetivo de este estudio es analizar los tweets sobre mujeres que contienen, al menos, una fotografía. Para ello, se ha analizado el Twitter oficial de los Medios de Comunicación deportivos (-at- Marca y -at- MundoDeportivo) durante los meses de marzo y abril de 2016. Este período se ha elegido para conocer la imagen de las mujeres en meses de información “rutinaria”, no un período en el que transcurran grandes eventos deportivos como, por ejemplo, los Juegos Olímpicos, en los que la presencia de las mujeres deportistas en los medios es superior con una imagen más profesionalizada. Los datos se han recogido mediante un muestreo aleatorio simple (Pérez, 2009) registrando todos los tweets publicados durante las 24 horas de los días muestreados. Durante estos dos meses se han publicado 46 tweets con mujeres como protagonistas, de los cuales, 41 (89.13%) contaban con fotografía, frente a 5 tweets (10.87%) que se publicaron sin foto. En ambos Medios de Comunicación, tanto en Marca como en Mundo Deportivo, aparecen más tweets con fotografías sobre mujeres no deportistas, que sobre mujeres deportistas. De las 41 imágenes publicadas, cuando se hace referencia a mujeres deportistas, el análisis revela que hay un sexismo más benevolente y no tan explícito como en los tweets sobre mujeres no deportistas, en los que la connotación sexual es más explícita, más hostil, siendo, en casi todos los casos, fotografías de parejas, ex parejas o incluso madres de hombres deportistas. Por otro lado, las mujeres deportistas aparecen en más fotografías solas o con compañeras de equipo, mientras que las no deportistas, mayoritariamente, aparecen acompañadas de un hombre, en un gran porcentaje, con su pareja o ex pareja. En definitiva, tal y como confirma en este estudio, el gap de género existente en los medios tradicionales se reproduce en las Redes Sociales, concretamente en Twitter, en dónde se demuestra que, la imagen de la mujer deportista que ofrecen los Medios de Comunicación deportivos perpetúa una visión claramente estereotipada de la mujer, la cual comparte espacio, en gran medida, con mujeres no deportistas, algo que no sucede con los hombres dentro de los medios de comunicación deportivos.

Title: Communicating new and old gender imaginaries in social media: the construction of gender identity in current female Spanish YouTubers

Session Type: Individual submission

Authors:

Name: Ester Villacampa

Abstract: Participative culture in the new media ecosystem (Jenkins, 2006; Scolari, 2012) has opened the door to new ways of portraying gender identity for those who have become the sort of public figures known as microcelebrities (Senft, 2012; Marwick, 2015), of which YouTubers are a major example. In the context of late modernity (Giddens, 1995; Beck, 1992; Bauman, 1990), microcelebrities emerge in social media as ordinary people in the intersection between commercialization and authenticity, and act as desirable role models for young audiences (Westenberg, 2016). In the case of YouTube, this ambiguous articulation of fame reinforces some neoliberal principles (Lovelock, 2018) and may determine the kind of (postfeminist) performance delivered by young girls (Banet-Weiser, 2011), with conventional gender models and traditional values being disguised as revolutionary. However, social media have also been proven to provide useful tools for civic engagement (Boulianne & Theocharis, 2018) and the defense of human rights, also in favour of fourth-wave feminism (Cochrane, 2013; Munro, 2013). Actually, for some subcultural microcelebrities, engaging in social justice activities is no longer incompatible with working on the own brand (Abidin & Cover, 2018; Raun, 2018). Therefore, social media and specially YouTube are possible spaces for resistance and negotiation, constantly moving from hegemony to counterhegemony.

The aim of this article, then, is to analyse how female Spanish YouTubers construct and display their gender identity through two case studies, Dulceida and Yellow Mellow, in order to establish whether they contribute to creating new social imaginaries or to reproducing hegemonic femininity. The two YouTubers have been selected according to their age (between 18 and 30 years old), their popularity (they both have more than 1,5 million followers) and the type of content produced, since the vlog genre is more connected to self expression than others. We conducted a qualitative content analysis of their channel profiles and three videos of each, launched from January to March 2018.

We developed a model of analysis which combines four different proven methods: a multimodal analysis of their profiles (Jones, 2009) and a film analysis of the selected videos (Casetti & di Chio, 1997) in order to understand which multimodal resources do they use in order to perform their gender identity; a socio-semiotic analysis of their characters (Fedele, 2014) with the aim of establishing which kinds of gendered values and personality traits do they identify themselves with; and a thematic analysis of their texts (Clarke & Braun, 2006) as a means to reveal which kinds of discourses do they create surrounding gender issues. They all together responded to our main research question, with results showing ambivalence towards gender. While gender diversity and inclusivity appear as generational, community and personal values, they coexist with postfeminism and the uncritical acceptance of individualism.

Title: Why do female editors leave Wikipedia? A qualitative analysis of gender bias in the Spanish Wikipedia / Mujeres alcaldesas en España: análisis de las diferencias de género en el tratamiento y calidad de la información de las webs municipales

Session Type: Individual submission

Authors:

Name: Lara Carrascosa

Email: larac40-at- gmail.com

Country: ES (Spain)

Affiliation: Universidad de La Laguna. Adjunct Professor

Name: Nuria Simelio

Email: nuria.simelio.sola-at- uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona. Associate Professor

Abstract: Las primeras mujeres alcaldesas alcanzaron el poder en 1924 en España durante la dictadura de Primo de Rivera, aunque por un sistema de cooptación que elegía solo a aquellas afines al régimen y que cumplieran una serie de requisitos. Desde entonces la presencia de féminas a la cabeza de los municipios ha aumentado, pero sigue siendo muy reducida y queda muy lejos de la paridad. El régimen franquista supuso una regresión en la igualdad efectiva de las mujeres al acceso al poder, del que nos hemos recuperado lentamente. Gracias a la Ley de Igualdad Efectiva de Hombres y Mujeres de 2007, que establece un mínimo del 40% de representación de cada uno de los sexos en las listas electorales, las mujeres han ido ganando presencia y representatividad en la política. En las últimas elecciones locales de 2015, las mujeres lideraban el 17,1% de los municipios españoles. El objetivo de este trabajo es averiguar si la variable sexo de la alcaldía influye en el nivel de transparencia, de apoyo a la participación ciudadana y de calidad de la información pública de las webs institucionales. Para ello nos centramos en 605 municipios de más de 10.000 habitantes de 8 Comunidades Autónomas españolas (Andalucía, Aragón, Canarias, Catalunya, Comunidad Valenciana, Galicia, Madrid y Murcia) donde las mujeres alcaldesas representan el 35,65% del total. La metodología se basa en 52 indicadores cuantitativos distribuidos en dos bloques: 1) Transparencia de la Corporación con indicadores relacionados con quiénes son los representantes políticos, cómo se gestionan los recursos colectivos, y cómo se gestionan los recursos económicos y; 2) Información para la Participación donde se analiza qué información se proporciona en las webs municipales sobre el municipio y la gestión de los recursos colectivos, y qué herramientas se ofrecen para la participación ciudadana.

Los resultados muestran que, en los porcentajes más altos de cumplimiento de los indicadores relacionados con la información para la participación y la buena comunicación, los ayuntamientos con mujeres alcaldesas duplican los buenos resultados con un 19,5% de ayuntamientos que superan el 76% de cumplimiento de indicadores en comparación con solo un 9,2% de cumplimiento de más del 76% de indicadores en los municipios donde los alcaldes son hombres. Por tanto, establecemos la hipótesis de que las mujeres alcaldesas pueden tener una mayor predisposición a facilitar la participación de la ciudadanía en la rendición de cuentas y en ofrecer una información pública con mejor calidad en las webs municipales. Estos primeros resultados e hipótesis se compararán con las

respuestas ofrecidas por representantes técnicas y políticas de las corporaciones municipales en 4 grupos de discusión realizados en el marco de esta investigación.

Financiamiento: Investigación en el marco del proyecto I+D+I, Metodologías y modelos de información para el seguimiento de la acción de los responsables de los gobiernos locales y la rendición de cuentas (CSO2015-64568-R, financiado por MINECO-FEDER)

Title: Women as Journalists/Women as Survivors

Session Type: Individual submission

Authors:

Name: Bailey Gerrits

Email: Bailey.Gerrits-at- Queensu.ca

Country: CA (Canada)

Affiliation: Queen's University

Abstract: Experiences of sexual and domestic violence are gendered. Is writing the news about these cases also gendered? In analyzing a sample of 823 news stories and interviewing over 60 news workers, I find that women are empirically associated with different types of framing of domestic violence in Canada. Women wrote differently about domestic violence, linking individual cases to broader social issues (thematic framing) more often than men writing similar stories. The question becomes, why might women be associated with differently framed domestic violence stories? The answer is not the official gendered assignment of stories, as women actually wrote less stories about domestic violence, women hold positions in various news departments, and no one reported editors handing them stories more amenable to thematic framing. There is, however, a degree of informal gendered allocation of stories, with colleagues turning to women to interview survivors. This, however, also does not explain differences in how women write and report on the stories. What I argue best explains this gendered difference is that women often have intimate knowledge of gendered violence that impels them to make broader connections between individual cases and broader themes. However, this would not be possible unless the newsroom structure created space for this. While there is a conflict in the literature about whether women's experiences influence news discourses, many come to the conclusion that women write similar to their male colleagues as both are socialized as journalists and constrained by newsroom hierarchies. So, part of the story in explaining why women write differently about domestic violence has to also be linked to changes in the newsroom culture and hierarchy. Those changes, however, are not an absence of sexism. Instead, I argue that women's advancement in some Canadian newsrooms have created space for women to write more thematically about domestic violence. In addition to offering statistical evidence from a content analysis and thematic evidence from interviews, I also draw on three narratives of women explaining why they wrote about their personal experiences of gendered violence. While not all women write the same about this issue, the difference and its connection to personal experience offers insights into the gendered experiences of journalism and the gendering of the newsroom.

Title: "Deal it a head-on blow!" Rural Chinese women's expression of nationalism on WeChat

Session Type: Individual submission

Authors:

Name: Yini Wang

Email: yini_wang-at- hnu.edu.cn

Country: CN (China)

Affiliation: Hunan University

Abstract: “Deal it a head-on blow” was 43-year-old rural Chinese woman Fang Liu’s outraged reply to Japan’s disposition in the on-going Diaoyu/ Senkaku Islands dispute between China and Japan. From the First Opium War in 1840 with Britain to the Manchurian Incident by Japanese in 1918 and Sino-Japanese war in 1937-1945, Chinese people have encountered many foreign invasions throughout modern history. Japanese military in particular, lashed heavily all over the country. Fang Liu was overwhelmed with indignation about Japan’s colony and war-like behaviour towards China and expressed this strong emotion through sharing anti-Japanese articles on one of the most popular Chinese social media platform WeChat. Based on an original study that explored the use of WeChat by 25 rural Chinese women aged from 40 to 52 years in Hanpu town in south-central China, the data explored in the present study were collected during a 5.5-month period in 2015. An ethnographic fieldwork methodology (Hammersley & Atkinson, 2007) and a social constructionist theoretical framework (Holstein & Gubrium, 2008) were used to investigate these rural Chinese women’s daily experiences in using WeChat. The findings present anti-Japanese nationalistic ethos were phenomenally expressed by the women through circulating articles generated by WeChat official accounts. They shared articles of news reports on the commemoration of the Sino-Japanese war and caricatures that disgraced Japan’s prime minister and its international relations to show their wish to remember the shameful history and their contempt for Japan. In addition, some WeChat articles reappropriated old sources and photos to fake that anti-Japanese demonstrations were actually happening, forging extra stories to arouse readers’ anger towards Japan and enticing them to share the articles. Shame and anger prevailed, impacting rural women’s judgement of unreliable online sources and stimulated them to share the links. This kind of emotional reaction was so intense that rural women like Fang Liu even thought, as China grows stronger, it should give Japan a “head-on blow” if Japan provoked again. It is noticeable that anti-Japanese discourse has been included in the political ideology consistently by the Communist Party of China, be it Zemin Jiang’s “great rejuvenation of the Chinese nation”, Jintao Hu’s “Harmonious Society” and “Scientific Outlook on Development”, or Jinping Xi’s “Chinese Dream” (Wang, 2014). They have been leveraged as a means for the Communist Party to bolster its legitimacy in leading the country (Callahan, 2015). However, based on the phenomenological observation and analyses, this paper concludes popular nationalism practiced by Chinese people and facilitated by the Internet is different from the official nationalism (Gries, Steiger, & Wang, 2016; Hyun & Kim, 2015; Liu, 2012). Just because “the concept of national rejuvenation is deeply rooted in China’s national experience and collective memory” (Wang, 2014, p. 11), a country being strong, prosperous and free of foreign invasions is what all Chinese people desire. Hanpu women’s nationalistic sentiments centring around anti-Japanese news reports, caricatures and misinformation, featured on WeChat perpetuated through their online interactions, instantiate these goals.

Title: #MeToo and Broadcast Journalism in South Korea and Japan

Session Type: Individual submission

Authors:

Name: MISOOK LEE

Email: misooklee-at- rikkyo.ac.jp

Country: JP (Japan)

Affiliation: Rikkyo University

Abstract: This research aims to articulate the process of broadcasting #MeToo in South Korea and Japan in order to understand the commonalities and differences of gatekeeping process of #MeToo in both societies and its impact on the formation and expansion of #MeToo movement. #MeToo movement, which accuses of sexual assault and sexual harassment in everyday life and forms solidarity with the victims, has occurred globally since late 2017. South Korea and Japan has also witnessed #MeToo movement in each political, social and historical context. Generally, both societies are regarded as gendered and patriarchal, showing their low rank in the global gender gap index as 110 of Japan and 115 of South Korea among 149 countries (World Economic Forum, 2018). However, #MeToo accusations and #MeToo movements in both societies show quite different look in its social recognition and expansion. In South Korea, after Suh, Ji-hyun, a prosecutor, spoke out publicly, 337 civic groups organized the "Action Network with #MeToo Movement" as a coalition and mobilized mass movement and "WithYou" campaign to form solidarity movement with the victims and raise the social awareness. In Japan, Ito, Shiori, a freelance journalist, spoke out publicly, and the "WeToo" campaign was initiated by a group of female activists and media workers. However, #MeToo movement in Japan is largely regarded that it didn't yet gain the mass attention and not evolve to mass movement. There could be some factors to explain the differences from the historical context of women's movement and the legal system of criminal code. However, this research sheds the light on the broadcasting process of #MeToo accusations. Both societies mentioned that TV news are the most (in Japan) or second most (in South Korea) important sources of news (Digital News Report 2018, Reuters Institute). TV news often turns to the sources of communication in the social network services, and reached more "broad" audience compared to personalized social media. By analyzing the broadcasting contents of the initial #MeToo case to the establishment of solidarity campaign, "WithYou" of South Korea and "WeToo" of Japan, and interviews with journalists in both societies, this research aims to clarify the commonalities and differences in the gatekeeping process (Tuchman 1980; Gans 1979; Shoemaker 2009) in its selection of news items and approaches in reporting #MeToo in both societies. Broadcasting of South Korea used a great deal of time to report #MeToo and put more news value on the "victim's voices" delivered directly through the long-interview, holding the emphasis on "objectivity" by delivering the different opinions from the alleged offenders. Broadcasting of Japan reported the #MeToo case as a short straight news type and put more emphasis on "facticity" or "authority's judgement" over the victim's accusation so that the alleged offender was hardly mentioned on TV news. However, this emphasis of "facticity" was applied differently in other cases such as power harassment in athletics or international disputes, showing double standard. Defensive reaction of broadcasting #MeToo in Japan brought limited social attention and the spiral of silence. This research is still ongoing.

Title: One Less Mouth to Feed: Early Marriage and Failed Infrastructure during the Syrian Conflict

Session Type: Individual submission

Authors:

Name: Rand El Zein

Email: elzeinrand-at- gmail.com

Country: AT (Austria)

Affiliation: PhD Student at the University of Salzburg

Abstract: This paper analyzes the concept of vulnerability within the context of the Syrian conflict, specifically in relationship to child marriage and the failed infrastructure in the refugee settlements in Lebanon and Jordan. By examining news reports from three major Arab satellite channels, such as Al-Aan, Al Arabiyah, and Al Jazeera, the paper discusses two reoccurring themes in the media: Firstly, how the phenomenon of child marriage among the displaced communities is highly tied to the concept of failed infrastructure; and secondly, how the television channels reported on the decay of the refugee settlements, as a result of the harsh weather conditions from the storm that hit Lebanon during the winter of 2015.

Although the phenomenon of child marriage and the deterioration of shelter during the snowstorm are analyzed in separate parts, this paper argues that these two supposedly separate dimensions that constitute the concept of vulnerability are indeed interconnected. The paper bases its analysis on examining the news reporter and/or expert's speech. By attempting to appear objective, the news report supposedly used an expert's opinion to provide a "rational" coverage on the topic. Within the context of the news reports analyzed, I contend for the prevailing attempts of the "expert" to produce objective reporting, by adopting a rationale that is somewhat similar to that of the dominant discourse, which also furthers the displaced female Syrians' subordination.

To strengthen my argument, I draw upon Timothy Mitchell's (2002) conception on "human and technocratic expertise" (from his subchapter Can the Mosquito Speak?), to contend against the widely disseminated notion: Human expertise and nature are separable elements. I argue that nature (e.g. the high winds, blizzards, flooding, and freezing temperatures, snowstorms) was not the sole precipitate of the deteriorating changes that took place in, for example, the informal settlements in Lebanon. I foresee the snowstorm as merely an unfortunate event that contributed to the hurling of the hitherto failing living circumstances in these informal settlements.

Here, I debate how during times of conflict, vulnerability is directly tied to infrastructure. The more failed the infrastructure is, the more vulnerable the subject is. And the more media expose images of the subject overcoming or mobilizing their vulnerabilities, the more they are prone to become mere representations and/or misrepresentations. To further analyze the concept of failed infrastructure, the paper borrows from Judith Butler's notion of mobilizing one's vulnerability to acquire resistance. The study finds that both infrastructure itself and resistance to infrastructural challenges may take myriad forms. In this way, the paper tries to expose how mere existence becomes a

manifest act of resistance, and concludes by asking: Does the subject's ability or willingness to be a target of power, or in Foucauldian terms "docile", render her agentive capacities as active or lost?

Title: What Do they talk about' Ugandan Women's Narratives on Facebook.

Session Type: Individual submission

Authors:

Name: Aisha Sembatya Nakiwala

Email: nakiwala-at- yahoo.com

Country: UG (Uganda)

Affiliation: Makerere University, Department of Journalism and Communication

Abstract: One of the key issues that researchers in gender in the media and communication have castigated is the underrepresentation of women voices in the public sphere, particularly in the traditional media. Often, the analysis in the research is framed through the lens of gender portrayal and representation in mainstream media, such as television and newspapers. Many of these studies illustrate, for example, that men are many times likely to be heard or read in the mainstream media as both news subjects and news sources, while women are kept on the fringes of the debate on key socioeconomic and political issues that affect today's society. In this paper, the analytical focus is on social media particularly Facebook, and the prospect for the liberation of women's voices. More distinctively, the discussion centres on the narratives prevalent in women's expressions and posts in a closed Facebook user group in Uganda. Theoretically anchored at the intersection between radical feminism, agency and communicative affordances of social media, the paper's aim is to examine what women talk about on Facebook and how importance this maybe in public discourse, including how it may or not lead women to understand their power and agency, and to liberate their voices. Methodologically, the discussion draws on critical discourse analysis of women's Facebook posts. The analysed posts were purposively selected over a period of two months to understand what narratives are instantiated in such text. In analysing narratives and assessing their importance, five thematic issues are discernible in the text and these include, mothering, suffering and victimisation, independence, resistance as well as careers. In the paper, narratives around these five themes are presented, discussed and implications for the liberation of women's voices highlighted. A view that the prevalent women's narratives signal an availability of an alternative forum for women's voices through Facebook, later on an opportunity to contribute and shape discourse on key issues, albeit marginally is herein advanced.

Title: APROPIACIÓN TECNOLÓGICA DE MUJERES JÓVENES A TRAVÉS DE SUS PRÁCTICAS ARTÍSTICAS EN CONCHA ELÉCTRICA

Session Type: Individual submission

Authors:

Name: Alejandra Camacho

Email: alecasu30-at- hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: Llevamos casi dos décadas en el siglo XXI, y desde sus comienzos y los finales del pasado la teoría feminista ha reflexionado sobre las diversas formas en que las mujeres se apropian de la tecnología digital y como ésta transforma nuestra vida cotidiana así como los sistemas socioculturales que la atraviesan. Hemos visto que las dinámicas generadas a través de este avance tecnológico se transforman y se re-configuran a partir de la aparición de nuevas formas de conexión en el ciberespacio. Es decir, de cómo interactuamos y nos relacionamos con personas, con imágenes, audios, videos, creaciones artísticas, productos mercantiles, redes de trabajo, de acción política y más representaciones y prácticas sociales que se problematizan a través de los espacios digitales. Así como sus posibilidades, limitaciones, convergencias y contradicciones que experimentamos cuando tenemos acceso a éstos.

Es así que a partir de lo anterior y entendiendo que la globalización es un proceso estructural y neoliberal por el cual se manifiestan estas configuraciones, también se crean relaciones que están inscritas en contextos más amplios como locales, teniendo repercusiones en los ámbitos más subjetivos de la vida de las personas, lo que hace complejo entender las distintas formas en que la diversidad de grupos sociales se desenvuelven en este contexto histórico tan acelerado.

Por esa razón el objetivo principal de la investigación ha sido comprender a través de una postura crítica y mediante entrevistas cómo es que una muestra representativa de mujeres jóvenes urbanas, conectadas y artistas se apropian de en la plataforma mexicana Concha Eléctrica en Instagram para difundir sus creaciones, crear redes entre ellas, denunciar a través de imágenes y audiovisuales el sistema patriarcal y neoliberal en el que vivimos. Porque sin duda la apropiación de este tipo de redes sociodigitales es una marca generacional en la que las personas jóvenes, y en este caso mujeres, las apropian desde diferentes lógicas pero las cuales se inscriben en un sistema tanto social como algorítmico que mercantiliza sus prácticas a través de éstas. Además en donde podemos entender cómo se articulan los pactos de una juventud conectada con prácticas feministas y la sociedad del consumo.

Title: Patriarchal Ideology in Kenya's Editorial Cartoons: A Cultural Studies Approach

Session Type: Individual submission

Authors:

Name: Joseph Nyanoti

Email: josephnyanoti-at- gmail.com

Country: KE (Kenya)

Affiliation: United States International University-Africa

Abstract: Although casual readers of newspapers see cartoons as cheap entertainment these cartoons carry serious journalistic messages like news does. Media scholars find cartoons a rich area of research through different methodological and theoretical persuasions. The cultural studies perspective looks at popular media texts, like editorial cartoons, which are meant to amuse, as sites where power imbalance plays out in favour of the dominant group in the society where they circulate. Scholars in cultural studies argue that that all media texts are not innocent but laden with ideology, promoting the preferred meaning of the dominant group in society. Ott and Mack (2014) have identified four ways through which ideology structures society. They are “limitation, normalization, privileging and interpellation” (p.138). The present study sets out to investigate how the patriarchal ideology, as the dominant ideology in the Kenyan society, plays out in the editorial cartoons of the Daily Nation, the country’s leading newspaper. Using a combination of quantitative content analysis and semiotic analysis the researcher will find out how men and women characters are treated by cartoonists in the editorial pages of January-December 2017. Although there is growing research interest in editorial cartoons in Kenya there has been no study interrogating patriarchal ideology from a cultural studies perspective in these texts. The present study attempts to address this gap. In other parts of the world there is a large body of literature suggesting that media texts, including editorial cartoons, depict symbolic power imbalance between men and women, reinforcing the ideology of patriarchal superiority (see, for example, Hall, 2013; Sonderling 2007; Long & Wall, 2009). Women are not only misrepresented and underrepresented in media texts but also depicted in their traditional roles as mothers and nurturers, as well as being inferior to men. In the present study will investigate whether through these media texts women’s voices and visibility have been denied through misrepresentation in the editorial cartoons. This is against the backdrop of the Kenyan Constitution’s (2010) provision for elimination of all types of discrimination among the country’s citizens.

Key words: Patriarchy, ideology, cultural studies, editorial cartoons

Abstract: El 16 de octubre de 2017, la actriz Alyssa Milano sugirió difundir el hashtag MeToo ("Yo también") en Twitter para que las mujeres expresaran la "magnitud del problema" del acoso y abuso sexual. Como parte del código de Twitter, los hashtags permiten sistematizar y categorizar sin intermediarios, la información de la red sociodigital, así como visibilizar y saber los temas prevalecientes, en un mismo canal, mediante los trending topics (Salgado 2015). La jerarquización de la información, coloca a los usuarios en posiciones de poder. Teun A. van Dijk (1999) explica que para entender cómo el discurso contribuye a la desigualdad social, se requiere comprender la disidencia y oposición.

En este sentido, el objetivo de esta ponencia consiste en analizar el #MeToo desde el análisis crítico del discurso (Van Dijk, 1999 y Hodge y Kress, 1988) con perspectiva feminista (Azpiazu, 2014), como una estrategia de acompañamiento para que otras mujeres, no sólo figuras públicas, se atrevan a denunciar públicamente en redes la violencia de género o ciberviolencia y se fortalezcan procesos de empoderamiento colectivo a su favor. Por tanto, se analizará la categoría de empoderamiento, desde la teoría crítica feminista y acuerdo con Marcela Lagarde (2015), Nelly Stromquist, Kate Young y Naila Kabeer (León, 1997). En un segundo momento, se vinculará la categoría de empoderamiento a las estrategias de acompañamiento de las víctimas ciberviolencia en marco del #MeToo, mediante una mirada crítica respecto a las relaciones desiguales de poder basadas en cuestiones de género (Azpiazu, 2014), así como a la categoría complejo ideológico (Hodge y Kress, 1988) y el análisis del discurso propuesto por Teun A. van Dijk (1999).

La verificación empírica se dará mediante el análisis cuantitativo y cualitativo del seguimiento de los tweets del #MeToo durante cuatro meses en la red sociodigital Twitter, con una metodología de recolección de tweets usada en investigaciones previas (Moore y Ramsay, 2017).

Abstract: El amor es uno de los sentimientos más inspiradores para la producción cultural. En términos culturales y mediáticos, es tal su relevancia que, si se eliminase la palabra amor, y con ella todo el contenido relacionado, se deberían omitir un número muy elevado de libros, películas, revistas y canciones. Los medios de comunicación, como transmisores culturales y en su función de generadores de opinión pública, no son ajenos a la organización sentimental de la sociedad sino que contribuyen a legitimar unos modelos amorosos sobre otros.

Desde los Estudios Feministas y de Género se ha coincidido en señalar que el modelo vigente de amor romántico viste con un velo de igualdad las relaciones entre hombres y mujeres que enmascara los mandatos de género inherentes al discurso romántico, y contribuyen a perpetuar el status-quo de la sociedad patriarcal.

El objetivo de esta investigación es conocer cuáles son los modelos amorosos representados en los productos culturales consumidos por adolescentes (12 a 18 años) residentes en España y en qué medida influyen dichas las representaciones mediáticas en la creación y afianzamiento de determinados valores y estereotipos. Para ello se ha empleado como instrumento un cuestionario en el que participaron un total de 1550 adolescentes (755 hombres, 783 mujeres y 12 personas que se no identifican con los géneros binarios), con un error muestral de 2,5% y un nivel de confianza de 95%. Posteriormente, se ha llevado a cabo un análisis de contenido de los productos mencionados.

La muestra fue seleccionada a través de un muestreo aleatorio por conglomerados, siendo las unidades primarias de muestreo 15 provincias: A Coruña, Alicante, Almería, Ávila, Barcelona, Córdoba, Huesca, Lugo, Madrid, Murcia, Navarra, Soria, Santa Cruz de Tenerife, Toledo y Zaragoza. Las unidades secundarias fueron los institutos de cada zona geográfica (seleccionados de forma aleatoria proporcional) y, finalmente, las unidades terciarias fueron las aulas. La muestra estuvo formada por 30 centros de áreas rurales y urbanas, de forma que cada zona geográfica estuviera representada al menos por un centro.

Los resultados muestran que la adolescencia consume mayoritariamente productos transmedia mainstream, ya sean producidos por los grandes conglomerados mediáticos tradicionales o por las nuevas estrellas mediáticas surgidas en YouTube. Se confirma que son las mujeres quienes consumen en mayor medida los contenidos mediáticos de temática amorosa, pero esto no influye necesariamente en una mayor aceptación de los ideales del amor romántico.

En dicho relatos mediáticos, el ideal del amor romántico continúa siendo el discurso predominante, y casi único, a la hora de establecer una relación amorosa. Sin embargo, La proliferación de medios de comunicación y la consecuente fragmentación del consumo mediático no ha traído conseguido la emergencia de representaciones de modelos amorosos alternativos. Los productos y relatos culturales de los medios de comunicación más consumidos por adolescentes continúan reproduciendo roles y estereotipos de género, en ocasiones acompañados de un sexismo explícito.

Title: Through the lens of gender: an analysis of Brazilian political discourses and normalizing power

Session Type: Individual submission

Abstract: Gender and politics are related to power. Whenever a discourse promotes segregation among people (in race, ethnic, sex or class terms), it always generates inequality and goes against Human Rights and democracy. In Brazil, the normalization of gender is being nailed in different speeches of the current government. For example, when the Minister of Women, Family and Human Rights, Damara Alves, declares that “boys must wear blue and girls must wear pink” or that “now, our nation will be filled of princes and princesses”, there is an intent to regulate and ordain papers that must be assigned by males and females. In a biologist perspective, it is normalized what is considered “right” for sexes.

As Joan Scott (1995) problematizes, gender is related to the logics of power and knowledge that normalize and regulate society. In Michel Foucault's (2017) perspective, power is present through webs that spread in different sectors and layers that could be institutional, familiar or personal, promoting hierarchies and inequality. Similar approach is brought by Marcia Veiga da Silva (2014) who sees gender as something present in everything in the world, as lens that enables our observation for behaviors, thoughts and regulations in social and professional practices. Through this lens, it is possible to see how politics, discourses and Medias are developed, generating different interpretations and significations in the subjects of communication.
