Politics articulates multiple senses in society. Individuals' trajectories lead to common beliefs, symptoms that generate movements of fight and resistance. As Walter Menon (2016) points, the confidence in institutions that ensure security depends of their investment on facing violence, use of police and military forces, going against the ideal of individual freedom, institutionalizing notions of control and normalization, creating a good and a bad enemy. The order is only accomplished through the norm. Out of normalization, the dissidence must be fought and repressed. However, the sophistication of hegemonic discourses of control leads to a subtle dissemination of prejudice and moral values, which rises to the political power, generating several crises in the “social moral”.

The hegemonic masculinity present in the discourses explores, dominates, imposes and treats with authority. This notion of “dominating power” comes from a culture that values force and domination as masculine attributes. If we understand Gender as an analytical, epistemological and descriptive category, perched by the concept of power, we may have a broader view of the social-symbolic organization, of languages and discourses and its relations of power, observing how they cause impact in social practices.

In this research, it is aimed to analyze the political context of Brazil through different subjects of communication, people who are involved in politics, their understanding of Gender and how their interpretations of Media discourses may be or not be normalized by political subjects and institutions. The hypothesis is that the communication processes that constitute the subjects can be a

cause of prejudice and segregation among people, also being reflected in the Estate actions, laws and measures of control.

Title: Until death do us part: A Comparative Analysis of Gendered Media Coverage of the Death of Israeli Male and Female Public Figures

Session Type: Individual submission

Authors:

Name: Moran Avital

Email: moran.avital-at- mail.huji.ac.il

Country: IL (Israel)

Affiliation: The Hebrew University of Jerusalem, Israel

Abstract: Various studies pointed to the evidence of gender biases in the media. For instance, news coverage will give more attention to personal life and appearances when its main subject are women, as opposed to men (Heldman, Carroll and Olson, 2005).

Extensive media attention is given to the deaths of public figures and celebrities. Since they are considered as representing of collective values and as having an impact on the lives of individuals and societies, journalists preserve their memory as iconic figures (Carlson, 2007; Kitch, 2005; Kitch and Hume 2008).

This study aims to examine whether discursive and stylistic means vary between the coverage of the deaths of women versus men public figures, similarly to news coverage of alive subjects. It will focus on Israeli media, and its specific means of positioning by gender, which derives from the political and social status of women in Israel. Two core elements affect Israeli women's status– the military compulsory service and religious commands according to Judaism – thereby ranking them socially lower than men (Barzilai, 2003).

The theoretical framework integrates several bodies of knowledge: (1) The meaning of death in ancient and modern cultures, and the ways in which groups mourn the passing of their members, such as the classic works of Durkheim (1915/1976) and Aries (1981); (2) The ritualistic and ceremonial functions of the media (e.g., Carey, 1989; Couldry, 2003; Dayan and Katz, 1994; Hjarvard, 2008); (3) The role of the media and journalists in shaping collective memory (Kitch, 2000; Neiger, Zandberg and Meyers, 2014; Tenenboim-Weinblatt, 2013; Zelizer, 2008; Zelizer and Tenenboim-Weinblatt, 2014); and (4) gender studies, and particularly scholarships focusing on gendered media coverage (Lachover, 2013; Lahav, 2010; Meeks, 2012).

Within this framework, I will address the following research question:

Are there any discursive and stylistic differences, in Israeli print media coverage of the deaths of women public figures vs. men public figures?

I perform a qualitative analysis of news stories published in two leading Israeli dailies, representing both elite and popular newspapers - Haaretz and Yedioth Ahronoth. Twenty-four deceased were chosen based on purposive sampling in order to allow a comparative examination. The case studies will be chosen in pairs of woman and man (12 pairs consisting of 12 women and 12 men). All pairs meet the following two criteria: 1) the woman and the man are from the same social category (e.g., politicians, media personas, actors, singers, writers, poets, etc.); and 2) both died from similar

causes and under similar circumstances (natural death, suicide). I retrieve and analyze all news items published during the week following the deaths of those deceased.

This study assumes the presence of gender biases in press coverage of death, similarly to general news coverage. Yet, it also aims to explore a potential connection between gendered media coverage and new trends which gradually reshape gender relations in the 21st century, both internationally (e.g. #metoo), and locally (such as religion-based gender segregation in Israel).

Title: [Panel] Misogyny Without Borders: A Clash of Cultures, Panel description

Session Type: Panel Submission

Authors:

Name: Maria Marron

Email: mmarron2-at- unl.edu

Country: US (United States)

Affiliation: University of Nebraska-Lincoln

Abstract: Although women's lived experiences under misogyny are by no means universal, the global rampancy of patriarchal social and institutional systems under which women face gender-based hostility is ubiquitous. Systemic misogyny and power inequities are at the root of sexual assault, harassment, and male-on-female bullying, as well as countless less conspicuous but no less violent practices, across the globe. As a result, related media stories recently have proliferated and been amplified by social media. In the United States, the cases of the Ford-Kavanaugh allegations and the Senate Judiciary Committee hearing, the sexual harassment allegations against incumbent President Donald J. Trump, and the #MeToo movement have garnered widespread attention. Other countries, too, have seen a rise in media coverage of stories rooted in misogyny and inequitable power dynamics. Given the prevalence of misogyny across the world, it is arguable that misogyny creates a clash of cultures between men and women, the powerful and the oppressed.

Following Chandra Mohanty's (2003) call in *Feminism without Borders* to decolonize theory and practice solidarity, this panel explores women's lived experiences and mediated misogyny in a variety of locales under globalization. It considers not only the ways in which misogyny can be conceptualized as a bounded clash of cultures but also the ways in which feminist theory may be able to intervene in mediated misogynistic gender relations to create a feminist culture that transcends borders. This panel will examine misogyny in relation to religion/mediated religion, New Wave feminism and toxic masculinity, women's media organizations, and mediated misogyny and global conservative populism.

Conference Program Rationale

Systemic misogyny and power inequities are at the root of sexual assault, harassment, and male-on-female bullying across the globe. Related media stories recently have proliferated and been amplified by social media. Given the global prevalence of misogyny, it is arguable that misogyny creates a clash of cultures between men and women, the powerful and the oppressed. This panel explores women's lived experiences and mediated misogyny in a variety of locales under globalization.

Title: Género y campañas electorales en twitter: Candidatos, discursos y estilos de liderazgo. El caso de las elecciones Andaluzas de 2018

Session Type: Individual submission

Authors:

Name: Maria Goenaga Ruiz de Zuazu

Email: mgoenaga-at- ucm.es

Country: ES (Spain)

Affiliation: Complutense University of Madrid

Name: Juana María Ruiloba

Email: jruiloba-at- upo.es

Country:

Affiliation: Pablo of Olavide University

Abstract: Este trabajo se inserta dentro de los estudios sobre mujeres líderes en política. Entre las dimensiones posibles, analizamos las campañas electorales y el uso de las nuevas estrategias de comunicación.

El uso de Twitter entre la clase política española ha sido adoptado de forma más tardía que en otros contextos (Aragón et al., 2013: 185), sin embargo, se ha generalizado como herramienta de comunicación política (López de Ayala-López et al., 2016: 1281) y de “estilo personalizado” (Norris, 2000; Zittel, 2009; Zamora&Zurutuza, 2014) en trabajos a nivel nacional (Aragón et al., 2013; Zamora&Zurutuza, 2014; Gómez-Calderón et al., 2017; Jivkova-Semova et al., 2017), autonómico (Marín y Díaz, 2016) o municipal (Criado et al., 2012; López de Ayala-López et al., 2016).

En España las mujeres están plenamente incorporadas en todas las esferas de la vida pública aunque, en el caso de la política, aún quedan techos de cristal que superar pues, pese a los avances, es un dominio históricamente masculinizado (Bustelo, 2016; Santana, Aguilar y Coller, 2016). El proceso de europeización (Lombardo, 2004), los compromisos estratégicos de la Unión Europea (Comisión Europea, 2015, 2018) y la consolidación de las políticas de género, promueven la plena incorporación de hombres y mujeres en la toma de decisiones y articula listas electorales con una composición equilibrada pero, a efectos prácticos, la pugna partidaria en los comicios suele dejar a las candidatas fuera del juego como líderes de los partidos y, por tanto, con pocas posibilidades de ostentar la presidencia regional (Uribe, 2013; Verge, 2008). En el escenario autonómico español de 2019, son dos las Presidentas (de un total de 17). Las mujeres políticas, por tanto, deben sortear las lógicas patriarcales y las sutiles barreras impuestas por el sistema político y los partidos. Cuando consiguen ser cabezas de lista y batirse en el duelo electoral ¿cómo se enfrentan a la exposición de sus ideas ante la opinión pública? ¿cuál es su estilo comunicativo y el liderazgo expresado? ¿cómo son sus discursos? ¿es la variable género explicativa de diferencias? ¿cómo se manifiesta en las campañas?

El objetivo del presente trabajo es analizar los discursos de los/as candidatos/as a la Presidencia de la Junta de Andalucía de 2018 y los estilos de liderazgo expresados a través de los mensajes de twitter de sus cuentas oficiales durante el periodo de campaña (16-30 noviembre de 2018). En unas elecciones excepcionales por la paritaria presencia entre candidatos (PP, Ciudadanos y Vox) y candidatas (PSOE y Podemos). En esta investigación analizamos los diferentes GAPs de género (presencia; representación sustantiva; visibilidad o aculturación) a partir de un análisis mixto de contenido entre todos los tuits generados en campaña (n= 1078) descargados a través de la herramienta t-hoarder (Congosto et al., 2017) y un análisis de categorías para delimitar la influencia de género y para comprobar si las candidatas andaluzas están incorporando un “estilo de comunicación femenino” (Campbell, 1989; Jamieson, 1988; Davisson, 2009; MEEKS, 2016) en relación a su tono y/o contenidos.

Title: Tanbi Culture in Contemporary China: Struggling in the Marsh of Patriarchy

Session Type: Individual submission

Authors:

Name: Yinfeng Gao

Email: yinfeng.gao-at-foxmail.com

Country: CN (China)

Affiliation: Communication University of China

Name: Zhenqi Fan

Email: fzq0911-at-sina.com

Country: CN (China)

Affiliation: Independent Researcher

Abstract: Known as heterosexual young females' creating homosexual works in cyberspace, tanbi fever started in the US and Japan, and now has marked itself as the peculiar and common sense of everyday practices for a group of young females, aka fujoshi, among the world. It has been seen as bearing significant meaning in lens of feminist discourse. But considering the special context of China, the research results of western or Japanese analyses may not be completely suitable.

Tanbi works are by no means the commonly known LGBT works as they are created by and targeted at heterosexual females though featuring love romance among same-sex couples,. Over the years, tanbi culture has developed its own characteristics in contemporary China. Firstly, novels instead of manga becomes the most common form for 'tanbi' creations, and media corporations are willing to adapt these novels for online TV shows; secondly, the spreading of 'tanbi' texts and the interactions among audience are largely relied on the internet; finally, seen as unhealthy and harmful, tanbi works are now completely forbidden in China. Therefore, as gradually known by general public, 'tanbi' texts that features homoerotic contents and 'fujoshi', girls who writes and reads them, are likely to be stereotyped and strictly regulated.

This paper has adopted methods of discourse analysis and in-depth interviews to examine 1) how male characters and masculinity are represented, 2) what are the images and roles of female characters, 3) what kind of power relations are lying behind character settings, and 4) what kinds of regulations, mainstream ideologies and processes of commercialization are put on tanbi culture.

To look specifically into tanbi culture in Chinese context, the authors pay specific attention to 4 Chinese original tanbi novels and 4 TV shows, and analyze how gender/sexuality discourses are constructed in tanbi works as well as audience's responses. To further dig deep, we organized semi-structured interviews with 15 audience, including 10 heterosexual females and 5 homosexual males.

Comparing this discourses to patriarchal values, we argue that tanbi fever in China is a nominal fashion bearing the patriarchal stigmas, which brings out the contradictions of challenging but also admiring male power, calling for gender equality while practicing female self-excluding and describing homosexual relationship with heterosexual cliché. What's more, by looking into the

regulations, commercialization of 'tanbi' culture and the mainstream stereotypes of 'fujoshi', we try to understand the social context of this phenomenon and thus demonstrate that the gender/sexuality discourses in 'tanbi' culture are being revised by mainstream values. Based on these, we further conclude that the supposed 'feminist' or 'queer' significance of tanbi culture needs to be examined more carefully in the Chinese context.

Title: Subpolitics and Citizenship: Understanding Queer Mobilization in India

Session Type: Individual submission

Authors:

Name: TT Sreekumar

Email: sreekumartt-at- gmail.com

Country: IN (India)

Affiliation: The English and Foreign Languages University, Hyderabad

Abstract: This paper aims to find how and in what manner queer movements in India impedes the normative by not just being a new identity movement, but by being anti-foundational and anti-identitarian, by stretching across myriad political engagements that transcends the gender identity boundaries and remain as a critical impetus to the resistance of the normative as a political goal. Further, queer theory's connection with both masculinity studies and feminism is crucial as there has been a conflation regarding gender and sexuality ever since sexual practices became the foreground for self-identity. In order to address the theoretical and political implications of the queer movement in India, three dimensions of the queer movements are chosen for careful and critical analysis in this paper: 1) how the queer initiatives are redefining the boundaries of citizenship 2) how the queer initiatives emphasize the need to create a 'new universal' within which all emerging sexual identities can be submerged and 3) how the online spaces become the space of visibility for the political participation of the queer.

The emerging digital landscape provides a platform for the enactment of citizenship by people who refuse to draw from a fixed body of participatory practices. Civic engagement, thus, comes to be informed by cultural and social conventions as we stand at a point of inflection for understanding what counts for participation in the civic life. Online practices help in defining or reinforcing social identities- the sexual minorities, in particular, are increasingly influenced by their online interactions. Information and communication technologies have, thus, infused the political sphere with new forms of civic engagement and community building.

Studies have shown that in India, with the spread of liberalization, urbanization and globalization, a suburban queer culture has emerged which borrows and contributes extensively to the "internationalization" of gay identities. Internationalization of the queer identity brings to fore a possibility to embrace the multiplicity in the 'queer other', with unique subjectivities being accepted as new identities. Roy (2003) emphasizes that to address the questions about queer citizenship and mobilization it is a pre-requisite to problematize the idea of resistance at a local level through generalizations being drawn from a global context. Based on ethnographic research on selected queer groups in Southern India, this paper focuses on exploring particularly the manifestations of subpolitics in the virtual space and its translation into subactivism at the local, more individual level. The intellectual charge of this study is to identify different forms of subactivism used by the members of the LGBT in order to position them as a viable force for the political elites to hear and respond to.

Title: Games for Woman in China: from Masculine Image to Gender Identity

Session Type: Individual submission

Authors:

Name: Yueran Ma

Email: 604172807-at- qq.com

Country: CN (China)

Affiliation: School of Journalism and Communication, Tsinghua University

Abstract: Originated from Japan, games for woman(女性向けゲーム) is a type of computer/mobile game in which the player socialises with a number of male characters to experience dating and love. As Role-Play-Games, games for woman is a long-term simulation of love with salient group characteristics and strong stimulation. It has been proved to be a breakthrough point for cultural studies of Japanese society, while its function and significance in China remain unclarified. Studies on games for woman in China may enrich the understanding about self-identification of Chinese woman and glimpse the development of Internet Culture in China.

Lover and Producer(《恋与制作人》) is an extremely popular game for woman in China, whose download rate hit ten million at the beginning of 2018. As the first and the most representative game in this game genre, Lover and Producer portrayed four male characters that aroused heated discussions. By taking this game for case studies, this essay attempts to figure out the following two questions:

1 What are the image and personalities of a virtual lover?

2 What kinds of self-identification of female players have been formed in the process of portraying virtual lovers?

This essay undertakes text analysis on the Game content and the discussions about the game from Weibo. The author observed the behaviours and attitudes of players via participation and carried out in-depth interviews with 15 players. The interviewees not only were familiar with the male characters in the Game, but also participated in the design of their image and personalities, and even had attended fans activities before. Three conclusions have been drawn:

1 Smart-looking, wealthy and considerate are the three common features of the male characters in the game, which serve as the fundamental characteristics and personalities for character design. With heavy simulation to the real world, the Game portrays male characters with extreme personalities to fulfill the pleasant sensation and the insufficiency in reality of female players.

2 The design of game characters is accomplished not only by the game developers, but also players and fan art producers. In other words, participatory culture is well demonstrated in the game design. A huge volume of fan art caricatures, novels and videos articulate the diverse opinions and demands of female players, and strengthen their self-identification of independency.

3 Apart from entertainment purpose, the virtual characters are also adored or even worshipped. Some players defend the perfect image of their virtual idols by verbally attacking other characters. While the virtual fans culture is generated, some players identified themselves as fans, which clashes with the self-identification pointed out in Conclusion Two. Such a conflict further provokes players' reflection of gender identity.

Overall, game for woman is a unique lens to inspect self-identification of female youth and the tendency of popular culture in China. In the long run, games for woman may exert influence on the scale-development, regulation and culture of the Internet industry in China from multi-dimensions.

Key words: Mobile Games; Image Construction; Gender Identity; Fans Culture

Title: Disorienting the Threshold: Queer Phenomenology in Public Interface Design

Session Type: Individual submission

Authors:

Name: Hannah Holtzcaw

Email: hannah_holtzclaw-at- sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: In considering the emerging global information landscape and its unfolding repercussions for human dignity and freedom, this paper will argue that reimagining the underlying values of interface design and its embedded computational principles is a critical task for our contemporary moment. Drawing from the traditions of critical theory and philosophy of technology (Feenberg, 2004, 2010; Jameson, 1991) as well as, science and technology studies (Barad, 2007; Suchman, 2007; Latour, 1991, 2017), and informed by contemporary theoretical and critical digital media scholarship (Andrejevic, 2013; Bratton, 2015; Bucher, 2018; Chun, 2011, 2016; Galloway, 2012; Mcpherson, 2018; Noble, 2018, Steyerl, 2012, 2017), this paper seeks to extend the contribution of these critiques and insights by turning to feminist and queer theories, to provide for an interface theory of design that disorients traditional design horizons (Ahmed, 2004, 2006; Butler, 1988, 2013; Chun, 2016, 2018; Haraway, 1988, 2017) to reveal a theoretical model of design more expedient to the empowerment of diverse publics within a rapidly developing technological society. Posing, in closing, several potential policy implications provided by this perspective.

The development of worldwide computational infrastructure has resulted in evolving boundaries of sovereign space in a global technological society. Traditional standards in computational design are premised on the reduction of complexity and yielded from a model of thought that emphasizes the individual and homogeneity, over interrelatedness and difference. The increasingly mechanized and arbitrated nature of information extends this logic into political and economic realms of society through information technologies, which act as points of integration into larger technocratic systems. Anchored in rigid binaries, these developments foster further polarization and undermine public engagement by locking marginalized groups, and ultimately political discourse, in an iterative loop that compounds and extends oppression through new, more obscure, regimes of control.

Our systems for collective understanding, then, become contorted to accommodate the guiding logic of these platforms, where, public interface technologies act as performative spaces that, through obligatory and controlled modes of engagement, interpellate users into associative ideological conditions of embodiment, with material repercussions for human dignity and civic participation. This paper seeks to outline the potentialities of public-facing algorithmic interface technologies when interaction is generated, instead, out of categories of discomfort and difference, specifically, those offered by queer theory, in particular, queer phenomenology.

Gender, as a generative category of identity, structures and orients experience. Queer phenomenology provides a theory of disorientation that reconfigures the terms of algorithmic online

engagement to manifest difference over sameness and to foster educative discomfort through fluid, rather than established, relationships. Thus, demonstrating how queer disorientation presents a nonbinary politics that engages, enacts and obliges the cultural and political work of marginalized, unaligned, dis-enabled or otherwise non-normative orientations, identities, or experiences, in order to exact a re-composition of power in the present socio-economic context. In effect, producing a political technological aesthetic that opens up networked communication systems to new forms of technical embodiment more expedient, and indeed serviceable, to the civic empowerment and engagement of diverse publics within an online public sphere.

Title: "Take this, you monster!" Vengeful women in South Africa's Daily Sun tabloid.

Session Type: Individual submission

Authors:

Name: Priscilla Boshoff

Email: p.a.boshoff-at- ru.ac.za

Country: ZA (South Africa)

Affiliation: Rhodes University School of Journalism and Media Studies

Abstract: South Africa's gender landscape remains deeply fraught post-apartheid, and violence against women and children by men continues to make headlines in mainstream news. However, in South Africa's most popular tabloid paper, the Daily Sun, we unexpectedly encounter reports of women who do not submit, but retaliate collectively and violently against their rapists and abusers. These women participate in what the tabloid calls "People's Justice". Extra-judicial forms of justice have been part of the fabric of township life since colonial times, and were a notorious feature of the liberation struggle. Post-apartheid, such vigilantism continues to haunt crime prevention efforts in township spaces. The literature that deals with vigilante justice, however, concentrates largely on the role that men play in these social formations (Nina and Scharf 2001; Buur 2005, 2009). Drawing on a complete archive of editions from 2011, and using a multi-modal discourse analysis, I examine how Daily Sun reports of people's justice represent women who participate in these violent events, particularly in response to rape and the abuse of children. In doing so, I scrutinise how its reports construct a particular idea of femininity in contrast with criminal masculinities. Working with Connell's constructivist framework, in which forms of femininity and masculinity are understood as being produced within particular social and historical spaces, I argue that township gender relations and popular justice formations are more complex than usually portrayed, both by the media and social science scholarship.

Title: [Panel] Gendered online harassment in journalism: a challenge to the right of voice of female journalists, Panel description

Session Type: Panel Submission

Authors:

Name: Sara De Vuyst

Email: s.devuyst-at- ugent.be

Country: BE (Belgium)

Affiliation: Ghent University

Name: Greta Gober

Email: greta.gober-at- ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: This panel addresses online harassment in journalism from a gender perspective. In increasingly digitalized newsrooms, journalists have access to a wide range of digital tools that offer new publishing platforms and can be used to contact a wide variety of sources or check factual information, for engaging with the audience, networking, and personal branding. At the same time, the online environment has made journalists more vulnerable to digital threats and abuse that come in different shapes and forms. Studies have indicated that online harassment is a gendered issue (Duggan et al., 2014; Mijatović, 2015). Women expressing their opinions in digital spaces are disproportionately confronted with misogynist comments, verbal and physical threats, and sexual harassment online (Amnesty International, 2018).

Understanding the characteristics and dynamics of online harassment is important, in particular in the context of journalism, because it can have a chilling effect on free speech, reduce the freedom of the press, and create environments in which journalists engage in self-censorship. This panel addresses online harassment as a multi-layered issue and aims to provide a holistic understanding of how journalists experience online harassment as well as how news organizations are dealing with this issue.

The organizational perspective will be explored by Speaker 1 who will discuss responses of newsrooms to online harassment in Sweden. The other panelists will document and raise awareness on experiences of harassment of journalists. Speaker 2 will present the results of a global survey that offers insight into the magnitude and nature of online abuse. The next panelists will use qualitative data from different geographic contexts to explain, provide more context and elaborate on these quantitative results. Speaker 3 will focus on the experiences of online harassment of Belgian journalists from an intersectional perspective. Then, Speaker 4 will discuss the coping strategies of female journalists in Latin America. Finally, Speaker 5 will shed light on disinformation strategies of states and corporate actors that are driving online harassment based on four cases in different countries.

The topic of online harassment in journalism fits well within the scope of the Gender and Communication Section and is closely connected to the principal IAMCR 2019 conference theme of advances in communication technology and human dignity. Online harassment poses a clear challenge to the quality of communication, the quality of life and human dignity in journalism. There will be a focus on how digitalization in journalism limits the right to voice and visibility of female journalists.

The panelists will not only reflect on these issues, but also propose recommendations for how challenges for research, policy, and action can be overcome. It will be an opportunity to announce the launch of a “Gendered Online Harassment Research Network” that was initiated by the panelists to connect researchers and activists working on gendered harassment in journalism. The session will end with an open invitation for members of the audience with an interest in studying online harassment in journalism to participate and get involved in the activities of the network.

Title: The Intermedia Agenda Setting in China's #MeToo Movement: A Case Study of 'Shen Yang Case'

Session Type: Individual submission

Authors:

Name: Zhijuan Chen

Email: zhijuan_chen-at- cuc.edu.cn

Country: CN (China)

Affiliation: Communication University of China

Abstract: “Shen Yang Case” is a prominent case in China’s #MeToo movement. The sexual harassment took place and led to the victim’s committing suicide more than 20 years ago in Peking university. When it was revealed online by the victim’s former classmate, it won the unusual attention of the media in China. Like its counterparts in the U.S. and other Western countries, China’s #MeToo movement was ignited in the social media. However, it may have its own features due to the different media ecology.

Taking “Shen Yang Case” as a case study, this study aims to explore the operating mechanism of intermedia agenda-setting theory in China’s #MeToo movement. It attempts to explore how China’s mainstreaming media, web portals and We Media frame the story of “Shen Yang Case”, and how different types of media set the agenda for each other, thus pushing forward China’s #MeToo movement.

This study focuses on the 129 reporting from 9 influential and mainstreaming media outlets, 67 reporting from 4 largest web portals: Sina, 163.com, Sohu and Tencent, and the top 30 articles on the Official WeChat Accounts in China from April. 5 to May 5, the period with high density of media coverage about “Shen Yang Case”.

Results showed that though “Shen Yang Case” was first revealed on social media, the mainstreaming media soon emerged as the agenda-setter by being able to provide the public with the relatively “authoritative” voices about the case. While framing the “Shen Yang Case”, different types of the media shows similarities such as seeking the “truth” about sexual harassment, placing priority to other themes instead of sexual harassment, and victim blaming, etc.

Nevertheless, in China’s #MeToo movement it is the various types of media that push the movement forward by framing the “unspeakable” stories about sexual harassment. And the mainstreaming media have been playing an even more important role by providing authoritative information. The interplay between the official opinion field and online opinion field gives vitality to China’s #MeToo movement.

Title: Title: Social Media Revolution; A comparative study on the role of social network sites in creating awareness among Arab and Non-Arab women about their fundamental rights

Session Type: Individual submission

Authors:

Name: Faiza Rafique

Email: faizarafique-at- fccollege.edu.pk

Country: PK (Pakistan)

Affiliation: Forman Christian College, A chartered university

Name: Dr. Safa Osman

Email: s.darwish-at- ajman.ac.ae

Country: AE (United Arab Emirates)

Affiliation: Ajman University

Abstract: Internet revolution has led to a more systematic, structured and convenient global communication. As Castells (2001), explains in his theory of a Network Society the reach of internet as 'limitless'. Social Networking Sites are most popular on the Internet, for the characteristics that distinguish them from websites, which encouraged Internet surfers from all over the world to use them increasingly, while the demand for websites has declined. Despite the severe criticisms to social networks, especially Facebook (which delineates that it has a negative and direct impact on the family, and contributes to family disintegration and collapse) there are those who see it as an important mean of development and cohesion between communities. In this study, we compare how Arab and Non-Arab women understand social networking analytics, the convergence of concepts and perceptions about their fundamental rights, cultural relativism and social practices. Social network sites (SNS) are web-based communication platforms that support socially relevant interactions among contacts on the site. According to Pew Research Center's Internet & American Life Project decided to examine SNS in a survey that explored people's overall social networks and how use of these technologies is related to trust, tolerance, social support, and community and political engagement.

We further intend to investigate the active and distinguished role of these social networking sites as a mean of effective communication and its' significant contribution in the revolutionary movements of Uprising, Cyber Activism and Cyber Feminism. The theoretical framework focuses on concepts of Cyber Activism and Social Networking Theory.

The current study aims to identify the impact of social network sites on Arab and non-Arab women by drawing on a survey from multinational, cultural & lingual environments that enrich the results and give us a chance for comparison according to education, age & nationality variables. A Survey sample of 200 Arab women and 200 Pakistani women is designed to explore the impact.

Keywords: Social Networking Sites, Arab and Non-Arab women, Cyber Activism, Fundamental Rights

Abstract: Social networking sites (SNS) have become the most popular modern communication channel for all categories of users. Studies on social networking sites have highlighted their potentialities in fostering social cohesion as well as increasingly becoming platforms that amplify voices in the everyday virtual lives of marginalized populations across social demographics of class, race, ethnicity, disability, gender etc. This study focuses on Nigeria, as it concerns its explicit patriarchal structures with long-standing traditional modes of control for women in real life spaces. Thus, it unpacks current trends of discrimination and differentiation based on gender identity in today's SNS as it concerns the building of networks, online engagement of social issues and social relations with other users. Against this backdrop, this study critically examines the nature of SNS communication as a modern platform which empowers and reinforces citizen's rights without gendered discrimination within emerging digital media technologies. Primary data will be generated from an quantitative online survey which will purposively pool together 100 women participants from across various social media platforms (Facebook, Twitter and Whatsapp). This primary data will be supplemented using content analysis of relevant extant secondary literature to explore the following set objectives; 1) women's perceptions of what gendered discrimination on SNS means to them 2) In what ways or forms are discrimination on SNS gendered against women 3) Is there a relationship between modern constructions of gendered discriminations on SNS and conventional patriarchal control in real life 4) in what ways does gender discrimination on SNS facilitate or hinder women expressions on social issues online. Consequently, drawing upon social dominance theory and the sociological discourse on institutional discrimination, the study reassesses to what extent gender differentiation serves as a major contributory factor to how men consistently transform and reinforce traditional cycles of patriarchy to real life modern SNS. In line with findings, this research recommends as remedial measures, the centrality of gender-specific human rights regulations by requisite state and administrators for SNS users, particularly across the online spaces of most developing nations where deeply-rooted gender discriminatory traditions persist.

Title: Media discourses on Women's Resistance through Territorial Conflicts: Examining Call the Midwife as a Neo-Feminism Text

Session Type: Individual submission

Authors:

Name: Shweta Arpit Srivastava

Email: shweta.srivastava-at- ndsu.edu

Country: US (United States)

Affiliation: North Dakota State University

Name: Charusmita Charusmita

Email: c.charusmita-at- my.westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster, UK

Abstract: Call the Midwife is a BBC period drama set in the period between late 1950s and early 1960s based on the memoirs of Jennifer Worth, who was a midwife working with a convent in East London during this time. The series fundamentally highlights women's socio-economic and political inequalities that are shown to go hand-in-hand with solidarity and empathy of the midwives from 'Nonnatus House'. The period depicts post-world war times that were often associated with first and second waves of feminism demanding equality for women. Call the Midwife, however, presents a narrative that is shown to be based in the periods of first and second waves of feminism but the presentation itself comes across as a neo-feministic text. The textual analysis of this TV series opens pathways to examine the role of communication in negotiation of feminine identity and human dignity. Disputed rights and contested truths were the highlights of the period depicted in this drama series that specifically underscored the sharp gender inequalities. This paper uses Mead's dialogical approach to analyze the drama as a neo-feminist text and aims to bring forth the underlying processes of identity formation and negotiation. This three-fold analysis focusses on the conversations of the midwives with Sister Julianne, the sister-in-charge of the St. Nonnatus House in the drama. First, the paper analyzes the diverse perspectives embedded in the socio-historic context of post-world war London. Second, it will explore multiple meanings of the conversations for Sister Julianne and other midwives. Third, the analysis will look at formation of individual identities through each character's perceived self-image that emerges through these conversations. The findings from this paper will contribute towards our understanding of the processes of identity formation and negotiation in the changing world. Due to emerging and fluid gender identities in the present times, individual rights are often disputed, and collective realities are blurred. In such a scenario, the findings from this paper will contribute towards the literature of gender identity and the practice of developing a community of dignity and respect.

Title: The feminisation of migration: A discourse analysis of news media texts on Zimbabwean women migrants in South Africa

Session Type: Individual submission

Authors:

Name: Joanah Gadzikwa

Email: gadzikwaj-at- yahoo.co.uk

Country: ZA (South Africa)

Affiliation: Monash University South Africa

Abstract: The media coverages of the Zimbabwean migration crisis in South Africa have intensified following the post 2000 politically induced economic downturn in Zimbabwe. It is no doubt that a string of these media narratives contribute to the formation of particular discourses about this particular migrant cohort. The subject of migration has been examined extensively in media studies literature. However, few studies have been devoted to the examination of the mediation of migration. In this paper we use a qualitative discourse analysis to examine the representations of Zimbabwean women migrants in the metropolis of Johannesburg. News articles were retrieved from the websites of the English newspapers headquartered in the metropolis of Johannesburg. A total of 20 news articles were, extracted, coded and classified into themes. Five themes emerged, namely; victimhood and vulnerability, institutionalised xenophobia, prostitution, criminalisation of migration and identity crisis. The combined benefits of a Foucauldian Discourse Analysis (FDA) and Gee's Framework were utilised to explore the intertextuality of the main theme of victimhood and vulnerability with extant literature.

Title: Female generations in (re)construction: intersection and power relations in the discourse in the Brazilian TV series "3 Teresas"

Session Type: Individual submission

Authors:

Name: Sílvia Góis Dantas

Email: silviagdantas-at- gmail.com

Country: BR (Brazil)

Affiliation: Universidade Tiradentes

Abstract: This paper presents some results of the doctoral research that analyzes the production of meanings about feminine gender and generations on the basis of the discourse of the series "3 Teresas" (BossaNovaFilms, GNT, Brazil, 2013-2014), whose two seasons were broadcasted on pay television channel and is still available via streaming.

This TV series presents the singularity of articulating the feminine protagonism in the intersection with the age issue, because the coexistence of three women named Teresa (grandmother, mother and daughter) composes the structural focus of the narrative and allows us to understand the transformations and permanences related to the representation of women in television fiction.

The episodes show how the three women deal with issues such as the invisibility of old women, ageism, sexism and female empowerment in contemporary everyday life in a Brazilian cultural context that values the young body a lot, despite of the growing population aging.

With a strong interdisciplinary character, the paper is a case study with a qualitative approach that builds a connection with the field of Communication (based on Cultural Studies, Latin American Research of Communication and Television), Sociology and Anthropology, through the gender and generations studies (based on G. Debert, A. Piscitelli, T. de Lauretis and A. McRobbie, for example), as well as linguistics, for their focus on discursive construction, using theoretical and methodological tools of the French discourse Analysis and the studies of language developed by Bakhtin.

The analysis of the feminine discourse in the intersection with the generational category identified different productions of meaning related to each age group and social role which significantly tension and deconstruct discourses that had been previously established around the chronological limits of each phase of female life - youth, adulthood, old age - which is depicted in the series. By articulating the axes of gender and generations in the series, this intersection refers to the multiplicity of social markers of difference and to the consequent power relations emanating from these categories. Thus, the discourse analysis of this series constitutes a privileged indicator of a moment of broad debate on issues such as population aging, female empowerment, respect for the plurality of generational identities and the representation of women in television fiction.

Title: Cherchez la Femme: Finding Feminism in Newspapers' Digital Archives ' The Cases of UK and Israel

Session Type: Individual submission

Authors:

Name: Einat Gedalya-Lavy

Email: einat.lavy-at- newcastle.ac.uk

Country: GB (United Kingdom)

Affiliation: Newcastle University upon Tyne

Abstract: This paper focuses on the unique challenges of digital archival search of gender and politics, using databases like LexisNexis and Gale, in two different countries and languages. It seeks to create measures which would reflect the permeation of feminist concepts and ideas into the mainstream media discourse over time. This is done as part of a larger project which examines the extent to which feminist ideas permeate into mainstream discourse and explain the nature of media coverage of women politicians running for Prime Minister in the UK and in Israel.

Applying the theoretical framework of developmental theory, as described by Inglehart and Norris (2003), this study examines whether and how changes occurring in the status of women in the UK and in Israel, as part of the structural and cultural transformations that this theory points to, seep into the political discourse surrounding women and politics over time. In both countries two women were realistic candidates / elected for premiership, 40 years apart. This offers a broad basis for comparison over time within and between two Western democracies, in a European versus a non-European context.

This research spans over 50 years of media coverage of gender and politics (1969-2019). The sample of British national dailies in digital archives include: the Daily Mail, the Mirror, the Telegraph and the Guardian. These newspapers were selected according to their format (broadsheets and tabloids), circulation and political orientation (left-wing and with right-wing agendas), while taking into account availability issues. For the Israeli case study, Yedioth Ahronoth newspaper was selected, as it is the most popular newspaper in Israel for most of the research period, and the only national daily that has been digitised for the entire research period.

For each newspaper, a keyword search is performed for each election year (overall 12 elections in the UK and 14 elections in Israel). The search covers all sections of the newspapers, and the results are classified according to their level of relevance to the keyword entered. The expressions (measures) chosen are ones relevant to feminism and the status of women. Such key expressions include: "feminism" and other variations of the word; "violence against women" (including keywords like domestic violence and sexual harassment); "gender" and related subjects, such as "gender gap," "gender (in)equality"; "the status of women"; items concerning women in the labour market, and the "glass ceiling". The "career" of each keyword will be mapped, that is when it first appeared, and when it disappeared from discourse, if at all. The salience of these measures in the media discourse reflects the extent to which the feminist movement serves as an important agent in

instilling cultural change. Preliminary results will be presented, offering pathways for carrying out archival research as a feminist practice.

An important contribution of this paper lies in raising awareness among feminist scholars and activists to the challenges that the digital era poses upon us, when we strive to uncover the impact of feminism on society's values and norms.

Title: LGBTQ+ people and their perception of gay-themed advertising

Session Type: Individual submission

Authors:

Name: Rein Demunter

Email: rein.demunter-at- vub.be

Country: BE (Belgium)

Affiliation: Vrije Universiteit Brussel

Abstract: Although gay targeted advertising has been an increasingly important area of interest within marketing research, the role of the representation of LGBTQ+ people in advertising has been underexplored from the perspective of gender studies. Despite society becoming more diverse, advertising has proven to still be heteronormative. Besides the overrepresentation of white, middle class males within gay-themed advertising, most depictions of LGBTQ+ tend to be gender-normative, hence heterosexualized. Consequently, current advertising representations do not reflect the existing diversity within the LGBTQ+ community. Notwithstanding the varying degrees to which LGBTQ+ people identify as gay and adhere to gender-norms, the LGBTQ+ community is targeted as if it is a homogeneous group.

Building on the idea that felt similarity with an advertisement and in-group/out-group membership are decisive factors when minority group members evaluate an advertisement, these implications concerning identity are most likely to influence LGBTQ+ people's reception of gay-themed advertisements. Knowing that marketers draw on various strategies to target gay consumers, going from covert to explicit gay-themed imagery, and that content analyses uncovered a lack of diverse representations of LGBTQ+ people, it may occur that gay-themed advertising produces non-target market effects even within the targeted gay market. This paper argues that integrating the inherent diversity of the LGBTQ+ community not only engenders more effective advertising strategies, but would also avoid the essentialist views and one-sided representations that currently characterize gay-themed advertising and reinforce ideas about hetero- and homonormativity.

Based on a mixed-method design using qualitative in-depth interviews (N=17) and a supplementary survey this research aimed to study how Flemish lesbians, gays and bisexuals (LGB) evaluate gay-oriented print and television advertising in mainstream media and to explore how these evaluations are affected by their level of gay identity. The findings of this study indicate that the level of gay identity only affected the evaluations by LGB respondents situated at the ends of the continuum, those with a high or low gay identity. For those with a more moderate gay identity, the desire for positive representations and assimilation into mainstream culture outweighs variations in level of gay identity.

The significance of the study is threefold. This study first provides valuable insight on gay targeted advertising in a situated context beyond the US (where most studies have been conducted so far). Second, by including the moderating effect of the gay identity and this within a Western European context where homosexuality is tolerated yet not completely accepted, this research contributes to current scientific knowledge on gay targeted advertising and the perception hereof within LGBTQ+

groups. Furthermore, seeking to bridge theory, research results and practice, suggestions are also made towards marketers in order to target different subsets of the LGBTQ+ community in an effective, non-essentialist way.

Title: When sexualized violence becomes part of your job description: organizational responses to online abuse of female journalists

Session Type: Panel Submission

Authors:

Name: Greta Gober

Email: greta.gober-at-ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: The risk of exposure to sexualized or gendered online abuse has been noted to be greater amongst women working in journalism and media (Fojo Media Institute, 2016; OSCE, 2016). To date, the majority of research on online abuse and misogyny has been approached from the perspective of freedom of expression and communication rights, as well as gendered - social and ethical implications of emerging technologies but rather fewer studies have addressed online abuse from an organizational perspective.

Working online is a vital part of every journalist's life in the contemporary media landscape and the fact that employers, media organizations and editors seem to assume little responsibility for protecting their employees from online abuse is worth investigating. A recent international overview of the challenges to the safety and protection of journalists, published by the International Women's Media Foundation, stated that most media organizations do not have formal policies on training employees in cyber-protection (IWFMF, 2016: 9). Tackling online abuse in the workplace is complicated by technological and organizational transformations that the media are undergoing. Blurred boundaries in relation to time, location and tools in the context of work, also blur the employers' responsibility to protect employees against online abuse. Furthermore, online abuse does not need to come only from the organizations' clients, i.e. readers and consumers of the media content, but can also be perpetuated by colleagues at work (Gorman, 2017).

The paper "When sexualized violence becomes part of your job description" will offer an investigation into organizational responses to online abuse of female journalists on the example of Sweden. This study will contribute to feminist media scholarship, by combining theoretical knowledge of gendered organizations, with Bourdieu's journalistic field theory and more broadly, phenomenology of being a woman in the media industry. Following Sara Ahmed the study follows the "feminist ear" methodology where I juxtapose the official commitment, if any, of media organizations to tackle sexualized online abuse of their female employees, with the employees' own experiences and understanding of what being a female journalist entails. Furthermore, the paper will explore what kind of help, in which circumstance and to whom, media organizations are willing to offer in responding to and challenging sexualized online abuse.

Title: Communication, Technology, and Human Dignity: Gender Issues in Indigenous Communication

Session Type: Individual submission

Authors:

Name: Chia Sui Sun

Email: suns-at- hotmail.com

Country: TW (Taiwan)

Affiliation: National Dong Hwa University, Taiwan

Abstract: The purpose of this research is to explore gender issues as seen in indigenous television news in Taiwan. The representation of gender in indigenous media is involved with gender norms, taboos, and cultural regulations in different ethnic groups and different indigenous societies. In the news production process, gender issues influence indigenous anchors and reporters in interview and broadcasting perspectives. Furthermore, gender bias affects the ethnic images produced and presented in indigenous news.

This research was carried out in order to understand what indigenous news professionals encounter when considering gender cultural space in the news production process and what gender issues are involved in indigenous media.

In the News production process, digital divide influences indigenous anchors and reporters in interview and broadcasting perspectives. Media as cultural means enhance cultural hegemony and also arise cultural resistance in different ethnic groups in indigenous society. Digital inequality reveals in voices which have been addressed to represent local people' opinions and represent cultural norms, taboos and cultural regulations in different ethnic society through journalists who can access to the ICT. In some cases, local indigenous people resist digital transformations and try to keep culture as its original forms and follow its own social life regulations. Journalists who equip with ICT have the power to represent local opinions; however, people who live in the indigenous tribes but without ability to access ICT often with strong sense to sustain indigenous culture as its own way and sometime against cultural hegemony through journalism. The ambiguous power of communication affects various aspects of indigenous social life. For example, gender role can be different when as reporters and as indigenous members. Journalists sometime expect the privilege to enter the cultural space to report the news which traditionally considers as gender taboos in the indigenous society.

Methodology of the proposed research includes (1) conducts interviews with indigenous journalists in 13 different ethnic groups to collect first hand data (2) Analysis includes documents with printed data in addition to multimedia text (online news databases etc). Theories for multiculturalism and feminism apply to examine different cases in different ethnic groups.

The research revealed ways gender and technology factors influenced news production in different ethnic groups. It identifies key gender issues and also provides suggestions to facilitate indigenous news production that embraces both gender awareness and multicultural gender images for human dignity.

Title: From bytes to backlash: Exploring online harassment of journalists from an intersectional perspective.

Session Type: Panel Submission

Authors:

Name: Sara De Vuyst

Email: s.devuyst-at-ugent.be

Country: BE (Belgium)

Affiliation: University of Ghent

Abstract: This study explores the intersectional aspects of online harassment in journalism. Previous research has shown that female journalists are disproportionately targeted by online harassment. As women have increased their presence in digital spaces in journalism, online harassment constantly reminds them that they are transgressing traditional gender boundaries and do not belong in the public sphere. It decreases their opportunities and participation in professional environments and silences their voices.

Considering that in digital spaces, not only misogynist but also racist, homophobic and ageist discourses can be expressed anonymously, the paper aims to provide an intersectional understanding of online harassment. The study will draw extensively on feminist theories on intersectionality (Crenshaw, 2015; Hill-Collins, 2015; hooks, 2014), technology and the internet (Shaw, 2014; van Zoonen, 2002), online hate speech, harassment and other intolerant discourses (Butler, 1997; Jane, 2014). In doing so, the research will contribute to the field of feminist media studies by “going beyond gender” as a single concept of study and focusing on how gender intersects with other social constructs, more specifically with age, sexuality, and ethnicity.

The central research question focuses on how journalists experience and cope with online harassment. This will be studied using in-depth interviews with a sample of Belgian journalists in different media companies, news beats and positions. Purposeful sampling will be used to select participants that have been confronted with different forms of online harassment. The sample will be diverse in terms of age, sexual orientation, ethnicity and gender. The interviews will be conducted between January and March 2019. The analysis will offer insight into the characteristics and dynamics of online harassment and the strategies journalists use to deal with this. Online harassment will be discussed in relation to the concept of a backlash that was introduced in 1991 by Susan Faludi to describe the counter-assault that occurs when women have made significant progress to obtain equal rights in society. The experiences and responses of the respondents to harassment in the digital sphere will be compared to previous studies on offline forms of harassment in newsrooms.

Id: 22668

Title: [Panel] Gendered online harassment in journalism: a challenge to the right of voice of female journalists [Presentation] The Digital Age scourge: Women journalists as targets of sexualised online abuse in the context of 'disinformation wars'

Session Type: Panel Submission

Authors:

Name: Julie Posetti

Email: julie.posetti-at- politics.ox.ac.uk

Country: GB (United Kingdom)

Affiliation: Reuters Institute for the Study of Journalism

Abstract: The newest and broadest threat facing women journalists is the global proliferation of online abuse targeting reporters and commentators online. This scourge has led the UN, the Organisation for Security and Co-operation in Europe (OSCE 2016), Reporters Sans Frontiers (RSF 2018), and other civil society organisations to recognise the problem, commissioning research into its impact, and calling for actions and solutions.

The expectation that journalists be actively embedded on social platforms like Facebook and Twitter to facilitate the direct audience engagement that is now integral to journalistic research, production and content dissemination (Posetti 2013) has placed women media workers on the frontline of a massive problem. In addition to threats of sexualised violence - including rape and murder - the 'pile on' effect (organic, organised, or robotic mass attacks against a person online) worsens the impacts of online harassment experienced by women media workers, along with their female audiences and sources (Posetti 2017). This problem is chilling the media freedom rights of women, exposing them to increasing physical safety risks, causing serious psychological injury, impacting on the functionality of newsrooms, pushing some women offline (or behind pseudonyms), and driving some women from the profession altogether.

Another hallmark of this online abuse of women media workers (and others producing verifiable information in the public interest across a range of digital platforms) is the use of disinformation tactics – lies are spread about their character or their work as a means of undermining their credibility, humiliating them, and seeking to chill their public commentary and reporting. In some instances, journalists face cyberattacks designed to reveal their sources, breach their privacy to expose them to risk, or access their unpublished data. More recently, computational propaganda (Woolley & Howard 2017) has increased the risks. Frequently, these attacks involve gendered elements and threats of sexual violence. Concurrently, AI technology is being leveraged to create 'deepfake' (1) porn videos and other forms of content designed to discredit women journalists.

The paper will present cases involving the specific targeting of women journalists by state and corporate actors engaged in 'disinformation wars' deploying the tactics described above (Posetti 2018). The presented cases will include: the targeting of Independent Philippines news site Rappler.com; the targeted online harassment campaign against a prominent editor Ferial Haffajee; the case of a journalist Rana Ayyub who was targeted by the government of India; the case of a

Finnish investigative journalist, Jessikka Aro, who is a target of an ongoing ‘troll factory’ campaign that began in 2014.

1) The term ‘deepfake’ is a portmanteau of ‘deep learning’ and ‘fake’. It involves AI technology in the creation of fraudulent content, sometimes of a pornographic nature, that is virtually undetectable. It is used in cyberattacks to discredit people, including journalists.

Title: Aproximación a la configuración del discurso travesti y, la representación en el sistema mediático

Session Type: Individual submission

Authors:

Name: Yvets Morales Medina

Email: yvetismorales-at- gmail.com

Country: BR (Brazil)

Affiliation: Estudiante Doctorado - Universidade Federal Rio Grande do Sul - UFRGS

Abstract: El presente trabajo busca problematizar la construcción de discursos de sujetos travestis, que operan en la contradicción de cuestionar la norma hetero binaria, al mismo tiempo que reproducen códigos de feminidad impuestos por las normas de la sociedad moderna. Interpelamos las lógicas de representación que reproducen los sistemas de comunicación tradicionales, modelos de exclusión que legitiman la existencia del imperativo heteronormativo (BUTLER, 2002, 2006). Así durante el proceso de investigación con personas travestis en Porto Alegre (2017 – 2019), fue posible observar la configuración de discursos que se construyen en los procesos de transición de sus cuerpos y subjetividades.

Es posible observar los modos en que operan los dispositivos de disciplinamiento y regulación (FOUCAULT, 2005) sobre los cuerpos, para reflejar los padrones de normalidad y abyección. De este modo los sistemas mediáticos hegemónicos, cumplen su rol normalizador, al representar los cuerpos travestis como “anormales y enfermos”, sujetos marginalizados que no importan para la sociedad. Así encontramos marcadores que evidencia la repetición permanente de modelos de discriminación, exclusión, e invisibilidad.

Cuando realizamos el análisis del discurso en las noticias publicadas sobre actos violentos en contra de las travestis (texto, imagen, tamaño de la noticia, narrativa, enfoque), es posible observar que los medios están colocando a estos sujetos en lugares de marginalidad, las violencias son naturalizadas, y las normas legitimadas, entonces nos encontramos con sujetos descartables, con cuerpos vulnerables que no importan y subjetividades ignoradas. Es posible reflexionar que esos modos de representación quitan la capacidad de agencia de los sujetos, porque los revictimizan, en ningún momento se aborda al sujeto multidimensional que tiene sueños, afectos, anhelos, desafíos, deseos de vivir.

Según el informe de 2016 del Observatorio de Personas Trans Asesinadas – TTM (siglas en inglés: Trans Murdering Monitoring Project), la región de América Latina y el Caribe concentran el 78% de los homicidios denunciados entre 2008 y 2016. De este porcentaje Brasil es responsable por el 39, 6%. No se puede ni se debe culpar al sistema mediático de estas cifras abrumadoras, sin embargo, es menester analizar e interpelar que cuando colocan la problemática trans, travesti en condiciones de subalternidad y desigualdad, mediante discursos de estigmatización refuerzan en el imaginario social la existencia de sujetos marginalizados, que se vinculan a categorías de anormalidad, enfermedad, incongruencia y victimización.

Sin embargo, durante nuestra investigación, fue posible acompañar las elecciones 2018 en Brasil, y acercarnos a la configuración de la esfera política de las personas trans, travestis, transexuales, con la participación de 53 candidatas a diputadas estatales y federales, y una candidata a senadora. Para volver a tensionar las lógicas del sistema central moderno, y observar que el

trabajo sostenido de resistencia y organización les permite ocupar y disputar espacios de poder político.

Title: Media portrayal of women and socio-political change: A case study of Nepal

Session Type: Individual submission

Authors:

Name: Samiksha Koirala

Email: sameexa-at- gmail.com

Country: NP (Nepal)

Affiliation: College of Journalism and Mass Communication

Abstract: The study examines the media portrayal of women to study the relationship between media and society in Nepali's context. Through a content analysis of 28 issues of newspapers of 2004 and 2014, the study investigates how Nepal's social changes were represented in the gender portrayal of the newspaper. These particular two periods were selected to compare two different socio-political situations. In the year 2004, the Maoist conflict was at the peak and the country was going through political instability. However, in 2014, the political situation was stable and the media were comparatively free.

Theoretically, the study is guided by Marxist media theories, mainly cultural hegemony. The analysis of the findings has also been discussed in the backdrop of equity and intersectionality feminism.

The findings of the study show that news stories of Nepali women as presented in the Nepali broadsheet dailies are influenced by the political change in Nepal. The data indicate that there are shifts from stereotypically traditional gender roles in both the private and public sphere.

Nevertheless, there are also stories supporting the patriarchal status-quo in both time periods.

Through the intersectionality theory, the study explores how the period of political instability and conflict can give the opportunity to marginalized rural women to be in the centre. It is also argued that despite the positive change in society, women's voices were often shut down. For example, although women occupied one-third of the parliamentarian in 2014, only four percent of politicians interviewed in the news stories were women.

The study concludes that despite the change in the socio-political sphere, there is no remarkable change in the media discourses on the modes of gender representation in Nepal. Although there were few changes, dominant modes of representation still reflect, reconstruct and largely reconfirm traditional stereotypes and power relations of Nepal's patriarchal society.

Title: "I'm not one of those maids": The use of smartphones for stigma management among Indonesian helpers in Hong Kong

Session Type: Individual submission

Authors:

Name: Barui Kurniawan Waruwu

Email: ruy_waruwu-at- yahoo.com

Country: HK (Hong Kong)

Affiliation: City University of Hong Kong

Abstract: Abstract

This study aims at investigating how Indonesian domestic helpers in Hong Kong actively use smartphones as a tool to negotiate spoiled identity. For millions of poor women from Indonesia, working as migrant helpers is a palatable option to escape endemic poverty. Despite the economic capital they accumulate abroad, they remain devalued and marginalized in Indonesia because they are unable to physically nurture their children and their occupation is considered “socially dirty” (Ashforth & Kreiner, 1999). Based on their deviant mode of motherhood and the “dirty work” (Hughes, 1951) they engage in, they become a stigmatized group of women.

Identity research posits that individuals have a strong desire for a respectable self-definition, which is a social product as it requires validation from others (Tajfel & Turner, 1986). For stigmatized individuals, validation might be withheld which leads to frustration and precarious identity (Goffman, 1963). Unlike other stigmatized individuals who manage their stigma through everyday interactions, migrant domestic helpers lack regular face-to-face interaction with their original community. In the absence of physical encounters, their search for recognition becomes more complicated.

Compared with their predecessors, migrant domestic helpers today have access to more advanced communication technologies. As Indonesia experiences rapid diffusion of mobile internet, permanent connectedness has become the norm among domestic helpers and their families. Studies have shown that mobile phones facilitate ubiquitous connectivity (Ling, 2012) and connected presence (Licoppe, 2004) within the intimate sphere which enable ritualized interactions to occur. This means domestic helpers have the opportunities to negotiate their absence from home and alleviate the impacts of family separation on their identity. Smartphone technology also offers opportunities for impression management and self-presentation through various social media platforms. How have these technological advancements changed domestic helpers’ experience with migration and stigma?

This study adopts participant observation and in-depth interviews with 30 Indonesian domestic helpers in Hong Kong, where approximately 180,000 Indonesian women work as maids. In addition, to understand the use of social media by the participants, the author will perform online ethnography by observing participants’ activities on Facebook to identify the identity narratives they create as remedies for stigma.

Based on the concepts of connected presence and stigma management, this study hypothesizes that Indonesian domestic helpers benefit from smartphone communication as it creates stable platforms for elaborate and intensive performances of roles and identity negotiation. Connected presence softens the spatial and temporal demands on mothering and intimacy which, in turn, justifies the absence from home. Smartphone also offers the opportunities to convert their economic capital into symbolic capital in the form of respect and legitimation that they can use to sustain respectable self-image. Finally, social media becomes a stage where interactions can be seen as on-stage performances, carefully orchestrated to elicit positive impressions from the audience and buffer themselves against the stigma of "dirty workers". By investigating how domestic helpers use smartphones, we can understand the consequences of mobile technology on the ways we interact with intimate others and what it means to live with stigma in the smartphones era.

Title: THE REPRESENTATION OF MASCULINE IDENTITY IN THE ADVERTISING OF COSMETICS

Session Type: Individual submission

Authors:

Name: MARTA PONGIDOR

Email: marpon13-at- hotmail.com

Country: BR (Brazil)

Affiliation: Faculdade Casper Líbero, São Paulo

Abstract: This work aims to study how contemporary man is represented in advertisements for cosmetic products in Men's Health magazine from different countries, and how, from the representation systems, a notion of contemporary masculine identity is pointed out. We focused our research on 4 ads from Men's Health magazine, published between February 2010 and September 2016, in different countries where the magazine is published. The theoretical reference is anchored in Cultural Studies, aiming at the study of cultural aspects of society. And in this context, we adopted the theoretical-methodological contribution of the Circuit of Culture of Paul du Gay et al and theirs proposal for reflection on the five axes that form part of this circuit as an analytical perspective of our work: Identity, Representation, Consumption, Production and Regulation . (Du Gay et al, 1997). We also discussed the role of advertising and its relation to the dictatorship of good form and the construction of perfect bodies, as well as the concepts of globalization and world culture under the theoretical support of Lipovetsky (2008, 2013) and Renato Ortiz (1994) The study allowed us to conclude that among the ads analyzed there is a similarity in the representation of the masculine that levels the identities and creates masculine stereotypes that serve the interests of the companies.

Keywords: Cultural Studies. Representation of masculinity's identity. Communication. Advertising.

Title: The Shapes of Gender-based Hate Speech in Latin America: Contributions to the global debate

Session Type: Individual submission

Authors:

Abstract: This study investigates the constituents of gender-based hate speech in Latin America, and their respective interconnections among political actors, and intersection of human rights, laws, and national policies. As such, there is no widespread common definition of hate speech in the Latin American context. The most advanced understanding of this concept in a policy way seems to be centered on the extensive efforts of the Council of Europe for combating different forms of hate in the European context. Hate speech is understood as a harmful communicative action, which supports and creates prejudice and discrimination, based on intolerance. This type of discourse tends to target certain individuals or groups of people, relying on certain social and demographic markers, such as gender, ethnicity, sexual orientation, religion. This study focuses on the features of hate speech affecting and directed toward women and sexual minorities. Due to the lack of studies regarding this issue in the Latin American context, the paper portrays the qualitative dimensions of gendered hate speech in Colombia and Guatemala. Regarding the legal frame, national and international soft law and hard law regulations and public policies which directly or indirectly address this issue were gathered. Furthermore, 16 in-depth semi-structured interviews with civil society organizations and NGOs were conducted to portray the nature of gendered hate speech. The analysis shows that hate speech is a non-isolated discourse, is linked to historical structural power relations and the persistent problem of injustice. The state and its institutions were identified as one of the principal actors that reproduce and spread hate on the basis of prejudice and ignorance. The principal functions of hate speech identified were the justification and reproduction of the use of violence against women and sexual minorities. Through all its mechanism and functions hate speech damages democratic processes and the pursuit of an egalitarian society. Unlike the European context, “hate” was identified as an inadequate terminology for the Latin-American countries, due to the understanding of hate as “an abstract feeling”. The concept of hate speech was classified and understood under the terms of prejudiced discourse, discriminatory speech, and sexist speech. In spite of recognizing the importance of the law, most of the CSOs and NGOs leaders argued the need for creative solutions beyond the law in Latin America.

Abstract: After the end of the violent and genocidal period that was World War II and the emergence of mass destruction weapons, it became clear the need for mobilizing efforts towards the assurance of world peace and the human race survival. For this matter, a pact between several governments was sealed, creating thus the United Nations. A few years later, the Universal Declaration of Human Rights was produced and signed by these countries, stating every fundamental indisputable right that each person has, despite their social origin, language, religion, race or sex.

Issues related to 'sex' are also present in the preamble of the Declaration, as it states that the peoples of the United Nations reaffirmed their faith in the "(...) equal rights of men and women (...)". Indeed, the fact that gender equality is mentioned in the beginning of such document shows its importance, which has been increasing within the UN itself, having become the fifth Sustainable Development Goal. Matters concerning this topic are addressed since 2010 to the United Nations Entity for Gender Equality and the Empowerment of Women, also known as UN Women. Created in 2014 as an "invitation for men and people of all genders to stand in solidarity with women to create a bold, visible and united force for gender equality", HeForShe was one of the first and widely known UN Women's movements. In the face of a mobilization campaign signed by one of the largest and most influential international mechanisms and the opportunity of analysing its development in two different countries, this paper proposes to map the communication strategies used in the HeForShe campaign in Brazil and in Spain to promote gender equality.

As additional objectives, it is seen the need to investigate how HeForShe takes action in social mobilization, to identify what publics each edition aims and to compare them, promoting a critical thinking toward the reasons for a possible difference between the strategies in HeForShe Brazil and HeForShe Spain.

The reasons for the choice of Brazil and Spain include the first one being the native country of the authors, as well as the 95th on the Gender Gap Index of the WE Forum, while the other one not only being the host country of IAMCR 2019, but more importantly a benchmark for Gender Studies, as seen by the amount and quality of its postgraduate programmes in said area. The methodology chosen for this research was Fairclough's Critical Discourse Analysis, as it utilizes a three-dimensional perspective (text, discursive practice and social practice) to gaze at social change.

It is expected that the results will show difference at some level between the development of the HeForShe campaign in each country, with some cultural justification, may it be in an academic level or related to the characteristics of the average population.

Abstract: In the past couple of years, feminist hackers have built feminist hackerspaces, discussion lists, bots, tech collectives, and servers, among others. While initially they articulated their practice through the prism of hacking, they have now moved to understanding what they do through the concept of feminist infrastructure. In this presentation, I explore three different articulations of feminist infrastructure. First, I investigate the ways in which feminist hackers conceive of the term, the reasons why they build them, and the values embedded in them. Second, I propose the notion of feminist techies as infrastructure to enlarge the repertoire of feminist infrastructure. To do so, I build on the concept of people as infrastructure conceptualized by AbdouMalik Simone (2004). Simone expands our understanding of infrastructure from one which is usually characterized by physical terms such as systems of highways, pipes, wires, or cables (Anand 2017; Larkin 2013; Star 1999; von Schnitzler 2016) to one which focuses on people's activities in the city. By being connected technically and socially feminist hackers create an infrastructure in and of themselves. Moreover, feminist infrastructure does network different parts of the world together including Brazil, Mexico, Netherlands, and Spain, among others. They are thus not the sole remit of feminist techies from the "global North". They in fact constitute a transnational network of feminist who gather at feminist hacker conferences and other events. Third, by developing, maintaining and repairing infrastructure, feminist hackers produce and reproduce feminist techies' lives. This echoes Julia Elyachar (2010) and Brian Larkin's (2013) understanding of infrastructure as constitutive of subjectivities and ways to live in the world. Methodologically, this presentation is based on mixed-methods. I conducted semi-structured interviews with (trans)feminist hackers at feminist hacker meetings and gatherings. I also consulted digital archives of (trans)feminist tech meetings held on feminist servers, and I made participatory observation.

Title: Women's Rights Campaigns in Lebanon: A Bakhtinian-Foucauldian Approach to Voice and Visibility

Session Type: Individual submission

Authors:

Name: Christy Mady

Email: christymady-at- gmail.com

Country: LB (Lebanon)

Affiliation: Notre Dame University - Louaize

Abstract: Although women's movements in Lebanon date back to the 1920s, well before the country's independence in 1943, and although Lebanon was one of the first in the Arab world to grant women the right to vote in 1953, its progress in the area of women's right was hampered by the 1975 – 1990 civil war. Lebanon ratified the Convention on the Elimination of all forms of Discrimination against Women (CEDAW) on April 16, 1997 with a number of reservations that may be considered in violation of the spirit of the convention. These reservations leave women at the mercy of the country's personal status codes derived from its 18 religious sects and its lenient, if not absent, laws on marital rape and domestic violence. It was only in August 2017 that article 522, which allows a rapist to escape punishment in case he marries his victim, was repealed by parliament. Rape, nonetheless, is still stigmatized and rape victims are often blamed, shamed and deprived of the right to live in dignity.

Campaigns advocating women's rights in Lebanon have been amply discussed, and domestic violence and rape are recurrent topics both outside and within academia (Sabat, 2010; Hejase et. al., 2015; El Hage, 2015; Allouche, 2015; Daou, 2015; Salameh, 2014).The majority of these studies, however, concentrate either on advocacy and legal rights or on the physical and psychological implications on victims, particularly women. Neither approach examines advocacy campaigns from a theoretical perspective, more specifically from a Bakhtinian-Foucauldian angle that problematizes the interconnections between voice, visibility and gender.

This paper bridges these gaps in the scholarly literature through an in-depth analysis of the most recent domestic violence and rape campaigns. Using Bakhtin's heteroglossia and Foucault's moral principles of refusal, curiosity and innovation, I will argue that these campaigns formulate heteroglossic discourses that consolidate the social field of women through their silence and visibility. Identifying heteroglossic disturbances as fundamental to the production of the discourse on gender and the propagation of its perception, the study also attempts to show how women's voice is generated through a particular staging of forces. The main case study for this paper will be the campaign entitled Shame on Who?, launched in November 2018 by Abaad, one of the most prominent non-profit associations advocating gender equality in the Middle East and North Africa region.

Utilizing a qualitative research design, individual in-depth semi-structured interviews will be conducted. Respondents will include male and female academics and activists. The gendered distribution of the respondents ensures the inclusion of both the male and female perspectives.

Applying the chosen theoretical lenses to activist campaigns will offer valuable perspectives on the dynamics played out between the elements of voice, visibility and gender and offer insight as to how these dynamics can be optimally used to analyze and generate future activist campaigns.

Title: CULTURA POPULAR Y RESISTENCIA EN FEMENINO: CONSTRUYENDO GENEALOGÍA FEMINISTA EN LA TELEVISIÓN ESPAÑOLA

Session Type: Individual submission

Authors:

Name: Laura Castillo-Mateu

Email: laura.castillo-at- uji.es

Country: ES (Spain)

Affiliation: UJI

Abstract: El marco de reconocimiento establecido respecto a la representación de la violencia de género (de cualquier tipo: directa, estructural o cultural) sigue favoreciendo, en el mejor de los casos, la representación de mujeres desprovistas de agencia y necesitadas de tutela por parte del sistema. En el peor, estas representaciones siguen incidiendo en el drama de la violencia directa y en los aspectos más trágicos y particulares de la víctima, a la que se sitúa en un continuo estado de “injurability” (Judith Butler). El objetivo de nuestra propuesta es identificar las estrategias narrativas contrahegemónicas de la cultura popular en que se representa a la mujer en contextos de violencia cultural y estructural para indagar en cómo se consigue superar las representaciones re-victimizantes e introducir una visión de sujeto femenino activo dotado de agencia y capacidad para transformar esos contextos. Existe además una particularidad que venimos explorando y que tiene que ver con la ambientación histórica de las series de televisión protagonizadas por mujeres en la ficción española. Sostenemos que la contextualización temporal elegida para la construcción de tales relatos implica el ejercicio de revisión histórica del legado colectivo respecto a la construcción de “lo femenino” y sus espacios. Este ejercicio retrospectivo sitúa a las mujeres en el centro del relato de ficción y permite repensar, recuperar y representar tipos de feminidades que subvierten los clichés heredados y prototipos de mujer del siglo pasado. En este sentido proponemos analizar casos en las que tales series historicistas de entre los años 2008 y 2017 han reproducido los discursos públicos feministas de la última década y han configurado, de esta manera, representaciones genealógicas sobre las cuestiones de la resistencia, el empoderamiento o la sororidad, entre otras.

Title: The Limits of Progressive Femininity: A Semiotic Analysis of the Depiction of Female Desire in 'Four More Shots Please'

Session Type: Individual submission

Authors:

Name: Damayanti Saha

Abstract: The dominant discourse of male friendship, recreation, and love and sexuality, in popular culture has recently been contested by the emerging genre of adult female friendship through films with all-female casts, that deal with the lives of a group of women individually, and their pursuit of happiness collectively. While not an entirely recent phenomenon in the West, it has found expression in Indian popular culture as recently as 2018, as portrayals of female friendships in the past revolved only around the problems of girlhood, and targeted a teenaged female audience, taking for granted marriage and romance as the default trajectory and main concern of an adult woman's life.

In this context, 'Four More Shots Please' (FMSP) is one of the first mainstream portrayals of Indian women who enjoy multiple bonds of female friendship and as a result of being affluent or professionals, enjoy some amount of agency in terms of what they wear, how they speak, where they go, and who they talk to. For the English educated middle class female audience, this is one of the first instances where sexual desire of Indian women has attained unequivocal visibility.

The show centres around four women with essentialised identities of 'divorcee mother', 'bisexual gym punk', 'ambitious journalist', and 'fat woman'. Although vastly different characters, their commonality lies in their relationship with sexuality, which for all of them is an exaggerated portrayal of desire, along with replication of selective masculine traits such as drinking, aggression, and swearing.

Conservative criticism of the show, concerned merely with the protection of women's purity, honour, and chastity, has created a unquestioned legitimacy of FMSP as a "progressive" feminist representation of sexuality, desire, freedom, queer identity, marriage, and body image.

De Lauretis (1984) talked about female subjectivity as being defined solely by what is seen as the absence of maleness, and thus, revolves around sex. Johnston (1973) proposed that the woman in film is a symbol for the projection of patriarchal ideology rather than a coherent presence.

Thus, employing a methodology of critical semiotic analysis, we contest the legitimacy of FMSP as a feminist text, and explore how the construction of even a progressive femininity operates under the male gaze and is inextricably tied to voyeurism, fetishism, and narcissism, as female spectators of the show are expected to identify with the object of desire. We analyse visual and linguistic symbols for the 'pornification' of female lives, the centrality of the sex act, and the heteronormative and fetishistic portrayal of lesbian sex. We find that male hegemonic discourse limits even the most extreme popular imagination of female liberation in Indian popular culture. Here, we base our findings on the conceptual frameworks provided by Mulvey (1975), Dworkin (1987), and Levy (2005).

We argue then, that such a critique of FMSP is crucial in highlighting the shortcomings of the vocabulary presented by popular feminist discourse to describe the liminality of female subjective experience, dissatisfaction, and repression of the middle class English educated woman in a rapidly modernising, but socially static India.

Title: La representación de la mujer en la publicidad radiofónica en España. Un análisis bibliográfico de la denigración femenina.

Session Type: Individual submission

Authors:

Name: Almudena García Manso

Email: almudena.manso-at- urjc.es

Country: ES (Spain)

Affiliation: Universidad Rey Juan Carlos

Abstract: El objetivo principal que se propone en este trabajo es el de demostrar cómo la representación de la feminidad sigue manteniendo el trasfondo tradicional patriarcal, la recurrencia a los estereotipos tradicionales del “ser o estar mujer” tal y como se muestran en las escalas de Mac Arthur y Resko (1975), Furham y Tohmson (1999) y Hurtz y DurkinK (1999). Esta manera de representar a la mujer nos evoca al cómo actúan las microviolencias de género o micromachismos (Bonino, 2006). Es así puesto que posicionan a la mujer en situaciones de vulnerabilidad y clara desigualdad, dan pie a interpretaciones negativas de las mujeres de manera generalista y forman parte de los contenidos en el aprendizaje por socialización. El daño de esas microviolencias no es mínimo como parece dar a entender el prefijo micro. Se denominan así porque lo que representan es algo común, cotidiano y asumido por los receptores por la aculturación y socialización machista a la que han sido expuestos durante el proceso de su auto identificación de género o performatividad de género (Butler, 2002).

El conjunto de estrategias y variables que se utilizan en la construcción de las identidades femeninas nos pueden servir como medidores de la “infoxicación machista” (García Manso, 2017), de ahí la necesidad de conocer las formas en las que se dan y sus combinaciones, siendo útiles no sólo en materia de discriminación de género, sino también para analizar mensajes publicitarios que discriminan a las mujeres como colectivo. Contenidos que derivan en actos y formas de denigrar a las mujeres, aportando un grado de infoxicación y microviolencia considerable.

La investigación realizada consiste en una revisión bibliográfica de la denigración de la mujer en la publicidad. La denigración publicitaria supone una vulneración de uno de los principales principios recogidos en la legislación española en materia de publicidad pero también en la Constitución como es el de igualdad. Por tanto, el principal interés de este trabajo es establecer unos parámetros que nos ayuden a medir los grados de infoxicación machista y las microviolencias de género, además de hacer visible el acto de denigrar a las mujeres en los mensajes publicitarios radiofónicos. Denigrar es comprendido en este trabajo como la última manera de hacer lo más negativamente posible la representación de un sujeto, esperando que sea comprendido, aprendido e interiorizado de esa manera por aquellos que reciben esa interpretación, incluyendo al sujeto representado. Esto también nos permitirá establecer propuestas y estrategias que luchen y minimicen el machismo en las ondas publicitarias.

Affiliation: CICOM - Universidad de Costa Rica

Abstract: Este estudio analiza las brechas de género en la Industria de Producción Audiovisual Publicitaria (IPAP) en Costa Rica haciendo una lectura interseccional (May, 2015) de las experiencias de mujeres en el gremio. Esto permitió analizar el contexto de la producción publicitaria y las relaciones de opresión/privilegio vividas por ellas, enfatizando en sus estrategias de negociación y resistencia frente a la dominación.

Los estudios sobre participación de las mujeres en la industria publicitaria regularmente no han prestado atención a las productoras audiovisuales. Se consideró que esta ausencia de estudios que aborden la participación de mujeres en la IPAP se debe a lo que se denominó la opacidad de los productos publicitarios; esa forma en que se enmascara, al menos en Costa Rica, al anonimato que tiñe los equipos de producción audiovisual publicitaria.

Para el estudio se empleó metodología cualitativa y entrevistas a profundidad de tipo semiestructurado para conocer cómo han vivido la brecha de género en la IPAP: sus inicios en la industria, sus motivaciones para entrar y permanecer en ella y el significado de ser productoras audiovisuales. Se entrevistó un total de 20 de mujeres.

En términos generales, la postura de las entrevistadas tiende a naturalizar la violencia simbólica que se produce en el ámbito laboral. A nivel epistémico, logran identificar los rasgos de la desigualdad, desde los más epidérmicos hasta los más complejos; aunque no todas hablan de desigualdad de género, si logran identificar “actitudes machistas”, tienden a verse como problemas individuales y no sistémicos.

Ellas desarrollan una narrativa de la experiencia en la que tienden a colocar su agencia individual como mecanismo de superación de la desigualdad. Coinciden en que una de las formas de superar dicha desigualdad es que haya más mujeres en puestos de toma de decisión. La dimensión ontológica expresada por May (2015) se manifiesta en la complejidad de la relación entre el reconocimiento de la opresión y la necesidad de mostrarse como sujetos autónomos y agentes de su propio desarrollo individual.

En las narraciones se evidencian las contradicciones con que las mujeres se enfrentan a las dinámicas de opresión/privilegio. Ellas no siempre logran verse como un colectivo o darle una dimensión política a lo que viven individualmente. Esto da fuerza a la agencia individual pero despolitiza las demandas de reconocimiento y visibilización dentro de la industria.

Las resistencias que plantea May (2015) se materializan en la narrativa de las entrevistadas como una necesidad de transformar la situación de las mujeres en la IPAP, aunque no siempre con la conciencia de transformar la IPAP en sí misma.

Title: Feminismos después del #8M 2018 en los medios mayoritarios españoles: entre la normalización de la "celebritización" y la estigmatización del feminismo de clase

Session Type: Individual submission

Authors:

Name: núria araüna

Email: nuria.arauna-at- urv.cat

Country: ES (Spain)

Affiliation: Rovira i Virgili University

Abstract: La demostración de fuerza del feminismo en España, principalmente en la jornada de huelga y manifestaciones del 8M de 2018 (y las previstas para 2019) y en las movilizaciones contra la sentencia del caso de La Manada, ha consolidado la relevancia que el debate sobre la desigualdad de género venía tomando en la esfera pública y los medios de comunicación. Postulados genéricos del feminismo interclasista parecen sustituir, en formas más o menos populares, al “backlash” antifeminista o postfeminista hegemónico desde los 90 y a principios de siglo, y una sensibilidad feminista parece guiar la perspectiva de los discursos mediáticos; entre ellos las piezas periodísticas. Cabe apuntar que la crisis de los medios de comunicación tradicionales ha abierto una brecha por la que se han puesto en marcha nuevos medios de base cooperativa dedicados a cuestiones feministas (Hunter y Di Bartolomeo, 2018), además de numerosos medios de tipo generalista que se definen de forma abierta como feministas. A su vez, sin esta presencia mediática costaría comprender el alcance masivo de las últimas manifestaciones tanto por la igualdad de género como en la expresión de solidaridad contra la violencia machista. La activación del ciclo de movilizaciones políticas desde el agravamiento de la crisis económica (el 15M), el desarrollo de las tecnologías digitales, y algunos intentos de restringir los derechos de las mujeres (particularmente, la propuesta de reforma de Ley del Aborto de Gallardón) podrían ser algunos de los factores explicativos del cambio cultural que se ha vivido en torno a la idea del feminismo. De palabra demonizada, así pues, el feminismo ha pasado a ser una etiqueta recuperable e incluso legitimadora del medio que se le adscribe.

Esta investigación se aproxima a la redefinición mediática del feminismo en tanto movimiento a través del análisis de cómo los medios periodísticos generalistas de más repercusión en Internet y que a la vez mantienen su versión diaria en papel (El País, El Mundo y ABC) en contraste con nuevos medios de comunicación digitales aparecidos después de la crisis (Contexto, El Salto, La Marea) han abordado las movilizaciones recientes, y las estrategias que han utilizado para representar tanto a las activistas como a sus reivindicaciones y acciones. La hipótesis es que si se ha dado un cambio cultural amplio en relación a la percepción social del feminismo, incluso los medios de más prestigio o autoridad previa al movimiento habrán asumido algunas de sus premisas. Además, se observan las controversias que se negocian en la prensa diaria, que es el principal espacio de mediación de las experiencias cotidianas. A grandes rasgos, la representación mediática mayoritaria en 2018 representa al movimiento como un grupo mayormente compuesto por mujeres muy diversas, que se presenta de forma positiva cuando es esgrimido por celebridades de manera individualizada pero que, en cambio, tiende a estigmatizarse como peligroso e incluso violento

cuando se actúa como un movimiento de masas y de base, y especialmente cuando cuestiona a las instituciones del estado (poder judicial).

Title: Against discrimination: Strategic use of technology amongst homeless women

Session Type: Individual submission

Authors:

Name: Hoan Nguyen

Email: hoannguy-at- usc.edu

Country: US (United States)

Affiliation: University of Southern California

Abstract: This study investigates technology use by a marginalized group of homeless women in the Skid Row neighborhood in downtown Los Angeles. As the notion of “home” is more often associated with women, it is crucial to study homeless women’s gendered experience and their strategies employed to resist social discrimination upon their identities (Gonyea & Melekis, 2017). However, to best of our knowledge, none of previous research investigated role of information communication technologies, such as mobile phones and the Internet, in the lives of homeless women. This research aims to address the gap in extant literature, emphasizing gendered experiences that precipitate women’s engagement with technology and define their technology use patterns. We conducted a grounded field research in Skid Row – America’s homeless capital – over the course of four months and interviewed 13 women living on streets or emergency shelters.

Applying the perspective of intersectionality (Crenshaw, 1989), we found different forms of social marginalization and discrimination the homeless women experience. Specifically, they faced stigmas from their own family and friend circles, and the wider society upon the homelessness identity. The situation was compounded by the politics of gender and race: The women, especially colored women, experienced physical abuses, violence, and harassment by men, and even police, passers-by, and other homeless fellows. Further, social marginalization led to spatial marginalization, as female residents faced difficulties in finding good locations for their tents on the street.

Facing multiple forms of social marginalization, the homeless women harnessed affordances of mobile devices, social media platforms, and the Internet as a coping mechanism. Our field research revealed that they engaged with social media and the Internet to mitigate their marginalized status, and empower themselves in many ways. First, having concealed their homelessness status from their families and friends, the individuals used social media, particularly Facebook and Instagram, to present an extended valued identity online, by posting decent photos of themselves, positive Facebook status updates, or their voluntary community works. Second, mobile Internet, specifically Facebook Messagers and chat apps, was critical for them to communicate with their families and friends, thereby maintaining social connections and gaining emotional support, while still hiding their homelessness identity. Further, specific online platforms such as Google Maps, and webpages were beneficial to satiate their daily instrumental needs as finding grocery stores, navigating GPS in the city, reading news, seeking healthcare advice, and housing resources available. These practices brought in social support and enhanced their psychological wellbeing. The study thus provides empirical evidence on role of technology use as a way to resist social injustices, achieve personal empowerment and dignity for women at the margins.

Title: Gender equality organizations and communication challenges: a good practices guide

Session Type: Individual submission

Authors:

Name: Carla Cerqueira

Email: carlaprec3-at- gmail.com

Country: PT (Portugal)

Affiliation: CSRC - Communication and Society Research CentreUniversity of MinhoPortugal

Abstract: Communication plays a central role in civil society organizations, in particular in what concerns publicizing the causes advocated and contributing to the mobilization of public opinion and social change. In a changing world communication about citizenship and gender equality have become increasingly complex. There are diverse organizations and publics and it is crucial to define a professional communication strategy.

Concerning Portuguese context there is a vast and heterogeneous group of civil society organizations operating in this field, mostly non-governmental organizations (NGOs) and other informal collectives.

This communication aims to present the main results of a research project developed around the communication strategies of NGOs and other informal collectives operating in the Portuguese context in the area of citizenship and gender equality. In this sense, interviews were conducted with these organizations, which were complemented by the analysis of digital and traditional platforms they use. Communication is considered a key area for all organizations, but in several cases it has not been a priority investment area. It is difficult to invest in this area due to the lack of economic and human resources. Simultaneously we analyze the mainstream news coverage of this type of organizations.

In this sense, after the analysis diverse workshops about communication strategies were held in different Portuguese regions to improve skills in the area. These spaces of learning and discussion allowed a collective reflexion about communication. So, as the last stage of the research was created an internal and external communication good practices guide focused on the particularities of these organizations and collectives. The core aim of this tool is to serve as a practical guide and reflexive resource for social actors in the area of citizenship and gender equality. The guidelines can be adapted to each organization and collective. It helps an NGO and collective strategically focus its communication and outreach efforts around a certain set of goals – usually the mission and objectives.

Title: "I Posted It Hopefully to Have Someone Care": U.S. Youth, Social Media, and the Search for Rights, Safety, and Dignity

Session Type: Individual submission

Authors:

Name: Aimee Rickman

Email: arickman-at- csufresno.edu

Country: US (United States)

Affiliation: California State University, Fresno

Abstract: Young people in the U.S. who have traditionally experienced marginality due to their gender are facing further threats within recent maligning mainstream discourses, proposed and allowed policy changes, gaslighting, and normalized practices of exclusion forwarded by their country's administration. For example, a 2018 report by the Guttmacher Institute finds delayed Title X federal funding for family planning now primarily channeled into abstinence-only education and other efforts denying women access to reproductive health and rights. That same year, after 24 years, the Trump administration allowed the Violence Against Women Act to expire, and they began a movement to re-define gender as based solely on biology. Following this, in January 2019, the U.S. Supreme Court upheld a ban on transgender members of the military, formally denying members of this minority group access to economic and educational opportunities while creating yet another precedent around their exclusion. Despite protest, human rights are being eroded for gender minorities in the U.S.

Drawing upon data from a year-long ethnographic study of 40 poor and working class rural female, gender non-binary, and transgender young people aged 15 to 25 from across California's Central Valley, this paper identifies and discusses specific offline economic and social injustices that are motivating marginalized young Americans to turn to social media seeking rights, safety, and dignity, and the specific practices they use in hopes of gaining greater accountability, justice, and respect for their realities.

These young people were found lacking offline supports they could trust to help them advocate for rights and dignity. They had few offline advocates to turn to who would be willing to publicly support them in their controversial lived realities as sexual females and transgender people, and few ideas of how to effectively push back against encroaching offline oppressions. Some who participated in offline efforts to protest against acts of injustice learned that those in power would be more likely to punish them for their resistance than to provide aid. Some hid their gender realities offline, fearing exclusion, job loss, and physical violence. This research also finds these young people attempting to negotiate and get around oppressive offline conditions by moving their attention to and through social media in "media migration" (Rickman, 2018). In this, interlocutors identified social media as a rare ally in their struggle for rights and existence, and they called upon these platforms to provide them outlets to document, share, and validate their experiences with injustice. As they were left to fend for themselves offline, they were found looking to social media desperately for help.

Social media exist within and through wider systems of power and inequity (e.g.: Eubanks, 2018; Fuchs, 2017; Nakamura, 2002; Tufekci, 2017). Working within this critical framework, this paper discusses the practices, hopes, and limitations of young people's social media-focused rights-seeking in this specific historical, cultural, political, and economic context as it considers how this media migration offered members of oppressed communities rare routes for push-back, safety, and support while also contributing to conditions that maintain offline marginality for them and other increasingly vulnerable gender minorities.

Title: Pseudoscience, witches, crystals, sex and love. The power of digital influencers today and the 'post-feminism'

Session Type: Individual submission

Authors:

Name: Thaïs Jorge

Email: thaismendonca-at- gmail.com

Country: BR (Brazil)

Affiliation: Universidade de Brasília

Name: Tássia Saraiva

Email: tassia.94-at- gmail.com

Country: BR (Brazil)

Affiliation: Universidade de Brasília

Abstract: According to the Global Digital Statshot from We Are Social and Hootsuite (2018), 4.021 billion people are online in the world (53% of the population), an increase of 7% over the previous year. Social networks are used by about 3.2 billion people (42% of the world) and 3.028 billion people actively use social media - that's 40% of the world's population. Some of these people look up to others in social media to guide them with their decision making. The latter are called digital influencers or simply influencers, individuals who have the power to affect purchase decisions of others because of his/her authority, knowledge, position or relationship with the audience. The majority of influencers fit into categories such as: celebrities, industry experts and thought leaders; bloggers and content creators; and microinfluencers. This paper analyzes the profiles of two influencers-celebrities who, through Instagram, spread pseudoscientific theories to promote the sale of products and a lifestyle, focused on wellness, beauty and spirituality: the actress Gwyneth Paltrow and the writer Gaby Herstik. In the media, they were called Instagram Shamans, for their strong relationship with their fans. In her page "Goop", for example, Paltrow states that "An informed woman taking care of herself is the most powerful form of activism today". Gaby presents herself as a "modern witch" and gives advice to control anxiety, organized as "week's mantras" such as: "My desires are sacred; I live with integrity and only say yes when it is yes". And both of them sell things, from books to crystals, tarot cards and makeup items. Addressing the methodology of deep hermeneutics, this work points out how these profiles use the feminine empowerment discourse to add value to the ideas and products they sell. The hypothesis is that the information disclosed brings a domesticated feminism, reinforcing individualist and elitist ideas of "post-feminism". Cognitive Psychology helps us to understand the human need to believe in pseudoscience, which is opposed to scientific knowledge because there is no possibility of proving what is promised. Here we face with challenges in respect of the quality of communication and can reflect on how the advance of technology affects the quality of human life and human dignity.

Title: Feminism on the Internet and on Television News: Negotiating the Boundaries of Public Morality with Regard to Domestic Violence in the New Media Era in Hungary, 2012-13

Session Type: Individual submission

Authors:

Name: Gyorgyi Horvath

Email: G.Horvath1-at- lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics

Abstract: In late April 2013 a domestic-violence-related political scandal shook Hungary, a country where public attention to the issue had never been particularly high: József Balogh, an MP from the ruling right-wing political party FIDESZ – in possession of two thirds of seats in the Hungarian Parliament since 2010 – battered his cohabiting girlfriend, and the woman got hospitalized. To be sure, Balogh was far from being the first Hungarian politician to batter a woman, but previous cases had repeatedly evaded public attention. In contrast to these, the Balogh story was followed by an intense media attention and public reaction, including not only various forms of bottom-up political action and expression, but also responses from elected officials and even changes in policy instruments (e.g. a bill on domestic violence, for which feminist activists in Hungary had been fighting for a decade in vain, was presented in the Hungarian Parliament in the direct aftermath of the scandal, by the FIDESZ government). The story also inflated public emotions around the issue to a previously unseen extent and, by creating a largely homogeneous emotional regime around the incident, intensively “socialised” the public to the proper expression of emotion with regard to the events, thereby forming certain social solidarities around domestic violence through emotional citizenship (see Pantti, 2011; Pantti & van Zoonen 2006). However, the main issue at stake in this case was that of re-opening a public and symbolic space where the boundaries of public morality with regard to domestic violence could be discussed, negotiated and above all affirmed, and concomitant “feeling rules” – that is, rules that regulate socially approved ways of expressing and managing emotions (Hochschild, 1983) – shaped and settled. My paper aims at exploring the ways in which television news and internet memes shaped the ways in which the story played out in the media and developed from an incident into a fully-fledged political scandal, and how they co-operated in inflating public emotions around Balogh's exposure, and bringing spectators to a common platform in relation to the events by shaping shared emotions and values with regard to Balogh's transgressions. I employ a theoretical framework that combines theories on mediated suffering with a Foucauldian notion of discourse, and my method is CDA. With this, I aim to contribute to two fields: the still largely Anglo-Saxon dominated field of the media portrayal of domestic violence, and the literature of Central-Eastern European (CEE) anti-domestic violence activism.

Title: Sound the Trumpettes! Nationhood, Maternalism, and the Republican Woman in the United Statesd

Session Type: Individual submission

Authors:

Name: Gretchen Soderlund

Email: gsoderlu-at- uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Name: Laura Strait

Email: lstrait-at- uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: Trumpism in the United States has taken its cues from emerging far-right populist movements as well as from authoritarian, strong-man regimes like those in Russia and the Philippines. At the level of policy and rhetoric, it engages in a project of determining national insiders and outsiders and reasserting white masculinity as the paragon of citizenship. It galvanizes voters by exploiting and intensifying existing anti-immigrant, anti-multicultural, and anti-feminist sentiments. The success of this formula, in the U.S. context, rests on a form of anti-government white male and Christian identity politics that has co-existed with traditional U.S. conservatism since the 1990s. It is marked by a sense that multiculturalism, gender equality, and secularism have created a world hostile to Christians and white men, now imperiled, victimized minority groups intent on taking back the power they once exercised freely and with abandon.

But if this rendering of the nation is decidedly masculine (with a Christian subtext), what about the women who helped catapult Trump to victory and actively promote his agenda? Trump drew heavy support from conservative women who traditionally vote Republican, despite the fact that the candidate and his most ardent supporters failed at almost every level to embody the moral, family-centered issues such voters have historically endorsed. Despite Kellyanne Conway, Sarah Huckabee Sanders, Ivanka Trump and a smattering of other women in his administration, we argue that women, including conservative women, have been sidelined in the Trump movement and are poised to play a diminished, supporting role in far-right politics more generally. We argue that the older symbolism that linked woman to the nation (moralism, modesty, spirituality), and the conservative women who embodied, in dress, demeanor, and ideology, these notions, have given way to a new figure whose primary drive is nonetheless very familiar: to uphold white supremacy in the face of inevitable and impending demographic change.

To do so, we trace the evolution of right-leaning Republican woman from the 1970s to today, and focus particularly on those who self-identify as “Trumpettes.” We use the political issue of immigration as a reference point, as the topic aptly represents the current nationalist political climate and also signals political parties’ (and in this case Republican women’s) priorities and definitions of natalism. By looking particularly at women Trump voters’ understandings of

immigration, we consider the ways in which they these figures serve to ardently defend and absolve the white males in power (through their appearance, actions, and subservience), while doubling down on the racial and ideological requirements of white American citizenship.

Title: #EleNãO: When the Brazilian women took (it to) the streets

Session Type: Individual submission

Authors:

Name: Lidianne Nunes de Castro

Email: lidiane.castro-at- uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: The #EleNãO that means “not him”, was the most talked-about hashtag of the presidential election in Brazil and came to life in a closed Facebook group named “Women against Bolsonaro” that was created in August 2018. The group managed not only to gather in less than 24 hours more than half million women but to get endorsed by a couple million more in the subsequent weeks. The participants rapidly joined the group because they did not want Jair Bolsonaro to be elected due to his controversial statements that were considered misogynistic, racist, homophobic and a threat to democracy.

Through the lenses of Gender Studies (Louro, 1998; Scott, 1986), the concepts of hegemony (Gramsci, 1999) and male domination (Bourdieu, 2000) are indispensable to understand a context where women are pushed into subordinated roles in a society marked by high rates of femicide. Concepts equally relevant to understand the significance of the #EleNãO movement, that relies on the fact that the demonstrations that took place on September 29, 2018 became the largest protest ever held by women in Brazil. Furthermore, it was the largest popular concentration during the presidential campaign.

More than one hundred thousand public tweets that used the hashtag “EleNãO” on the 29th September 2018 were retrieved. Firstly, these tweets will be investigated using Quantitative Content Analysis (Krippendorff, 2005) while taking into consideration: the text; use of images; presence of URLs; replies; mentions; favorites; retweets; additional hashtags found in the publications. The research question is how the movement was pictured on Twitter? And the objective is to present a broader view of how the demonstrations were depicted on Twitter by its users.

On an additional level of investigation, a comparative analysis will be conducted using Critical Discourse Analysis (Fairclough, 1989; Van Dijk, 1999). The top one hundred tweets with the highest engagement will be selected from the sample and analyzed in comparison to the coverage presented on the platform by three top newspapers in Brazil, which are the ones with the highest numbers of followers on Twitter: “Folha de S.Paulo” with 6,5 mi; “Estadão” with 6,23 mi; “O Globo” with 5,74 mi.

The first hypothesis is that the depiction of the protest among different newspapers will be similar and seemingly neutral but will differ from the users; the second hypothesis is that there will be variety in the depiction by users but the portrayals will be predominantly positive. The objective is to unveil, using the Framing Theory (Goffman, 1974), the similarities, disparities and nuances found in the portrayals of the protest and, consequently, of the women involved in it that were given by mass media vehicles and users that succeeded on reaching a widespread audience to engage with the depiction they presented. This detailed analysis combined with the quantitative approach will offer insights to achieve a greater understanding of how the event was portrayed on Twitter.

Keywords: #EleNão; Gender; Quantitative Content Analysis; Critical Discourse Analysis; Framing Theory.

Title: On the Right to Public Space in the Age of Algorithms

Session Type: Individual submission

Authors:

Name: Claudia Alvares

Email: claudia.alvares-at- ulusofona.pt

Country: PT (Portugal)

Affiliation: CICANT - Lusofona University

Abstract: Online violence became a much debated topic in the Portuguese media around May 2017, during the traditional academic festivities (Queima das Fitas, or Ribbon Burning) of graduating university students. The most salient episode covered by the media in this regard concerns the allegedly non-consensual video recording, disseminated on social media, of a young male student genitally manipulating a young female student, apparently unconscious due to excess drink, in a public transport bus especially chartered for the event, while a multitude of students watched, laughed and clapped. The video was disseminated by the online version of the *Correio da Manhã* populist newspaper as well as its TV channel. Although the paper attempted to distort the image of the alleged victim, the dissemination of this video was severely criticised by various sectors of Portuguese society, namely the Commission for Citizenship and Gender Equality (CIG), the Deontological Council of the Journalists' Trade Union as well as the Portuguese Regulatory Entity (ERC). The director of the *Correio da Manhã*, Octávio Ribeiro, defended that, by distributing the vídeo, the newspaper was contributing to disseminating 'a relevant and controversial fact, whilst protecting the identity' of those involved, adding that 'without news, there is no reflection' (Lusa 17.05.2017). As such, the *Correio da Manhã* invoked the public interest in disseminating the video, which it allegedly intended to mobilise society around a cause, namely that of collective indignation against possible sexual abuse.

This episode will be analysed with the objective of understanding how the Net, as an integral part of an expanding public sphere, has come to redefine the classical division of public and private. As such, the contexts in which the collective understanding of sexual rights (with emphasis on the reframing of 'privacy') is being visibly challenged and redefined in light of online publics and digital publicity (Albury 2017: 714) will be explored. Ultimately, I intend to sustain the claim that the concepts of public space and publicity are interconnected, with impact on regulatory practices concerning both gender performances as well as the mechanisms of intersection of informal and formal justice.

Title: Media discourse of cross-border marriage in China: A gender based perspective

Session Type: Individual submission

Authors:

Name: Xiaocong HUANG

Email: imhuangxc-at- foxmail.com

Country: CN (China)

Affiliation: Sun Yat-sen University

Abstract: For historical reasons, the estrangement between mainland China and Hongkong last many years. After Hongkong returned to China in 1997, the unexpected Asian financial crisis shattered the political economic certainty in Hong Kong, and drove it into anxiety and anxiety. At the same time, the tide of cross-border marriage emerged. Women from mainland China entered Hongkong by marriage. Cross-border marriage is different from general immigration. It intersects with gender, class, culture and other mechanisms, making the development of new immigrants a social problem. With huge disparity in economic quality in two districts, women with relatively low education level from the mainland to Hong Kong can only go in for occupations with low wages and long hours of work.

This paper focus on cross-border marriage from the mainland China to Hong Kong, and try to use a series of Hongkong films as cases to illustrate the impact of public policies on sociocultural and political life of migrant brides. Experiences of migrant brides suggest that gender power and resource inequality are closely interwoven in marriage immigration, which makes the gender based social problems come to the surface. Hongkong has been in the gap between Western colonial culture and traditional Chinese culture, so it tried hard to find it cultural identity in the relationship between Hongkong and the mainland. The cultural dilemma creates a unique cultural perspective for Hongkong film directors. A three-dimensional analysis framework based on Fairclough's critical discourse is applied to examine the visual and textual components in this film. Through the analysis, we can see what is depicted in these movies is changes of Hongkong society form the end of the 70s to the millennium. We know little about how mainland women in cross-border marriage survived at the edge of Hongkong and became marginalized social group under the political and economic pressure in Hongkong. This article offers a perspective to study the media and social discourse of marriage immigration in China.

Title: How Kenyan Female Journalists Cope with Trauma

Session Type: Individual submission

Authors:

Name: Samuel Mwangi

Email: scmwangi-at- k-state.edu

Country: US (United States)

Affiliation: Kansas State University

Abstract: Journalists frequently bear witness to human suffering whether covering mass disasters or individual atrocities; however, little is known regarding the impact of such exposure on the well-being of journalists. Researchers in the field of traumatic stress are only beginning to examine the toll this line of work may have on the health of journalists. Research suggests that between 80-100% of journalists have been exposed to a work-related traumatic event (E.G, Dworznik, 2011; Newman et al., 2003; Pyevich et al., 2003; Smith, 2008; Teegen & Gotwinkel, 2001).

In Kenya female reporters often cover traumatic events but there have been very few studies on how they cope with such trauma. A report by Thomson Reuters Foundation reveals that Kenyan journalists including females who reported on their country's worst outbreak of inter-ethnic violence, which killed more than 1,000 people following a disputed 2007 election, remain traumatized. The Royal Society of Medicine referred to this scenario as the first major study of the emotional well-being of journalists covering violent events in Africa, although half of the continent's countries are either at war or have recently experienced it. Other traumatic encounters covered by Kenyan female journalists include the Westgate Shopping Mall attack by Alshabaab in 2013, Garissa University Alshabaab attack in 2015, Baragoi clashes, and the January 2019 terrorist attack in Riverside, Nairobi.

The Association of Media Women in Kenya (AMWIK) notes that female journalist's security issues extend to the workplace as there is a prevalence of sexual harassment, character assassination and demands for sexual favors in the newsrooms.

A Unesco publication, *Media and Gender: A Scholarly Agenda for the Global Alliance on Media and Gender* (2014) postulates that Violence against women journalists is sadly an important issue that is rarely openly confronted. There are at least four different ways in which violence against women journalists occurs. One is during the course of reporting dangerous events such as wars and conflict zones where a woman journalist, much like a male journalist, simply finds herself in a dangerous context. A second form is sexual violence which, while meted out on occasion to male journalists, is preponderantly acted out against women. A third is state-sponsored violence in the form of arbitrary arrest, imprisonment and torture of journalists, amongst whom many are women. And a fourth form includes trolling and other forms of sexualised hate speech that women encounter on the internet.

Given the prevalence of violence against female journalists in Kenya and the fact that this is an under-studied area, this research paper seeks to answer the following questions: (1) How do female journalists in Kenya cope with trauma; (2) What resources, if any, are available to them in dealing with trauma; (3) What role can newsrooms play in improving their work environment.

Data will be collected through phone interviews with female journalists who have experienced work-related trauma. These journalists will be identified and selected through the Association of Media Women in Kenya.

Title: Let's Get in Formation: Subjectivity and Independence in the 21st century

Session Type: Individual submission

Authors:

Name: Miriam Rahali

Email: m.rahali-at- lse.ac.uk

Country: US (United States)

Affiliation: The London School of Economics, Department of Media and Communications

Abstract: Beyoncé has emerged as a popular hip hop icon in the United States whose public persona has been produced and reproduced as the ideal neoliberal and post-feminist subject of the 21st century. She is one of the most visible performers in hip hop music, and her discursive construction shapes not only what it means to be a successful Black Millennial, but also what it means to be an independent and empowered modern woman. This paper examines post-feminist ideology in hip hop, and traces the connections between its prevalence in the music industry, and the larger cultural picture of how Black women have been characterized historically. Using Beyoncé as a site, I will sketch performances of contemporary Black femininity. Consistent with tenets of neoliberal post-feminism, patterns of regularity point to a specific focus on individualism, self-actualization, and self-reinvention. I argue that her early career has been discursively constructed to fit within new and emerging neoliberal economic and social arrangements. Findings suggest that Beyoncé performs a wide range of femininities that speak at once to both White and Black middle and working class sensibilities. However, because her specific “feminist” identity has been framed through the lens of gender and race, this chapter will build upon neoliberal and post-feminist theories by drawing on theories of Black Feminism. I use Beyoncé’s discursive formation to situate the Black Millennial woman’s experience in the United States, and challenge intersecting identities of race and gender, and intersecting oppressions of racism and sexism. Beyoncé’s construction could be considered dangerous, as it operates under the guise of resistance, but is oftentimes a reflection of the prevailing values in society – values that continue to be created and sustained by White capitalist patriarchy. At the crudest, the expression of Black feminist attitudes tend to be portrayed by the dominant culture as an expression of female independence. However, in reality, they are part of an oppressive continuum, necessary for the maintenance of the hegemonic social order. This chapter calls for a new centering of the Black Millennial to augment feminist discourse and research in media studies.

Title: Misogyny through the Millennia: The Ancient and Religious Roots of Hating Women

Session Type: Panel Submission

Authors:

Name: Debra Mason

Email: masondl-at- missouri.edu

Country: US (United States)

Affiliation: University of Missouri

Abstract: Nearly half of the world’s population say they belong to an Abrahamic faith: Christianity, Islam, or Judaism. It’s not surprising that these three faiths, with some shared prophets and sacred stories, include believers who hold not just sexist — but overtly misogynistic views. The interpretations by some followers of scriptures that permit the raping of women prisoners, blame women for a fall from perfection, view biological conditions of menstruation and childbirth as dirty, and exclude women from elite sacred rites have stoked misogyny throughout the millennia. This presentation traces the ancient and global religious roots of misogyny from ancient Greek and Roman times to the modern era (e.g. the ancient Greeks had no word for “heroine”), using historical and scriptural analysis. Furthermore, the chapter introduces the topic of how “media” — interpreted broadly — was used to spread and enforce such religious-based misogyny.

Title: Toxic Masculinity, Misogyny: Feminism Renewed

Session Type: Panel Submission

Authors:

Name: Maria Marron

Email: mmarron2-at- unl.edu

Country: US (United States)

Affiliation: University of Nebraska-Lincoln

Abstract: The argument can be made that toxic masculinity and misogyny have led to a renewal of feminism. Toxic masculinity, a deviation from hegemonic masculinity in which men regard women as inferior, is actually a dangerous form of male entitlement that increasingly is associated with violence, including mass shootings. The INCEL movement (involuntary celibates), aligns with toxic masculinity in that its white, heterosexual members in an online subculture who define themselves as unable to find a romantic or sexual partner despite desiring one, engage in misogyny, racism, a sense of entitlement to sex, and endorse violence. The #MeTooMovement is a female response to sexual assault and sexual harassment, often perpetrated by men in positions of power. It not only has elicited greater transparency about sexual misconduct but also has drawn in a younger female demographic, women previously not committed to the ideals of feminism. In doing so, it has led to a renewed feminism, not just a new wave of feminism, and has focused attention on toxic masculinity and the emergence of the INCEL movement.

Title: AWSM, JAWS and Riotrrrs: Female Journalists Address Misogyny

Session Type: Panel Submission

Authors:

Name: Pam Creedon

Email: Pam-Creedon-at- uiowa.edu

Country: US (United States)

Affiliation: University of Iowa

Abstract: The power inequities in journalism have a history of evolution through the establishment of female organizations to address misogyny and the media. The Journalism and Women Symposium (JAWS), Association of Women in Sports Journalism (AWSM) and Riotrrrs showcase how inequities have been experienced and are being addressed by women journalists. For more than three decades, JAWS and AWSM have showcased the need to address media discrimination, exclusion, hostility, objectification and violence against women—misogyny. Riotrrrs is an online organization that already has more than 8,000 members on its network. This discussion overviews interpersonal communication in each organization. Today, for example, JAWS members use LinkedIn, Vimeo, Twitter, Facebook sites and have chapters in 16 states. It will provide an overview of member conversations related to misogyny experiences. Overall, it will examine how misogyny and power inequities are addressed by these organizations interpersonally and on their social media sites today.

Title: The Achievements and Challenges of the United Nations' General Assembly in the Field of Media and Public Communication Revisited

Session Type: Individual submission

Authors:

Name: Roja Zaitoonie

Email: roja.zaitoonie(at) rub.de

Country: DE (Germany)

Affiliation: Institute for Media Studies (Ruhr University Bochum)/Erich Brost Institute for International Journalism (Technical University of Dortmund)

Abstract: The General Assembly of the United Nations (UN) is one of the most important actors in global governance. Even though it has adopted hundreds of resolutions on media and public communication, we can still determine severe gaps in the global governance of freedom of information and media development. This paper reflects the analysis of nearly 1.600 subject-related resolutions adopted by the General Assembly from 1945 until today. The results of the analysis disclose a wide range of topics, which can be divided into five main categories: (1) general provisions on UN public information, (2) promotion of freedom of information, (3) media development assistance, (4) strategic communication and (5) information and communications technologies. The aim of this study is to highlight the achievements and the challenges of the General Assembly in the field of media and public communication. It provides a basis for further investigation and promotion of freedom of information and media development in global governance.

Title: The rise of the policy-takers. Adoption of EU telecommunications policies in the Southern Neighbourhood

Session Type: Individual submission

Authors:

Name: Veronique Wavre

Email: veronique.wavre(at) unisg.ch

Country: CH (Switzerland)

Affiliation: Post-doc fellow, University of St-Gallen

Abstract: Why does Jordan adopt the European Union (EU)'s telecommunications rules, but Morocco refrains from doing so? Instead, Morocco leapfrogs the EU by proposing innovative solutions based on Latin American models. Using rationalist theories from the policy adoption literature, this paper argues that the EU policies have different adoption costs in Jordan and Morocco explaining the differences in adoption behaviour. I use as a most-similar system co-variance design, and 46 original expert interviews run in Jordan, Morocco and Europe to analyse adoption practices in Jordan and Morocco between 2000 and 2014. The results show that Moroccan policy-makers have willingly diverted from the European policy model by adopting an alternative policy more suitable to their local context. To conclude, research studying the relationship between EU and European Neighbourhood Partners (ENP) countries needs to take the role of policy takers seriously and refrain from solely focusing on the European-side of policy adoption.

KEY WORDS: Policy adoption, adoption costs, Morocco, Jordan, universal service obligation (USO), European Union (EU), European Neighbourhood Partnership (ENP)

Title: Reconstruction of Cyberspace Governance Assessment Framework: Based on Positioning of Structuration

Session Type: Individual submission

Authors:

Name: XUEQIAN ZHANG

Email: 15210681944(at) 163.com

Country: CN (China)

Affiliation: School of journalism and communication, Tsinghua University

Abstract: Cyberspace governance has been regarded as different types of single or multiple object under the objectivity cognition led by diverse disciplines, but it has been always separated from the dynamic process of active action in cyberspace. It would leads to the blockage of integrating technology governance paradigm and social governance paradigm in a symmetrical and inter-embedded way, which makes it difficult to obtain an independent research form distinguishing from technology sciences and traditional social sciences. Basing on the perspective of interaction between subject and object, the analysis of the structural connotation and structuration positioning of cyberspace governance will become an important way to break through this problem: in the view of cyberspace as a field organization, which consist of established regulation, actors' association and institutionalization, cyberspace governance not only embed in the reproduction of these as some object, but also intervene in the production of these three parts as some subject, which consist of three mechanisms including actions, organizations and issues. Under this path, governance of cyberspace is integrated as the basic condition of the structuration's positioning of cyberspace, and it is also the most likely perceptible condition to be tracked and assessed. Therefore, the assessment framework of cyberspace governance will consist of three targeted topics: governance issues, governance actions and governance organizations. It will include 7 first-level assessment indicators, including relationship setting, priority setting, effectiveness, extensibility, degree of participation, degree of collaboration and sustainability, and 16 secondary indicators. The assessment framework would indicate the way that cyberspace generates both the subject and the object of governance in the dimension of coexistence of empowerment and constraints, and this indication would sustain altering with the information society's evolution.

Title: Spanish children and youth in a digital world

Session Type: Individual submission

Authors:

Name: María-Ruth García-Pernía

Email: mruth.garcia(at) uah.es

Country: ES (Spain)

Affiliation: University of Alcalá

Name: Pilar Lacasa

Email: p.lacasa(at) uah.es

Country: ES (Spain)

Affiliation: University of Alcalá

Name: Laura Méndez

Email: lmendez(at) psi.uned.es

Country: ES (Spain)

Affiliation: UNED

Abstract: This study is part of an analysis of practices related to the use of the Internet among Spanish children and youth aimed to guide regulatory processes in this context and seeking to establish general principles that can guide self-regulation in the telecommunications sector. The overarching goal is to provide a framework for discussion based on a critical review of existing contributions that allow for defining a new framework. Considering them as a whole and taking into account the complexities of each perspective, we have been able to observe what they contribute and how they guide digital technologies regulation.

Four perspectives are defined that frame the work carried out so far: 1) the European Commission's(<https://goo.gl/Dzhfnf>), based on self-regulation as the basis of the European strategy to create a better Internet for children; 2) UNICEF's(<https://goo.gl/Uwd7Z6>), a perspective that highlights the presence of children's and young people's voices in this environment; 3) Kids Online's(<https://goo.gl/eJnASL>/<https://goo.gl/Dcay7H>), focusing on Europe and on security challenges related to children, and 4) PewResearchCenter's(<https://goo.gl/u8s3fc>), a US organization that supports institutions in decision making in the use of technology among young people.

The methodology of this work is based on the qualitative analysis of 30 document contributions, mostly published since 2017. The NVivo12 software program has been used for the analysis, which has allowed for the creation of a categories set to clarify the relationships between the four perspectives indicated by pointing out their similarities and differences. From here, a discourse analysis of all the documents' content has been carried out.

The results offer a vision of what each perspective has contributed in relation to our objectives.

Next, we will summarize some of the most important contributions:

- From the European Commission's perspective, the possibilities and opportunities in the use of the Internet through the different devices are shown. The tendencies of the users in the networks point towards total connectivity, and they emphasize that the best way to protect young users is to

educate and train them properly. Specific education programmes include Internet safety tools, lessons, campaigns and public service announcements.

- UNICEF insists on the idea that digital technology is changing the world as well as childhood, since it has been empirically proven that children are accessing the Internet at younger ages. A concern is shown by the potential digital gap. Policies and regulations should be updated taking into account this reality and considering equitable access to online content.
- KidsOnline highlights the existence of new ways to access Internet as it becomes increasingly mobile, personalised and widespread. Access could almost be considered a right. Today, the complexity behind use goes beyond the frequency of use and covers a wide variety of forms of participation, including search practices, security, privacy, communication and much more. It is about stimulating the production of creative and educational content online, promoting positive experiences and increasing awareness and empowerment.
- Finally, the PewResearchCenter insists on the idea that access to smartphones and devices has made Internet use more frequent among young people, although there are differences in frequency regarding gender, race and ethnicity. This organisation's research sheds light on the positive effects of the network, which helps young people to stay connected and to interact with other people, family, friends and new friends.

Title: Canada's Policy Response to Facebook Privacy Concerns, 2009 and 2018

Session Type: Individual submission

Authors:

Name: Steph Hill

Email: [steph.hill\(at\) ryerson.ca](mailto:steph.hill@ryerson.ca)

Country: CA (Canada)

Affiliation: Ryerson University

Email: [jshtern\(at\) ryerson.ca](mailto:jshtern@ryerson.ca)

Country: CA (Canada)

Affiliation: Ryerson University

Abstract: This paper compares analysis of the 2009 case of Facebook's agreement to institute a series of changes to assure compliance with Canadian law with the 2018 hearings and subsequent reports of Canada's Standing Committee of Access to Information, Privacy and Ethics over revelations of the misuse of user data by Cambridge Analytica. The 2009 case was the culmination of a formal complaint to Canada's Office of the Privacy Commissioner (OPC) that Facebook was in violation of Canada's Personal Information Protection and Electronic Documents Act (PIPEDA). The non-binding dialogue that ensued between Facebook and Canada's OPC resulted in universal changes in Facebook's operation until Facebook altered its services not long afterward.

This paper combines analysis of policy documents and interviews with key participants from the 2009 dialogue between Facebook and the OPC with examinations of the hearings and reports generated in 2018 over the misuse of user data by Cambridge Analytica. The 2009 case was widely interpreted as a small country projecting disproportionate power over global communication flows. However, the data breaches in 2018 raise new questions at a potentially pivotal point in the governance of transnational social media platforms. As some jurisdictions pass more stringent privacy requirements, such as the EU's General Data Protection Regulation (GDPR) and other territorial governments scramble to develop a coherent response, the relatively informal multistakeholder cooperation that has governed much of the relationship between nations and social media platforms is in flux.

Research question:

What does comparison of recent hearings and recommendations and previous policy milestones by the Canadian government on Facebook's compliance with Canadian privacy law indicate about the state of the governance relationship between national governments and online information intermediaries?

Expected outcomes:

Despite earlier indications that multistakeholder cooperation would effectively govern online platforms, there seems to be a resurgence of nationally defined interest in Facebook's operation that

is leading countries to rethink their strategy towards these companies. Canada seems likely to follow a global trend towards increasing territorial sovereignty over data.

Theoretical framework:

This paper engages the literatures on media policy, internet regulation and political economy of communication, particularly as they overlap with the study of platforms.

Significance:

This paper makes a significant contribution to evaluations of the approaches needed for regulatory frameworks to address transnational media and internet corporations and to understanding the role of governments in contemporary media policy, providing a detailed case study of policy developments in Canada. Using a comparative historical methodology to examine one government's policy approach to internet governance is a significant contribution at an inflection point in the history of internet governance.

Abstract: This discussion session critically interrogates new developments at the intersection of technology, policy, and civic rights. Participants will explore current trans-national policy debates and regulatory arrangements with regards to technology developments and human dignity, and investigate potential shifts towards the improvement of people's lives.

Title: E-Health Projects coverage of urban slum dwellers in Nigeria

Session Type: Individual submission

Authors:

Name: Onjefu Okidu

Email: okidu2002(at) yahoo.com

Country: NG (Nigeria)

Affiliation: World Health Organisation Emergencies Programme

Abstract: The purpose of this study was to assess e-health projects coverage of Nigerian urban slum dwellers in their operational concepts and programme formats. Growing evidence of health inequalities within urban populations is of major concern in Low and Middle Income Countries (LMICs) and this is in part attributed to exclusive conception and implementation of e-health projects. The Bellagio Group convened by the World Health Organization (WHO) in September, 2011 recommends rigorous assessment of e-health projects around the world to generate evidence that will help “redress health inequalities in innovative ways.” One particular concern across Africa including Nigeria is the poor e-health coverage of slum populations who bear the highest burden of diseases within urban settlements, an aspect of the health crisis which now needs to be better understood. Assessments of e-health projects in Africa have been ongoing. Apart from the fact that not much has been done on Nigeria, the assessments tend to focus on the general urban populations. Little attention is given to how e-health projects cover the health concerns of vulnerable and disadvantaged populations such as slum dwellers. All in all, Two hundred (200) e-health projects were identified using the google and yahoo search engines. One hundred and fifty were purposively selected based on comprehensive information dwelling on their visions, missions, key principles as well as their communication policies and strategies using the document analysis method. The content of their visions, missions, key principles as well as their communication policies and strategies were then examined and analysed based on eight thematic areas; focus, objectives, goals, tools, content, design, target audience and socio-economic differential using the latest version of QCMap software. In general, the study findings show that e-health projects bunched slum dwellers with non-slum dwellers in their coverage formats. Urban slum dwellers were not specifically and specially defined within projects. Their strategy content reflects the general urban population. Also, e-health projects programme plans and designs were devoid of social inequalities analysis that would make the urban slum dweller stand out. It is recommended that an all-inclusive and socially disaggregated national e-health framework be developed to guide e-health projects design and implementation in Nigeria.

Abstract: In China, an estimate of 32.3% of the adult population were overweight or obese in 2016. Obesity is associated with a number of non-communicable diseases and chronic conditions. By losing 5% to 10% of initial body weight, obese and overweight adults can decrease risk factors for obesity-related illnesses even if they are still within the overweight or obese range. Weight management requires lifestyle modifications and thus often faces challenges of low adherence, low retention, non-clinically significant weight loss, limited long-term effects, and a tendency to regain weight. To promote sustainability, researchers have advocated the use of social media technology to enhance the continuity of overweight and obese adults' healthy weight practices. The trend of using social media as a platform for delivery of weight management interventions has been substantial. However, little is known about the underlying processes of social media interactions and ways through which online interactions exert social influences on weight management. This study provided a qualitative inquiry into the dynamics of social media interactions in shaping overweight and obese adults' weight control behavior. Three aspects of social media interactions—social support, social comparison, and surveillance, and two sources of social media influences—

medical professionals and peers were explored to present a comprehensive analysis of the cyber-social influences of social media interactions.

The studied context involved a social media-based weight management program launched by a tertiary hospital in charge of regional disease prevention and control in a southeastern province in China. WeChat is the most popular social media app in China and has exceeded a penetration rate of 93% in large cities and 80% across the population. In the professionally-led and free-of-charge weight management program, each patient joined one WeChat group with 10-12 members based on the time he or she joined the program. Within each group, members reported their weight and dietary intake on a regular basis and received individual feedback from nutritionists and endocrinologists. Members can also freely interact with each other and with medical professionals through question posting and information sharing. A purposive sample of 32 members were interviewed with variations in age, gender, and weight loss outcomes. The average duration of participant membership was 1.5 years.

Results of thematic analysis identified three themes: professionally-led support in the form of capacity building, reaction and resistance to surveillance, and co-presence of peer support and peer comparison. The first theme delineated support from medical professionals that helped enhance participants' capacity to perform healthy dietary and exercise behaviors. The second theme addressed public surveillance and social surveillance on WeChat and participants' reaction to the panopticon gaze. The third theme revealed peer influences in the forms of support and comparison that motivated participants' self-control of weight in both positive and negative ways. Findings highlighted the mutually reinforced relations among social interaction factors and their fluctuant influences on weight management. Implications of the study concern improved strategies for maintaining the positive dynamics of social media interactions.

Title: To Construct e-HDL as Examining Health Literacy Ability in Taiwan: Crossing Public Health and Communication Fields

Session Type: Individual submission

Authors:

Name: Cheng-yu Lin

Email: cyou.lin(at) msa.hinet.net

Country: TW (Taiwan)

Affiliation: Associate Professor, Department of Radio, Television & Film, Shih Hsin University, TAIWAN.

Abstract: The study was to develop the assessment tool for the e-healthy diet literacy based on the comprehensive conceptual framework of health literacy, and examine the association between health literacy (HL), e-healthy diet literacy(e-HDL), healthy outcomes and behaviors. A population-based study was conducted on 1342 adults aged 18 years and above, between April and September 2018. The multi-stage random sampling method was used to recruit the study sample from four regions and 19 cities and counties in Taiwan. Health literacy was measured by HL-SF12 questionnaire contained 12 items, the internet based healthy diet literacy questionnaire (e-HDLQ) was developed to measure healthy diet literacy. Personal characteristics and socio-demographics, Health status and behaviors were also measured. Principal component analysis (PCA), linear regression models, logistic regression models were used to analyze the data. The mean age of study population was 33.9 ± 11.4 , ranged from 18 to 64 years old. The e-HDLQ was constructed with 11 items. The positive association between HL and e-HDL was also found ($B = 0.27$, $p < 0.001$). Result of multivariate analysis showed that both HL and e-HDL was significantly lower in men, and higher in those who used Facebook to search. HL positively associated with ability to pay for medication ($B = 2.47 \sim 5.07$, $p < 0.001$), and social status ($B = 1.38 \sim 3.22$, $p < 0.001$). e-HDL was lower in older participants ($B = -2.24$ to -2.30 , $p < 0.001$), and those who searched for healthy cooking ($B = -1.14$, $p = 0.023$), or healthy food places ($B = -2.34$, $p < 0.001$), or weight control ($B = -1.27$, $p = 0.026$), positively associated with education ($B = 3.7 \sim 4.826$, $p < 0.001$). Both HL and e-HDL were positively associated with health status and physical activity. Health literacy strongly associated e-HDL, both were determined by gender, searching means, and linked to health outcome and behaviors.

Title: The Momo Challenge: A Mixed-Method Approach on How Suicidal Games on YouTube May Cause Harm to Adolescents

Session Type: Individual submission

Authors:

Name: Antonia Markiewicz

Email: antonia.markiewicz(at) ifkw.lmu.de

Country: DE (Germany)

Affiliation: Ludwig-Maximilians-Universität München

Abstract: Relevance: Each year, 800,000 people die of suicide, with suicide being the second leading cause of death among adolescents aged between 15-29 years old. These youngsters are especially susceptible to harmful depictions of suicide in the media, which might elicit Werther effects. Additionally, adolescents are vulnerable to peer pressure; a pressure that intensifies in a digital age in which omnipresent social media invade private spaces. Combined, depictions of suicide and cyberbullying pose high self-harm potential. Suicide games like the Blue Whale Challenge or the Momo Challenge take advantage of these two risk factors by demanding their players to perform self-harming dares and, ultimately, to commit suicide. However, empirical knowledge about this emerging cyber threat and its dissemination through social media is still lacking.

Aim: In recent years, YouTube has become one of the most popular social media platforms for the young audience. With the rise of suicide games, dozens of videos have been uploaded that contain potentially harmful depictions of such dares. Therefore, we aim to investigate the reach of the Momo Suicide Game on YouTube, how young users engage with this video material, and how its content might put them at risk. **Method:** We conducted a manually edited network analysis of YouTube videos dealing with the Momo Challenge (nvertices = 211) and combined it with a manual content analysis of the video material (n = 53; 25%). We then analyzed comments of those users who have commented on at least two videos dealing with the Momo Challenge (n = 762; 50%).

Results: The study is still in progress; thus, we cannot provide final results yet. First insights show that these videos have a high reach with top-scorings of up to 15 Million views and 20,000 user comments. Furthermore, highly involved users tend to comment beneath several of these videos, thus creating a network of potentially harmful interactions and discussions. As the YouTube algorithm favors videos with high engagement rates, these interactions may lead to further spread of suicide games such as the Momo Challenge.

Future Prospects: Future studies may investigate the effectiveness of YouTube's trigger warnings on adolescents because this study's first insights indicate a boomerang effect, which leads youngsters to turn to such videos even more eagerly. Thus, tech giants need to develop further strategies to deal with such potentially harmful trends.

Title: Social Support Seeking on Social Media among Obese People in China: Revisiting the Extended Parallel Process Model

Session Type: Individual submission

Authors:

Name: Lunrui Fu

Email: fulr3(at) mail2.sysu.edu.cn

Country: CN (China)

Affiliation: Sun Yat-sen University

Name: Liang Chen

Email: ch0087ng(at) ntu.edu.sg

Country: CN (China)

Affiliation: Sun Yat-sen University

Abstract: Background:

China has become the country with the largest number of obese people since 2014. Obese people in China experience not only deterioration of physical health but also psychological distress.

Moreover, due to social obesity stigma, most of obese people are unwilling to seek social support in the offline context. Alternatively, social media has become an important venue for them to receive social support. The current study aims to examine the antecedents of online social support seeking among obese people in China based on the extended parallel process model (EPPM).

Theoretical Framework:

According to the EPPM, perceived threat and perceived efficacy could affect individuals' health behaviors, such as social support seeking. People who perceive a high level of threat or efficacy are more likely to engage in health behaviors (Witte, 1992). Specifically, perceived threat has been conceptualized as a two-dimensional concept, including perceived susceptibility and severity of the disease. However, only one aspect, perceived severity is applicable to the current examination of obese people. Given that the sample group of people has suffered from obesity, they are not worry about the likelihood of being obese, but concern about how serious the obesity is likely to be and how to control it. Besides severity of physical health, obese people may also feel threatened by the negative social outcomes caused by the stigma of obesity (Chen, Guo & Shi, 2018). Thus, perceived severity of obesity and perceived severity of stigma are two elements of perceived severity, which could be positively associated with social support seeking. In addition, perceived efficacy, referring to the ability to seek effective social support messages on social media, could be another determinant of online social support seeking. Therefore, it is hypothesized that a) perceived severity of obesity, b) perceived severity of stigma, and c) perceived efficacy are positively associated with online social support seeking. Besides, these three factors interact to effect online social support seeking.

Method:

A total of 480 obese people in China have completed online survey. Control variables included social media use and demographic variables such as age, gender, education and ethnics.

Results:

According to the results of the ANCOVA, perceived severity of stigma, and perceived efficacy had main effects on online social support seeking. However, perceived severity of obesity is not significant associated with online social support seeking. Besides, three factors interacted to effect online social support seeking. Moreover, when two kinds of perceived severity are low, perceived efficacy did not affect online social support seeking. Similarly, when perceived efficacy is low, perceive severity of obesity and stigma did not significantly affect online social support seeking.

Implications:

First, we extended the construct of perceived threat in the topic of obesity by developing perceived severity with two dimensions: (1) physical outcomes and (2) social outcomes. Second, the current study suggested that teleinterventions of obesity should not only provide online social support, but also increase individuals' perceived severity of stigma and efficacy.

Affiliation: University of Rostock

Abstract: Adolescents and young adulthood are phases in which it is important to develop one's own identity (Vogelsang 2014: 144). The process includes self-presentations in digital public areas on social network sides (SNS) (Kaplan/Haenlein 2010: 63), where, photos and videos are getting more attention (e.g. Instagram). Here, the networked images are not only components of identity processes, but also important for creating visual memories (van Dijck 2008). At this, illness narrative content is getting more attention on SNS like blogs (Stage 2017: 51). These narratives have changed from former retrospective narrations to a nowadays discontinuously appearing narration, because „the narrator documents their experiences while diagnosis and treatment unfold” (Page 2010: 10). Combining illness narratives on SNS and visually oriented culture of Instagram (Lee 2015: 552), we have to face the term autopathography (Tembeck 2016). The possibility of recording and archiving private moments in a digital area through photos and texts lead to a personal narration (biography) about the disease (pathography). In this visual diary on Instagram, illness recordings are not just pictures' objects, but also identity processes by accepting the depicted person as being ill.

In Germany, Instagram is mostly used by adolescent and young adults between age 12 and 19 (Feierabend et al., 2017: 32). Furthermore, various studies have shown the importance of SNS, just as Instagram - especially for young people with cancer (AYAs/age 15-39) regarding to identity processes within chronic illnesses (Chou/Moskowitz 2016: 90). The aim of the conference article is to show AYA's different illness narrative self-presentations and identity processes on Instagram. Our study examined how German-speaking cancer bloggers stage themselves on this app (def. cancer bloggers: (1) age 14 and 39, (2) making cancer references (eg. word/hashtag) in their Instagram biographies).

In total 142 bloggers (7553 photos) for Instagram-Posts (P) and 103 bloggers (4117 photos) for Insta-Stories (S) were included in the sample. We used a standardised content analysis, whereby relevant categories were examined (eg. motifs, body images, hashtags/captions, emojis) with an intercoder reliability of Cronbach alpha 0.85.

Despite blogger's public staging as (former) cancer patients, they don't share much illness narratives. With regard to photo's and video's motifs, food and landscapes dominate. Pictured illness content is poorly represented. Instead, captions/hashtags offered more illness-narrative references but sent messages are mostly positive/neutral. All in all, cancer bloggers present themselves ambivalent on their illness narrative Instagram's autopathography.

Title: Miracle doctors, miracle cures, and invented traditions: designing health-related interventions on online social networks in Vietnam

Session Type: Individual submission

Authors:

Name: Dang Nguyen

Email: nguyenhonghaidang(at) gmail.com

Country: AU (Australia)

Affiliation: University of Melbourne

Abstract: This paper presents a social network analysis of the propagation of traditional medical knowledge and practices on social media networks in Vietnam. Despite its widespread popularity throughout Southeast Asia, the propagation of non-scientific, non-biomedical knowledge and practices on online social networks is an understudied topic. The substantial scale with which non-biomedical knowledge and practices proliferate on social media platforms such as Facebook means that its potential impact on population health warrants careful examination. From sharing family medical recipes to discussing medicinal properties of indigenous plants, from selling medicinal plants to crowdsourcing the diagnosis of diseases and illnesses via photos and videos, from advocating for traditional alternatives to unaffordable biomedicine to creating cult followings of miracle doctors, these online social networks constitute an emerging health ecology that reflects the historical continuities of local and regional socio-cultural realities as much as it conditions health experiences of the local population.

In Vietnam and Southeast Asia, the issue of regulating non-biomedical practices is one fraught with contentions. Postcolonial governments across this region of newly independent states are eager to enlist traditional and indigenous medicines in various continuing ‘modernisation’ and ‘scientisation’ projects. These processes result in a body of state-legitimated non-biomedical practices that excludes a much larger uncoded yet popular set of practices, often regarded as quackery or superstition. As codified ‘traditional’ therapeutic approaches become incorporated into mainstream medical curriculum, uncoded folk medicine proliferates through oral traditions, hand-me-down secret family recipes, and most recently, via online social media networks at a much larger scale.

Increasing interest in health-related intervention through social networks in recent years has testified the impact that these networks could have in shaping individual health behaviours through access to resources, opportunities, and constraints. While social networks, both online and offline, can generate social support, social cohesion, social capital, as well as facilitate social norms, they can also create negative health consequences of social isolation. Central to health-related intervention via social networks is the idea that health outcomes can be modelled as a function of network processes. Participants of a social network act based on the specifics of their network environment; their position within the network influence their behaviour and capacity to influence others. As such, understanding the network structure and network properties of emerging online health ecologies is instrumental to not only understanding the state of health and perceptions of well-being in the local context, but also inform effective intervention.

Title: What Satisfies Pediatric Parents in China: A Model based on the Online Doctor's Reviews

Session Type: Individual submission

Authors:

Name: Qiwei Wu

Email: lunawu(at) tamu.edu

Country: US (United States)

Affiliation: Texas A&M University

Name: Lu Tang

Email: ltang(at) tamu.edu

Country: US (United States)

Affiliation: Texas A&M University

Abstract: Background: Patient satisfaction is an important proximal outcome of a clinic visit (Street, Makoul, Arora, & Epstein, 2009). While existing research extensively explores the theoretical and practical dimensions of patient satisfaction through literature review (e.g., Campen et al., 1995; Ware et al., 1983) and survey research (e.g., Choi et al., 2005; Westaway et al., 2003), there is not one universally accepted definition of patient satisfaction. In addition, patient satisfaction research is mostly conducted in western countries such as the United States. Since the ideas about health, illness, and doctor-patient relationship are cultural specific, it is very possible that patients in different parts of the world would define satisfaction differently. Recently, the rise of Internet-based physician review websites (such as Healthgrades and Yelp) allows patients to share their experiences and evaluations of physicians publicly online. In doing so, patients become prosumers, who not only consume health information but also produce health information such as writing reviews about on their medical encounters (Sarasohn-Kahn, 2008). The burgeoning online medical services open new opportunities to understand patient satisfaction.

Purpose: This study seeks to understand how pediatric patients in China define patient satisfaction through an inductive analysis of their evaluation of pediatricians posted online.

Method: This study employed qualitative content analysis of reviews of pediatricians posted on the "Good Doctor Website" (haodf.com), a China-based physician review platform. We focused on the Pediatrics Departments, as a recent study by Zhang et al. (2018) shows that Chinese pediatricians receive the most negative comments from patients. A total of 523 comments were randomly chosen from reviews of pediatricians in a top-tier hospital in Beijing using a python crawler program. To analyze the data collected, we followed the grounded theory building tradition to inductively identify meaningful concepts from texts by using various coding techniques, such as initial coding, vivo coding, and focused coding (Charmaz, 2006). Atlas-ti, a hermeneutic qualitative data analysis software, was used to assist the management of the data and content analysis.

Result: Five dimensions of patient satisfaction emerged from the content analysis: pediatricians' communication styles, work ethics, medical competence, cost awareness, and overall health outcome. Compared to the traditional conceptualization of patient satisfaction in previous research

(e.g., Ware et al., 1983; Westaway et al., 2003), our findings emphasize prosumers' preferences for doctors' good communication styles, including courteous attitudes, listening to patients, offering sincere encouragement to patients, and explicit medical explanations. In addition, we find that the review platform showcases how doctors' good reputation online can attract non-local patients, which suggests that the Internet may increase the transparency of the medical services that have rarely been socially monitored before the prosumer age.

Conclusion: This study informs future theorization and empirical investigation of the convergence of communication technologies and patient-center communication.

Keywords: patient satisfaction, doctor-patient communication, online doctor review, China, inductive content analysis

Title: Direct-to-Consumer Advertising'How Pharmaceutical Companies Are Drawing You in on Instagram

Session Type: Individual submission

Authors:

Name: Ryan Wallace

Email: ryanwallace(at) utexas.edu

Country: US (United States)

Affiliation: University of Texas, Austin

Abstract: While healthcare has been the leading industry in the United States, both in terms of size and breadth, its transition to integrate advanced forms of communication and information technology has been slow. However, now with the rise of social media, healthcare is starting to embrace these changes—transforming what has traditionally been a face-to-face industry. As the concept of customer engagement transitions, value creation has become centralized around the interaction between seller and customer. This change has not only led to more individualized healthcare, but also more targeted approaches to advertisement. Though direct-to-consumer pharmaceutical advertisements are largely illegal in most other nations, in the United States they have become an increasingly popular way to engage a new generation of interactive consumers. Evidence suggests that direct-to-consumer pharmaceutical advertisements can have positive or negative effects on patient populations, but as Internet use continues to expand, little research and even less regulatory oversight has left patients and public health policymakers without a necessary understanding of what it is these advertisements are communicating on social media platforms. Addressing these new types of marketing campaigns, this study sought to understand direct-to-consumer advertisements on social media—using a comparative approach between pharmaceutical, healthcare, and retail accounts. From a theoretical perspective, this study builds on the works of mass communications scholars and the critical cultural traditions of understanding ideological values and symbolic meanings embedded in different forms of discourse. Rather than looking at the traditional model of communication as a linear process, it follows in the works of Hall, Gramsci, and Barthes who all argued for a more complex understanding of communication and discourse. And by particularly focusing on the intentions of advertisements to influence the behavior and opinions of consumers, this study also builds on the seminal works of Marxism—looking not only at how these new direct-to-consumer campaigns are ideologically built to sell products, but also how they do or do not rely on previously established strategies of health communication or product advertisements on social media. Using the method of a multimodal discourse analysis, decoding the various forms of discourse used by these campaigns and their underlying ideological elements, this study not only provides a thick description of what it is that these new direct-to-consumer campaigns look like, but also why they represent a uniquely challenging problem to consumers and the regulatory agencies that try to keep them safe.

Title: Conflict and Health: Communication Interventions in Isolation

Session Type: Individual submission

Authors:

Name: Ravindra Kumar

Email: ravi(at) efluniversity.ac.in

Country: IN (India)

Affiliation: English and Foreign Languages University:

Abstract: The North Eastern region of India, comprising of 8 states, has over 220 ethnic groups and an equal number of dialects. Multi-linguistic, multi-cultural, multi-ethnic, and multi-religious diversity is unique to this region, albeit contributing to the isolation of the communities both physically, due to its geographic location, and socially from each other and from the rest of the country. Located in the strategic northeastern corner of India, it is part of a region which shares a highly porous and sensitive frontier with China in the North, Myanmar in the East, Bangladesh in the Southwest and Bhutan to the Northwest. Naga insurgency, which started in the 1950s, known as the mother of the Northeast insurgencies, is one of the oldest unresolved armed conflicts in the world. In total, Manipur, Assam, Nagaland and Tripura have witnessed scales of conflict that could, at least between 1990 and 2000, can be characterised as low intensity conflicts. Currently, most of the states in the region are affected by some form of conflict, except for Arunachal Pradesh, Mizoram and Sikkim in which the situation is at the moment relatively stable. The reasons for the respective conflicts are wide ranging from separatist movements, to inter-community, communal and inter-ethnic conflicts.

This study is a three year research project. The study as part of its initial engagement has attempted to understand the various forms of health communication engaged by the Government and other local bodies in various dialects. North East India has very less penetration of Non-Governmental Organisations (NGO). Most of the tribal areas are served by the Faith Based Organisations (FBO) who complements the Government Programmes. Therefore, the FBO also add up as counselling centres in the times of conflict. This study will present the initial findings that were collected in all the 8 states.

The major challenge in such conflicts is health care delivery. The direct impact of such conflicts has a direct impact on population health and overall development. However, the extent of its impact on long-term health, and the opportunity costs, are less well understood. Protracted conflict has degraded the trajectory of public health in the north east India and has hurt population health outside of the conflict zone. Such conflicts have led to trust deficit between tribals and the health workers. This has led to increased hostilities between tribes who are health functionaries to the ones who are health care seekers. Women have to travel to an official health centre to avail Government programmes. Moreover, there have been instances where people have declined taking health care services from rival tribes.

Title: The role of communication in mediating access to new HIV prevention technologies in HIV high burden districts in KwaZulu-Natal, South Africa

Session Type: Individual submission

Authors:

Name: Eliza Govender

Email: elizamoodley(at) gmail.com

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal

Abstract: The introduction of new HIV prevention technologies has ignited the need to advance communication and participant inclusivity in public health agendas. The right to access HIV treatment and also HIV prevention options is fundamental to human dignity and effective social participation can mediate adoption of these new HIV prevention innovations. With HIV incidence rates disproportionately high among adolescent girls and young women (AGYW) in Sub-Saharan Africa, pre-exposure prophylaxis has the potential to radically change the face of the HIV epidemic with access of PrEP for these key target populations. However, PrEP to date has only been targeted at sex workers in South Africa, resulting in PrEP becoming associated with stigmatized identities and behaviours long before it is made available to AGYW. As such, access to PrEP is at risk of being presaged by discourses that tie these prevention efforts to promiscuity and sexual deviance. It is within this context that this article explores how men and women in KwaZulu-Natal, the epicenter of HIV infection; make sense of oral PrEP as a potential HIV prevention strategy amidst current stigmatized associations. The paper further investigates the role of participant inclusivity utilizing a culture centred approach to mediate the introduction and adoption of PrEP. Twelve gender-specific group discussions of 45 minutes using purposive sampling were conducted with a cumulative total of 88 respondents in Vulindlela. The data was manually coded and collectively generated objective-derived themes that pertain to the benefits/opportunities, the potential barriers for PrEP among men and women and key considerations for the promotion of oral PrEP. Promotion of PrEP as part of combination prevention strategies can effectively assist women to enhance already existing health behavior routines. Understanding the adoption of these innovations within an interchange of cultural and gender norms highlights that intrapersonal ability of women alone is insufficient for effective product uptake, but rather understanding the interpersonal connectivity of male and female engagement within a broader socio-ecological system can epitomize the adoption of new PrEP innovations. The article highlights the importance of mobilizing the voices of those who will benefit from new HIV prevention technologies to understand the opportunities and barriers for successful product uptake; the role of efficacious communication then becomes a key pillar in advancing new HIV prevention strategies.

Title: PERCEPTION TOWARDS HIV/AIDS INFECTION AND ITS EFFECT ON CONDOM USE AMONG THE YOUTH OF KENYA'S KIBERA SLUM

Session Type: Individual submission

Authors:

Name: Jeremiah Nganda

Email: jeremynganda(at) gmail.com

Country: KE (Kenya)

Affiliation: Daystar University

Abstract: While studies have shown that the total number of new HIV / AIDS infections globally has been reducing, it is regrettable that many Sub Saharan countries continue to record high HIV prevalence. This is especially among the youth living in slums like Kibera in Kenya. The proper and consistent condom has been presented as one of the best ways of preventing the transmission of HIV among the youth because abstinence is not working for youth who are already sexually active. Though several behaviour change campaigns have been done in Kenya to promote the use of condoms among the youth, their uptake is still low. Consequently, this study sought to find out what factors were influencing condom use decisions among the youth. Using the Theory of Planned Behaviour this study has shown that intention to perform a behaviour is greatly influenced by attitude, social norms and perceived behavioural control. Data for this quantitative study was collected by issuing questionnaires to 400 youth in Kibera who had been selected using purposive sampling from a population of approximately 50,000 youth. Data collected was keyed into SPSS for analysis and presented in tables and graphs. Findings of the study revealed that many of the youth were sexually active (51%) but were not using condoms because their perception was that they were at no risk of infection (53.2%). This perception of not being at risk impedes condom use among the youth hence the high HIV prevalence. The study recommends that communicators, especially in this era of new media should tailor campaigns to address the perception of youth towards condoms. In addition, condom communication campaigns should link condom use to the perception of risk of infection.

Title: The loneliness of silver social media users: the mediating role of SNS

Session Type: Individual submission

Authors:

Name: Wenshu Li

Abstract: With the emergence of smart phones, online social networking sites (SNSs) have already changed the way people interact with others in the digital era (Vromen et al., 2015). WeChat, a most popular social media online application in China (CNNIC, 2016), is playing a pivotal role with 1.58 billion monthly active users (Tencent, 2018). Similar to some popular instant communication applications (WhatsApp, Line, Facebook Messenger), WeChat is considered as a mobile multi-purpose messaging application, which provides text messaging, hold-to-talk voice message, video and audio calls et al. WeChat data shows that in September 2016, the number of WeChat active users over 55 years old was 7.68 million, and by September 2017 it had reached 50 million. More and more older people are integrating to the cyber world and growing older in the information age. But in comparison with the youth, especially undergraduates, few studies pay attention to the elder groups. Therefore, the social effects and social influences of social networking sites (SNSs) on seniors have become the main focus of this paper.

After retired from work or growing old, the seniors are facing the decreasing social capital and increasing loneliness. Everyone may have a chance to suffer loneliness at different age ranges, the old is not the unique group to experience loneliness (Dykstra, 2009). While the seniors are considered as the major suffers (Victor et al. 2002). Social networking sites (SNSs), especially WeChat, are of great importance for the seniors to maintain and develop their social network and social capital in China. Lots of researches found that the Internet usage is able to raise social network size, contributing to generate or maintain social capital (Hampton & Ling, 2013, Steinfield et al., 2008), alleviating loneliness and improving psychological well-being among seniors (Chan, 2013; Choi & DiNitto, 2013; Coll-Planas, Del Valle Gómez, Bonilla, Masat, Puig & Monteserin, 2017; Pfeil, Arjan & Zaphiris, 2009; Russell, Campbell & Hughes, 2008; Sum, Mathews, Pourghasem & Hughes, 2008).

The overarching goal of this study is to understand and examine the implications of using WeChat for social capital (bonding social capital and bridging social capital) and loneliness, among Chinese 'silver surfers'. Based on an online survey (n = 305), we found that the WeChat use is significantly associated with social capital and loneliness in the group of people aged above 50, but there is a non-significant correlation between social capital and loneliness. Some scholars encourage seniors

to embrace the digital age, but is it the more the better? No. In this study we found that it's not healthy for the seniors to immerse in the SNSs too long, which would lead loneliness, according to the currently data. So we hold the belief that the seniors are not supposed to spend too much time on WeChat to enjoy the virtue world.

Abstract: The World Health Organization estimates that the influenza virus contributes to between 290,000 - 650,000 annual deaths. The most effective way to prevent seasonal influenza is vaccination. Scientific consensus exists on the effectiveness and safety of these vaccines; however, vaccine myths are especially prevalent on the Internet and social networking sites. There is reason to believe that visual social media sites, such as Pinterest, may also be used to spread misinformation regarding the influenza vaccine. The inclusion of visuals enhances individuals' processing of health risk information; however, the extent of flu vaccine misinformation in Pinterest posts is unknown. In addition, Pinterest is understudied as a platform and is primarily used by women, who make the majority of healthcare-related decisions for their families. This study explored the content/nature of influenza information that is shared on Pinterest. To theoretically ground the current study, messages were also analyzed using Health Belief Model constructs: perceived severity, susceptibility, benefits of and barriers to obtaining the flu vaccine.

This study focused on the following two research questions:

RQ 1: How is the flu vaccine discussed on Pinterest and how do users engage with these posts?

RQ 2: To what extent are Health Belief Model constructs present in flu-vaccine related posts on Pinterest?

A quantitative content analysis of 500 flu-vaccine-related Pinterest posts was carried out using a sample collected through manual systematic random sampling. Posts were coded for engagement variables; account characteristics; Health Belief Model variables; conspiracy theories; framing; and visual characteristics. Intercoder reliability testing showed that individual Scott's Pi coefficients

were all reliable. Mann-Whitney and Kruskal Wallis tests were used to check for differences in engagement between posts with versus without a range of dichotomous and nominal variables. While many recent vaccine-focused social media studies have produced an alarming picture of a majority of anti-vaccine posts on several platforms, this study provides a somewhat more balanced picture: posts supporting and posts critiquing the flu vaccine seem to be mostly evenly distributed. In addition, perceived benefits of and perceived barriers to the flu vaccine were both present in approximately one-quarter of the sample. However, all pins associated with increased engagement appeared to be associated with anti-vaccine variables.

According to the Health Belief Model, unless people perceive the flu to be a serious disease and themselves to be at risk of contracting the flu, they will not be likely to get the vaccine. In this sample, perceived severity and susceptibility were barely present, creating an area of concern. Moreover, almost half the visuals included potentially fear-inducing components, and these may influence people's perceptions through the communication of a more implicit threat.

Another finding of interest was that the majority of the pinners in this sample were individuals, while only 5% of all pins were confirmed to either originate with official medical accounts such as the CDC. This is concerning since it appears to suggest that the public health voice – often likely to be one to provide trustworthy and reliable information - may be largely absent on this platform.

Title: La publicidad de complementos alimenticios (CA). Análisis de la presencia de testimoniales, declaraciones saludables y apelaciones en la radio generalista en España

Session Type: Individual submission

Authors:

Name: Clara Muela Molina

Email: clara.muela(at) urjc.es

Country: ES (Spain)

Affiliation: Universidad Rey Juan Carlos

Abstract: El principal objetivo del estudio es analizar la presencia de testimoniales y la información relacionada con la salud en la publicidad de complementos alimenticios (CA) en la radio informativa española. Con este fin, se realizó un análisis de contenido de todos los anuncios de radio emitidos en 2017, obteniendo un corpus de 165 spots diferentes que se emitieron un total de 10.566 veces en las tres cadenas generalistas de más audiencia que suman un total de 9.000.000 de oyentes diarios. La principal aportación teórica ha sido aplicar Elaboration Likelihood Model (ELM) (Buchholz & Smith, 1991; Petty, Cacioppo, & Schumann, 1983; Priester & Petty, 2003) al medio radio poniendo en relación variables periféricas como la fuente del mensaje y otras centrales del contenido del anuncio.

Las variables analizadas fueron el tipo de testimonial (Brownfield, Bernhardt, Phan, Williams, & Parker, 2004; Choi & Kim, 2011; Chung, Hwang, & Kim, 2007; Kaphingst, DeJong, Rudd, & Daltroy, 2004; Main, Argo, & Huhmann, 2004; Shaw, Zhang, & Metallinos-Katsaras, 2009; Wallack & Dorfman, 1992), tipo de declaración (Chung et al., 2007; Orquin & Scholderer, 2015; Wallack & Dorfman, 1992) y tipo de apelación (Albers-Miller & Royne Stafford, 1999; Chan, Leung, & Tsang, 2013; Main et al., 2004). En consonancia con los antecedentes, los resultados muestran que el portavoz anónimo es el tipo de voz más habitual (60%). Sin embargo, el 40% de los spots de radio de CA utilizan testimoniales con un alto reconocimiento, influencia social y demostrada eficacia publicitaria como los expertos y famosos (Bhutada & Rollins, 2015; Kaphingst et al. 2004; LaTour & Smith, 1986; Limbu, Huhmann, & Peterson, 2012; Rollins & Bhutada, 2014; Wu, Linn, Fu, & Sukoco, 2012). Cabe señalar que el 25% de estos anuncios cuentan con la presencia de celebridades a pesar de que estudios previos han demostrado su escasa presencia publicitaria en el medio radio (Perelló-Oliver, Muela-Molina & Campos-Zabala, 2018). La tradicional infrautilización de los famosos en los anuncios de radio se debe a las características del medio que no puede explotar el potencial visual y el atractivo de sus protagonistas.

Según el ELM, un testimonial es una herramienta periférica que aumenta la capacidad persuasiva de la publicidad. Sin embargo, este trabajo muestra que, para productos de alta implicación como CA, se utilizan ambas rutas -central y periférica- para potenciar el efecto persuasivo del mensaje. Así, las apelaciones racionales predominan en los anuncios de los testimoniales con mayor influencia como los doctores y famosos. Es decir, que cuanto más reconocimiento social y credibilidad tiene el personaje, más peso tienen los argumentos directos, explícitos y racionales y menos atención se presta a la parte emocional del mensaje publicitario. Este predominio de los recursos racionales viene condicionado por la ausencia del elemento visual en la radio, hecho que condiciona los planteamientos generales del ELM en su aplicación en este medio.

Title: How we discuss AIDS: A study on AIDS information on social media in China from social computing perspective

Session Type: Individual submission

Authors:

Name: Weigang Tian

Email: tianweigang(at) sina.com

Country: CN (China)

Affiliation: Communication University of China

Name: Rudong Zhang

Email: rudong.zhang(at) ucdenver.edu

Country: CN (China)

Affiliation: Communication University of China

Abstract: Although the established narratives on the HIV/AIDS epidemic can provide us with a brief overview of the history and present of the epidemic, they cannot reveal the nuanced complex and cultural and sociopolitical meanings of HIV/AIDS as constructed, practiced, and negotiated in everyday lived experience. (Ding, 2017) Particularly in China, where the government has been slow to respond to the crisis, people have come to learn about HIV/AIDS, understand its consequences, and construct their own beliefs and attitudes largely through reading and reflecting on other people's stories as shared online. (Leslie and Matthew, 2006)

Against the backdrop, this study aims to develop a holistic understanding of the patterns and dynamics in discourses about AIDS from various information sources in China by looking at related posts on Weibo, the Chinese equivalent of Twitter, and the dominant platform for public discussion online.

This study used the Latent Dirichlet Allocation (LDA) topic model to extract AIDS information topics from social media from the perspective of social computing. F.-Y. Wang, Carley, Zeng, and Mao (2007), synthesizing from multiple sources, define social computing as the “computational facilitation of social studies and human social dynamics as well as the design and use of ICT technologies that consider social context” (p. 79)

One of the research questions is the frequency of information on AIDS (keywords) on Weibo. The second question is about how AIDS information is classified on social media(topics). We selected one week from 29th November to 5th December in 2018, covering the World AIDS Day of December 1, and used Python to capture 8036 AIDS-related posts published in this week on Weibo.

Topic modeling belongs to the category of unsupervised learning. It refers to the algorithm for automatically summarizing and archiving large texts by discovering hidden "topics" intensively discussed in the document. There are 20 topics we got and we grouped them into 6 categories including transmission and rumors, PWLHA, epidemic, incidents, prevention and therapy, campaign and intervention, which manifested obvious differences from topics of traditional media reports that featured medicine, politics and economy etc. (Liu and Zhang, 2005)

From the perspective of research significance, at the methodological level, this research can provide an effective way to explore the online public opinion of social media users and learn about the public's knowledge and awareness of health issues or specific events. At theoretical level, the study is expected to provide examples for theoretical research on health communication using big data and social media in the future. While at the practical level, we can understand in real time how people use social media to offer and share information about AIDS, provide guidance for health communication practitioners to use social media for effective health promotion.

Abstract: Demographic global changes have put health organizations across the globe under considerable strain (OECD/EU, 2018). Digitization of health care systems in many countries has been a promising way of developing more efficient and sustainable infrastructure. At the end of January 2019, 57 per cent of the world's population were using Internet, and 45 per cent were using social media (We Are Social, 2019). However, digitization of health care systems has taken place in two parallel tracks: while several studies confirm that most patients have embraced the use of digital utilities to improve their personal health care management, health care organizations continue to face problems with digitization that prevent them from optimizing their patient treatment strategies. Many problems are financial and technological, while others result from cultural factors but also privacy concerns handling patient data following the EU GDPR (European Commission 2019; Lovari, 2017; Sendra and Farré, 2017; Vaagan, 2015).

At the same time, the steady empowerment of patients through digitization is a double-edged sword. On the one hand, technologies have undoubtedly democratized the access to health care (Gonzalez-Polledo, 2018), but to what extent? Do all individuals have the same conditions (Cioni et al. 2018)

or digital competences to use these resources? On the contrary, the proliferation of these practices is raising concerns in terms of ethics and data protection (Lupton, 2012; Vaagan, 2015; Roland, 2018). After more than a decade since the onset of health 2.0 (Hughes, B., Joshi, I., & Wareham, J., 2008), this study examines how and to what extent health care communication is being digitized in two North European and two South European countries: Finland, Norway, Italy, and Spain. The sum of the health care expenditure in these countries amounted to EUR 298 billion in 2015 (Eurostat, 2018). All four countries have relatively high rates of Internet penetration and use of social media (ITU, 2018). Furthermore, the study continues the discussion on the digitalisation of health care communication and the theories of health communication (Torkkola, 2015).

Our main research objective is to analyse and compare the documents and digitization policies of health care organizations in these four countries during the last 10 years. Analysis would be driven by some factors like the type of technology, actors involved, the aim or aims of the digitization, legal constraints, and the communication about the policies. After this first mapping, further analysis would examine the possible trajectories for digitization and healthcare through four key concepts, all related to digital health: hyperconnectivity (i.e. wearables and other devices), artificial intelligence (i.e. bot, vocal assistants, etc.), virtual reality (for instance, virtual hospitals), and big data (also related to social media). In this preliminary study, similarities and differences will be discussed focusing on theoretical and practical implications for health communication.

Title: The Impact of Pregnant Women's Online Health Information Seeking on their Dietary and Nutritional Intake Behaviors

Session Type: Individual submission

Authors:

Name: Ying-ju Lai

Email: laiyingj(at) gmail.com

Country: TW (Taiwan)

Affiliation: Fu Jen Catholic University

Name: Hsin-yu Huang

Email: p95270(at) gmail.com

Country: TW (Taiwan)

Affiliation: Fu Jen Catholic University

Abstract: Looking for dietary and nutritional information online is very common among pregnant women in Taiwan. With the abundant health information available online from many platforms, including professional medical websites, medical professionals' personal blogs, discussion boards, forums, social media, and so forth, pregnant women are facing the challenges to differentiate the quality of the information they acquired online. The purpose of this study is to examine to what extent do pregnant women's dietary and nutritional intake behaviors are influenced by the health information quality, their perceived risks during pregnancy, the level of their online health information seeking, the degree of their online health literacy, and the amount of social supports they received online. An online survey was conducted from March 27 to April 7 in 2018. A sample of 500 pregnant women in Taiwan was recruited for data analysis. Respondents were asked to answer survey questions to measure their changes in dietary and nutritional intake behaviors during pregnancy, perceived risks, degree of their online health information seeking behaviors, online health information quality, online social supports, and online health literacy. Statistical analyses using multiple linear regressions were applied for hypotheses testing. The results showed that (1) pregnant women's dietary and nutritional intake behaviors are influenced by the frequency of their online health information seeking; (2) their perceived risks during pregnancy has an impact on their online health information seeking behaviors; (3) the timeliness of information as one of the sub-dimensions of information quality has a direct impact on pregnant women's change in health behaviors; and (4) the more informational and emotional social supports they received online, the higher degree of the change in their dietary and nutritional intake behavior. The findings in this study indicate the importance of online health information seeking, information quality (i.e. the timeliness of the information), online social supports (i.e., informational and emotional supports), and perceived risks, as well as how they influence pregnant women's health behaviors in the field of health communication research.

Title: Health communication through the advertising of functional foods

Session Type: Individual submission

Authors:

Name: cristina González Díaz

Email: cristina.gdiaz(at) ua.es

Country: ES (Spain)

Affiliation: University of Alicante

Abstract: Nowadays, we are immersed in what authors like Díaz and Morant (2005) have called "sanismo". This denomination refers to the increasingly incipient concern for health that consumer feels. Food with magnesium to reduce our fatigue, with vitamins B6 and D that help our defenses, rich in fiber, in omega 3, etc. The functional foods market is growing and this fact is reflected in an increase in the health claims that these products make in their advertising. The objective of this research was to study what information about food health benefits appears in advertisements and how this information is presented. This could help to improve the consumer's information and understanding, resulting in better health.

Academic studies on food advertising have focused their research on different areas: There are studies of content analysis whose aim is observing what both the claim and the nutritional value of the product are (Barker and BurrIDGE , 2014, Cuevas-Casado, Romero-Fernández and Royo-Bordonada, (2012) There are also many which seek to determine if the messages are misleading (Brushwood, et al., 2013; Muela and Oliver, 2011). However, the literature consulted in this regard fails to analyse what information is presented and how it is used in health claims advertising.

We have analysed 210 advertisements broadcasted on tv in 2016. The following items were studied: advertising claim; how the claim is presented (slogan, main character, image and/or voice over); the presence of additional information as well as the main claim, what the information was, how it was presented and vocabulary used.

The main results show that of 210 advertisements analysed 103 used the "flavour" claim and 88 used "health" claim. Of the latter, only 56 contained additional information as well as the main claim, and this information was presented using a text that was difficult to read due to letter size, colour and/or because it was moving.

In conclusion, this research shows that there are weaknesses in the content and form when presenting the relevant information of a product's health benefits. This fact could result in incorrect consumer understanding and, in consequence, affect his health. We propose some recommendations to improve the design and information in the advertisements to make them clearer and more thorough.

This research was conducted as part of "Reclamos de salud en la publicidad de alimentos y comprensión del consumidor " (Health claims in food advertising and understanding consumer GV/2016/088), an RDI project funded by the Generalitat Valenciana, Spain and directed by Cristina González Díaz

Title: The effects of language use on health information diffusion and audience engagement on Twitter

Session Type: Individual submission

Authors:

Name: Meng Chen

Email: meng.chen(at) webster.ac.at

Country: AT (Austria)

Affiliation: Webster University, Vienna

Abstract: Due to the ubiquitous information technologies, social media have extensively been leveraged for social benefits, especially health promotion and cancer prevention. For example, Twitter provides a platform to efficiently disseminate up-to-date information about cancer prevention, diagnosis, and treatment. At the same time, the technologies equip the information consumers with the ability to exercise information selection in this digital era when various resources proliferate. Some messages go viral whereas some languish in obscurity. Therefore, an important question for health communication scholars to consider is what factors determine the diffusion of health information on social media.

Previous research has identified a number of content and sender factors affecting audience selective exposure and media engagement, such as presence of message efficacy component, number of followers, profile verification, etc. This study aims to expand this line of research by investigating how language use of cancer diagnosis and prevention messages on Twitter affects its diffusion and audience engagement. Specifically, three research questions are proposed: (1) To what extent do emotion words (positive, negative, fear, hope) affect cancer-related tweets' diffusion size and structure, as well as people's liking and commenting behavior? (2) To what extent do cognitive processing words affect tweets' diffusion size and structure, as well as people's liking and commenting behavior? (3) Do cancer diagnosis and treatment related words have any influence on tweets' diffusion size and structure, as well as people's liking and commenting behavior?

Tweets on cancer diagnosis and prevention posted from 1 January, 2017 to 1 January, 2018 was collected by a web-crawler program. These tweets will be analyzed using Linguistic Inquiry and Word Count (LIWC), a software program that measures grammatical and psychological dimensions in text records. Three linguistic dimensions will be created and assessed: emotional affective words, cognitive processing words, and cancer diagnosis and treatment words. For dependent variables, number of retweets is measured as the diffusion size. Diffusion structure is operationalized by assessing the extent to which a tweet is broadcast (diffused to a large number of followers from a single individual) or viral (goes through multiple steps from the originator to the followers). Each tweet's liking and comments number are calculated as a measurement of people's media engagement behavior. A linear regression will be used to examine the association between linguistic dimensions and tweets diffusion as well as people's media engagement.

This research will address the following theoretical, methodological, and practical issues. First, adopting a linguistic approach, this study tests how language use of cancer-related tweets affects its

diffusion and audience engagement. Second, this study collected people's actual liking, commenting, and retransmission behavior on Twitter. This large-scale data collected in a natural setting will address recall inaccuracy, data subjectivity, and sampling bias. Third, the results have practical implications for health practitioners to design spreadable cancer-related messages by considering the linguistic factors in a prevention message.

Title: Cancer information seeking and cancer knowledge, attitude, and practice in China: Trends from 2012 to 2017

Session Type: Individual submission

Authors:

Name: Shaohai Jiang

Email: cnmjs(at) nus.edu.sg

Country: SG (Singapore)

Affiliation: National University of Singapore

Name: Piper Liping Liu

Email: cnmliul(at) nus.edu.sg

Country: SG (Singapore)

Affiliation: National University of Singapore

Abstract: Background

With the largest population in the world, about a fifth of all global cancer cases occur in China, and cancer has become the leading cause of death in this country since 2010. To reduce the serious and growing cancer burden in China, it is important to disseminate relevant cancer-related information to the public. Yet, cancer information seeking (CIS) is still uncommon in developing countries, and empirical studies that systematically examined CIS remain limited in China.

The knowledge, attitude and practice (KAP) model is critical to identify knowledge gaps, attitude changes, and behavioral patterns that can facilitate the planning and implementation of cancer control efforts, reduce barriers in the program delivery, and offer solutions for improving quality and accessibility of healthcare services.

Thus, in line with the importance of CIS and KAP, this study aims to examine (a) the effects of two dimensions of CIS (active CIS and diversity of CIS) on KAP (cancer knowledge, cancer worry, and cancer screening), and (b) whether CIS and KAP, and their relationships have changed from 2012 to 2017 in China.

Methods

Two probability sample surveys, using multistage stratified random sampling, were conducted in 2012 and 2017 respectively, in two cities in China, including Beijing, representing first-tier cities, and Hefei, representing second-tier cities. The sample size was 2,568 in 2012, and 3,090 in 2017. The survey questionnaire was designed with a basis of the US Health Information National Trend Survey.

Results

Trends of CIS and KAP

There were significant differences in CIS and KAP between 2012 and 2017. For CIS, the percentage of active cancer information seekers dropped from 27% in 2012 to 17% in 2017. A decreasing trend was also observed in diversity of CIS, with the mean reducing from 1.14 in 2012

to .71 in 2017. Regarding KAP, an overall downward trend has been revealed. Specifically, cancer knowledge declined from 1.85 in 2012 to 1.72 in 2017. Also, respondents reported less cancer worry ($M=2.18$) in 2017, down from 2012 ($M=2.61$). Similarly, less frequent cancer screening was shown in 2017 ($M=3.57$), decreasing from 2012 ($M=3.67$).

Relationships between CIS and KAP

CIS has exerted significant impacts on KAP over time. In 2012, active CIS increased cancer knowledge and cancer screening. Similarly, in 2017, active CIS was positively linked to cancer knowledge, cancer screening, as well as cancer worry. In addition, diversity of CIS was a significant predictor of cancer knowledge and cancer worry in 2012, and in 2017, it predicted cancer worry.

Conclusion

This study has broken new theoretical grounds in (1) distinguishing different dimensions of CIS and their impacts on KAP; and (2) analyzing two waves of data to illustrate trends of CIS and KAP, and their relationships over time in China.

In many developed countries, cancer prevention and control has gained increasing attention. However, in China, people's cancer information seeking, cancer knowledge, cancer worry, and cancer screening have decreased over time. We call for promoting cancer prevention through multi-level actions, including clinical consultations, public health campaigns, and joint societal efforts in China.

Title: How Doctors Manage Consumerism and Their Communication with Patients in China's Neoliberal Economy

Session Type: Individual submission

Abstract: China's healthcare system underwent considerable reforms since China started to implement the economic reforms in 1979. The central government drastically reduced its funding in healthcare services and relegated the monetary responsibility to provincial and local governments. An unexpected outcome of this new policy is the enlarged divide between coastal and inland provinces. Furthermore, the logics of market and economy were introduced into the hospital operations, requiring hospitals to be fiscally accountable and doctors to make profits. China's central government issued a new policy in 2009 that stresses the public service nature of hospitals and medical operations, thus marking a shift from an over-reliance on the market to the re-establishment of the central government's role in financing medical services. However, the lack of government funding means that hospitals and doctors still have to make profits for survival. The marketization of healthcare is also accompanied by the transformation of Chinese people from socialist citizens to capitalist consumers, which has complicated the already strained doctor-patient relationship and communication practices. Doctors are put in the situation where they are viewed simultaneously as professionals driven by profit and public service providers whose ultimate goal is to treat patients with little or no consideration of monetary returns in the socialist condition. The neoliberal conditions and rising influence of consumer culture have thus complicated how doctors are (mis)perceived and how they communicate and manage their relationship with the patients. This paper analyzes how doctors manage consumerism, other structural changes and the doctor-patient relationship in the broad context of neoliberalism and rising consumer culture. We are especially interested in looking how structural inequality created by health-related policies and the neoliberal subjectivity created by market reforms produce new challenges for doctors and patients. The analysis is based on interviews with doctors and patients as well as media reports and academic and industry research. We argue that the new mode of governance is characterized by self-interest, opportunism, and strategic management of information, mistrust and decision-making processes.

Abstract: The World Health Organization's (WHO's) 'Five-Keys-to-Safer-Food' campaign inspires food safety risk communication in several countries. Such campaigns offer little protection unless cultural, behavioral, and contextual aspects that shape practices are addressed. Issues at the consumer end also affect food safety and these relate to how consumers acquire, cook, store and consume foods. In India, diverse food habits, hygiene practices, and centuries-old traditions coexist with the changes introduced by globalization making food safety promotion a daunting public-health task. Taking the theoretical underpinnings of critical health communications research approach (Lupton, 1994 and Zoller and Kline, 2008), which critiques the production, circulation and reception of dominant health discourses, emphasizes on deconstruction of the biased assumptions of health promotion messages and calls for development of context-sensitive models of health promotion. This study aimed to develop context-specific messages or keys to food safety promotion and assess the efficacy of a risk communication campaign based on them. In the first phase, a cross-sectional study was conducted among primary home food preparers (N=400) in rural and urban ((at) 200 each) areas of Telangana, India to enlist the key risk factors that affect safety of foods in home kitchens. In addition, literature was reviewed; focus group discussions and non-participant observations were conducted. Based on these, an 87-item comprehensive index questionnaire covering variables like knowledge, practices and enabling-environment was developed and administered. Simultaneously, 400 food samples and hand rinses were collected from the study participants for microbial analysis. Association between each of these 87 variables and presence of high risk food borne pathogens was checked. Eleven out of 87 index variables were found to be significantly associated with food contamination. Of these, 9 were related to context-specific practices and 2 were related to enabling environment. The identified 11

key variables were used to develop a household food safety index (HFSI) that can rapidly ascertain food safety status at household level.

These 11 parameters were collapsed into five context-specific key messages which broadly related to hand hygiene, separation of raw and cooked foods, safety of drinking water at point-of-use, maintenance of domestic kitchen and washing raw fruits/vegetables.

In phase-2, a risk communication campaign was carried out among a set of new participants (N=120) selected (40 each) from urban, rural and slum areas. A variety of communication tools like shareable videos, pamphlets and slideshows covering the context-specific five keys were developed in Telugu, Hindustani (local languages) and English. After the campaign, significant improvement was observed in HFSI scores of the participants indicating that risk communication based on critical health communication framework has been effective and efficacious in promoting household food safety. This study strongly backs the view that India indeed presents a strong case for refining the dominant food safety discourse of WHO.

Title: I'D Rather Have AIDS: Rural Women's Perceptions of Cervical Cancer in Kenya

Session Type: Individual submission

Authors:

Name: Nancy Muturi

Email: nmuturi(at) ksu.edu

Country: KE (Kenya)

Affiliation: Kansas State University

Abstract: Cervical cancer is among the leading causes of death among women of reproductive age globally. With estimated 570,000 new cases in 2018, it is the fourth most frequent cancer in women representing 6.6% of all female cancers, but 90% of the deaths are in low- and middle-income countries (WHO, 2018) where health services are deserving. These are countries that are highly impacted by other communicable diseases, including HIV and AIDS and other sexually transmitted infections. In Kenya, 14.3 million women ages 15 years and older are at risk of cervical cancer, more than 4,800 cervical cancer cases are diagnosed annually and in 2017 approximately 2450 deaths were reported (Bruni et al., 2017).

Human papillomavirus (HPV) is the main cause of cervical cancer, specifically HPV 16 and 18 genotypes that are associated with about 70% of all invasive cervical cancers (Menon et al, 2016). It is the most common sexually transmitted infection (STI) that affects men and women. HPV is also associated with vaginal, vulvar, anal, penal and oropharyngeal cancers (Cates et al, 2012) and is more prevalent in countries with higher levels of HIV prevalence. Kenya, for instance, has an HIV infection rate of about 6% and an HPV incidence rate (per 100,000 a year) of about 22.4 (Bruni et al, 2017). HIV positive women are at higher risk of progressing to cervical cancer if infected with HPV due to the suppressed immune system (Menon et al, 2016).

Preventing cervical cancer entail abstinence, use of condoms, HPV vaccination, and screening for cervical cancer. Kenya is among the countries that have adopted HPV vaccination as a measure for preventing cervical cancer, but vaccine uptake has been limited (Vermandere et. al., 2015). This may be attributed to a lack of access to information and services, communication strategies used, and other elements associated with STIs. Although information about HPV and cervical cancer is available through online sources, making accessibility possible to everyone regardless of geographical borders, many factors limit this accessibility especially those with the greatest need.

The purpose of this study was to examine rural women's perceptions and barriers for participation in cervical cancer prevention programs. Based on McGuire's information processing theory, the study focused on message exposure and understanding of HPV and cervical cancer as well as socioeconomic and cultural barriers to prevention.

Data were gathered through focus groups among rural women in Central Kenya who were sexually active (22-64). Key findings indicated limited access to information and services, lack of knowledge and understanding of HPV and its association with cervical cancer, fear of screening and stigmatization, inadequate doctor-patient communication about cervical cancer, imbalanced gender

relation as well as personal and cultural barriers to prevention. The study suggests communicating about HPV as an STD, provide information and service accessibility, and focusing on stigma. Empowering women in doctor-patient communication, promoting spousal communication and targeting men in preventing HPV transmission and to motivate women to go for cervical cancer screening is also recommended.

Abstract: Most of what is known regarding cancer information engagement on social media stems from quantitative methodologies. Using available Facebook metrics, public health literature has often quantified cancer information engagement by measuring the likes, comments and/or shares of posts within cancer organizations' Facebook Pages. Although analyzing this content provides insight to certain factors that may enhance engagement with cancer information on social media platforms, this content isn't necessarily representative of the cancer information generally available to and consumed by platform users. Understanding how users engage with user-generated or shared cancer information that may not come from reliable sources can provide further insight to features that affect engagement and contribute to the dissemination of accurate cancer information – particularly those conveying cancer prevention and screening (CPS) recommendations. This insight may lead to better ways of reaching underserved audiences at higher risk of cancer health disparities (CHDs), thus educating them on ways to reduce their cancer burden.

This paper discusses the challenges of current approaches to CPS information engagement on Facebook, and presents a qualitative approach to understanding engagement. For this study, 20 self-identified Latino/Hispanics ages 40-75 with no history of cancer participated in semi-structured, in-depth interviews to discuss their Facebook utilization and engagement with cancer information on the platform. This diverse population not only avidly uses Facebook, but also faces high CHDs: cancer is the leading cause of death among U.S. Latinos and cancer incidence rates are highest for screenable cancers linked to preventable behaviors (breast, prostate, colorectal). Participants accessed their Facebook account alongside the researcher, typed "cancer" in the search bar, and discussed cancer-related posts they engaged with during the previous 6-12 months. Engagement was defined as liking, commenting and/or sharing a post; clicking on a post link; reading an article

in a post; and/or watching a video within a post. Content engagement prompted questions regarding the reasons for engagement, and whether engagement triggered further action.

A thematic analysis revealed that participants rarely engage with CPS information through likes, comments, and/or shares, but instead by viewing/reading content. Furthermore, rarely did CPS information from health organizations appear or elicit engagement among participants. Instead, engagement was most common when individuals had personal relationships to those posting information, when posts included videos and/or images, and when information promoted popular Latin American foods as cancer remedies. Lastly, engagement often led to varying levels of action. Findings highlight that current approaches to measuring engagement do not fully capture the cancer information landscape on Facebook. While Facebook allows administrators to access some post viewing metrics on their Pages, this quantification of engagement cannot be readily captured elsewhere on the platform. Incorporating qualitative methods, such as those outlined in this paper, allow for a better representation of how persons engage with CPS in reality and make substantial contributions to scientific knowledge relating to engagement on social media platforms. These methods may also be applied to future studies regarding how to best communicate cancer information on these platforms, an important step towards addressing CHDs among the most vulnerable.

Title: Communicating cannabis: Biomedical framings in practitioner publications

Session Type: Individual submission

Authors:

Name: Monique Lewis

Email: monique.lewis(at) griffith.edu.au

Country: AU (Australia)

Affiliation: Griffith University, Australia

Name: John Flood

Email: j.flood(at) griffith.edu.au

Country: AU (Australia)

Affiliation: Griffith University

Abstract: After being illegal for many decades, cannabis, through its medical therapeutic benefits, is enjoying a resurgence as a legal substance for treating a range of chronic and acute diseases as well as for palliative care patients. This framing study investigates how knowledge about medicinal cannabis is being mediated among the medical professions in Australia in their scholarly and practitioner publications. Such publications are spaces where the role and worth of medical professions is constructed and doctors' authority, expertise, and professional dominance reinforced and legitimated. Discourse about new and emerging medicines, research, and technologies are an important topic in practitioner publications. Whilst these topics may be a site of contestation in which disputes and debates occur, they also may provide a space for boundary work and social closure.

This study also explores the unusual phenomenon whereby the medical profession is being encouraged to embrace a plant medicine; one that does not yet have gold-standard EBM research behind it for all the illnesses for which it may be prescribed. The significance of the project is founded on the rise and integration of complementary and alternative medicines (CAM) into mainstream healthcare.

Using content analysis, we mapped key frames arising from the discourse about medicinal cannabis in Medical Journal of Australia, Australian Doctor, Medical Observer and the Australian Journal of General Practitioners from 2000-2018. Using NVivo, we coded for article type, frames, headline and article tone, sources, and visuals. We retrieved 108 articles. The majority of framings were positive about MC and acknowledged its legitimacy as a therapeutic option for doctors. Articles also framed positive research findings about cannabis as much as the deficiencies of evidence for its use. No articles suggested MC should not be legalised. Doctors' concerns were conveyed through frames about safety issues, accessing and prescribing, and the research challenges posed by MC. Framings of cannabis legalisation being driven by community members were also frequent. Across the articles, MC was typically framed as a pharmaceutical substance rather than a plant medicine.

This study places a sociological lens on mediations that demonstrate the medical profession embracing (albeit with uncertainty and ambiguity) a plant medicine; one that does not yet have

gold-standard EBM research to support it, but appears validated by some quality research and anecdotes, as well as traditional usages across human history. The representations also reflect the mainstreaming process in action, which is reliant on doctors' capacity and willingness to prescribe MC. We argue that this process is also dependent on the successful framing of cannabis in medical practitioner publications as a scientised, molecularised, and pharmaceuticalised, substance.

Country: CN (China)

Affiliation: GuiZhou University of Finance and Economics

Abstract: In July 2017, HPV vaccine-Cervarix(at) was officially launched in mainland China, and with the HPV vaccine-Gardasil(at) and Gardasil(at) 9 launching into the market, HPV vaccination has finally been introduced in mainland China. Compared to other countries, it took almost 10 years for the HPV vaccine entering China, and the HPV vaccine is a rather fresh thing for the general public.

Media coverage always serves as a window for people to understand the reality, so does in the popularization of HPV vaccine. The vaccine launching news was once a big heat in mass media as well as social media which plays a crucial part in information communication in China especially for the young. However, several studies have showed that the cognition of Chinese women to the very vaccine is relatively at low level (Zhang et al., 2017; Zeng et al., 2015). Other research also found that media's information of HPV vaccine is lacking, inaccurate and vague (Deng, 2018). Given the circumstance, the public probably cannot get sufficient information from the media about HPV vaccination, and their attitude and willingness of practice toward HPV vaccination will be effected. Additionally, the case of HPV vaccine mandates represents a genuinely "new" issue on which even political elite and medical experts' opinions were dynamic(Fowler et al., 2012), so HPV vaccine is still of controversy due to extreme cases and various debate about its prevention of cervical cancer in China.

Focusing on media and the public's cognition of HPV vaccine, the paper sets hypotheses as: 1. People in China mainly gain their knowledge on HPV vaccination through both mass media and social media; 2. Information provided by the media has changed the public's attitude towards the HPV vaccination. Based on the hypotheses stated above, the paper applies research method of online-questionnaire assisted with in-depth interview with group aged 18-45, in order to analyze media's influence on the public's cognitive level of HPV vaccination. With the help of framework

of K.A.P. (knowledge, attitude and practice) in health communication, the paper tries to answer the research questions listed as below:

1. Through what channel Chinese people get information of HPV vaccine? and how majorly does media's role played in people's cognition?
2. Does social media practice (like attitude of Key Opinion Leaders) effect the general public opinion towards HPV vaccination?
3. Whether or not Chinese people attain sufficient and accurate knowledge of HPV vaccination?
4. Does media coverage improve or weaken the target group's intention of vaccination?
5. As for gain frames and loss frames which have been proved effective for health behavior changing (Rothman & Salovey, 1997), which one is more effective on the group's intention for HPV vaccination?

Affiliation: Faculty of Social Sciences, Tampere University

Abstract: Traditionally, health care institutions and their professionals have enjoyed high social status and esteem in society. Western medicine has largely legitimised its status by establishing its scientific criteria on objective knowledge production. New medical and information technology is changing the nature of health care interaction between individuals and health organizations and its professionals. There have been an increasing number of signals indicating that medical authority is challenged by lay people in social media in various ways.

In our ongoing research project the pressures of ignorance and disinformation on expertise, we examine how health professionals take social media into account in their expertise and interactions with the patients. In the empirical part of the study, we will conduct a survey to 1100 medical practitioners and 3000 nurses working in the Pirkanmaa Hospital District at its Tampere University Hospital in March 2019. In the survey, we will make questions on five different sections: 1) frequency and diversity of the use of social media; 2) influence of social media on interaction between a care provider and a patient; 3) Influence of social media on expertise; 4) protection of privacy of professionals; and 5) the formal and informal instruction of social media used in the hospital. In this paper, we will present preliminary findings of the survey.

The case study presented in this paper is a subproject of the research project Struggling with Ignorance: Negative Expertise and the Erosion of the Finnish Information Society at the Turn of 2020 (NEGATE). Based on the epistemology of ignorance and theories of professional education, the project outlines the significance of non-knowing and ignorance for professional work, stressing the potential of non-knowing in creativity, unlearning and the toleration of uncertainty. In the research project, we investigate how radical changes in the information society alter the status, authority and employability of highly educated professionals and experts.

Title: Antecedents and Consequences of Suicide Stigma in South Korea

Session Type: Individual submission

Authors:

Name: Hannah Lee

Email: hoy1222(at) naver.com

Country: KR (Korea, Republic Of)

Affiliation: Ewha Womans University

Name: Soontae An

Email: soontae(at) ewha.ac.kr

Country: KR (Korea, Republic Of)

Affiliation: Ewha Womans University

Abstract: About 36 Koreans commit suicide every day, the highest ranked suicide rate among member countries of the Organization for Economic Cooperation and Development (OECD). Despite the high suicide rate, most Koreans tend to perceive suicide as “something unrelated to me” or “someone else’s problem.” Furthermore, suicide and mental illness are highly stigmatized in Korean society. Stigma toward mental illness or symptoms is a key barrier to help-seeking and receiving timely, appropriate treatment in order to curb the suicide rates.

The purpose of this study is to examine the antecedents and consequences of suicide stigma. A total of 510 Koreans participated in an online survey. The questionnaire included questions assessing suicide stigma, cultural beliefs (Chemyon sensitivity, conformity tendency, and interdependent self), attitude toward seeking professional psychological help (ATSPPH), attitude toward mental health services (ATSMHS), and demographics. ATSPPH was made as a latent variable consisting of one’s willingness to seeking professional help and not coping on one’s own. ATSMHS was also made as a latent variable including perceived value of mental health services and perceived importance of mental health services.

First, a confirmatory factor analysis was performed to assess the reliability and validity of Korean Suicide Stigma Scale. Results confirmed that suicide stigma in Korea consists of six factors; incompetence, glorification, sympathy, being immoral, selfishness, and social exclusion. These dimensions were clearly distinguished from suicide stigma in Western societies. Second, a structural equation model was performed to assess the cultural beliefs as antecedents of suicide stigma as well as consequences of the stigma.

Results showed that people with high sensitivity to Chemyon (a cultural belief emphasizing others’ views) tended to perceive that suicidal people were incompetent, immoral, selfish, and disconnected from society, showing high levels of suicide stigma. People who consider themselves as interdependent also demonstrated high levels of suicide stigma, viewing suicidal people as incapable, self-centered, disconnected, and immoral. Conformity tendency was also positively associated with five factors of suicide stigma; incompetence, glorification, being immoral, selfishness, and social exclusion.

As a result, suicide stigma composed of six factors had direct effects on ATSPPH and ATSMHS. In particular, being immoral, sympathy and glorification were significantly related to ATSPPH. Participants viewing suicidal people as being immoral and glorified were more likely to have

negative ATSPPH. In contrast, sympathy was positively related to ATSPPH. Regarding ATSMHS, glorification was negatively associated with ATSMHS. On the other hand, sympathy was positively associated with ATHSMHS. Results underscore the important role of cultural beliefs, indicating useful insights and directions to lower suicide stigma among Koreans.

Title: Framing HPV and cervical cancer: An analysis of news coverage in English language newspapers in India

Session Type: Individual submission

Authors:

Name: Prabhjot Kaur Sohal

Email: sohal.prab(at) gmail.com

Country: IN (India)

Affiliation: School of Communication Studies, Panjab University, Chandigarh, India

Abstract: Cervical cancer is one of the leading causes of cancer-related deaths among women in India. Absence of affordable, quality healthcare, poor nutrition, unhygienic environments and regressive social norms put women from low income and marginalized households at a high risk of being infected with the cervical cancer causing strains of Human Papillomavirus (HPV). Cervical cancer is also a highly preventable disease, if detected early or vaccinated against before an HPV infection. Yet, efforts by public health advocates to implement an effective screening and vaccination program in India are dwindling. The HPV vaccine has only been included in the pediatric list of Universal Immunization Program (UIP) of India as a non-mandatory vaccine.

Controversies around the Randomized Control Trials (RCT) of the vaccine and associated fear in the public, high cost of the vaccine, opposition from right-wing groups, and lack of awareness (Hussain et al., 2014) are cited as major causes of sluggish efforts to control cervical cancer in India. A failure to control the high incidence of cervical cancer in India can severely affect the public health system, worsening the country's heavy burden of disease. Inability to assuage fears related to the efficacy and safety of the HPV vaccine can relegate the progress made by the UIP in combating preventable diseases like polio and measles through vaccination.

In the current light, there's a need for strategic planning of health promotion and a critical assessment of Indian media's role in covering the issue. The ecological model of health behavior considers media as an important structural influence on health behavior and attitude (Sallis & Owen, 2015). This paper aims to unravel the frames assigned by Indian media to HPV/cervical cancer issue. For the study, a sample is drawn from four English language newspapers in India: The Hindu, The Times of India, The Hindustan Times and The Indian Express, and two independent news websites: The Wire and Scroll.in. The sample includes coverage of HPV/cervical cancer from 2015 to 2018. Using a directed content analysis approach (Hsieh & Shannon, 2005), content is categorized on the basis of medical and non-medical determinants of health (DOH). The study is informed by a body of research that highlights the significance of incorporating DOH in health messages to influence public policy makers (Lantz, Lichtenstein, & Pollack, 2007), and studies that confirm traces of overarching political and economic discourses in media's health reporting (Abdelmutti & Hoffman-Goetz, 2009).

The study reveals that newspapers employ the economic frame most frequently, among non-medical frames of the issue. It is also observed that authoritative sources are preferred while reporting about the health issue, while the "voice" of the public is absent. Through a detailed

description and discussion of the frames the paper highlights the implication of the media coverage of HPV/cervical cancer and signals at future areas of research.

Abstract: Smoking is linked to multiple health problems, but it is also the biggest preventable cause of premature death. Therefore, an important goal in health communication is to improve the effectiveness of campaigns targeted to smokers. The present paper is based on narrative persuasion research (Moyer-Gusé, 2008) and, in particular, on empirical research on smoking prevention with narrative messages (Kim, 2018).

The main theoretical models of narrative persuasion (Moyer-Gusé, 2008) have identified several psychological processes responsible for the impact of narrative messages on attitudes and behaviours, highlighting the role of identification with the protagonist because it reduces “resistance” toward the persuasive message through decreasing “critical” cognitive processing (lowering counterarguing and reactance). Given that identification is a relevant process in narrative health communication, current research is focused on figuring out how to increase this process. The present study focuses on the impact of two factors: audience-character similarity and narrative voice.

Similarity describes a process through which the individual exposed to a narrative shares certain traits with the protagonist. Given that the empirical evidence on the effect of similarity shows inconsistent results (Tukachinsky, 2014), we propose that it is possible that similarity influences identification only in certain conditions, depending on other characteristics of the message (Kim, 2019), like narrative voice. Narrative voice or point of view refers to the perspective adopted by the narrator and from which the story is told. Neuropsychological research has shown that first-person (versus third-person) narratives are processed in a neurological different way (Van Krieken, Hoeken & Sanders, 2017).

Our study establishes the concept of “optimal reception condition” and analyses the “joint effect” of audience-character similarity and narrative voice. Because first-person voice could facilitate that the audience of the message takes more easily the perspective of the character when audience-character similarity is high, it was hypothesized (H1) that the combination of reading a first-person narrative whose protagonist shows a high similarity with the audience will induce the highest levels of identification. Secondly (H2), this research tests a serial mediator model, in order to contrast the indirect effect of the optimal reception condition on the intention to quit smoking, perceived self-efficacy and response efficacy, through identification (as primary mediator) and counterarguing and reactance (as a secondary mediators).

To test our predictions, an online experiment was carried out with QUALTRICS, accessing to a sample of 680 (Spanish) smokers between 18 and 55 years old (50% female). Participants were exposed to a narrative message featuring an adult smoker (a 35-year-old man) who related his experience in the process of quitting smoking. Narrative voice (first versus third-person) and behavioural similarity (high versus low) were experimentally manipulated in the message.

The results showed that the optimal reception condition induced the highest levels of identification with the protagonist. In addition, we observed statistically significant indirect effects of the optimal reception condition on intention to quit smoking, perceived self-efficacy and response efficacy through identification that, in turn, reduced reactance. In conclusion, this research provides empirical evidence on how to improve smoking prevention interventions aimed at adults.

Title: Health communication for pregnant Chinese migrant women in northern England

Session Type: Individual submission

Authors:

Name: Qian Sarah Gong

Email: qg8(at) leicester.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leicester

Abstract: Health literacy, an integral component of health communication, has long been linked to health outcomes of both general and migrant populations. While much previous work on health literacy relied on quantitative measures of (English) literacy and numeracy of mainstream adult population (e.g. NAAL, TOFHLA), recent work informed by an ecological model (Dutta, 2007) aims to provide critical-cultural and interpretive analysis of individual and system conditions of health literacy, recognising the role of language, social capital, culture and healthcare providers (Berkman, et al, 2010; Squiers et al., 2012). Meanwhile, researchers of migrant health also argue for a more refined theoretical lens to capture complex influences (non-translatable educational status, language more than SES as a health risk) on migrant health (Acevedo-Garcia, 2012). This paper intends to contribute to the critical-cultural and interpretive research on migrant health, drawing on the concept of health literacy in a cross-national, ICT-mediated healthcare context. It investigates how pregnant Chinese migrant women in England seek, access, understand, appraise and communicate health information in their maternity care. This paper is based on a study supported by two NHS Trusts where 30 interviews with pregnant Chinese women (17) and midwives (13) and 7 observations of midwife appointments were conducted.

Preliminary analysis suggests that most Chinese women, regardless of their educational attainment and socioeconomic background, do not read information leaflets (e.g. ultrasound scans) provided by the NHS due to language barrier. However, they value information provided orally by their midwife. The arrival of the leaflets, usually during the first midwife appointment when women are 8-10 weeks pregnant, was thought to be too late and have missed the window of opportunity when women first found out about their pregnancy (week 4-6) and wanted more information. Due to limited social capital, most women turn to their Chinese social circle for support, including getting pregnancy advice from family and friends. Most women engage with Chinese pregnancy websites and apps extensively to seek information and monitor maternal and fetal health, but often find them inconsistent with the NHS practices. While some women are digitally savvy (e.g. being able to identify powerful translation apps for their midwife appointment), they demonstrate low eHealth literacy in terms of the ability to discern the credibility of online sources. Few are aware of data protection and privacy issues. Some women's health practices (e.g. purchase private scan to avoid the risk of nuchal chord) are underpinned by a sense of vulnerability and the notion of 'risk', shaped by women's knowledge of risk-averse maternity care practices in China (learned from Chinese websites and apps) and limited public healthcare resources in England, and social isolation. It's clear that several social, cultural and ecological factors influence Chinese women's health communication. Digital media reconfigure some of the influence, producing both enabling (immediate information in Chinese; translation app) and disempowering (risk and scaremongering,

inconsistency) effects. These findings can be used to review some practices of the NHS, and to potentially inform the development of a conceptual framework for migrant health literacy.

Country: IN (India)

Affiliation: Department of Foods and Nutrition, The Maharaja Sayajirao University of Baroda, Vadodara-390002, Gujarat, India

Abstract: Background & Objective: Food labels inform consumers about the overall quality, standard and safety related to packaged-food. Interpretation of food labels is a complex and time-taking exercise. Therefore, the aim of the present investigation was to understand the food labeling in India and its understanding among the consumers to make an attempt to develop a user-friendly android based application for decoding the food labels. Methods: Two situational analysis were carried as the groundwork to develop the android app (1) Market-survey (supermarkets=4, grocery stores=4): To examine the type of food labeling predominant on packaged foods (n=1,020) in India. (2) Consumer-survey (n=807 consumers): To examine the extent of consumer understanding of food labels. Results: Results revealed that majority (64.1%) of food products displayed Nutrition-Information-Panel (NIP) as “per 100 g”; 19% as “per 100 g and per serving” and 2% as “per serving.” Remaining products had a combination of two or more type of NIPs. Of the total products (n=1,020), only 337 products listed ingredients in descending order of percentage weights as per the Food Safety and Standards Authority of India (FSSAI) guidelines. The most common symbols/logos found on the products were either vegetarian or non-vegetarian logo (98.6%) followed by FPO (22.6%), ISO (12.4%), HACCP (5%), ISI (0.6%) and AGMARK (0.2%). Consumer survey revealed that majority of the consumers (93%) used ingredients list for product information followed by NIP (83%) and symbols/logos (73%). However, the understanding about the use of the same was low and ranged between 24% to 34% for each component. Conclusion: On one hand, there is a variety of nutrition information available on food labels, and on the other, understanding of the same is low among consumers. Therefore, the present android-application can aid in making informed choices by the consumers.

Keywords: Food labeling, FSSAI, Nutrition Information Panel, Symbols/logos

Title: Family Planning in Global Health Governance: A Political Economy Analysis of the Bill and Melinda Gates Foundation's Campaign for Contraception in Developing Nations

Session Type: Individual submission

Authors:

Name: Leslie Howerton

Email: lesliehowerton(at) weber.edu

Country: US (United States)

Affiliation: Weber State University

Abstract: The Bill and Melinda Gates Foundation (BMGF) uses multilateral partnerships and governmental relations as a global health and development actor in the arena of global health governance. “Global health governance involves an amalgamation of various state, non-state, private, and public actors and as such has developed beyond the institutional role of the World Health Organization (WHO) and state based ministries of health” (Harman, 2012). As the foundation exerts power in the form of financial grants it also exerts power over the discourse about global health and development by crafting messages that represent value systems from wealthy nations for programs employed in developing nations.

This study is a critical political economy analysis of the BMGF's campaign for contraception from 2014 through 2018. It answers the following research questions: 1) How does the BMGF use strategic and economic relationships to design and deploy its family planning campaigns?; 2) How are BMGF messages about family planning situated historically within broader development discourses, for instance, of modernization vs. critical discourses?; 3) How are BMFG messages about family planning situated historically within the field of international family planning and reproductive health discourses?

This research employs critical discourse analysis of BMGF documents, including annual reports, media articles, website content, and BMGF funded academic articles to answer these research questions. It combines theory and literature from critical political economy, development, feminism, and public health campaigns to historically analyze the BMGF's role as a global health actor in family planning campaigns.

Title: Communicating During Public Health Emergencies: The 2014 Chikungunya Outbreak in Jamaica

Session Type: Individual submission

Authors:

Name: Livingston White

Email: livingston.white(at) uwimona.edu.jm

Country: JM (Jamaica)

Affiliation: CARIMAC, The University of the West Indies

Abstract: In August 2014 Jamaica confirmed its first case of the Chikungunya virus (Chik V). In a Jamaica Health and Lifestyle Survey conducted during 2016-2017 it was reported that the virus infected approximately 80% of the island's population and has remained in the island since the first outbreak in 2014. The initial reaction of the Ministry of Health during the 2014 outbreak and the communication that followed revealed very low numbers of Chik V cases. This contrasted with what Jamaicans believed to be the reality. Much of the population was also convinced that the information concerning the source and spread of the virus were being withheld from them. Their need to know the facts was compounded by limited access to information on the virus during the crisis. This led to many Jamaicans utilizing unofficial sources of information as alternatives to adequate official information from the Ministry of Health. Social media channels became one such alternative that Jamaicans used to express their frustration and disperse information they believed represented the depth of information that they required. The paper argues that user-generated content on social media can be a tool used to cope with the need for clear information sharing during public health emergencies in the absence of expected official sources of information. In this case, social media technology enabled citizens in their attempt to secure human dignity at a time when the prerequisites for ethical health communication which include truth, completeness, correctness, relevance and sincerity, comprehensibility, inclusion, and equity and utility were seemingly not being upheld by the relevant authorities. The study will employ a multi-method approach that will glean information from different sources. These include secondary data gathered from a knowledge, attitude and practices (KAP) study done during the outbreak in 2014; a review of newspaper articles and other traditional media artifacts published or broadcast during the height of the outbreak between September and December 2014; as well as user-generated content shared on social media platforms. An analysis of existing literature addressing the role of media in risk communication will also be done. This approach to data-collection and analysis is expected to describe the nature of the communication around the Chikungunya virus that was provided by the Ministry of Health via traditional media platforms; examine how this related to the behaviour of Jamaicans; and analyze how new media, namely social media, were used to fill gaps in the information provided.

Affiliation: South China University of Technology

Abstract: Introduction: Media can play an important role in creating awareness about vaccine-preventable diseases. Due to their capacity to reach a large number of people simultaneously, media outlets are effective tools for dissemination of information about diseases and the vaccines used to counter them. However, recent studies have shown that media coverage of vaccination in different contexts and countries tends to lack comprehensive information and transparency, and creates uncertainty about the vaccine (Abdelmutti and Hoffman-Goetz, 2009; Bodemer, Müller, Okan, Garcia-Retamero, & Neumeyer-Gromen, 2012; Calloway, Jorgensen, Saraiya, & Tsui, 2006). The information in the media about vaccination also lacks accuracy (Sood, Klassen, Cronin, Massey, & Shefner-Rogers, 2015). Incomplete and non-transparent media coverage of health issues is a major risk for public health (Bodemer, et al., 2012). The lack of background information about diseases and vaccinations developed to treat them can misguide audiences. Similarly, “false-balancing” as a theoretical concept has recently received attention from public health scholars. Previous studies had noted that false-balancing techniques in the production of news stories created uncertainty around verified knowledge by “balancing” the arguments of pro-vaccine medical experts with the false claims of non-experts who oppose vaccination (Dixon and Clarke, 2012; Dixon and Clarke, 2013; Thomas, Tandoc Jr, & Hinnant, 2017). Dixon and Clark (2013) noted that people reading a falsely balanced story were likely to believe that the scientists were divided on the effectiveness of vaccine. This belief that scientists are divided on the effectiveness of vaccine may lead to vaccine hesitancy. Our content analysis of the media coverage of polio vaccination campaigns in Pakistan aims to explore the relationship between truth-telling and false-balancing in the context of polio vaccine. Methods: Based on the past literature on false-balancing, comprehensive information and truth telling, we created a code sheet. Using Lexis Nexis, we identified 53 news stories that met the inclusion criteria. The data was analyzed using SPSS (24, IBM).

Results: The results showed that a majority of the news stories (87%) were falsely balanced and therefore included scientifically invalid claims of parents about the side-effects of polio vaccine. Only a minority of stories (n=23) provided basic information about the effectiveness of polio vaccine.

Conclusion: The belief that a journalist should report the allegations of parents— even if the claims are proven scientifically wrong— as a kind of opposite view to the official position on vaccines, results in false-balancing. Therefore, there is a need to tell journalists that not all claims are worth covering and that reporting scientifically incorrect or invalid claims can result in vaccine hesitancy among readers, especially among those who have less familiarity with the science of disease.

Abstract: [ESP]

En su conocido libro *Hamlet on the Holodeck*, Janet H. Murray abordó sobre cómo los universos literarios evolucionan y se convierten en entornos de realidad virtual representados a través de la holocubierta de *Star Trek*. Esta tecnología consistía en una sala vacía en la que una computadora simulaba situaciones de la vida real y se usaba para entrenar a los personajes de la serie en diferentes tipos de situaciones (la misma lógica utilizada para los *X-Men* en la Sala de Peligros). El uso de esta metáfora ilustró el potencial inmersivo e interactivo de los nuevos medios para sus usuarios, quienes pudieron interactuar con un mundo ficticio sin ser conscientes de su entorno. Representando juegos como un modelo narrativo espacial de ficción interactiva que propone mundos virtuales es actualmente uno de los enfoques analíticos más populares para los videojuegos. Este artículo pretende abordar cómo este enfoque se ha cristalizado en la construcción cultural de una de las enfermedades más trágicas de nuestro tiempo: el cáncer.

Este estudio explora la intersección entre el cáncer, una de las principales causas de muerte en la sociedad contemporánea, y los videojuegos, uno de los medios más importantes en la cultura pop del siglo XXI. Las técnicas de análisis de contenido se aplicaron al mensaje de ocho juegos basados en una narrativa sobre la enfermedad, los pacientes, los tratamientos y los resultados obtenidos en los últimos quince años. Los resultados apuntan a una construcción de cáncer que se basa en la ciencia, el apoyo social y las convicciones espirituales para el empoderamiento individual y social en relación a la enfermedad.

[ENG]

In her well-known book *Hamlet on the Holodeck*, Janet H. Murray discussed how literary universes evolve and become virtual reality environments represented by *Star Trek's* holodeck. This technology consisted of an empty room in which a computer simulated real-life situations and was used to train the characters of the series (following

the same logic used for the X-Men in the Danger Room). The use of this metaphor illustrated the immersive and interactive potential of the new media for their users, who were able to interact with a fictional world without being aware of their surrounding environment. Portraying games as a narrative spatial model of interactive fiction that proposes virtual worlds is currently one of the most popular analytic approaches to video games. This article aims to address how this approach has become crystallized in the cultural construction of one of the most tragic diseases of our time: cancer. This study explores the intersection between cancer, one of the main causes of death in contemporary society, and videogames, one of the most significant media in twenty-first century pop culture. Content analysis techniques were applied to the message contained in eight games based around a narrative concerning the disease, patients, treatments and outcomes obtained over the last fifteen years. The results point to a construction of cancer which relied on science, social support and spiritual convictions for social empowerment.`

Title: Sexual Health, Discursive Silence: Rising HIV Infection in Canadian Youth and Health Risk Communication in a So-Called "Universal Health Care" System.

Session Type: Individual submission

Authors:

Name: James Forbes

Email: forbes.james.a(at) gmail.com

Country: CA (Canada)

Affiliation: York University

Abstract: In the 70 years since the UDHR, and the declaration of human health as a human right, great strides have been made in public health, both in Canada and around the globe. Canada's public health system and Medicare were introduced in the Province of Saskatchewan in 1962, and in 10 years, the entire country was covered. Or so the conventional wisdom goes. As many researchers in health and health communication are all too well aware, social determinants play a very important role in how citizens access, use and benefit from even public health systems (or how they do not). In the Canadian context, social isolation in the HIV+ and co-infected communities provides a stark lesson in how power operates on marginalized bodies differently. Crenshaw (1989) describes the different ways certain people are privileged and others are not in any system as "intersectionality". Thus, the "dynamics of inequality" that are operant in Canada are significant and important to understanding how health communication can effectuate change in a community, or shut it out. This paper looks specifically at two intertwined issues, campaign fatigue in ASO's and the rising incidence of HIV infection in youth (18-25), at the intersections of race, sexuality and gender. It hopes to that corroborate community (BIPOC) based intervention strategies are potentially effective, require more funding and application, and support this conclusion through data collected.

As one of the fastest growing demographics for HIV infection and transmission (Canada Public Health, 2018), youth in Canada face unique and specific challenges for health communication. Among youth demographics, HIV is thought to be curable, or a "gay disease". Culturally exacerbated stigma about M2M sex combine to produce an ideal storm which is driving the rise in infection rates. Campaign fatigue in the traditional ASO framework of funders, fundraising, service providers and clients makes the existing problem worse. What is emerging in the Canadian youth context is a distinction between "haves" and "have nots", with access to services hinging on community support, the "have nots" (BIPOC youth in particular) are getting left behind (AIDS Vancouver 2017). Faith based medicine as well as superstition and homophobia trouble the boundaries of access to diagnosis and treatment further, with much misinformation and confusion about who is susceptible to HIV/AIDS and what steps to take to prevent exposure or transmission. This research involves a brief literature review of existing strategies (CATIE 2016, CATIE 2017, CHABAC 2017) survey, interviews with service providers in Indigenous, Black and PoC communities as well as youth (18-25) living with HIV and youth sexually active in that demographic in order to arrive at a series of policy positions and guidelines for how better to share information about sexual health, but also as an affirmation of the basic human right of health for all citizens of the nation, and the world.

Title: The Return of the Black Death: Collective Memory of the Plague in Movies

Session Type: Individual submission

Authors:

Name: Oshrat Sassoni- Bar Lev

Email: osassoni(at) gmail.com

Country: IL (Israel)

Affiliation: The Max Stern Yezreel Valley College

Abstract: Subject:

In 2017, the World Health Organization identified an outbreak of the plague in Madagascar (Galy, Loubet, Peiffier- Smadja & Yazdanpanah, 2017).

The black plague has left its mark on history and society. It was the second pandemic wave in history of the bacteria *Yersinia Pestis*, which had spread throughout Europe between 1346- 1352. According to estimations, it was responsible for the death of third to half of the world's population (Peiffier- Smadja & Thomas, 2017; Ligon, 2006).

The Black plague also had a profound effect on art and literature, such as in Boccaccio's Decameron (1350) and the artistic theme of Dance of death (Kiple, 1997; Peiffier- Smadja & Thomas, 2017).

Today the black plague still is present in popular culture, such as movies, television and computer games (Peiffier- Smadja & Thomas, 2017). Thus, it is interesting to examine its portrayal.

Main question and aims:

This research examines the portrayal of the black plague in four contemporary television mini-series and movies: World without end (2012); Inferno (2016); Pride and prejudice and zombies (2016); Beauty and the beast (2017). These popular culture products serve as vehicles for transmission of collective memory.

The research explores the following questions: How do these contemporary movies portray the black plague? What is the role of the plague in these movies series?

Theoretical framework:

Media shapes collective memory, since people learn about the past mainly from television and films. Fiction and non-fiction representations of the past have changed viewers' perceptions of past events (Edgerton, 2001; Hanke, 2001).

The cultural approach of collective memory studies conceptualized memory as an activity, which creates a meaning for a society. This approach focuses on accuracy and authenticity, and sees popular culture as an active agent in the process of shaping and re-shaping memory (Zelizer, 1995).

Methodology:

Qualitative content analysis of the television mini-series World without end (2012), and the movies Inferno (2016), Pride and prejudice and zombies (2016), and Beauty and the beast (2017). Each of them references the black plague. A thematic analysis was conducted in order to find themes, such as the way the black plague is described, its symptoms, purpose of the black plague in the plot, and social myths the movies convey.

Findings:

Western culture tells the story of this deadliest disease and maintains its presence in society's collective memory. Through two overlapping themes, the movies portray the black plague as a lethal disease, which killed many in its time. The plague is perceived as a biological threat to humankind. For example, although Dr. Langdon in *Inferno* (2016) does not actually encounter the black plague, he references it during his quest to find a deadly hidden virus.

The second theme represents the plague as a device that sets the movies' plot in motion. For example, in *Pride and prejudice and zombies* (2016) it is assumed that the plague created zombies in Regency England. *World without end* (2012) shows how the plague in the Middle Ages transformed the characters' lives.

Title: Ungrateful governments' Controversies between political power and the media in Aznar and Zapatero's Spain (1996-2011)

Session Type: Individual submission

Authors:

Name: Carlos Barrera

Email: cbarrera(at) unav.es

Country: ES (Spain)

Affiliation: University of Navarra (Pamplona, Spain)

Abstract: Relationship between media and politics in democracy is often exposed to changes depending on the political color of the government ruling the country. Newspapers and media groups that were in the opposition and somehow contributed to defeat those in power usually expect some kind of reward from the new government: access to news sources for their media outlets, appointments for official or trustworthy positions, broadcast licenses, opportunities for the company's expansion, etc. If the expectations fail, the old friendly relationship can be damaged to varying extents and can lead to consequences such as frustration, distrust and even enmity. Media systems belonging to polarized pluralist model (Hallin & Mancini, 2004), with a high degree of political parallelism, strong state intervention, and weak professionalization are prone to these practices.

After the untypical period of Transition to democracy (1975-1982) and the Socialist governments of Felipe González (1982-1996), the conservative José María Aznar and the young Socialist José Luis Rodríguez Zapatero ruled the country for fifteen years between 1996 and 2011. It is our intention to describe to what extent some editors and publishers politically sympathetic to Aznar first and Zapatero later, ended up disenchanted and even openly critical of government decisions and attitudes. As they were governments very different ideologically and politically, our hypothesis is that government and media interests tend to diverge regardless of political closeness, which would be a slight rectification of the aforementioned variable of political parallelism in the case of Spain, at least temporarily.

The historical methodology is used, along with the contributions from subfields such as theories of the media (Christians et al. 2009), media sociology (Waisbord, 2014), and political economy (McChesney, 2008). Certainly, the roles of the media, changes in the newsroom's culture and practices, and the growing dominance of economic interests over those exclusively journalistic, are factors to take into consideration to understand the stories of convergences and divergences between media and politics in Spain between 1996 and 2011. From all these perspectives together, the events will make sense within a broader periodization of the history of the mass media in Spain after the death of Franco. This paper is part of a book (work in progress) encompassing the last forty years of relationship between media, politics and business in Spain.

In the conclusions, we will remark the strong influence of the culture of the Transition in the newspaper's practices to explain the frustration that different media groups, editors and publishers experienced in the following periods, particularly a sort of mutual understanding with politicians

that developed a certain sense of superiority toward the latter on the part of some media actors. In addition, personal political leadership also determined the course of events, because Aznar and Zapatero developed media policies designed to protect their own political autonomy. They did not want to be limited by powerful media groups as happened in the past.

Affiliation: Université du Québec à Chicoutimi

Abstract: Franklin Ford (1849–1918) is a relatively obscure figure in the history of American journalism, mostly known for his association with the philosopher John Dewey in the late 1880s and early 1890s. Together, they tried to launch Thought News, a revolutionary “philosophical newspaper” that never saw the light of day. This short episode is a foundational moment in the development of media and communication studies in the United States (Carey, 1989), believed to have a lasting influence on Dewey’s conception of communication, which remains central in the field of media and communication studies today.

Media and communication scholarship usually casts Ford as a minor character in this history: Ford is an original figure, characterized as a “dynamic but quixotic man” (Czitrom, 1990: 104), an “itinerant journalist” (Carey, 1982: 1182) or a “crackpot journalist-philosopher” (Peters, 1989: 253) and his encounter with Dewey at the University of Michigan during the 1880s is presented as almost an accident. In this paper, we argue for an alternative reading of Ford’s status and position during the last decades of the nineteenth century. As the editor (1880–1887) of Bradstreet’s, a financial weekly in New York, he was a respected and well-connected public intellectual. Thanks to his expertise on a variety of topics (municipal government, credit and finance, the news, etc.), he was a regular public speaker, he served on various committees on local government, and was a member of prestigious social clubs. We therefore argue that it is necessary to reassess Ford’s role in the foundational decades of media and communication studies in North America, in order to precisely determine the scope and the nature of his contribution.

In order to do so, we have gathered Ford’s writings before, after and beyond his participation in the Thought News project. Building on these documents, our analysis shows that his vision for a reformed media and communication system was a coherent, enduring project that spanned over five decades. In this paper, we therefore describe the central tenets of Ford’s intellectual project that concerns journalism, media and communication, but also had important ramifications in the realm of finance and government. Our findings highlight the role Ford played in relation with three historiographical issues: his contribution as a pragmatist and his specific contribution to a pragmatist theory of communication, his contribution as a future of the news thinker, and his work as a political theorist concerned with the role of communication and news media in democratic societies.

Affiliation: Pontifical Catholic University - RS - Brazil

Abstract: Brazilian media history can be told, among others, from the perspective of its relation with key political moments and public perception. In this paper, the aim is to investigate such a connection in three different periods, describing the scenario, the most important media in the historical horizon described, and public reactions in this ecosystem. The criteria for selection are based on the fact that they were all times of political rupture in the country. The first cycle to be analyzed concerns the so-called Era Vargas, particularly the Estado Novo in 1937, when the then president of the Republic, Getúlio Vargas, went to the radio to reassure a frightened population that he would rid the country from Communism. Next in the sequence of observation is the horizon in which television was consolidated in the Brazilian scenario. Election debates, however, only became popular in 1989, gaining traits of spectacle. This was the year of the famous second-round presidential debate which put Fernando Collor de Mello and Luiz Inácio Lula da Silva face to face in a pool of broadcasters. According to some, next-day image editing by Rede Globo may have determined the victory of Collor de Melo. The third horizon described is the recent year of 2018, in which radio, television and the Internet coexist and are all consolidated. The new fact is the intensive usage of social networks and WhatsApp groups both by the candidates – especially the winner – and by the public to share information. Radio and television, both centralized production and distribution media whose formats were still innovative in 1937 and 1989 were virtually obsolete in the latest process.

In this descriptive, bibliographic and documentary research, one can observe similar reactions and decisions on the part of the public, although in three periods with different social characteristics and diverse media ecosystems. The most successful politicians in the three phases all reject the most popular media of their time – which the audience was already equipped to understand – and adopt new formats in an early stage of popularization. On the one hand, these constitute favorable contexts for the population to rely on discourses of rupture, which usually follow moments of fear and discontent. However, one fact deserves careful analysis and will also be a focus of this paper: in 1937 and 1989 – as Bourdieu (1996) would put it – the language of authority informed under the condition that those it governed would collaborate. This language originated in broadcasting centers, radio and television. In 2018, however, such a "partnership" was not built with the media but rather in networks of friends or family members who shared large amounts of true or fake information. For the audience, the most relevant aspect of the news was whether it was aligned with their way of thinking. As Castells (2018) points out, crises are moments that reveal the failings of a system. Therefore, they mediate between the background trends of a society, the awareness of problems, and the practices emerging to modify trends that, although functional, are perceived as harmful.

Title: The Way the Future Was. Imagining the Digital Futures in Consumer Fairs, 1980s-2000s

Session Type: Individual submission

Authors:

Name: Gabriele Balbi

Email: gabriele.balbi(at) usi.ch

Country: CH (Switzerland)

Affiliation: USI Università della Svizzera italiana

Name: Christian Schwarzenegger

Email: christian.schwarzenegger(at) phil.uni-augsburg.de

Country: DE (Germany)

Affiliation: Augsburg University

Abstract: The ways in which the future of digital media is perceived, marketed, and narrated is continuously changing over time. These predictions on how we will communicate and interact in the digital worlds of the future is made of predictions, mandatory paths, and sounding fiascos. For example, very few people predicted the personal computers in the 1960s and even early 1970s, nobody imagined what the world wide web would be in the 1980s and early 1990s, and even the mobile phone was considered not so promising in the 1980s.

What we can consider “failures” in predicting the future hide another dimension: the imagination of an alternative future that sometimes does not become reality. The ways in which digital corporations proposed to their users (and to the world of tech experts and enthusiasts) these futures is the main topic on this contribution, which aims to understand how the future of digital media was described and imagined during fairs on technology and communication from the 1980s to the 2000s.

Consumer fairs are key and symbolic places where corporations and experts often make predictions about the near future and how digital media could affect the ways in which people are about to live. As said, these predictions sometimes are completely wrong, but at the same time help to reconstruct how in past times new technologies of communication and new relationships between humans and machines were imagined. Furthermore, we argue that these fairs also reflect the social and cultural grounds on which they are developed. Future imaginaries are thus to be seen as linked to past experiences, and project current desires and visions of what should be overcome to future scenarios. Digital technologies can either be imagined as facilitators of these futures to come or as a normalized inventory of future lives.

Combining the literatures of media history and future studies and digging into the catalogues and media coverage of the major fairs from Europe (CeBit), the USA (CES) and the Asian (Computex), this paper will follow the evolution of the imagination of digital futures through 3 decades (the 80s, 90s, and 2000s) and in 3 different world regions.

The final scope is to better understand how imagining the future of digital media shaped the ways digitization itself was perceived. On the one hand, even if past predictions and future visions are in many cases determinists (the future will come for sure using those technologies) and sometimes are wrong, they influence the ways in which corporations “imagine” and invest and how users manage expectations and imagine the digital world of tomorrow. On the other, it is interesting to understand

the persistent ideas of digitization, maybe also persistent at global level. As any revolutions, indeed, digitization contains promises for a better or simply different future and this paper also aims to identify which visions, keywords, ideas change and persist over time.

Title: Tres contribuciones metodológicas determinantes para la historia de la investigación de la comunicación en América Latina: El legado de Beltrán, Gómez Palacio y José Marques de Melo

Session Type: Individual submission

Authors:

Name: Raul Fuentes-Navarro

Email: raul(at) iteso.mx

Country: MX (Mexico)

Affiliation: University of Guadalajara

Abstract: La ponencia propuesta pretende exponer un ejercicio de meta-investigación de la comunicación, centrado específicamente en los aportes metodológicos para la historia de esta especialidad en América Latina, de tres investigadores fallecidos en los últimos años: el boliviano Luis Ramiro Beltrán Salmón (1930-2015), el mexicano Carlos Gómez-Palacio y Campos (1945-2016) y el brasileño José Marques de Melo (1943-2018). Se trata de honrar su memoria, al mismo tiempo que reubicar y discutir sus contribuciones al estudio de la historia y a las prácticas académicas sobre la comunicación en América Latina. Aunque alguno de ellos haya sostenido en algún momento la idea de una investigación o un “pensamiento latinoamericano” sobre la comunicación, se sostiene que su legado se caracteriza precisamente por la capacidad de contribuir al desarrollo de un conocimiento de alcance potencialmente universal, y por ello se analizan especialmente sus aportes metodológicos, situados en contextos y perspectivas distintas, pero los tres ubicados explícitamente en coyunturas reflexivas al mismo tiempo regionales y globales.

Luis Ramiro Beltrán fue uno de los primeros latinoamericanos en obtener un grado doctoral en comunicación en Estados Unidos (Michigan, 1968) y se convirtió muy pronto en un referente central para los estudios de comunicación para el desarrollo, en colaboración crítica con su mentor, Everett Rogers. Elaboró y presentó en 1974, en una reunión de la AIERI/IAMCR, un diagnóstico ejemplar (“paradigmático”) sobre la investigación de la comunicación en Latinoamérica basado en información recopilada por CIESPAL y, por su trabajo en organismos internacionales como el CIID de Canadá y la UNESCO, pudo impulsar tanto los procesos y sistemas de documentación científica en el campo de la comunicación en América Latina, como las iniciativas de elaboración de políticas nacionales de comunicación durante las décadas de los sesenta a los noventa.

Carlos Gómez-Palacio fue también discípulo de Rogers, y con Steven Chaffee como asesor principal construyó para su tesis doctoral en Stanford (1989) un análisis comparativo de las representaciones mutuas de investigadores estadounidenses y latinoamericanos sobre la investigación en el campo y sus respectivas influencias. La tesis articuló el empleo de técnicas documentales y métodos etnográficos, como encuestas y entrevistas, con análisis estadísticos y referencias histórico-sociales. Trabajó como uno de los primeros expertos mexicanos en comunicación organizacional y dirigió durante más de veinte años la Facultad de Comunicación de la Universidad Anáhuac.

Por su parte, José Marques de Melo dedicó su vida a la práctica directa del periodismo y la docencia universitaria en la Universidad de Sao Paulo y otras, así como a fortalecer la institucionalización académica de los estudios de comunicación en Brasil, América Latina e Iberoamérica, especialmente mediante la creación de programas y asociaciones, proyectos editoriales y redes internacionales de estudiosos de la comunicación, con énfasis en las articulaciones político-sociales

y la conciencia histórica subyacente en los proyectos de investigación y la práctica de la comunicación.

Title: Advertising Nationalism: War Commemoration and the 'Politics of Memory' in Bangladesh

Session Type: Individual submission

Authors:

Name: Kajalie Islam

Email: kajalie(at) gmail.com

Country: BD (Bangladesh)

Affiliation: University of Dhaka

Abstract: Eric Hobsbawm (1983) defines 'politics of memory' as an exercise in social engineering, where the history, fund of knowledge or ideology of the nation is not what has actually been preserved in popular memory, but what has been selected, popularized and institutionalized by those in power. Ashplant, Dawson and Roper (2009) refer to a 'hegemonic framing of memory', a selective process in which the nation-state exercises power to construct a national narrative which includes only certain war memories and officially marginalizes others.

Almost 48 years after independence, the War of Liberation remains a major subject of public discourse, policy and politics in Bangladesh. The ruling Awami League, which led the war in 1971, was brought to power in 2009 with a landslide victory largely based on an election manifesto which highlighted the issue of the war, and a promise to try the war criminals. In the last decade, monuments and memorials, literature and film, have all paid tribute to the war, its freedom fighters and martyrs, while also constructing an image of the anti-liberation enemy Other. A Ministry of Liberation War Affairs has been established to, among other things, "uphold the spirit and ideals of the great war of independence" and "preserve the history and memories of the war". The media, for its part, has played an increasingly significant role in war memorialization, reporting on, celebrating, or mourning events and occasions related to the war and its leaders with great zeal. As Andrew Hoskins (2009) argues, memory is mediated in how the past is and is not recorded, preserved and represented in relation to the technologies, media and institutions of the day.

In this context, this study critically engages with the notion of 'politics of memory' and examines the role of the media as a political tool in the memorialization and mythologization of Bangladesh's liberation war through the construction and articulation of war memories. Based on archival research, it employs discourse analysis of media content published during the months of independence (March) and victory (December) in three Bangla-language and one English-language newspaper every election year since the advent of democracy in 1990, and analyzes how coverage of war-related discourse can contribute to the construction of nationalism, national identity, and the Other. Drawing on theories of imagined communities and banal nationalism (Anderson 1983, Billig 1995), identity (Hall 1996) and ideology (Althusser 1971), the study aims to problematize the dominant narratives as reflected in the media and the state's use of them to legitimize itself while delegitimizing any form of difference, debate, and dissent.

This paper, as a critical study of the politics of post-war memory, can contribute to the academic fields of history, memory studies and media studies. It can provide an understanding of war memories, remembrance and commemoration in the context of a South Asian nation where war discourse is all-important, and their implications for nations and citizens in the present.

Title: 30 Years After ' The Fall of the Berlin Wall and the Transition of the East German Press

Session Type: Individual submission

Authors:

Name: Mandy Tröger

Email: mandy.troeger(at) ifkw.lmu.de

Country: DE (Germany)

Affiliation: Ludwig Maximilian University of Munich

Abstract: For people worldwide, the fall of the Berlin Wall on November 9, 1989, represented hopes of democratic transformation and liberation. Millions of East Germans went to the streets to protest state repression and censorship, voicing their demands for freedom of opinion, and a free and democratic media. One year later, the German Democratic Republic (GDR) joined the Federal Republic, reuniting Germany. While much has been written about East Germany's subsequent media transition from a state-controlled propaganda apparatus to that of a free democratic media system (Haller, Puder and Schlevoigt 1995; Schneider 1992, 2002), there has been no historical analysis of the underlying political and economic forces that shaped this transition and/or the newly established media. With the thirty-year anniversary of the fall of the Berlin Wall approaching, there remain many important but unanswered questions: How and under what conditions was the East German media reformed and its market created, who was most successful in implementing their socio-political and economic interests and what were the socio-democratic benefits and losses? The answers to these questions are important not only to capture this unique historical moment, but also to inform current debates on media reform in Western democracies.

Based on extensive archival research, this paper asks in how far the democratic potential that existed in the moment of revolutionary change in 1989/1990 found its institutional and/or political implementation in the post-socialist East German press. In particular, it analyzes the dealings of the federal government in close relation to the market strategies of the major publishing houses Springer, Bauer, Gruner+Jahr and Burda. Called the "big four" these companies used three different strategies to explore the GDR market. First, starting in December 1989, they started to import and sell high numbers of their own publications by means of aggressive market strategies (e.g. heavily discounted prices). Second, following failed early lobbying efforts, they jointly built a privately run press distribution system. Dividing the GDR into four zones, they distributed largely only their own publications. The third strategy were joint-ventures with East German publishers, a strategy employed also by small and medium-sized West German publishers, which led to massive shifts in ownership patterns. This paper gives detailed insights into how East Germany became the battle ground for various interest groups, East and West, but with all-overshadowing interests of West German political and economic groups.

Title: Encuadre a la memoria mediática de la prensa chilena: Las noticias sobre la muerte del general Contreras

Session Type: Individual submission

Authors:

Name: Francisco Javier Tagle

Email: fjtagle(at) uandes.cl

Country: CL (Chile)

Affiliation: Universidad de los Andes, Santiago de Chile

Name: Vanessa Zuñiga

Email: vanessazunigar(at) gmail.com

Country: CL (Chile)

Affiliation: Universidad de los Andes, Santiago de Chile

Abstract: En Chile, a poco asumir el gobierno de Patricio Aylwin (1990-1994), la Comisión de Verdad y Reconciliación dio a conocer su informe sobre las violaciones a los Derechos Humanos ocurridas durante el régimen militar del general Augusto Pinochet (1973-1990). El texto final arrojó por resultado que hubo en ese periodo 2.279 personas muertas por violencia política, de las que más de un tercio eran imputables a la Dirección Nacional de Inteligencia (DINA), órgano de seguridad creado en 1973 y que funcionó hasta 1977.

Ya en democracia, y en su calidad de haber sido director de la DINA, el general Manuel Contreras fue sentenciado por distintos crímenes a 549 años de prisión. Así, el 5 de agosto de 2015 falleció “el Mamo”, como era apodado Contreras, quien se encontraba cumpliendo su condena en la cárcel para militares de Punta Peuco.

Tanto las muertes como las conmemoraciones de fechas son eventos que utilizan los medios para recordar y evaluar el pasado con sus propias lógicas mediáticas (Edy, 1999; Zelizer, 2008).

Asimismo, se debe considerar que los medios han revolucionado la memoria colectiva de las sociedades, no sólo con los nuevos recursos que ofrecen (Olick & Robbins, 1998), sino que también su propio proceso de formación e inclusive creación (Ángel, 2016; Cruz, 2002).

Desde una perspectiva periodística, los medios no sólo necesitan de la memoria para contextualizar las noticias, sino que también las controversias sobre el pasado reciente en muchas ocasiones son una noticia en sí misma (Edy, 1999; Zelizer, 2008).

De esta manera, entra a jugar un rol fundamental los encuadres o framing (McCombs, 2006; Scheufele, & Iyengar, 2016) que utilizan los medios para construir el pasado. Si consideramos la ya clásica definición de Entman (1993) sobre encuadre, de que los medios no sólo ponen temas en la agenda de la opinión pública, sino también promueven una determinada definición del problema, es posible establecer una relación con la memoria, dado que ellos seleccionan u omiten los aspectos de la realidad que desean recordar (Humanes, 2003).

Se postula que la prensa escrita chilena con sus determinadas características (Godoy, 2016; Monckeberg, 2011; Navia, Osorio, & Valenzuela, 2013) y tras la muerte del general Contreras, construyó una memoria mediatizada a partir de encuadres que promovieron una dimensión del personaje en torno a su Rito Fúnebre; los Derechos Humanos y la Justicia, y a las Reacciones del mundo político.

Se trata de una investigación deductiva, puesto que, tras el análisis de las noticias de los principales periódicos de la prensa escrita chilena, El Mercurio de Santiago, La Tercera, LUN y La Cuarta, se estudiaron los más importantes encuadres que emergieron tras la revisión sistemática de las noticias: Rito fúnebre; Justicia y Derechos Humanos, y Reacciones políticas. El tiempo seleccionado fue entre el 8 al 15 de agosto de 2015. Es decir, desde el día siguiente del fallecimiento de “El Mamo” hasta una semana después.

Title: The Popular Comic Book Heroine, the first female commissioner of FCC & Unseen Feminism Movement in the 1930's to 1950's

Session Type: Individual submission

Authors:

Name: Koichiro Shigaki

Email: kshigaki(at) mail.doshisha.ac.jp

Country: JP (Japan)

Affiliation: International Institute of American Studies, Doshisha University

Abstract: There is a common consensus within feminist studies that women's movement and its history can be divided into three phases of modern feminism. Although the history is linear, we tend to analyze social movement including a feminist movement based on the common consensus. Within the framework of feminism studies, a majority of studies tends to focus on the notable moment that brought social change. For first wave feminism movement in the 1920's, there were demands for women's suffrage. For the second wave feminism in the 1960's, there were fights for equality. Nonetheless, what happens between the 1930's and 1950's? By looking at the whole history through media studies, it can be said that there is definitely some liner history and persistent effort leading to big changes. All social change would not happen overnight.

The purpose of this paper is to analyze a notable case between the 1930's to 1950's that was believed to make some impact on the later feminism movement, a background history as well as its implication for today. This paper especially sheds light on the history of the birth of strong independent heroine in a popular comic book, Wonder Woman in the 1930's, and Frieda Hennock, a first woman to become FCC commissioner who had a tremendous impact on broadcasting industries in the 1950's. Primary sources available at an archive center in the U.S. are analyzed here in both cases.

There have been many important historical cases to prove that there was the continuous effort for social changes; however, this paper focuses on particularly two cases that involved media, and those cases can be cross-examined by different fields of studies, especially media studies, feminism studies, and American Studies. While this study definitely recognizes other cases and discuss different cases as background history, the study conducts an in-depth analysis of two cases, and examine its implication.

There are a few studies focusing on Wonder Woman as feminism studies but a majority of studies have an emphasis on its images and the character while existing previous studies are good references for a start of learning Wonder Woman. Meanwhile, there are not a lot of studies regarding Frieda Hennock but there are few historical texts that mention her achievement. However, these works do not include any further analysis. Besides, it does not get any central focus from media studies perspective.

Most of all, there are insufficient studies evaluating both cases because both cases are not something directly related to the social movement. Other than this, there are not a lot of studies focus on the 1940's to 1950's while there are a few small studies mentions notable cases such as Rosie the Riveter and Betty Friedan's famous book, "Feminine Mystique." Thus, this paper sheds light on the particularly 1930's to 1950's era by focuses on two notable cases, Wonder Woman and

Frieda Hennock, which is related to media or popular culture that believed to be impacted in the later U.S. society.

Name: Erik Koenen

Email: ekoenen(at) uni-bremen.de

Country: DE (Germany)

Affiliation: ZeMKI, University of Bremen

Abstract: The communication history of the League of Nations is under-researched (Lange 1991, Löhr/Herren 2014, Nordenstreng et al. 1986, Tworek 2010). The authors present the first complete document analysis of the given corpus of the "Information Section" files (see LoN), the institutional body of the League concerned with public relations and external communication. The analytical perspective aims at the complex actors' constellation and its performance between journalism, PR and Diplomacy as it appears from those archive materials. The Geneva files mainly contain unpublished sources like internal proposals and strategic papers, (informal) correspondences between members of the Information Section and politicians/diplomats as well as journalists, reviews of conferences held at Geneva and other documents which reveal processes of internal organisational communication as well as planned strategies of external communication and not least the vivid relations to the international journalistic field namely the conference journalists at Geneva. It is constructive to analyse the League of Nations communication during the 1920s employing the conceptual notion of "co-evolution" (Schönhagen/Meissner 2016). Conceptualised as the co-evolution of the three fields of diplomacy, journalism and PR the authors of the submitted paper analyse the rise, the meaning and the communication strategies of "Open Diplomacy" (Sweetser 1920:187) in a diverse professional environment.

Based on the sources the authors are able to show that the co-evolution can be characterized with regard to the world views of the actors, namely their normative understanding of "open diplomacy" and its idealized relation to journalism ranging between a) more democratic concepts of participation of European publics mediated by journalism as an autonomous field and b) a narrower understanding of the so called "openness" of diplomacy as more or less restricted to the discussion between professional state actors and their trust in each other mediated by diplomatic communication.

To sum up, based on the analysis of the vast corpus of the Geneva Archives the authors are able to show

1. A profile of the information agents of the League by national, gender, generational and political patterns and the related inter-/transnational and professional experiences (former work as war correspondents, in the Red Cross, the female rights movement etc.)
2. The evolution of their professional performances, norms and values in the field of “open diplomacy” in relation to the power structure of the League

Title: Circuits of Inspection and Control: American Post-War Closed-Circuit Television and Electronic Vision

Session Type: Individual submission

Authors:

Name: Susan Murray

Email: susan.murray(at) nyu.edu

Country: US (United States)

Affiliation: New York University

Abstract: While today we tend think of CCTV almost exclusively as a technology of surveillance, it also has had a range of other applications in fields such as medicine, education, commerce, engineering, manufacturing, and the military. More specifically, in the post-war America, there were a series of proposed and enacted applications for what was referred to as “private wire,” “closed-circuit” or “industrial” television, which worked to position television as not just a medium for domestic entertainment, but more innately, perhaps, as a seeing device, capable of extending and mechanizing vision in the service of organizing, surveilling, instructing, and mobilizing industries, institutions, and bodies. Televisions were used for such varied purposes as remote visual control over hazardous materials, monitoring conditions in mines, surveilling and coordinating production lines, the long-distance verification of signatures and documents, guiding missile direction, medical instruction, psychiatric care and business conferences. Vladimir Zworykin, head of development of television for RCA, described the uses of CCTV thusly: “whenever it is too dangerous; too difficult; too expensive; too inconvenient; too inaccessible; too tiring; too far; too hot; too cold; too high; too low; too dark; too small to observe directly, use television.” (Television in Science and Industry, NY: Wiley & Sons, 1958)

In this presentation, I will unpack the discursive positioning of CCTV applications during this period in relation to the assertions that were made about the specific type of vision that it claimed to offer through the examples of its use in industrial safety operations and in surgical education and diagnostics. This work stems from a larger historical research project of mine on the history of closed-circuit television and builds on and extends arguments that I made in my recent book, *Bright Signals: A History of Color Television* (Duke UP, 2018). The work will be based on a collection of primary materials (memos, journal articles, press reports, marketing materials) and be placed in conversation with other histories of post-war television as well as engage with concepts related to surveillance and perceptual technics. It will also touch on the idea of television as a particular type of seeing device in relation to Lynn Spigel’s commercial television’s liveness as providing home viewers with a sense of “being on the scene” and John Ellis and John Durham Peters’ analyses of television’s form of “mediated witnessing.” (Ellis, John. *Seeing Things: Television in the Age of Uncertainty*. London: I.B. Tauris, 2000 ; Peters, John Durham Peters. “Witnessing,” *Media Culture Society*. vol. 23, 2001: 719. Spigel, Lynn. *Make Room for TV: Television and the Family Ideal in Postwar America*. University of Chicago Press, 1992.)

Title: Fake News at the Inception of Hebrew Journalism and its Imprint on the Jewish and Israeli Press

Session Type: Individual submission

Authors:

Name: Gideon Kouts

Email: gkouts(at) wanadoo.fr

Country: FR (France)

Affiliation: Université Paris 8

Abstract: In his essay (in French) “Reflections of a Historian on the Fake News of the War” (Bloch, 1921), Marc Bloch suggested that such news needs a “helpful culture” within the society in which it grows and expands. Nineteenth-century European Jewish society and its media navigated uncertain and often hostile waters as they transitioned from the suffocating but protective walls of tradition to the modern world. The confrontations that ensued between these trends created a helpful culture for fake news—making fake news in Hebrew journalism as old as the genre itself. Thus, amid turbulent internal political and ideological disputes in Jewish societies, publishers and editors disseminated falsehoods and half-truths in the defense of sanctified interests and in the pursuit of professional and business rivalries. The story of “fake news” in this press and public sphere provides us with a useful model of cultural accommodation. All types of contemporary definitions of “fake news”, like: satire; false connection; misleading, false, impostor, manipulated or fabricated contents (Wardle, 2017) existed already from the inception of journalism.

Studied in the main, in this paper- using Ecole des Annales’ (founded by Bloch) method, as well as recent news analysis and reception theories- are two early Hebrew-language newspapers, HaLevanon and HaMagid. For instance: being a local correspondent for one of them conferred social status that compensated for poor remuneration. Desperate to be published, some invented or recycled old stories with an occasional retouching of details, all in the highest literary style that they could muster in the holy tongue. Miracle stories, some purely fraudulent, were inseparable parts of the evolving general popular press in Europe and therefore of the Jewish and Hebrew press as well, especially when they also carried a moral that reinforced the paper’s ideological or theological position.

The great tussle between these vehicles, actually originating in personal interests, was manifested in allegations of malicious lying and/or criminal business practices, bogus letters to the editor, and possibly the invention of a fake foreign-affairs correspondent.

The early Hebrew-language newspapers’ principal mission was not to report information but to connect Jews around the diaspora and advise them on Jewish matters. Fearful of angering people in high places, they augmented official censorship by censoring themselves.

In a sequel to the foregoing, Nahum Sokolow, a founding father of the Hebrew press but also the Zionist Movement’s first “professional” propagandist, prescribed the creation of a “guided” press that would serve the needs of the Jewish people and the Zionist movement. Goings-on in the Land of Israel, he believed, should be covered without the “fake democracy” and sensationalism that typified reportage in the Yiddish press, which he equated with falsehood. The dissemination of an official “truth” (or “post-truth”) that ignores “undesired” topics is a classic demand in the history of government–press relations. Sokolow’s attitude found expression in sovereign Israel through the

“Editors’ Committee.” Thus, the official function of “national responsibility,” freed from considerations of “truth” and “falsehood”, left its imprint on the Israeli press as it oscillated between reliable information and fake news.

Title: [Panel] Landscapes of DiVision: Memory in Post Conflict Societies, Panel Description

Session Type: Panel Submission

Authors:

Name: Stella Theocharous

Email: stella.theocharous(at) cytanet.com.cy

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology

Abstract: The motivation behind this proposal is to bring together studies from various academic disciplines tackling the issues of space, historical memory, collective memories (or more accurately collective remembrance), and identity in conflict areas. The contributions to this panel attempt a critical investigation that displays discourses of memory in cases of conflict and troubled past.

Would it be an exaggeration to claim that we are what we remember? Indeed, memory constitutes the development of individual and collective identities alike (Ryan, 2011; Bell, 2003; Poole, 1999). In its broad definition as a social construction - formed in economic, social, cultural, political and ideological contexts - memory becomes a mythical version of events, people and places that serve social or political interests (Azaryahu & Foote, 2008; Boyd, 2008; Bell, 2003). On the other hand collective memory sometimes challenges the “governing myth” of a nation (Bell, 2003, p. 65).

The control of memory determines the “hierarchy of power” (Ryan, 2011; Connerton, 1989, p. 1). The function of remembering the cultural elements that constitute a mnemonic fabric (Brockmeier, 2002) and distinguish a group is achieved through a "master narrative" which gives the context for reading the past and the future orientation of the group (Assmann, 2006; Halbwachs, 1992). Memory is constantly evolving according to the need to create a usable past that will justify the present identity and shape our experience of the present (J. R. Gillis, 1996; Lowenthal, 1994; Wertsch, 2004). The master narratives take the form of collective memories in the level of the unconscious, conditioning the thinking process (Connerton, 1989, p. 1). In frames of conflict, the existence of different narratives is used to enhance our own legacies and define our identity often by excluding the other (Lowenthal, 1994, p. 41). Memory becomes a useful tool for the political elites in their attempt to enhance cohesion or division but at the same time it can act as a “counter hegemonic site of resistance”, a site of contestation and political opposition (Assman & Sebastian, 2010; Bell, 2003).

The common imagery of identity is very much connected to issues like memory, conflict and homeland. Collective memory both at the micro and macro level - local and global - (Assman & Sebastian, 2010) is important in order to understand the current political, social and economic situation around the globe, and particularly within Europe. In the aftermath of the European economic crisis, the continent faced a resurgence of nationalism (Colantone & Stanig, 2018; Kuntz, Davidov, & Semyonov, 2017; Spohn, 2016) that “has been able to promote novel forms of memory work and construct a Europe-wide narrative, albeit one bent upon destroying the European project.” (Bull & Hansen, 2016, p. 391) This panel, by exploring the different aspects of the local Cyprus intractable conflict from a memory perspective, will by extension contribute to examining conflict

at the macro level; the findings of the papers presented extend beyond the framework of Cyprus-as a case study, offering ideas that can lead to integration at a European level.

Title: Gendered memories of Cyprus conflict: An Oral history work with Turkish Cypriot women

Session Type: Panel Submission

Authors:

Name: Hanife Aliefendioglu

Email: hanife.aliefendioglu(at) emu.edu.tr

Country: CY (Cyprus)

Affiliation: East Mediterranean University

Abstract: In the literature on post-conflict societies, women are believed to acquire new skills for social change. Both Cockburn and Hadjipavlou note that Cypriot women do not express any enthusiasm to fight against patriarchy, but they also noted that in a conflict zone, women's expectations and requirements are put off to an unknown future because of pressing political issues (Cockburn 104; Hadjipavlou 337). This study explores the stories of Turkish Cypriot women who experienced internal displacement during the conflicts in 1963-1964 and 1974. It uses oral history to review the Cyprus issue and partition in Cyprus from a gender/women's and feminist studies perspective.

As Portelli notes memory is conceptualized as not merely a passive depository of facts but an active process that creates meaning (Portelli 37). Individual stories are not simply mixtures of official and informal histories; they represent cracks in hegemonic metanarratives. In this sense, the memories of individuals are not divorced from collective memory (Portelli 36; Halbwachs 53) Although the reliability of memory is a concern for positivist historians, Thompson sees it as "a resource and not a problem" (Thompson 33-35 cited in Einhorn 708). After "the doors were opened" on April 23, 2003, there was great curiosity and enthusiasm about the former houses among both Greek and Turkish Cypriots. People streamed through the "doors" to visit the towns and villages where they used to live.

Title: Blocking the solution: Social representations of threats and (non)dialogue with alternative representations in Greek-Cypriot newspapers during peace negotiations.

Session Type: Panel Submission

Authors:

Name: Maria Avraamidou

Email: mariaavraamidou(at) gmail.com

Country: CY (Cyprus)

Affiliation: University of Cyprus

Name: Charis Psaltis

Email: cpsaltis(at) ucy.ac.cy

Country: CY (Cyprus)

Affiliation: University of Cyprus

Abstract: This presentation will explore representations of threats and fears in Greek-Cypriot media related to the negotiations for a Cyprus settlement. Then, it will provide an analysis of how alternative representations are treated within these core representations. Relevant representations draw from and re-enforce certain dividing historical narratives. We will identify not only these narratives but also the use of numerous semantic barriers by the media to manage alternative representations and maintain their core representation against the negotiated settlement. Therefore, the presentation aims at problematizing the role (function) that such representations may play in undermining the potential for transformative dialogue in the post conflict and divided country of Cyprus. Focus will be on two newspapers during a four-month period before the collapse of the July 2017 peace talks at Crans Montana, Switzerland. Both were suspicious and polemic vis-à-vis the said negotiations but used different strategies to oppose them. The first, Simerini convened recurrently the threat of Turkification, state dissolution and threats against Hellenism. The second, Phileleftheros focused on the issue of security drawing so-called red-lines on various dossiers under discussion in the negotiations. The study contributes to the theoretical debate of the relationship between social representations and identities and the role of threats and historical narratives in undermining transformative dialogue using semantic barriers. Additionally, it contributes to the field of media studies by providing an empirically grounded account of how mainstream media continue to hinder dialogue and transformation sustaining ethnoterritorial divisions.

Title: The Cabinet of Lost Memories

Session Type: Panel Submission

Authors:

Name: Aysu Arsoy

Email: aysu.arsoy(at) emu.edu.tr

Country: CY (Cyprus)

Affiliation: Eastern Mediterranean University

Abstract: “It was a nice and bright day that we decided to walk at the seaside. After a while we noticed some glistering glimmers which were reflected by the sun, although still partially hidden in the sand. At closer inspection we discovered burned domestics objects which were buried at the beach. They were all from ‘Varosha/Maraş/Βαρώσια’.

Varosha/Maraş/Βαρώσια was a flourishing suburb of the medieval walled city of Famagusta, thriving in the sectors of tourism and commerce while at the same time having a vibrant cultural life in the early 1970s (Dobraszczyk 2015; Luke S., 1965). In 1974, it was occupied by Turkish military forces. Ever since, Varosha, one of the most significant ghost towns on the island (Arsoy, 2018, p.233), has been looted and burnt down repeatedly; looters disposed and burned belongings of the former residents of the city at a nearby seaside area.

This paper presents the process of finding, photographing and presenting the looted objects within the frame of the “Cabinet of Lost Memories”. The belongings in the photo series were found and photographed between 2013 and 2016. A selection of photographs from the Cabinet has then been exhibited in public, eliciting a variety of responses and feelings. During the exhibition(s), it was observed that groups of visitors would come together in front of the Cabinet and share their memories and feelings. Hence, the paper will also document the reactions of the audience when they were exposed to the objects.

According to Kuhn (2000), photographic images, ‘far from being transparent renderings of a pre-existing reality, embody coded references to, and even help construct, realities’ (Kuhn, 2000, p. 183). ‘Reflection and self-reflection’ (Kuhn, 2000, p. 173) on ‘lived experience’ (Thompson, 1995), allows us to construct a ‘sense of who we are and where we are situated in time and space’ (Thompson, 1995, p. 43). The objects were shown to awaken long forgotten memories of life in Varosha, and Famagusta in general, as well as of the near past of Cyprus (Van Dick, 2004, p.262). Even after 45 years, it is interesting to ponder what kind of memories and feelings discarded and redundant domestic objects are capable of evoking.

Furthermore, the paper explores the personal and collective memories of the audience through the photographed objects. Selected objects and documented photos have been shown to the former residents of Varosha, as well as Famagustians who are now elders in both communities.

Abstract: Buffer zone, no man's land, dead zone: While life on both sides of the divide goes on, the abandoned, since 1974, airport at Nicosia - Europe's only divided capital - is a place where time has stopped. As a reminder of the bicomunal conflict on the Island, it represents two overlapping memories regarding the 1974 war and consequent division of Cyprus: A "Happy Peace Operation" for the Turkish-Cypriots and a "Tragedy" for the Greek-Cypriots. At the same time the airport can be placed within a shame-centered memory framework (Holyfield & Beacham, 2011): it remained in the "dark" of the Greek-Cypriot collective memory for many years, and carries a 'national trauma', since it was the place where three Greek military transport aircrafts were shot down by friendly fire and the killing of 32 Greek commando on board.

The Nicosia International Airport, once "among the best in the Middle East" and a "Jewel of Cyprus", is now a ghost airport sealed with barbwire and derelict buildings. Remaining concealed and inaccessible to the members of the two communities in Cyprus, any knowledge about it stems from transmitted memories or exposure to mass mediated representations (Landsberg, 2018). For the generations of Cypriots who have not experienced the 1974 war, photos and videos of the airport within the buffer zone act as sources of memory, reinforced by the slogans "I don't forget" and "We will never forget". These images stipulate remembrance and define how events should be remembered (Sontag, 2003).

What happens when transmitted experiences are substituted by first-hand accounts? If we are what we remember, raising awareness of the past is important for identity formation (Azaryahu & Kellerman Barrett, 1999; Edensor, 1997; Halbwachs, 1980; Nora, 1989). By extension, a distorted remembrance results in a falsified sense of self. This paper presents the experiences of 8 Greek- and Turkish-Cypriot (equal number of females and males) youth born long after 1974, from their visit to the abandoned airport. The outcomes constitute a representation of reality, as seen by them

and draws on the need for a shift from Antagonistic nationalist memory as "such antagonism closes the possibility of dialogue" to Agonistic Memory (A. Bull & Clarke, 2017). Taking this approach and exposing the "artificial nature of memory" will then promote a mode of remembering both reflexive and dialogic and will also address the "politicized representations" of the division (A. C. Bull & Hansen, 2016, p. 19).

Our aim is to outline the image of the conflict as it is perceived, 45 Years later, by people with transmitted memories of the war. The focus of the essay is to shed light into a different perspective of the hegemonic narrative and official memory. This will reflect by extension the ways in which the hegemonic narrative is shaped in deeply divided societies by the interaction with members of the 'Other' in a space where the effects of the conflict are prominent.

Title: Capturing the "unknown": Visualization of the Nicosia International Airport by the Cypriot youth

Session Type: Panel Submission

Authors:

Name: Yetin Arslan

Email: yetinarслан(at) gmail.com

Country: CY (Cyprus)

Affiliation: East Mediterranean University

Abstract: We live in a new media era where new technologies enable ordinary people to capture and “share” images from the principles offered by digital technologies such as interaction, digitalization, and freedom of time-space; The identity of the content producer of film and photography has been altered. Now, content creation is not only in the hands of the media professionals: anyone can be the meaning/content creator.

This presentation consists of two parts: the film, and the paper. The film presents the visit of young Cypriots to the Nicosia International Airport which is under the control of UN since 1974, and how they capture this experience with their cameras/smartphones. Being a member of the post-1974 generation myself, it was an exciting experience to visit the “restricted” part of my country. It is one of the most powerful, even iconic, images that remind me/us of division and war. We are born in a country where we learn about the past and conflict through the stories and visuals we are faced with. In a way, the post-1974 generation is wounded by “second hand” traumas. Being at the airport, we experienced a place where life stopped 45 years ago: a frozen place/time between “now” and the “past”. The predominant feeling was one of curiosity, as the participants wondered how one could capture/visualize this ghost “monument”, which became a symbol of division in Cyprus. Alongside narratives, photographs/images have been important in our understanding of the “past” since “seeing comes before words” and images are compelling in meaning creation (Berger, 1972). It was important to see how the participants would “re-create” their memory; in other words, how they would create their images about a place with which they are familiar through mediated images/photographs. In this film, unlike traditional film-making, the participants are active content-producers. The film includes the participants’ own photos and recordings, but also the footage produced with my smartphone.

Photographs tell stories. Therefore, the paper part of the presentation will discuss the process of the post-1974 generation in creating their memories via the medium of photography. Although photograph is seen as capturing reality, it carries the decision of framing, the feeling of creating of the person who takes it, as well as the reading of the photographs by the mind that perceives it. Thus, the paper will look at how the official or/and mediated discourses and norms which became part of the visual representation (Butler, 2015) were replaced by the personal narratives. As John Berger says “we never look at just one thing” but always look at the relation between things and ourselves. Our vision is continually active, moving and holding things in a circle around itself, constituting “what is present to us as we are” (Berger, 1972). Following this notion, the paper aims

to demonstrate the relation between the photographs and the narratives of the Cypriot youth and the way these are presented in the film.

Title: Reading between the lines and scenes: the Brazilian cinema project by the fan magazine 'Cinearte' through Carmen Santos' stardom.

Session Type: Individual submission

Authors:

Name: Amanda Rosasco Mazzini

Email: arosascomazzini(at) gmail.com

Country: BR (Brazil)

Affiliation: Justus-Liebig-Universität Giessen

Abstract: In Brazil, during the transition from the silent to the sound cinema period around the 1930s, film professionals believed in the creation of a Brazilian film industry. They were driven by nationalist ideologies at the same time that Hollywood was their reference. In this context, the fan magazine “Cinearte” started to promote the actress and producer Carmen Santos.

Articles connected the star with Brazilian cinema, linking their paths, expressing a greatness and perseverance of both. The texts promoted an image of filmmaking in Brazil: a painful and heroic task, that had more ideological duties, with nationalist tendencies, than economic ones. The magazine deliberately sought to attribute to the national cinema an image of Brazil itself.

Besides the nationalism, a big issue of the magazine was spotted by Paulo Emílio Salles Gomes and João Luiz Vieira, both important film researchers in Brazil. They exposed the racism in the magazine, as well as the propagation of very questionable moral values and a social hygienization.

Thus, the interest of this work lies in the following questions: how was Carmen Santos’ stardom related to a national cinema project defended by “Cinearte”? Furthermore, what was promoted in this national cinema project? The chosen period for the analysis is from 1931 to 1933, the years of production of “Onde a terra acaba” (Octavio Gabus Mendes, 1932), which Carmen produced and starred in. “Cinearte” published exhaustively about it, acclaiming technical qualities and reinforcing its magnitude as a way to show the potential of a Brazilian film.

The methodology comprises the collection and analysis of “Cinearte” between the mentioned years. The Hemeroteca Brasileira’s website (<http://bndigital.bn.gov.br/hemeroteca-digital/>) contains open editions of the magazine. Attention is paid to texts involving Carmen Santos and/or discussions about the Brazilian film business. The methods of Janet Staiger in “Interpreting Films” (1992) will be taken into consideration to understand how the magazine was related to its historical context. This archive material became an important historical document of how many film professionals behaved in the period, their projects and their vision of what Brazilian cinema should have been. The desired industrialization, however, never came. But what makes this research currently relevant is the possibility to analyze a representation of nationalism in media, that it may be different from the one today in Brazil, but it can already express some of its roots.

Title: Indian Soundscapes in colonial Mozambique: historical notes on the circulation and politics of diasporic sounds

Session Type: Individual submission

Authors:

Name: Catarina Valdigem

Email: catarina.valdigem(at) ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Abstract: In Mia Couto's *Sleepwalking Land*, Assma, the wife of Surendra, "an Indian by race and profession", spends her days behind the counter of her husband's shop, leaning her ear towards a small radio device. The author depicts her as being detached from reality and unable to connect with her Mozambican surroundings, which have become a heavy burden to carry. "What is she listening? She listens to sounds with no intonation. Nonetheless, for her, beyond those sounds lies the music of her India, the melodies that heal her longing for the Orient."

Although set in post-independence Mozambique, Mia Couto's narrative and the scene of Assma's listening practice reminds the reader of the presence of a population of Indian ancestry in Mozambique. Furthermore, it prompts an interrogation regarding the Indian soundscapes available to and tuned in by people of Indian origins, who according to Avtar Brah (1996) integrated a "colonial sandwich", insofar as they were neither simply colonisers nor colonised within an arguably much more complex and multilayered social, cultural and political context.

This paper is inspired by this literary note and earlier research findings regarding the importance of Indian sounds in creating a sense of Indian "imagined community" (Anderson: 2006 [1983]) in colonial Mozambique. It aims to contribute to the history of broadcasting and popular culture within the Portuguese colonial empire by focusing on the production and circulation of the Indian soundscapes turned in, consumed and listened to by Indian diasporas in colonial Mozambique. It intends to go beyond the view of an either imperial or colonised account of radio and sound history, by bringing to the foreground this intermediate level of soundscapes circulation, such as the Indian soundscapes, in the colonial setting. The latter have unequivocally turned sounds and radio waves in colonial Mozambique into much more diffused and rhizomorphic forms than anticipated by mainstream views of imperial media, though invisible and considerably hard to grasp.

Drawing both on a few oral memories of reception collected and on documental and archival research, this presentation aims to, firstly, discuss and deconstruct the nature of these Indian soundscapes, in articulation with other so-called Indian media and their consumption, such as Hindi Films screened in colonial Mozambique. Such an approach thus adopts an intermedial perspective of sound, seeing it through the lenses of its interdependent relationship between radio broadcasts, radio music and film music. Secondly, it aims to thoroughly map and understand the circulation, direction and purposes beneath those Indian soundscapes in colonial Mozambique. This mapping requires a dual perspective of sound media, which entails both an immaterial and a material understanding of sound in radio, disc and film, both as media and as physical devices, through

which it circulates. Finally, it aims to understand how the Portuguese colonial regime perceived these Indian soundscapes throughout the late colonial period - particularly a few years before and after 1961 when the diplomatic relations between Portugal and India became more convoluted following the liberation of the former Portuguese territories in India.

Title: The Birth of Popular Press in Palestine and the diffusion of Modern Hebrew 1884-1914

Session Type: Individual submission

Authors:

Name: Ouzi Elyada

Email: ouzi(at) com.haifa.ac.il

Country: IL (Israel)

Affiliation: University of Haifa, Department of Communication and Department of General History

Abstract: This research breaks new ground by showing that from the 1880s onward, a popular press came into being in Palestine for the first time in the history of the Hebrew press in that country. This study investigates the Hebrew popular press that evolved in Jerusalem in the nineteenth and early twentieth centuries along the lines of the Western popular press. Central in it is the personality of Eliezer Ben-Yehuda (Perlman).(1858-1922) In 1884, Ben-Yehuda, a Russian-born Jewish intellectual who lived in Paris for several years, established Ha-Zvi,(The Deer) the first Hebrew-language popular newspaper, in Jerusalem under the influence of the French model of journalism. A pioneer in the Zionist movement, he preceded Theodor Herzl in considering the Jewish people a nation. The Jewish nation, he ruled, was defined first of all by its Hebrew language and only afterward by elements such as territory and history. The problem was, however, that Hebrew had become ossified over the generations due to its theological use. To regenerate the Jewish people, its language had to be regenerated, secularized, restored to vernacular use, and brought back from the dead. He decided to carry out the regeneration project by founding a popular newspaper that would communicate not as the elite press abroad did, by means of refined and abstract expressions, but in a new and revitalized Hebrew language that takes up topics such as murder and rape, disaster stories and gossip, violent polemics, erotica, and melodrama. (Later, after years of journalistic work, Ben-Yehuda gathered his linguistic innovations into the massive Hebrew lexicon that he authored.)

Ben-Yehuda patterned his newspaper after two French popular vehicles, Le Petit Journal and Le Petit Parisien.

In this conference, I examine the development, and the *modus operandi* of the Hebrew popular newspaper Ha-Zvi (later on Ha-Or) that evolved in Jerusalem between 1884 and the eruption of World War I in 1914.

I argue that Ben-Yehuda attracted the general public to read and to speak Modern Hebrew by producing intriguing and sensational news written in an emotional, melodramatic style. These Texts were read in public, aloud in the streets and in public reunions.

The analysis in this research is influenced by the approach of the French "Annales school" (Roger Chartier) studying media history in a Socio-Cultural and Economic and Material context. The inquiry yields a profile of the printers, editors, and journalists, and examines the editors' working patterns, the gathering of journalistic information, and distribution of the resulting product in the public sphere. Concurrently, the research profiles the readership of the popular Hebrew press and investigates its reading practices.

Recent Publications related to this conference

Ouzi Elyada, *Yellow World – The Birth of Hebrew Popular Journalism in Palestine: 1884-1914*, Tel-Aviv, Tel-Aviv University Press, 2015. (Hebrew)

English edition by Routledge will appear in 2019.

Name: Dominic Holdaway

Email: dominic.holdaway(at) unimi.it

Country: IT (Italy)

Affiliation: University of Milan

Abstract: This paper will present the research project “Screen Diplomacies”, which we are currently preparing and which aims to study the mutual influences of European international relations and screen media (film and television), between 1914 and 1989. This period enables the project to span the growth and saturation of two major cultural phenomena (cinema and broadcast television), in a timeframe that moreover witnessed a series of political and economic conflicts and allegiances that fundamentally shifted the social fabric. The working hypothesis of the project is that at the height of the twentieth century, audio-visual media played a crucial, yet under-researched role in European international relations.

The aim of the project is, first, to build a publicly available digital platform with metadata on diplomatic material on cinema and television (1914-89) in a series of national archives linked to the ministries of Foreign Affairs in Europe. Second, it aims at illustrating the usefulness and productivity of cross-national and historical network analysis on audiovisual media and international diplomacy by organizing pilot studies on particular controversial movies (e.g. Dawn in 1927-28), political-ideological events and processes (nazi-Germany and its international pre-war film policy, 1933-40), or topics (e.g. satellite TV).

The paper uses the case of the British movie Dawn (Herbert Wilcox, 1927/28) as an example of the usefulness of bringing together archive material from various diplomatic archives across Europe in order to understand the role of cinema in relation to wider international political and diplomatic issues. The Dawn international controversy these issues relate to Germany's aspirations to re-establish itself as an important player in the diplomatic arena; France's fierce resistance to it; the British government's will to maintain a policy of conciliation and neutrality; and with Belgium running the risk of being molested by these European powers' diplomatic arm wrestling.

Title: "Over to you, George': Catalonia in the Anglo-American news weeklies -Economist, Time and Newsweek- during the Spanish Transition to democracy (1975-82)

Session Type: Individual submission

Authors:

Name: Christopher Tulloch

Email: christophertulloch(at) gmail.com

Country: ES (Spain)

Affiliation: Senior Lecturer - Journalism

Abstract: Recent academic literature on the role of the foreign media during the Spanish Transition to democracy has focussed heavily on the influence of the major European and American daily press and has been centred on their overt interest in the consolidation of democracy and open support for the fledgling King Juan Carlos I and dynamic young premier Adolfo Suárez. (Guillamet, Tulloch et al, 2016; Tulloch 2015; Guillamet, Salgado et al 2014). This paper diverts from this script by looking at a Transition-related issue outside of the confines of Madrid political life –in this case the Catalan question- and does so not in the daily press (Guillamet 2014) but rather on the pages of the highly-influential Anglo-American news magazines Time, Newsweek and The Economist.

This paper analyses those articles dedicated to the ‘Catalan story’ published by those foreign correspondents working for the world’s biggest three political magazines during the seven years spanning from October 1975 and the onset of Franco’s definitive illness up until October 1982 and the overwhelming victory of the Spanish Socialist party. While unable to compete with the volume of articles related to the Basque Country –due largely to the fact that 90% of them refer to ETA and violence- Catalonia draws on its historical media capital from the Civil War –hence the reference to Orwell in the magazine headline present in the paper title- and appears in a supporting role within the wider journalistic narrative regarding Spanish socio-political developments in the late 1970s.

This paper analyses how these magazines explained complex territorial issues in an unfolding political landscape through their coverage of Transition episodes such as the freedom of expression demonstrations of 1976 or the return of president Tarradellas and tracks the projection of Catalonia from its “angry minority” status (Time October 1975) to that of being a key supporter of the 1978 Constitution. The sources drawn on by foreign correspondents, the recurring issues when dealing with this story and the framing and editorial stance taken towards the Catalan issue are all under analysis in this unexplored field of the foreign press coverage of the Transition years.

Title: From Breaker Morant to Verraiers: Ideology and representations of the Anglo-Boer War (1899-1902).

Session Type: Individual submission

Authors:

Name: Alexander Holt

Email: alexanderrholt(at) gmail.com

Country: ZA (South Africa)

Affiliation: not presently affiliated to any university

Name: Anne-Marie Jansen Van Vuuren

Email: ajansenvanvuuren(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: The films Breaker Morant (1980) and Verraiers (2012), are inspired by true events and are meant constitute strong anti-war statements. In Verraiers (Traitors), a prominent field cornet and his sons are put on trial for treason. The purpose is to sustain war -- by discouraging Boer Commandos from leaving the battlefield to take up British amnesty in response to General Kitchener's threat to torch their farms and starve their families in concentration camps. In Breaker Morant, Australian soldiers under British command are arrested and stand trial for murdering Boer prisoners and a civilian. The purpose is to end the war -- a sacrifice deemed necessary to avert a diplomatic incident and to promote reconciliation for a Peace Conference. Corresponding plot structures lend to the use of familiar devices for engaging cinema audiences. In both instances, the accused are betrayed and only the youngest is spared execution by firing squad. Breaker Morant is regarded as a seminal film to the Australian New Wave, was profitable at the time of its release, and distributed internationally. Verraiers received some critical accolades but failed to resonate with its South African target audience and lost money.

The paper gives a brief analysis of Breaker Morant and explains its success (in terms of the contextual social dynamics that justified its production) as contrast to an in-depth analysis of the more complex historical and contextual social forces to which Verraiers is a response, and which account for its failure at the box office despite the existential importance its message for the future of South Africa.

The narrative structure of Verraiers is analysed against a re-interpretation of events which form the historical landscape the film is traced over. The depiction of the interaction between Jan Smuts and General de la Rey reveals the crucial role of the former in prolonging the war, and this raises important new questions that are examined in the paper. The difficulty of producing such a film text for a sensitive and contested cultural terrain, when the message is more than an anti-war statement, is explained. At the same time, aspects of aesthetic execution are critiqued on the basis appropriate film theories. Finally, prospects for realisation of ideals enshrined in United Nations Charter for the protection of human rights of minorities who have survived holocausts such as the Boer War (Pakenham) are considered.

Comprehensive secondary and primary sources relating to the conflict and its background have been referred to, including the Smuts biography, Vols. 1 & 2 by W.K. Hancock and Selections from the Smuts papers, Vols. 1-4, edited by W.K. Hancock and Jean van der Poel. Recent PhD research using primary sources not previously consulted gives a glimpse into the grim reality of the situation related in Verraiers, and forms basis for new interviews with producer, script writer, and director, which re-inform the paper. Theoretically-informed critical work published on release of Breaker Morant, giving insights from South African and Australian perspectives is also taken into account.

Abstract: The Anglo-Zulu War of 1879 was the last of the great set-piece conflicts between British colonisers and an indigenous Black people in southern Africa. Though much is made of the fact that the 24th Regiment was a Border troop mainly of Welsh soldiers, there were enough Irish soldiers involved both at the battle of Isandlwana and at that of Rorke's Drift to create interest in the Irish press and periodicals, both nationalist and unionist.

Initially this interest tended to be narrative reporting. Soon, however, mixed messaging began to intrude into these reports. On the one hand, the advanced wing of Irish nationalism in the Fenian Brotherhood or Irish Republican Brotherhood wrote of assisting the Zulus in their struggle with arms and ammunition (neither of which ever materialised). On the other hand, the 'Zulu hordes' were also used as a metaphor for British 'barbarity' towards the Irish.

This paper also highlights the rise of racial stereotyping and racial consciousness in Ireland. This was particularly evident in the growing and vibrant Irish nationalist cause as the granting of self-government, or Home Rule, became a viable goal. This Irish awareness of race focused on the tension between two opposing attitudes. There was sympathy for a 'fellow-subjugated people' – something which would also later manifest itself in a fervent Irish pro-Boer movement. However, there was also a growing contention that Ireland was a nation of equal standing among the nation states of Europe, and as such not to be categories with people of colour. John Dillon, the Irish Parliamentary party leader in the 1890s, on one occasion asserted that Ireland deserved self-government (Home Rule) "because we are Whitemen". As late as 1921 and the final independence negotiations, the Sinn Féin delegation rejected the concept that an independent Ireland would have a high commissioner rather than a governor general, because the former designation was used in African High Commission Territories.

The legacy of this interest in Africa and its mutation into Irish fascination with missionary endeavour in the African continent, with the Sunday collections in aid of missions at Catholic churches, are also touched upon in the paper.

Nothing has to-date been written on this subject. This empirical study surveys the Irish press in the 1880s and 1890s to investigate shifting Irish attitudes towards the Zulus, who became so prominent that they came to personify 'African' in the Irish mindset. Newspapers explored include the mainline nationalist Freeman's Journal and Independent as well as such advanced nationalist papers

as United Ireland and the United Irishman. On the unionist side The Irish Times and the Belfast Telegraph are investigated. In addition, various periodicals are scrutinised, most notably the satirical Pat.

Abstract: In this paper we wish to shed light on the interplay between media, event, and history in the context of political death in the Cold War era. Theoretically, we draw on scholarly debate on media events and their historical constitution. Empirically, we sharpen our eye on the cold war political history of the 1980s in the socialist Soviet Union and the Nordic democracies of Finland and Sweden. We investigate the deaths of three political leaders of the era; the Soviet Union General Secretary Leonid Brezhnev (1906-1982), Finnish President Urho Kekkonen (1900-1986) and Swedish Prime Minister Olof Palme (1927-1986) as ritual media events. These three death events symbolically ended one political era giving room to a new one, eventually giving shape to the history of Cold War in their own national contexts. The role of news media varied in these three societies. The significance of mass media – especially television and national newspapers – was still strong during the Cold War in constructing the common, national, Andersonian imagined community (Anderson 2007 [1983]). The media affected the way how the nation saw itself, also in relation to its leader and the world. In a totalitarian system like that of the Soviet Union, the task of media and the press was to serve the state and its agenda. Sweden and Finland in turn, although both representing Nordic welfare societies with a traditionally democratic-corporatist media system and a liberal press, were (and still are up to a point) culturally different societies. The empirical data analyzed consists of different media materials obtained from national and media archives in Finland, Sweden, and Russia (Soviet Union at the time). In the analysis we utilize close-reading as a method of analysis and interpretation. We investigate recurring ways of narration and representation in news text and visual imagery, and analyze how these methods of ritual story telling functioned to eventize the death of three leaders in three societies of different historical and political background. We ask how the ritual transition of power was carried out in these ritual media events. As a conclusion, we reflect the differences and similarities between these ritual media

performances and the ways in which they were shaped by different historical and societal conditions of the Cold War era.

Title: Historicizing Fake News

Session Type: Individual submission

Authors:

Name: Aurora Wallace

Email: [aurora.wallace\(at\)nyu.edu](mailto:aurora.wallace(at)nyu.edu)

Country: FR (France)

Affiliation: New York University

Abstract: In what were once more commonly known as media “hoaxes,” (or what PT Barnum referred to as “humbugs”) purposeful deceptions designed to boost circulation and ratings are a perennial feature of the media landscape. This paper investigates the means and motivations behind some of the more spectacular instances of 19th and 20th century “fake news” in order to provide context for the current crisis in news veracity. Whereas the hoax has historically presented an opportunity to recalibrate and re-establish a baseline by which to gauge the falsehoods being promoted, endless prevarication in today’s media makes it increasingly difficult to detect the true from the not-true. Legacy media have been so successfully undermined, and its credibility challenged by those on the wrong side of investigative journalism that fringe opinions, conspiracy theorizing, and outright falsifying have become endowed with a new status of legitimacy precisely by operating outside of the mainstream. The more extreme the claim, in other words, the more the lower threshold of credibility becomes its own merit; advancing the self-fulfilling prophecy that the liberal media elite is lying and must be circumvented by other means.

Drawing on examples including life on the moon and alien invasions, I demonstrate a shared set of conditions and attributes that have historically helped false stories gain purchase with certain segments of the population. Using contemporaneous news analysis and reception, I also document a consistent pattern of consternation in the public sphere and mobilization of gullibility that is fruitful for understanding the current news ecology. The complicity of the public in its willingness to be taken in for the purpose of being entertained is a necessary part of the media defense. The media criticism that attends each instance of deception is as much politicized as it is used as evidence for multiple and contradictory arguments. Competing claims on the role of media in democracy – wherein the commercial imperative is both the problem and the solution, the excuse and the justification – are at once partisan and malleable. With careful consideration of the affordances granted by technological change in each era, including the penny press, telegraph, radio, and social media, specific attention is given in this paper to how the medium itself comes under scrutiny and liability in the dissemination of false news. Working with concepts elaborated by Richard Hofstadter, Susan Jacoby, and Daniel Boorstin on media influence and culture, the paper demonstrates remarkably consistent and recurring discourses within popular media criticism in the face of falsehood.

Title: Cultural Journalism and representations: A content analysis of digital coverage about Brazil and Portugal (2012-2018)

Session Type: Individual submission

Authors:

Name: Mariana Scalabrin Müller

Affiliation: NOVA FCSH

Abstract: This paper aims to comprehend the main characteristics of culture coverage in the digital editions of a Brazilian and a Portuguese newspaper. It is the first step of a multimethod analysis within a larger project that will draw a complex map about representations of Brazil and Portugal in Cultural Journalism from both countries.

We understand Journalism as a social construction (Alsina, 2009) and Cultural Journalism as a mediator (Kristensen & From, 2017). News analysis allows the identification of maps of meaning about society in specific periods or territories (Hall, Chritcher, Jefferson, Clarke, & Roberts, 1978). Regarding Brazil and Portugal, countries that have a strong tie since the colonial period, it is hypothesized that colonial heritage is a driver of social memory and stereotypes that may be reflected in digital Journalism.

We considered audience, track record of cultural coverage and presence of specific online culture sections to select two newspapers that present themselves as national (Folha de São Paulo and Público). Our analysis was focused on 2012, when two atypical events happened (Year of Brazil in Portugal and Year of Portugal in Brazil) and 2018, the latest year available. We selected our sample using keywords (Brazil, Brazilian, Portugal, Portuguese, et cetera) from Factiva database and Folha de São Paulo's digital archive. Then we extracted all false positives and collected the links, resulting in a sample with 490 articles from 2012 and 638 articles from 2018.

We conducted a Content Analysis (Neuendorf, 2002) with the following variables: arts and culture sub-sector (e.g. music), geographical reference (core or periphery), journalistic genre, digital format, news value and protagonist (gender and nationality). This analysis considered concepts such as social representations (Moscovici, 1981), stereotypes (Tajfel, 1982), cultural memory (Assmann,

2008) and press as a technology of memory (Van Dick, 2007). We will present a preliminary panoramic view of the cross-country representations, specifically revealing the main differences in the coverage about Brazil by Público and about Portugal by Folha de São Paulo.

Title: Empire and Communications in Context: The Meaning and Significance of Harold Innis's Beit Lectures at Oxford

Session Type: Individual submission

Authors:

Name: William Buxton

Email: w.buxton(at) concordia.ca

Country: CA (Canada)

Affiliation: Concordia University

Abstract: Harold Innis's *Empire and Communications* (1950) is considered to be one of the classical works in media studies and the history of media. Yet little attention has been given to its origins as the Beit Lectures, a series of six talks delivered at All Souls College, Oxford in May, 1948. This paper examines how (and possibly why) Innis was invited to deliver the lectures, with particular attention given to his relationship with the two co-sponsors of his visit, W.K. (Keith) Hancock (Chichele Professor of Economic History at Oxford) and Sir Reginald Coupland (Beit Professor of Colonial History at Oxford). It challenges the commonly held view that Innis surprised his unsuspecting hosts and audiences by delivering a set of lectures on the historical relationship between empires and modes of communication (rather than on some aspect of imperial economic history). Rather, as his evident in Innis's correspondence with his hosts (as well as in their published comments on his previous scholarship), Innis was likely selected because of his highly innovative approach to economic history, characterized by Hancock as examining "The impact of Industrialism upon Knowledge." This took the form of tracing "the diffusion of words since the invention of printing [as] a supply-and-demand history in which are interwoven technological change, business enterprise and the innate or acquired capacities of men to understand or misunderstand ideas."

The paper also challenges the widely held notion that Innis's talks had little to do with (British) imperial economic history, but rather largely addressed issues that were marginal to the central theme of the Beit lectures. Rather, it claims that Innis did indeed squarely address key historical aspects of British imperialism in his final lectures (with particular reference to the 19th and 20th centuries), emphasizing the extent to which these developments were bound up with the advent of publishing, newspapers, and print culture. His previous lectures served as a background to this discussion, by examining how earlier forms of domination were linked to particular modes of communication.

Finally, the paper argues that the Beit lectures can only be understood in relation to three other interventions of Innis in Great Britain during the spring and summer of 1948—namely the Stamp Memorial Lecture at the University of London, the Cust Foundation Lecture at the University of Nottingham, and his presentation and commentary at the Sixth Congress of the Universities of the British Commonwealth held at Oxford University.

The paper draws on the theoretical approaches of the sociology of knowledge and intellectual history. The methodology is primarily that of a historian; it involves the close reading of archival material within the context of a particular historical conjuncture.

Title: Piet Meyer, nationalism propaganda and control in the mid-Century SABC.

Session Type: Individual submission

Authors:

Name: Ruth Teer-Tomaselli

Email: TEERTOMA(at) ukzn.ac.za

Country: ZA (South Africa)

Affiliation: University of KwaZulu-Natal

Abstract: Piet Meyer was an important contributor to the intellectual process of Afrikaner identity and the mystification of Christian-National Ideology for the better part of the twentieth century (Meyer 1943; 1980; 1984). While there is a significant literature dealing with his position in the Broederbond (Moodie, 1975; Wilkins and Strydom, 1978; o'Meara 1983), his contribution to and influence over the SABC is less well documented and this paper seeks to address this space. The paper outlines Meyer's gargantuan influence over the SABC for twenty years. Applying an historical approach, the research draws on original archival material, contextualised by secondary literature (Prinsloo, 1987; Sharp, 1981; Archibald 1969). Starting life as a journalist, Meyer held crucial positions in the emerging labour movement, and later was responsible for the establishment of some of the 'new generation' Afrikaans universities. He is best remembered for his leadership of the secret society, the Broederbond (Band of Brothers) that clandestinely directed much of the activity of the apartheid state and South African business. Meyer joined the organization in 1931, and led it from 1960-1972. Simultaneously, he was the Chairperson of the SABC (1959-1981). The 36-story radio building completed in the 1960s was named after him and until 1994 housed an enormous bronze bust likeness. Under his leadership, many English-speaking employees left the SABC, replaced by members of the Broederbond, changing the ethos of the broadcaster to an extension of the apartheid government. A staunch supporter of radio, under his watch the Frequency Modulation (FM) transmission was expanded, allowing for the strengthening of the flagship English and Afrikaans radio services, as well as the bilingual Springbok Radio. Meyer's strident Afrikaner nationalism showed itself in the determination to create a powerful Afrikaans service while nominally espousing a doctrine of partnership between English and Afrikaans white South Africans. A consequence of the FM expansion was the creation of Radio Bantu, a broadcasting infrastructure that both mimicked and bolstered the apartheid doctrine of discrete and distinct ethnic services for African people; institutionalizing the ideological vision of 'separate development'. Meyer was a staunch advocate of the establishment and maintenance of 'Radio South Africa', an external shortwave service beamed throughout southern and central Africa as a propaganda platform to counter what was seen in the 1960s as the criticism of South African policies from African and European countries. Television was not introduced into South Africa until the 1970s. Initially, Meyer supported the doctrine that the external influences brought about by television would be detrimental to the country and its citizens. By the 1960s, however, the tide of opinion turned, and in his capacity as head of the SABC, Meyer chaired the Commission of Inquiry into Matters Relating to Television (Hayman 1975). Consequently, the service was approved along lines similar to the racial divisions established in radio. Meyer retired from the SABC three years before the first televised broadcast, but it was his vision, outlined in the report that bore his name, that shaped the structure and ethos of television's early years.

Affiliation: Doctoranda - Universidad Complutense de Madrid

Abstract: Se presenta un análisis comparativo de comentarios realizados en vídeos de Youtube, tanto en inglés como en español, cuya temática es la Guerra Civil Española. Se trata de uno de los periodos históricos que ha sido ampliamente tratado en el mundo académico y, pese a ello, la necesidad de repasar esta etapa de la historia resulta, en la actualidad, más pertinente que nunca dado el clima político y social en el que se encuentra España y otras partes del mundo. La aparición de nacionalismos, la reivindicación de cambios políticos y el uso con fines estratégicos de la memoria histórica, son solo algunas de las razones por las que este tema debe ser revisitado, invitando a reflexionar una vez más sobre un suceso que no debe ser olvidado. Por ello, se investiga este periodo desde una nueva perspectiva y con un enfoque diferente a través del que, a día de hoy, constituye el mayor repositorio audiovisual gratuito en Internet: Youtube. Se ha escogido esta plataforma por ser un gran punto de encuentro entre personas de diversos países, culturas, ideologías, creencias religiosas, etc., en el que todas ellas pueden compartir puntos de vista, noticias y conocimientos, haciendo que ese espacio sea un punto de inicio idóneo para poder comenzar a entender la sociedad actual y sus actitudes respecto a este momento histórico. Esta investigación pretende mostrar las coincidencias y diferencias de las ideas y opiniones de los usuarios en función del tipo de producción (informativos, documentales, vídeos musicales, dibujos animados, etc.), y del público al que van dirigidos: hispano o anglosajón. Se valoran los modos de producción, los contenidos y las audiencias (número de visitas y comentarios generados por cada vídeo) a través de una muestra formada por los 20 vídeos más vistos por los usuarios durante el mes de enero de 2019, utilizando los términos de búsqueda “Guerra Civil Española” y “Spanish Civil War”. Para facilitar un análisis en profundidad de las opiniones y diversas aportaciones que los usuarios han realizado en la sección de comentarios asignada a cada uno de los vídeos, las producciones que conforman esta muestra se clasifican en función de los diversos formatos audiovisuales; se tienen en cuenta los comentarios realizados desde el momento de la publicación del vídeo en la plataforma hasta el mes que se ha establecido como límite temporal de esta investigación. Esta investigación se enmarca dentro de la perspectiva de los Estudios Culturales, desde la cual se entienden más fácilmente las relaciones existentes entre los contenidos audiovisuales analizados, la recepción de éstos y la sociedad en la que todo ello convive. Dentro de este campo de estudio se presta especial atención a las perspectivas desarrolladas por los estudios de recepción de audiencia al igual que al análisis de contenido temático.

Title: [Panel] La televisión en Europa: del monopolio estatal a la libertad de antena, Panel description

Session Type: Panel Submission

Authors:

Name: Juan Martín Quevedo

Email: juan.martin(at) unir.net

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja

Abstract: La lucha por las audiencias se ha constituido como el factor clave en el planteamiento de la programación televisiva desde la instauración de las cadenas comerciales. Todo tipo de programas, también los que se orientan a objetivos ajenos al medio mismo (por ejemplo, los debates políticos y electorales), buscan una amplia repercusión en términos de recepción, y por ello la medición y efectos sobre las audiencias (tradicionales y digitales) tienen un interés cada vez mayor también para la academia.

La libre competencia de programas en todas las franjas, las estrategias de programación para conseguir audiencias mayoritarias afectan tanto a los espacios de entretenimiento más clásicos (o rupturistas e innovadores) como a aquellos más vinculados a la función social de las televisiones. Desde el inicio de esta competición por las audiencias en España, en 1990 hasta el actual proceso de hibridación mediática y el uso sincrónico de segundas pantallas que amplían la difusión de los contenidos televisivos, ha transcurrido un tiempo más que suficiente para abordar tanto procesos de tempo amplio, como cuestiones de mayor actualidad. En este panel se abordan aportaciones sobre programas; estrategias de programación para conseguir mayores audiencias y sus repercusiones en otros ámbitos; estudios sobre audiencias (clásicos, sobre audiencias sociales y digitales, también permanencia en conversaciones, redes sociales y memoria); transmedialidad, etc.

Title: Producción de ficción audiovisual española: evolución y consolidación de la industria televisiva de ficción

Session Type: Panel Submission

Authors:

Name: Charo Lacalle

Email: Rosario.Lacalle(at) uab.es

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona-UAB

Abstract: La década de los noventa imprime un giro radical a la producción de ficción televisiva en España, marcada por el impulso de la producción cinematográfica a las adaptaciones de grandes obras literarias y la renovación del drama que tiene lugar en ese período. Como se ha señalado reiteradamente, la comedia de Antonio Mercero *Farmacia de guarda* (Antena3, 1991-1995) representa la señal de salida de la carrera por la construcción de un tejido industrial de ficción televisiva, que culminaría a comienzos de 2000 con la consolidación de “drama de profesiones”. Títulos como *Periodistas* (1998-2002), *El comisario* (Tele5, 1999-2009) o *Policías en el corazón de la calle* (Antena3, 2000-2003) representan, entre otras series de ese período, la mayoría de edad de un ámbito que abandonaba la producción artesanal del pasado para adoptar de manera generalizada la producción “en serie”, con técnicas y estructuras importadas de Norteamérica.

La primera década del siglo XXI multiplica y diversifica (tanto en géneros como en formatos) la producción de ficción televisiva española, aunque la atomización del sistema, característica de la ficción de los noventa, coexiste con el crecimiento de unas pocas empresas responsables de los programas de éxito (*Globomedia*, *Boca Boca*, *Diagonal TV*, *Bambú*, etc.). La transformación de las empresas de difusión en empresas multimedia, que se produce en la década actual, consolida la expansión internacional y el consumo de ficción local frente al dominio estadounidense del pasado, pero la dependencia de las productoras independientes respecto de las grandes cadenas ha inducido a las empresas independientes a integrarse en los grandes grupos multimedia (controlados por dichas cadenas) y a aliarse con las grandes plataformas internacionales.

Esta comunicación recorre las diferentes etapas de la implantación y consolidación de la industria de producción de ficción televisiva, desde 1990 hasta la actualidad. Se trata de determinar las razones de la concentración vertical y de la especialización de contenidos a las que se apunta en la actualidad, con el objetivo de debatir sobre la inminente reconfiguración de un sistema determinado por la creciente imbricación entre la ficción de cadenas generalistas en abierto, las propuestas de las grandes plataformas y la producción cinematográfica.

Email: jm.gonzaguilar(at) gmail.com

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja

Abstract: Con la llegada de las cadenas privadas en España en 1990 se produjo una redefinición del concepto de “público infantil y juvenil”. Se analizan los factores que determinaron esa nueva concepción y también sus consecuencias en la programación y los programas emitidos. Se muestra como fundamental la capacidad de atraer anunciantes de este target de la audiencia. De hecho, el descenso de la natalidad y del número absoluto de niños y jóvenes redujeron su interés para la publicidad y acabaron por desterrar estos programas de las cadenas generalistas. Sobre este elemento básico actuaron las cuestiones audiovisuales, el discurso social y las disposiciones legales para acabar de definir un concepto en el que predominaba su debilidad y necesidad de atención y protección. Estos elementos estuvieron subordinados a los primeros. Lo prueba el que las disposiciones efectivas para conseguir esa protección no se pusieron en práctica hasta que se crearon las cadenas infantiles digitales.

Abstract: Se ofrecen los primeros resultados de una investigación en curso sobre las publicaciones acerca de la programación televisiva. Se estudia la distribución de producción por periodos; las fuentes del Área; los autores más referenciados; las principales revistas y las áreas de producción mas destacadas.

La metodología que se ha empleado ha partido de un primer grupo de datos obtenidos exclusivamente de Web of Science Core Collection mediante el empleo de términos clave relacionados con “programación televisiva”. Esta primera información se ha analizado con Excel y VosViewer. Desde esta primera información que se almacena en Mendeley, se ha pasado a la obtención de un segundo núcleo mediante la localización de la bibliografía citada en esa primera selección. Del cuerpo de información resultante se ha vuelto a buscar nueva bibliografía citada hasta la saturación. Todos ese conjunto de datos se han volcado en Mendeley. Se ha generado un archive RIS que se ha analizado con VosViewer. Para algunas visualizaciones se usan nubes de palabras.

El análisis permite ofrecer la relación de los investigadores mas citados ; los trabajos mas citados; las revistas mas citadas; las áreas más abordadas en relación con el tema de foco principal (la programación televisiva) y los países con mayor producción y establecer las correspondientes relaciones y conclusiones.

En términos generales puede hablarse de dos áreas diferenciadas en los estudios sobre programación televisiva. Una primera general, estudia la programación televisiva de forma directa: historia y evolución, competencia, contenidos (humos, noticias, series, películas, programas, etc) y publicidad. Una segunda, alternativa, se centra en el análisis de la influencia de (casi siempre

negativa para los autores) de la programación televisiva en otras dimensiones: obesidad (principalmente infantil), violencia, racismo y estereotipos en general.

Affiliation: Universidad Internacional de La Rioja

Abstract: La llegada de los operadores privados a España en 1990 supuso el inicio de un acelerado declive para Radiotelevisión Española, que tuvo que ver cómo sus audiencias se desplomaban mes tras mes a medida que la cobertura de otras cadenas alcanzaba todo el territorio nacional, con la consiguiente pérdida de cuota de publicidad.

TVE llegó al nuevo escenario mediático en muy malas condiciones: dependía exclusivamente de la publicidad para financiarse -pues se había renunciado a las subvenciones en 1983-, arrastraba una estructura altamente ineficiente, con aproximadamente el triple del personal que necesitaba y graves carencias en la gestión, y estaba lastrada por una histórica politización, que a un tiempo mermaba su atractivo para los espectadores y reducía su capacidad para realizar las necesarias reformas. En este contexto, emprendió una política programativa que cada vez ponía más énfasis en los espacios comerciales y menos en los de servicio público, a través de fichajes estrella, programas sensacionalistas, blindaje de fichajes con contratos millonarios y el uso de su capacidad para endeudarse de forma casi ilimitada para competir favorablemente por los derechos de los contenidos más atractivos, como el fútbol.

Esta investigación analiza el debate político sobre RTVE y su gestión entre los años 1990 y 1995, hasta la llegada de José María Aznar al gobierno, a través de las actas de la Comisión de control del Congreso, y las contrasta con un análisis de lo que la propia televisión pública decía de sí misma a través de los medios, y de los Anuarios Oficiales de RTVE, en los que se ofrecía un balance del año concluido y se planteaban los nuevos retos. Se pretende con ello analizar el discurso público de TVE, la manera en que presentaba -y justificaba- sus estrategias para competir en un nuevo mercado y comprobar cuáles eran las prácticas reales de la cadena, con un análisis de las estrategias de programación en base al modelo de programación de TVE. Como resultado preliminar se puede avanzar en que en la primera etapa de la llegada de las privadas (de 1990 hasta 1995), las estrategias de televisión española fueron muy conservadoras, aplicaban lo que ya había funcionado en el pasado. Las privadas también optaron por esa opción y lejos de vencer la tradición, el público se fragmentó en tres bloques que coincidían con las tres cadenas televisivas. Desde TVE negaron la pérdida de liderazgo y se enrocaron un discurso que aludía a la calidad del servicio público y negaba la evidencia: Antena 3 y Tele 5 estaban muy cerca de desbancar a TVE.

Title: Critical Communication Studies as Cold War effect. The case of West Berlin

Session Type: Individual submission

Authors:

Name: Maria Löblich

Email: maria.loeblich(at) fu-berlin.de

Country: DE (Germany)

Affiliation: FU Berlin

Abstract: After 1968, the West Berlin department became the centre of critical communication research in the small academic field of West German communication studies (Scheu 2012). A reorientation of research, courses and teaching as well as academic self-administration took place following socially and capitalism critically ideas. Political economy of the media for instance became an established course topic as well as “emancipatory” journalism education. Research assistants wrote books on media policy and press concentration. Due to specific rules and faculty policy, students and professors got equal vote for instance in professors’ appointment procedures (Wersig/Neveling 2013; Knoche 2017). No other department in the Federal Republic of Germany underwent such a reorientation in the aftermath of 1968. To the contrary, professors and research assistants in other places joined in defence of the student movement (Meyen/Löblich 2007). In the long run, however, not even in West Berlin critical communication studies survived.

My paper proposes that the specific development of the department at Freie Universität (FU) Berlin was (also) an effect of Cold War. My study asks why and how this department became the centre of critical communication studies. It investigates the conditions, which the Cold War hot spot West Berlin created for university, for system criticism and particularly, media criticism. Drawing on the social theory of Pierre Bourdieu (1996), this paper studies how these conditions translated into the field and capital structures of communication studies and how these conditions enabled capital-poor academic actors (students and assistants) to become players in this field apart from professors. I will describe what the new “doxa” of communication studies encompassed and how it was fought about it. Drawing on Bourdieu, however, also helps to understand the counterforces and the decline of critical communication studies at the end of the 1970s and in the 1980s. An important role in this regard played West Berlin Social Democratic Party, deeply shaped by Cold War itself.

The empirical basis of this study are different sources: archive material from the FU archive (protocols, reports, statements, applications regarding academic administration at department, faculty, and university steering level), scholarly publications and research plans, course catalogue, curriculae, biographical and autobiographical material, political documents and literature. Sources were analysed by means of categories, which were derived from Bourdieu’s theory (main categories: field, capital, habitus).

Title: [Panel] Broadcasting under Colonial Rule: Institutions, Policies and Voices, Panel description

Session Type: Panel Submission

Authors:

Name: Nelson Ribeiro

Email: nelson.ribeiro(at) ucp.pt

Country: PT (Portugal)

Affiliation: Catholic University of Portugal

Abstract: Throughout most of the 20th century radio broadcasting assumed a central role in the construction of national and imperial identities, as it was the main source of news and popular culture available to the majority of the population. Even before globalisation became a buzzword, imperial nations used radio to foster the creation of 'imagined communities' (Anderson, 1983) among populations spread out over different continents and with distinct cultural backgrounds. Broadcasts were designed to create a sense of nation, covering ceremonial events and ensuring that the whole population, irrespective of its distance from the centre, would have access to the same content.

While the role of radio in fostering a sense of nation has been recognised by scholars dealing with the history of communication in different European Empires (Kuitenbrouwer, 2016; Potter, 2012; Scales, 2013), in this panel we propose to look at how broadcasting was organized in colonial settings, focusing on the broadcasting stations that were set up in Africa and Asia under the domain of European colonizers, while also taking into consideration which voices and which languages were heard on the air.

The papers assembled for this panel will look at five different colonial territories under the control of three different imperial nations: Britain, The Netherlands and Portugal. Thus, the first paper will discuss how the British government allowed the establishment of a state broadcaster in India, while rejecting that it would follow the public service model. Programmes were designed to encourage loyalty to the imperial state and to provide basic education to improve agricultural production and the health of the colonial population. The second paper deals with the impact of broadcasting in the Dutch East Indies in the interwar years, discussing how it was controlled by the colonial elite that believed that the audio medium had the ability to influence power hierarchies. The last three papers focus on the broadcasting in the Portuguese Empire. The third paper focuses on the organization of broadcasting in São Tomé e Príncipe, first by private initiative and later on by the installation of a local branch of the Portuguese state broadcaster. The importance assumed by programmes in local languages is also discussed in the fourth paper that looks at the development of broadcasting in Cape Verde. The author demonstrates how radio was used to spread a language that had been created through a miscegenation process with contributions from Portuguese and several African languages and dialects. Last, the fifth paper is centred in broadcasting in Mozambique, discussing the radio apartheid between the colonizers and the colons and detailing how local languages were given the right to be heard on the air in the late 1950s, putting an end to the monopoly of transmissions in Portuguese.

The panel will be chaired by Barbie Zelizer, Annenberg School for Communication, University of Pennsylvania.

Title: 'Not for Export': the BBC Model of Public Broadcasting, Freedom of Expression, and Colonial Broadcasting

Session Type: Panel Submission

Authors:

Name: Simon Potter

Email: Simon.Potter(at) bristol.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Bristol

Abstract: One of the paradoxes of British imperialism was that, in a political order based largely on undemocratic, authoritarian rule, many British colonial regimes nevertheless allowed the importing and application of British ideas about press freedom. Democratic ideas about the functioning of the media were introduced into polities where the wider institutions of political consultation and discussion did not exist. Conservative historians of empire, such as Niall Ferguson, celebrate this as part of the liberalising mission of British imperialism. Others have drawn out the role that the press played in colonial liberation movements. Few have considered how broadcasting operated in colonial settings. The history of radio provides a stark contrast to that of the press. As contemporary colonial and imperial policymakers discussed how broadcasting might be deployed in colonial settings, they were aware how, in India and elsewhere, radio might operate as a powerful mass medium of popular political mobilisation. If the colonial state introduced radio, Asian and African elites might wrest control of it and use it to help overturn the established order. In India, the colonial government was thus wary of introducing the new medium. When they did, a great deal of attention focused on village listening, using radio to provide basic information and education as part of a wider, paternalist policy of colonial development. Radio would be tightly controlled, both in terms of who could broadcast, and who could listen. All India Radio would be a state broadcaster, not a public broadcaster: the BBC model was not for export to the Asian and African colonies. Village sets for communal listening would be under the control of loyal headmen, who would be able physically to restrict who had access to receivers. Those receivers would also be designed to limit which stations could be listened to, creating colonial and imperial monopolies of knowledge. The Plymouth Report of 1936 established the guidelines according to which this approach could be extended to British colonies across Asia and Africa. The focus was on limiting listening to programmes that would encourage loyalty (particularly through group listening to great imperial ceremonies and events) and basic education to improve agricultural production and the health of the colonial population. The Second World War meant that the recommendations of the Plymouth Report were only partly implemented before 1939. However, the Report provided the basis for colonial broadcasting policy in the decade that followed the war, when radio was again perceived as a key tool of colonial education and development. The BBC model of public broadcasting was only exported to the colonies at a very late stage, from the mid-1950s, as contemporaries came to terms with the inevitability of rapid political decolonisation across Africa and Asia. This proved a weak inoculation of public broadcasting values in the face of a renewed post-independence drive towards state broadcasting in many former colonies.

Title: Radio Broadcasting and Colonial Power in the Dutch East Indies, 1930s

Session Type: Panel Submission

Authors:

Name: Vicent Kuitenbrouwer

Email: J.J.V.Kuitenbrouwer(at) uva.nl

Country: NL (Netherlands)

Affiliation: University of Amsterdam

Abstract: The advent of radio broadcasting had a big impact on the Dutch East Indies in the interwar years. The medium-wave station Nederlandsch-Indische Omroep Maatschappij (NIROM) attracted many listeners from the archipelago with its combination of 'Western' and 'Eastern' programs. Considering this success, members of the contemporary Dutch colonial regime believed that the new medium could seriously influence power hierarchies and as a result radio was both celebrated and feared by them. This paper explores how these ambivalent visions of radio broadcasting translated into attempts from the colonial administration to control broadcasts in order to protect and strengthen the status quo.

Central to this paper are the archives of the Advisory Council of NIROM, that was responsible for monitoring and censoring radio broadcasts in the Dutch East Indies. By using them I will not only reveal the fundamental views on the societal impact of radio amongst colonial elites, but also reflect on the limits of their power. On the one hand there was censorship, that was aimed to prevent radio from undermining the colonial hierarchies. On the other hand radio amateurs, who organized in clubs, were quite influential in determining the programme of NIROM. Particular focus will be given to Indonesian agency and music broadcasts on the so-called 'Eastern' programme, both traditionalistic and modernistic styles. The members of the Advisory Council extensively discussed this topic, but the sources reveal a profound ambivalence.

Abstract: Portuguese broadcasting to the African colonies, via shortwave, began in the 1930s. However, imperial broadcasting was hardly a priority for the Portuguese government until the mid-1950s, when the territories it controlled in India were threatened by the Indian Union and the sounds of independence from the African continent began to echo. When the Portuguese government decided to invest in radio as a tool for unifying the empire, a particular landscape dominated by privately-owned stations had already emerged in its African colonies. The Portuguese strategy was then twofold: on one hand it invested in imperial broadcasting from the mainland; on the other hand it installed branches of the state broadcaster – Emissora Nacional (EN) - in some of the colonies. It was the case of São Tomé and Príncipe, where EN installed a local station in 1969. This first experience of EN in Africa was part of a larger plan that aimed to improve the dissemination of propaganda from the colonial state aimed to gain supporters for the cause of the Empire. In São Tomé, EN replaced the former Radio Clube of São Tomé and Príncipe, a privately-owned station with close ties to the ruling elite. Radio Clube relayed several programmes from the EN but was mostly appreciated for its locally produced musical programming mostly targeted at the Portuguese settlers and small communities from Angola and Cape Verde. On this presentation we focus specifically on the history of broadcasting in São Tomé and Príncipe, which has deserved no attention in scholarship dealing with media and empire. The case of São Tomé helps to deepen our understanding of the coexistence of imperial forms of culture and local identities (e.g. through music). Therefore, we analyse how the medium was used as a tool of Empire. We present unpublished materials mostly from archival research and personal interviews with former radio announcers from the Portuguese former African colonies.

Title: The Crioulo and Morna in the Portuguese colonial strategy: the role of radios in Cape Verde

Session Type: Panel Submission

Authors:

Name: Ana Reis

Email: aisabelreis(at) gmail.com

Country: PT (Portugal)

Affiliation: University of Porto

Abstract: The use of native languages in radio programming was part of the strategy of the colonizing countries. By using native languages or dialects on the broadcasts the colonial states spoke directly to the native populations that lived under their domain, and therefore radio performed the function of promoting the rules imposed by the colonial elite and the benefits of the Empire. This was also the case in the Portuguese empire, namely in the archipelago of Cape Verde. Unlike other Portuguese colonies, Cape Verde did not have a natural language since the archipelago was uninhabited when the Portuguese first arrived. During the first centuries of Portuguese occupation the territory was populated by slaves from various parts of Africa who spoke different languages and dialects. Creole was born in the Portuguese colonial context, due to the need to communicate in a common language that could be understood by all. The Crioulo was generated from the miscegenation of people and languages that crossed in Cape Verde. Portuguese was the language of the white colonizers, and therefore was considered the language of culture and education. On the contrary, Creole was the language of the slaves, the 'black portuguese' (Duarte, 2003), and thus associated with popular culture and oral traditions, the language of family and affective relations (Madeira, 2015).

The Crioulo is mainly oral, and therefore naturally geared to the radio. The words and music, especially Morna (local traditional song), were first listened on Cape Verdean radios (Radio Clube of Cabo Verde and Radio Barlavento) and also on the state broadcaster - Emissora Nacional. The texts and the poetry aired on the stations were not always in the Cape Verdean Creole, but in a so-called "Portuguese Creole". Morna suffered an identical adaptation, as it was sung in Portuguese, under canons of overseas politics (Cidra, 2011), and it was this version that was mostly aired on the broadcasts. The appropriation of the Creole and Morna by the Portuguese administration functioned as an instrument of colonization and simultaneously of Portuguese colonial expression, devaluing the native culture. In this paper we intend to analyse the role that the Cape Verdean radios played in this process and how the stations were used as a tool of Empire. The research presented will be based on archival research and interviews with radio men and women who worked in the former Portuguese colonies.

Title: Colonial Broadcasting in Mozambique: a Paternalistic Approach to Local Languages and Culture

Session Type: Panel Submission

Authors:

Name: Nelson Ribeiro

Email: nelson.ribeiro(at) ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Abstract: Contrary to other colonies of the Portuguese Empire, in Mozambique a large-sized broadcaster emerged as early as the 1930s with the ambition of achieving good coverage of the whole colony. Founded in Lourenço Marques (today Maputo) in 1932, Radio Club of Mozambique (RCM) was the result of the colonial elite's desire to demonstrate that modernization did not take place only in Europe but also in the colonial territories. The entrepreneurs who led the project were very successful from the beginning and soon the colonial state authorities endorsed the station, granting it several tax exemptions and awarding it the radio license that was to be paid by all those who owned radio sets.

Until the late 1950s, RCM broadcast in Portuguese with the exception of live music performances in local languages. In regular programming the native languages were totally absent as these were considered inappropriate for the dissemination of news and culture. Departing from this context, in this paper we aim to discuss how the language policy followed by RCM helped to maintain the cultural apartheid that existed between the settlers and the native populations in Mozambique. The first programme broadcast in a non-European language was "Hora Nativa" (Native Hour) that premiered in 1957 in Ronga, the most spoken language in the south of Mozambique. Presented by African announcers, the aims of "Hora Nativa" were twofold: to integrate the native populations in the spirit of the Empire, and to provide basic information and educational content to those who did not speak Portuguese. The programme adopted a paternalistic treatment towards its audience, whose cultural heritage was frequently presented as primary. Listeners were also told about how they could become "more civilized" by incorporating Portuguese habits and culture.

The paper is based on archival research conducted in Mozambique and also on the analysis of texts printed in the official magazine of RCM, in which scripts and schedules of "Hora Nativa" have been printed.

Title: [Panel] Memories of/and Authoritarianism, Panel description

Session Type: Panel Submission

Authors:

Name: Barbie Zelizer

Email: barbie.zelizer(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: At a point in time when creeping authoritarianism is penetrating even the most settled democracies, it is time to look back and reflect on how a past experience with autocratic rule lives on in current mediated engagement. This panel, chaired by Silvio Waisbord, considers the afterlife of an authoritarian past across a spectrum of geographic locations— Europe; the Southern Cone of South America; Hong Kong and China; Afghanistan; Spain; and the US—and the media through which such an afterlife helps shape not only the past but also the present. The panel begins with N.R., who focuses on the features of an entrenched fascism that foregrounded interwar fascism and that are recurring today in multiple instances of contemporary populism. It continues with E.J., who considers the ways in which sexual abuse was used as a tool of torture in the authoritarian regimes of South America's Southern Cone and then as a crime against humanity, generating a paradox between the publicity surrounding such abuse and the rights to privacy of its victims. F. L. examines social media's balkanization of the collective memories of the 1989 Tiananmen Square crackdown by Hong Kong people, with both the government and radical social movements challenging Tiananmen commemoration as an important political ritual for Hong Kong's pro-democracy movement. E. E. addresses the worsening turn to authoritarianism in the ongoing war in Afghanistan, where proximity between the journalistic and political fields generates euphemistic framing that borrows from the Cold War and disconnects the war from its growing refugee population. A. M. considers how the war on memory about the Franco dictatorship has been fought via documentaries and TV programs, unearthing long-silenced historical traumas. B. Z. concludes the panel by addressing the ways in which an embedded Cold War mindset shapes US journalistic engagement with the Trump administration and obstructs a fuller recognition of the administration's authoritarian contours. Together, these presentations demonstrate how memories of/and authoritarianism both fuel a localized understanding of current conditions as well as travel in untoward ways across space and time. They suggest that looking to memory is a critically useful though insufficiently examined tool for identifying and arresting the creep and re-entrenchment of authoritarianism.

Title: Memories of Authoritarianism: 'Eternal Fascism' and Contemporary Populisms

Session Type: Panel Submission

Authors:

Name: Nelson Ribeiro

Email: nelson.ribeiro(at) ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Abstract: Scholars attempting to make sense of the rise of contemporary populist leaders have noted that these resort to communication techniques that resemble the rhetoric of the European dictators of the 1920s and 1930s. Despite assuming different characteristics in different world regions, contemporary populisms do share common features, namely a xenophobic attitude against migrants, criticism of the elites and the galvanization of political supporters through a discourse of “us” versus “them”. All these elements resonate the political climate that existed in European fascist regimes in the interwar period, opening the debate on the similarities and differences between the contemporary political landscape and the emergence of fascism in Europe. While some scholars, such as Jason Stanley, have described what is happening in countries such as Hungary, Poland and the United States as “a rapid normalization of fascism” that makes “us able to tolerate what once was intolerable” (2018: 190), others, such as Frederico Finchelstein (2018) have considered this to be an overreaction and do believe that contemporary populism will not bring an end to democratic institutions. Building on this discussion, this paper discusses how some of the archetypal elements of what Umberto Eco defined as “eternal fascism” are present in today’s populist movements. A particular focus will be given to four features central to interwar authoritarian regimes and that are at the core of populism: i) leaders who speak in the name of the people; ii) leaders who aim to control the media and to speak directly to the “people”; iii) leaders who resort to an “us” versus “them” discourse that promotes fear against all those who are different; iv) leaders who present an idealised version of history. It will be argued that an informed discussion on the memory of fascism and its legacy might allow for a better understanding of contemporary populisms and how these movements resort to communication techniques that were central to the propaganda that marked the interwar period.

Title: Social Media, Memory Balkanization and Polarized Attitude Toward the Past: The Case of Remembering Tiananmen in Hong Kong

Session Type: Panel Submission

Authors:

Name: Francis Lee

Email: nelson.ribeiro(at) ucp.pt

Country: HK (Hong Kong)

Affiliation: Chinese University of Hong Kong

Abstract: This presentation examines the characteristics, dynamics, and consequence of memory balkanization in social media in the case of collective remembering of the 1989 Tiananmen crackdown by Hong Kong people. For three decades, Hong Kong people have continually commemorated the military crackdown of the 1989 student movement in Beijing. In fact, Tiananmen commemoration can be regarded as one of the most important political rituals of the pro-democracy movement in Hong Kong. However, in association with the evolution of the pro-democracy movement, collective remembering of Tiananmen has faced new challenges from both the pro-government forces and the radical social movements in the most recent years. The presentation draws upon data from a content and textual analysis of purposively selected Facebook pages to illustrate how social media facilitated the trend toward memory balkanization as online sites were established to proffer distinctive views on the Tiananmen crackdown and its commemoration. It is argued that the characteristics of social media communication have facilitated a process of normative disinhibition such that Tiananmen commemoration is nowadays criticized with arguments and themes that would have been regarded as morally transgressive in the mainstream public arena. The presentation also draws upon survey evidence to illustrate the increasing polarization of Hong Kong people's attitudes toward the issue of Tiananmen, which may be partly attributed to memory balkanization in the digital arena.

Title: War, Refugees and Decontextualization

Session Type: Panel Submission

Authors:

Name: Elisabeth Eide

Email: elisabe(at) oslomet.no

Country: NO (Norway)

Affiliation: Oslo Metropolitan University

Abstract: Since late 1979 and the Soviet invasion, Afghanistan has been in a constant situation of war. The first decade saw the anti-occupation forces – the Mujahedeen – fighting the Soviets, and, helped by U.S. interference, this became the final battle of the cold war. After a decade of in-fighting in the 1990s, 9-11 happened, and “Operation Enduring Freedom” launched the search for bin Laden and his associates. After some years of optimism after the fall of Taliban, the situation has worsened. This contribution analyzes some prominent media examples demonstrating authoritarianism in a euphemist guise (“Enduring Freedom”, “Liberation of women”, “Humanitarian Intervention”), discussing how this Cold War rhetoric has worked in Afghanistan. Given the closeness between the journalistic and the political field in a nation at war, it considers how distinctions between “here” and “there,” “us” and them” help explain why Afghans constitute one of the larger groups of refugees to Norway and the rest of Europe but also the one with meagre chances of obtaining asylum. The paper argues that Cold War rhetoric helps make strict authoritarian asylum policies more edible by decontextualizing the refugees from their background life and experiences.

Title: Buried Memories, or the Truth of Graves

Session Type: Panel Submission

Authors:

Name: Antonio Monegal

Email: antonio.monegal(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: Federico García Lorca wrote in his unfinished play *El público* (The Audience) that the goal of the theatre must be to unveil “the truth of graves”. Today, his unmarked grave lies in an as-yet-unidentified spot near where he was murdered. The memory wars of the 21st century in Spain, on how to deal with the legacy of the Civil War and the Franco dictatorship have been fought not in the theatre but largely in the media, with investigative journalists and TV documentaries literally unearthing long-silenced historical traumas. The public conversation about the mass graves of victims of Franco’s repression was triggered by a civic movement, which led to the founding in 2000 of the Association for the Recovery of Historical Memory, and by its resonance in the media. The contrast between the more than 2,500 unopened mass graves, with probably around 140,000 buried, and Franco’s resting place at the Valle de los Caídos (Valley of the Fallen, a memorial and mausoleum built with prisoner-of-war labor that also houses the remains of 33,872 military dead from both sides of the war) illustrates Spain’s inability to come to terms with its authoritarian past. Twelve years after the passing of the Law for the Recovery of Historical Memory, a belated and timid effort to achieve reparation for the victims and eliminate the many remaining symbols of the dictatorship, Franco’s body is still in his monumental grave and journalists are reporting on the judicial battle between the government that is trying to have him removed and the Franco family that is fighting the exhumation. The paper examines the interaction between social activism and media representation: the process by which the past becomes news can function as a form of political intervention in the shaping of collective memory.

Title: When Authoritarianism Comes to Stay

Session Type: Panel Submission

Authors:

Name: Barbie Zelizer

Email: barbie.zelizer(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: This presentation addresses the ways in which an embedded Cold War mindset shapes US journalistic engagement with the Trump administration and obstructs a fuller recognition of the administration's authoritarian contours. Arguing that authoritarianism has long been positioned in the US as the "other" side of Cold War enmity, where it was associated with Russia and other autocratic regimes, the presentation considers how that mindset—involving dichotomous thinking, orientation to deference and repair to news from nowhere—shapes US journalistic engagement with the Trump administration and obstructs a fuller recognition of the administration's authoritarian contours.

Abstract: El siglo XXI está siendo testigo de una militarización de la información sin precedentes gracias al desarrollo y consolidación de nuevas y poderosas tecnologías que simplifican extraordinariamente la manipulación y la fabricación de contenidos. Entre dichas tecnologías destacan las Redes Sociales y las plataformas de mensajería instantánea que se han convertido en un magnífico amplificador de falsedades generadas tanto por los gobiernos como por el sector empresarial y la propia ciudadanía. Sin embargo, a pesar de la escala que el fenómeno de la desinformación ha alcanzado en la actualidad, las mentiras en el mundo de la información han existido desde siempre. De hecho, la historia de las guerras de desinformación se remota a la antigua Roma y durante muchos siglos la difusión de noticias falsas, medias verdades o el recurso a la manipulación informativa ha representado un arma de políticos, empresarios y otros actores sociales. Su utilización era funcional a la obtención de un objetivo. En la Historia se cuentan muchos casos de mentiras y falsos informativos. No obstante, es cierto que en la actualidad la inmediatez periodística, la rápida difusión y la facilidad de uso de las redes sociales han contribuido a la proliferación de estas falsedades informativas. Para poder comprender la relevancia de este fenómeno es necesario entender su contexto histórico. Con ese objetivo se plantea un panel especializado titulado “Historia de la Desinformación. Manipulación y propaganda en los medios de comunicación” que tendría lugar durante el transcurso del Congreso de la International Association for Media and Communication Research (IAMCR) en Madrid (España), durante los días del 7 al 11 de julio de 2019. Dicho panel contaría con la participación de un elenco de destacados especialistas en Comunicación, tanto desde su perspectiva histórica como desde el punto de vista del panorama internacional actual.

Moderador: Angel Luis Rubio Moraga, Vicedecano de Estudios y Calidad de la Facultad de Ciencias de la Información de la Universidad Complutense de Madrid (alrubio(at) ucm.es).

Title: Memoria, historia y mentira: las narrativas mediáticas de las elecciones de 2018 en Brasil

Session Type: Panel Submission

Authors:

Name: Ana Regina Rêgo

Email: anareginarego(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal do Piauí

Name: Marialva Barbosa

Email: anareginarego+marialva(at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal do Piauí

Abstract: Cuando tratamos la pos-verdad como un constructo histórico es válido recordar que Burke (2018), a diferencia de D'Ancona (2018), advierte que la mentira, tanto como la verdad, participa del poder desde su génesis. Sin embargo, el Oxford Diccionarios conceptualiza la pos-verdad como "[...] circunstancias en que los hechos objetivos son menos influyentes en formar la opinión pública que los llamados a la emoción ya la creencia personal" (Oxford Diccionarios apud D'ANCONA, 2018, p.20). Las fake News, consideradas hermanas de la pos-verdad, están íntimamente relacionadas al proceso ya la institución periodística. La trayectoria y potenciación de las falsas noticias, así como de la pos-verdad, también se encuentra interconectada a contextos favorables relacionados al proceso tecnológico y, en la actualidad, a los contextos políticos de revitalización de las fuerzas conservadores. La implosión de la política de verdad y del pacto social en torno a ella, se manifiesta en un contexto en el que la hipérbola verdadera anunciada por Donald Trump (1988) gana gran proyección y aceptación en el seno de la sociedad, pues lo que importa no es la verdad, ni tampoco los hechos, sino el impacto. En contra, es verdad, que la mentira es algo inherente al juego político desde su génesis, así como, la manipulación de las mentes no críticas que se dejan llevar por los juegos de seducción. Sin embargo, mentiras y manipulaciones que parten de políticos y partidos difieren de las supuestas construcciones que se colocan como post-verdad. "La novedad no es la deshonestidad de lo político, sino la respuesta del público a eso. La indignación da lugar a la indiferencia y, finalmente, a la connivencia. La mentira es considerada regla, y no excepción, incluso en democracias [...]" (D'ANCONA, 2018, pág. 34). En el centro del proceso encontramos el desentendimiento que hace aflorar las disputas (RANCIÈRE, 2018). Así, considerando la historia y la memoria como construcciones del presente, cuyas narrativas se ramifican en espacios de experiencias y horizontes de expectativas (KOSELLECK, 2015) y que, a los contextos de desinformación en el ambiente brasileño, se suceden lo que Hartog (2015) inspirado en Arendt (2014) denomina de brecha en el tiempo, o sea, momentos de suspensión de la historia en que el orden del tiempo se sumerge en un túnel oscuro en el que no se vislumbra luz, ni salida (Furet apud Hartog, 2015), o, como nos dice Arendt (2014), en que, una herencia sin testamento, sin tradición, sin continuidad consciente en el tiempo, nos es repasada; es que tenemos la intención de observar en las narrativas consideradas fake News en la elección presidencial de 2018 en Brasil, como una economía de la atención construyó y destruyó reputaciones teniendo como base mentiras potencializadas. Por lo tanto, trabajaremos con la hermenéutica de la

conciencia histórica de Ricoeur (2010) en que tradición y memoria nos auxilian en la interpretación / comprensión de las narrativas a partir de la reflexión de la experiencia temporal dentro del círculo hermenéutico.

Title: Periodismo profesional Vs. Manipulación y desinformación

Session Type: Panel Submission

Authors:

Name: María Susana González Reyna

Email: sgreyna44(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad Nacional Autónoma de México

Abstract: El propósito de esta ponencia es reflexionar en torno a tres cambios, entre otros más, que internet ha provocado en el ejercicio periodístico. Sus ventajas y desventajas, así como una propuesta para la enseñanza universitaria a los profesionales del periodismo.

Sabemos que el impacto del desarrollo tecnológico en el ejercicio periodístico no es nuevo. Sin embargo, la aparición del internet marca el fin de una época en el ejercicio del periodismo, y el inicio de nuevas prácticas periodísticas ante nuevos retos. Estos tres cambios en la información periodística son:

Uno, la construcción interesada (manipulación) del discurso periodístico: interés empresarial hoy llamado “modelo de negocio”.

Dos, la construcción precipitada de la información ante la presión de los tiempos sociales, políticos y económicos y que, en ocasiones, resulta en desinformación.

Tres, la coexistencia del ejercicio periodístico con las redes sociales, fuentes espontáneas de información no necesariamente verídica (noticias falsas).

Title: Covering the elections of 1975 in a revolutionary context. Journalistic procedures and the temptations of the propaganda framework

Session Type: Panel Submission

Authors:

Name: Helena Lima

Email: hllima(at) letras.up.pt

Country: PT (Portugal)

Affiliation: University of Porto

Abstract: The Portuguese Revolution of April 1974, carried out by the Military Armed Forces (MFA), ended 48 years of dictatorship. The MFA's manifesto, among other main goals, proposed the transition to a democratic regime, the end of the colonial war and a free press. Newspapers, radio and television were understood as a key element in the process to democracy. In fact, the coup was announced by radio, the medium chosen by the rebel military to communicate their goals to the Portuguese, but also to articulate the several steps of the Movement by a series of passwords that were broadcasted and served as signals for their strategic operations (Reis, Lima, 2014). The transition to democracy, however, was not achieved without a radicalization of the political struggle. In the following year, military, political organizations and society in general developed a confrontational process. The MFA took a turn and chose the "revolutionary path", supported by radical left-wing organizations. Portugal entered a period of great instability, namely with the PREC (Revolutionary Process in Progress). after March 11, 1975, major companies, banking and insurance were nationalized, thus opening "the path to socialism" (Rezola, 2006). For newspapers, one of the consequences of the March coup was becoming partial or totally owned by the state, which helped in the process of political influence. The media were part of the revolutionary turn either by the political struggle that overcame newsrooms, either by the several forms of editorial control (Mesquita, 1996, Lima, 2015). In spite of the revolutionary wave, as initially promised, the first democratic elections took place on April 25, 1975. For the first time in almost a half century, the press had the opportunity to cover the suffrage with no restraints. However, newspapers and other media were affected by the struggle for control of the news, namely, radical revolutionary stands. This study focus on the hypothesis of the contamination of the news by revolutionary discourse and propaganda in the coverage of the electoral campaign. Methodology will rely on the analysis of editorial strategies carried out by the press. This approach will take into consideration journalistic procedures, news sources and discourse framework. Being an ongoing project, it is possible to present some findings resulting from the analysis of several daily papers and also the most important weekly publication, Expresso.

Title: Desinformación y periodísticas en las transiciones políticas: la irrupción del semanario Interviú en el mercado editorial español (1976-1982)

Session Type: Panel Submission

Authors:

Name: Francesc Salgado de Dios

Email: francesc.salgado(at) upf.edu

Country: ES (Spain)

Affiliation: Universidad Pompeu Fabra

Abstract: Las transiciones políticas y en general las crisis o grandes transformaciones en el panorama sociopolítico suelen propiciar emergencias informativas, alteraciones en los mercados editoriales, situaciones de volatilidad empresarial e inseguridad jurídica en diferentes ámbitos, pero de forma muy acusada en el de la información. Por ello resulta especialmente interesante el estudio de determinados fenómenos disruptivos que afectaron al periodismo y que supusieron un cambio en el paradigma informativo de un determinado mercado. Esta es la situación del semanario Interviú (1976-2108), aparecido en mayo de 1976 en plena Transición española y que en apenas seis meses alcanzó cotas históricas de difusión para convertirse en poco tiempo en un fenómeno editorial que transformó el sector de la prensa no diaria de información general, del que se convirtió en un paradigma.

Interviú ofreció desde su aparición una reformulación de los planteamientos informativos y comerciales de los tabloides sensacionalistas europeos, basado en no-ticias sensacionalistas, a las que añadió una docena semanal de columnas de opinión y un extenso reportaje fotográfico del desnudo de una mujer tan famosa como fuera posible. De estas tres apuestas, analizamos la serie de reportajes informativos que aparecían en sus páginas, en general de un llamativo alcance político y una fuerte repercusión social, una práctica periodística que situó a la revista en una tensión permanente por conseguir el impacto y la exclusiva informativa, una situación que se presume de riesgo y que derivó en determinados momentos, como mínimo, hacia la desinformación.

Si hubiera que arbitrar una hipótesis, diríamos que es posible encontrar en el planteamiento inicial de Interviú trazos de algunas disfunciones que hoy percibimos en nuestro entorno periodístico. Ya sea la presencia en sus páginas de fake news (no-ticias falsas) o false news (noticias falseadas), es decir informaciones erróneas fruto de la desinformación, la desidia o el error, por un lado, o incluso de la voluntad premeditada de engañar, por otro. También se podría localizar la negación expresa de una “realidad objetiva” a través de la apelación a los sentimientos y las emociones, una “realidad sentida”, el fenómeno que en los últimos años se ha llamado ‘posverdad’.

Para determinar si estas disfunciones informativas se pueden encontrar en las páginas de Interviú, se ha realizado una catalogación de las piezas informativas de mayor resonancia durante el periodo de estudio, los siete años que van entre la aparición de la revista y el momento de su consolidación para determinar el papel de la falsedad y las informaciones erróneas en la lucha por alcanzar el impacto informativo. Después se han analizado con TAC el trabajo más determinante de cada mes. Las conclusiones permiten advertir sobre algunas condiciones y características de la desinformación en esos momentos que podrían extenderse incluso a la actualidad.

Title: Spokesperson or Chief Propagandist ' The long tradition of political counter-fires by German governments' spokesperson (1918-2018)

Session Type: Individual submission

Authors:

Name: Nicolas HUBE

Email: nicolas.hube(at) univ-paris1.fr

Country: FR (France)

Affiliation: Université Paris 1 Panthéon-Sorbonne

Abstract: The emergence of the political spokesperson is contemporary with the transition to democracy in Germany, and the arrival of the masses in the political game in the twentieth-century. During this century, Germany has gone through several periods of unrest (including revolutionary) and institutional changes. Over this long period, the Reichsministerium für Volksaufklärung und Propaganda conducted by Joseph Goebbels from 1933 to 1945, by its exceptional nature and by the industrialization of its propaganda work seems to overshadow any analysis of continuities of the activities of propaganda, i.e. public relations, produced by the government over the period. It overshadow the existence of the Vereinigte Presseabteilung der Reichsregierung (Unified Press Service of the Reich Government) set up in 1919 and the Bundespresseamt (Federal Press Service - BPA) set up in 1949. The three regimes are obviously in no way comparable in their representations of the world and political practices. But from the point of view of their relations with the media and of their perception of the public general attitude toward their regime, one can only be struck by the politico-administrative continuity of the structures and a part of the actors who occupy these functions from one regime to another.

Following a sociological and historical institutionalism (especially the path-dependent institutional logics) perspective, this paper aims to stress the institutionalization and the organizational continuities of this spokesperson's service. This service is dedicated to the defense of a specific political project. From the Weimar Republic to the beginnings of the Federal Republic, the challenges are (all else being equal) the same : fight contra-propaganda opposed to the regime in place. The paper will come back over actor's rationales in creating this administration. The distinction from propaganda to public relations in the 1950's is the result of a strategic naming more than a fundamental distinction.

The actors engaged in the press-politics relations have managed to seize the organization of a dedicated political service and made it an instrument of government. This institution is, therefore, less in the service of a man or a woman than an administration dedicated to the legitimization of the political work of the government and, more generally after War, of the parliamentarism. In addition, it can be hypothesized that, in this respect, Goebbels' ministry owes a great deal to the organizational permanence of the state apparatus. Finally, looking at the profiles of the job holders over the time, the paper will show the professionalization and the changes in the profiles of job holders, notwithstanding this persistence of services.

This paper is based on the study of the archives of the Bundespresseamt 1949–1985, the Vereinigte Presseabteilung der Reichsregierung 1918–1933, of the Bundespressekonferenz (Berlin) 1949–1985, of the Verein der ausländischen Presse 1970–1975, and an analysis of the administrative documents (organisation plans) filed in the documentation department of the Bundespresseamt. It is

also based of a prosopography of the spokespersons from the Weimar Republic towards the Federal Republic.

Title: La incorporación de la mujer en la prensa durante las transiciones políticas. El caso de Montserrat Roig y otras tres profesionales en el semanario español Triunfo (1972-1978)

Session Type: Individual submission

Authors:

Name: Francesc Salgado de Dios

Email: francesc.salgado(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra (Barcelona)

Abstract: El artículo desgrana los detalles de la incorporación de las escritoras, intelectuales y periodistas en la redacción de un semanario que, partiendo de la información cinematográfica en 1946, se acabó convirtiendo en uno de los semanarios de referencia en la defensa de la democracia en España durante el tardofranquismo.

El texto estudia la incorporación de algunas mujeres jóvenes y/o recién licenciadas que encontraron un hueco puntual para publicar en las páginas de Triunfo a partir de 1972, en pleno tardofranquismo, cuando el semanario no contaba con ninguna redactora y escasísimas colaboradoras. Se ha seleccionado el grupo de mujeres según dos criterios: que fuera uno de sus primeros empleos y que al menos publicasen 25 trabajos en Triunfo durante el periodo de estudio. Fueron cuatro las mujeres que cumplen estas características, y todas ellas asumen diferentes papeles en el semanario, una diversidad que enriquece este estudio: Montserrat Roig (1946-1995) era por entonces ya una escritora conocida y se encargó de la redacción de noticias en su mayoría referidas a Catalunya. Julia Luzán (1948) se incorporó al trabajo diario en la redacción central, en Madrid. Nuria Pompeia - pseudónimo de Nuria Vilaplana (1931-2016) - publicó 93 viñetas gráficas y Pilar Aymerich (1943) ilustró con sus fotografías una cincuentena de reportajes. Las cuatro compartían ideas antifranquistas y feministas.

El texto investiga con las técnicas de análisis de contenido si los trabajos que firmaron estas nuevas incorporaciones introdujeron algún matiz informativo nuevo en la revista, y cómo se puede cuantificar y describir esa hipotética nueva mirada que estas periodistas e intelectuales jóvenes añadieron a una redacción compuesta exclusivamente por hombres hasta ese momento.

El artículo reconstruye el proceso de participación de estas mujeres en una de los semanarios más importantes del tardofranquismo y las pone en relación con las características de la incorporación profesional de las mujeres al periodismo, así como a otras profesiones en la España de finales del franquismo.

Title: Mediatization of the Poor: 1945-2015

Session Type: Individual submission

Authors:

Name: Anne MacLennan

Email: amaclenn(at) yorku.ca

Country: CA (Canada)

Affiliation: York University

Abstract: The images of the poor and disenfranchised in popular media or lack thereof, has resulted increasingly in an erasure of the poor. This examination of products of popular culture is based on a global sample that includes television, film and music. It will be contextualized with views of poverty as framed in the news media and popular culture (Iyengar 1990). The post-war media has moved further away from the depiction of society that includes the poor, except as so far removed from the larger population that their existence is erased.

The importance of definitions of poverty, as history demonstrates, is that how we understand the issue of poverty has far more influence on what we do about it than its depth and severity (Edelman, 1977). It is for this reason that the meaning of poverty is continually contested (Lister 2004). In contemporary Western societies, much of this contestation is playing out in and through media. Dominant narratives about “the poor” and poverty are reproduced daily in Western mainstream media and popular culture, consequently having an impact on the larger narrative of the poor. Simultaneously, activists are challenging and contesting dominant cultural narratives and political policy approaches to poverty in print, broadcast, film, and particularly through an array of digital media technologies. Research about poverty and media attention to poverty fluctuates with the impact of economic recessions and depressions, making it a new focus in the last decade. Financial crisis sparks focus on poverty, but the focus tends to be on its growth or change. Persistent poverty is the target of the dominant and lasting narratives found in popular culture and the news media. In the spring of 2015 the discussion of poverty coalesced around the lightning bolt of the larger discussion of the narrative. Social and news media were captured by the encyclical or more specifically the discussion of Pope Francis’s encyclical. Naomi Klein as an environmentalist and Jeffrey Sachs as an economist both supported Pope Francis’s encyclical as a rallying cry for environmental issues and this theme repeated through social media and the news. Pope Francis’s focus was incidentally the environment as he views the environment as inextricably linked to the fate of the poor and overconsumption of the rich. Despite the extensive use of Biblical passages to contextualize the problem of poverty as intertwined with the fate of the environment the message retained by the media is a secular and environmental one. The prevalent thinking about poverty, its causes and persistent were not set aside with this influential jab at the underpinnings of consumer society. This work will focus be based on a content analysis and critical discourse analysis of popular film, television, and music to demonstrate the underlying depiction and understanding of the poor as it changed in the decades following the Second World War.

Title: 'Green Lives Matter': Environmental Racism, Maggie Walker, and the Politics of Place

Session Type: Individual submission

Authors:

Name: Nicole Maurantonio

Email: nmaurant(at) richmond.edu

Country: US (United States)

Affiliation: University of Richmond

Abstract: On Saturday, July 15, 2017, before a joyous crowd of several hundred people, Richmond, Virginia Mayor Levar M. Stoney unveiled a statue of Maggie Lena Walker at the plaza at Broad and Adam Streets, the gateway to the historic neighborhood of Jackson Ward, once deemed the “Harlem of the South.” Dedicated on what would have been Walker’s 153rd birthday, the 10-foot bronze statue commemorating the first African American woman in the United States to found a bank held the distinction of being not only the city’s first singularly devoted to a woman but also the first statue in Richmond devoted to a woman of color.

The celebratory tone of the statue’s dedication, however, marked a sharp departure from the tone of the debates leading up to that day. While there was near universal agreement that a statue to Walker would be a welcome addition to the commemorative landscape of Richmond, a city best known for Monument Avenue, a residential thoroughfare marked by a series of imposing statues celebrating Confederate leaders, the placement of the Walker statue, however, inspired citywide controversy. For Walker’s contributions to the city and to Jackson Ward specifically, it was deemed that her statue be placed at the intersection of Broad and Adams streets and Brook Road in Downtown. While this initial proposal, too, was met with much enthusiasm, debate ensued when opposition emerged to the cutting down of a live oak tree located in the plaza where Walker’s statue was to be placed.

Analyzing the public debate surrounding whether to leave a live oak tree in the plaza with the statue of Walker or cut it down, this essay explores the controversy as a lens through which to examine contemporary debates surrounding race and racism in the United States. Public defenses of the live oak tree, this essay argues, co-opted the rhetoric of environmental justice to proffer discourses of colorblind racism. Deploying what Richmond Times-Dispatch columnist Michael Paul Williams called “green lives matter” discourse, the tree’s defenders offered a version of a “colorblind” world that failed to account for the ways in which race structures experiences. In so doing, the tree’s defenders, who also staunchly supported the dedication of a statue to the Richmond heroine Walker, claimed history as the moral high ground, attempting to de-politicize and, in so doing, de-racialize the debate, while recreating a variant of “all lives matter” discourse used to challenge the work of racial justice advocates.

Drawing from local and national news coverage of the debate, this essay applies the theoretical frameworks of environmental racism, colorblind racism, and space-place to analyze the selected texts. Using this case study, this paper discusses how controversies surrounding monument placement speak to broader issues of race, racism, and the politics of representation.

Title: News from Robben Island: A historical analysis of censorship during Nelson Mandela's incarceration

Session Type: Individual submission

Authors:

Name: Martha EVANs

Email: martha.evans(at) uct.ac.za

Country: ZA (South Africa)

Affiliation: Centre for Film and Media Studies, University of Cape TownUniversity of Cape Town

Abstract: Between 1963 and 1990, the apartheid government attempted to isolate Nelson Mandela and other political activists from the rest of the world. Not only did the state severely limit access to political prisoners in South Africa, it also imposed strict censorship laws on journalists, curtailing what they were able to reveal about political prisoners in their reports. At the same time, prisoners were denied access to news about current affairs, and their correspondence and visits were closely monitored and censored. The objective was to suppress resistance by removing liberation leaders from society.

During the 1960s and early 1970s, this mission was for the most part successful; news about Mandela and other important leaders reduced to a trickle in the wake of the controversial Rivonia Trial (Sampson 1999: 259), which had attracted the attention of the outside world. But the situation was soon complicated by an emerging tradition of human rights law (see Thompson 2016) as well as the rising prominence of the Anti-Apartheid Movement. Against the backdrop of the Cold War, apartheid South Africa was increasingly pressured to provide prison access to journalists and human rights organisations such as Amnesty International and the International Committee of the Red Cross. These resulted in some politically complex, sometimes staged, public relations visits, and a concurrent rise in news reporting about political prisoners.

Centering on the figure of Mandela, this paper examines material from apartheid state archives, the Mayibuye archive, various newspaper archives, the archives of the Red Cross, as well as relevant memoirs and biographies, to determine the nature of the censorship of political prisoners. The material reveals much about international relations and the double-edged effects of censorship during the Cold War. The paper argues that the state's attempt to censor the liberation movement ultimately backfired, and hunger for news about Robben Island increased. Instead of resulting in Mandela's invisibility, it boosted his mythologisation – so much so that by the time of his release, he was the world's most celebrated political prisoner.

Title: Present past: media, transition to democracy and collective memory in Portugal

Session Type: Individual submission

Authors:

Name: Maria Inácia Rezola

Email: irezola(at) escs.ipl.pt

Country: PT (Portugal)

Affiliation: School for Media and Communication (ESCS-IPL); Institute of Contemporary History (IHC-UNL)

Abstract: Although going through challenging times, the Portuguese celebrations of the 40th anniversary of the 25 of April 1974 (a coup d'état that overthrew the dictatorship that ruled the country for almost half a century) managed to convey the image of a country reconciled with its past. Recent surveys reveal that the long dictatorship (1926-1974) and the revolutionary crisis (1974-1975) are mainly perceived as historical events and it is very difficult to activate them politically.

To what extent were the media important or even responsible for this reconciliation with the past? Which is their role in historical knowledge and in the construction of collective memory? How is the past used in media? These are some of the questions this paper deals with, focusing on some key dates of the carnation revolution commemorations. We will explore these general issues through analysis (content analysis) of the presentation of historical accounts in four newspapers (one weekly and three daily newspapers), taking into account the different socio-political contexts in which the celebrations took place: 1984 (huge economic crises under a fragile coalition government), 1994 (one decade of political stability under conservative governments lead by Cavaco Silva), 2004 (strict economic reforms under Durão Barroso's government) and 2014 (huge financial crisis/ the European Union/IMF-led rescue plan, under a Social Democratic government).

The focus upon media's relationship with history is fairly recent (e.g. Zelizer 1998; Zelizer and Allan 2002; Cannadine 2004) and although over the last decades, Memory Studies have emerged powerfully in academic agenda, it is not common to discuss how history, memory and media have encountered. It is our goal to contribute to enriching the debate, bringing new perspectives to this research field namely in what concerns the constraints and opportunities brought by the boom in history in the media and the influence of news coverage of historical issues in the collective memory.

Title: The marginality of media and communication as an academic field of study in socialist Croatia

Session Type: Individual submission

Authors:

Name: Helena Popovic

Email: helena.popovic(at) fpzg.hr

Country: HR (Croatia)

Affiliation: University of Zagreb, Faculty of Political Science

Abstract: In the Socialist Republic of Croatia that formed a part of The Socialist Federative Republic of Yugoslavia (1945-1991), there was an absence of any systematic academic study of media and communication. In terms of media practices, after WWII the media were publicly owned, self-regulated and controlled by the Communist Party. The press, radio, and later television were given the function of instilling the socialist spirit into the masses while the main task of journalists was to inform the people of facts from the political domain and the activities needed to establish socialist society. Academic interest for media and communication emerged along with the institutionalization of journalism as a separate program at the University of Zagreb in 1971. It is at that time that a one-year course was introduced at the Faculty of Political Science in collaboration with the publishing house Vjesnik and Zagreb Radio Television. The program was intended for students enrolled in their last years of study or for graduates who had a degree in another field. The idea that the course was long overdue was voiced by Professor Davor Rodin who addressed those in attendance at the opening ceremony by saying: “We are opening the study of journalism at the University of Zagreb with a huge historical delay” (Politička misao, Editorial Information, 1971, 146-147). This paper focuses on this critical event and it asks: What were the reasons for this delay, as articulated by the main actors involved? Why was the study of journalism established at the Faculty of Political Science and how was the curriculum conceptualized? More extensively: what were different expectations placed on journalists as public workers in socialism and how did it correspond to the ideas developed within the academic community? In a broader theoretical context, it analyses the role of Marxism as a theoretical framework underpinning the political project of the State and its policies, that was, interestingly, marginal within the academic community interested in media and communications. Rather, positivist and functionalist theories were embraced, pushing ‘objectivity’ and ‘unbiased scientific approaches’ to the fore. In terms of methodology, the paper includes content analysis of editorials and articles published in the academic journal Political Thought (1964-) published by the Faculty of Political Science, University of Zagreb. Engaging with these questions and illuminating entanglements among different fields and actors, the aim of this paper is to shed light on the trajectories of the field in socialist Croatia.

Id: 22911

Title: Recovering Memory, Reporting History; Media's Role in How Basques Remember the Franco Dictatorship

Session Type: Individual submission

Authors:

Name: Eztizen Miranda

Email: eztizen.miranda(at) ehu.eus

Country: ES (Spain)

Affiliation: University of the Basque Country / Aranzadi Society of Sciences

Abstract: Since the turn of the 21st century (2000), working groups related to the recovery of memory such as the Association for the Recovery of Historical Memory and Aranzadi Society of Sciences have worked tirelessly throughout Spain and its autonomous communities to document the repressed history of the Franco dictatorship (1936-1978); the regime disappeared thousands with 110,000 still missing. Both the United Nations Working Group on Enforced or Involuntary Disappearances (2002) and the European Court of Human Rights (2009) have supported this work.

But the recovery of memory involves more than the discovery and exhumation of Franco's victims. News reports interpret the investigations of the recovery movements and will be critical to how Franco's dictatorship is remembered. Journalism is a powerful tool for advancing justice and human rights. Since today's news will be the sources of future historical accounts, the current interpretation of past events will influence political conflicts not only in the present but in the future. In fact, "given a selective and permanently shifting dialogue between the present and the past, we have come to recognise that our present will inevitably have an impact on what and how we remembered (...) At the same time, the strongly remembered past may turn into mythic memory" (Huysen, 1995:249-50).

In this paper, I report on a content analysis of a Basque newspapers' coverage of the findings of Aranzadi's exhumations in Basque country and news related to the recovery movements. This investigation takes the ethical stance that news media should promote civil society's needs over financial or narrow political interests (McQuail, 1992). I analyse news coverage of the exhumations and the recovery movements guided by two questions:

- 1) How do current political interests shape how news coverage of the past? In other words, does media coverage of the work to recover the memory of the Franco dictatorship reflect media outlets' interest in harnessing memory to promote their analyses of the current political context?
- 2) Finally, I ask an ethical question: how does Basque news coverage serve Aranzadi's human rights mission? More broadly, can journalism help civil society face the past as it tackles current political conflicts?

To conduct this content analysis, I selected a sample of news articles reporting on exhumations and the recovery movement from 2000 to 2012. The media outlet included in this study is called GARA resulting in a sample of 789 articles.

The analysis suggests that the political perspective of the newspaper shapes the journalistic definitions of the past. These political perspectives, then, shape interpretations of the past that correspond to the news organizations political sympathies in the present.

I conclude with lessons learned regarding the role of media in the creating of historical memory and advancing human rights.

Title: From veracity to social justice. The historical evolution of journalistic norms.

Session Type: Individual submission

Authors:

Name: Juergen Wilke

Email: juergen.wilke(at) uni-mainz.de

Country: DE (Germany)

Affiliation: Institut für Publizistik Johannes Gutenberg Universität Mainz

Abstract: When the printed newspaper came into being in the early modern age, a normative frame or regulative principles for its existence and content were still missing. These had yet to be developed. The paper describes with peculiar respect to Germany, but also with references to France and England, how this happened and tries to outline the origins of professional norms for journalism. The investigation is based on four sources:

(1) Titles of newspapers. Many of the titles of the forerunners of the periodical press indicated already that they wished to give true, credible and well-grounded information (“Wahrhafftige newe zeytung...”, “Discours véritable...”, “True and plaine report”). Different reasons were responsible for that: Readers should be attracted by this promise, whereas censorship could be by-passed.

(2) Legal norms. Such norms were codified by the press legislation, in Germany since the 1530s. Such norms included that nothing against the state and the church should be printed. Defamatory information had to be avoided and personal honor was to be respected. The order was given to protect public peace.

(3) Early literature on newspapers. In the 17th century several authors already dealt with the nature of the newspaper and its problems. In this literature first professional norms for writing newspapers can be discovered. Again truthfulness was required. Journalists were obliged to check the news and to separate true from fake news. Confirmation by different sources was set on the journalistic agenda. 1748 a brochure was published in Germany that can be identified as the first Code of practice.

(4) Personal testimonies and programmatic writings. The fourth source for early journalistic norms are announcements or prefaces of newspapers and personal testimonies. The most renowned German newspaper of the 18th century (“Hamburgischer Unpartheyischer Correspondent”) declared objectivity and impartiality as central norms. New social norms emerged in the course of the enlightenment. Journalists were moved to work for more public knowledge, to expand transparency and to serve justice in society.

To investigate the origins of journalistic norms, on the background of the level of development of the press, is of peculiar interest in times like nowadays when new media emerge and the question raises if new journalistic norms are becoming necessary. So the historical question includes an actual reference.

Title: Historical representation of minorities in digital games

Session Type: Individual submission

Authors:

Name: Carla Ganito

Email: carla.ganito(at) fch.lisboa.ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Name: Catia Ferreira

Email: catia.ferreira(at) fch.lisboa.ucp.pt

Country: PT (Portugal)

Affiliation: Universidade Católica Portuguesa

Abstract: There is a growing interest for the study of how games represent and portrait historical events and characters. Digital games are one of the digital media that has most attracted the attention of users worldwide. In 2018 there were over 2 billion frequent gamers all over the world (Newzoo, 2018). Digital games industry is becoming more and more complex, every year different titles are launched from different genres of games and taking advantage of different narrative strategies and technological solutions, but there is something digital games have in common, they are cultural environments (Salen and Zimmerman, 2003). Some of the most significant video game releases have historical themes ou historical sites, such as “Civilization”, “Mafia III”, or “Assassin’s Creed”.

We would like to argue that as cultural environments games are prone media to consolidate ‘grand narratives’ (Lyotard, 1984), but as we have been witnessing in other media, some narrative tropes do not illustrate the diversity of cultural perspectives of contemporaneous social life, such the ones associated with gender (Cassell & Jenkins, 2000; Ferreira & Ganito, 2015), and race and ethnicity (Namakura, Kolko & Rodman, 2000; Namakura, 2002; Galloway, 2012).

The lack of ethnical diversity in such a diverse industry is considered an important trend to analyse, and it has been even covered by the media in the latest years. Despite the effort that some game developers have been making to offer games with non-western main characters and perspectives, these alternative perspectives have tended to be mainly explored by serious games genre - games that take advantage of games potential to communicate serious narratives, such as hunger, poverty, and minority rights.

We would like to argue that in order to fully acknowledge the potential of digital games as representation systems, in particular for representing minorities it is important to understand: (1) how ethnicity as been being present in games since the 70’s, (2) how the representation strategies in games are aligned with the ones present in other forms of media, particularly in the film industry, and (3) the role that the biggest game developers are having for presenting alternative ethnical perspectives to a wider audience.

In order to accomplish these goals and following a qualitative methodology, the paper will present a historical perspective of ethnicity in games, followed by a detailed analysis of a particular case, the franchise Assassin's Creed. Despite being a fictional universe, Assassin's Creed pays attention to different historical details, in its exploration of different historical times and places, it ends up

remediating not only history in itself but how social markers have been negotiated over the centuries.

Title: 'C-Section' of African beauty: The story of how an advertisement infringed on African dignity

Session Type: Individual submission

Authors:

Name: Wanjiru Mbure

Email: wmbure(at) stonehill.edu

Country: US (United States)

Affiliation: Stonehill College Department of Communication Stonehill College

Abstract: On March 30, 1965, history was made when the Kenyan parliament proposed the first-ever legal framework for the regulation of cosmetics. J. M. Kariuki, MP for Nyandarua North declared that of all the sections of the Bill, the “C-cosmetics section” was the most important because it would offer guidance to “many of our girls [who] go to the shops and buy some stuff to make them brown.” Another MP declared that the bill would allow the government to “safeguard the beauty and the dignity of the people of the country.” However, by the early 1970s, increased access and popularity of magazines and cinema created a booming advertising presence for cosmetic manufacturers. This occurred in the absence of restrictions to dangerous cosmetics, and this increased exposure threatened to undermine the prosocial goals previously articulated by legislators.

On March 2, 1971, Assistant Minister for Information and Broadcasting, Mr. Makone, issued a stern warning in parliament “to foreign and even local manufacturers who use the cinema screens to embark or attempt to discredit the African colour against the other colours.” The offending advertisement used the Swahili tagline “Kuwa Mwafrika wa Kisasa” or become a Modern African. Makone, however, offered a variant translation of the tagline, “it means to apply the cosmetics of Ambi.” The advertisement, another MP claimed, was guilty of “being derogatory and an abuse to the dignity of Africans.” Ambi was a heavy advertiser not only in cinema screens but in the legendary magazine *Drum*. The Ambi brand was most recently acquired by beauty giant L’Oréal in 2017. Makone went on, “If this is what these foreign manufacturers are showing our people...I call upon the Government to make it very clear that our colour is black and we are proud of it. Therefore, there should be no person who tries to show that one must be Mwafrika wa kisasa (a modern African) by becoming light skinned.” To which rapturous MPs replied: “Ban them! Ban it!”

This essay uses primary sources and print media coverage from 1965-1975 to examine the people and events that led to a critical moment in advertising history in Kenya - the national sanction of all Ambi advertising. The ban was preceded by a vibrant parliamentary debate on the specific transgressions of the campaign. The debate concluded that the advertising infringed on the dignity of the African. The essay also examines how Ambi advertising rebranded relying on familiar tropes of globalized beauty ideals. A key argument in this paper is that the colonial and post-colonial goals of Kenyan media are largely immune to the charged demands by nationalists’ goals in the post-independence period. This essay aligns with the conference theme in its focus on the connection between dignity and representation and in its interrogation of the viability of media regulatory efforts when shifting political priorities and national identities collide.

Abstract: El presente trabajo analiza la presencia del documental deportivo en la programación de los dos canales de Televisión Española desde 1958, fecha de los primeros registros de la programación de la televisión en España gracias a la revista Tele-Diario (posteriormente Tele-Radio), a 1975 con el final del franquismo. El objetivo de este análisis es determinar los rasgos de la programación documental deportiva en televisión para establecer las intenciones y el sentido de estos contenidos por parte de un medio estatal en un contexto específico -la dictadura franquista- que en un primer momento no prestaría mucha atención a la televisión, y menos al género documental, ya que disponían de producción propia gracias al No-Do.

Este propósito se encuadra en el hecho de que los contenidos documentales se sitúan como uno de los géneros que pueden convertir a la televisión en un medio cultural, algo de gran importancia para una televisión que prometía cumplir con las funciones educativas, informativas y de entretenimiento. Esto, trasladado a la temática deportiva, llevará a aunar, especialmente, los aspectos informativos y de entretenimiento.

Por otro lado, la programación marca la seña de identidad de una cadena, al exponer las preferencias de los directivos del canal a través de su programación y su ubicación en la parrilla. Para ello se analiza, por un lado, lo que supuso el documental deportivo en cifras dentro del género. A través del análisis de las parrillas se estudia la posición que ocupan estos programas: franjas horarias, duración, día de la semana, programas que preceden y suceden a estos contenidos, para dibujar el panorama del documental deportivo en los primeros años de la televisión en España e identificar la importancia de estos entre los demás productos. En este sentido, sería una de las temáticas con menor representación (solo se encuentran cincuenta y tres emisiones, lo que la convierte en una de las cuatro menos programadas en Televisión Española, junto a gastronomía, religión y medicina). Aunque contará con dos títulos en formato serie, ambos de producción nacional, que supondrían treinta y una de esas emisiones.

Además, se analizan los contenidos documentales mediante el visionado. Entre los documentales se abordan de manera general el mundo de los deportes a través de los contenidos dedicados a las

Olimpiadas –una de las series y una película–. El resto de las emisiones hablarán de un deporte en concreto, donde destaca el fútbol, con una serie propia.

De esta forma se pretende entender las intenciones de Televisión Española con dicho género y temática, y el uso del documental deportivo dentro de las parrillas televisivas; si gozaban de un espacio propio y privilegiado o, por el contrario, eran contenidos de segundo rango, que únicamente servían para cubrir huecos y ajustar horarios.

Abstract: Purpose: This paper aims to explore the framing of Muslim immigrants in the right-wing U.S. media outlets. Media play a critical role in setting agenda about different issues. The current U.S. administration banned the entry of citizens of seven Muslim countries to the U.S. in early 2018. The U.S. government had said that it considered citizens of these countries a security threat for the U.S. Several newspaper reports noted that the current U.S. president is influenced by the right-wing media outlets such as Fox News. It is imperative to understand how those media outlets frame Muslim immigrants in their news stories. This paper offers an important insight into the media coverage of Muslim immigrants that has been understudied by academic scholars.

Methodology: Using framing analysis as a method, the author analyzed 27 stories published in the following elite U.S. media organizations about Muslim immigrants from January 2017 to December 2018: Brietbart News, and Fox News. As recommended by framing analysis scholars, the stories were analyzed for positioning of the information, syntax, words and phrases used, sources of the information, and priming.

Findings: The findings show that the U.S. right wing media sent out message about CPEC that were consistent with the U.S. government's rhetoric about Muslim immigrants. The U.S. media framed the immigrants as: 1) A security threat; 2) People whose culture conflicted with the U.S. culture; 3) Bad neighbors; 4) People who wanted to impose Sharia in the U.S.

Practical Implications: This paper offers an important insight into how the Western (U.S.) media and in turn the current U.S. government look at the Muslim immigrants. The author offers suggestions for improving the right-wing media coverage of Muslim immigrants.

Title: Loyalist or Terrorist': Analyzing Netflix Original Movies Portraying Adversaries and Protagonists from Islamic Countries

Session Type: Individual submission

Authors:

Name: Abhijit Sen

Email: abzen2018(at) gmail.com

Country: US (United States)

Affiliation: Winston-Salem State University

Abstract: NETFLIX streams movies and TV series to the subscribers. NETFLIX, a multi-billion dollar company, also finances and produces original content for streaming to the audiences. Audiences today are now most likely sitting in front of a smart TV or a computer screen watching streaming 'long-form' TV shows. NETFLIX specializes in 'long-form' TV format – multi-episode, multi-season dramas which are now staple of online video streaming, the most popular form of programming today. NETFLIX movies and video series are produced and made not just in the U.S. but also in various countries, in different languages and by unknown directors. This paper will analyze and critically look at the portrayal of adversaries and protagonists in NETFLIX original content, specifically of characters and narratives from Islamic countries and cultures. The movies and TV series selected for analysis are Bodyguard, Nobel, Warrior, The Punisher and Sandcastle. Most of them have been produced and made in a non-U.S. country. The paper will be based on the media representation and stereotyping theory, and to some extent on Herman and Chomsky's propaganda model. The methodology used will be critical-historical analysis as normally used for film criticism.

NETFLIX, not being one of the major Hollywood studios, could be deemed to be relatively free of governmental influences. Historically, Hollywood has been known to churn out effective and entertaining PR and propaganda content for the government beginning with Wings (1927), an Oscar award winner for best picture. Hollywood got the military hardware and personnel to run the equipment in exchange for ceding creative control to the defense department. In return for their cooperation, the producers got the military's support and resources, in other words the armed forces were shown in a good light while the opponents were featured in a negative manner. Consequently, my assumption is that the movie actors and players representing foreign countries and cultures would be depicted in a fair, balanced and artistically appropriate manner in NETFLIX original movies and TV series than in a Hollywood produced content. This study would facilitate comparison of characters in various roles in films and TV series produced by different content creators.

Title: Social media and the image of Muslims in China and in the U.S.A.

Session Type: Individual submission

Authors:

Name: Yuanyuan Wei

Email: weiyuanyuan.sdu(at) gmail.com

Country: FR (France)

Affiliation: Université Sorbonne Nouvelle

Abstract: Literature Review & Research Question

Empirical studies about the representation and image of Islam and Muslim in mass media and social media are on the rise. However, most tend to focus on western media and cases, with few on social media and cases in China and from comparative perspective of the West and the East. Researchers on Islam, Muslim, religion and media suggested that the image of Islam and Muslims were represented in a negative way in media (Saeed 2007, Akbarzadeh & Smith 2005) and the misrepresentations were rooted in western soil (Ogan et al 2013, Moore et al 2018).

From an empirical comparative perspective, this work examines the representations and the image of Islam and Muslim in news coverage in social media platform in the U.S and in China. It takes two terrorist attacks as case studies, the Orlando nightclub shooting in the USA, and the Kunming train station attack in China. This interdisciplinary research combines quantitative and qualitative approaches to investigate social media coverage of the two events, respectively in Twitter and its counterpart in China—Weibo. It uses social media analysis and communication sciences to explore: 1) how Islam and Muslims have been represented and framed on Twitter and Weibo; 2) the differences and similarities of media actors and citizens' attitudes and perceptions of Muslims in the U.S and China; and 3) what are the reasons for the deviances and similarities between the two countries.

Methods & Data

Twitter data about the Orlando nightclub shooting is collected by using Twitter APIs in full-archive searching with keywords “Orlando nightclub shooting”, “Muslim” and “Islam” for a period of one week from the 12th June 2016 (immediately after the event). Twitter data about Kunming Train station attack is collected the same way with keywords “Kunming Train Station attack”, “Muslim” and “Islam” for one week from the 1st March 2014. Weibo data about the two events is collected by using Weibo APIs in the same way, for the same date period, and with the same keywords but stated in the Chinese language.

Content analysis and sentiment analysis are used to analyze the four datasets. Semantic networks were used to provide visualization of the results with tables and graphs. Verbatims were also extracted to provide more qualitative insights.

Preliminary Results

Preliminary results show important differences. Chinese media actors on Weibo showed more neutral attitudes toward Islam and Muslims, while the attitude of Weibo ordinary users was more negative or even radical. American media actors on Twitter constructed differently the image of local Islam and that of China, while the Twitter ordinary users showed no evident divergence. Weibo users are concerned more about ethnical minorities issues and focus more on emotive expression, while Twitter users are concerned more about religious freedom, national security, and human rights. Reasons for these differences will be analyzed based on national interests, values, culture and media systems.

Title: Critical study of Egyptian feminism from the perspective of activist Huda Shaarawi.

Session Type: Individual submission

Authors:

Name: Fátima Contreras Pérez

Email: fatconper(at) alum.us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Name: Marta Contreras Pérez

Email: marconper3(at) alum.us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: This study deepens the critical vision of the Egyptian activist Huda Shaarawi through her work *Harem Years: The Memoirs of an Egyptian Feminist* (1987). Her feminist and innovative position has been a reference in Egypt, and by extension, in the Arab world for the defense of women's rights in the Islamic world. Islamic feminism began to develop in the early twentieth century during the heyday of European colonialism in Egypt. After the demonstrations against the British occupation, a movement for the rights of women was born (ABU-LUGHOD, 2002, GOLLEY, 2003, KUBISSA, 2007, FAY, 2012). The emerging feminisms in Africa and Asia were nationalist feminisms, while in the emerging feminisms in the western colonizing countries various forms of colonialism were filtered, and for that reason, they were later called imperial feminisms. Soon a negative view on feminism was generated in Europe, interpreting it as an ideology against men. In this study we have adopted an interdisciplinary approach involving different areas of knowledge. Shaarawi has been a pioneer with his ideas on Egyptian feminist activism through his autobiographical work. In it she narrates her seclusion in a harem, a place where she will become aware of gender inequality and in which she will plot her social and political commitment to the Islamic woman. In this paper, Huda Shaarawi's intercultural trajectory towards feminism is analyzed through his personality in the colonial circumstances of his time. At the same time, she emphasizes her struggle for the equalization of women against the imposition of harems and the Islamic veil. The cultural relevance of Huda Shaarawi in the political and social history of Egypt has been the fundamental reason for his choice in this study. This activist generated with her companions a new stage in the history of Egyptian women and in the rest of the Arab and Islamic communities. Throughout this work we reconstruct their vital and ideological evolution under the influence of the West and the foundation of a feminism with its own identity in Egypt.

Title: Beyond Representation: Muslim Voices, Satire and Digital Activism in Germany

Session Type: Individual submission

Authors:

Name: Katharina Schmoll

Email: 603195(at) soas.ac.uk

Country: GB (United Kingdom)

Affiliation: SOAS University of London

Abstract: The marginalisation of Muslim voices in Western public spheres and stereotypical media representations of Muslims and Islam has long been analysed in scholarship. Such research has been significant in disclosing and critiquing prejudices against Muslims and Islam in the West. Yet in order not to re-marginalise Muslims, it is also critical to explore and illustrate Muslims' agency.

With the case study of the online satire group 'Datteltäter', this paper explores mediated Muslim voices and activism of Muslims in Germany, aiming to further increase the visibility of diverse Muslim narratives in media and communication research. It analyses how young German Muslims engage in the public sphere on their own terms through social media, interact with their fellow Muslim and Non-Muslim citizens, negotiate or assert belonging, and react to right-wing populism and hate speech but also Islamism.

Founded in 2015, 'Datteltäter' is a group of several young German Muslims and non-Muslims that post weekly videos on YouTube, aiming to dispel stereotypes about Muslims and other minorities in Germany and building bridges with the wider society. Their name 'Datteltäter' is a combination of the German words 'Dattel' (date fruit) and 'Attentäter' (assassin/ attacker), thereby referring to common Orientalist stereotypes about Muslims as exotic, foreign and/ or violent.

This paper draws on a qualitative analysis of eight YouTube videos by the 'Datteltäter' and publicly posted comments, covering a diverse range of topics including racism within German society; prejudices within the Muslim community about other Muslims; hijab and clothing; refugees; fasting and the daily prayers; gender, family and dating; and right-wing populism as well as radical Islamism.

While so far, scholarship on German Muslims has widely concentrated on media representations using a framework of Muslims as minorities and migrants (Soliman 2017), this paper illustrates Muslims' agency and national belonging in a time where, following Europe's so-called migration crisis, the German far-right party AfD ('Alternative for Germany') is on the rise, having entered the German national parliament for the first time in 2016. While the German-language videos of the 'Datteltäter' are dubbed in English and potentially speak to an international public, the discourses are also clearly oriented towards the German public sphere. Criticising dynamics in both wider German society and Muslim communities, the 'Datteltäter' establish a space for negotiating and asserting new German diverse identities.

Regarding the conceptual framework, this paper builds on and contributes to emerging digital aspects of concepts such as voice and recognition (Couldry 2010), discussing the role of social media in supporting cultural citizenship, social cohesion and belonging.

Title: Media, Fitra and Providing Human Dignity With Emphasis on Islamic Vision

Session Type: Individual submission

Authors:

Name: Reza Vaezi

Email: emadvaezi(at) yahoo.com

Country: IR (Iran, Islamic Republic Of)

Affiliation: Islamic Republic of Iran Broadcasting University

Abstract: Undoubtedly, experts believe in the extraordinary power of the media and mass communication equipment in a way that media in current century is considered as one of the most important infrastructure factor in economic, social and cultural development, as far as it can be claimed that media of today is playing an outstanding role in society.

This phenomena, is the product of modern era, which has been formed based on societies and human needs. Due to the importance of media performance in all areas, certainly it plays a significant role in supplying, protecting, respecting or threatening human dignity.

The author believes that due to the humans' both parts, body and soul, which have their own desires, if media formed based on innate needs (that exclusively distinguishes man from other creatures) can ideally provide real innate needs and reinforce human dignity.

The essential requirement of forming such a media is to apply the theory of Innatism in theoretical field, as well as using relevant models instead of those which generally are based on human natural, apparent and instrumental needs.

According this model, media carry great responsibilities to the audience and their innate needs and of course, developing human characteristics is their main goal, therefore, media's messages and products are designed, edited, produced and released in accordance with these needs.

This kind of media, formed based on the nature in humanity (fitra), does not consider audience as an object, but paying significant attention to human's innate needs, happiness and benefit, also avoiding evil, that is the most important threatening factor of the human dignity, are at the center of its activity.

Therefore, in this research, the researcher has tried to present a model of media through applying the theory of Innatism in a descriptive-analytical approach which can be operationalized for all people, also supply and protect human dignity.

Key words: media, Fitra, human dignity, theory, model, Islamic vision

Title: Islamophobia: Histories, Context and (de)Construction

Session Type: Individual submission

Authors:

Name: Zafar Iqbal

Email: drzafar.iqbal(at) iiu.edu.pk

Country: PK (Pakistan)

Affiliation: International Islamic University

Abstract: History helps us understand complex problems; but at times, it makes seemingly easy-to-understand issues appear exceedingly perplexing and intricate. Islamophobia is one of such terms / constructs, which would get further convoluted if you attempt to develop clarity on it with the help of history. Contemporary advances on the Islamophobia construct are fast-paced leaving more doubts than crystalizing it for a better understanding. Not only this, to have a simple and square understanding, Islamophobia has been associated with ‘fear or hatred of Islam and Muslims’ more often. Hostility, prejudice, racism, orientalism and many other negativities are baptised as Islamophobia, and some of the scholars resort to inventive approaches to explain and theorize Islamophobia. Since the release of Runnymede Report in 1997 and more after 9/11 catastrophe, the term is in abundance use and a huge literature has been produced on it so far involving all disciplines of social sciences. Nonetheless, sustained confusions in literature pose it to be a literature produced in haste.

The aim of this research endeavour is to destroy the confusions and myths from the literature, which generated more misunderstandings than resolving the problems the construct and phenomenon of Islamophobia is confronted with. Following hypotheses would help us generate debate on the serious issues concerning Islamophobia besides breaking some myth plaguing discussion on the construct:

- The phenomenon of Islamophobia is historic in nature, and has always been there since the birth of Islam in early 7th century.
- Islamophobia has not been defined in a systematic and scientific fashion in literature; rather efforts have been to include all negativities in its ambit without substantiating it with cogent rationale etc.
- Islamophobia is not a monolithic bloc or phenomenon; but a construct having multiple facets / dimensions.
- Literature produced on Islamophobia seems to have been produced in haste; hence, inundated with countless glitches.
- Orientalist’s perspective on Islamophobia has mostly driven the debates and definitions of Islamophobia, which is not more than a mere fab.
- Antecedents of Islamophobia are less debated in literature.
- Islamophobia has more often been discussed and debated in literature as a qualitative phenomenon.
- Islamophobia at various places is not the same in its nature and in terms of its antecedents; however, similarity in its manifestations is quite high.

Additionally, there are some established myths about Islamophobia, which are:

- Myth – 1: Islamophobia is a European hostility and prejudice towards Arabo-Muslim people (Said, 1978).
- Myth – 2: Islamophobia was born after the demise of communism; as a new enemy to the west (Huntington, Summer, 1993).
- Myth – 3: Islamophobia is towards Muslims, and not towards Islam (Halliday, 2010).

Title: Public Relations In the Life and work of Prophet Muhammad (PBUH)

Session Type: Individual submission

Authors:

Name: Mohamed Kirat

Email: mkirat(at) qu.edu.qa

Country: QA (Qatar)

Affiliation: Qatar University

Abstract: This paper discusses the importance of public relations and communication in the life and work of Prophet Muhammad, peace be upon him (PBUH) to disseminate and spread Islam. The task was to propagate the teachings of Islam and to explain and elaborate on issues not fully explained in the Quran, through Hadith and Sunna (Essira Anabawia) –the daily life and conduct of prophet Muhammad. The mission was not simple and required a lot of skills, techniques and qualities to introduce a new way of life, values, concepts and principles to the people in the Arabic peninsula and around the globe.

Through Quran, Hadith and Sunnah (Essira Anabawia)- the life and conduct of the prophet Muhammad- this paper highlights the use of public relations and communication by prophet Muhammad to disseminate and convey Islam to the population of Kureish, the Arabic Peninsula and in the world. The essence of modern public relations, as stated by the late Edward Bernays in his book “Crystallizing Public Opinion”, lies in modifying attitudes, actions behaviors and efforts to integrate attitudes and actions of an institution with its publics, and of publics with those of that institution. This means, consent, persuasion, mutual understanding, two-way communication, mutual respect ,credibility, good will and cooperation

As a universal religion for all times and all humanity, Islam is a religion based on communication and public relations. Its principles are founded on democracy, freedom of speech, the right to know, the right of political opposition, the respect of human beings and human rights. Furthermore, Islam is a religion of tolerance, conviction, logic and science. All of these principles need communication, public relations, persuasion and logical thinking to be understood, adopted and practiced in real life by all Muslims.

Prophet Muhammad was a great communicator. He used public relations extensively to disseminate and spread the new religion. His task consisted of convincing people to change their attitudes by forming opinions and then transform such opinions into actions. This means the early followers of Muhammad had to quit their old habits and way of life and adopt new values, morals and ethics. The prophet was challenging a system that has existed for ages, and worked hard to introduce new principles and faith which destabilized a system based on coercion, force and injustice. Muhammad had many foes and enemies, but with his tolerance, sense of justice, high skills of communication and effective public relations, he was able to make everybody admire him.

Title: Religion and Human Dignity: A Comparative Survey of Attitudes of a Muslim Country's Universities and Islamic Seminaries Students towards Feminism

Session Type: Individual submission

Authors:

Name: Muhammad Yousaf

Email: yousafspeaks(at) gmail.com

Country: PK (Pakistan)

Affiliation: School of Media and Communication Studies, University of Central Punjab, Lahore-Pakistan

Abstract: There is a widespread assumption that religion and religious beliefs influence public attitudes towards a range of issues. Feminism is a contentious issue in Muslim countries. However, the issue is overlooked and ignored when we look at the influence of the religion on the attitudes of the public of Muslim countries regarding feminism. The current study sought to survey the influence of religion and religious beliefs on the attitudes of a Muslim country's two Universities (University of the Punjab & University of Central Punjab) and Islamic Seminaries (Jamia- e- Naeema & Jamia-e- Ashrafia) Students towards Feminism. The study employs a quantitative methodology vis-à-vis survey method to collect data from 600 students, university students (n=300), and Islamic seminaries students (n=300). A purposive sampling technique was used to select respondents for this study. A survey instrument was constructed to measure the attitudes of the students. The survey was administered face to face to the respondents. The instrument for the Islamic seminaries students was translated into Urdu, a national language to remove language barriers and ensure data authenticity. The findings of this study would be significant for our understanding of the comparative attitudes of the university and Islamic seminaries students towards feminism in a Muslim country which has predominately Islam as a driving force in most of the aspects of people's lives. It is assumed that the university and Islamic seminaries students would have different attitudes towards feminism. Therefore, the findings would be useful for the policy makers to introduce Islamic feminism courses to enhance respect and acceptance of the females' role especially in the religious seminaries of the country.

Title: Soft power and its effect on stereotyping Arabic Muslim women: social media websites as a model

Session Type: Individual submission

Authors:

Name: Azza Abdelaziz

Email: azzaosman(at) hotmail.com

Country: EG (Egypt)

Affiliation: Sohag University, Alexandria Media Institute

Abstract: This research paper aims to monitor, analyze and explain the techniques and strategies used by the soft power, represented in social media websites, to shape the image of the stereotypical image of Arab Muslim women.

This image was described by previous studies as negative, distorted and superficial, as well as being characterized by ignorance most of the time.

Social media websites, however, have allowed women to present themselves as who they really are, and not as whom the media outlets want them to be portrayed.

This is the new media reality today that the image of Arab Muslim women is being formed within.

Will this carry signs of change?

Title: Islamic Identity in the Contemporary Egyptian Media Discourse

Session Type: Individual submission

Authors:

Name: Fatma Elzahraa Elsayed

Email: zahraafat(at) cu.edu.eg

Country: EG (Egypt)

Affiliation: Associate Professor

Abstract: This research focuses on the potential development of the Islamic identity meaning across five years (2014-2018) by analyzing presidential speeches in two religious occasions; Lailat Al-Kadr during holy Ramadan and Prophet Muhammad birthday. The analysis associated with media interpretations and deliberations to the concept of renewing Islamic discourse and correcting the image of Muslims which is – according to their point of view- severely damaged by misinterpretations of Islamic holy texts.

Renewing religious traditional discourse has been always a contested issue in Egypt between the ruling authorities and the religious entities such as Al-Azhar Sheikh, Al-Mufti, and the civilian Islamic movements. The ruling authorities accuse Islamic discourse as a one-sided dogmatic communication that incites violence and supports terrorism and extremism. However, the Islamic entities tend to resist these accusations by distinguishing between the holy fundamental resources of Islam which are Quran and Sunnah, and the Islamic thought which is unholy human interpretations that vary by place and time.

The research employs discourse analysis of the vocal and written language of the Egyptian most famous newspapers and TV shows within the communicative events of the religious occasions to reveal the socio-psychological characteristics of the source and extract the Islamic identity that is being targeted and then reconstructed through the media.

The study would analyze 20 speeches; 10 are presidential and 10 are for religious references. In addition, 100 articles and 50 TV shows to detect the persuasion styles that are used by the media to convince the audience of renewing the Islamic traditional discourse in a logical, sentimental, or sensual ways.

The research aims to investigate three main questions:

RQ1- How presidential and religious references differ in justifying the significance of renewing the traditional Islamic discourse?

RQ2- What are persuasion styles employed by the Egyptian media to deliver the message of renewing and correcting the Islamic discourse?

RQ3- What are characteristics of the Islamic identity that is being targeted and reconstructed by the media throughout five years 2014-2018?

Paper Presented to

Islam and Media Working Group

Religious Issues in the Iranian Press (1956-2006)

By: Hossein Afkhami , & Atiyeh Pirhadi

Abstract

This research examines content of religious issues in two daily papers Ettelaat (1925) and Kayhan (1941) over fifty years. These are just two newspapers that are being published continuously before and after the Islamic Revolution of Iran (1979). The choice of these two papers is aimed at comparing the content and structure of religious materials in an historical context.

In this research, systematic sampling was performed on six periods of the first two weeks of the month of Muharram in years of 1956, 1966, 1976, 1986, 1996 and 2006. The selection of the month of Muharram is due to its importance in promoting, educating and remembering religious and political values in the Shiite religion. A total of 118 copies of each of the two newspapers were examined and 1126 religious items were collected. The data were coded using quantitative method and analyzed by using SPSS software.

The findings of the research show that there is a significant difference between the content of the newspapers in the two periods of pre and post revolution. The use of news styles has increased in the three decades since the revolution and by contrast the number of religious advertisements has fallen. The largest number of published religious advertisements dates back to 1976. The number of advertisements published in the Ettelaat newspaper is almost twice as high as the Kayhan newspaper ads. Issues such as hadiths, mourning, and praise have increased in the years after the revolution. Published articles in Pahlavi period have more educational and religious publicity, while in the post-revolutionary period, these materials have more of a function of news and political propaganda.

Key Concepts: Religion, Pre and Post-Revolution Iran, Newspaper Functions, Kayhan Daily, Ettelaat Daily

Title: Islamic Worldview as a Model for De-Westernizing Journalism Profession and Studies

Session Type: Individual submission

Authors:

Name: Basyouni Hamada

Email: bhamada(at) qu.edu.qa

Country: QA (Qatar)

Affiliation: Department of Mass Communication, College of Arts and Sciences, Qatar University

Abstract: In his article on “journalism studies and Western bias”, Thomas Hanitzsch argues that despite the productive attempts to globalize journalism studies, Western hegemony still prevails in the way scholars approach, and understand journalism on a global scale(Hanitzsch 2018). In fact, the Western model of journalism culture in terms of its liberal democratic tenets and professional practices have become a benchmark against which journalism is assessed in the rest of the world especially in the Arab Muslim countries. Hanitzsch as well as other scholars(Hallin and Mancini 2004) believe that journalism must be truly international not just in quantitative terms (publications outlets and outputs, conferences and subscription in international journalism societies), but also by recognizing other indigenous cultural perspectives and intellectual paradigms that govern journalism practices in the rest of the world.

This paper is based on the argument that Islamic worldview has the potentials to provide an alternative intellectual and practical paradigm that enriches and guide both journalism scholarship and profession. Communication scholars in North America and Europe will continue unable to truly understand journalism as a global profession even inside their own cultural context unless they look at the profession from a global perspective. The Islamic perspective does not claim its supremacy over Western or non-Western journalism culture/s, instead, it accommodates other cultures and respects diversity. Global journalism is being transformed everywhere due to substantial changes in economic and technological foundations governing traditional media. As such, the role played by the traditional Western Liberal norms has to be revisited in a rapidly changing world of digital journalism.

The main questions this paper seeks to answer are simple but important: What does the Islamic worldview offer to journalism culture and practice in the era of digital journalism? To what extent, does the Islamic worldview insure that news reporting and investigative journalism are operated to preserve journalists’ freedom and journalism independence? What are the roles of journalists as perceived by the Islamic worldview? How does Islamic worldview approach the global issues of journalism such as journalists’ safety and impunity, linkages between politicians and journalists and censorship? Finally, to what extent Islamic worldview help establish an independent way of thought to approach and examine the modern journalism issues.

The purpose of this paper is twofold: First, to introduce the Islamic worldview as an alternative to the Western professional journalism model. Second, to discuss a conceptual groundwork for future journalism studies that is mainly premised on the tenets of Islamic worldview. To answer these questions, a critical assessment of relevant empirical and theoretical research will be examined.

Title: Contested Identities and Blogosphere: The Case of Violence and Victimization of Hazara Community in Pakistan

Session Type: Individual submission

Authors:

Name: Uzma Aleem

Email: uzaleem1(at) gmail.com

Country: PK (Pakistan)

Affiliation: Lahore College for Women University, Lahore, Pakistan

Name: Abida Ashraf

Email: abidaejaz(at) gmail.com

Affiliation: Institute of Communication Studies, University of the Punjab, Lahore

Abstract: The war against terror witnessed an upsurge of sectarian violence in various Muslim countries including Pakistan. These violent conflicts against different sects particularly Hazara community i.e. Shi'ia ethnic minority, have been a matter of concern since Quetta massacre of 2013 against Hazara community in Pakistan. Almost 200 people were killed in two consecutive horrific incidents of terrorism in January 2013 and February 2013 (Report, 2013) (Azher, 2013). Thus, this massacre enraged nationwide protests and media reports regarding violence against Hazara community and captured the attention of people across the globe (Nazish, 2013). Research studies show religious and sectarian conflicts became most apocalyptic when they were carried along ethnicity (Galdini, 2014; Kasbarian & Mabon, 2016; Robinson, Connable, Thaler, Scotten, 2018; Petrokkos, 2018).

According to a report presented to Senate of Pakistan in 2018, more than 3,000 people of Hazara community have been killed during last seven years (Shahid, 2018). Lives of members of Hazara community have been marred with violence due to their sectarian and ethnic identity (Siddiqi & Mukhtar, 2015). Mainstream media tend to marginalize the issue of target killings of Hazara community.

The growth of digital participatory media like blogosphere has become an alternative platform that has altered the information space in the conflict ridden societies (like Pakistan) by providing tools to more and more people (both parties of conflict) to disseminate their reflections to the world (Sigal, 2009).

While keeping in view these premises, the researchers intend to analyze the role of digital media particularly blogs in shaping and re-shaping the identities of Hazara community in the wake of violence against them under the realm of communication theory of identity. Since Hecht (2002) reasons that identity cannot be segregated from communication, particularly in the digital age, when digital technologies are not only changing and challenging the identity enactment rather creating new possibilities for ethnic and sectarian groups. Thus, with an aim to explore the impact of violence on ethnic and sectarian identity of Hazaras in the age of digital media this study has employed two research methodologies: quantitative and qualitative content analysis of blogs related to Hazaras; and intensive interviews of members Hazara community sampled through snow ball sampling technique. This study reveals how blogs run by members of Hazara community and

general bloggers are affecting the contested sectarian and ethnic identities and religious orientations of Hazaras in Pakistan. While considering the continued situation of violence against Hazaras, role of state institutions is also being discussed in the emergence of relational identities of Hazaras.

Title: The role of religious ethical values in journalism practice in Pakistan

Session Type: Individual submission

Authors:

Name: Bushra Hameedur Rahman

Email: bushrajk(at) gmail.com

Country: PK (Pakistan)

Affiliation: Institute of Communication Studies, University of the Punjab, Pakistan

Abstract: Media is considered to be a profit-oriented industry driven by the exploitative capitalistic system aiming for nothing but monetary interests. Nevertheless, it is also argued that the very conventions of this industry are based on the ethical foundations of religious values. In this context, the present study is an attempt to see how far religious ethical values are considered to be part of journalism practice in Pakistan. As Pakistan is considered to be an ideological state, the question of bringing in the religious ethical values in journalism education and professional life becomes quite relevant. The present study, through a survey of the electronic and print media journalists of Lahore, aims to explore whether journalists see themselves as agents of change by consciously bringing in their religious ethical values in their everyday discussions and through their own example? How far do they see themselves compromising their religious values in their professional life? And lastly, do they ever apply the Golden Rule of compassion- thinking of the other by placing themselves in the shoes of the other?

Title: Contested Truths in the Digital Media: Coverage of Aasia Bibi's Blasphemy Case in the Religious and Non-religious E-newspapers

Session Type: Individual submission

Authors:

Name: Abida Ashraf

Email: abidaejaz(at) gmail.com

Country: PK (Pakistan)

Affiliation: Assistant Professor Institute of Communication Studies, University of the Punjab, Lahore, Pakistan

Abstract: In the developing countries, portraying conflicts has been a monopoly of state actors and their colonial masters for a long time however, the situation seems to be different due to digital/online/citizen journalism and active participation of non-state actors as producers of the content (Mortenson, 2014). Media has become an important source to provide information on religious issues. According to Pakistan 2015 International Religious Freedom Report, media coverage of issues related to religious minorities is getting better however, there are instances of media making inappropriate reference to minorities and using inflammatory language. The report says, "Human rights and religious freedom activists and members of minority religious groups reported they continued to be hesitant to speak in favor of religious tolerance due to a societal climate of intolerance and fear" (Pakistan 2015 International Religious Freedom Report, p. 18). In the given scenario, it seems interesting to critically evaluate and compare the news coverage and treatment of the said blasphemy case. This study analyzes two online dailies; Asia News and the Express Tribune for the coverage of Aasia Bibi blasphemy case in Pakistan (Aasia Bibi is a Christian and belongs to minorities). Asia News is a Christian online newspaper and an official news agency of the Roman Catholic, whose editor-in-chief is Father Bernardo Cervellera. He also heads the official news agency of the Vatican, Agenzia Fides. Asia News has its correspondents in many countries including Pakistan. All the news items with the search words 'blasphemy' and 'Aasia Bibi' are selected from a period of four months starting from October 8, 2018 (last hearing and Pakistan Supreme Court's decision date), to January 29, 2019 (decision of Pakistan Supreme Court on the writ petition by the Islamic radicals).

Title: Malala Versus Drones: The Perpetuation of Orientalism through a Case Study of Worthy and Unworthy Victims in Pakistan

Session Type: Individual submission

Authors:

Name: Firasat Jabeen

Email: fjabeen(at) g.clemson.edu

Country: US (United States)

Affiliation: Clemson University

Abstract: This paper examines the media portrayal of Malala Yousafzai (Pakistani Nobel Prize winner and an activist for female education) and the victims of US drone attacks in Pakistan. In this analysis, I compare the portrayal of these issues/events in US and Pakistani newspapers. My analysis argues that in the contemporary context, the issues of orientalism and imperialism perpetuate for the marginalized and underrepresented groups of Pakistan. My paper is aligned with the 'Islam and Media' working group of the conference in the sense that it studies the intersection of orientalism (from a Pakistani standpoint, a predominantly Muslim majority country) and media portrayals for downtrodden groups in Pakistan. Overall, my paper not only provides a news analysis of the portrayal of Malala Yousafzai and the drone attack victims, it also observes that once again, we are back to Edward S. Herman and Noam Chomsky's ideas of 'worthy and unworthy victims.' Thus, considering Herman and Chomsky's views alongside Edward Said's Orientalism, my paper explores the aspects of uses and abuses of power for traditionally marginalized sections in Pakistan.

Furthermore, this paper focuses on the intersection of the ongoing nature of orientalism and the political economy of communication. I study how a biased representation portrays some victims as worthy, whereas others are unworthy. Specifically, I analyze the coverage of two Pakistani incidents—the Malala Yousafzai case (for the year 2012) and the US Drone Strikes case (for the year 2010) in four newspapers (two US—the New York Times, and the Wall Street Journal and two Pakistani—The Nation, and Daily Times). This study argues that the US media's selective representations lead to the perpetual cycle of orientalism for post 9/11 Pakistan. By employing the methodology of critical discourse analysis, this paper offers an empirical component in the study of orientalism and presents a thorough and comprehensive analysis of the relentless process of orientalism.

Title: Social Media Role in Relieving the Rohingya Humanitarian Crisis

Session Type: Individual submission

Authors:

Name: Fatma Elzahraa Elsayed

Email: zahraafat -at- cu.edu.eg

Country: EG (Egypt)

Affiliation: Associate Professor

Abstract: This research explores the possibilities and limitations associated with utilising new media technologies in relieving humanitarian crises by focusing on the Rohingya case. The main interest is to approach a conceptual communication framework based on the current Rohingya refugees' perceptions about social media networks and mobile apps and the potential suggestions to optimise its usefulness in relieving their crisis. Addressing the obstructive challenges that interrupt the new media technologies functionality is another objective of the study.

The methodological design is an attempt to apply the mixed methods technique that interlace qualitative findings of the questionnaire that would be distributed to the British Rohingya refugees' community in Bradford/UK with the qualitative outcomes of the semi structured interviews with Rohingya and Bengali professionals, academics, and activists to reach an inclusive investigation to the research questions. An examination to the significance of relationships between Rohingya demographic attributes and their preferences and perceptions toward social media platforms and mobile apps is substantial to explore the dominant factors that may influence the relationship between the Rohingya and different media platforms.

Studying the Rohingya crisis led to reconsideration of the validity of applying the traditional crisis communication models during humanitarian disasters as a short-term strategy takes into account the extensive political and historical background that requires an alter treatment based on the Rohingyas specificity. On the other hand, the social information processing model to interact with users' interactions as a long-term strategy includes the uploaded and posted content on social media networks should be applied before and after the crisis to eliminate hatred speech, divisiveness discourses, and focus on building social peace and spread love and forgiveness values.

To approach a communication model that explains the functionality of the social media platforms and traditional media performance in relieving the humanitarian crisis of the Rohingya, three aspects should be considered. First, the media governmental policy that believes in empowering people with media is better than depriving them of expressing themselves. Second, the NGOs can compensate the communication inadequate by providing communicative alternatives and facilitate accessing services in addition to its role to eliminate media illiteracy that may lead to media misuse. Finally, the Rohingya themselves should broaden their vision to the potential horizons of using social platforms and be aware of new media technologies possibilities and limitation that optimise the supportive functions to their cause.

Title: Cultural Proximity and Genre Proximity: How do Chinese Viewers Enjoy American and Korean TV Dramas'

Session Type: Individual submission

Authors:

Name: JIA LU

Email: lujia_tamu -at- mail.tsinghua.edu.cn

Affiliation: Tsinghua University

Abstract: In China, watching foreign television dramas is not only an important means to know about the outside world but also a trendy lifestyle. The popularity of foreign TV dramas reflects the cultural logic of media globalization, which is shaped in two competing processes – globalized demand of media industry and localized demand of indigenous cultures (Waisbord, 2004). Thus, Chinese viewers' consumption of foreign TV dramas is simultaneously global and regional (Chan & Ma, 1996). American and Korean dramas are respectively characterized with global and regional features, and become the most popular in the Chinese market.

This paper aimed to examine this transnational viewing process, in which Chinese audience watch American and Korean TV dramas. Specifically, cultural proximity and genre proximity were adopted to predict media involvement and enjoyment. The theory of cultural proximity was often used to explain transnational media consumption. It argued that audience would like to choose media products that are proximate to their own cultural backgrounds (Straubhaar, 1991). As an extension of cultural proximity, genre proximity refers to particular genres, which have similar structures, formulas, and archetypes that can reach past cultural differences and be accepted in different countries (La Pastina & Straubhaar, 2005).

Staying at the heart of media entertainment, enjoyment was used to describe the outcome of viewing experiences (Vorderer, Klimmt, & Ritterfeld, 2004). It was often defined as “a general positive disposition towards and liking of media content” (Nabi & Krcmar, 2004, p. 290). Raney and Bryant (2002) saw enjoyment as a consequence of the interactions between audience and media contents, where audience input cognition and affect, and media input characters and the narrative. Levy and Windhal (1985) used the term of involvement to capture the interactions between audience and media, referring to individuals' personal participation in message reception, involving cognitive engagement in information processing and emotional reaction to media content (also see Perse, 1990). Prior studies generally pointed out two major categories – involvement with

characters and involvement with the narrative (Green & Brock, 2004; Greenwood, 2008; Greenwood & Long, 2009; Murphy et al., 2011).

A quantitative content analysis was conducted to study Chinese viewers' comments and ratings for American and Korean dramas at Douban.com, one of the largest social networking platforms in China. A cluster sampling method was used to obtain a sample of 16,440 comments from 411 TV dramas in a period of 2016 – 2017.

Statistical analyses found that cultural proximity failed to predict enjoyment but succeeded in explaining involvement. It also revealed two different routes to enjoyment – to enjoy Korean dramas through involvement with characters and American dramas through involvement with the narrative. In addition, cultural proximity served as an alternative resource to alleviate the mutual reliance between involvement with character and involvement with the narrative.

Genre proximity was found in action/crime but not in fantasy/adventure. Genre difference also affected involvement. Romance and horror/crux respectively had higher level of involvement with characters and involvement with the narrative. In sit-coms, overdependence on performance highlighted involvement with characters through which Chinese viewers acquire enjoyment and accept the narrative.

Title: Research on Foreign Online Celebrities of We-media in China: Based on 57 Bloggers in Sina Weibo

Session Type: Individual submission

Authors:

Name: Jie Cui

Email: 251232215 -at- qq.com

Country: CN (China)

Affiliation: Minzu University of China

Abstract: Introduction: With the development of international exchanges and Internet celebrity economy, more and more foreigners are attracted to become online celebrities in China, most of whom master fluent mandarin and know Chinese audiences' preferences. The main objective of this study is to identify features, influences, and problems of these foreign online celebrities.

Materials and methods: data mining and content analysis. 57 foreign celebrities with followers > 200 in Sina Weibo. Their countries, followers, registration date, and top contents are collected. Influences are assessed by Analytic Hierarchy Process.

Results: Foreign online celebrities usually have long net ages from three to five in Sina Weibo. They post 1204 twitters on average. Most of them come from Japan, America, Britain and Korea, and live in Beijing and Shanghai at present. Individuals are the majority while organizations are more influential. For example, Foreigner Research Institution, founded by a group of foreign students from Israel, America and British at Tsinghua University, has attracted 2,582,402 followers and been reported by Chinese official media. Besides, short videos, especially series, are dominated. Contents not only include China's society, culture and food, but also include their own cultures. For instance, OMG Laughing Club has three series: OMG Feeding Room which invites foreigners to comment on Chinese pop stars, Little Ma's Food (a British man looks for Chinese food in Britain), and OMG Questions which interviews foreigners and Chinese on the same topic to compare differences between foreign countries and China.

Conclusions: Foreign online celebrities usually focus on vertical fields, such as recommending foreign special products. What's more, they pay attention to interactions with fans. Korean Dongdong, for example, often gives presents to her fans through transmitting and lottery. Thirdly, collaboration is given the priority. Fourthly, they cater to mainstream values in China. For example, Gao Yousi, the leader of Foreigner Research Institution, often volunteers to experience different Chinese roles, such as delivery man, village schoolmaster, and Taobao shopkeeper. Finally, they also actively frame positive images of their own countries. Foreigners in Neighbor, for example, operated by two African men, often introduces African customs to break Chinese stereotypes.

However, they have their own hidden potential crisis. First of all, homogenization of content: differences between China and foreign countries are too much. Beauty fatigue is emerging. Secondly, some individuals are motivated to create high-quality videos at first, yet gradually lose passion. Finally, to catch Chinese's eyes, some foreign bloggers blindly flatter China. For example,

Fu Lifang, a Britain, once made a video, titled “After eating Chinese steamed stuffed bun, a Britain considered British hamburger rubbish.”

Title: Above the law and below poverty: Digital activism and online publicity in the Global South

Session Type: Individual submission

Authors:

Name: Payal Arora

Email: payal_arora04 -at- yahoo.com

Country: NL (Netherlands)

Affiliation: Erasmus University Rotterdam

Abstract: In a favela ruled by the drug lords in Rio de Janeiro, an activist uses Facebook Live to capture the dealings in his neighborhood, putting himself and some of his community members at risk (Arora, Forthcoming). In Jeddah, Saudi Arabia, a few teenage girls Instagram the fashions of the week, unveiled, an act that can be persecuted by the morality police. In Jammu and Kashmir, some activists through the hashtag #justiceforkathua draw attention to the case of an eight-year old nomadic girl who was gang raped, defying the privacy law on revealing identities of minors. Contrary to the popular narrative of activists in the Global South seeking to be protected through anonymity, many at the margins continue to put themselves at high risk by being visible and heard (Ganesh, Schulte, & Deutch, 2016).

These are just some of the many cases that shed light on the tensions between privacy, law, and protest. The General Data Protection Regulation (GDPR) holds the law as sacrosanct and sees it as the key weapon to fight against the rising privacy violations in today's platform age (Albrecht, 2016). Implicit in this sweeping and major reform is that society can transform for the better by reigning in corporations and changing platform design and usage through governance rooted in human rights. GDPR centers individual choice and data protection as its cornerstone innovation, serving as not just a golden standard to privacy regulation but a global standard (Sloot & Zuiderveen Borgesius, 2018).

The fact is that an estimated 25 percent of the world's urban population live in informal settlements, with 213 million residents added to this kind of global habitation in last year alone (Arora & Scheiber, 2017). For this kind of vast and global marginalized public, laws are often an obstacle to justice or may be subservient to parallel systems of local governance and traditional social norms. Drawing from the author's decade of ethnographic fieldwork on activism among vulnerable communities beyond the West, (India, Brazil and recently South Africa and Namibia) and content analysis of empirical, theoretical and popular media narratives on visibility and activism in the Global South, this paper critiques the question of whether privacy and activism are after all compatible. GDPR while well intended, may have created a privacy universalism, reminding us of how privacy is a privilege and a luxury for the global marginalized majority.

Title: The internal and external soft power dimensions of the Chinese government's new governance approach in the age of noopolitik

Session Type: Individual submission

Authors:

Name: Zheng Li

Email: zheng.li11 -at- hdr.mq.edu.au

Country: CN (China)

Affiliation: Macquarie University

Abstract: Soft power has two vectors – internal and external – as theorized by Chitty: Good governance and rule of law represent high-quality internal soft power (or I-soft power) that generates external soft power (or E-soft power) as a by-product. This paper further examines this proposition empirically in the Chinese context to understand better the relationship between rule of law, governance approach, soft power, and discourse power. It draws on Western and Chinese literature on rule of law, governance, soft power and discourse power. China has begun to play an increasingly important role in the international community as the second largest economy in the world. Being sensitive to wariness in the international community of its military development, a development that it views as commensurate with its economic size, China invests heavily in developing soft power messaging resources to influence attitudes and discourse. However, Some commentators have argued that China's soft power strategy places too much weight on the mediation of its cultural resources (which Chinese scholars call soft power) and too little weight on the mediation of its political values and governance approach such as emphasizing rule of law (which the Chinese classify under discourse power). After 2013, the new administration initiated an anti-corruption campaign that has gained international media attention and attracted considerable discussion in Chinese social media and in the press and academy. This anti-corruption campaign is selected as a case to examine if China's efforts to curb corruption and enhance its rule of law are viewed as an enhancement of its soft power overseas. As there are several distinctions in China's political discourse compared with the Western understanding of rule of law and good governance, China's efforts to improve its rule of law and governance approach might seem unique and debatable from the Western perspective. This paper throws light on how Australian intermediate elites view China's anti-corruption campaign and its governance approach. A case study of China's anti-corruption campaign examines if western observers view China's efforts to curb corruption and enhance its rule of law as an enhancement of its soft power. This paper will answer the following research questions: Is China mindful of potential E-soft power effects of its governance and rule of law stances and practices? What are the views intermediate elites in the Australian public diplomacy policy community on China's governance approach and its soft power implications? How do Chinese and Australian newspapers reportage on China's governance approach and anti-corruption campaign compare with each other? In-depth interviews with policy community members in Australia and Chinese and Australian news media frames will offer data for frame analysis. The results show a lack of congruence between Chinese intended frames as culled from Chinese media and preferred frames as evinced in Australian media and interviews with members of the Australian public diplomacy policy community.

Id: 20081

Title: Twitter, race and 'sousveillance' in South Africa

Session Type: Individual submission

Authors:

Name: Tanja Bosch

Email: tanja.bosch -at- uct.ac.za

Country:

Affiliation: Centre for Film and Media Studies University of Cape Town

Abstract: This paper explores social media conversations about race and racism in South Africa, arguing that processes of polarization can privilege certain positions. More specifically, the paper explores notions of surveillance and social media etiquette, i.e. what is acceptable to post about others, taking into account the notion that etiquette is a contested space and is governed by politics of inclusion and exclusion. More specifically, the paper is based on qualitative content analysis and discourse analysis of Tweets using specific hashtags. These will include hashtags such as #AshwinWillemsse – referring to the incident in which a black rugby commentator and former national team player accused his fellow white commentators of racism on national television, resulting in a huge social media debate on the issue. “Posts on Facebook and Twitter have also led to major controversies around racism and identity politics, ranging from racist comments made by a DA member and estate agent Penny Sparrow about Black people on South African beaches during the festive period, to a judge, Mabel Jansen, who claimed in a Facebook exchange that race was part of black ‘culture’, to the student activist Ntokozo Qwabe who used Facebook to gloat about having refused to pay a White waiter a tip until she ‘returns the land’” (Wasserman, 2018, 163).

While hashtags are used to mark interpretive frames, the paper explores how and why platforms like Twitter have become important sites for activism around issues of racial Inequality. Methodologically, this paper uses a mixed methods approach, creating a dataset using the open tool Mecodify, and exploring the notion of hashtag activism, hashtag ethnography and the contested notion of the hashtag as a field site. Theoretically, the paper draws on Papacharissi's (2015) work on affective publics, which focuses on affect as one of the main driving forces of internet engagement, participating in online conversations with narratives of the self. She proposes that affective engagement revives political discussions and promotes engagement.

The paper also draws on Chen's (2017) work on online incivility and public debate, who explores how and when online incivility can lead to strategies to reclaim the online public debate. Chen (2017) describes incivility as (online) speech which exhibits “at least one of three main attributes: insulting language or name-calling; profanity; and a larger category that encompasses stereotypes, and homophobic, racist, sexist, and xenophobic terms that may at times dip into hate speech... Incivility is part of a larger continuum of aversive speech that both violates what is considered normal in conversation and also has the potential to cause harm (6). In addition, Steve Mann's concept of ‘sousveillance’ also becomes relevant in this exploration. This refers to the notion of watching from below (sous = below in French), i.e. ordinary people watching as opposed to being watched from above. “The act of holding a mirror up to society, or the social environment, allows

for a transformation of surveillance techniques into sousveillance techniques in order to watch the watchers” (Mann and Ferenbok, 2013).

Title: A non-state media system: the Kurdish example

Session Type: Individual submission

Authors:

Name: Kerem Schamberger

Email: kerem.schamberger -at- ifkw.lmu.de

Country: DE (Germany)

Affiliation: Ludwig-Maximilians-University

Abstract: Following discussions on how to analyze different media systems (e.g. Hallin & Mancini, 2005; Blum 2005; Meyen, 2018) and bridging some of the core topics of the International Communication Section in Madrid (e.g. the influence of new technologies, the development of the internet / social media) this paper looks at the non-state media system of the Kurdish people in the Middle East.

With more than 30 million people worldwide, the Kurds are the largest people without an own nation-state. They primarily live in four countries: Turkey, Iraq, Syria and Iran. With the dissemination of satellite television in the early 1990s and, later, with the advancing possibilities of the internet in the last 25 years, an independent cross-border Kurdish media system developed with its own organisations, values and rules. Here, characteristics do not seem to be national borders, but a common language and culture. At the same time, Kurdish media are in conflict with the respective nation states where they are being produced. In Turkey, Kurdish media services are banned, and several dozen Kurdish journalists are imprisoned. In northern Iraq and northern Syria, Kurdish media have only been able to develop with a relative freedom in recent years and are still exposed to governmental threats from Baghdad and Damascus. Using the example of the Kurds, this paper discusses the functioning of a media system without national borders, ensuring the trans-national dissemination of news.

The theoretical basis is that of the actor-structure-dynamic developed by the German sociologist Uwe Schimank (2007). It examines the interaction between individual action and social structures. Three types of social structures are important here: structures of constellation (resources, etc.), of expectation (laws, agreements, etc.) and of interpretation (e.g. journalistic beliefs, self-images). These structures restrict and, at the same time, enable the actions of actors. Schimank's complex theory provides the basis for a category system that structures the qualitative research process and allows intersubjective understanding.

This paper is based on 39 interviews with journalists from various Kurdish media, civil servants, military personal and representatives of journalists' associations, which were conducted during several stays in Northern Iraq (South Kurdistan) and Northern Syria (West Kurdistan) in 2017/2018, and by Skype in Eastern Turkey (Northern Kurdistan). The interviewees were chosen according to the category system and the factor reachability. This was added by field observation, for example in various editorial offices, and a collecting of documents.

Following Schimank theoretical approach, the talk provides insight into relatively new media structures established by different Kurdish actors, the self-image of Kurdish journalists, the influence of the internet, and those media outlets dependent to different political parties.

Title: Does Political Generation Matter' Examining the role of Internet use in four modes of political participation in Taiwan

Session Type: Individual submission

Authors:

Name: Xiaomei Sun

Email: xsun95 -at- wisc.edu

Country: US (United States)

Affiliation: University of Wisconsin-Madison

Abstract: The impact of Internet and social media use in political participation has been discussed in numerous studies. However, most studies focused on the West and the role of the Internet in Asian societies is still not fully understood. Scholars have found different factors that could affect the relationship between Internet use and civic engagement, such as socio-economic status, social network, personality, and other related factors. However, the influence of “political generation” has not been examined. Borrowed from political psychology, “impressionable year” is a hypothesis which argues that there is a lasting effect of experiencing political events during late adolescence and early adulthood on individual’s political behaviors. Those generations who have experienced the same political events during the same time period are categorized as one political generation. This study thus aims to look at whether political generation matters in relation to the role of Internet and social media in political participations in Taiwan. The political generation is classified into two groups for the analysis: the younger political generation who was born in 1979 and before and the older political generation who was born after 1979 based on historical events and memories in modern Taiwan. The data analyzed in this study is derived from Asian Barometer (Wave IV), conducted between June and November of 2014 in Taiwan by face-to-face interviews. Through descriptive analysis, Chi-square test, and multiple regression analysis, this study found that the two political generations behave differently in voting and election campaign. The older political generations are more likely to vote and participate in election than the younger political generation. In addition, political generation also has a moderation effect on expression of ideas and unconventional participation, such as protest. Instead of simply considering age as numbers, this study takes a step further to look at the implication of those political events behind age. As significance of this study, it contributes to our understanding of the relationship between digital tools and political participation in a new emerged democracy as well as within an Asian society, with consideration of a broader context, political generation.

Title: Evaluating International Mediated Public Diplomacy Efforts towards Empowering Women Rights in the Arab World through In-Depth Analysis of Social Media: A comparative study of BBC, Aljazeera, Al-Arabiya, Russian Today and France24

Session Type: Individual submission

Authors:

Name: Hamed AL-Hasni

Email: hamedalhasni-yati -at- hotmail.com

Country: CN (China)

Affiliation: Tsinghua University - China

Abstract: In the age of information, the world is witnessing rapid changes in various arenas that required the mediated public diplomacy to familiarize the new advanced technology on term of dealing effectively and reacting speedily with global affairs, particularly human rights issues. For instance; RT extended its global spread via the adaptation of various social media platforms including Twitter, Facebook, and YouTube (Kelly, 2012).

Lately, the world community has paid a great attention over human rights issues in the Arab world, which suffers from massive of wars and changes in political systems as well as the grave tensions in regional and international relations, for instance; the diplomatic ties between Canada and Saud Arabia has been frozen over human right concerns on Aug, 2018.

Consequently, the significant of the study aims to examine the mediated public diplomacy efforts of top five international broadcasters to the Arab world namely; BBC, Aljazeera, Al-Arabiya, Russian Today, and France24 through evaluating their coverages of women rights issues specifically the case of Saudi women (Rahaf Al-Qnoon) who got asylum in Canada and highlighted globally on January, 2019.

Accordingly, the Theoretical framework of current study has inspired by Golan (2013) integrated model of public diplomacy. The first level of Golan (2013) model it's to deals with mediated public diplomacy, the second level with nation branding and the third level with relational public diplomacy. The mediated public diplomacy approach is concentrated on government efforts to shape and effect it's framing in the global news media (Entman, 2008). The success or failure of mediated public diplomacy efforts can have straight consequences concerning global public opinion (Manheim, 1994).

For the purposes of the present study, we use Entman's (2004) definition of framing: "selecting and highlighting some facets of events or issues, and making connections among them so as to promote a particular interpretation, evaluation, and solution". By comparing the BBC, Aljazeera, Al-Arabiya, Russian Today, and France24 beyond their coverages the case of "Rahaf".

Systematically, the current study applied social media analytics method which combines different methods to create insights, such as, sentiment analysis, social network analysis, topic modeling, trend analysis (Thelwall, 2018). Evaluators of public diplomacy believe that a mixed-method

approach, integrating the collection of both quantitative and qualitative data, produces the accurate and best evaluations for public diplomacy efforts (Banks, 2011).

The author conducted In-depth analysis of top 100 user comments on top 10 most viewed YouTube videos and content analysis of top 10 most viewed YouTube videos, user comments number, views, Likes and headlines, which have been broadcasted by the BBC, Aljazeera, Al-Arabiya, Russian Today, and France24 in YouTube during their coverages of “Rahaf” case. The comments were collected on 29th January, 2019 using YouTube comments scraper software.

The main finding indicates that international frame-building and public engagement have played a major role to brand BBC and Aljazeera as more effectively than Al-Arabia, France 24 and RT.

Title: Expanding Public Debate or Narrowing the Options' Examining the Impact of India's Top English Language Political Talk Shows

Session Type: Individual submission

Authors:

Name: Prashanth Bhat

Abstract: As a genre prime time news and current affairs talk shows occupy a distinct space within the Indian television universe. Typically built around a single editor/interrogator and invited guests, talk shows have come to constitute a relatively inexpensive format which most leading news channels deploy to brand and market themselves. As a result, even though the viewership of such shows tends to be confined to the urban educated elite in the country, they have been increasingly “embraced,” by news channels and according to Mehta (2008) have come to “serve as important agencies for political debate,” and have been “harnessed explicitly in the political arena,” their implications for public deliberation remain open to question. Put differently, although prime time talk shows are characterized by an “argumentative,” and “animated” style, in which politics and spectacle are closely intertwined, the extent to which such shows make “the news more comprehensible and interesting,” and enhance the “potential of “rational-critical” debate,” as has sometimes been asserted (Harrington, 2005), remains unclear at least in the context of India. This chapter seeks to explore the role of these talk shows as a form of political communication focusing primarily on the two most-watched English news channels, Times Now and the newly-established Republic TV. In exploring Times Now shows such as Newshour and India Upfront as well as Republic’s Debate and The Nation Wants to Know, the chapter will seek to analyze both the manner of presentation adopted by these programs (which not surprisingly tend to differ significantly from the stylistic conventions of their Western counterparts) as well as their content both in terms of the participants invited and the range and types of topics discussed. In doing so, it will examine the relationship between these shows and the manner in which they engage with the country’s political discourse. That is to say, do the style and content of these shows amplify or challenge dominant political beliefs, especially those associated with the ruling party and thus evaluate the impact of these shows with regard to the Indian public sphere.

Abstract: National image in media is a significant research topic in the age of globalization. Nevertheless, in view of English hegemony across the globe and the ensuing dominance of media of English-speaking countries in the international communication market, previous studies on how foreign media represents China pay more attention to western developed countries by which English is used as official language. In recent years China has rolled out some new diplomatic strategies in favor of non-English speaking countries, such as the launch of the “Belt & Road initiative”, the development of good-neighborly relations and the consolidation of relations with developing countries. Therefore, by treating official language as a cut-in point, this study is a first attempt of examining how China is represented by mainstream media of eight non-English speaking countries. Since ‘non-English’ is not so much a concept as language but as cultural relations and geographic politics, this study supplies an alternative, as well as a relatively holistic, outlook on how foreign media builds up China’s national image.

One national mainstream media is sampled from each of eight non-English speaking countries: Germany, Austria, Spain, Italy, Netherlands, Mexico, Kenya and Bangladesh. By using Cina, cinese, Taiwan and Honkong as keywords, a total of 2669 China-related news articles are sampled from 2008, 2010, 2012 and 2015.

It first finds that the image of China is primarily represented through economic (39.1%), social (15.4%), diplomatic (14.3%) and political (13.9) news. Second, by employing source of information to measure objectivity, this study reveals that over a half of sources of information come from China and their homelands of the eight countries. Third, as to favorability, despite the fact that negative reports are a bit higher than positive ones, the overall image of China is neutral with 60.9% coverage of China evincing an objective stance. Fourth, China’s national image has remained relatively consistent in mainstream media of non-English speaking countries.

The above-mentioned findings highlight the leading role played by economic factors in media representation of China. Therefore this study serves as an important addition to preceding literature that always highlights how western developed countries politicize China in news coverage.

Moreover, this study exposes a notable difference in media representation of China between developing countries in Asia, Africa and Latin America and developed countries in Europe, of which the division is also grounded in economic situations. Specifically, developing countries

devote themselves more to diplomatic issues as well as positive reports, while developed countries hold more critical and negative stances towards China's political situations and so-called 'China Threat'.

Another significant contribution made by this study is dynamics between news topics, source of information and favorability. Negative reports from those eight media mainly point to political and social issues. Furthermore, the expression of negative tones sometimes can be explained by their proactive usage of information sources from third parties with the purpose of covering up their true stances, and sometimes is a passive result of their partnership with news agencies of third parties. As such, source of information becomes a pivot that in a degree is able to shape how national image is represented by media.

Title: Between a chip and a wire: Free Basics and civic engagement in Kenya, Rwanda, and DRC.

Session Type: Individual submission

Authors:

Name: Toussaint Nothias

Email: tnothias -at- stanford.edu

Country: US (United States)

Affiliation: Digital Civil Society Lab, Stanford

Abstract: Facebook's growing role as a political intermediary led to critical inquiries from scholars, activists, and policy makers about misinformation, political polarization, privacy and content moderation. Less studied, however, are Facebook's efforts to increase connectivity and build network infrastructures throughout the Global South. From fiber cables and Internet exchange points to satellites and WIFI mesh networks, Facebook has been experimenting widely in this area. One such initiative – the Free Basics app which provides mobile phone users access to data-lite versions of a limited number of websites – gained significant visibility in 2015. Upon its launch in India, a coalition of civil society groups generated public backlash against the project and led to a ban on such programs seen as violations of net neutrality principles. Although perceived as a significant blow to Facebook's connectivity efforts, the Indian case did not prevent the expansion of Free Basics. As of 2018, it is live in 64 countries - including 30 in Africa – and offers access to some 1500 services worldwide. This paper fleshes out the implications of this initiative for civic engagement in authoritarian and hybrid regimes. I explore Facebook's efforts to partner with civil society organizations (CSOs) to join Free Basics using case studies from Kenya, Rwanda and the DRC. I provide a content analysis of the services and CSOs available on the app in those three countries, while highlighting influential local CSOs missing from it. In conclusion, I discuss the tension between opportunities to expand civic space and risks of seeing the civil society co-opted by corporate interests.

Title: [Panel] Netflix: Producing and consuming Latinx Culture in the Data-driven Global Mediascapes, Panel description

Session Type: Panel Submission

Authors:

Name: Eliseo Colon-Zayas

Email: eliseo.colon -at- upr.edu

Country: PR (Puerto Rico)

Affiliation: University of Puerto Rico School of Communication

Abstract: This panel proposes Netflix as a site of symbolic production, circulation, and consumption of disparate discourses of Latinidad, Hispanicity, and Latin American conceptions within a global mediascape. The presentations that form this panel depart from the idea of algorithmic cultures as theoretical frameworks to suggest the way Netflix -as a cultural engine- is 1) producing a Latinx global discourse; 2) reinventing and mimeticizing traditional narrative tropes from Latin America's telenovelas to appeal to a global audience; and 3) bringing forward new ideas of Latinidad, Hispanidad, Latin America and Spain. Some of the media texts that this panel will tackle are Netflix's original shows Ingobernable, One Day at a Time and the promo for Latin America of the show, Orange is the New Black. The panel also discusses Netflix's production strategies for the Latinx global market through analysis of productions companies in Mexico and Spain. Netflix's first fiction series filmed entirely in Spanish, Club de Cuervos (2015-2019) and its most recent House of Flowers (La casa de la flores, 2018-) are Mexican productions. While recently, Bambu Production in Spain has brought two of the companies most successful global series in Spanish Money Heist (La casa de papel, 2018-) and Cable Girls (Las chicas del cable, 2017-).

Abstract: This paper studies Netflix's algorithm of prediction, recommendation and mediation to promote audiovisual consumption and symbolic mediation of Latino images in global markets. I explore some of the mechanisms used by Netflix for cultural symbolic construction analyzing its portrayal of a global Latino discourse through what has been defined as public relevance algorithms. I focus on the question regarding Netflix's audience building algorithm in engaging in cultural symbolic production through a recommendation system that produces human cognition through habit, chance and necessity by addressing its construction of a Latino global discourse. I argue that Latino culture serves Netflix as a mechanism of textual production that operates through the tensions between three global market geographies: 1) the United States and Europe where the so-called Latino cultural communities construct, live and interpret themselves, while being situated outside the hegemonic culture of each country; 2) Latin America and the Caribbean, where Latino culture is organized and constructed as an imaginary culture projected around the cultural circulation model of globalization, in its neoliberal sense, of transnational communities of markets and consumers, where Latino culture belongs to a repertoire of signs classified as constitutive of some tastes, aesthetics and narratives define by global markets as Latino; and 3) those regions where market and consumer communities build Latino culture as something alien and exotic.

Title: Netflixendo and The Logics of Nostalgia

Session Type: Panel Submission

Authors:

Name: Manuel Aviles-Santiago

Email: maviless -at- asu.edu

Country: US (United States)

Affiliation: Arizona State University Communication and Culture Department

Abstract: Netflix has been producing content not only in a nostalgic style but also as a trigger for nostalgia: shows like *The Get Down*, *Stranger Things*, *Glow*, and *Fuller House* bank on nostalgia for the '70s, '80s, and '90s, respectively. As a platform for the projection of nostalgia, some of Netflix's original shows engage in a bittersweet longing for earlier times and spaces and a possible return—most often to the remembered past, but sometimes to an imagined future (Boym, 2001; Niemeyer, 2014). This presentation considers how Netflix capitalizes on nostalgia as a marketing tactic aimed at bringing Latina/o audiences to its original shows, as a template for producing, adapting, and marketing the revival of an older show, and as an emotional atmosphere provoked by viewers' anxieties about cancellation and salved by the narrative of saving a show. I conduct a critical textual and industrial analysis of the series *One Day at A Time* (ODAT) and its Netflix reboot. Created by Norman Lear in 1975, ODAT told the story of a divorced working-class white woman from Indianapolis raising strong-willed daughters and the family's interactions with the handyman for the building in which they lived. For the new version, Lear hired Gloria Calderón Kellet as showrunner and cultural translator (Rivero, 2005) of the show that has been coined by the press as the Latina/o remake/reboot/reimagination/twist. Within the realms of reimagining there are several deployments of nostalgia in the marketing and narrative, and within the anxiety provoked after the announcement of the possible cancellation of the show. My interest is to explore whether it is possible for nostalgia to be deployed as a source of creative renewal and/or as a means of critiquing present conditions of production, circulation, and consumption of Latina/o representations.

Title: Creación y producción de ficción televisiva latinoamericana en la plataforma de streaming Netflix. De "Club de Cuervos" a "La Casa de las Flores"

Session Type: Panel Submission

Authors:

Name: Maria Jose Higuera Ruiz

Email: mhiguer -at- ugr.es

Country: ES (Spain)

Affiliation: Universidad de Granada Departamento de Información y Comunicación

Abstract: La industria de la producción de ficción televisiva contemporánea se halla caracterizada por nuevas formas de producción, difusión y recepción de series de televisión en la era digital. Las plataformas de video bajo demanda –en adelante, VOD– o de streaming, han establecido un nuevo modelo de negocio que influye en las estrategias de producción, en el contenido de los proyectos audiovisuales, y en el consumo realizado por parte de la audiencia. Resulta esencial destacar el servicio de streaming ofrecido por Netflix debido, entre otros factores, a la variedad de los productos de su catálogo, y a la promoción y difusión internacional de los mismos. En este contexto, incidimos en el incremento y novedades que dicha plataforma ha supuesto para la creación y producción de series de ficción latinoamericanas en la última década. La presente propuesta de investigación responde a un doble objetivo. Por una parte, se estudian las estrategias de producción de contenido latino por parte de la plataforma Netflix. A continuación, se examinan dichos productos audiovisuales, incidiendo en dos proyectos concretos: la primera serie de ficción original de Netflix rodada íntegramente en español, Club de Cuervos (2015- 2019); y la última, La Casa de las Flores (2018-). Empleamos una metodología cualitativa cuyo diseño de investigación se basa en dos técnicas diferentes. En primer lugar, se realiza una revisión bibliográfica sobre el desarrollo de las plataformas de VOD (Sepinwall, 2012; Douglas 2015) y, específicamente, del servicio de Netflix (Jenner, 2016), insistiendo en su modelo de negocio (Izquierdo-Castillo, 2015) y en el contenido de los proyectos que produce (Waybe, 2018). Asimismo, se atiende a trabajos que analizan series de televisión latinas y su repercusión social (Mastro & Behm-Morawitz, 2005; Denzel de Tirado, 2013). Por otra parte, los datos son complementados con testimonios extraídos de una entrevista personal en profundidad a Diego Ávalos, Director de contenidos originales internacionales para Latinoamérica y España; y productor ejecutivo de, entre otras, las series de ficción objeto de estudio. Los resultados de la investigación destacan el papel desarrollado por la plataforma de Netflix en el incremento de la producción de series de ficción latinoamericanas, en la difusión internacional de dichos productos, y en la representación de la comunidad latina a través de contenidos novedosos y poco convencionales. En este punto, los trabajos analizados responden a dichos parámetros y permiten ejemplificar los datos obtenidos. Por lo tanto, se hace patente la configuración de un panorama televisivo que reformula la producción de proyectos audiovisuales gracias a las plataformas de VOD y, en este contexto, promueve interesantes cambios para las series latinoamericanas, su percepción y su alcance.

Abstract: In an increasingly globalized world where the boundary of nation-states no longer constrains the flows of media goods and technologies, the Democratic People's Republic of Korea is one of the few isolated countries in the world. The North Korean government prohibits citizens from using any form of foreign media because they are deemed harmful to socialist ideals. However, pirated media of South Korean TV shows and Hollywood movies are readily available in the black market. The question then is whether societal change will lead to large-scale economic and political reforms in North Korea. If yes, then whether both economic and political reforms will take place simultaneously? Or will economic reform precede political reform or vice versa? How would either or both political and economic reforms bring changes to the media? If societal change will not lead to large-scale political and economic reforms, then how would North Korean leaders use political and economic means to curb foreign media consumption because they deem such to be acts of dissent? Changes in the political system in North Korea are desirable because North Korean citizens do not have basic human rights. The government uses various tactics such as murder, torture, and imprisonment to punish dissenting citizens ("Human rights in North Korea", 2018). The central objective of the paper is to reflect on and discuss a possible path to liberalization in the North Korean media system. In order to outline possible ways of liberalization we compare the North Korean media system with two other socialist media systems. The comparative method allows for a systematic comparison of a small number of cases that belong to a phenomenon (Collier, 1993). We have chosen the People's Republic of China and the German Democratic Republic as two countries of comparison. To conduct a comparative political analysis, we examine the media of present North Korea, East Germany before the reunification, and China in the late 1970s. For each country, we look at government control of media ownership and content; the flow and consumption of western ("capitalist") media among citizens; the size of media economy and the black market in which illegal media circulates; and the adoption of western ("capitalist") cultures in relation to citizens' political views. The interaction between politics, economies, and

cultures will show how socialist states negotiated tension between political control, market liberalization, and underground media cultures. How the PRC and the GDR managed the tension also led to different outcomes in different political and economic paths. We compare and contrast the three countries in order to discuss if North Korea is going to normalize its political and economic relationship with South Korea and other countries, how a liberalization and westernization of its media system could be like and whether it may choose the Chinese or the East German path.

Title: La signalétique comme système de communication internationale, la protection des informations personnelles sur le Web

Session Type: Individual submission

Authors:

Name: Marilou Kordahi

Email: marilou_kordahi -at- yahoo.fr

Country: LB (Lebanon)

Affiliation: Université Saint-Joseph / Université Paris 8

Abstract: L'objectif de notre travail préparatoire est de présenter nos résultats préliminaires sur la construction d'un modèle de traduction automatique de syntagmes écrits en « signagrammes », pour la protection des données à caractère personnel. La signalétique est un système de communication imagée qui donne une information sur un sujet, pour à terme simplifier la communication entre des usagers à l'échelle mondiale. Le signagramme, qui est de type figuratif, est son unité d'écriture (Klinkenberg, 1996). La protection des données personnelles se définit par les lois et réglementations interdisant le stockage ou le partage de certains types d'informations sur des personnes à leur insu et sans leur permission (Kennedy et Millard, 2016). Le modèle de traduction automatique, quant à lui, sert à traduire instantanément le texte d'entrée d'un utilisateur en signagrammes (Hutchins, 2003). Il serait utilisé à partir d'une application Web, à savoir un réseau social. Des utilisateurs de tout âge et de toute culture utiliseraient ce modèle. À notre connaissance, les projets publiés abordant ce sujet sont limités.

Ce travail de recherche se fonde sur les méthodes du transfert sémantique et de l'ontologie. La méthode du transfert sémantique agit comme un système de réécriture qui traite une entrée d'une langue source (p. ex., le texte d'entrée d'un usager) et construit une nouvelle sortie en un système de communication cible (p. ex., les signagrammes), en appliquant des règles linguistiques (Emele et al., 2000). L'ontologie est l'ensemble structuré de mots et concepts, qui représentent le sens d'un système d'informations dans un domaine particulier, et les relations entre ces concepts (Grueber, 1993).

Notre modèle de traduction automatique de syntagmes écrits en signagrammes est composé de l'adaptation de l'ontologie pour la protection des données personnelles (Bartolini et Muthuri, 2015), ainsi que des constructions d'un dictionnaire de signagrammes relatifs au même cas (Holtz et al., 2010 ; Economic Commission for Europe, 2006) et d'une fonction qui fait la traduction du texte d'entrée en signagrammes (Emele et al., 2000).

La démarche de travail proposée s'appliquerait à des établissements appartenant à différents domaines, comme celui du commerce électronique, de la santé. Nous nous intéressons au domaine des autorités administratives, à savoir la Commission Nationale de l'Informatique et des Libertés (CNIL). La CNIL est chargée du suivi de la protection des données des professionnels et particuliers.

Un premier prototype de ce modèle est développé pour tester son fonctionnement dans une application Web. Nous mettons en relation les fichiers de l'ontologie et du dictionnaire avec ceux de la fonction de la traduction automatique afin d'exécuter cette dernière. Le modèle mis en place facilite la communication autour de la protection des données personnelles. Afin d'assurer sa bonne utilisation, des prototypes doivent être rendus disponibles dans des espaces numériques libres, pour aider les usagers à s'y familiariser.

En conclusion, dans un futur proche, nous améliorerons ce premier modèle pour traduire automatiquement un paragraphe écrit en une série de séquences de signagrammes. Nous mènerons des études qualitatives et quantitatives pour analyser le comportement des participants lors de l'utilisation de cet outil.

Email: diana.ingenhoff -at- unifr.ch
Country: CH (Switzerland)
Affiliation: University of Fribourg

Abstract: Introduction and Literature Review

Twitter has become a prime channel for public diplomacy (Bjola, 2015). Many studies have shown how governments are using twitter for international communication (Dodd & Collins, 2017; Christensen, 2013). However, many previous researches lacked to consider the online communication of non-state actors who, especially in times of social media, are actively co-creating content and influencing the communication discourse about nations (Sevin & Ingenhoff, 2018). Therefore, the study investigates the country image based on content analysis of English tweets that mention #country.

Theory and Hypotheses

News has always been important in constructing and shaping the image of foreign countries (Segev, 2016), particularly for the most prominent countries such as the US, China and Russia. Although Twitter is a prime channel for news-related information, it is still possible that the discourse on countries would evolve around other topics and differ from the discourse in traditional media (Wu, Groshek, Elasmr, 2016; Xiang, 2013). The tweets will be therefore analyzed thanks to the new developed five-dimensional model of country image (Authors, year). In line with the theory of reasoned action (Ajzen & Fishbein 1980), the model operationalizes the country image as an attitudinal construct, comprising a functional (e.g., political/economic news), a normative (ethical issues), a cultural (entertainment, food, sports), a natural (landscape) and an emotional (affective evaluations) dimension.

We propose that the discourse on prominent countries in the news will be dominated by news content in twitter corresponding to the functional dimension. Also, for the less prominent countries in the news, the discourse will cover different dimensions as well (e.g., nature and cultural dimensions).

Method

The content analysis of #country in Twitter followed several stages. First, using twitter API we collected tweets mentioning the hashtags of four prominent countries in world news (#USA, #UK, #Russia, and #China), and four less prominent countries in world news (#Canada, #Australia, #Spain, and #Brazil) during two different time frames (October 2018 and January 2019). We randomly chose 2,500 tweets and generated a list of the 100 most frequently occurring words. We created a network of co-mentioned words appearing in the same tweet. Finally, using Louvain method we identified clusters of words that were frequently mentioned together in the same tweet.

Results

Our results confirm our assumptions that countries that are prominent in international news are discussed in Twitter in local and international news contexts, emphasizing their functional dimension. Countries that are less prominent in international news are often mentioned also in broader contexts, emphasizing their culture and nature dimensions.

These findings are of greatest significance for international communication and public diplomacy as they could review the discourse on and topics of countries in social media and the effect of news in these discourses. For the prominent countries, they mirror actual debates and ongoing issues and how they are linked to each other, while for the less prominent countries, the effect is less observable. We will also show which implications this has on developing a public diplomacy policy and the international communication strategy of countries.

Title: [Panel] The effect of the #Me Too and #Time's Up movements one year later: What is left of all the noise' Presentations from the U.S., Mexico, Brazil, Hong Kong & Russia, Spain, and Sweden, Panel description

Session Type: Panel Submission

Authors:

Name: Karen Arriaza Ibarra

Email: arriazaibarra -at- ccinf.ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid, Spain

Abstract: Since October 2017, #MeToo and #Time's Up movements have made some 'big noise' to raise up the voice against men abuse in several domains, not only by anonymous women, but also from Hollywood celebrities and powerful women. On January 8, 2018, during the 2018 Golden Globes Awards ceremony the audience stood up with applauses to the passionate discourse of Oprah Winfrey against 'the powerful and brutal men who have ruled the world for too many years' (...) 'Time's Up!', Oprah repeated, holding in her hand the Cecil B. De Mille award to a lifetime trajectory. Finally, world-known Time magazine appointed 'persons of the year' to those famous women (mostly 'showbusiness' women like Ashley Judd, Alyssa Milano, Rose McGowan or Taylor Swift) who first denounced all these abuses, calling them 'The Silence Breakers'. The movement was "a collective wrath that provoked immediate and shocking results", according to the magazine.

For some others, though, the frequent repetition of this movement and its continuous use in everyday newspapers also implied the hidden danger of transforming the main purpose of these movements into some kind of 'white noise' that would end up in nothing. "If everything is a scandal, then nothing is a scandal", said writer Lee Drutman. The New York Times also published: "The takeaway from this shouldn't be, men and women can't work together", and "What can someone accused of sexual misconduct reasonable expect, what is fair, and what range of punishments should be considered beyond the abrupt torching of someone's career?"

There were also other kinds of reactions: On January 9 the French newspaper Le Monde published a manifesto led by world-known actress Catherine Deneuve and signed by many prestigious French actresses, writers, singers and artists that declared that "Rape is a crime. But the continuous, even clumsy, attempt to seduce a woman should not be portrayed as a crime. Gallantry is not a chauvinist aggression." And it continued lamenting that "there is an attempt to portray women as poor, defenseless victims under the control of phallocratic demons". This letter was backed up by Oscar-winner actresses such as Marion Cotillard, Juliette Binoche, and Oscar nominee Isabelle Huppert.

Therefore, it is relevant to ask ourselves one year later: What have been the mid-term and long-term reactions and effects to the #MeToo and #Time's Up movements in other parts of the world? To what extent these movements have actually brought up new feminist initiatives or associations that have seen the light with similar purposes? Are there any other 'counter movements' to consider?

Have the political authorities / parties taken part in any of these debates – either for or against these arguments?

In this panel we want to provide a very complete overview (with some interesting conclusions) on what has been the reaction to the #Me Too and #Time's Up movements one year they started, in regions as different as the United States, Mexico, Japan & Hong Kong, Brazil, Spain and Sweden.

Title: The #MeToo Movement in Spain: Important Social Advances but with Some Pending Assignments Yet

Session Type: Panel Submission

Authors:

Name: Karen Arriaza Ibarra

Email: arriazaibarra -at- ccinf.ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid, Spain

Abstract: It is not surprising that in Spain, a country where Hollywood's star system has millions of followers, a lot of attention was paid to the #Me Too initiative started by Alyssa Milano in October 2017 and later fueled by Oprah Winfrey and her #Time's Up claim in January 2018. Both actresses urged women to stop all the sexual harassment they had gone through in the present or in the past and to stand up in front of powerful men they would have never dreamed of defying otherwise – like for instance, the now world-known Harvey Weinstein.

As it was expected, initially both movements spread around the world rapidly through the social networks. However, one year later it has been proved that in countries like Spain these movements, although clearly reflected in the traditional media, didn't go far beyond its interpretation as another Hollywood's female stars' strategy directed to take vengeance over those who had abused from their privileged positions at the beginning of their careers.

There are several reasons for this: Spain is a country where the inequality of salaries between men and women is very big; a country with a historic chauvinist stereotype of the male and with one of the highest rates of gender violence in Europe. According to statistics from the Ministry of Health, Social Services and Equality, in 2018 47 women were killed by their male mates – something that was celebrated in the media as 'the lowest rate in fifteen years' (El Mundo newspaper, 31 Dec. 2018). If we talk about work environments, male workers still earn approximately 6.000 euros more (per year) than their women colleagues, thus reflecting that inequalities towards gender still exist (Simona & Giusti, 2017). Luckily, when it comes to the Congress representatives 40,6% of the seats are occupied by women, a honorable third place in the European ranking (ABC newspaper, 7 March 2018) that is only increased by Sweden (46,1%) and Finland (42%).

So, given these and other figures it is not surprising that Spain still has a long way to go towards gender equality. However, for this article the questions are: What have been the real effects of the #Me Too movement in Spain? Will the recent presence of far-right political party VOX, which has already declared its intention to derogate the Gender Law Violence approved in 2017, represent a withdrawal of women's rights in Spain? In this article there is a clear display and analysis of the current situation of Spanish women and Spanish society in general, as well as an analysis of what are the possibilities of echoing social movements such as '#Me Too' and '#Time's Up' in the future.

Title: Sweden and the #MeToo Movement

Session Type: Panel Submission

Authors:

Name: Ester Pollack

Email: ester.pollack -at- ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: The #MeToo initiatives were quickly taken up in all the Nordic countries during the autumn of 2017, though in very different ways. It grew most extensively in Sweden and actresses, singers, journalists, law practitioners, academics, trade union representatives – after sharing their stories in closed forums like Facebook and Instagram – united under different hashtags and decided to make their testimonies public. The allegations typically related to sexual misconducts in the past and were described as men's misuse of power in relation to women in weaker positions, often younger and dependent.

Many of the first public accusations concerned well-known media personalities, journalists, actors, and leaders in the cultural sphere. In the most debated case a cultural club owner, affiliated with the Swedish Academy through his marriage, was accused of leaking the names of former winners of the Nobel prize in literature. He was also brought to trial in two rape cases, and in December 2018, sentenced to two and a half year of imprisonment. Because of these and other scandals, a decision to withhold the Nobel prize in literature 2018 was made.

Legacy media became the main arena for several public debates. This included the movement within the political sphere #inthecorridorsofpower. A couple of male Swedish politicians hastily exited the political realm, with only their party affiliation named in the media. Several other well-known politicians were publicly accused of sexual assault or misconduct; and in a few cases to resignation or dismissal from party assignments (Pollack, et al 2018). The Swedish #MeToo movement also led to some political action: In December 17, 2017, a new law prohibiting non-consensual sex was quickly proposed by Swedish Prime Minister Stefan Löfven. This law came into force in July 2018.

Beside this reform, the #Metoo-movement did not seem to influence the political debates during the national and local Swedish elections later the same year. Structural changes in gender relations are dependent on a more long-lasting work than a few months with intense media debates and news headlines.

Title: #MeToo, Feminism and Femicide in Brazil

Session Type: Panel Submission

Authors:

Name: Raquel Paiva

Email: paivaraquel -at- hotmail.com

Country: BR (Brazil)

Affiliation: Universidad Federal de Rio de Janeiro

Abstract: Violence against women in Brazil continues to grow. The data from 2018 is alarming, and the country is already in fifth place, losing only to El Salvador, Colombia, Guatemala, and Russia. The trend will only increase given Brazil's new political outlook.

The #EleNão movement fits into a continuous line of various other female protest movements in Brazil - internationally articulated as #MeToo - throughout this new millennium, such as Chega de Fiu Fiu (2014) or "Enough with the Catcalls", #EuNãoMereceSerEstuprada (2014) "I Don't Deserve to be Raped". Others include: #PrimeiroAssedio (2015) "The First Harrassment", and #MexeuComUmaMexeuComTodas (2017) "Mess with one of us, mess with us all".

Less than two months from the first round of the 2018 general election, various groups began to mobilize intensely on the internet around the campaigns of the candidates for the President of the Republic. One of the movements which had the most impact on - and off - the networks began with the creation of the Facebook group "Mulheres Unidas Contra Bolsonaro" (Women United Against Bolsonaro) on August 30th, in response to the misogynist, racist, and homophobic declarations made by the candidate of the PSL political party, Jair Bolsonaro, throughout his public life.

A study developed by the Fundação Getúlio Vargas Public Policies Analysis Board (FGV - DAPP) revealed that the #EleNão hashtag earned more the 1.6 million Twitter mentions between September 12th, when the first tweets arose, and the 24th. Tweets that were critical of the candidate were the majority among the collected publications, with around 1.2 million mentions.

The use of the #EleNão hashtag, associated with other hashtags (such as #mulherescontrabolsonaro [#WomenAgainstBolsonaro], #mucb [#M.A.B.], and #nãosomosumafraquejada [related to Bolsonaro's comment disparaging the birth of his own daughter]), also helped to drive the movement, which mobilized 114 cities in Brazil and 66 cities across the world, with support from numerous Brazilian artists as well as foreign ones, such as Madonna, Cher, Dua Lipa, and Ellen Page, among others. Bolsonaro was the candidate most rejected by the electorate: 43% of voters affirmed that they would never vote for him, a percentage which rose to 49% among female voters. It is important to remember that women represent 52% of the Brazilian electorate, a total of 147 million voters.

Finally, despite all electoral assessments recognizing the expressive nature of the female and feminist movement, it was incapable of reversing the general outcome, especially because it was not able to increase its base. After the election, many feminist groups and collectives have been formed with a specific profile, such as women who live in favelas, black women, and rural women, all committed to maintaining their historically achieved rights and fighting against general violence against women as well as femicide, whose number of victims has increased considerably.

Title: When it is #UsToo: Framing of Sexual Harassment towards Journalists in Russian and Japanese Opinion Articles

Session Type: Panel Submission

Authors:

Name: Kateryna Kasianenko

Email: Kasianenko-Kateryna -at- g.ecc.u-tokyo.ac.jp

Country: JP (Japan)

Affiliation: University of Tokyo

Abstract: The #MeToo movement, which started in the US, extended its influence globally. It has become an opportunity for discussion about issues of sexual harassment and assault towards women as well as a call for change. However, up until February-March 2018, Western media outlets had been describing the movement in Russia and Japan as being “slow”, “facing hurdles” or not existing at all (Ryall 2018, Ferris-Rotman 2017, Khurshudyan 2018, Shoji 2018).

In Russia, while some media outlets such as Meduza covered the subject of harassment in domestic entertainment industry, government-loyal news agency Life.ru portrayed Harvey Weinstein as a sufferer, and the host of a liberal online TV-channel “Dozhd” blamed his victims for not speaking up earlier. Meanwhile, in Japan, the case of a freelance journalist Shiori Ito who filed a lawsuit as a victim of rape by former co-worker, stayed underreported by the media across the political spectrum. However, in February and April 2018 journalists in both Russia and Japan respectively were confronted with another issue to cover, when female reporters accused Russian lawmaker Leonid Slutsky and high-ranking Japanese financial ministry official Junichi Fukuda of sexual harassment.

This paper aims to assess whether the media of the two countries were able to expand the issue of journalists facing sexual harassment from their news sources to a larger debate on the position of women in media companies and in society, and whether these events had led to any changes in government or media company policies. To identify which actors were seen as responsible for the problem, how its importance was explained and what solutions were proposed, framing analysis of opinion pieces covering sexual harassment published in 3 Russian (Kommersant, Komsomolskaya Pravda, Novaya Gazeta) and 5 Japanese national newspapers (Asahi, Mainichi, Nikkei, Sankei, Yomiuri) is chosen. The examination of newspaper coverage is complemented by the analysis of articles and podcasts from web-only news sources such as Meduza and Buzzfeed Japan. Lastly, the paper gives an overview of journalists’ movements following the accusations and protests organized by female reporter networks in Japan and the boycott of the Russia’s State Duma by several Russian media as well as reactions of the political authorities in both countries.

Title: Politicization and Polarization of the #MeToo Movement in the United States

Session Type: Panel Submission

Authors:

Name: Elizabeth Earle

Email: elizabeth.earle -at- tamu.edu

Country: US (United States)

Affiliation: Texas A & M University

Abstract: Throughout 2018 celebrities in the United States continued to publicize both the #MeToo and Time's Up movements throughout 2018. At the Golden Globes in January many in attendance wore all black in solidarity. Oprah Winfrey gave a widely publicized speech about the movement, saying that we have all 'lived, too many years in a culture broken by brutally powerful men. And for too long, women have not been heard or believed if they dared to speak their truth to the power of those men. But their time is up. Their time is up. Their time is up' (Winfrey 2018). Indeed, it seemed their time was up, as in April comedian Bill Cosby was convicted of rape, singer R. Kelly was dropped from Spotify playlists, and CBS Chief Les Moonves resigned in the wake of sexual misconduct accusations. However, in September of 2018, #MeToo was brought into the national spotlight and the realm of politics when Dr. Christine Blasey Ford accused Supreme Court nominee Brett Kavanaugh of sexually assaulting her in high school. During the hearing, the #MeToo movement became politicized in new ways and polarized along party lines. This piece looks at both the positive and negative impacts of the Kavanaugh hearing on the #MeToo movement.

Indeed, on NPR's "Morning Edition" from October 31, 2018, Tovia Smith said that "polls show the nation deeply divided on sexual assault and harassment, with fissures running more along party lines than gender" (Smith 2018). This division along party lines is due, in large part, to the September and October 2018 hearings and Supreme Court appointment of Brett Kavanaugh. These events have politicized and polarized the #MeToo movement, changing its course. This article examines how the Kavanaugh hearings became a defining moment for #MeToo, in terms of politicization, and looks at some of the divided opinions on #MeToo, as expressed in the United States media. I begin by reviewing the highlights of the past year of the movement, and then move on to discuss the Kavanaugh hearings and what the politicization and polarization of #MeToo means for the movement. While some articles argue that the Kavanaugh hearings had a positive impact on #MeToo, others argue that they negatively affected the movement.

Title: #MiPrimerAcoso and #METOO: The analysis of the media coverage of gender problems in Mexico

Session Type: Panel Submission

Authors:

Name: María Teresa Nicolás Gavilán

Email: mnicolas -at- up.edu.mx

Country: MX (Mexico)

Affiliation: Universidad Panamericana, Campus México

Abstract: Mexico's women hadn't been indifferent to sexual violence. In April 2016, two activists invited women to use hashtag #MiPrimerAcoso to share their experiences about violence against them. Response was overwhelming, and the hashtag became trending topic. Valuable information was obtained to get a profile of the victims of sexual abuse.

The problem, as it happened a year and a half later with #MeToo, is that, for women, sexual harassment is not only in their jobs, but it can be part of their day by day and since they are children, with deepest roots in the lack of gender equity, that later prevents women from preparing and obtaining the same jobs and salaries as men.

Movements like #MiPrimerAcoso and #MeToo give notoriety to this critical situation, but in Mexico, government and ONG don't have the resources to fight against its structural causes.

The analysis of the media coverage of #MeToo in Mexico and the public response in social media shows information about the issues that most concern women in Mexico.

Abstract: The role of the media in our society has been addressed through various approaches and theories, such as agenda-setting, framing, indexing, priming, hegemony, or concentrated media ownership structures. The research on the analysis of the media representation through a framing theory has been growing, and the theory posits that the media tend to present a constructed “reality” by selecting and highlighting particular aspects of reality while obscuring or omitting others (Entman 1993). Hence, this process leads the audience or readers to a particular understanding of the reality. Depending on how each event or issue is defined, the same event can be presented and understood in different ways or through different frames.

“Traditional” or typical framing research has used content or text analysis to identify such frames by examining major news sources that each story adopted, words used, and the tone of the stories. However, this study aims to extend this framing research to a different level by using computer-assisted analysis. The data-mining method (a popular method in the computer science field) allows us to analyze a massive data and to visualize the representation through text-mining, natural language processing, and emotion lexicon. Within the broad framing approach, this study intends to show how a major newspaper of five countries depicts leaders of two Koreas (Jung Un Kim and Jae In Moon) and US President Donald Trump.

The past two years (2017 and 2018) are important in a geopolitical sense as the relationships between the two Koreas and the relationships between North Korea and U.S have transformed through summit meetings or talks. Under such developing geopolitical circumstances, this study addresses the following questions: What is the overall representation of each leader portrayed in international newspapers? What image is dominant? How similar or different is the portrayed image

of each leader across international newspapers? Have such representations changed between the years 2017 and 2018?

A total of six newspapers written in English from five countries (including two newspapers from South Korea) were selected for this study: The Chosunilbo (“conservative” newspaper) and The Hankyoreh (“liberal” newspaper) from South Korea, Rodong Sinmun from North Korea, The New York Times from USA, The Globe and Mail from Canada, and People’s Daily from China. These countries were selected based on the history and geopolitical relations with two Koreas and the USA. Instead of traditional content analysis, this study uses a data-mining method through key word search, text mining, and Natural Language Processing algorithms (Zhang, Yoshida & Tang, 2010; Manning, Surdeanu, Bauer, Finkel, Bethard & McClosky, 2014). As a Lexicon-based method, emotion analysis detects different emotions expressed in news stories by analyzing words describing each leader. Various degrees of emotions associated with each leader would indicate the nature or orientation of reported frames. The significant contribution of this study is to present a new method of text mining and big data analysis for framing studies and to show how the overall media frames could be visualized for a clear and better understanding of media representation.

Title: Contested colonial discourses' A Multimodal Critical Discourse analysis of the representations of Belgium in the Congolese press and vice versa during the Congolese elections.

Session Type: Individual submission

Authors:

Name: Elke Mahieu

Email: Elke.Mahieu -at- UGent.be

Country: BE (Belgium)

Affiliation: Ghent University

Name: Stijn Joye

Email: Stijn.Joye -at- UGent.be

Country: BE (Belgium)

Affiliation: Ghent University

Abstract: Many studied already the Western media representations of 'Africa', mostly stating that colonial and Afro-pessimistic discourses are still present (Mudimbe 1988; Toussaint 2016). However, this research has been conducted for the media of the biggest colonizers in Africa, being France and the UK (Toussaint 2016), but not for Belgium, despite its violent colonial past in among others the Democratic Republic of Congo. Views of the African countries on 'the West' and issues of Occidentalism are on the other hand almost completely neglected (Buruma & Margalit 2005; Mohmoh 2003). Acknowledging the historic colonial bonds between states, this paper studies the range of contemporary representations of Belgium in the Congolese printed press and vice versa, thus taking into account a reciprocal perspective.

Focusing on newspaper coverage of the Congolese elections, which were postponed from 2016 to 2017 and finally took place in December of 2018, this paper discusses the contemporary representations of DR Congo and Belgium in each other's printed press. We identified the preparatory phases (Frère 2011) of the elections in 2017 as critical discourse moments, or periods which could 'challenge the "established" discursive positions' (Carvalho 2004: 166) of DR Congo, as an ex-colony, towards ex-colonizer Belgium and vice versa. Thereby, we follow the suggestion of Willems (2012: 92) to step away from the dominant view on elections in the African countries as a necessary step to install a liberal democracy, where the media 'must act as watchdogs guarding against possible abuses of power by governments'. Instead, we focus on the power relations and the ideological role that media play in constructing a reality about these key moments (Willems 2012).

Using a Multimodal Critical Discourse analysis (Fairclough 1995; Machin & Mayr 2012) we analysed articles and their images on the Congolese elections in 2017 in the six main Belgian newspapers and three Congolese newspapers. The selection of the Belgian press is divided between mid- and upmarket and Dutch- and French-language newspapers. The selection of the Congolese press is Kinshasa-based and divided between independent newspapers and the ones that are strong or moderately supportive of the ruling party (Frère 2011) as well as between printed and online media. Our findings suggest a substantial difference in discourses on Belgium among the Congolese media, with the pro-state newspaper articulating the strongest nationalist and anti-colonial

discourses. On the Belgium side, the research hints at a liberal democratic framework on the postponement of the elections, which resonates the approach of European development policies (Willems 2012: 92). Additionally, the paper will feature the preliminary results of a quantitative content analysis, which shows a strong connection between the French-language Belgian and Congolese press. This touches upon what Frère (2011: 165) calls ‘campaigning through foreign media’, where foreign newspapers are seen as important communication channels for Congolese contenders.

Title: The Role of U.K. Public Diplomacy in Empowering the Women Rights in Middle East through CSR: Examining the British Petroleum Company in Empowering Women Rights in the Sultanate of Oman through Corporate Social Responsibility

Session Type: Individual submission

Authors:

Name: Hamed AL-Hasni

Email: hamedalhasni-yati -at- hotmail.com

Country: CN (China)

Affiliation: Tsinghua University - China

Abstract: Globalization has caused in the growth of international public relations as transnational organizations enter new markets and adapt their strategic communications efforts to cultural differences. Globalization also has opened a new role in public diplomacy for multinational corporations. Whereas traditional diplomacy was conducted between governments, public diplomacy is no longer simply a government's international public relations (Candace, Antoaneta & Ioana, 2011).

The shift from government-to-government diplomacy to government-to-people or even people-to-people diplomacy brings about a blank map to be filled. Signitzer and Wamser (2006) emphasize that this shift sheds light on the similarities between public relations (PR) and public diplomacy (PD). Also they emphasize how the mass participation in foreign policies extends far beyond the interactions between national governments.

Moreover, Lawniczak (2007) stated clearly that CSR initiatives in particular can have great impact in developing and transitional countries where they have the potential not only to reduce poverty and affect public policy global issues, but also to contribute to societal transformation to help the transformation succeed. And numerous scholars have argued for the significance of the public relations standpoint as a useful model for the study and practice of public diplomacy (Fitzpatrick, 2007; Signitzer & Coombs, 1992; Signitzer & Wasmer, 2006).

Therefore the significant of this study is to explore the role of business in public diplomacy by examining CSR activities of U.K. corporations in Middle East, particularly the British Petroleum Company (BP) in Oman, and how this activities and programs have employed extremely to empower the women's rights in particular.

The theoretical framework of current study has motivated by Golan (2013) integrated model of public diplomacy. The first level of Golan's model is to deals with mediated public diplomacy, the second level with nation branding and the third level with relational public diplomacy. Consequently this study is concentrating on the third level of Golan's model through applying the relationship management theories from the public relations field which can be a useful framework in public diplomacy.

The methodology of current study used multiple qualitative approach over conducting textual analysis of British Petroleum Company's (BP) media outlet such as press release, news, magazines, annual reports and social media contents which have been published from 2014 until 2018, and specifically were targeted to Oman's society, as well as in-depth interview with the (BP) community liaison officers and corporate communication managers in Oman.

In conclusion, the key Findings indicates that the British Petroleum Company has played a major role in empowering women rights in Oman specifically by transforming local women from traditional work condition to professional atmosphere through corporate social responsibility activities which ultimately achieved the UK public diplomacy objectives in the Middle East.

Title: From parochialism to cosmopolitanism in American audiovisual supply' Netflix's U.S. foreign television programming

Session Type: Individual submission

Authors:

Name: Jose-Carlos Lozano

Email: carlos.lozano -at- tamiu.edu

Country: US (United States)

Affiliation: Texas A&M International University

Abstract: Historically, the supply of films and TV series in the United States has been dominated almost exclusively by local/national programming produced by the powerful media conglomerates based on the country, significantly limiting the geographic diversity of choices American viewers have had. The offer of films and series from other countries has been extremely restrictive or non-existent due to the pervasive control or influence of these media conglomerates over U.S. television networks and cinema venues.

Netflix and other videos-on-demand platforms seem to be changing this situation, increasing significantly the availability in the U.S. of fiction produced in different countries and regions of the world. Through multiples screens (TV sets, computers, tablets, smartphones) these platforms are offering to thousands of American viewers unprecedented access to an immense volume of movies and television programs from many different origins and genres.

These platforms have done the latter mostly for economic reasons (productions from these other regions are much more cheaper and Netflix and the rest of the VOD platforms face significant restrictions when buying American programming because of competitors in the local market).

Another force driving this growing acquisition of international programming or even the investment and financing of foreign audiovisual content is the need to cater to local markets outside the U.S. as well as to ethnic minorities and migrants from those geographical regions residing in the United States. For the reasons and more, these platforms have increased substantially the contact of American audiences with productions from other countries, potentially exposing them to new narrative styles, locations, ethnicities, nationalities, languages, and cultural meanings.

This paper discusses the findings of a content analysis of one year and a half of new television releases by Netflix (January 2017-June 2018). In particular, the study analyzes the geographical origin and genre of all monthly new television fiction releases in this popular platform to assess the percentage international programs represent in the total number of Netflix's new offerings, as well as the main countries or world regions these international options come from.

The paper discusses how diverse the supply of fiction in Netflix is in terms of national origin of the productions, and whether and in what degree American productions are still dominant over all other national/regional contents. Also, the paper analyzes what percentage of the non-American productions is presented as "Netflix Originals," and how many of the foreign contents are actually produced in part or completely by Netflix.

Title: "MEDIA, SOCIAL NETWORKS, AND REGRESSION IN BRAZIL"

Session Type: Individual submission

Authors:

Name: Muniz Sodré

Email: sodremuniz -at- hotmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal do Rio de Janeiro

Abstract: The results of Brazil's 2018 elections helped to raise the growing wave of rightwing politics which has spread throughout different regions of the world, with its flagrant risks to established democracies and human rights. The most symptomatic point of this new moment is the expansive phenomenon of the social networks. In little over a decade, the diverse resources available principally via cellular phone have popularized and fragmented the diffusion of information, indistinguishably transforming all users into both producers and consumers. Communication studies, despite having focused on this new moment for a long time, were not capable of predicting the destructive effects that capillary dissemination tools, such as WhatsApp, could produce.

Acquired by Facebook for 22 million dollars in 2014, the application became the population's most widely used communication channel in countries such as Brazil, with its extremely low education index and high telephone costs. Initially dedicated to the circulation of private messages, the application soon came to be used by communication outlets, as begun by the Rio de Janeiro newspaper Extra in 2015; in 2017, it became a promising tool for business marketing, and, finally, in 2018, the defining instrument in the presidential elections through the dissemination en masse of fake news, through automation features.

The final result was that a supposedly neutral or innocent tool, oriented toward the full-time connection of family, friends, employees and consumers, was transformed into the most efficient electoral tool in Brazil. The phenomenon caught traditional institutions by surprise, as they were unable to react against the highly effective, new mobilizing resource: neither legislation, established powers such as political parties, nor traditional media outlets, or even academia managed to effectively react. Fake news and rumors were spread at an unimaginable speed. After the unpredictable ascension of the new right, other variables came to be defined through reported data and investigation. The proposal of this article is to analyze this data within the conceptual framework of this phenomenon, as well as investigate the role of traditional media, indicating, as far as possible, new paths for research.

Title: Disaffection, Anger and Frustration: the new Egyptian digital public sphere

Session Type: Individual submission

Authors:

Name: May Alaa Abdel Mohty

Email: may.allaabdelfmohty -at- ucdconnect.ie

Country: IE (Ireland)

Affiliation: University College Dublin, School of Information and Communication Studies

Name: Eugenia Siapera

Email: eugenia.siapera -at- ucd.ie

Country: IE (Ireland)

Affiliation: University College Dublin, School of Information and Communication Studies

Abstract: Since the pivotal moment of the Arab Spring, Egypt has gone through several tumultuous years culminating in the contested elections of 2014 which saw Abdel-Fattah al-Sisi elected president. Within this context, how is the Egyptian digital public sphere, once so dynamic, responding? In addressing this question theoretically, we make use of Kraidy's (2006) concept of hypermedia space alongside Chadwick's (2013) notion of hybrid media; through these, we understand the media ecosystem as a complex and contested space, characterised by control, tensions, relative unpredictability and creative remediation. Our main research question therefore is, how is this hybrid media space reconfigured in post-Arab Spring Egypt?

In empirically examining this question, the proposed article relies on a three-pronged investigation.

In a first step, we map the social media sphere in Egypt, focusing on the most popular accounts.

Secondly, we undertake a more focused analysis of some of the most popular pages and accounts, looking both at the topics and themes of their posts as well as through a qualitative content analysis of a random sample of the reactions/comments they receive. Specifically, we selected the Facebook pages of four news outlets, Al Masry Al Yom, Al Yom Al 7, Al Ahram, and Daily News Egypt, representing some of the most influential media and the YouTube presence of Lamis El Hadidi and Amr Adeeb, both popular TV hosts. In a third step, we conducted a set of 30 in-depth interviews with young people (18-40) in Cairo regarding their media habits and practices.

Preliminary findings suggest a broad depoliticisation of the digital public sphere, with religious personalities, TV hosts, entertainers and lifestyle media dominating. Secondly, this depoliticisation is encountered among younger people who have turned away from politics, are sceptical about all kinds of media, rely on close family and friends for news, and use social media primarily for personal connections. Thirdly, among comments left in media and other social media accounts, we see that a particular kind of political sentiment is emerging as dominant, revolving around dark humour and irony, but which also includes anger, displayed in rude comments and insults. All these point to a shift from the hope and promise of the Arab Spring to disaffection and frustration. While disaffection may have been present in the years before the January uprising, the current hybrid media space leaves little room for collective political mobilisation.

Title: Assessing the impact of Chinese media on the perceived attractiveness of China and its policies among the foreign community in China.

Session Type: Individual submission

Authors:

Name: Gaelle Patricia Ayamou Chekam

Email: patygaelle -at- gmail.com

Country: CN (China)

Affiliation: Ph.D. Candidate at Tsinghua University

Abstract: Over the past two decades, Chinese media have seen a rapid expansion globally as part of what is often referred to in the existing literature as China's "Going Out" strategy. This globalization process of Chinese media, as reflected by the establishment of foreign offices of major news outlets such as Xinhua News Agency, China Daily and China Radio International, as well as the launch in 2016 of China Global Television Network (CGTN), is regarded by most media scholars as an instrument of Chinese public diplomacy or as a way to achieve greater soft power as conceptualized by Joseph Nye. In other words, media are instrumental in China's goal to make its policies, culture, and political perspectives attractive to the foreign audience.

This study examines the effectiveness of the current use of Chinese media as a tool to enhance the country's soft power. However, unlike previous studies that have mainly focused on evaluating the reach, impact and influence of Chinese media on non-Chinese audience abroad - i.e. in African countries and in Latin America- this paper focuses on foreigners living in China. It investigates the use of Chinese media by the international students of Chinese universities in Beijing. By looking into the source selection habits of international students in Beijing, this study also aims at evaluating their exposure to the Chinese perspective on global socio-political issues and at understanding the potential motives behind such exposure and its impact on their opinions about China and China's foreign policies.

The uses and gratifications theory is used as the theoretical framework to understand the reasons behind the selection of Chinese media as daily news sources. Assuming that in today's information-rich societies, individuals tend to combine news content from multiple platforms and multiple information sources, this study adopts a media repertoire approach to information consumption. In order to reach the objectives of this paper, a survey of international students affiliated to Chinese universities in Beijing is carried out. Based on findings from the previous literature, factors investigated in the selection of news sources by international students include acculturation, gratifications, media skepticism, accessibility and availability, as well as political interest. As for the media repertoire patterns, both complementary and convergent patterns, as introduced by Steven H. Chaffee, are investigated among participants. Drawing on the results, this paper concludes by reflecting on the impact of Chinese media on the perceived attractiveness of China, its policies and political ideals by the foreign community in the country.

Title: Audiovisual flows and media policy: the 'Netflix tax' in EU Member States

Session Type: Individual submission

Authors:

Name: Catalina Iordache

Email: catalina.iordache -at- vub.be

Country: BE (Belgium)

Affiliation: imec-SMIT, Vrije Universiteit Brussel

Abstract: The global discussions on the 'free flow of information' in the 1960s (see Guback, 1969; Hamelink, 1983; Schiller, 1971) have since kept the focus of transnational media flows on the imbalances between markets. Over time, EU media policies have attempted to strengthen the internal market for audiovisual services in order to counter US dominance. This has been done through measures of both economic and cultural nature. Recent changes in the media industry, primarily brought about by digitalisation, have made it increasingly difficult for audiovisual policy to keep up. The global market for video-on-demand (VOD) services has particularly grown (Doyle, 2018), as have services distributed over the Internet, so-called over-the-top (OTT) (Arthofer et al., 2016).

Discussions on the imbalance between markets have resurfaced due to the rising dominance of US companies in SVOD markets. In an attempt to anticipate the dominance of platforms like Netflix and Amazon, the revised AVMSD extends its quota regime and obligation to invest in European works to on-demand audiovisual players, also when targeting a foreign market. But are production incentives and distribution quotas still the way to go? Through document analysis, this paper examines the existing financial investment obligations on VOD platforms in nine EU countries. We found that policies are very fragmented between Member States, both with regards to quotas and investment obligations. So far, only a few countries have, or are in the process of imposing investment obligations on foreign players. We paid particular attention to the calculation methods of the investments required, as well as the calculation bases, and the motivations listed in the regulatory documents for extending the obligations to on-demand audiovisual services providers. The contributions were found to be limited and rather symbolic. Furthermore, as with previous measures of this type, they are more likely to reinforce the production, rather than the circulation of EU audiovisual works. Thus, their impact on the transnational, and particularly intra-European, flow of content is expected to be limited. Especially since many countries are found to promote domestic content, over non-national European content.

Title: [Panel] Diversifying Chinese international academic publication in a changing global media environment, Panel Description

Session Type: Panel Submission

Authors:

Name: Deqiang Ji

Email: jideqiang -at- cuc.edu.cn

Country: CN (China)

Affiliation: The National Centre for Communication Innovation Studies, Communication University of China

Abstract: The world of academic publication has been changing against the backdrops of both the digital revolution in the publication industry and the emergence of non-Western players. For example, in order to build global academic reputation there is a recent clear trend for some leading public Chinese universities to publish in English language journals in collaboration with international academic publishers. In the meantime, the arena of international communication research has also been under transformation largely because of the fast-changing global media environment, which is characterized, as it happens with the publication industry, by both digitization and diversification of voices and players.

At the intersection of the afore-mentioned transformations in the publication industry and the global media environment, this panel / roundtable is organized to have expert points of view when it comes to determining which could be the main issues of research and publication in international communication research, with the contribution of experienced European academics. They will exchange opinions and points of view with the editors of Global Media and China, a new Sage journal associated with the research of the dynamics of international communication in a digitized world, as well as the potential roles played by China in it.

Topics of discussion will include:

- Trends of international communication in a digitized world
- International communication and geopolitics
- Social media and its impacts on international communication
- The history and present of academic publication in international communication
- De-Westernizing of international communication research and its impact
- Academic publication of international communication research from non-Western countries
- China's media going global and the changing global media landscape
- The Role of IAMCR in diversifying international academic publication of media and communication research

Participants:

- John Downey, Professor and Director for the Centre of Research in Communication and Culture, Loughborough University

- Karen Arriaza Ibarra, Professor, Universidad Complutense de Madrid and Chair of the INC Section at the IAMCR
- Anthony Fung, Professor, The Chinese University of Hong Kong, Editor-in-Chief, Global Media and China
- Lei Zhang, Professor, Communication University of China, Managing Editor, Global Media and China
- Deqiang Ji, Associate Professor, Communication University of China and Vice Chair of the INC Section at the IAMCR
- Xiao Han, Assistant Professor, Communication University of China, Commissioning Editor, Global Media and China

Title: [Panel] A new international communication order for the digital age' The impact of BRI and BRICS, Panel Description

Session Type: Panel Submission

Authors:

Name: Daya Thussu

Email: Daya.Thussu -at- sc.tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University

Abstract: This panel will examine the emerging trends in international communication triggered by the profound and transformative changes in the media and communication sectors in large non-Western countries – notably the BRICS (Brazil, Russia, India, China and South Africa) nations. As a result of digital globalization, a new type of global connectivity has developed, creating possibilities of a new world communication order for the digital age. This is happening at a time when the West is experiencing anti-globalization tendencies exemplified by Trump's presidency in the United States, as well as by Brexit (Britain's plan to leave the European Union). On the other hand, within the BRICS grouping, China and India – with the world's largest and second biggest internet populations as well as diasporas - have demonstrated impressive economic growth.

The Belt and Road Initiative (BRI - formerly called One Belt, One Road), China's ambitious developmental and geopolitical 'going out' project, is aimed at creating connectivity of capital and commerce in Eurasia and beyond. BRI also offers unprecedented opportunities for Chinese government and corporations to expand and amplify their communicative power within the countries involved in the projects. Due for completion in the next decade, BRI comprises more than 900 infrastructure projects, ranging from ports and roads to digital infrastructure, valued at about \$1.3 trillion, with the aim 'to deepen economic integration and connectivity'.

Will BRI undermine the BRICS grouping? Although in operation as a formal group since 2006 and holding annual summits since 2009, the BRICS countries represent five large and diverse nations with different political and media systems as well as stages of development. Such a grouping, coinciding with the relative economic decline of the West, creates opportunity for non-Western powers, to influence global communication structures hitherto dominated by the US and its Western allies.

The rationale for this panel is that while the media and communication sector in the BRICS nations is rapidly expanding, their impact on broader international communication debates and discourses has received scant academic attention. The five presentations will highlight the geo-political implications of these power shifts in international communication. The panellists suggest that the Chinese focus on BRI may be undermining the BRICS grouping. They will focus on different models of governance within the BRICS nations, the promotion of BRI, disagreements between China and India over BRI and the soft power perspectives from Brazil, a BRICS member not directly affected by the BRI.

The panellists explore how a new international communication order is being created by large non-Western nations, increasingly dominated by the economic and political interests of China. They also articulate the need to examine these developments within the context of the global communication order. The panel draws on empirical studies from multiple conceptual frameworks, methodologies, and levels of analysis to provide a comprehensive discussion of one of the most significant issues in international communication. The panel also encourages the historicization of research on international communication, emphasising continuities and changes of communicative practices and of production and reproduction of global power relations.

Title: BRICS as a testbed for media in democracy

Session Type: Panel Submission

Authors:

Name: Kaarle Nordenstreng

Email: kaarle.nordenstreng -at- tuni.fi

Country: FI (Finland)

Affiliation: Tampere University

Abstract: Democracy is a concept which is looming behind most international comparisons of media systems but is seldom thoroughly examined. The BRICS countries introduce different ways of understanding and implementing democracy, ranging from the traditional multi-party electoral democracies of Brazil and India to China governed by a single party, with Russia and South Africa in between.

This paper will, firstly, show what is the official reading of democracy in each of the BRICS countries – as stipulated in the constitutions and practice in the prevailing political reality. Second, the paper will present a critical overview of existing models of democracy and the scholarly discussion around them. Thirdly, the paper will apply the academic theories to understand how media systems relate to democracy in the BRICS countries. Finally, the paper draws conclusions on how to study media and democracy in general.

Title: Marketing China's global rise

Session Type: Panel Submission

Authors:

Name: Colin Sparks

Email: sparksc -at- hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: The economic development of China has reached the point where it is beginning to be a challenger to the USA in a range of areas. It is following a classic imperialist path in being increasingly a net exporter of capital. It is developing its military forces to ensure that it can exercise its power internationally. It is developing an international cultural apparatus which is designed to present China and Chinese initiatives in a positive light to sections of the world's population. In doing these things, it is doing in a conscious and deliberate manner many of the things that occurred in a rather more piecemeal fashion with the rise of earlier imperial powers. If the old world communication and information order was dominated by the USA, China's clear intention is make sure that the New World Communication and Information Order is dominated by China. China is still very much a junior operator and in finance, armaments and culture it is still vastly weaker than the USA, but it is growing year on year and a re-organization of global power relations seems more or less inevitable. This paper is concerned only with the cultural dimension of China's rise. It briefly reviews the state of its international media initiatives, including the well-researched investments in Africa. On the basis of what is known already about these developments and their reception, the paper considers the prospects of China's success in forging a major place in international communication.

Affiliation: Communication University of China

Abstract: Since its announcement over five years ago, the Belt and Road Initiative (BRI) proposed by China's new leadership has been received with scepticism by Western mainstream media, as well as some BRICS countries - notably India - which see it as providing a new developmental model with possible geo-political ambitions. China's self-driven mode of globalization has had to deal with the dynamics of the world political and economic order, in which both the decline of the West and the rise of the Rest co-exist. After surveying the theoretical discussion about how the BRI will shape both global and regional geopolitics and communication, this paper will shift attention to a transcultural communication approach in order to map out how BRI could facilitate, consciously or unconsciously, a multi-leveled communication, thus contributing to a new international communication order. A three-fold analysis will be deployed. First, at the level of meta narrative, the BRI resonates with people's collective memories about the old Silk Roads that connected China and Eurasia via trade and cultural exchanges for many centuries. Though reframed by modernism, orientalism, and the 20th-century ideological antagonism, which together composed a West-East dichotomy, this imagined connection has never disappeared. The paper will examine how the BRI rhetoric revitalizes or appropriates this connection into today's international environment in pursuit of communicative relations with countries alongside the BRI. Second, China's legacy media is the major platform to tell the world about the BRI. The paper will summarize the dominant discourses on the making of the BRI by examining the websites of Xinhua and CGTN - designated official channels to carry the message to a global audience. Third, the role of social media and interpersonal communication is becoming increasingly important to mediate the BRI between China and relevant countries. The increasing use social media and tourism and educational exchanges is creating news people-to-people communication. The paper, therefore, proposes a transcultural communication framework, instead of a media-centric perspective, to understand the BRI in a holistic manner.

Title: BRICS, BRI and a NWICO 2.0'

Session Type: Panel Submission

Authors:

Name: Daya Thussu

Email: [daya.thussu -at- sc.tsinghua.edu.cn](mailto:daya.thussu-at-sc.tsinghua.edu.cn)

Country: CN (China)

Affiliation: Schwarzman College, Tsinghua University

Abstract: The communication aspects of China's ambitious economic and geo-political project the Belt and Road Initiative (BRI - formerly called One Belt, One Road), also sometimes known as the New Silk Roads in the West, have largely been neglected within international communication research. This paper focuses on the communicative dimensions of BRI within the geopolitical framework of a transforming Asia. After examining the Western governments reservations about the geo-political implications of BRI, evident in various commentaries and concerns expressed by think tanks and government reports, the paper will focus on how the BRICS nations are reacting to arguably the biggest infrastructure project in the world. The paper suggests that two of China's main BRICS partners – Russia and India – harbour reservations about BRI, while for the other two members (Brazil and South Africa) it is not of such geo-political significance. Many commentators in Russia view BRI as undermining Moscow's traditional domination of its 'near abroad' – the central Asian nations - by Chinese growing investment and infrastructural presence in the region. As for India, the China-Pakistan Economic Corridor (CPEC) project - an integral part of BRI – makes politicians and analysts in New Delhi nervous about what many see as the 'encircling' of India by its eastern neighbour. There is also an issue of sovereignty involved as parts of the CPEC pass through territories claimed by both India and Pakistan. It is no coincidence that India was the only major country not to participate in the inauguration of BRI in 2017. The BRI issue has been compounded by tensions over border disputes (notably in summer 2017 which almost stymied the Xiamen BRICS summit). The paper suggests that such scepticism continues to characterise the coverage of China in the Indian media, which in any case remains very limited, generally negative and influenced by Western perspectives. The coverage of India in Chinese media is even scantier and more superficial. Such limited understanding between the two of the world's largest civilizational powers, most populated countries and fastest growing economies (since 2015 India has been the world's third largest economy after US and China in purchasing power terms) bodes ill for the future of BRICS too. However, at the same time economic cooperation between the two Asian giants is growing rapidly – China is one of India's largest trading partner (more than half of India's smart phone market is now dominated by Chinese-made smartphones), while Bollywood films are widely appreciated among Chinese audiences. As the West proposes de-globalization, the paper asks, are China and India creating a new version of globalization and thus helping establish a new world information and communication order for the digital age: a NWICO 2.0?

Title: Brazil and corporatist soft power

Session Type: Panel Submission

Authors:

Name: Joseph Straubhaar

Email: jdstraubhaar -at- mail.utexas.edu

Country: US (United States)

Affiliation: University of Texas, Austin

Abstract: This paper argues that Brazil has developed considerable soft power in the world, particularly from commercial cultural industries in television and music, but also from government initiatives like the building of its new capital Brasilia in the 1950s and the initiatives to host the World Cup and Olympics in the 2010s. It also argues that the soft power originating from Brazilian cultural industries has a distinct flavour, albeit it one similar to other Latin American countries, in the way that cultural industries have developed key export genres in a corporatist form of interaction with a series of national governments, where governments have delegated much of their internal ideological work on national identity to cultural industries, particularly in music, from the 1930s on, and television, from the 1970s on. Another distinct Brazilian (and Latin American) pattern is the way that its cultural industries have developed in hybrid form in interaction with the culture and industries of the U.S. so that its soft power reflects historical U.S. influence.

Title: Rethinking the Role of Chinese Migrants in International Communication Studies

Session Type: Individual submission

Authors:

Name: Hui Ye

Email: victorye -at- 126.com

Country: CN (China)

Affiliation: Communication University of China

Abstract: Long-distance and large-scaled human flows have always been one of the key driving forces of global connections. During past two centuries, life-changing convenience results from globalisation push migration behaviors into a situation of less cost for both time and money, like the modern information networks and instant messaging technologies. Cross-border movements are no longer as treacherous as it was in the era of Marc Polo or Vasco da Gama. In this case, diversified migrants living in a nation-state together, and frequent human flows between national borders both become a daily and commonly seen spectacle in the globalised world. Therefore, migration and migrants draw highlighted attention from communication and media studies. In China, Chinese immigrants scatter into different corners around the globe, whom are stated as ‘overseas Chinese’ (华侨, hua’qiao) by Chinese government, have also been widely-discussed by academia, especially international communication scholars. According to the author’s review, the subjectivities of Chinese immigrants in these studies could be categorised into three patterns: 1. Chinese immigrants as the audience of international communication media contents. In this perspective, researchers want to figure out the effect of international communication practices, especially to understand how well Chinese people overseas acquire the knowledge of Chinese society and Chinese culture via those media contents. By this taken, these studies aim to discuss how to better construct the audience an identity as a member of Chinese national community. 2. Chinese immigrants as the communication subjects or at least the ally of Chinese international communication, these studies indicate a default assumption that with their intercultural and transnational identities and life experiences, they have better capability to overcome culture barriers, even culture shocks in the process of international of intercultural communication practices. 3. Chinese immigrants as carriers or performers of material culture that represent China, like Chinese restaurants, Chinese media group overseas, Chinese art performing organisations, by whom those studies think could better spread Chinese culture to other civilisations. In the epistemological perspective, these studies followed the traditional approach nation-state frame, which is commonly seen in most international communication studies. However, considering the basic character of migrants, mobility, it appears to be a paradox—many activities conducted by migrants group could not be comprehensively acquired in the nation-state approach. Many studies focused on migration and diaspora have approved that the flexibility and mobility, coming alone the complexity of identity, have profoundly challenged the nation-state approach’s adaptability in current globalised context. This paper tries to rethink the role of Chinese migrants in international communication studies in the way of transnationalism, which now is the most widely accepted theory in migration and diaspora studies, emphasising migrants’ own subjectivity in their daily behavior. The study will discuss the topic in three leads: mobility of behavior, identity hybridity and transnationality of space. And finally tries to seek new theoretical imaginations on future possibilities for Chinese international studies.

Id: 21696

Title: Examining the Moderating Role of Religious and Cultural Symbols in Advertising on Consumer Decision-making and Product Evaluation in Diaspora communities.

Session Type: Individual submission

Authors:

Name: Mian Asim

Email: z9860 -at- zu.ac.ae

Country: AE (United Arab Emirates)

Affiliation: Zayed University

Abstract: Introduction & Purpose:

To survive in a rapidly changing international and global business environment, marketers must be aware of the cultural sensitivities, diverse nature, and socio-economic settings of their audiences in various markets around the globe. Diaspora marketing is a lucrative business, and companies often use suitable national, cultural, and religious symbols to get their message across various international markets to target particular groups of audiences. The current study examines the process of consumer decision-making, when exposed to a variety of favorable, and sometimes, conflicting symbols in advertising messages containing religious and cultural connotations in highly diverse markets often found in migrants supporting countries like the United States, and the United Arab Emirates.

Literature Review & Theoretical Framework

Social identity theory of inter-group behavior proposed by Tajfel and Turner (1986) provides the basic theoretical framework for this study. However, the interdisciplinary nature and the use of multiple variables allow room to explain and predict the study outcome within the premises of the cultural meaning theory as proposed by McCracken (1986).

Method:

A true experiment will be conducted with factorials: 2 locations: (U.S. vs. UAE) x 2 symbol type: (religious vs. culturally specific) x 2 Symbol: (Present vs. Absent) x 2 Ethnic Affiliation of the respondent (South Asian or the Indian sub-continent vs. the Middle Eastern ancestry)

Hypothetical ads will be developed by a professional graphic designer to enhance the face-validity of the experimental stimuli. Pre-tests will be conducted before initiating the main experiment in the two selected geographic locations to test the intended effect of the stimuli. Professional research companies (Qualtrics in the USA; and PARC/TGI in the UAE) will be deployed to conduct experiments. Collecting data with the help of professional companies would be the cornerstone and critical component of this study. It is imperative to employ a truly representative sample to increase the generalizability of the results.

Study sample

The study employs (N = 720) representative sample from UAE and USA comprised of respondents from Middle Eastern and Indian-subcontinent (India, Pakistan, Bangladesh, Srilanka) descent.

The key independent variables deployed by the study are:

- Location (the U.S.A. vs. U.A.E)

- Symbol type (Religious vs. Cultural)
- Symbol Presence (Absent vs. present)
- Ethnic affiliation of the respondent (Indian Sub-continent vs. Middle Eastern)

The dependent variables are:

- Purchase Intention
- Favorable attitude
- Perceived quality
- Skepticism of the marketers
- Product Recall

The proposed moderating variables:

- Religiosity
- The strength of Ethnic Identification
- Collectivist and Individualist aptitude

The fixed variables:

- Religious Affiliation
- Length of Stay at their Current Place of Residence
- Age
- Gender
- Income
- Education

Results, and Discussion

Data collection underway.

The study will be completed by March 31, 2019.

Title: Competing Nationalisms: Biography as sites of memory and contest in the social media era

Session Type: Individual submission

Authors:

Name: Charu Uppal

Email: ucharu -at- gmail.com

Country: IN (India)

Affiliation: Independent Researcher

Name: Krishna Jayakar

Email: kpj1 -at- psu.edu

Country: US (United States)

Affiliation: Pennsylvania State University

Abstract: Competing Nationalisms:

Biography as sites of memory and contest in the social media era

This paper presents an analysis of competing visions of “nation” and “nationalism” under the influence of new media and social networking, as evidenced in textual analyses of contests over the biographies of two medieval and two modern political leaders in India and the European Union.

India and the European Union are politically integrated, yet linguistically- and ethnically-diverse, with numerous separatist tendencies, exemplified most dramatically in the case of Europe by Brexit. Social media have provided a forum for the articulation of competing visions of political unity and separatism, often aiding the emergence of ethno-nationalism and xenophobia, and demands for border controls and limits to immigration.

In this context, we conduct a textual analysis of contested biographies of national leaders in India and the European Union. Our analysis is based on a theoretical premise that biography is not a straightforward recording of historical fact, but the outcome of active and contested selection, suppression and interpretation within a socio-political context (Pierre Nora’s lieux de memoire, cited in Talbot, 2016). Social media, due to audience fragmentation, absence of formal gatekeepers (but subtle forms of controlling content such as shadow banning, removal of posts etc.), the impermanence of text, lack of accountability for content etc., seem to be perfect forums for the dynamic re-invention of biography. However, we also seek to demonstrate that though social media appear to have accelerated the trend, this is by no means historically unique: contested biographies have been used as tools of political mobilization since the pre-modern period.

To substantiate this, we conduct textual analyses of biographies of four political leaders, two medieval and two modern. The two medieval leaders are Prithviraj Chauhan and Charlemagne, respectively from India and Europe. In the case of Chauhan, we trace his evolution from sectarian Rajput chieftain to national leader in texts such as the Taj al-Maasir and the Prithviraj Raso (Talbot, 2016). In the case of Charlemagne, contrasting visions have been articulated in Einhard’s medieval Life of Charlemagne, the Chanson de Roland and Primat’s Grandes Chroniques de France (Morrissey, 2003). The modern leaders studied are India’s Narendra Modi and the French Jean-

Marie Le Pen, both polarizing figures. The biographies of both have undergone significant contestation, as both rose from partisan leaders to national prominence. Texts for analyses will be provided by online forums such as bharatrakshak.com, as well as news reports.

The outcome of this paper will be to explore “biography” as a locus and catalyst for the emergence, maturation and transmutation of competing visions of ‘nation’ and ‘nationalism,’ and to compare how this process is influenced by the characteristics of social media: impermanence, lack of formal gatekeepers, audience fragmentation, etc.

Title: Comparing Journalism Cultures in Western and Muslim Majority Countries: Journalists' Perception of their Freedom, Pressures and Professional Roles

Session Type: Individual submission

Authors:

Name: Basyouni Hamada

Email: bhamada -at- qu.edu.qa

Country: QA (Qatar)

Affiliation: Department of Mass Communication, College of Arts and Sciences, Qatar University

Abstract: This paper is based on a comparative analysis of journalism cultures in Western and Muslim majority countries. I identified three major comparative elements of journalistic cultures: editorial autonomy, influences and professional roles. The selection of countries employed the model of the most different systems design in order to account for cultural diversity(Hantrais 2009). Where journalism values, norms and practices in Western countries are rooted in the liberal theories of journalism, in Muslim majority countries, they are shaped by the repressive political, economic, and socio-cultural contexts. The investigated countries include 24 countries of the worlds of journalism study divided equally between the two groups of cultures. Muslim countries group includes Egypt, Sierra Leone, Sudan, Bangladesh, Indonesia, Malaysia, Oman, Qatar, Turkey, United Arab Emirates Albania and Kosovo. The Western countries group includes USA, Canada, UK, Germany, France, Spain, Italy, Switzerland, Norway, Denmark, Belgium and Sweden. The design, statistical analysis and findings of this study provides unique implications for the international comparative studies of journalism cultures.

Title: Migration Coverage: Different approaches to a common challenge in media from 15 European countries and the USA

Session Type: Individual submission

Authors:

Name: Marcus Kreutler

Email: marcus.kreutler -at- tu-dortmund.de

Country: DE (Germany)

Affiliation: TU Dortmund University

Name: Susanne Fengler

Email: susanne.fengler -at- tu-dortmund.de

Country: DE (Germany)

Affiliation: TU Dortmund University

Abstract: Migration and the rise in migration figures has been a defining topic for news coverage in recent years, and its representation in the news may be seen as a major case for human dignity in the media. The paper presents results of a content analysis into migration coverage in 32 opinion-leading media from 15 European countries and the USA in the years 2015-2018.

Background

While the coverage of migration has been investigated in some detail for several countries (for an overview see Hovden et al. 2018), comparative data for a larger number of countries with different levels of exposure to migration flows is sparse. Especially the representation of migrants and migration in different Eastern and Central-Eastern European states has received little attention so far.

Methodology

The content analysis included migration coverage from two text-based media (print or online) from Albania, Belarus, Czech Republic, France, Germany, Hungary, Italy, Poland, Portugal, Romania, Russia, Spain, Switzerland, the UK, Ukraine and the USA. Based on a keyword-based pre-study of coverage peaks in 2015-2018, six weeks of coverage were included in the analysis, leading to a total of 2381 articles. Media-selection, article retrieval and content analysis were conducted by country-specialists fluent in the respective languages.

Results

Some general trends in the coverage confirm and deepen prior research:

- Speakers quoted in migration coverage are ten times more likely to be non-migrants than migrants. Some Eastern European media do not quote migrants at all.
- Large, anonymous groups of migrants are the most frequent main actor in the analysed articles (17.0 %), followed by the German government (9.1 %). Individual migrants make up 6.0 percent, with male adults being represented about four times more frequently than females.

- Migration is mostly covered as a political issue, followed by descriptions of the situation of migrants. Articles covering problems with migrants outnumber personal stories that portray migrants as individuals.

But migration coverage takes different forms and emphases in the countries included in this project:

- For most media under study, the dominant origin of migration is the Middle East and particularly Syria, but migration from Africa (in Italian and French coverage), from European countries (in Russian, Belorussian and Albanian media) and the Americas (in the USA) is in fact predominant in some countries.
- Most media focus on migration flows into other European states, not into their country of publication – migration coverage is mostly foreign coverage. Exceptions include both German media, *Corriere della Sera*, *Washington Post*, and *Kommersant*.

Finally, differences in the coverage are not only visible between countries. Where the two media in one country can be attributed to political orientations, this seems to be reflected in their coverage:

- In Germany, France, Poland, Spain and the UK the more conservative publications tend to cover problems with migrants more intensively than the situation of migrants, while their more left-leaning counterparts have opposite preferences.
- This pattern continues when more conservative papers quote less migrants, and non-migrant speakers critical towards migration are more visible than those defending it.

Title: The historical change of international communication discourse in China: difference or integration'

Session Type: Individual submission

Authors:

Name: Jidong LI

Email: 438955713 -at- qq.com

Country: CN (China)

Affiliation: National Center for Communication Innovation Studies, Communication University of China

Abstract: As the digital world is coming, the world political and economic situation and the order of information and communication is in the process of new adjustment and transformation. The ecology of information and communication has become more open, interconnected, and transparent. Domestic issues are internationalized and international issues are internalized. the public is more global, participatory and initiative. The external publicity is not only the work of specific departments and professional media, but also a multi-level interactive compound system of the government, media and the public. Since the 18th national congress of the Communist Party of China, great changes have taken place in the concepts, principles and methods of both external and internal communication in the digital China. As a result, the international communication discourse, especially the principle of internal and external differentiation (nei wai you bie) that the state has always followed since its foundation have also changed.

From the perspective of historical changes, this paper sorts out the brief evolution and trend of the international communication discourse, emphatically analyzes the problems and challenges of the internal and external differentiation (nei wai you bie), and then explores the integration of internal and external communication discourse in the digital China. the internal and external differentiation was originated in Yan 'an period, formed in the early days of the People's Republic of China, perfected in the 1980s and 1990s, and expanded to "the outside is different"(wai wai you bie). At present, China's international status, role and responsibility have undergone great changes, and China's issues are often intertwined with international affairs and human propositions. Meanwhile the internal and external differentiation have the problems of narrowness, one-sidedness and extreme, so it's time to rethink the internal and external differentiation.

Title: Can the Foreign Correspondent Still Exist': A future model of human connection

Session Type: Individual submission

Authors:

Name: Saba Bebawi

Email: saba.bebawi -at- uts.edu.au

Country: AU (Australia)

Affiliation: University of Technology Sydney (UTS)

Name: Mark Evans

Email: mark.evans -at- uts.edu.au

Country: AU (Australia)

Affiliation: University of Technology Sydney (UTS)

Abstract: To many reporters and journalists working around the world from their desks with access to immediate online sources, information and social media, the concept of the foreign correspondent seems redundant. Journalists can reach any source they want through online calling tools such as Skype, Facetime or Zoom. Crowdsourcing has replaced vox pops on the streets through social media such as Twitter. And any information – almost any – can be accessed online. Willaims (2011) comments on this noting that '[t]he growth of the internet, with its provision of instant access to databases and information around the world, reinforces the “stay at home tendency” of modern foreign reporting [...] foreign editors are more reliant on their online sources of information' (139). Furthermore, trusted bloggers and citizen journalists can provide unique footage from any location and even report on events on the ground, as seen through the 'Arab Spring' protests where major media outlets were partnering up with prominent citizen journalists on location. So the whole 'why be there at all' argument is a valid one, and the question of whether a foreign correspondent is still required in today's media environment continues to persist, especially in light of the financial restrictions facing many media organisations which are tightening their budgets, and where foreign correspondents are the first to go when financial cuts are made.

This paper will include a discussion on various scholarly debates in relation to this, arguing that there still is a need for reporters on the ground to report on events, albeit that the concept of the foreign correspondent might need to be transformed and reconceptualised within an ever-changing media environment. Specifically, there is a greater need for cultural connection that needs to be reflected in foreign reporting. This paper, therefore, will first unpack the role of the foreign correspondent as traditionally practiced, and discuss some limitations to the role. It will then outline some current issues that are entrenched in international reporting in relation to pre-conceived story ideas, parachute journalism, the local vs foreign reporter, and citizen journalism. This will be followed by a discussion on what the future of the foreign correspondent might need to entail based on these issues.

This discussion will be based on observations stemming from the Foreign Correspondent Study Tour (FCST) which is a project that has been funded by the Australian government through the Council for Australian-Arab Relations (CAAR) to the Middle East and the Australia-India Council

(AIC) to India, part of the Department of Foreign Affairs and Trade (DFAT). The lessons learnt from training participants during the FCST iterations are strong examples of how future foreign correspondents need to be trained to focus on intercultural reporting that is often missing from the training they receive when reporting in their home countries.

Title: Love across frontiers: reinventing family in the digital age

Session Type: Individual submission

Authors:

Name: Vandana Pednekar-Magal

Email: pednekav -at- gvsu.edu

Country: US (United States)

Affiliation: Grand Valley State University

Abstract: Transnational family is described as family members spread across national and cultural borders due to the intersection of individual and collective aspiration and needs, as well as structural opportunities and constraints (Bryceson and Vuorela, 2002). Very often transnational families comprise of individuals from different linguistic, cultural/religious backgrounds forging new identities and cultural practices. In this paper I describe the private sphere of transnational family networks and how family members transcend locality, negotiate distance to construct familial relationships across national and cultural frontiers. My purpose is to trace the ways globalization is embodied within the domains of family life, and personal affect; and show how the linkages of 'informal' global networks in this private sphere constitute the micro-processes of globalization and social transformation.

With the aid of first hand perspectives provided by ethnographic interviews with ten transnational families residing in the United States, with heritage from culturally different regions (South Asia; Asia; Latin America; Eastern Europe) I address the following questions:

What does cross-border communication mean in relationship to transnational families? How is migration and subsequent family relationship helped and or hindered by mediated communication (for example, using internet-based communication technologies)? How do members sustain ties of 'belonging' across national borders? How are identities (often hybrid or hyphenated) experienced or expressed in family life and cultural life? How are relationships (such as among parents and adult children; spouses) constructed, managed, repurposed or sometimes broken down in transnational families? What role do national policies (specifically, policies of immigration/emigration) play in facilitating, hindering or altering family life?

The in-depth ethnographic interview methodology of the study works to provide an experiential, narrative driven account. Transnational families are not generic homogenous cultural groups. Their experiences are not generalizable but vary due to geographical contexts and differing levels of literacy and socio-economic ladder. To emphasize the heterogeneity, my investigation avoids standardized questionnaire and favors open ended questions that encourage reporting of unique experiences.

Theories of globalization point to Ethnoscapes - the landscape of people who constitute the contemporary world: immigrants, refugees, exiles, guest workers, international students and other moving groups (Appadurai, 2000). As people move across borders and experience the realities of long term or permanent separation from their family, heritage and nation, the private spheres of family constellations and practices become fluid and shifting. Every day communicative practices, via electronic technologies/media, strewn across borders constitute the active process of globalization from below and from within. As Beck and Beck-Gernsheim (2014) suggest, "Just as there are transnational firms, organizations and transnational states (such as the EU), so too we are

witnessing the birth of transnational families.” (p, 12). The communicative activities in familial networks point to how a reconstitution of identities – local, national, global – takes shape; how national identities are refracted through other identities such as religious, linguistic; and how the transnational people reshape or at the least, temper the defined or imagined unified culture of families, the city, nation. My paper situates personal accounts of transnational families in this context.

Title: Facts or Values' Exploring the Conditions Public Deliberation Successfully Forms in Communities: A Qualitative Comparative Analysis (QCA) based on 40 Cases

Session Type: Individual submission

Authors:

Name: Fanchen Zeng

Email: zengfanchen0103 -at- foxmail.com

Country: CN (China)

Affiliation: School of Journalism and Communication, Tsinghua University

Name: Xin Yu

Email: yuxin1 -at- tsinghua.edu.cn

Country: CN (China)

Affiliation: School of Journalism and Communication, Tsinghua University, China

Abstract: Information Communication Technologies open great opportunities to the public enabling, engaging and empowering to participate in social debates (Macintosh, 2004; Carpini et al., 2004; Anduiza, Cantijoch & Gallego, 2009). On the contrary, the social consequences digital technologies would lead are still facing challenges because of several kinds of pessimistic paths, such as disinformation/fake news (Wardle & Derakhshan, 2017), information cocoons (Sustein, 2008), and opinion polarization (Lee et al., 2014). However, no matter the optimistic or the pessimistic, most of the arguments are contextualized in country and social wide, where the participants are connected dividedly, the issues have the lack of common values, or the processes are without orders and rules.

Compared to the country and social wide, communication in a specific community seems provide a quite ideal environment for social discussion, with relatively fixed members, closed physical spaces, long-term development of both values and rules. Therefore, exploring the process in the community communication approach could provide basic conditions and paths where public deliberation would successfully form, which would be expected to help us find out the key factors moderate the benefits or the defects ICTs bring to social issues.

This paper made a qualitative comparative analysis (QCA) of 40 public events in a university community from 2014 to 2018. The expected independent variables were constructed through five aspects, including issue attribution, public participation, analyzing process, social process, and policy process; the dependent variable was deliberating result. Using the tool of fm-QCA (fully functional multi-value QCA), we found out that radical media/individuals and organizational mediatized frameworks jointly influenced the change of public policy in the community. As a specific community, the common values of community members in the university were also conducive to the deliberating result. Common values helped the to reach reasonable policies in the end, which were highly endorsed by the community members. In another word, facts could not independently lead to deliberation without common values.

Title: NGOs and INGOs' WeChat as Organisation Communication in China

Session Type: Individual submission

Authors:

Name: Zhaorui Meng

Email: magmeng -at- hotmail.com

Country: CN (China)

Affiliation: Communication University of China

Abstract: Abstract:

As of January 2019, China has 816,307[Sources: China Ministry of Civil Affairs statistics.] Social Organisations[Social organisation: a Chinese term more or less equivalent to civil society, including NGOs, INGOs, Funds, Charity and other civil society groups; either government owned NGOs or none governmental ones.], including 5,285 registered Charity organisations to more than 8,000 NGOs, among which 441 registered INGOs with the earliest operations dated back to the 1980s. Over the past 30 years, NGO sector (both local and international NGOs) have experienced considerable development in China. Getting themselves to be heard or advocacy is NGOs and INGOs' major work through which they communicate to the local public their mandates, values and key messages. WeChat, as the current most powerful social media in China which reaches 1 billion active users in January 2019, has increasingly becoming one of the most important means of organising one's personal and work life as well as an effective organisational communication channel for both governmental and none governmental organisations in China. Thus this paper will take a look at whether WeChat also impacts profoundly NGOs and INGOs' communication and advocacy work? What is the current overall picture of NGO and INGO's WeChat communication in China? Is there any trend? Which organisations perform well WeChat-wisely and why?

Meanwhile, the author had the pleasure to work as a UN staff member and with other international organisations in China for many years during which participated in the substantial work of country program and communication strategies formulation and implementation. These experiences have also intrigued the author to think about questions such as: which one, local NGOs or INGOs, performs better in terms of WeChat communication? What are the key messages they deliver via WeChat to Chinese audience and which messages attracted or mobilised the audience the most?

Having these questions in mind, this article first reviews the current Chinese literature regarding NGO and INGO communication and advocacy via WeChat in China. Then it retrieved the 2018 Weekly List of China's Top 20 NGO WeChat Accounts, collected a pool of all Top 20 NGOs and INGOs and ranked them on yearly basis against an index (such as WeChat accounts user subscription, number of publications and frequencies, highest number of viewers and comments etc) to arrive a 2018 List of Top 10 Local NGOs and INGOs; next it further compared these organisations WeChat performance and explored these WeChat contents to see what were the key messages delivered to and most welcomed by the audience. The article then drew the conclusion on the status quo of NGOs and INGOs' WeChat communication and advocacy, the trends exhibited, and which NGOs and INGOs perform the best in their WeChat strategy delivery as well as whether the INGOs were more effective than the local NGOs. Next, employing relevant Organisational

Communication theories and combined work observation, the article explored the possible reasons why some organisation seem to perform better than others. It also summarized the WeChat communication strategies of those most successful orngaisations as case studies and offered some suggestions for future work.

Key words:

NGO, INGO, WeChat, advocacy, organisational communication

Title: Global media flow and contra-flow: Transnationalization of Turkish Television Series

Session Type: Individual submission

Authors:

Name: PINAR ASLAN

Email: pinaslan -at- gmail.com

Country: TR (Turkey)

Affiliation: ISTANBUL UNIVERSITY

Abstract: This study analyzes the transnational success of Turkish television series. With their recent success around the World, they are called in many different ways such as soap opera, drama, telenovela, series or dizis (Turkish name already accepted by many) and this overcategorization is worth analysis alongside with the cause and effect of this global flow. This study aims to have a look at the current situation of the transnational spread of Turkish television series through case studies. The research is mainly conducted in Latin America which is a surprising location where Turkish television series has become a phenomenon. The main focus is analyzing television series within the cultural context with an emphasis on international communication, popular culture, and global media flow.

Title: Understanding 'fake news' in three African countries: prevalence, causes and impact

Session Type: Individual submission

Authors:

Name: Herman Wasserman

Email: herman.wasserman -at- uct.ac.za

Country: ZA (South Africa)

Affiliation: University of Cape Town, South Africa

Name: Dani Madrid-Morales

Email: dmmorale -at- Central.UH.EDU

Country: US (United States)

Affiliation: University of Houston

Abstract: In recent years, questions around truth, veracity and deception have been receiving an 'extraordinary' amount of attention in journalism scholarship as well as in public debates. This can be attributed to their centrality in debates about the role of "fake news" in the 2016 US presidential election, as well as US President Donald Trump's use of the term to dismiss his critics. However, it would be erroneous to circumscribe issues of truth, veracity and deception to the United States. After all, according to the United Nations Educational, Scientific and Cultural Organization (UNESCO), disinformation is an "emerging global problem". Like elsewhere in the Global South, misinformation in Africa has often also taken on the form of extreme speech that have incited violence or spread racist, misogynous xenophobic messages, often on mobile phone platforms such as WhatsApp. Misinformation campaigns have been used to influence political agendas in African countries and governments have responded by restricting online spaces or embarking on other countermeasures. To date, there has been especially little scholarly attention paid to how African audiences actually engage with misinformation and disinformation, how prevalent the notion of 'fake news' is among African media users, and how African media users navigate notions of truth, mis- and disinformation and news.

With the aim of filling in this knowledge gap, this study uses data from a two-wave survey in Kenya, Nigeria and South Africa to offer an overview of the prevalence and impact of "fake news". The first wave (N = 752) was fielded in late 2017, while data for the second wave was collected (N = 750) in early 2018. Our data, the first to explore the issue using a cross-country comparative approach, offers evidence of the high prevalence of "fake news" in the three countries, as well as alarming levels of sharing dis- and misinformation deliberately. Based on existing literature that suggests the potential impact of high levels of perceived exposure on levels of media trust, we also explore how public's trust in different type of media is affected by the prevalence of "fake news". Not only, this is found to be true, but the impact appears to vary across countries and types of media. In a context where the mainstream media have long struggled to gain its independence and freedom, and where state control over media remains strong – either through ownership or suppression – these findings raise important concerns for the ability of the media to exercise its duties of truth-telling, dissemination of information and holding power to account. We conclude by

proposing ways forward in the study of dis- and misinformation in Africa, with a particular focus at understanding the cultural, social and political factors facilitating their prevalence.

Title: "Knowledge'in Cross-Culture Contexts: How Frames shaped in Zhihu and Quora

Session Type: Individual submission

Authors:

Name: Fanchen Zeng

Email: 1243388495 -at- qq.com

Country: CN (China)

Affiliation: Tsinghua University

Name: Xin Yu

Email: yuxin1 -at- mail.tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University

Abstract: the “knowledge” production in social media is affected by the user's knowledge contexts, logic, text, cultural differences and other factors. In order to explore the difference of "knowledge" in the cross-cultural context, this study adopted the grounded theory as the research method, and selected the 20 most agreed texts from the discussion on the Chinese website zhihu and the English website Quora about "German refugee policy". The open & axial coding includes defining the problem, diagnosing the cause, making moral evaluation and predicting results. The study found that zhihu users thought the "German refugee policy" was wrong and gave a pessimistic view on it. Quora users see it as an adjust policy and give a optimistic view on it. Zhihu users tend to criticize the liberal left of German and worried about German social security. Quora users are more concerned with human rights issues, and tend to praise on German political correctness and its international reputation.

Title: Diseño nórdico: democratización, renovación y diferenciación. Las estrategias para combatir el agotamiento de un modelo exitoso

Session Type: Individual submission

Authors:

Name: Angel Luis Rubio Moraga

Email: angel.l.rubio -at- gmail.com

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Name: Andrea Donofrio

Email: adonofrio -at- ucm.es

Country: IT (Italy)

Affiliation: Universidad Complutense de Madrid

Abstract: En 2016 analizamos el impacto de las crisis sobre las empresas de diseño nórdico arraigadas en España, en el que una de las conclusiones fue que sus efectos variaron según el tamaño de la empresa, su capacidad de reaccionar y renovarse, sus cambios de estrategia comercial y de modelo de producción. Como consecuencia de la crisis, las empresas se vieron obligadas a aplicar diversas medidas para paliar los efectos de esta. El objetivo de esta nueva investigación sobre el tema es demostrar cómo el proceso de democratización ha ido en aumento, a la vez que las empresas han apostado por una diversificación de su marca. Las marcas han elegido apostar por una estrategia que por un lado contemplaba mantener un vínculo con su esencia y que, por otro, a la vez se centraba en ofertar productos novedosos. Las principales empresas han decidido renovar su oferta, incluyendo productos más acordes a los gustos y a los cambios que se están dando en la sociedad. Al mismo tiempo, las principales marcas del diseño nórdico, como Tiger, Ikea y H&M entre otras, están planteándose adoptar nuevas estrategias para contrarrestar el posible agotamiento de su modelo, exitoso hasta la fecha, planteando alternativas tanto de productos como de comercialización. Esta propuesta pretende, por lo tanto, reflexionar sobre los cambios que se están dando tanto en el diseño como en el modelo de negocio.

Abstract: In April 2016, Alibaba successfully acquired the South China Morning Post (SCMP), a well-known English-language newspaper based in Hong Kong. Alibaba announced that SCMP's new mission is to "lead the global conversation about China". The acquisition had sparked concerns around its editorial autonomy and objectivity. In March 2018, SCMP launched an online news site called Abacus with an aim to "unbox China," giving many the impression that Abacus is a tool for painting a positive picture of China's technological advancement. It is worth examining if there are changes in SCMP's news content and stance as a result of the acquisition.

The present study focuses on SCMP's recent change in coverage on China news and how Abacus works as a new branch to promote China. Changes in three aspects were analyzed, namely (1) the

number of China news covered, (2) the content about special events, and (3) the commentaries. We also read articles and watched videos in Abacus to decipher what impressions its content would give to the readers. By using data in “Factiva,” we located relevant articles in SCMP with the keyword “China” in the headlines and lead paragraphs from October 2014 to September 2018.

There were more short local spot news stories which had little to do with national issues or policies. SCMP had been covering more news on the relationship between China and the US after the acquisition and the news mostly mentioned US President Donald Trump. China’s diplomacy has also been another focus such as the “One China Policy” to Taiwan.

We analyzed two significant events over the recent years, namely Occupy Central and HKSAR establishment day (the handover). There were more news coverage on both topics since 2015, and the reports tend to be more pro-government. The year 2017 marks the watershed for SCMP’s coverage on the Occupy Central movement, as its voice changed from being neutral to framing the movement as “unrests” and put blames on the protesters. In 2018, there was a stronger focus on the celebration activities and positive evaluation on the performance of the chief executives.

There were more articles on China’s diplomatic relations and economy, but increasingly fewer articles on its domestic politics since the change of ownership. Even if there were negative comments about China, many of them put their foci on the Chinese financial market and suggest how China can improve.

Abacus can still uphold core news values such as objectivity, comprehensiveness and fairness. It has not refrained from reporting sensitive issues in China, and also reports on tech-related irregularities in China. Macroscopically Abacus is able to showcase China’s soft power to the world.

In conclusion, while the coverage adopted in SCMP’s stories might have shifted towards a more pro-China angle, it is unlikely that SCMP will play the role of a blatant mouthpiece for the Chinese authorities. Otherwise SCMP would lose its credibility and cannot fulfill its goal to lead the global conversation about China.

Title: Repackaging Oriental frames in the coverage of Gaddafi's death by television news channels in India: a framing analysis

Session Type: Individual submission

Authors:

Name: Sweta Singh

Email: swetasingh2000 -at- gmail.com

Country: IN (India)

Affiliation: University School of Mass Communication, Guru Gobind Singh Indraprastha University, Kashmere Gate, Delhi

Abstract: This research attempts to analyse how 'Oriental Framing' got mediated by the two leading English private television news channels CNN-IBN and NDTV 24*7 in the representation of the death of Gaddafi by collecting stories from their respective websites. This research builds its arguments based on framing studies that have shown that the Western news agencies use the Oriental frames in the coverage of the Arab world. The research uses six interpretive packages: 'Gaddafi, the dictator'; 'Gaddafi, the eccentric'; 'Libya, a nation without democracy'; 'Protesters as revolutionaries'; 'NATO as positive interventionist' and 'Death of Gaddafi, a nemesis'. Employing qualitative framing analysis, this research inductively employs the six packages using semantic and reasoning tools. The research argues that 'Oriental' frames of the West that define the East in 'disparaging' tone were used in the narratives of the stories from both the channels. This was due to the dependency on Western news sources. Though both channels show similarity in the use of Oriental frames, there are differences as well owing to origin and ownership of the two channels. Gaddafi as a leader was depicted as a dictator who was potentially dangerous for Libya and the world. The comparison of Gaddafi with Saddam Hussien constructs an appropriation that justifies militant protests by Libyans and military interventions of NATO. The representation of Gaddafi's rule as a dictatorial regime has been used as a justification for ousting and eventually killing of Gaddafi. Democracy has been pitched as the only alternative to the regime and the eventual solution to all things ailing Libya.

Title: On-demand television flows: European series on SVoD platforms

Session Type: Individual submission

Authors:

Name: Celina Navarro

Email: celina.navarro -at- uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: With the global consolidation of on-demand audiovisual consumption, the international SVoD players have become one of the main cultural intermediaries of audiovisual flows. With commissioning and acquisition decisions across the world, they influence which local television content is available for consumption. Therefore, their role in media flows has become more relevant than the international purchasing decisions of traditional broadcasters due to the scope of their decisions. This is especially relevant for serialized fiction titles, the main genre of their catalogues.

At the same time, local broadcasters attempt to use these platforms to sell a second exploitation window for their fiction titles and benefit from international impact. However, the largest portion of the SVoD services libraries are still produced in the United States, the hegemonic player of television flows since the beginning of the media. The European Union is trying to counteract this with the establishment of a European minimum works quota of 30% of the catalogue for programmes either directly commissioned or acquired by the service, legislation that it is set to be approved during 2019. This measure has been actively opposed by the SVoD platforms, especially Netflix, claiming that they already have a diverse catalogue from around the world.

The main objective of this study is to analyse the presence of European serialized fiction on the European catalogues of the main SVoD platforms which are Netflix and Amazon Prime Video, distinguishing between those series commissioned directly by the SVoD platform and those titles firstly aired on linear television. Since the catalogues from the services differ slightly in each market and time periods, the Spanish catalogue from the beginning of 2019 has been chosen. The quantitative content analysis of all series available on these two catalogues is focused on the origin, the production companies, the genre, the year of production and the original language of the titles.

The preliminary results show that original productions on the platforms coexist with titles previously broadcast, but particularly produced in the UK, the main European market in canned television flows. Nevertheless, to a lesser extent there is also the presence of titles produced in regional European markets in minority languages. In addition, there is a growing tendency by Netflix of commissioning new seasons of already popular European series directly for its platform. This paper also concludes on the importance of the alliances among European markets and these international digital players due to their role as cultural intermediaries to promote and diversify the flows even among European countries.

Abstract: El propósito de esta investigación es analizar la gestión de comunicación y los procesos de sostenibilidad en un grupo de organizaciones ecuatorianas, colombianas y chilenas para establecer relaciones entre el trabajo que se desarrolla en tales disciplinas y la influencia de las culturas nacionales en esos resultados. Se trata de un estudio descriptivo, basado en una metodología cualitativa y cuantitativa, desarrollado en tres fases: en primer lugar, una indagación bibliográfica y documental que permita, por un lado, discutir el modelo de convergencia propuesto por Durán y Mosquera (2016) para fundamentar la relación entre la gestión de la comunicación y el avance de los procesos de sostenibilidad y, por otro, describir el entorno cultural y legal del sector empresarial en los tres países.

En una segunda fase se aplicará la encuesta propuesta dentro del modelo, basada en características observables y tangibles de la organización que permiten identificar la orientación teórica que tienen los procesos de sostenibilidad, según lo propuesto por Garriga y Melé (2004) y el modelo de relaciones públicas que aplican, según la teoría de la excelencia de Grunig y Hunt (2000). La muestra será de 48 organizaciones pertenecientes a los distintos sectores empresariales,

seleccionadas entre las empresas mejor ubicadas en el ranking empresarial de los tres países y la aplicación se hará a través de la plataforma Survio. En una tercera fase se trabajará sobre los resultados de las encuestas, detectando convergencias y complementariedades entre el ejercicio de las Relaciones Públicas y la gestión de la sostenibilidad y se efectuará un análisis comparativo entre los tres países para establecer diferencias y analizarlas a la luz de los factores culturales particulares que diferencian al sector empresarial de Ecuador, Chile y Colombia. Las conclusiones y recomendaciones que se propongan contribuirán a una gestión efectiva de la comunicación para afianzar los procesos de sostenibilidad de las empresas para su propio beneficio, el de los distintos sectores involucrados con ellas y la sociedad en general.

Title: Long-distance mothering and companionship: managing close relationship between Chinese Migrant students and their left-behind mother through mobile instant messaging

Session Type: Individual submission

Authors:

Name: Christina Zhang

Email: juehongzhang -at- gmail.com

Country: NZ (New Zealand)

Affiliation: Auckland University of Technology

Abstract: As globalization continuing at strength, student migration have also intensified world-wide. International students and their left-behind mother face the challenges of maintaining close relationship with each other from a long distance. Mobile communication technologies, in particular mobile instant messages, provide ‘connected presence’ as a new mode of interpersonal communication assist the management of the relationship between migrant students and their geographically distant mother.

Focusing on the WeChat, the most popular mobile instant messages application in China which integrated with multimedia instant messaging and a social network service called Moments, this study investigated the patterns of mobile instant messages interactions for managing close relationships in transnational settings through communicative behavior records and semi-structured in-depth interview. Communication behavior contains the use of all WeChat functions, such as text messaging, voice messaging, emoji and photo sharing, voice call, video call, and interactions ‘likes’ and comments within the Moments. With contextualized accounts of 10 Chinese migrant students’ phone use over one semester (14 weeks), research data also include continued 14 interviews (every two weeks): 7 interviews with these students who have lived in New Zealand for at least one year and 7 interviews with their ‘left-behind’ mother who stay in China.

This study proves that WeChat’s wide functionality enabled multimodal communication in varying situations. Nine modes of WeChat interaction were identified: general information forwarding, check-in, performance, cross-checking, money transfer, experience articulation, emotions display, technical support, and sympathetic companionship. The study also analyzes how user construction attaches social meaning to certain communicative practices between mother and children on WeChat. It revealed that WeChat could sustain more diverse communication modalities, with varying levels of cue richness and need for synchronicity.

Findings also confirm the interaction patterns of ‘connected presence’ and further suggest an emerging ‘panoptic-presence’ consciousness among the young adults, leading to a performative mode of interaction with their parents. Meanwhile, though individualism prevails among the younger generation, family values and norms rooted in traditional Chinese culture are found to be both explicitly and implicitly practiced. Overall, this study enriches our understanding of the impact of mobile communication technologies on the management of family relationships.

Title: Reflections on the African Digital Ecosystem

Session Type: Individual submission

Authors:

Name: viola milton

Email: miltovc -at- unisa.ac.za

Country: ZA (South Africa)

Affiliation: University of South Africa

Abstract: This paper introduces an Afrokology approach to the Internet, focusing on Africa's emerging digital communication practices as a gateway towards analysis of the complexities and contradictions of the digital ecosystem in local contexts. For example, while Africa leads the world in the use of mobile phones for money transfer, it is simultaneously notorious for politically motivated Internet shutdowns and censorship. Hence, it should come as no surprise that discussions on Africa's digital ecosystem tend to focus on issues of access, digital divides and communication rights. This paper addresses the question of who has access to the African digital ecosystem but also asks a critically important second question, i.e. what happens after people get access to technology and broadband? It is indisputable that digital divides remain an ongoing concern for African people of the world, for even though it is bridging the gap quite rapidly, Africa still lags the rest of the world in Internet penetration. Yet its ability to meaningfully participate in and benefit from the Internet in future will likely be determined by more than the sheer ability to connect. If the Internet is to fulfil the potential towards intensified audience participation, African audiences, users and communities should gain understanding in the unique capabilities and affordances of technology and broadband. This paper argues that, while the increasing connectivity and reach enabled by the Internet and its associated digital media has great democratic potential, in Africa deep divides remain between those who have resources, skills and education to reap the benefits of the information technologies and those who do not. The digital ecosystem concept will be unpacked from an Afrokology perspective, focussing on the ability of digital ecosystems to help build connections between people, communities, municipalities and governments. Establishing a digital ecosystem can help members of a community interact with each other, those outside the community and hold municipalities and governments accountable. While the phenomenal growth in ownership and usage of mobile phones in Africa means that even the continent's poor can potentially engage ICTs, there is still a "digital divide," especially when we consider that divide as encompassing both access to technology and the opportunity to create digital media. To truly understand this phenomenon, it will be argued that we must reexamine the digital divide to focus not only on issues of access but also on issues of content creation and digital literacy (Clark, 2017, p.252). Here, it will be argued, a focus on a so-called "have-not" Africa as primarily end users in closing the digital divide, is insufficient. Instead, invoking Afrokology theory, the paper argues that it would be useful to cast an eye towards Africa's emerging digital communication practices both in relation to Africans as consumers and producers. As such, the paper will unpack the African digital ecosystem in relation to three issues, i.e., (1) access to technology, (2) opportunity to create digital media and (3) digital connectivity and acts of social exchange, which links creation to production and the exercise of power.

Title: Rethinking impact in ICT4D through the lens of the Sustainable Development Goals

Session Type: Individual submission

Authors:

Name: Franz-Ferdinand Rothe

Email: rothe.franz-ferdinand -at- vub.be

Country: DE (Germany)

Affiliation: Vrije Universiteit Brussel (VUB) - imec-SMIT

Abstract: The field of Information and Communication Technologies for Development (ICT4D) is being driven by the conviction that ICTs can foster development and improve the lives of people around the world. However, critical research points out a large variety of detrimental effects, indicating that ICTs are indeed harmful for international development, as they are closely linked to issues such as economic inequalities or environmental pollution. Clearly, the two sides do not represent a techno-deterministic dichotomy of whether ICTs themselves are good or bad for development. Much rather, we must discuss how we can actually utilize ICTs for development, meaning that they are more help- than harmful for the international development agenda. In order to do so, however, we must holistically conceptualise ICTs potential impact taking into account their positive and negative implications alike.

This article argues that the Sustainable Development Goals (SDGs) present a framework that can be a basis for holistically conceptualising impact in ICT4D, wherein potential effects and side-effects of ICTs on the various integrated development objectives can be mapped and juxtaposed. Based on a literature review, we translate the novelties of the SDGs, in particular their network architecture of interdependent targets, onto the field of ICT4D. Acknowledging the complex interdependencies between the various areas of sustainable development allows us to apply a cost-benefit approach towards ICT4D's positive and negative effects. This would include not only a project's impact on its target area, but at the same time its various secondary impact fields, such as the environmental harm resulting from the technology's production and eventual disposal or the labour conditions along its value chain.

After outlining the scope of implications that the use of ICTs can have for the holistic landscape of sustainable development, this article accordingly analyses to which extent the impact assessment (IA) frameworks commonly used in ICT4D take account of these complex interrelations. Identifying the shortcomings and mismatches between IA frameworks and the nature of sustainable development, this article discusses how our conceptualisation of ICT4D impact should adapt in order to do justice to the multidimensional impact areas of ICTs in the framework of the environmental, economic and social dimensions of sustainable development.

Title: Framing Social Protest: A Comparative Content Analysis of the Coverage of the "Yellow Vests Movement" in the French and German Press

Session Type: Individual submission

Authors:

Name: Susanne Merkle

Name: Melanie Radue

Email: melanie.radue -at- fau.de

Country: DE (Germany)

Affiliation: Friedrich-Alexander University Erlangen-Nürnberg

Abstract: Rising diesel fuel prices initially sparked the gilets jaunes (yellow vests) movement in France in November 2018. Since then, hundreds of thousands of people took part in massive street protests across France, wearing yellow vests to demonstrate their anger at economic and social inequality and political immorality. The movement draws international attention due to some of the most violent street clashes the country has witnessed in decades. Unlike other populist movements spreading recently in Europe, the yellow vests phenomenon is neither party nor elite driven and can be considered a truly grassroots movement. The yellow vests' rejection of leadership and its decentralized organization reflects the mistrust in the capability of the government, parties, unions and other organizations to solve economic and social grievances.

Comparing German and French media coverage of the yellow vests seems pertinent under various aspects. Germany does not share France's deep tradition of revolutionary uprisings and both countries differ in their journalistic culture and journalistic role perceptions (Hanitzsch, Steindl & Lauerer, 2016; Mercier, Frost & Hanitzsch, 2017). This leads to our assumption of a differing media coverage of the yellow vest movement. At the same time, the German media generally show great interest in French politics, which seems to have heightened since Macron became president, promising to break with the old structures of the traditional party system and bringing in fresh ideas. The violent revolt of the yellow vests against his politics and the classic clash of citizens vs. elite represent strong news factors. This might explain the vivid discussion of the protests in the neighbouring country by German media. Some German politicians even warned of the possibility of a similar movement in Germany relating to the current discussion on fuel prices and bans of diesel vehicles. Finally, the fact that the yellow vests' anger is aiming not only at politics but also at the established media, (who they see as part of the system they are fighting) represents another reason to study the movements' media coverage.

In a two-level content analysis, our study examines the coverage of the yellow vest movement in German and French newspapers. At the first level an automated content analysis delivers the basis for the content analysis which identifies frames based on Entman's (1993) approach. The comparison shows how the German and French press frame the ongoing social unrest in France to promote "a particular problem definition, causal interpretation, moral evaluation, and/or treatment recommendation" (Entman, 1993, p. 52, emphasis in original) for the yellow vests' movement. By

means of his concept we evaluate whether the German and/or the French press use negative framing to “weaken the influence of social protests in public opinion” like Xu (2013, p. 2412) finds for the coverage of the 2011 Occupy Wall Street (OWS) movement. The demands and the structure of the yellow vests’ movement are very similar to the OWS movement. Therefore, we take the coverage of OWS as a reference to test if similar negative frames lead to a marginalization of the yellow vests’ protest.

Title: Globalising China's National Media under the Belt and Road Initiative

Session Type: Individual submission

Authors:

Name: Xin Xin

Email: x.xin1 -at- westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: Despite the fact that the Belt and Road Initiative (BRI) has attracted enormous public and media attention since it was unveiled by president Xi Jinping in 2013, there is surprisingly little research examining its implications for China's evolving media and communication sector, especially in relation to the country's other eye-catching yet controversial initiative, namely the "Going out" project, also known as China's "soft power" project. The latter has since early 2000s prompted a number of leading state-owned national media organisations, such as Xinhua News Agency and China Central Television, to go global with the state's generous financial and policy support. Is China under the BRI initiative aiming to further stimulate the globalising tendencies of China's state-owned national media? If so, are there any other driving forces behind this process? And what are the main implications for China's national media? This paper will discuss these issues based on the evidence derived mainly from policy analysis and documentary study in combination with interviews with media executives and journalists based in Beijing.

The paper also aims to engage with a deeper academic issue concerning how Chinese media in general and its state-owned leading national media in particular should be conceptualised under the two ongoing initiatives. The Chinese state's efforts to project its soft power through state-owned central media has become a popular research subject in recent years (Zhao, 2015). It seems that every step that a central media institution like Xinhua takes towards conglomeration, marketisation and globalisation can now be explained and justified in relation to the Chinese state's soft power ambitions. However, the "soft power" concept itself is not without theoretical flaws. Thus, I would argue, alongside scholars such as Yuezhi Zhao (2013) and Colin Sparks (2015), that looking at contemporary developments exclusively through the soft power theoretical lens has prevented us from gaining a more nuanced understanding of the changes happening to Chinese media and journalism. This "soft-power-for-all" approach, though popular, certainly does not help gain a full picture of the Chinese media, consisting of "a huge and complex set of institutions" (Sparks, 2012: 65). Instead, it tends to oversimplify the functioning of China's media system and policy decision-making in the country. In order to advance our understanding of the ongoing transformations of China's national media, we need to move beyond seeing it through the narrow lens of soft power. Instead, we need to critically examine it from a historical perspective as well as in relation to ongoing processes of media marketisation, conglomeration, financialisation and digitalisation within and outside China. This paper will do so as a starting point for such an academic endeavour.

Title: Does Internet Contribute to Cosmopolitanism' Evidence from European Data

Session Type: Individual submission

Authors:

Name: Yang Bai

Email: ymb5037 -at- psu.edu

Country: US (United States)

Affiliation: Pennsylvania State University

Abstract: As the Internet has made cross-broader communication much easier, its impact on the users' perception of the world has attracted considerable attention. On one hand, the wide adoption of algorithm and use of social media create an online space where people are more likely than ever to be exposed only to information they like to see and interact only with people who share same ideas and interests (Just & Latzer, 2017). Thus, users of Internet are consciously or unconsciously being segmented into different "worlds". On the other hand, however, the connectivity enabled by the Internet is global in nature. With the free flow of information about distant places, it is easier for people to realize that "local happenings are shaped by events occurring many miles away and vice versa." (Giddens, 1990, p.64) Therefore, many studies (Verboord, 2017) have emerged which explore whether the Internet has contributed to the rise of cosmopolitanism – the worldview and ideology that all humans belong to a single community (Appiah, 2007).

This study joins the discussion about the role of Internet on the perception of the world. The research question it seeks to answer is: does the use of Internet contribute to the worldview that all humans are part of the same community? To answer this question, an empirical analysis will be conducted using 3 years of data (1990, 1999, and 2008) from the European Value Surveys. The percentage of the respondents who believed that they first belonged to the world as a whole rather than their own countries will be calculated for 26 participant countries as an indicator of the country's cosmopolitanism orientation. Based on previous studies about nationalism and cosmopolitanism (Steenkamp, 2009; Lan & Li, 2015; Verboord, 2017), several socioeconomic, demographic and cultural factors will be identified as control variables. The impact of Internet penetration, the data of which will be obtained from ITU databank, on the cosmopolitanism orientation will be analyzed. In order to tackle the potential endogeneity issue, fixed effect estimation and the generalized methods of moment technique will be used in the regression. Given that large differences exist among the surveyed countries, cluster analysis will be conducted to show if the effect of Internet varies across countries.

Although the discussions about Internet use and cosmopolitanism abound, to the best of the author's knowledge, there are very few studies which examine the relationship empirically using national level data. Therefore, this study can provide the much-needed empirical evidence to further the discussion. Also, since the study will conduct cluster analysis, the result will shed light on the non-uniform and complicated impact of Internet on the forming of worldviews.

Title: The communication practices of big data science and the globalized 'post-truth' environment, and the call to observe social control (re)definitions by communication and media scholars

Session Type: Individual submission

Authors:

Name: Wagner Piassaroli Mantovaneli
Email: wagnermantovaneli -at- hotmail.com
Country: AT (Austria)
Affiliation: University of Vienna

Name: Gert Tomita
Email: gert.tomita -at- gmail.com
Country: AT (Austria)
Affiliation: University of Vienna

Abstract: Big Data specialists claim that we are experiencing a new stage in science, which finally announces the “end of theory”: “The big data enterprise claims that rather than testing a theory by analyzing data, the new analytics seeks to gain insight ‘born from the data’” (Završnik, 2018, p. 5). Therefore, there would be no need for a priori theories anymore. At the same time, we live in a post-truth environment, where new community of practices based on “tribalist” beliefs (see Crawford, 2018) create speech acts (which turn out to be securitization processes), reaching digital media, public opinion by steering, e.g. sentiments like hatred. Based on this recent context, what are the consequences of these “new” communication practices, both in science and in society in general, for social control practices in an information era? How social control, their forms, possibilities and limitations, may be impacted and affected by the practices of this new stage in science claimed by big data scholars and, at the same time, by the social communicative practices of speech acts which might gain the status of truth and real policies just by their continuous replication through social media? Based on Chriss’ (2016) framework for a social control theory, a tripartite division of social control types, we seek to theoretically understand how each of these communication practices of this new era are connected to (re)definitions of kinds of social control in the current information society ranging from the most informal to formal ones (Chriss, 2016). We are also based here on Beniger (1986), who understands that no control works separately from communication in societies. Our claim, however, is that much is talked about social control, but little is done in Communication and Media Research to directly identify, within a theoretical framework, the types of social control that communicative practices create. This is based on the fact that social control has become a catch-all phase with no meaning and content throughout social sciences, and especially in Communication Science (Chriss, 2016). We know, however, that concepts are the building blocks of theories (Shoemaker, Tankard and Lasorsa, 2003) and by taking for granted old sociological concepts like social control we might be losing much of the accumulated knowledge about it, specially when we talk about types of social control, many thoroughly theorized since the foundations of the American Sociology (see Ross, 1901) and Criminological studies. Our understanding is that the observation of communicative practices, which are the constant object of research of communication and media scholars, have much to

contribute to the theorization of new forms of social control colonizing science, digital media and the sociopolitical world. And it is through the identification of forms of social control that we might contribute to think of steering social change and reaffirming human rights.

Title: Writing online novels to deliberate on environmental change and citizenship and social change

Session Type: Individual submission

Authors:

Name: Ingrid Volkmer

Email: ivolkmer -at- unimelb.edu.au

Country: AU (Australia)

Affiliation: University of Melbourne

Name: Anthony Fung

Email: anthonyfung -at- cuhk.edu.cn

Country: CN (China)

Affiliation: The Chinese University of Hong Kong

Abstract: This paper examines one of the most popular forms of youth entertainment in China, namely, online fiction. For this new form of literature, netizens are not only readers or fans; they can be amateur or full-time professional writers. Based on in-depth interviews with writers and fans and the study of text of online novels, this paper focuses on a particular genre of online novel that reflects social and environmental change in China. The analysis of the cultural production and consumption of online fiction not only reflects how the authors and readers co-create their identities, but also reveals narratives of their perceptions of social change in a related closed political and social environment, yet, a globalized risk environment. These readers, through active reading, adopt cultural content that exhibits rich imagination and occasionally goes beyond the confined hegemonic discourse of the Internet and official media, which are closely monitored by the state. For writers, they narrate their perception of China relatively freely to express their personal frustration, imagination, utopia and ideals as they enjoy a degree of creative freedom. In theoretical terms, this project will examine the new digital habitat of online fiction as a deliberative dimension to possibly challenge and change the social reality, and it can be regarded as an alternative form of protest and citizenship to engage with globalized climate issues.

Abstract: Globalized 'risks,' such as climate change, are emerging as new conceptual and empirical domains. For example, approaches in sociology and political science begin to conceptualize the globalized dimension of climate change to define the emerging fine lined transnational axes of democratic structures, for example in terms of globalized 'geopolitical democracy' (e.g Eckersley, 2017). However, compared to social sciences, theoretical and methodological debates of globalized 'risk' communication are only on the periphery of media and communication scholarship. While some studies exist, these are situated (1) on the periphery of the discipline and assess climate change through (2) a focus on one country or adopt a (3) transnational comparative approach, yet, compare these national perspectives. Furthermore, most studies investigate climate change communication in (4) mainly Western countries while research in non Western/ developing regions is still rare.

However, discursive dimensions addressing globalized risks can no longer be investigated through such a national focus. Climate change communication is no longer 'just' about addressing climate 'issues' within bounded publics but we need to conceptualize climate change communication in broader terms as transnational 'risk discourse,' including developing and developed countries, conveying the cosmopolitan reality of climate crises., enabling to assess new deliberative practices. In this sense, climate change communication needs to be conceptualized as cosmopolitanized risk discourse in order to assess the complex processes of civic deliberation across countries which is necessary for the legitimacy and accountability of no longer just national but sustainable global risk governance. We argue that new methodologies are required to assess climate change discourse in the perspective of dense 'risk' interdependence, unfolding in digital civic interaction across developing and developed world regions. This panel outlines five approaches for a much needed methodological debate of transnational research of risk discourse.

Title: Global risk citizenship - climate change deliberation in dimensions of civic identity

Session Type: Panel Submission

Authors:

Name: Wendy Li

Email: wenil1 -at- student.unimelb.edu.au

Country: AU (Australia)

Affiliation: University of Melbourne

Abstract: Citizens' engagement with climate change is mainly addressed in a national focus and in the context of the Western world. The majority of research on public deliberation about climate change considers deliberation as a 'mechanism' for democratic policy-making to sustain national risk governance.

The national focus is also used when assessing climate debates in digital spheres. Processes of civic deliberation (1) in the global South but also (2) cross-national deliberative talks around the globe are left unnoticed. However, this paper argues that nation-state-centred research tends to overlook the specifics of unprompted, transnationally powerful deliberative action, emerging in a 'fluid' transnational digital sphere. However, a focus on globalised digital risk communication, transcending nationalistic presuppositions allows to identify emerging communicative forms and practices, arising in globalized public spheres, including spontaneous deliberation on climate change. Comparative research on public deliberation about climate is needed to assess civic interaction in spheres of fine lined transnational dimensions of "reflective interdependence" (Volkmer 2014). Such an assessment allows to identify deliberation on climate change no longer in national terms but in contexts of subjective civic risk identity. This paper argues that comparative analysis of transnational 'fluid' civic interaction could reveal the commonalities and specificities of citizens' self-identification in relation to global climate risks - from a globalised communication perspective. Overall, this paper proposes a conceptual outline for 'global risk citizenship' in contexts of climate change as the existential threat to each member of the global citizenry.

Title: Stories of Protests against global climate change ' the environmentally networked self in the age of digital media: the case of chinese environmental NGOs

Session Type: Panel Submission

Authors:

Name: Xiao Han

Email: han.xiao -at- cuc.edu.cn

Country: CN (China)

Affiliation: Communication University of China

Abstract: After the enactment of Law of the People's Republic of China on Administration of Overseas Non-Governmental Organisations in the Mainland of China, in April, 2016, the number of international NGOs began to decrease in China. International NGOs had to now find a 'supervisory unit' within the institutional system, register with the police and be under constant surveillance. Domestic grassroot organisations, engaging with international environmental issues were unable to receive funding from unregistered international groups. The Chinese authorities' crackdown on international NGOs further worsened the conditions for China's environmental civic associations addressing transnational climate issues. They are left fragile with insufficient resources in terms of financial support, staff, volunteers, and members. Yet, these environmental civic associations did not choose to keep silent and withdraw from public life; rather, they continued to use their social media platforms to 'tell stories' of their suppression, angry, and 'fighting-against' activities. In this context, environmental civic associations can be seen as storyteller, using social media to express their emotions, affect sentiments of followers, and seek for solidarity with supporters. More importantly, it seems that environmental civic associations have, to a larger extent, realised the potential of social media to share their stories to promote an action for maximal effect; i.e., to have appropriate rights to give voice in the online public realm.

Drawing on outcomes of my ethnographic study, this paper investigates digital storytelling practices before and after the new foreign NGOs law to shed light on how 'old' and 'new' media characteristics blend, overlap, and coevolve for green movement in the Chinese society. The empirical data is mainly derived from in-depth interviews with core organisers of representative environmental civic associations, as well as critical discourse analysis of the groups' posts in their both public and private social media accounts. Irrespective of whether or not storytelling needs to be seen as 'new' communicative practices, this paper specifically focuses on the design, format, and display of the groups' selected posts and the contexts where the international environmental issues, values, and beliefs can be properly circulated through Chinese online spaces, albeit accompanied by censorship.

Title: Risk journalism and the role of journalists as cosmopolitan actors

Session Type: Panel Submission

Authors:

Name: Ingrid Volkmer

Email: ivolkmer -at- unimelb.edu.au

Country: AU (Australia)

Affiliation: University of Melbourne

Abstract: It is surprising that still today, at a time of advanced climatic transformation, climate change journalism has still a marginal role. Despite the urgent need to communicate implications of climate change on all sectors of societies, climate change journalism is marginalized in most countries. For example, journalists who cover climate change are forced to 'squeeze' the issue into the traditional 'foreign' and 'domestic' news agenda. Furthermore, as journalists rarely have a science background they are left alone to develop their own subjective 'logic' of producing climate change stories. This is also a reason why - despite the globalized interdependent scope of climate change - journalism mainly adopts a national angle in most countries, framed along the – again - national policy agenda by governments.

In consequence, climate change is only vaguely seen as globalized dimension by citizens but mainly perceived as a national phenomenon. Studies show that, for example, in Sweden climate change is related to the melting of polar caps, in Germany associated with national industrial emissions while in Australia and the USA, the issue is addressed by journalists, yet, politically neglected. In Indonesia and Pakistan, climate change issues are assigned to junior journalists, while senior journalists cover more 'serious' newsbeats, such as 'terrorism' or the 'economy' and – in consequence – climate change is rarely included in the news agenda. In today's advanced stage of climate change with implications on all continents, journalists across societies need to take on new active roles not only in a national context but also as transnational 'cosmopolitan actors' to open the perspectives of citizens towards an understanding of climate change no longer in national boundedness but within increasingly dense globalized 'interdependent' risk spheres. Overall, we require a new paradigmatic approach to understand journalistic practice vis-a-vis globalized 'risks' within a globalized sphere of globalized interdependence. This paper outlines a new transnational dimension 'risk journalism' and defines journalists cosmopolitan actors addressing globalized risks. Risk journalism is suggested as a third dimension of journalistic practice, besides traditions of 'domestic' and 'foreign' journalism which are insufficient for engagement in globalized climate change.

Title: Third Culture Kids and Doing Family: Communicating Across and Through Generations

Session Type: Individual submission

Authors:

Name: Manisha Mishra

Email: manisha.m86 -at- gmail.com

Country: DE (Germany)

Affiliation: Heidelberg University

Abstract: It is estimated that roughly 244 million people (or 3.3% of the world's population) reside outside their countries of origin (UNFPA, 2016). In an increasingly interconnected and transnational world, it now means that more people are scattered across the globe under different circumstances, facing voluntary or forced migration. In many cases, those migrating are often separated from some members of their family, losing their ability to “do family” and physically maintain a sense of community with them. However, in order to communicate with these physically separated family members and maintain a sense of community across borders, migrants have to use certain technological tools. Such methods of keeping in touch have not only become common but have also shaped the communication systems in migrants' countries of origin (Vertovec, 2009). Today's increasingly inexpensive and widely accessible forms of communication technology have allowed individuals to “do family” and be co-present in spaces aside from the physical; a process that was both expensive and difficult earlier. Although there has been a great deal of literature about labour migrants and how they communicate with their families physically separated from them (Baldassar, 2016; Madianou, 2016; Constable 1997; Nedelcu, M. and M. Wyss, 2016), not much has been written about financially well-off mobile family units, and especially migrant children from such families (henceforth called “Third Culture Kids”).

“Third Culture Kid” (TCKs), a term coined in the 1950s by Ruth Hill Useem refers to “a person who has spent a significant part of his or her developmental years outside the parents' culture” (Pollock & Van Reken, 2009). TCKs often move several times in their lives, shuttling from country to country. As children of voluntary short-term migrants, they are also financially well-off, which changes the way they communicate with family members they have left behind in their countries of citizenship. In order to understand the communication practices of former TCKs who are now adults (aged 25 to 35), this paper analyses various levels of “doing family” by drawing from first-person interviews. It firstly focuses on generational aspects by understanding how the communication practices of the interviewees differ presently from the time they were highly mobile children (both pre-new media and post-new media). This represents not only a generational shift in the understanding of technologies but also access to such technology. Secondly, this study maps the change in communication technologies themselves: their accessibility and cost (for example, pay phones versus mobile technologies). Thirdly, the study draws from the physical location and situations under which the interviewees practised “doing family” with their extended family members (their countries of residence and citizenship, political situations, etc).

The study found that various factors affected the interviewees' ways of “doing family”, such as age of access (which impacted their means to communicate), cost (the higher the cost, as in decades

ago, the more infrequent the communication), as well as physical location (the further away from major cities, the more difficult to find appropriate communication technology).

Title: Digital development imaginaries, informal business practices and the platformisation of digital technology in Zambia

Session Type: Individual submission

Authors:

Name: Wendy Willems

Email: w.willems -at- lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: Digital development imaginaries continue to vest much hope in the ability of technology to transform economies in the Global South. Tech hubs and start-ups are presented as key to promoting innovation, investment and wider economic growth on the African continent, reflected by terms such as Kenya's 'Silicon Savannah', Nigeria's 'Silicon Lagoon' and Cameroon's 'Silicon Mountain'. Digital technology is not only treated as a crucial growth sector in its own right but is also seen as a means to transform existing businesses, entrepreneurs and economic practices. Mobile phones are considered to be vital in the business practices of farmers, small-scale traders and market vendors. For some, they have enabled small businesses to communicate more effectively with customers or suppliers or made it possible for farmers to access market price information on livestock or agricultural commodities.

However, in focusing attention on the contribution of digital technology to economic change, scholars often fail to examine the way in which the internet itself is changing, slowly giving way to a space that is largely controlled by global social media platforms. This paper aims to situate informal business practices within the wider context of the growing 'platformisation' of the global mobile internet which does not only violate net neutrality but also raises concerns about the growing datafication of the Global South and threats to privacy. Against this background of global power relations which increasingly shape the nature of the internet, I examine how informal traders and vendors in New Soweto Market in Lusaka, Zambia make use of digital technology in their working lives and the extent to which smartphones have transformed their business practices.

Drawing on semi-structured interviews with informal traders and vendors, I argue that smartphones, mobile internet and social media offer a number of opportunities to small-scale informal businesses, such as the ability to efficiently communicate with customers, to cheaply and instantly share information (e.g. images of goods) with traders in neighbouring countries, or to quickly transfer money to suppliers. However, technology does not radically transform informal businesses as face-to-face contact as well as building trust remain important preconditions for the scaling up of informal business networks. Furthermore, the growing 'platformisation' of Zambia's mobile internet marginalises local technology firms, is likely to reinforce user dependency on global corporate platforms and poses risks to traders' and vendors' privacy.

Title: Path dependency and critical junctures for Irish public service media

Session Type: Individual submission

Authors:

Name: Andrew Ó Baoill

Email: andrew -at- funferal.org

Country: IE (Ireland)

Affiliation: NUI Galway

Abstract: Since 2007, Irish public service broadcasting has encountered a ‘perfect storm’ of challenges. Encompassing economic, technological, and regulatory elements, these developments have weakened the long-term capacity of the sector to provide a distinct Irish cultural space, and tended to hasten media concentration within the sector.

2007/ 2008 marked a high point of the Irish economic boom, with a sudden crash following shortly thereafter. The paper examines the tension and interplay between market participants and state actors, offering a political economic analysis that examines industry data for Irish audio-visual media from 2007 through to 2017. Thus, looking at this period shows the previous high-water mark, as well as covering the period of the crash and subsequent ‘recovery’ to date.

The downturn in the Irish, and global, economy, coincided with a key period in audience fragmentation, as Irish audiences were targeted ever more directly by largely UK-based media conglomerates. Interventions, both by central government and sector-specific regulatory bodies, have been focused on short-term fiscal goals, and acted, in several instances, to weaken the long-term capacity of indigenous broadcasters, particularly in the not-for-profit sectors.

The findings included in this paper highlight the extent to which the Irish media market is tied into and subject to shifts in international markets, with, for example, shifts in international investment patterns having a significant impact on levels of activity in the domestic film production business, and on the threat provided by the development, by British broadcasters, of opt-out advertising streams (on pre-existing television channels) aimed at the Irish market. Government policy plays a key role. This may be most evident in the longstanding commitment, across several changes in government, to an essentially open economic policy, heavily reliant on foreign direct investment (FDI).

A key development identified in the project is the delay in implementing a free-to-air digital television (DTT) platform, which has had significant impacts on subsequent development of the broadcasting sector, and which looks likely to have long-term consequences for the efficacy of cultural interventions by indigenous public service operators.

This paper provides insights into the changing fortunes of Irish public service broadcasters over the past decade, coupled with a political economic analysis that identifies and teases out the key issues shaping that experience.

Title: Young Adults' Attitude Toward Online Healthy Lifestyle: a comparative study between China and India

Session Type: Individual submission

Authors:

Name: shuhan chen

Email: sc463 -at- le.ac.uk

Country: GB (United Kingdom)

Affiliation: (0044)7741939962

Name: Deepti Ganapathy

Email: deepti.ganapathy -at- nmims.edu

Country: IN (India)

Affiliation: NMIMS

Abstract: China and India are developing countries in Asia- known for their large population as well as a larger share in the global digital media landscape. A young and growing population in China and India plays a significant role in the use of digital media for health-related information consumption. This paper provides a comparative study between Chinese and Indian young adults' in trying to explore their reflections on the popularity of health-related practices online which in turn has implications on their lifestyle in the offline lives that they lead.

The exploratory research includes two focus groups among six Indian University students and two in-depth interviews of two participants from China. All participants are between the age of 18-24 years old and active in searching for health-related information online. According to the participants, there is a rising interest in health-related activities among their peers in both online and offline environment. The most popular activities are the creation and consumption of fitness related online information, which include physical exercises, developing healthy-eating habits as well as pursuing a well-shaped body. Although digital media provides these youth with the convenience in online information sharing and consumption, they also raise different concerns. For instance, young Chinese adults' concern is primarily about the rising social comparison among peers which has implications on the possible financial cost of pursuing a healthy lifestyle in the offline environment, as well as the difficulties in identifying the credibility of online healthy-related information. Indian young adults are much more concerned about the negative influence of celebrity endorsements, for instance celebrities who blatantly endorsed health or hair-regrowth supplements. Despite of this is being a small-scale exploratory research, the research findings shed light on the popularity of health communication among youth through their use of social media. Therefore, future research as part of this study will focus on investigating the popularity of healthy lifestyle among Chinese and Indian youth from a socio-cultural and media perspective.

Title: Going Global at Chinese Universities: A critical discursive analysis of Tsinghua and Peking Universities' online content

Session Type: Individual submission

Authors:

Name: Sophia Han

Email: shh10 -at- sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: This paper examines the changing value proposition of Asian universities as it is presented in the digital discursive space of the Internet. In an analysis of keywords and semiotic resources explaining what it means to “go global” at Chinese universities, I argue that concepts related to global connectedness, inclusivity and citizenship are marginalized by discourses built around market-framed needs and further contextualized by a uniquely Chinese definition of global participation. While the primary methodology was drawn from Norman Fairclough’s three-dimensional framework for critical discourse analysis, Zhang and O’Halloran’s “hypermodal” approach was extended and applied to an examination of the mediating influence of the web browser and search engine software on practices of digital production and consumption. At the micro-level, a social semiotics approach was applied to draw an interpretative reading of meaning-making practices embedded in the Internet.

Title: International brand communication in the belt and road initiative: Chinese corporate's choices and dilemmas

Session Type: Individual submission

Authors:

Name: Yaxin Cao

Email: caoyaxinthu -at- gmail.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: As the second largest economy in the world today, China has made great progress in its economic development in the past 30 years. Especially after it launched the belt and road initiative, overseas investment and corporate development have made great growth. The issue of "Chinese corporate go global" has become a hot research topic in China corporate communication literature. Chinese corporate go global are not only capital go global, but also include the corporate brand go global. Under such a context, an increasing number of Chinese corporates are investing abroad and building subsidiaries and factories in other countries. In particular, the most significant development of Chinese corporates is found in Africa. For the time being, Chinese corporates focus more on economic interests and growth than on their "image" in the foreign audience. As a result, their reputation does not match the corporate's hard power, especially in corporate brand building. The strategy by some of Chinese corporates branding efforts by mergers and acquisitions of famous local brands have worked in some countries. This strategy, however, cannot always solve the problem. Therefore, how to promote their own brand overseas become Chinese corporate's opportunities and challenges.

The purpose of the paper is to provide recommendations and references for Chinese corporate go global in brand communication. Taking an in-depth analysis and study of a Chinese corporate in Ethiopia as a case, combined with interviews and analysis with other Chinese corporates in Ethiopia, to explore the problems encountered in corporate communications. It mainly includes the following aspects: 1) corporate ignore the brand building; 2) The corporate's own identity is not clearly defined; 3) Corporate communication lacks cross-cultural communication strategies and cannot tell one's own story with international discourse or local discourse. At the end of paper concludes author's opinions on how to brand communication and brand building. Including how corporate define core value; How corporate make brand slogan overseas; How corporate promote the management of public relation with local media and community.

Title: Violence against journalists: A comprehensive definition of types and harms

Session Type: Individual submission

Authors:

Name: Sallie Hughes

Email: Shughes -at- miami.edu

Country: US (United States)

Affiliation: University of Miami

Name: Julieta Brambila

Email: jabrambila00 -at- gmail.com

Country: MX (Mexico)

Affiliation: Universidad de las Americas-Puebla

Abstract: In this paper we offer and justify an expanded definition of violence against journalists and journalism as an institution. The preferred approach in academic research has been to conceptualize violence against journalists narrowly as “attacks,” or verbal, psychological or physically intimidatory behaviours directed toward journalists, associated media workers and independent news bloggers. Arguably, physical attacks are the most visible and extreme form of violence, understood as deliberate harm inflicted upon an individual or a group. This type of violence hampers journalistic professional practice, produces a chilling effect upon colleagues and, ultimately, limits press freedom and the right to information. As important, the definition of violence as direct attacks misses indirect or diffuse forms of violence, including structural, cultural and symbolic violence, which also harm journalists’ occupational performance and wellbeing. Structural, cultural and symbolic violence manifest as economic inequality and vulnerability materializes as working in conditions of precarity or labor informality, both in economically developed and less-developed countries. Studies from health fields document that institutionalized racism and sexism, trauma from historical cultural marginalization, and economic vulnerability can produce significant physical and psychological harm. In journalism studies, abundant literature has shown that women journalists’ occupational status and wellbeing are harmed by these forms of indirect violence. While there is less empirical work on the harmful personal consequences of unequal newsroom structures and ideologies on ethnic minority and LGBTQ journalists, the results there are suggest the effects of indirect violence are similar. We thus propose an omnibus definition of violence against journalists and the press which encompass actions and conditions that injure or increase the risk of physical, psychological or occupational harm to journalists as human beings and as institutional actors. We define violence against journalists as both direct and indirect aggressions that may cause harm to journalists’ occupational performance or individual wellbeing. Besides encompassing the various dimensions of violence against journalists, this conceptualization highlights the deleterious effects of violence to journalism as a source of societal improvement and to journalists’ human rights.

Title: "Ethnicity, Violence and Civil Disobedience": Coverage of the Wadi Salib Events in the Israeli Press from the Post-Colonial Perspective.

Session Type: Individual submission

Authors:

Name: Nissim Katz

Email: nisimkolota (at) gmail.com

Country: IL (Israel)

Affiliation: kinneret college

Abstract: This study analyzes the coverage of the Wadi Salib events from the perspective of postcolonial theory (Baba, 1994, Said, 2000). The premise of this study is that it is possible to analyze media coverage of events from the past, using theoretical and research paradigms developed in media research (Katz, 2015).

The events of Wadi Salib were a series of street demonstrations and riots that took place in 1959 in the Wadi Salib neighborhood of Haifa. The events were a social revolt against ethnic discrimination and discrimination against the "Mizrahim" Jews and against the "Mapai" party that ruled the State of Israel at the time. The "Mizrahim" Jews were Jews who came to Israel mainly from Arab countries and Islam (Shenhav, 2003). The postcolonialist approach to the discrimination of Mizrahi Jews has economic, political, social and cultural characteristics, all of which are intertwined (Haber, Mutzafi Halar and Shenhav, 2002).

At the methodological level, this study used the framework of grounded theory. In addition, framing processes and how they are reflected in the modes of coverage in two major newspapers: Yedioth Ahronoth (popular) versus Haaretz (qualitative) .

The methodology is done on two levels: the unhidden level and the hidden level. The unhidden level is intended to determine the main issues and the connections between them. It includes reading sample details and to develop concepts for the use of subsequent readings and more systematic data analysis. Sampling is done by searching for cases until they reach the "saturation point". The hidden level was performed on two levels: textual and textual. On a textual level, the goal is to identify the various messages implicit in all the narratives, myths and silences that are found in the text in an undisclosed manner. At the textual level, there is a linguistic-rhetorical analysis that focuses on metaphors, representations, context and content that create hidden messages in the text.

In the analysis, this study attempted to answer a number of questions arising from the coverage, such as: Who are responsible for the events? Why did the events occur (against a socio-ethnic or political background)? Who are the victims in the story and who is responsible? Who is the strongest and the weak? What is the solution to the riots, etc?

The study found that three prominent coverage frameworks were prominent throughout the media coverage: One, a framework of guilt - violence is not accidental, but is planned and caused by a group of political and non-socio-economic goals. The second, a framework of ethnic-violence, comes from a certain ethnic group - the immigrants from North Africa. Third, a framework of binary contradictions - the demonstrators are dangerous, criminals and have a criminal past, while the police and government is the defender of the public to those rioters.

Country: SG (Singapore)

Affiliation: Wee Kim Wee School of Communication and Information, Nanyang Technological University

Abstract: Fake news has been studied as it impacts on democracy (Allcott & Gentzkow, 2017) particularly following its disputed impact on the electorate in 2016 in the US and the UK. Its role in further polarising societies has been examined (Vargo, Guo & Amazeen, 2017) as people tend to more readily believe false information if it supports their existing views. Yet this big picture overlooks the impact of fake news on interpersonal relationships. In many cases, people share (fake) news not to destabilise a country nor to shore up their political credentials among likeminded peers, but to help, entertain, or inform their friends and family (Goh, Ling, Huang & Liew, 2017). This makes a crucial distinction between the motivations for creating and for sharing fake news which forms the basis for this study. The act of sharing moves news from the informational to the social. Ironically, this benefits fake news because when people share real news to enhance social cohesion, they may distribute fake among the true. Since fake news fits into an existing mechanism for social cohesion, it utilises benevolent sharing processes but to negative effect.

To examine this, we ran 12 focus groups of 88 adults who share news stories via social media.

Discussions concerned how they shared news, with whom, their reasons for sharing, and how they felt about news shared with them; and their reactions to fake news, the strategies they used to identify and check it, and its impact on relationships when they shared or received it.

We found that people share news to maintain social cohesion. Pressure to take part in this social activity can lead them to (often inadvertently) share fake news. This transgression can prompt negative feedback from recipients which can then lead the sharer to modify their news-sharing behaviour. The social utility observed in sharing real news extends into sharing fake news but it comes at a price, and this feeds back into news sharing behaviour. Many found fake news had an entertainment value regardless of its truth. Others disparaged those who shared fake news. Several

altered their news sharing behavior. Older participants who wished to be seen as a source of advice and wisdom were less critical of the stories they shared, while younger participants were more circumspect. These findings contribute to understanding of the impact of fake news on dyadic and small-group relationships; as well as on public attitudes towards the credibility of traditional news media; and on wider social cohesion.

Title: What's Really Real' Journalism in the Age of Angry Publics and Alternative Facts

Session Type: Individual submission

Authors:

Name: Ed Madison

Email: madison2 (at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: “The question ‘Is it real?’ is less important than is it newsworthy? ... We are threatened by a new and peculiarly American menace ... the menace of unreality,” wrote historian Daniel Boorstin in his prophetic 1962 book, *The Image*.

Boorstin likely never imagined “reality” would become a television genre, and that this source of entertainment would spawn an American president. This research paper investigates how social media, exemplified by Twitter, allows populist politicians to manipulate perceptions of reality by setting their own agendas and circumventing mainstream media gatekeepers — often bewildering the press. Specifically, it examines how political leaders around the world are emulating the tactics of Russian Vladislav Surkov, Vladimir Putin’s chief propagandist, to disrupt democratic norms and fuel mass confusion (Pomernatsev, 2014). It is a strategy that disregards traditional diplomacy and defies reasoning. A political perpetrator may promote a position or policy one day, only to repudiate it the next; backing all sides and then suddenly no sides, leading people to experience news fatigue and hopelessness (Pomerantsev, 2016).

“Truth isn’t truth,” Trump’s attorney Rudy Giuliani told Meet the Press host Chuck Todd (Stewart, 2018), exemplifying why several scholars fear that certain populist administrations and alt-right leaders are co-opting postmodern theory (Williams, 2017; Delton, 2017). A philosophy that sought to liberate people from the forces of regressive politics is being used to perpetuate it. The study uses critical discourse analysis (Fairclough, 2013) to discern how such politicians craft well-timed tweets as linguistic weapons deployed to shift news narratives in their favor. Potentially damaging stories are abandoned in favor of less significant “breaking news” that is often tantamount to a sideshow.

The research also explains the role of mainstream media in its own demise, and what it will take to regain public trust and return civility to public and political discourse. It cites how legitimate broadcast news organizations succumbed to entertainment strategies that won them ratings but cost them credibility. It presents a path forward, noting the significance of language and its power to reestablish the role of journalism.

Title: Feminism, development and online activism in the digital age

Session Type: Individual submission

Authors:

Name: Carolina Matos

Email: carolina.matos.1 (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: Department of Sociology, City, University of London

Abstract: In the last decades, social movements and a series of NGOs working across the world for different causes have made wider use of new technologies in order to shape public opinion in the media and the public sphere with the intent of influencing the political arena, policy and decision-making. In the age of media saturation, research has shown that various NGOs face a series of political challenges and difficulties in creating awareness around their causes, particularly those working with human rights as well as in areas such as sexual and reproductive rights (SRHR), being forced to engage in competition for attention to their cause and overcome political resistance. New technologies are thus not always capable of assisting them (Thrall et al, 2016). Gender equality and sexual and reproductive rights have implications for democracy, whilst the potential offered by new technologies for change has a role in media democratization. Research has shown that Latin American NGOs have been crucial in advancing reproductive health rights, managing to make inroads internationally, shaping policy and criticizing the violation of women's human rights (Richardson and Birn, 2011).

Funded by the GCRF, the project Feminism, development and online activism in the digital age seeks to advance research on how the use of technologies by women's groups and feminist NGOs in the North and the South can empower women in developing countries to advance human rights and influence policy. A sample of NGOs based in the North and South, who work in Latin America and in large democracies such as India, have been selected. This is combined with questionnaires and in depth interviews with NGO representatives, communication specialists, experts and political leaders. It will explore their online communication activities, from their organizational websites to social media profiles, contributing to theoretical debates and empirical work on cyberfeminism, the role of NGOs in development, journalism and use of ICTs for social change. Research questions include how can online communications be used for gender development and how are feminist NGOs working with sexual and reproductive rights making use of online communication tools to reach out to the public, thus shaping policy globally and locally?

This research adopts a mixed methods approach and makes use of both qualitative and quantitative methodology. The core objective is to assess the information flows of a series of NGO organizations working with SRHR and women's rights, assessing the ways in which new technologies can be better used to their advantage. The methodology consists of content and discourse analysis of the online communication activities of a selection of NGO websites; the use of secondary data, which will include research into policy documents and legislation as well as media reports as a means of examining the clout, or the political and media impact of these NGOs, as well as the application of questionnaires and in depth interviews with NGO representatives and communication specialists, academics, experts and political leaders to assess the link between online and offline communication strategies and political activities.

Title: Using GMG's News Game as a pedagogical tool for journalism students

Session Type: Individual submission

Authors:

Name: Jesse Hearn-Branaman

Email: justjeshb (at) hotmail.com

Country: CN (China)

Affiliation: Beijing Normal University-Hong Kong Baptist University United International College

Abstract: Like many other media-related fields, journalism education faces a challenge on how to balance practice-related skills education, required for students to procure employment, and the more theoretical and contextual knowledge required by modern higher education. Should we focus on writing, filming, copyediting, and other necessary real-world skills student require at the expense of social science, political economy, linguistic, and other academic subjects? How can we make students interested in the latter despite their preference to focus on the former?

This study will illustrate one such pedagogical practice that attempts to bridge the gap between these two positions, that is, using the students' practical work to better illustrate the theoretical knowledge they also need to acquire. This will be done by re-assessing the 'News Game' research method, often deployed in research by the Glasgow Media Group (i.e. Philo 1993, 2002), and examining its pedagogical implication.

The 'News Game' research method used by the Glasgow Media Group to "investigate how changes in the structure and content of programming might affect audience comprehension and levels of interest" (Philo 2002: 178). This has been used "to examine media effects and audience beliefs about a wide range of 'public knowledge' issues" (Devereux 2014: 235). Devereux points out this method was originally devised as a "teaching aid" (ibid), but later evolved in a research tool to examine audience reception and re-presentation of media messages. As Philo argued, this tool was developed "to establish what people already 'knew' and to show the processes by which they had arrived at their beliefs" (Philo 1993: 258).

Whereas this research method, wherein participants are given photographs of events and asked to write news stories, examines how audiences understand and frame events and how this is affected by their news consumption, I argue that this can easily be adapted as a classroom-based activity for more theoretical courses. It can, instead, be used to simultaneously analyze the framing practices of news texts produced by journalism students and to inform a discussion with the students of their framing practices in conjunction with lectures and seminars exploring framing theory. Examples will be given from activities performed with Chinese undergraduate journalism students in the Spring of 2018 and 2019.

Title: Viral Journalism: digital approaches and tactics of the professional media in the UK

Session Type: Individual submission

Authors:

Name: Anastasia Denisova

Email: a.denisova1 (at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: The rise of populist politics and accusation to the media of being elitist or ‘fake news’ has led to a shift in trust of established media resources. Only 44% of people in the UK believe the news in traditional media; a figure juxtaposed with the rising use of social media for news updates (Newman et al., 2018). Furthermore, audiences often do not recall the names of news sources as they receive news updates from search engine and social media platforms (Kalogeropoulos, Fletcher & Nielsen, 2018).

This presents a problematic media environment, where professional media have to identify new ways to connect with their audiences and deliver high-quality information fast and to many people. This paper provides a fresh account of how media professionals in the UK adapt to and adapt from the rapid social media environment, methods and practices of viral spread of information and ideas. The method is semi-structured interviews with social media editors and journalists from the leading respected UK publications, including The Economist, Telegraph, The Guardian, BBC, Financial Times, The Times and others.

Current research on viral media (Nahon & Hemsley, 2013; Berger & Milkman, 2010; Guadagno et al., 2013; Blommaert & Varis, 2017; Burgess, 2014) defines virality as fast-moving information flows that spread at a high speed due to being shared by masses of people. This fits in the logic of ‘accelerated society’ (Rosa, 2013), where technology, globalisation and pressures of economy have significantly pushed people to consume information at fast pace.

This paper on viral journalism is looking into whether professional media need to adopt such viral tools as memes, gifs, looped videos and hashtags in order to appeal to mass audiences; if it is necessary to convey serious information to the audiences in a jokey form; and whether this tactic helps to attract crowds to the professional, fact-checked reporting and analysis.

My study has identified a number of working and efficient tactics that quality media apply to compete with viral hits on the Internet: using videos or smart infographic, among others. However, the surprising finding is that quality media do not pursue viral techniques as a long-term strategy. They abide by the traditional principles of original reporting and belief that a strong story would find a way to the audience without any ‘viral’ decorations and those would only undermine the credibility of the media.

Email: martin.olleralonso (at) gmail.com

Country: CU (Cuba)

Affiliation: Universidad de La Habana

Abstract: Journalism has long been seen as a young person's occupation. While the average age of journalists has increased slightly in past twenty years, the Worlds of Journalism Study (WJS) data permits us to unpack this average. Analysing and comparing the journalistic and general workforce in age segments in 14 countries allows us to arrive at a more detailed picture of age distribution. Our findings reaffirm that journalism is still an occupation for the young, and underscore the fact that in many countries journalists do not stay in the job for long. This leads us to argue that journalism lives with large numbers of young and relatively inexperienced workers, which offers an important insight in the digital age when journalism is similarly created from many diverse sources and with workers of varying levels of experience.

Abstract: In recent years, the emergence of social media has resulted in many structural changes in human life. These "platform media" features their convergence, sociability and openness, which bring new opportunities to the whole process of news production. A Collaborative Journalism model has become a crucial practice through social media.

With regard to social media, journalistic gatekeeping is in transition. (Francois Heinderyckx, 2015) Professional journalists appear to play less and less important role as gatekeeper. (Axel Bruns, 2006 & 2018) Meanwhile, citizen journalists begin to have more opportunities to participate in news production. In such process, the mechanism of Gatekeeping evolves towards Gate-watching. Algorithms also become one of the gatekeepers.

It is worth noting that, although collaborative journalism forms on social media, and provides a platform for public participation, they are trying to establish new regulations with strong market force by platformization.

In China, on February 18, 2014, the WeChat official account of People's Daily (overseas edition), which is called "knight-errant island", was launched. It was constructed by young journalists focusing on hard news, especially in-depth and investigative reporting. Because of the originality, objectivity, and globally oriented perspectives of their coverage, this news group has received wide popularity. The readership of "knight-errant island" are young, well-educated, active, rational, and have certain consumption ability. More importantly, the editorial team makes every decision on the themes of each coverage through Wechat group discussion. The group members consist of random netizens, intellectuals and publics, and the name list will be updated from time to time and closed automatically if there is a silly season. As the editorial decision has been made, members will proceed to participate in news verification.

Therefore, three questions generated from observation 1) How Chinese citizens have been involved in the process of news production conducted by People's Daily ? 2) How online presence

of party media played its role in the interaction between platform, publics and government ? 3)
Since Chinese citizens engaged in negotiation, how they identify themselves in democratic politics?

In order to response those questions, the research method of 3 months participative observation (from Dec. 2018) and 25 in-depth interviews (10 interviews have been done already) are in process.

In summary, this study will help us to understand the social and structural of contemporary Chinese in more comprehensive way, by analyzing and comparing the journalism on social platforms, as well as how collaborative journalism provide impetus for social interaction.

Title: Robot Journalism and the 4IR: Implications for Practice and Training

Session Type: Individual submission

Authors:

Name: Abiodun Salawu

Email: salawuabiodun (at) gmail.com

Country: ZA (South Africa)

Affiliation: North-West University

Abstract: The Fourth Industrial Revolution (4IR) builds on the Digital Revolution (i.e. the Third Industrial Revolution) and it represents new ways in which technology becomes embedded within societies and even the human body. It revolves around robotics, artificial intelligence, nanotechnology, quantum computing, biotechnology, The Internet of Things, 3D printing and autonomous vehicles. In short, it affects every aspect of human endeavours including journalism. Scholars have asserted that the key to the viability of news media in the digital age is innovation. As such journalism has to be innovative in adapting to the world of artificial intelligence as a hallmark of the fourth industrial revolution. A few news media organisations (for example, Associated Press) have adopted the use of Artificial Intelligence (AI) for their journalistic operations. This paper attempts to look at the practice of robot or automated journalism, the challenges associated with it and its implications for general journalism practice and training. It also looks at what implications it has for jobs in the media industry and the new skills that will be required and developed in this automated brand of journalism. The paper provides answers to these inquiries through information gathered from document analysis.

Title: "Shaping news waves' and constructing events: Why Iranian journalists embrace new communication platforms

Session Type: Individual submission

Authors:

Name: Banafsheh Ranji

Email: banafsheh.ranji (at) media.uio.no

Country: NO (Norway)

Affiliation: University of Oslo

Abstract: How do online communication platforms influence the Iranian journalists' struggle with the constraints? For what purposes do Iranian journalists resort to social media and mobile messaging applications in a restrictive context? This study, for the first time, addresses in what ways online communication platforms affect Iranian journalists' strength in the struggle for their journalistic ambitions in the restrictive setting of Iran.

This research applies Bourdieu's sociological framework and the concept of capital to explain how online media function as sources of power for Iranian journalists and influence their chance of success in their struggle with the political and organisational restrictions. I employ the concepts of social capital (aggregate of a network of connections that could be mobilized), symbolic capital (reputation, renown, and recognition), and symbolic power (the power to construct the reality with words) to make meaning of the journalists' use of online media.

The empirical evidence includes in-depth interviews with 26 journalists working in established state-owned and privately owned news outlets in Iran. The Interviews were analysed through a combination of thematic analysis and grounded theory.

The findings suggest that online communication platforms including social media and mobile messaging applications function as the resources (capitals) at the journalists' hands, and improve their position in their struggle with external and organizational restrictions. The findings of this study suggest that the journalists' social media accounts and related networks are a form of social capital. This includes the journalists' network of connections with various influential actors inside and outside the journalism field including other journalists, officials, activists, netizens, and citizen journalists. Online linkages with various actors contribute to a wider distribution of issues and making them public (in particular sensitive ones that are not publishable in established media). Furthermore, this study shows that online platforms are the sources of journalistic external reputation (outside the journalism field) and recognition among the public, and thus sources of symbolic capital.

The journalists' social and symbolic assets in online platforms, particularly Twitter, give them the chance to have leverage on issues (in particular sensitive ones), publicize an issue, stimulate the action of other actors (ranging from officials to ordinary publics) on the issue, which consequently increases the chance of covering the issue in established media. The journalists call the process of publicizing issues "shaping news wave". The findings suggest that the agenda behind creating "news wave" is to mobilize actions on sensitive issues by making people see and think about an issue. Put these findings in Bourdieu's words, the journalists attempt to construct events and employ symbolic power that is the power to construct reality. This practically means when an issue is

constructed as an “event” and wins the publics’ as well as officials’ attention; it can be covered in established media.

Title: Transparency in Virtual Reality: Is it enough to ensure journalistic validity'

Session Type: Individual submission

Authors:

Name: Radwa Mabrook

Email: radwa.mabrook (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: City, University of London

Abstract: Abstract:

Virtual Reality (VR) technology has brought many changes to the journalistic practice, causing numerous normative paradoxes related to accuracy, truthfulness, objectivity and autonomy. VR content creators are constantly looking for creative tools to address these paradoxes and demonstrate their journalistic validity. Transparency thus appears in VR journalism, taking different shapes and degrees. To date, the research literature about VR journalism examines empathy impact, narrative structures, production costs and content accuracy. This study explores the transparency concept in VR journalism in the light of similar discourses around narrative and digital journalism. The study aims to identify types and degrees of transparency, the creative ways of showing it, and its significance in VR journalism. The researcher used social semiotic analysis of VR content and semi-structured interviews with VR creators. The mixed-method approach provided a holistic understanding of how transparency appears in content, and how VR creators perceive its significance. For the social semiotic analysis, the researcher selected a purposive sample of eighteen fact-based VR pieces, created by established media organisations, including Al Jazeera, BBC, The Guardian, The New York Time and the US public broadcaster PBS. The sampled VR pieces were diverse in their content nature and interactivity level. The sample included CG, live-action and acted VR, ranging between 360° videos and highly interactive ones. For interviews, the researcher used purposive and snowball sampling techniques to recruit twenty-six fact-based content creators from production studios and media organisations as well as freelancers. The semi-structured interviews took place between November 2017 and May 2018. The findings showed that content creators actively make situation-based assessments to determine the type and degree of transparency needed to demonstrate rigor without undermining trust. Content creators look for creative ways to demonstrate transparency, however, they do not hold it superior to other journalistic ideals. Veracity and accuracy are still the determinant of journalistic validity. Transparency does not justify the breaches of veracity. It is a tool to show the already-existing journalistic rigor behind the VR experience. Content creators thus perceives their normative understanding of journalism as unchanged, despite the dramatic changes in their journalistic practices.

Keywords– journalism, normative ideals, semi-structured interviews, social semiotics, transparency, virtual reality

Abstract: In this paper, we present a comparative analysis of the interpretative repertoires journalists employ for articulating journalism's role in society. On a conceptual level, we argue that cross-national variation in journalists' conceptions of their roles can be meaningfully studied with regard to four central dimensions: monitorial versus collaborative roles, and interventionist versus accommodative roles.

The empirical analysis is based on a survey of more than 27,500 journalists in 67 countries. Together, these societies cover almost three-quarters of the world's population. The interviews were conducted through the Worlds of Journalism Study (WJS), a collaborative framework for comparative journalism research open to scholars from around the world.

Our results indicate that journalists' professional roles still coalesce around key traditional values addressing journalism's function in the political domain. Among the four role dimensions mentioned above, the monitorial role, broadly grounded in the ideal of journalism holding the powerful to account, enjoyed the strongest support globally (although it was more dominant in the Western than in the non-Western world). The collaborative role, which is about journalists acting as partners of the government, has received the least support, albeit valued more strongly in the non-Western than the Western world.

The collaborative and interventionist roles were found to be meaningful descriptors of difference in the way journalists around the globe construct their roles. A collaborative role was associated with lower levels of democracy, while the interventionist role (characterized by a strong disposition of journalists to pursue a particular mission and promote certain values) was more strongly supported in less developed societies and countries facing disruptive changes. The accommodative role, which is about providing orientation for the management of self and everyday life, received greater support in more developed and stable countries.

Global diversity is also apparent within the bounds of seemingly similar journalistic traditions. While journalists in the Western world are strongly supportive of the monitorial role, they are nevertheless divided by orientation into the accommodative versus the interventionist role. Likewise, development journalism is refracted through differing orientations toward the collaborative, interventionist, and monitorial roles. Overall, democratic conditions and the strong presence of emancipative values favor journalistic cultures embracing a monitorial role. Lower levels of democracy, meanwhile, are associated with a collaborative role. These results provide further support for the importance of the political context as a major source of cross-national variation in journalistic cultures.

Title: What is journalism innovation? Thoughts on initiatives from the European news industry at Google DNI Fund

Session Type: Individual submission

Authors:

Name: João Canavilhas

Email: jc (at) ubi.pt

Country: PT (Portugal)

Affiliation: University of Beira Interior

Name: Ana Cecilia Bisso Nunes

Email: nunes.anacecilia (at) gmail.com

Country: BR (Brazil)

Affiliation: PUCRS University (Brazil) and University of Beira Interior (Portugal)

Abstract: The development and spreadability of technology as well as its consequent media market changes has made innovation a central theme for news industry survival. Innovation became even more crucial when new incumbents started to steal significant profits from legacy media groups, described by Bower and Christensen (1995) as the disruption theory. Christensen, Skok, and Allworth (2012) comment that what is happening today in the news industry is not much different from what has been seen in others markets, with new actors entering and taking advantage of their digital born nature, without a legacy to worry about. The fact is that it disrupted the media market, running all news industry into an innovation no-way-back road.

In this new and digital context, despite media innovation becoming a decisive topic, academic research is still very diffuse and recent. It is a fact it experienced significant growth over the past 10 years (García-Avilés, Carvajal-Prieto, Arias, & De Lara-González, 2018), but we are still in need “for innovation-oriented journalism research that provides clear, foundational definitions of ‘innovation’ in reference to journalism” (Posetti, 2018, p. 12).

Considering these premises, this paper proposes a discussion around journalism innovation through the analysis of 17 Google Digital News Innovation Fund initiatives highlighted in its three-year report (Google, 2018). The Fund is a European project with a €150 million commitment to support and kick-start innovations, which help journalism growth in the digital age. The projects are divided into four categories: (1) Battling misinformation, (2) Telling local stories, (3) Boosting digital revenues and (4) Exploring new Technologies.

Based on this classification, we reflect on: a) innovation aims, b) innovation types (Lindmark, Ranaivoson, Donders, & Ballon, 2013; Storsul & Krumsvik, 2013), c) replicability degree and d) expected outcomes (García-Avilés et al., 2018). The analysis sets ground to discuss what could really mean innovation in the news industry nowadays, based on Lindmark et al. (2013, p. 130) reflection on the difficulty in defining media innovation: "Where to draw the line between media innovation and routine media production is not obvious." Hence, we seek to identify the main aspects that will differentiate the more punctual innovations, in a daily context, sometimes present in the newsrooms, from the innovations focused on a medium to long term impact, such as those analyzed here.

As for journalism, the need to understand its innovation particularities and, indeed, to propose a clear concept of what is journalism innovation and how it has been addressed by different social actors to influence the future of the news industry is not exclusively an academic and theoretical demand. It is also a need to the professional field to develop more innovative initiatives in the market industry.

Title: Obsessive-Activist Journalists: Between Professionalism and Involvement

Session Type: Individual submission

Authors:

Name: Zvi Reich

Email: zreich (at) bgu.ac.il

Country: IL (Israel)

Affiliation: Ben Gurion University in the Negev

Name: Avshalom Ginosar

Email: avshalomg (at) yvc.ac.il

Country: IL (Israel)

Affiliation: The Max Stern Academic College of Yezreel Valley

Abstract: This study explores a new breed of professional journalists, that develop an "obsession" (Quartz, 2019) addressing a social problem in activist ways, in addition to or as a substitute for their regular reporting job, mostly inside traditional news organizations. We named this breed "obsessive-activist journalism".

Their obsessions, that were turned into micro-beats, range from fighting tobacco companies, to crusading sexual harassment, criticizing the Prime Minister, fighting the occupation of Palestinian territories and its humanitarian effects, enhancing the transparency of public institutions and confronting market concentration.

This paper tries to identify the new breed and tracing its relations to familiar species of journalism. Using in-depth semi-structured interviews with fifteen such journalists, we focused on their motivations, practices and norms, the type of expertise they reflect, and the extent to which they have an impact on individual cases and public policies.

Initial analysis indicates that:

- (1) Obsessive-activist journalists are motivated by a sense of justice that shapes their agenda and professional work;
- (2) Most of them adhere to traditional news standards such as accuracy and verification, however, they adopt additional practices, such as the use of quasi-academic research methods;
- (3) They abandon the values of professional detachment and impartiality in favor of personal involvement and a crusading tone;
- (4) Some of them became public figures with a celebrity status that adds impact to their coverage;
- (5) Newsrooms reactions to obsessive-activist coverage shift from support, through indifference to open objection, especially in early stages of obsessions.

We found that obsession journalists are "lonely wolfs". On the one hand, they deviate from the dominant professional-neutral journalistic model; on the other hand, they represent neither of the known journalistic species that were so far documented in the research literature, nor do they reflect an explicit journalistic manifesto. And yet, obsessive-activist journalists share some similarities with Advocacy Journalism (Janowitz, 1975), Civic Journalism (Waisbord, 2009), Constructive / Solutions Journalism (McIntyre & Gyldensted, 2017), Activist Journalism (Ashuri, 2012) and even with journalist-bloggers (Domingo & Heinonen, 2008).

Hence, we suggest to consider "obsessive-activist" journalism as a distinct species, that absorbed various attributes of other species of journalism that were mentioned above, however constituting a unique mix that is not identical with any of them.

Affiliation: Universitat Jaume I de Castelló

Abstract: The difficulties faced by the journalism sector that is still seeking a profitable business model in the digital age, force journalists to manage new skills and competences to personal branding on social media. It has been said that the future of journalism depends on improving self-branding on social media. Despite the lack of an agreed definition of journalistic personal branding, literature has identified some benefits of having a personal brand in terms of influence.

On the other hand, previous research has shown some practices that seem to promote journalistic branding, especially on Twitter. For instance, it has been found that sharing private life details can impact on the brand, but there is no consensus about how much journalists should show about themselves. Moreover, mostly decisions related to the personal branding affect the classic norms and principles of journalism.

In this context, learning how to build and manage a personal brand in the digital environment appears as a decisive competence for the future generations of journalists. To the best of our knowledge, there is no specific research about this issue in the field of journalism education. In this sense, the methodology uses a quantitative approach based on surveys done to the students of Journalism Degree from the Universitat Jaume I of Castelló (Spain), with the aim to delve into the future journalists' perceptions about branding implications in terms of influence. This study also contributes to identify the skills, practices and personality features most strongly associated with self-branding by journalism students.

Results show a close relation between branding and influence. The increase of the ability to influence both public opinion and media agenda is indeed the most valued implication of having personal brand, according to the respondents. Moreover, polyvalence, interaction and regularity in

updating posts would be the most efficient skills to journalistic branding on social media. In contrast, humanization, in terms of being close, using an informal tone or sharing private life, is the lowest valued skill by students. Paradoxically, being accessible is considered one of the most useful personality features to personal branding. Regarding practices, in line with literature, comment, criticize, take sides, discuss and respond to any type of user are the routines to promote the personal brand most supported, followed by correcting fake news or rumors.

This work is included on the research project CSO2017-88620-P funded by the Ministry of Science, Innovation and Universities of the Government of Spain

Title: Using statistics in financial news in Saudi Arabia and United Arab Emirates: between normative professional aspirations and practice

Session Type: Individual submission

Authors:

Name: Faisal Alaquil

Email: faisal.m (at) gmail.com

Country: GB (United Kingdom)

Affiliation: PhD researcher University of Leeds, UK

Abstract: In this article we consider the use of statistics in journalism, financial journalism and journalism in the Arabian Gulf – three areas which remain under researched. In doing so, we explore how journalists in two countries – Saudi Arabia and United Arab Emirates – engage with, and use, statistics and numbers to develop financial news and how this reflects upon professional practice.

This study is based on empirical research in these two countries conducted by using mixed methods, including: content analysis, close reading and semi-structured interviews with journalists. Our data suggests that, contrary to common assumptions about journalistic approaches and practices that claim exceptionalism, financial journalists in these countries tend to follow similar normative aspirations and implement comparable approaches as their counterparts operating in Western liberal democracies.

These results of course are not surprising as similar findings around normative aspirations have been found in other regions of the world despite the fact that many of these journalists operate in non-democratic and even authoritarian regimes. Indeed, one of the most remarkable findings from the Worlds of Journalism Study research project (2016) is the overall convergence in normative claims and deontological aspirations around news values and journalistic ethics among journalists from all over the world.

In fact, our analysis confirms that statistics used by journalists in these countries are valid, tend to come from reliable sources. Moreover, journalists in these countries seem to interpret statistics in an appropriate manner, achieving accuracy in their reporting. Furthermore, statistics are used by journalists in Arab countries to frame financial news stories in similar ways to journalistic practices in the West; specifically, they were balanced between positive, neutral and negative tones in the aftermath of the world financial crisis of 2008.

However, as our research also indicates, the engagement of these journalists with statistics is one in which they seem mainly ‘to be ticking the boxes of professionalism’. By this we mean they follow procedures set by the canons of professionalization but without really exercising critical scrutiny of the subject in a way that they would fulfil their duty of being a watchdog of society.

The evidence underpinning the lack of critical engagement with the statistics in ways that normative models of professionalization would demand, is robust. Over-dependency on official sources and lack of criticality only serve to highlight the difficulties that these journalists face. While our results echo those of other scholars (Sakr, 2007, Rugh, 2004, Mellor, 2005, Mellor, 2007) who have also argued that it is difficult for journalists in the Arab world to practise their role as watchdog under their particular contexts (that is, the political and media systems), the reasons for the lack of fulfilment in terms of professional expectations seem, however, to differ from those in the West.

One particular difference is the ability and willingness to engage with statistics from other sources and the lack of professional training and specialisation.

Title: A Discursive Encounter at Roxham Road: Reporting US-Canada Irregular Border Crossings

Session Type: Individual submission

Authors:

Name: Saumava Mitra

Email: mitrasaumava (at) gmail.com

Country: CR (Costa Rica)

Affiliation: University for Peace

Abstract: With the anti-‘migrant’ rhetoric and policies of the current United States administration under Donald Trump, Canada has been receiving people leaving the US at irregular border crossings. In an exploration of the relationship of news media discourses of migration with gender in this context, the paper will focus on a certain video news story produced by the Canadian Broadcasting Corporation about the movement of people across the US-Canada border. Broadcast in late September 2017 – at a time when political rhetoric emanating from the Canadian government sought to emphasize its ‘Feminist’ credentials to differentiate itself from the United States – the news story in focus reported on one popular crossing point for people arriving in Canada from US: the border at the end of Roxham road in New York state. Among the many different ways that CBC edited, packaged and broadcast this news story filmed at the Roxham road border, the paper will analyze an 11 minutes 35 seconds long video news story shown on the nightly national news of the public broadcaster. The paper focuses on this particular news story because – rather than allow for the usual criticisms of anti-‘migrant’ discourses in Western media representations – the example helps exploring how solidarities between peoples may be built through “visibilities of self-reflexivity” for potential identification of ‘migrants’ as ‘people like us’ (Chouliaraki & Stolic, 2017). The paper will show how the news story discursively built recognisability of the shared intersectionalities of identities between the Canadian women present in the story and the non-Canadian women crossing the US-Canada border. Based on the comparability of these female agents’ interpellations of identity discourses within the dominant discourse of the news narrative of ‘Feminist Canada’ as opposed to a ‘male-centric US’, the paper will argue that the news story provides an example how conditions of solidarity between the host societies and people arriving can be created in Western media representations of migration.

Title: News about China's soft power in European media: a quantitative content analysis

Session Type: Individual submission

Authors:

Name: Jingwen Qi

Email: Qi.jingwen (at) UGent.be

Country: CN (China)

Affiliation: Ghent University

Name: Sarah van Leuven

Email: Sarah.VanLeuven (at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University

Name: Stijn Joye

Email: Stijn.Joye (at) UGent.be

Country: BE (Belgium)

Affiliation: Ghent University

Abstract: The concept of soft power was introduced in 1990 by Nye who defined it as “the ability to affect others to obtain preferred outcomes by co-option and attraction rather than coercion” (Nye, 2010, p.216). The notion and practices of soft power resonate well with the official strategy of the Chinese Communist Party to discursively establish China’s “peaceful rise” worldwide while simultaneously reducing the international concerns related to a fear of a perceived Chinese threat to other countries. Therefore, scholars have been increasingly investigating China’s soft power in the global media context. Most studies are, however, geographically focused on the US (e.g. Metzgar & Su, 2017), as well as on selected African or Latin American countries where China has gained substantial economic influence (e.g. Estupinan, 2017) while Europe remains an under-researched area of study. Hence, we aim to close this gap by studying European online news coverage of China’ soft power.

We have conducted a quantitative content analysis of The Economist, Politico.eu, Euronews.com and The Financial Times for four months (June. September-November 2018). In total, 1130 news articles about China were retrieved.

The results show: first, China’ soft power is insufficiently covered. Most articles just mention China on the side (N=797, 70.5%). 248 articles (22.0%) had China as the main subject, whereas direct references to China’s soft power are rather scarce (N=85, 7.5%). Second, the latter is mainly focused on issues as economy and development. This follows well with previous studies on soft power (e.g. Estupinan 2017) as these have demonstrated that the topic of economic success attracts more attention of Western media and is one of the most prolific areas in which China is respected by other nations. A second confirmation was found in the analysis of the represented actors (e.g. Chinese companies) top the charts as well. Third, our result contradicts previous studies which indicated that foreign coverage on China mainly adopted a negative tone (Estupinan, 2017). A large

section of the articles adopts a neutral tone (N = 212, 63.6%). The remainder of the news stories features a negative tone (N=101, 30.3%) while manifestations of a positive tone (N = 20, 6.1%) are rare. However, a biased approach can still be detected by comparing the proportion of negative and positive reports in the sample which can lead the audience to think in a critical way about China's soft power expansion.

This study argues China's soft power is under-represented in the European media mainly under economic consideration. Though China invested billions of dollars on its soft power initiatives, it has not resulted in positive news coverage in European media yet.

Title: The Selfie Sit/de of Power: Instagram in Political Communication in Germany

Session Type: Individual submission

Authors:

Name: Thomas Eckerl

Email: mail (at) thomaseckerl.de

Country: DE (Germany)

Affiliation: University of Passau

Name: Oliver Hahn

Email: oliver.hahn (at) uni-passau.de

Country: DE (Germany)

Affiliation: University of Passau

Abstract: At least since the campaign that led to the federal elections to the Bundestag in Berlin in 2013, social media have extensively entered German parliaments. For campaigning, politicians and their PR managers no longer use only 'classic' social media such as Facebook and Twitter, but more and more also services for which more background knowledge of how to use and manage them is required. By doing so in political communication, particularly younger target groups such as first-time and young voters are aimed at. Furthermore, relatively young digital media services within ubiquitous mobile communication such as the app Instagram offer manifold opportunities to politicians to market their own political personality and programme. Following the US model to further extent campaigning from offline to online, the use of social media has become interesting also for German actors of political communication (Burgard 2012).

This exploratory pilot study conducted during the campaign that led to the German federal elections to the Bundestag in Berlin in 2017, analyses to what extent Instagram is useful as a tool for political communication. Methodologically speaking, we conducted 8 qualitative semi-structured in-depth interviews with German members of parliaments on regional and national levels and with social media managers of political parties. These interviews were qualitatively content-analysed.

This study provides answers to research questions such as (1) on which grade of professionalisation political communication with users of the free of charge visual service to share photos and videos takes place and (2) which strategies – if any – are applied. Moreover, this study examines whether or not special advantages offered by this app are taken into consideration and are exploited to what extent. Beside contents and strategies of political communication using Instagram, this study also analyses the target groups aimed at as well as the suitability of Instagram for 'mediating politics' between political actors, media and journalists, and audiences.

Particularly journalists seem to more and more rely on social media as political sources. This trend, of course, raises new questions about the credibility and authentication of sources as well as about the identification of originators of sources.

Research findings give empirical evidence for the fact that only a fraction of the interviewees pursues a concrete strategy by using Instagram as a tool for political communication. Oftentimes, it is paid only very little attention to younger target groups such as first-time voters in particular. Potentials inherent to the app are oftentimes exploited very differently or even disregarded in parts, such as e.g. the adequate (keyword) indexing by hashtags. However, nobody seems to be willing to

refrain from Instagram as part of the social media instruments for political communication: many political communicators and journalists alike appreciate the value of this app – apparently because of an inherent predominantly ‘positive tonality’ in the ‘culture of debate’ there, which they seem to consider of more human dignity and mutual respect in contrast to other more hate speech-dominated platforms.

Title: El estado del periodismo narrativo en Internet. Luces y sombras extraídas de un estudio Delphi entre expertos internacionales

Session Type: Individual submission

Authors:

Name: Itsaso Manias-Muñoz

Affiliation: University of the Basque Country UPV/EHU

Abstract: Objetivo

Esta investigación analiza la opinión de 28 expertos y expertas internacionales, sobre el estado actual y perspectivas de futuro del periodismo narrativo en Internet. Se pretende averiguar el alcance real de dicha práctica, la valoración que les merece su ejercicio, así como conocer hasta qué punto el slow journalism puede contribuir a detener el deterioro de la calidad y credibilidad que afecta a los medios a nivel global. El estudio realiza un diagnóstico de la realidad y viabilidad de los medios que practican el periodismo narrativo digital, analizando sus prácticas, estructuras empresariales y evaluando el grado de novedad que aportan a un panorama mediático dominado por la frenética pugna en pos de la instantaneidad. El estudio Delphi, además de realizar un diagnóstico, esboza también un pronóstico, indagando sobre el futuro de esta práctica (tendencias y oportunidades) preguntándose —por último— por el porvenir de la prensa escrita.

Enfoque teórico y metodología

El estudio Delphi ha demostrado ser una metodología apropiada para la prospección y evolución de los factores del entorno social y sus interacciones (Landeta, 1999). El objetivo de dicha metodología es obtener una opinión consensuada de expertos en una determinada materia y predecir u ofrecer una solución a un problema (Mitroff & Turoff, 2002). En junio de 2018 iniciamos un estudio Delphi cualitativo entre 28 expertos (académicos y profesionales) en Periodismo Narrativo (42.85% Mujeres y 57,14 Hombres) procedentes de distintos países (Australia, N=1; Europa, N=20, Norte América N=5 y Sudamérica N=2) para debatir sobre 10 ejes temáticos entorno al Digital Slow Journalism. El estudio consiste en dos rondas de cuestionarios que han sido administrados a través de un software digital. El primer cuestionario Delphi (concluido) consistía en 10 preguntas abiertas y, el segundo cuestionario (en proceso) está compuesto por 10 ejes temáticos combinados con escalas Likert (1-5).

Las 10 preguntas buscan diagnosticar los problemas y retos del periodismo actual, reflexionar sobre las transformaciones tecnológicas, el consumo, las audiencias, y ahondar en los nuevos modelos reposados que suponen una alternativa al periodismo superficial y descontextualizado. Durante todo el proceso se ha mantenido el anonimato de los participantes, asignándoles un código numérico para evitar revelar identificadores personales.

Originalidad/Relevancia

Este es el primer estudio Delphi que analiza el estado del periodismo narrativo digital desde una perspectiva global. Consideramos que los resultados de la investigación pueden aportar algo de luz a los turbulentos tiempos que vive el mundo del periodismo. Las reflexiones de las personas participantes arrojan luces y sombras sobre la práctica slow, destacando sus potencialidades, pero siendo, al mismo tiempo, conscientes de sus limitaciones. Los expertos detectan que existe una necesidad imperiosa de información verídica y de calidad y que ello es valorado por la audiencia. ¿Tendrá el Slow journalism la capacidad de reverdecer los valores históricos que siempre ha defendido el periodismo y que hoy parecen estar más en crisis que nunca? Es la incógnita que tratan de responder los 28 académicos y profesionales de reconocido prestigio de todo el mundo que han respondido a este inédito estudio Delphi.

Title: News from the Future: News narratives, Temporality and Newsworthiness in the Age of Acceleration

Session Type: Individual submission

Authors:

Name: Motti Neiger

Email: motti.neiger (at) gmail.com

Country: IL (Israel)

Affiliation: School of Communication, Bar-Ilan U. (Israel) & The Truman Research Institute for the Advancement of Peace, The Hebrew U. of Jerusalem

Abstract: Previous research emphasized that important share of news items refers to the development of processes or future occurrences (e.g., Neiger, 2007). This study endeavors to use time and temporality as a vantage point in order to contribute, both empirically and theoretically, to the ongoing discussion on newsworthiness and thus to shed light on the shifts in journalistic practices in the age of accelerated news cycles of the digital era.

A connection between the news cycle and news values was indicated by Galtung and Ruge (1965) through designating “frequency” (how well occurrences fit with the news organization's time constraints and schedule) as the most prominent of the news values. From a different angle, the findings of my recent researches point to a relation between the temporal structure of the news story and the type of media. e.g., we pointed out that online news stories have a tendency to put the emphasis on the past while print items tend to focus on future-oriented temporality (Tenenboim-Weinblatt & Neiger, 2015).

The proposed paper wishes to elaborate on the function of the future temporality in the news by combining the two strands of research in journalism studies – news values and media temporalities – and thereby to investigate the interrelations between the technological platform, newsworthiness, and the manifestation of time in news narratives.

The methodology is based on previous studies categorization of the temporal stratum of news narratives into 11 layers ranging from the far past to the unknown future (Neiger & Tenenboim-Weinblatt, 2017). The paper examines items in both print and online outlets by observing these 11 temporal layers and analyzing the news values that predominate in each. This allows to compare how each platform defines “news” and they use their “temporal affordances” (Tenenboim-Weinblatt & Neiger, 2018) while producing it. The study employs a combination of qualitative and quantitative cross-media (print and online) and cross-cultural content analysis of news items published in prominent media venues in Israel and the US.

Abstract: Some journalists convey news in countries where press freedom is taken for granted, and – although debated – journalism is seen as a carrier of information and a mean to democratic rights. Other journalists struggle with access to information, or censorship and safety for their sources and themselves. Five days into 2019, an Afghan citizen journalist, Noori Javid in Radio Neshat, was killed, and on January 16, journalist Ahmed Hussein-Suale was shot down in Accra, Ghana (RSF, 2019). International Federation of Journalists states that, “There can be no press freedom if journalists exist in conditions of corruptions, poverty or fear” (IFJ, 2019). However, the concept of press freedom includes a variety of aspects besides safety and good working and living conditions. There are reports of a decline in press freedom, whether one looks at aspects such as impunity, fake news, repressive laws or commercialisation leading to less diversity. The conditions for press freedom apply to journalists and editors, as press freedom is the foundation for journalism. That is not only true for journalists working in countries where press freedom is denied or threatened, but also applies for journalists who feel the pressure of downsizing of news staff or polarized opinions from the echo chambers of a globalized, digitalized world.

The aim of this study is to explore how journalism students define press freedom, and what they found out regarding the conditions of press freedom through a pedagogical tool. In order to teach journalism students the meaning and significance of press freedom, the pedagogical tool – called the rig on press freedom – was created. This study takes its point of departure in the rig on press

freedom, where bachelor students in journalism in Palestine, France, Norway, and Uganda investigated the conditions of press freedom around the world. After working journalistically and connecting with sources in other countries, searching for information and the stories to tell about the conditions for press freedom, the 188 students were given a survey, and 72 per cent answered. With the use of quantitative and qualitative methods, we studied for instance the learning outcomes, and found that 41 per cent of the students ranked their learning outcomes as excellent and 43 per cent as good. Based on the students' answers, we identified several dimensions of the concept of press freedom, the three main ones being journalists' rights and duties, freedom to publish and the autonomy of the media. The students' definitions were analysed up against theoretical approaches from John Milton until contemporary research contributions, for instance Timothy Garton Ash, John William Tate, Katrin Voltmer. Altogether, the students from the four departments looked into 24 countries, and we also analysed their main findings.

Title: Journalist Students' Achievement of Silent Knowledge in the Newsroom

Session Type: Individual submission

Authors:

Name: Anders Gjesvik

Email: anders.gjesvik (at) hioa.no

Country: NO (Norway)

Affiliation: Oslo Metropolitan University

Abstract: Journalist Students' Achievement of Silent Knowledge in the Newsroom

Journalism is both a craft and a profession and journalism education resides between the two poles editorial practice and theoretical subjects (Willig 2016). Journalism is as well a professional identity based on silent knowledge about e.g. etic boundaries and personal characteristics like curiosity, assertiveness and a critical view. The strength of these values might vary between different newsrooms, but I will argue that the journalistic identity has a shared core of values. This knowledge and these characteristics are achieved through socialisation in professional environments. The students are socialised by experiencing which values that are appreciated and which are not in the newsroom. Important arenas for the socialisation might be the evaluation meetings and the general conversation between colleagues during the day.

The students are partly socialised in the class room, but the deeper socialisation is achieved by the students in the newsrooms (Nygren 2016). Nordic journalist students are young compared with other students and fewer and fewer have any editorial experience when they attend the study (Hovden and Ottoesen 2016). A study of the journalist students at Oslo Metropolitan University shows that they identify with the teacher's values in the beginning of the study but develop an ever stronger identification with the performing journalists through the study (Krøvel 2016).

My research question is: How do the journalist students experience this socialisation and which values is it representing for them?

Our students write a personal report about their experiences through their external practice. I will do a content analysis of these reports to see what kind of silent knowledge and personal characteristics they experience that they have achieved through the socialisation in the news room and how they have achieved them.

Title: True or false' The difficult art of political fact-checking in Norwegian and Swedish journalism

Session Type: Individual submission

Authors:

Name: Sigurd Allern

Email: sigurd.allern (at) ims.su.se

Country: NO (Norway)

Affiliation: University of Oslo

Name: Ester Pollack

Email: ester.pollack (at) ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: “Respect for the truth and the right of the public to truth is the first duty of journalists”, according to the Declaration of Principles from International Federation of Journalists. To fact-check statements from sources is therefore one of the basic norms of journalism, characterized by Kovach and Rosenstiel (2007) as “a discipline of verification”. Ideally, fact-checking procedures should be embedded in a news organization’s editorial routines and practices. However, verification procedures demand competence, knowledge and investigations, efforts that take time and consume resources. Therefore, the practical editorial solution is often limited to check that sources are cited correctly, without any serious attempt of evaluating the truth content in their claims, resulting in the false ‘balance’ of he-said/she-said-journalism.

During the last two decades fact-checking has got another and extended meaning, which in many ways represent a new and independent journalistic genre. While traditional fact-checking has been part of editorial processes before publication, the new genre of fact-checking represents a critical evaluation of claims after they have been published (for example in news stories, speeches or social media postings). The result is a conclusive, public judgement, telling us if a statement is based on a fact that is verifiable. Although fact-checking can be applied to any societal and journalistic field, the new genre is primarily linked to political fact-checking, and got its breakthrough in the US in the first decade after the millennium. These initiatives have been characterized by Lucas Graves (2016) as a journalistic reform movement, which today has spread to other parts of the world. In 2015 Poynter Institute in Florida launched the International Fact-Checking Network (IFCN), based on a declaration of principles concerning non-partisanship, fairness, transparency and a commitment to open and honest corrections (IFCN, 2019).

In 2017 several Nordic news organizations started fact-checking groups and some of them have joined the IFCN, often with a reference to the international, US-inspired debates about “fake news”, “alternative facts” and “post-truth”. This paper (based on interviews with fact-checkers and analyses of fact-checking sites) discusses such initiatives in Norway and Sweden. A distinctive feature in the Norwegian case is the establishment of fact-checking as a free public service, organized by a common, independent editorial organisation, financed and backed by both the state-owned public service broadcaster (NRK) and large commercial media enterprises. In Sweden the same kind of cooperation only lasted for a short period of time. The paper describes the types of

fact-checking that characterize Norwegian and Swedish initiatives, and discusses both the strengths and of fact-checking in political debates and processes.

Abstract: Financial journalism has experienced tremendous growth over the past two decades along with the rapid expansion and the increasing complexity of the global financial market. Scholars have documented the effects of financial news on financial markets. Yet, financial policies, market infrastructure, role and expectation of stakeholders have also evolved rapidly and induced numerous challenges to financial journalists. By adopting the gatekeeping theory, concepts of information subsidies and news routines, this paper examined how the professionalism of financial news workers are threatened by government regulations, news routines and the spinning of news sources. We focused on the context of initial public offerings in the world's top IPO market, Hong Kong which has hit a record high in term of the number of new listings and fund raised in 2018.

Shoemaker and Reese proposed a comprehensive and hierarchical model of news influences by forces at five levels, including individual, routines, organizational, extramedia and ideology. It is argued that government's policies at the extramedia level play a crucial role in shaping news production. In the case of IPO, a change of listing rules may provide journalists with more information but may also hinder journalistic practices if the rules confine the room of information disclosure. In addition, previous studies have also proposed that corporations which play the role of dominant sources can induce a critical influence on financial news agendas through their strategic PR efforts. On the other hand, news routines may encourage such an asymmetrical relationship between news sources and journalists. Through routinization, financial journalists follow certain ways to produce news reports about IPOs and facilitate PR people to provide standardized information subsidies for setting the news agendas.

The current research used content analysis and in-depth interviews to assess how the journalistic practice of financial news workers were influenced by the above-mentioned factors. 60 press conferences held by IPOs listed on the Main Board of Hong Kong Stock Market in 2018 were recorded and audio transcribed. The questions asked by journalists at the conferences were analyzed for types, similarities and differences. In addition, 30 financial journalists and PR people who have worked on IPOs were interviewed to investigate how the source-reporter relationship, implementation of regulations, journalistic routines have shaped the production of financial news.

The results suggested that questions asked by journalists at IPOs' press conferences were quite standardized and repetitive. They still rely heavily on information subsidies from financial PR professionals even the new listing rule implemented by the regulatory body requires a higher level of information disclosure from companies. Reasons for such a heavy reliance include time constraint, availability of alternative sources, journalists' experience, changing news ecology, and routines. The standardized information subsidies provided by financial PR fit the highly routinized news practice well. The government regulation which confines information disclosure has become a reason or an excuse for pre-listing companies for not giving extra information to news enquiries, thus restricted the scope of financial news reports.

Abstract: Marco teórico

El mercado de trabajo viene experimentando en los países desarrollados una radical transformación desde finales del siglo pasado, principalmente por la modificación de los procesos productivos debida a la revolución digital, la globalización de la economía y la adopción de nuevas formas de organización laboral (Jiménez-Vivas, 2009). En este contexto, la noción de empleabilidad ha irrumpido en el debate académico, presionando a las universidades para adaptar sus programas a las necesidades del mercado laboral. En una de las definiciones más influyentes del concepto, Hillage & Pollard (1998: 2) entienden la empleabilidad como “la capacidad de desenvolverse con autosuficiencia en el mercado laboral para desarrollar el [propio] potencial por medio de un empleo sostenible”. En el ámbito universitario europeo, esas demandas acabaron concretándose en la Declaración de Bolonia (1999) y la instauración del denominado Espacio Europeo de Educación Superior (EEES), que colocó “las competencias profesionales y la empleabilidad como motor de cambio hacia el nuevo sistema” (García-Manjón & Pérez-López, 2008: 4).

Objetivos de investigación

En este trabajo se valora la capacidad de los programas universitarios sobre Periodismo en España para formar a sus estudiantes en las competencias y habilidades necesarias para afrontar los retos de la profesión en el contexto de la economía digital. Con este objetivo, se analiza la satisfacción de los graduados con la formación universitaria recibida, la percepción que tienen de esa formación como un factor que ha contribuido a incrementar sus posibilidades de empleabilidad, y el éxito que han tenido para acceder y mantenerse en el mercado laboral hasta tres años después de su egreso.

Método

El trabajo se basa en los datos recogidos por el sistema universitario español (universidades y agencias de evaluación universitaria) mediante las encuestas de satisfacción y empleabilidad que realizan a los egresados universitarios en el marco del Sistema de Garantía Interna de Calidad implantado en todas las universidades españolas tras su adaptación generalizada al EHEA a finales de la primera década de los 2000.

Resultados

Los resultados muestran una baja satisfacción de los graduados españoles en Periodismo con la formación universitaria recibida y su adecuación al nuevo contexto laboral, lo que indicaría un cierto fracaso de los Planes de Estudios a la hora de mejorar la empleabilidad de sus graduados. Sin embargo, los datos relativos a la inserción laboral efectiva en el sector de periodismo, o en otros sectores de la comunicación afines, no son insatisfactorios, de manera que en torno al 50% de los egresados tiene un trabajo adecuado a su formación universitaria transcurridos tres años tras el egreso.

Abstract: This paper reports a case-study of the impact of digital media on editorial decisions in a Chinese “commercial” paper. It demonstrates that the introduction of digital media has provoked a re-orientation of the mechanisms of control in the overall newspaper. Control in the Chinese newsroom has been extensively studied but the introduction of new media created problems which demanded significant adjustments to established patterns,

In common with most of the Chinese press, this newspaper has been suffering from declining circulation and falling advertising revenues and has been under pressure to adopt a stronger online presence. The paper launched a New Media Department in 2014. In order to produce online material, they hired new staff, most of whom were recent journalism graduates who possessed the necessary technical skills. The Department was headed by a small number of experienced editors.

Despite strict regulations about suitable sources of news stories, the new journalistic cohort made several “mistakes” of a journalistic, political and commercial character, resulting from their limited tacit knowledge of practical Chinese journalism. They also lacked political experience and knowledge about the economic situation of the paper. Although they were able to avoid obvious errors, they lacked sufficient knowledge to make fine distinctions about what should and should not be covered.

The newspaper’s leadership reacted negatively to these errors. They demanded changes to the material published in online. They wanted some articles taken down and others to be published at once. They insisted on the reworking of other articles. These conflicts became so serious that the leadership intervened in the online newsroom. They sent experienced journalists from the offline edition to lecture the staff and instructed journalists from the offline newspaper to submit articles directly for unedited publication online.

These interventions provoked resistance, but the online editors were unable to defend their staff. While these measures produced a greater degree of conformity, they proved insufficient to ensure complete adherence. Eventually, the group management decided upon re-organization. They introduced a new editorial layer of experienced journalists from the offline edition, as “gatekeepers” between the young journalists and the online outlets.

These findings illuminate a number of points both about the transition to online journalism and about the socialization of journalists. Firstly, they confirm the findings of other studies that

editorial control in the “mixed” media environment remains vested in the printed newspaper. Secondly, contrary to arguments that new technologies are transformational for journalism, they suggest that journalistic cultures exert a strong “conservative” influence on news production. Thirdly, they cast doubt upon the adequacy of the world-wide trend towards the educational certification of entrants to journalism in preparing them for the practical realities of the occupation. Finally, they demonstrate the adaptability of the “Chinese model” of journalism to changing circumstances.

Affiliation: Leipzig University

Abstract: While relying on different skills, epistemologies and socialization than traditional reporters, data journalists are said to enable new forms of journalism and to change the journalistic trade from the inside (Coddington, 2014; Hermida & Young, 2016; Usher, 2016).

In times of misinformation and 'fake news', data journalism's ability to enable truthful, objective and authentic reporting has come into spotlight. One paradigm of the practice has been described as "reporting through the articulation of quantifiable evidence" (Borges-Rey, 2016, p. 841). On a content level, notions of fact-checking (Borges-Rey, 2016; Cohen, Hamilton, & Turner, 2011) as well as transparency and open source (Aitamurto, Sirkkunen, & Lehtonen, 2011) resonate with data stories. Practitioners are furthermore said to aspire to scientific ideals such as transparency and reproducibility (Weinacht & Spiller, 2013). Considered together, data journalism could be imagined to be an effective enabler of truthful, objective and authentic reporting.

Do such assumptions hold true when surveying data practitioners? To what extent do data journalists associate themselves and their reporting with notions of objectivity and transparency? How far has the practice spread since its initiation in the early 2000s? Using a standardized computer assisted telephone survey, the paper seeks to explore such questions and validate existing insights on the practitioners and their perception of the trade (Baack, 2017; Parasie & Dagiral, 2013), the characteristics of data journalistic coverage (Loosen, Reimer, & De Silva-Schmidt, 2017; Stalph, 2017) as well as used organizational setups (Boyles & Meyer, 2017; Hermida & Young, 2016).

A population of 305 German newspapers and public broadcasters was surveyed between July and August 2018 for conceptualizations, contents, structures and processes of data journalism. The survey's response rate was 36% for newspapers (105 out of 293) and 100% for public broadcasters (12 out of 12), with overall 75% of the respondents holding executive or supervisory editorial positions.

Among others, the results indicate that data journalists demonstrate a strong believe in the craft's ability to transform journalism towards more transparency (66% among newspapers, 70% among public broadcasters). At the same time, they are not convinced that data-based reporting is more objective than other forms of journalistic representation (28% among newspapers, 22% among public broadcasters). On a sourcing level, accountability-functions of journalism are traceable with practitioners frequently or occasionally requesting data from authorities via e.g. freedom of information requests (80% among newspapers, 90% among public broadcasters). However, such efforts are outnumbered by the frequent or occasional reliance on freely available and ready-made datasets by e.g. federal offices (88% among newspapers, 100% among public broadcasters). Structurally, data journalism in Germany is well established (75%) and mostly practiced by individuals (51%) or teams of 2-4 journalists (45%).

With the above approach, the paper seeks to inform the theory-building and scholarly understanding of data journalism's ability to enable truthful, objective and authentic reporting. It furthermore validates existing insights from previous studies and contributes the first representative quantitative assessment of data journalistic activities, contents and practitioners in Germany - one of the most diverse media markets in the world.

Title: [Panel] Biased or Beneficial' Cross-border lessons on journalists' safety, Panel Description

Session Type: Panel Submission

Authors:

Name: Saumava Mitra

Email: mitrasaumava (at) gmail.com

Country: CR (Costa Rica)

Affiliation: United Nations mandated University for Peace

Abstract: Since the UN published its research agenda on the safety of journalists in 2015, research focused on threats and dangers faced by journalists in different parts of the world, has become an important area of investigation. Country and region based academic studies on threats faced by journalists are being conducted in ever-increasing numbers (e.g. Asal et al., 2016; Cottle et al., 2016; Høiby & Ottosen, 2017). However, the focus on cross-national data in this context has also been criticized for its bias towards treating nations as a whole (Hughes & Marquez-Ramirez, 2018) instead of understanding socio-cultural and political-economic particularities at the sub-national level that affect the safety of journalists. In response to this recent criticism, this panel will address whether learning lessons across borders to understand safety issues faced by journalists is indeed a worthwhile endeavor. The panel will focus on how data and learning from one country or regional context can help understand, and even perhaps mitigate, safety issues faced by journalists elsewhere. In addition, the panel will also address methodological challenges presented in cross-border studies on journalists' safety. The panel will include contributions by researchers engaged in identifying trends and finding commonalities within cross-border and cross-regional studies on journalists' safety through a variety of methodologies and disciplinary perspectives. The goal of the panel is to identify and inform the academic and practitioner communities how internationally comparative foci can be of benefit to practice and research surrounding journalists' safety.

Title: Bridging the gap between local and global monitoring of journalists' safety

Session Type: Panel Submission

Authors:

Name: Diana Maynard

Email: d.maynard (at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: Sheffield University

Abstract: Collecting and monitoring accurate data on attacks against journalists is imperative to further our understanding of the complex nature of safety threats, and to ensure that effective measures are taken to prevent them. However, limitations in this data currently impede any comprehensive understanding of violations and of shifting trends. Our previous research analysing commonly recorded incident categories (Torsner, Maynard & Harrison, 2018) shows that similar data challenges exist in both local and international datasets, namely: lack of conceptual consistency; varying incident category coverage; vague categorisation schemes; discrepancies in different reports about the same event; and the incorporation of uncategorised information found in free text. This results in information silos where wildly disparate feral spreadsheets roam: information from different sources cannot be compiled and analysed. However, cultural and contextual issues mean that local studies cannot be simply extended to a universal representation, nor can this be currently achieved by combining the existing information from different sources. We describe a pilot study based on the findings from a survey of information from local organisations, which we use as the basis for mapping the wider picture. Through the use of text mining techniques, we investigate the development of ontological categorisation schemes able to capture the wider picture while incorporating existing individual databases, through the use of concept mapping, the merging of related information, and the introduction of reliability indicators. Through the use of standardised information representation schemes, disparate information recorded by different organisations in different countries can thus be assimilated and compared, leading to better understanding of the whole picture and without the need for individual organisations to make major changes to their practices.

Title: Fear, trauma and local journalists: cross-border lessons in psycho-social support for journalists

Session Type: Panel Submission

Authors:

Name: Michelle Betz

Email: michellebetz (at) yahoo.com

Country: US (United States)

Affiliation: International Media Support

Abstract: Increasingly, reporting of conflicts, such as those in Syria and Afghanistan, is being done by local journalists. Foreign news bureaus have been closed and fewer international correspondents report on these conflicts as they are deemed simply too dangerous to send in internationals. This comes at a price. Globally, around 95 per cent of journalists killed in armed conflict are locally based journalists (UN News, 2015). In Syria, for example, 90 per cent of journalists killed have been local (Dlewati, 2016). While there has been increasing attention paid to the physical and digital safety issues these journalists face, less has been done with regards to psycho-social support. But addressing the psycho-social needs of local journalists, and the support available, are imperative for the well-being of local journalists who are impacted directly by psychologically traumatizing events happening around them. These needs also vary from context to context. This paper will discuss the cross-country lessons, as well as the challenges, on addressing psycho-social issues faced by journalists. Researchers have shown how journalists, particularly war correspondents, are affected by the work they do (Feinstein et al., 2002). But there has been little examination of the effects on local journalists or fixers for international media who live amidst, and report on, violence, conflicts or disasters that impact them directly (for exceptions see Feinstein, 2012; Feinstein et al., 2015). This paper will define how psycho-social support is provided to journalists in first world countries and how these concepts may not readily apply to local journalists. The paper will look at how trauma support might be adapted for local journalists in the Global South and compare examples of such support that have been used in different contexts such as the Middle East, Asia and Latin America.

Abstract: Comparing notes from our independent studies on threats faced by radio journalists in the Philippines, photojournalists in Afghanistan and digital journalists in Venezuela, we found that the threats were often related to the very medium they used for their journalism. Working in the audio, visual or digital formats presented specific ways by which, and reasons for which, the journalists faced threats. We also noted that discussion of this interrelation of journalistic medium with safety issues was missing from existing studies on journalists' safety, perhaps stemming from the general lack of in-depth comparison of different country contexts within the Global South. We embarked on a comparison of our findings to add this perspective to the larger discussion surrounding anti-press violence around the world. While methods of cross-country comparisons of quantitative data on journalists' safety are well-established, our efforts in presenting together the findings of these three disparate qualitative investigations presented significant theoretical and methodological challenges. While facing the usual, and expected, criticism that we were trying to compare apples and oranges, we were also aware of the recent challenge that cross-country studies on journalists' safety obfuscate local and sub-national particularities in favour of macro-level data that do not help in-depth understanding or mitigation of the very safety issues they highlight (Hughes & Marquez-Ramirez, 2018). In this paper, we will discuss how we sought to address these two issues by approaching our cross-country qualitative comparison with an inductive theoretical lens (Bryman, 2016). We will show how building knowledge upwards from real-life contexts, as the inductive approach prescribes, helped us argue for the importance of the common thread we found among the different contexts, while not sacrificing discussions of the role played by the respective political-economic and socio-cultural factors and forces in Philippines, Afghanistan and Venezuela. Based on this, we will present a case for future meso-level qualitative cross-country studies on journalists' safety issues as a way to complement macro-level quantitative cross-country studies on the topic.

Title: News Journalism's Conflicting Claims for Truth: The "Jenin, Jenin" Controversy in Israel

Session Type: Individual submission

Authors:

Name: Oren Livio

Email: olivio (at) com.haifa.ac.il

Country: IL (Israel)

Affiliation: University of Haifa

Abstract: Contemporary society has been described as one pervaded by "epistemological insecurity" – a cultural climate of "not knowing what is true or who can be trusted to have access to the truth and tell it" (Van Zoonen, 2012). This zeitgeist has been linked to various sources, including critical/postmodern theory, populist anti-intellectual rhetoric, and the decentralization of knowledge brought upon by the internet (Lynch, 2016). It has been particularly challenging for institutions that have traditionally been associated with authoritative claims to truth, such as news media. Examining how media negotiate the question of what is true and battles between conflicting "truths" is thus extremely important, since the public service function of journalism relies on its perceived authority as disseminator of accurate information and resulting public trust (Coleman, 2012).

In this study I examine how Israeli media constructed struggles over what is considered true in the case of a prolonged crisis involving the documentary film "Jenin, Jenin". Made by Palestinian-Israeli director Mohammad Bakri, this 2002 film accused the Israeli military of committing war crimes during its invasion of the Jenin refugee camp. It became a center of controversy in Israel, as Bakri was accused of presenting falsified evidence as documentary truth. In the following years, legal and cultural battles over the film persisted, including attempts to ban its screening and defamation lawsuits filed against Bakri.

Based on a critical discourse analysis of a media texts dealing with the film and the subsequent legal battles, I identify three complementary justifications for claims to truth made by media, associated with different epistemological regimes: (1) "correspondence" involves the claim that the description of events corresponds objectively and factually with the real world events portrayed; (2) "morality" involves the claim that truth is primarily a moral concern and that focusing on the moral meaning of the story is most important; (3) "subjectivity" involves the claim that truth is subjective and that media must pragmatically present what is considered true for individual participants or for society as a whole, rather than aim for overarching objectivity.

The analysis demonstrates that while all three justifications were present in media discourse, they were deployed flexibly in different contexts to maintain the media's cultural legitimacy and privileged status with regard to the right to tell the truth. Thus, claims of correspondence, morality, and subjectivity as the basis of truth were alternately emphasized to simultaneously display the media's obligation to factuality and their "patriotic" conduct. This coexistence of different truth claims complicates normative arguments regarding the media's role in the creation of a "post-fact society" or a culture of "truthiness" (Lynch, 2016) to highlight how news journalism's claim to truth

is largely a pragmatic achievement, differently employed in different circumstances associated with different power dynamics.

Abstract: Empirical research (Boczkowski & Mitchelstein, 2013; Bright, 2016) confirms an old suspicion of journalism: the disconnect between what journalists propose as news and what kind of news audiences seek and share. This disconnect questions the ability of media to set the agenda (Tandoc, 2014), but also points towards a discrepancy between media and audiences about what is news (Harcup & O'Neill, 2017), questioning the traditional news values (García-Perdomo et al, 2018), and what journalism is (Steensen & Ahva, 2015; Sherwood & O'Donnell, 2018).

The objective of this paper is to identify the differences in news values among the content prioritized by journalists and those news which are most read, most commented and most shared by readers. In order to fulfil this objective news published by the four most read news sites in Spain (two pure players and two online media with print counterpart) have been analysed, as well as the most read, most commented and most shared news (n=1200). The analysis was carried out in two different timeframes of fifteen days each.

The news values were identified using Harcup & O'Neill's taxonomy. Results confirm divergences between what media and audience consider newsworthy, but also detect changes in news values depending on the use given to the information by audience. The results suggest the need to change the classic perspective of news values, focusing on institutional and professional criteria of media, to move to a perspective that takes into account what the audience considers newsworthy, as a previous step for a review of the news concept.

Title: [Panel] Human Dignity Beyond Boundaries: Revisiting Global Journalism Ethics, Panel description

Session Type: Panel Submission

Authors:

Name: Herman Wasserman

Email: herman.wasserman (at) uct.ac.za

Country: ZA (South Africa)

Affiliation: University of Cape Town, South Africa

Abstract: What are the ethical duties of journalism in a globalized world? Can we agree on ethical values for the media that have relevance and resonance beyond the boundaries of nation-states, regions and cultures? These questions have been at the heart of scholarship into global journalism ethics over the last two decades. As global geopolitics increasingly retreats into nationalism and populism, the need to think about journalism's ethical responsibilities across boundaries continue to rise in importance. What ethical principles can guide the global media towards dialogue, peace-building and social justice, with human dignity as its foundational norm?

Journalism ethics has been subjected to criticism for being founded on epistemological foundations that are Northern in origin but universalizing in their claims. Normative frameworks developed in the North have historically been exported globally through textbooks, training programmes or development assistance organisations. In recent years, media ethicists have responded by searching for a global ethical framework that would articulate and critique communication networks and practices that are now global in content, reach, and impact in order to develop aims, principles, and norms of practice appropriate to a world that is increasingly interlinked through communication technologies and characterised by complex flows and counterflows of media.

The search for ethical frameworks that could have relevance and legitimacy across borders arose from the idea that the rapid and disorienting change that communication infrastructures, content and practices globally have been undergoing has had the effect of blurring geographical, cultural and temporal boundaries. Global journalism requires an ethical underpinning applicable to the plurality of religions, traditions, ethnicities and lived experiences of practitioners and consumers around the world. Some of the concerns in these debates relate to the deterritorialisation of local cultural values and power relations, a perceived incompatibility between different traditions, and the amplification of incursions into private grief to a global stage.

At a time where journalism is undergoing significant disruption and reformulation, this panel provides an opportunity to examine the current state of journalism ethics from a range of different international perspectives and foci. Key questions that the panel will address include: to what extent are the recent ideological challenges to globalization shifting the ethical and normative parameters of journalistic forms across cultures? How might transnational approaches to journalism ethics transcend current international flux and disruption? To what extent have new (old) political formations affected the ethical landscape for journalists and news-workers and how might they respond? How might interdisciplinarity contribute to the development of new ethical considerations? How might non-traditional journalism practices and actors intersect to curate new ethical frameworks for global journalism ethics in 21st century? And finally, what methodologies

and approaches can be developed to forge new, innovative and meaningful ethical norms for news-workers and wider civil society?

Title: The Problem Of Pluralism And Universal Principles

Session Type: Panel Submission

Authors:

Name: Clifford Christians

Email: cchrstns (at) illinois.edu

Country: US (United States)

Affiliation: University of Illinois

Abstract: When establishing universal principles of ethics, monism is unacceptable. Rationalist absolutes in the Western tradition of Kant have been discredited for a global imaginary of multiculturalism and competing politics. But the problem is to eschew monism while not being trapped in philosophical relativism. Pluralism is the alternative and this paper develops that concept. The focus is on theoretical pluralism in terms of the one-many problem in the history of ideas. But aspects of properly understood pluralism can be clarified when the viability of people-groups constituted by history and geography is considered non-negotiable.

Title: Protonorms in context: South African perspectives on truthtelling, human dignity and non-malefeasance

Session Type: Panel Submission

Authors:

Name: Herman Wasserman

Email: herman.wasserman (at) uct.ac.za

Country: ZA (South Africa)

Affiliation: University of Cape Town, South Africa

Abstract: If we accept that there are broad principles like Human Dignity, Truthtelling, and Nonviolence (Christians & Nordenstreng, 2004, p.21) that are common to global humanity, a crucial question remains: how will these principles take shape in different contexts? In order for these protonorms not to become reified into absolutes, they should remain open-ended and receptive to local conditions, cultural dynamics, and global shifts in media platforms and practices. This paper investigates what the values of Human Dignity, Truthtelling, and Nonviolence might look like in a highly unequal, transitional democracy such as South Africa. What does dignity mean in a place where millions of people live in dehumanising poverty? How does the media engage in the ethical duty of 'truthtelling' in a context of cultural difference and vastly divergent lived experiences? How do the media uphold the ethical duties of 'nonviolence' and 'care' in a transitional setting marked by conflict?

Abstract: The project, Defining Freedom of the Press, aims to identify a definition of “freedom of the press” as a normative principle in contemporary media ecologies. The paper will present findings from a qualitative analysis of the codes of ethics and in-person interviews with journalists and stakeholders from five countries that are at the top of the 2018 RSF press freedom index: Norway (1), the Netherlands (3), Finland (4), Switzerland (5), and Denmark (9); with a view to identify how they operationalise press freedom, and how they relate comparatively to the eight other countries in the study.

Title: Journalistic Ethics: Between Globalization and Anti-Globalization

Session Type: Panel Submission

Authors:

Name: Jairo Lugo-Ocando

Email: jairo.lugo-ocando (at) northwestern.edu

Country: QA (Qatar)

Affiliation: Northwestern University Qatar

Abstract: Journalism Ethics have been widely debated within journalism and media studies in recent years. However, it is only relatively recently that a number of scholars have engaged with journalism ethics in a cross-national comparative manner. This paper argues that such a relative lack of work has tended to reinforce the notion that there are universal principles and values which should be applied to journalistic practice. Yet, one of the key questions remaining is one that concerns the extent to which journalistic deontology can be applied or gauged through the prism of 'western' universality. This paper therefore critically engages with the concept of universality and asks how we may gain an understanding of journalism ethics and practice within this globalized context via perspectives orientated towards reacting against the forces of globalization. In doing so, the paper challenges common assertions about ethics in journalism practice and offers a more comprehensive assessment of the range of ethical frameworks from the Global South.

Title: Revitalizing Framing Research: A Critical Evaluation of Framing Scholarship

Session Type: Individual submission

Authors:

Name: Kevin Carragee

Email: kcarragee (at) suffolk.edu

Country: US (United States)

Affiliation: Department of Communication and Journalism, Suffolk University, Boston, MA. USA, 02108

Abstract: Abstract

Revitalizing Framing Research: A Critical Evaluation of Framing Scholarship

Since the 1980s, framing research has expanded rapidly. In its full scope, it explores the construction of frames by political actors, the sponsorship of frames, how journalists construct meaning through framing processes, how news stories articulate frames, how audience members interpret frames, and the influence of frames. Researchers have provided useful overviews of this research tradition.

Although framing research has expanded significantly over time, researchers have advanced recurring critiques of this perspective. Paradoxically, framing research remains robust and troubled.

This paper provides a critique of framing scholarship, seeking to revitalize this perspective. It particularly highlights weaknesses in how framing research has assessed the interaction between social movements and the news media. While contemporary movements increasingly employ digital activism to reach publics with their ideas, the relationship between social movements and the news media remains significant given journalism's continuing role in defining movements.

Recent calls to abandon framing as a perspective or to significantly narrow its focus fail to recognize the tradition's valuable contributions and represent an overreaction to the weaknesses that characterize some approaches to framing. Framing research has been and will remain fractured given the theoretical commitments of scholars to different paradigms - post-positivist, interpretive and critical - that inform social science research (D'Angelo, 2002). Despite its fractured nature, we should address limitations within and across these perspectives.

Despite the quality of considerable scholarship within the framing tradition, significant problems plague this perspective. This paper initially examines conceptual difficulties in defining frames. It, then, discusses the failure of studies to analyze frame sponsorship and the centrality of resources in the ability in advancing frames, shortcomings that neglect how power inequalities inform framing contests (Carragee & Roefs, 2004; Vlieghart & van Zoonen, 2011). Subsequently, the paper explores the lack of attention to framing processes in most of the research literature, and the failure to consider emotions as an influence on framing. It concludes by examining how engaged or activist-oriented research linked to framing can help address the shortcomings in framing research,

devoting attention to scholarship associated with the Media Research and Action Project and Communication Activism Research (Carragee & Frey, 2016).

Addressing limitations in framing research assumes added significance given contemporary political trends. Well organized disinformation campaigns, fake news, declining confidence in the news media and threats to democracy now increasingly characterize our political environment. Historically, framing research has been a primary means to explore the ideological diversity of news coverage. Systemic weaknesses in framing research, therefore, compromise our ability to examine this significant issue.

Affiliation: The University of Queensland

Abstract: One of the challenges for journalism education is how to accommodate emerging technologies and prepare graduates for future jobs. The emergence of social and mobile computing has impacted journalism curriculum: universities now offer digital production and social media theory alongside more established journalistic topics. However, there is an ongoing debate about where the emphasis should lie. Some argue for equipping students for existing jobs, others prioritise critical skills or emphasise the need to learn to coding (see Creech & Mendelson, 2015 for an overview). Yet, ongoing technological change means there is a risk that traditional skills that are losing currency (Wall, 2015) and that graduates need to be equipped to deal with continual change (Pavlik, 2013). While companies such as Facebook currently dominate and define the design of news for social distribution, tangible interfaces will require a different approach.

In response to this challenge we have drawn on interaction design methodologies as a way to explore the boundaries of journalism (Deuze & Witschge, 2017) by developing conceptual skills regarding technology. Interaction design is a design discipline focused on the intersection of people and technology. Rather than focus on teaching proficiency in computational tools and languages, which will change as technologies evolve, we have sought to introduce students to processes for understanding the potential of new platforms and how to develop journalistic interactions for them.

A key tool in this approach is a design workbook. Design workbooks are collections of sketches, notes and reflections that facilitate creative thinking about complex or novel situations. They are both a method for design and a design methodology (Gaver, 2011). In this paper we outline a learning module in which students used design workbooks to respond to a series of provocations centred on tangible technologies. Over three weeks students are introduced to novel contexts for journalism: in the home; to wear; in a public space. The workbooks are used to capture their thinking about how journalistic goals and values might be realised in these new forms. Analysis of entries and interviews with students reveal the value of the workbooks as a way of understanding existing configurations of journalism and technology, and then speculating on new configurations. We suggest exploratory approaches such as sketching (Buxton, 2007) can complement more established journalism curriculum with the aim of encouraging a pro-active view of journalistic tech (Doherty, 2018).

Email: paul.frosh (at) mail.huji.ac.il

Country: IL (Israel)

Affiliation: Hebrew University of Jerusalem

Abstract: Our paper deals with the recycling and reframing of “iconic” news photographs by Israeli news outlets from the 1940s to the present. The study builds on literature that foregrounds the significance for collective memory of news images in general and particularly iconic photographs that are treated as symbolically powerful images, widely replicated and circulated, attracting public attention, giving rise to public discussion, and contributing to shaping the collective mood. Subsequently, they become widely recognized collective mnemonic devices, representing events and eras. Their presumed public recognition encourages their republication, recycling and reframing by journalists and editors – on anniversaries and other occasions – thereby enhancing their recognizability and becoming symbolic templates for the creation of transgenerational and transnational publics, and for memory “echoes” from one event, period or group to another.

The study is based on our previous cross-generational investigation – using 13 focus groups and an online survey with over 1,100 respondents – in which we determined the 30 specific iconic news photographs (domestic and foreign) most recognized by the Israeli public. Through intensive archival research we located and are analyzing the institutional and cultural processes that underpin the republication these photographs, thereby delineating the journalistic practices and news frames that may have legitimated and routinized their repeated selection. Furthermore, through textual analysis of the articles in which the photographs were recycled and visual analysis of iconographic variations in their appearance, we are investigating the potential shifting meanings of these images following their continual reinsertion into public discourse in changing contexts.

Our research questions are:

RQ1: How often and in what manner or patterns are iconic photographs republished in major Israeli news outlets following their original publication?

RQ2: What are the dominant visual and verbal frames that accompany the recycling of the photographs, and to what extent do they change over time?

RQ3: Is there a correlation between the intensity of recycling (frequency, salience etc.) and the extent of public recognition of the photographs measured in our previous study?

RQ4: What are the main professional, organizational and institutional factors shaping the recycling of the photographs, and how have these changed over time?

Using multiple keyword searches we located over 1,000 instances in which the 30 photographs were republished in four major Israeli newspaper and news websites since each appeared for the first time.

Each located item – the photo and its accompanying text – is subjected to a textual and visual analysis focusing on several quantitative and qualitative variables, such as: location in outlet, size of image and text, layout features, caption, relationship to any accompanying headlines, other images and story text, and particular framing themes. The paper will report on initial findings of these analyses as well as relationships between parameters of “supply” (e.g. frequency and types of media frames of the photos) and the public’s recognition of the same images in the earlier study (e.g. level of recognition accuracy and detail, as well as the types of response to the images and their interpretation).

Abstract: Migration is one of the most pressing and divisive issues in global politics today. In the past decade, the debate around refugees, asylum seekers, immigrants and migrants has become increasingly charged and heavily politicised and the media play a crucial role in how communities understand and respond to the challenge. This study examines how UK newspapers (n = 974) and popular news websites (n = 1044) reported on asylum seekers throughout the year 2017.

It contributes to previous literature in two important ways. First, it examines the 'new normal' of daily news coverage in the wake of the 2015 'refugee crisis' in Europe – how this subject is addressed outside of a crisis situation when normal journalistic routines are usually interrupted. Second, it looks at how asylum seekers from different regions of the world are represented in the news media. The content analysis finds significant variations in how asylum seekers are reported, including terminology use and the topics they are associated with.

We conclude that two years on, when the numbers of refugees had slowed significantly, asylum remains a topic where boundaries are still being mediated and mediated in the UK press. By looking over the space of a year, and coding for geographical location and origin, we attempted to nuance more carefully how different asylum seekers are represented. While economic concerns were dominant when considering different geographic regions and origins of those mentioned in stories about asylum, the data clearly showed that those originally from the MENA region were far more likely to be associated with terrorism, violence and crime in the media, despite some research that suggests terror crimes perpetrated by asylum seekers was a very small percentage. We also identify important commonalities in how all asylum seekers are represented - most notably, the dominance of political elites as sources across all media content. We argue that Entman's 'cascade network model' can help to explain this news content, with elites in one country able to influence transnational reports.

Attempts to counter these narratives of security – as well as ones around social issues and culture – were limited, in part because of the very low number of stories in which refugees, asylum seekers, immigrants and migrants actually speak. Only one in five stories featured such a voice—compared with four in five, which featured a politician or a public official. While refugees, asylum seekers, immigrants and migrants voices are excluded from the mediated debate, there can be an absence of empathy and understanding about the migrant experience, which is urgently needed – particularly given the influence of transnational elites on terminology in UK media coverage.

Abstract: Internet and social networks have contributed to creating a new public sphere for political and social discussion; however, the use of social media for news has started to fall in a number of key markets (Newman et al., 2018). Several reasons can explain this fact, but different researches have shown how social networks sites have become spaces of incivility and impoliteness (Ruiz et al., 2011); others state that social sites like Facebook or Twitter have got so much bigger that users do not feel comfortable sharing content openly (Newman et al. 2018). As a result, they are moving the discussions to messaging apps, such as WhatsApp and Telegram, where interactions between users are mostly private in an enclosed ecosystem of friends and acquaintances. Frequently discussions are linked to news (24%), indeed, news organizations' audiences are increasingly moving from public social media to closed or semi-closed platforms like WhatsApp, Discord, and Facebook Groups (Frankel, 2018). In these "private public spheres" users feel more comfortable than in open platforms. They are surrounded by friends and acquaintances with whom they share news and reliable information and they feel protected from algorithms, hashtags and technological manipulation. However, some studies conclude that fake news and other problematic contents are increasingly spreading on WhatsApp each day (Khurana and Kumar, 2018; Newman et al 2017). Internal features create in users a false sense of confidence in the information shared and makes users more resistant to moderation and change their beliefs and values (Sharot, 2017). Hence, the relationship between problematic content and closed platforms they see is twofold. Firstly, users become central in defining the generation and dissemination of (mis)information, and secondly, the safe space as a retreat from hostile views that characterizes WhatsApp, makes it difficult for users to adopt a critical approach to problematic and antagonistic content, particularly when the content questions one's beliefs and values.

The main aim of our research is to analyze the role of WhatsApp as a space to discuss news content in Spain, and particularly it is guided by three major research questions: 1) To what extent are WhatsApp's users concerned about the truth or falsehood of messages and news spread on WhatsApp? ; b) How do users manage problematic content when it is at odds with a core identity belief (i.e. pertaining to ethnicity, gender, morals, religion, ideology), and 3) To what extent do audiences adopt normative principles to evaluate the credibility of news stories and content spread on WhatsApp?

To address these research questions, we employ an exploratory sequential approach. The qualitative phase is based on 6 focus groups (n=48), which are aimed at stimulating participants' expression of their "latent thoughts" and show how they construct their own personal meaning on the use of WhatsApp. The quantitative approach is based on a nationwide survey (n=1000), aimed to address and measure some of the topics described in the research questions. (i.e. credibility judgments, awareness of social and political influence, resistance/acceptance generated by messages that challenge, slight, or threaten core identity beliefs, misinformation and fake news...).

Title: Journalists under time pressure

Session Type: Individual submission

Authors:

Name: Halliki Harro-Loit

Email: halliki.harro (at) ut.ee

Country: EE (Estonia)

Affiliation: Professor of Journalism, University of Tartu

Abstract: Journalism represents a sector of society that is at the forefront of technology driven social acceleration. According to the acceleration theory “the inhabitants of rich industrial states do feel themselves increasingly pressed for time” (Rosa 2005, 79). Time pressure in contemporary journalism has also to be seen in the context of some aspects that generally influence acceleration in working life and working conditions: reduction in workforce; work intensification; tighter deadlines, the need to accomplish more tasks in the same period of time, multitasking and increase in up-skilling requirements (e.g. Green 2004; Ulferts, Korunka and Kubicek 2013; Korunka, Kubicek, Paškvan, Ulfers 2015; Schöneck 2018).

The first aim of the present analysis is to capture the global picture on temporal acceleration in the news media sector. The second aim is to provide data on how journalists on an individual level generally perceive time pressure? The third aim is to discuss what could be the main reasons of increasing time pressure and how it would affect journalists’ profession?

This study presents the data based on the second wave of Worlds of Journalism Study, encompassing 63 countries and 26,514 replies. For this study I used three variables from the WJS 2012-2016 questionnaire: how much time limits influence their work (C15 L). This question was asked of all participants in the study. The subsequent sub-questions were required only of those participants who had worked more than five years as a journalist. These questions asked to what extent the average working hours of journalists have increased or decreased (C19 B), and to what extent time available for researching stories has increased or decreased (C19 C).

46,1% of respondents perceive that their working time has increased a lot or somewhat increased while their time for researching stories have decreased notably. 16, 7 % of respondents perceive less working time but also less time for researching stories; 16,4 % journalists perceive either no change in working hours (or the working time has increased somewhat), also more time for researching stories. 15,4% perceive no changes; 5,5 %of journalists’ working hours have not changed or decreased; they have got more time for researching the stories or it has not been changed.

The perception of time pressure is strongest in technologically advanced market oriented democracies (figure 1 presents data comparing different countries) is in line with the general on acceleration of working time speed in technologically advanced western countries. Due to changes in the business model and cost-cutting policies specific to journalism, fewer journalists are required to sort through and interact with a large volume of digitally delivered materials and sources in order to file stories. This, and the continuous deadline of the 24/7 news cycle, has fuelled a distinct awareness of increased work load and time stress.

Title: Legitimation and authority building in the news: the case of the economic crisis in Greece

Session Type: Individual submission

Authors:

Name: Vaia Doudaki

Email: vdoudaki (at) gmail.com

Country: CZ (Czech Republic)

Affiliation: Charles University

Name: Angeliki Boubouka

Email: a.boubouka (at) gmail.com

Country: GR (Greece)

Affiliation: Independent researcher

Abstract: This paper focuses on the analysis of news related to the economic crisis in Greece, in order to identify the struggles over legitimation and authority building, since news is a privileged terrain where these struggles are represented and take place. The research focuses more specifically on the periods and events related to the signing of the three memoranda between Greece and the Troika (EU, ECB, IMF) (2010, 2011-2012, 2015), which were presented as ‘necessary for the salvation’ of the Greek economy, and the period around the completion of the terms of the third memorandum (2018), which typically signifies Greece’s ‘exodus’ from the bailout agreement’s harsh terms and the stabilization of its economy.

The study incorporates: a) the systematic analysis of 150 news articles from the two Greek daily newspapers with the highest circulations during the periods of research –Ta Nea and I Kathimerini– for the identification of legitimation mechanisms through the presence of news sources, b) the analysis of the journalistic practices that relate to the construction of these news texts, and their legitimation discourse, c) the contextualisation of the analysis in its specific socio-political environment.

Using the analytical toolbox of critical discourse analysis (Fairclough, 1992; 2015), it is explained how the elite news sources that appear in the domestic mainstream Press legitimate or delegitimate policies and measures related to the bailout agreements, and their implications, but also how, through their privileged presence in the news, are given ample opportunities by the journalists to legitimate their own positions and establish their authority. With the help of cultural studies (Zelizer, 1992; 2004), it is also discussed how these practices and processes allow journalists to legitimate and reconfirm their own professional identities and authority positions, and how the two main discourses of legitimation that have been identified, those of objectivation and naturalisation, serve the dual logic of news as facts and as stories.

Title: [Panel] The journalism 'crisis' in the Arab World and its emerging alternatives, Panel description

Session Type: Panel Submission

Authors:

Name: Zahera Harb

Email: zahera.harb.1 (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: Senior Lecturer in International Journalism City University London Journalism Department

Abstract: When assessing the state of Arab Journalism, questions of freedom, safety and economic sustainability come to the forefront. While much optimism was expressed following the Arab revolts that dominated the political scene in the region in 2011, this optimism has been challenged, not only by the political instability the region continues to witness over the last seven years, but also by international trends that have put journalism at risk of becoming a liability to public affairs rather than a medium of trust. Similar to other contexts, populism and disinformation have affected Arab countries at large as well as in more specific ways in post 2011 countries – leading to partisan Journalism and renewed authoritarianism, as is the case in Egypt. Disinformation has become a tool which is used by authorities to undermine political opposition and silence calls for political, economic and social change. Economic hardship has led to the closure of several newspapers across the Arab region. Broadcast journalism is struggling as well with numerous broadcast journalists being made redundant. From Iraq to Morocco, many journalists are finding it harder and harder to keep their jobs, forcing them into a position where abiding by the political message their organisations stand for offsets the fear of losing their jobs.

A lack of trust in traditional media has seen citizens turn to social media and online news sites as alternatives, which has proven to be problematic in a region where media literacy is not widespread. Users have become susceptible to “fake news” traps and their ability to be fully informed of the political, economic and social order they live within has been limited. In many cases, users are acting as tools for spreading hate speech against individuals or groups, might they be political, religious or social.

Within this context, this panel engages both theoretically and empirically with the notion of crisis in the context of Arab journalism. It draws on interviews with journalists and first-hand experience and knowledge of the Arab politics and media to address the idea of crisis in Arab journalism. While, the panel sheds light on the pressures Arab journalists face, it also investigates alternative journalism frameworks, emerging as through bottom-up civic values and via user generated content, whether emanating from local contexts in the region or practiced in exile.

The panel asks: What can we learn from a region where journalism is often dismissed as dictated by the state? Is there really a “crisis” or is this a Western-centric notion? As academics, how can we highlight the plight of journalists to challenge authority? What are the differences between the roles

of activists and journalists? And finally how can we theorize the struggle for freedom between those who want to speak out and the powerful structures that silence them?

Title: Beyond the digital question: challenges facing journalists in Egypt and Lebanon

Session Type: Panel Submission

Authors:

Name: Zahera Harb

Email: zahera.harb.1 (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: Senior Lecturer in International Journalism City University London Journalism Department

Abstract: The Arab world was taken by surprise when mass protests erupted in Tunisia in December 2010, followed by mass protests in Egypt in January 2011. Much optimism was expressed towards a new era for journalism freedom in the Arab world, in Egypt specifically with the fall of Hosni Mubarak and the long reign of his authoritarian regime. The influx of private media mainly TV channels following his demise was remarkable. This paper begins with the assumption that changing socio-political contexts may not only have been a factor in the increase in the number of media organisations in the region, but may have a direct impact on the state and wellbeing of the journalists and their role in society. Eight years on from the Egyptian revolt and the state of journalism in Egypt has transferred from a state of hope to one of despair. The prosecution of journalists and social media activists has become a regular occurrence. There are more than 35 journalists in detention right now for ‘publishing offences’.

In Lebanon authorities, owners and editors are quick to clamp down on journalists who cross both un-stated and stated boundaries on sensitive topics. There always existed an interwoven relationship between the media and Lebanese politicians. Politicians had a strong appetite for owning and even running media organisations. Political affiliation, thus self-censorship, remains a problem. Most media organisations in Lebanon live on funding supplied by political actors in the form of individuals or foreign states comprising mainly Arab gulf countries. The constant shift in the political alliances in the region means less ‘political money’ for the media (the phrase used in Lebanon to indicate money given to dictate and disseminate certain political messages). Several Newspapers have gone out of print, with some not even continuing their online presence. TV channels have made many journalists redundant.

This paper draws upon 30 in-depth interviews conducted with journalists across platforms in Egypt and Lebanon. It argues that in certain political and socio-economic context, journalists fearing for their safety or for their job security, will be more inclined to adopt an activist role to foster change in society, in an attempt to maintain their journalistic integrity.

Title: Journalism crises and opportunities: alternative practices and platforms.

Session Type: Panel Submission

Authors:

Name: Joe Khalil

Email: jkhalil (at) northwestern.edu

Country: QA (Qatar)

Affiliation: North Western University in Qatar

Abstract: Since the Arab Uprisings, journalism in the Arab world has been struggling with multiple crises of credibility, viability, and relatability. After a brief reclamation of their freedoms, traditional broadcast and print media are increasingly subjected to government direct and indirect restrictions. The regressive state policies include but are not restricted to new media laws, overtaking of media organizations, censorship directives, and attacks on journalists. The very few relatively independent media organizations are facing financial losses and forced to adapt different business models. Even partisan organizations are struggling with restricted state or political party patronage. At the same time, the largest demographic group, the millennials, are accessing news and information in non-traditional ways from peers to social networks. In line with global trends, Arab millennials feel that their politics are misrepresented or underrepresented in mainstream media. But there seems to be an opportunity in every crisis. This paper engages with three cases of alternative news practices in different localities across the Arab world. The boycott of Qatar by its Gulf neighbours has allowed twitter to play a significant role in information and disinformation. The distribution of certain news content is state sanctioned and violators could have jail time, yet opinion and information sharing remains high. In overcoming the limited access to Lebanese highly partisan media, social commentators have used Facebook to disseminate exclusive eyewitness reports. In the process, they forced changes in mainstream media's news agenda setting, and their reporting practices. Finally, Tunisian bloggers who were integrated in mainstream media have returned to their blogs preferring freedom of expression over financial rewards and publicity. Using a combined methods approach, this paper argues that these crises are, and can be, amenable to fundamental changes in media practices and lend to a range of alternatives to traditional journalism. If anything, these crises reveal the continuing need for reliable information and any changes in platforms or revenue streams should aim at increasing access to and faith in journalism.

Title: Pockets of media civiness in a conflictual political landscape: A case study of Iraqi media

Session Type: Panel Submission

Authors:

Name: Aida Kaisy

Email: aida.kaisy (at) gmail.com

Country: GB (United Kingdom)

Affiliation: The Centre for Global Media and Communication, School of Interdisciplinary Studies, SOAS, University of London

Abstract: The Iraqi media landscape has been characterised by partisan ownership, in the main based on political and religious affiliations. Comparative ethnographic research has revealed highly irregular practices and the struggles of Iraqi journalists to adhere to the norms of professionalism, suggesting that these practices are contributing to and fuelling the on-going context of conflict and violence in Iraq. Using the concept of liminality, my own research has shown that despite many Iraqi journalists in state and privately funded media battling with the concept of professional identity, there are, nonetheless, 'pockets of civiness' within this landscape. This project seeks the positive in an arena defined by the negative, exploring opportunities for enabling Iraqis to carve out spaces which can contribute to better journalism and, ultimately, better local and national governance.

This paper is based on fieldwork that will take place in Iraq in early 2019, as part of a project for the LSE Conflict Research Programme. Interviews with media producers, will explore to what extent, in spite of the challenging environment, one might expect to see 'pockets of civiness' emerging from within a media environment that echoes the political context of conflict. The concept of civiness will be fleshed out with reference to the relationship between media and governance. It will map out the media landscape, identifying actual and potential 'pockets of civiness', and examine the drivers behind their development. Recent examples of 'pockets of civiness' in the media world include: the blog, Mosul Eye; the work of journalist, Assad Al Zalzali, winner, Global Shining Light Award, Global Investigative Journalists Network 2017. Mapping and interviews with key media and political stakeholders will provide the empirical basis from which to build on these examples. Further interviews and engagement with the chosen identified examples of 'civiness' will then provide some insight into the complex interaction between political and social conditions, structure and agency.

Title: The temporality of activism, journalism & exile at times of conflict

Session Type: Panel Submission

Authors:

Name: Omar Al-Ghazzi

Email: O.Al-Ghazzi (at) lse.ac.uk

Country: GB (United Kingdom)

Affiliation: Department of Media and Communications London School of Economics and Political Science

Abstract: Exile is a spatial condition that connotes an expulsion from a place as a way to prevent witnessing, silence critical voice and end political activism. But what is the role of temporality within this spatial exclusion? And how is it related to voice and power? In this paper, I argue that the power of a dissident's voice, whether as a journalist or activist, is shaped not only by physical distance to their place of engagement but also temporal distance from being on the ground. Empirically drawing on the case of Syria, including interviews conducted with Syrian media practitioners, I argue that in Syria, media engagement was shaped by the temporal boundaries of lived and perceived events. In 2011, when protests broke out in Syria as part of the Arab uprisings, a belief in the unfolding of a revolution determined media practice and merged the roles of activists and journalists. However, with the militarization and internationalisation of the conflict, the tensions between the role of activist and journalist diverged in parallel to the different media practices involved in each endeavour. By 2014, many of activists and journalists either left the country or lost their lives.

The paper calls for an approach that centres the human experience in media theorisation. It makes the case that temporality is a key factor within the logics of media practice and in conceptualising media roles. It concludes with reflecting on the potentialities and limitations of voices of dissidents exiled from their countries.

Id: 21049

Title: Situated journalistic practices in times of flux

Session Type: Panel Submission

Authors:

Name: Dina Matar

Email: Dm27 (at) soas.ac.uk

Country: GB (United Kingdom)

Affiliation: The Centre for Global Media and Communication, School of Interdisciplinary Studies, SOAS, University of London

Abstract: The boundaries between what counts as journalism, partisan journalism and disinformation order are becoming increasingly blurred worldwide, leading to concerns about the crisis in journalism or the crisis over journalism. In the Arab world, such boundaries have also been radically impacted by unstable political contexts that have contributed to the rise of fake news, disinformation, propagandist discourses and hateful speech, among other phenomenon. These contexts and emerging trends point not only to disruptions in emerging spaces for free speech and public expression post-Arab Spring, but also to the breakdown of trust in media institutions, exacerbated by the alignment of major media actors with political elites, and, in the case of transnational actors, such as Al-Jazeera Arabic and Al-Arabiya, also with financial backers. Grounded in these concerns, this paper challenges the presumed assumptions in the general discourses around “journalism in crisis” that remain situated in Western-centric approaches dominated by the presumed coherence of communication flows between journalists, institutions and publics as well as by news frames, their effects and role in public engagement. Drawing on case studies from Palestine and Syria, this paper suggests that more in-depth studies of ‘situated’ journalistic practices that takes into account their political contextualisation in particular historical contexts are needed to clear the conceptual and methodological confusion around the presumed crisis.

Title: State capture and journalism capture in South Africa

Session Type: Individual submission

Authors:

Name: Anthea Garman

Email: a.garman (at) ru.ac.za

Country: ZA (South Africa)

Affiliation: Rhodes University

Abstract: South Africa has just emerged from a major attack on the country's democracy. This attack was spearheaded by the Gupta family who relocated from India in 1993 and who already had a global empire spanning media, mining and IT. Their close ties to President Jacob Zuma and his family resulted in the removal of Cabinet ministers and directors of key institutions and their replacement with a network of cronies. This enabled the looting of state enterprises, the disabling of the Revenue Service's investigative unit which was alert to their money laundering, and the corruption of governance. The Guptas also controlled the television station ANN7 and The New Age newspaper (both now closed).

Media scrutiny of the Guptas dates from 2013 when they used South African taxpayer money to fund a family wedding and flew their guests into South Africa using a military airbase. To offset the bad publicity, the Guptas enlisted the help of Bell Pottinger, the notorious (and now defunct) British public relations company, to generate a counter news agenda and to conduct Twitterbot attacks on journalists.

Against this backdrop of "state capture" (Hellman and Kaufman, 2001), two major developments have happened in investigative journalism in South Africa. The first is the series of dogged investigations into the Gupta empire led by the independent journalistic unit Amabhungane. This consortium effort resulted in two whistleblowers releasing emails (#Guptaleaks) from within the Gupta empire which named those involved. This journalistic endeavour is thought to be the primary reason why President Zuma was removed and two commissions of inquiry set up to identify and prosecute conspirators ("Uncaptured", Mail&Guardian 20 December 2018, pp 22-29).

The second development is much more sobering. It also became clear that journalists at one of the country's largest newspapers, The Sunday Times, had been complicit in enabling state capture to take place. The editor Bongani Siqoko revealed that his specialist investigative unit had been so manipulated by captured intelligence sources that they had manufactured stories which discredited those investigating the Guptas and that the many front-page scoops over a period of years had contributed to the overthrow of accountable governance. In short, journalism itself had been captured.

This research has two parts: the first focuses on the successes of the amaBhungane unit. Interviews with the journalists who created the unit show that they have refined particular strategies that enhance their investigative work which is a meld of investigative journalism strategies honed under the apartheid regime with the affordances of the digital era. The second part focuses on structural arrangements (and defects) within the Sunday Times print newsroom and takes into account financial stress, political uncertainty and major challenges to the credibility of journalism because

of the prevalence of fake news and bot-fuelled social media (Beckett and Ball, 2012; Mabweazara et al, 2014; Schudson 2018; Zelizer 2017).

Both situations highlight important issues for a Global South country struggling to find its feet in a world beset by new strategies of disinformation and manipulations of the online and social media environment.

Title: Struggling for epistemic authority: algorithmic news-valuing at Swedish public service

Session Type: Individual submission

Authors:

Name: Torbjörn Rolandsson

Email: torbjorn.rolandsson (at) ims.su.se

Country: SE (Sweden)

Affiliation: Stockholm University

Abstract: One aspect of journalism's increased digitization, is the accelerating automation of its processes (Dörr, 2016; Weber & Kosterich, 2018). As digital platforms become the main sites of news-publishing, media companies have started experimenting with algorithmic structuring of their front pages. This affects news valuation, since how front pages are ordered, is the result of estimations of news worthiness. News deemed as more valuable, are placed higher on the page, for a longer duration. When creating an algorithm that orders news items in accordance with their perceived value, these values, which often are tacit (Carlson, 2018), need to be made explicit to the developers creating the algorithm.

However, developers are also actors who shape and structure algorithms, according to their own values. This can be a source of conflict, since research has shown that journalists and developers tend to adhere to different values (Bucher, 2017; Deuze, 2004; Gynnild, 2014; Linden, 2017; Royal, 2010; Stavelin, 2014; Usher, 2016). Since creating an algorithm means creating a metric for how to assign value to news items (Klinger & Svensson, 2018), I propose that something which is at stake during such a process, is epistemic authority: who gets to decide, through which metrics, the value of news?

Even though the number of studies of the convergence of developers and journalists is growing, most studies have been conducted in commercial media settings. This leaves a gap regarding how innovation and valuation negotiations happen in public service media, which are said to hold different values than commercial media (Bolin, 2011).

The aim of my paper, is therefore to study how journalists and developers construct a news-sorting algorithm for the front page of Swedish public service radio (SR). My research questions are 1) what types of values are called upon, in deliberating on how to build the algorithm 2) what perceived benefits and risks do journalists and developers associate with the algorithm?

Data was collected during observations at SR, and consists of observations of two meetings between developers and journalists, as well as two qualitative interviews with participants in the process of developing the news sorting algorithm.

As a theoretical point of departure, I use valuation theory, a transdisciplinary perspective that aims to examine the social practices of valuation (Helgesson & Muniesa, 2013). As Fourcade (2011) points out, processes of valuation are sensitive to socio-political context, so certain types of arguments will carry greater weight in some contexts, and lesser in others.

And indeed, my results show that, values adhering to normative ideals of public service were prominent in arguments made by journalists and developers alike, albeit in competing senses. Developers perceived the algorithm as a means to counter intra-organizational power structures regarding center-periphery, whereas journalists were sceptic that an algorithm would be able to recognize some of the “softer” values of public service, such as minority reporting. Implicit in these arguments, is the struggle for epistemic authority between developers and journalists over who gets to decide what counts as news, and in what way.

Title: The role of televised electoral debates in the diffusion of candidates' policy proposals: The part played by journalists

Session Type: Individual submission

Authors:

Name: William Porath

Email: wporath (at) uc.cl

Country: CL (Chile)

Affiliation: Full ProfessorSchool of CommunicationsPontificia Universidad Catolica de Chile

Name: Constanza Ortega-Gunckel

Email: cortega1 (at) uc.cl

Country: CL (Chile)

Affiliation: School of CommunicationsPontificia Universidad Catolica de Chile

Abstract: Studies on the content of televised electoral debates reveal that candidates prefer to address policy issues, rather than discussing character traits (Benoit & Benoit-Bryan, 2014). Studies of media coverage of campaigns, however, show that journalists opt for personalization, focusing on personal characters aspects of the politicians (Zeh & Hopmann, 2013) or campaign strategies (Schmuck et al., 2017). These findings may result from televised debates being a platform for candidates to more freely transmit their messages to audiences, bypassing the filter established by journalists (Maier & Jansen, 2017). Nevertheless, it is not clear whether that holds true for debates in which journalists conducting them play a more active role in determining discussion.

Given the importance of televised debates in electoral campaigns, and their impact on campaign news coverage (Maier & Faas, 2011; Luengo, 2011; Birdsell, 2014) and public opinion (Benoit, Hansen, Verser, 2003), it is important to understand the role that journalists play in determining the content of debates (Turcotte, 2015; Isotalus, 2011; Stromer-Galley & Bryant, 2011; McKinney & Carlin, 2004). This is specially the case of debates that use the so-called “panel of journalists,” in which interviewers lead the discussion, introduce topics, and question the candidates (Eveland et al. 1994). This format was abandoned in the U.S. in the 1990s, with the following decay of the academic interest for studying their role (Lehrer, 2011). However, this format is still in use in many Latin American countries. In Chile, the “panel” format has been maintained since 1989, so studying it can be paradigmatic in determining the role of the journalists in defining the content of electoral debates.

We conducted a content analysis of the questions and interventions of journalists in the main debates in the last seven presidential campaigns. We want to examine whether journalists in the debates replicate the routines of the media when covering politics, or if it represents something different, enabling politicians to discuss their policy proposals, given the special nature of this type of television programs (Schroeder, 2000). We study the Chilean case from the logic of "the most likely case," to then establish a comparison parameter with other models or countries.

Despite the occurrence of some of the phenomena identified for media coverage of politics (e.g., increase mentions of personalization or strategic issues; see van Aest et al., 2017), we found that the logic of journalists is closer to that of the public service, moving away from the usual logic of political coverage of the media and the commercial logic and the negative consequences of the

mediatization of the politics (Mazzoleni & Schulz 1999). In short, we find that the journalists themselves have made possible the discussion of public policies by the candidates and that, then, the debate represents a special moment of journalistic coverage. These results are analyzed by looking for the factors that could favor or hinder this decision of journalists, which are discussed in the context in which each election takes place.

Title: Fragments of history. The rhetoric of the past as a bridge to the fantastic in American journalism

Session Type: Individual submission

Authors:

Name: Diana Garrisi

Email: Diana.Garrisi (at) xjtlu.edu.cn

Country: CN (China)

Affiliation: Xi'An Jiaotong Liverpool University

Abstract: This paper explores the deployment of history in American newspapers, focusing on the relationship between journalism and the imaginary. Newspapers may engage with the past to ensure continuity to their editorial identity and a connection with their audiences in the present (Conboy, 2011; Kitch, 2014). History can have an epistemological function, providing the audiences with resources to navigate the present (Pöttker, 2011); it can reinforce national narratives (Griffen-Foley, 2011); or it can be employed to legitimate political activities (Lugo-Ocando, Guedes and Cañizález, 2011), or to foster a sense of community and national identity (Commager, 1965). This paper situates the uses of history in journalism within an imaginative and poetic dimension. Drawing on the concept of history as an aesthetic representative form, and as a result of a poetic act (White, 1973), I will conduct a narrative and rhetorical analysis of a selection of case studies, out of a sample of 150 articles taken from the winners of the American Pulitzer Prizes of the past fifty years for the categories 'public service', 'investigative reporting' and 'feature writing'. We will see that these articles often included historical references, for example, the first American Indian settlements, famous natural disasters, exploratory expeditions, and epistolary exchanges between artists or celebrities of the past. However, these references rest against an unknown background and should be treated, using the words of Rhian Atkin (2010), as a form of "textual wandering". They can take the form of a brief interruption or an extended digression, as a way of departing from the main subject of a story through analepsis (flashback). The reconfiguration of the past, through the inclusion of fragments of history that lack any contextual information, is a literary device that appeals to the readers' ability to linger on fantasies about possible scenarios. The fragment of history works as an invitation to think about the missing whole and make predictions for the future, expressed in the articles through the use of prolepsis (flash forward). The narrative strength of these references lies in their partiality: it is their fallibility that empowers the imagination of the reader. Journalism about what is known to have happened in the past paradoxically aligns well with the news value of 'novelty' where the element of novelty is subjective, and borne out of the relationship between the journalist, the article, and the reader's imagination. Rather than raising awareness of the past, the uses of history in journalism stimulate a human attitude to think in an imaginative way about present events, and to speculate about the future. Fostering the human ability to recreate images in the mind, through the deployment of history in journalism, may have a political implication, as imagination is often a prelude to social action.

Title: Caribbean Journalism Advancing Democracy Through Advocacy Journalism

Session Type: Individual submission

Authors:

Name: Juliette Storr

Email: jms1015 (at) psu.edu

Country: US (United States)

Affiliation: Pennsylvania State University

Abstract: Media scholars and practitioners have an ongoing debate on the need for journalistic objectivity in news reporting (Schudson, 2001; Kovach & Rosenstiel, 2001; Anderson, C., Bell, E. & Shirky, C., 2015; Deuze, M. & Witschge, T., 2018). Subjective journalism, the category media advocacy often falls into, is restricted to opinion columns and commentary sections of the news. However, over the last 20 years there has been more acceptance of the role of advocacy in journalism practices (Christians et al. 2009) but many journalists and journalism scholars cling to the tradition of objectivity as the core principle of journalism. This debate plays a significant role in understanding the growing practice of media advocacy in journalism in the Caribbean. Media advocacy is the strategic use of media to openly support and advance community issues or public policy. Advocacy journalism deliberately employs a non-objective stance for political or social purpose. Journalists and media organizations in the Caribbean are employing a variety of media to advance social causes and public policy—from a protest movement created to raise awareness of street harassment and sexual abuse of women to woman's rights organizations that use social media to mobilize online communities for public protest and educational campaigns like domestic violence, homophobia to public protest to expose lapses in accountability by the government. Agenda setting media theory and development media theory are used in the analysis of this work. This paper examines the growing use of media advocacy in news media organizations and journalism in the Caribbean in a 24/7 news information cycle. It attempts to answer the following questions: Is subjective journalism better than objective journalism in upholding democratic ideals of liberty and justice? Is Caribbean journalism becoming a platform for advocacy and is that a good thing for journalism and democracy? This research uses mix methods—interviews, archival documents and content analysis to answer these questions. The researcher examines the content of four newspapers in four countries, Jamaica, Bahamas, Barbados and Trinidad and Tobago and interviews media practitioners and owners in the Caribbean to understand the growing practice of media advocacy in journalism in the English speaking Caribbean to advance social issues and public policies.

Title: Audience Engagement with Sport TV Content across Twitter: A Transmedia Storytelling or a 'Catch-All' Strategy'

Session Type: Individual submission

Authors:

Name: David Puertas Graell

Email: davidpg5 (at) blanquerna.url.edu

Country: ES (Spain)

Affiliation: University Ramon Llull (Blanquerna). School of Communication and International Relationships.

Abstract: Sports journalism represents an important area in contemporary journalism, although it has not been considered one of the areas with greater reputation or credibility and there is a lack of academic studies about it (Butler et al., 2013, Sanderson & Kassing, 2011; Sheffer & Schultz, 2010, 2013; Sears, 2011). Hence, Academia (Boyle, 2006; Boyle et al., 2010; Cokley et al., 2006; Nicholson et al., 2011; Zhao et al. 2011), recognizes the absence of a deep analysis at sports genre in comparison with another fields of journalism (O'Hallarn, 2016). Nevertheless, sports has a daily space in the general coverage of the media. In Spain, moreover, the consumption of sports has an indisputable role in media culture (EGM, 2017; Barlovento, 2017; Nielsen, 2016). Likewise, there is a strong tradition of sports programs on both television and radio that are part of the late prime time. Besides, "social media have impacted news production and sports journalists' working routines" (Pederson, 2013) and "all the advantages that Twitter brings to media and journalism are even more pronounced for sports, which already has a large, built-in audience hungry for the opportunity to talk directly with sports journalists, athletes, and coaches" (Sheffer y Schultz, 2010). As Jenkins said (2006), Twitter offers an absorbing example of convergence between old and new media, as well as between producers and viewers. The current scenario goes further thanks to transmedia storytelling, where stories are displayed through multiple media and communication platforms (Scolari, 2013). These keys, in a media context based on digitization, end up being related to the concepts of active audiences and participation (Masip & Suau, 2014). We are facing a culture of participation open to planned programming through the different intercommunication channels provided to connect with the audience (García Avilés, 2011).

This research analyzes how the four main sport programs of Spanish television establish relationship with their audiences through social networks. Content analysis based on the official accounts of the Twitter programs were observed and decoded thanks to an analysis datasheet which was prepared, tested and presented in previous research (IAMCR 2018). The activity of a sample of more than 8000 tweets was carried out during the period from March to November 2018, excluding summer period. In particular, interactivity (tweets, retweets and replies-to) has been studied by analyzing all the tweets generated by the accounts of the programs in the selected weeks.

The main aim of our research is analyze the role of Twitter through a technique of the built week (Riffe, Aust & Lacy, 1999). This practice was used with the goal of obtaining a sample as wide and varied as possible, avoiding intentional biases by key dates and/or avoiding the result of unreliable data due to scarce measurements or unforeseen alterations in the media agenda.

Programs demand participation that translates into greater engagement. However, the most widespread use by media seek to direct their users from the social network to television, creating a transmedia 'continuum'.

Abstract: Monitoring those in power has traditionally been one of the central functions of professional journalism. At the normative level, this is one of the most crucial professional roles in journalistic culture around the world (Weaver & Willnat, 2012). However, Mellado et al. (2017) showed that this role is only the second most frequent in the news stories that reach the public. Despite the centrality of the watchdog role both for the journalist's professional identity and for media organizations, the characteristics of media systems influence the degree to which the monitoring function is put into practice, as Hallin and Mancini have noted (2004). Thus, in a Polarized Pluralist media system, we would expect the presence of the neutral, detached watchdog role to be low, consistent with a high degree of political parallelism. Mazzolleni (2010) has asserted

that, in countries where journalism is subordinate to politics, journalism and politics have shared interests and aims. In this context, watchdog journalism overlaps with the practice of partisan journalism.

Since the Spanish media system is characterized by a high level of political parallelism (Brüggemann, Engesser, Büchel, Humprecht, & Castro, 2014), we would expect the media outlets to make frequent use of a more partisan watchdog role to interact with those in power. A previous study from the Journalistic Role Performance Around the Globe Project showed that the watchdog role was highly prevalent in the four legacy print newspapers analyzed (Humanes & Roses, 2018), but did not answer the question: Who is monitoring whom?

This proposal is based on a content analysis of two Spanish native digital newspapers, *elspanol.es* and *eldiario.es*, during 2018. While both newspapers advocate watchdog journalism and reach a large audience, according to Comscore Spain, they represent different ideological profiles. The aim of this paper is twofold. Firstly, we measure the extent to which the watchdog role materializes in the news content. Secondly, we explore whether the watchdog role in these newspapers is oriented by journalistic criteria (e.g., serving public interest), or by ideological or partisan leanings.

Following Mellado (2015), we have measured the performance of the watchdog role according to the presence or absence of the following indicators: information on judicial/administrative processes, questioning by the journalist, questioning by others, criticism by the journalist, criticism by others, denouncement by the journalist, denouncement by others, reporting of external investigation, reporting of conflict, or investigative reporting. To analyse if the watchdog role performance is oriented by ideological or partisan leanings, we have codified the specific political or economic actors, groups and organizations which are monitored by both newspapers.

This proposal is part of a R&D project funded by the Spanish Ministry of Science, Innovation and Universities (National Programme for Fostering Excellence in Scientific and Technical Research, 2017).

Title: Giving Voices to Numbers: The Added Value of Data Journalism for Local Reporting in Germany

Session Type: Individual submission

Authors:

Name: David Liewehr

Abstract: After the euphoric advent of data journalism on national and international levels, this practice has to suffer setbacks, particularly with regard to the surprising 2016 US election's and the Brexit referendum's results. Those two events have paved the way for strong criticism of statistical prognoses by unveiling weak points of data collection and interpretation. Indeed, calls for a return to shoe-leather reporting became louder. This kind of in-the-field reporting is especially inherent to local journalism. Local news – that Nielsen (2015, p. 1) dubbed as often being “terrible” but at the same time being “terribly important” – has also been struggling over the past years: Baquet (cit. in Wattles, 2018), a New York Times editor, considers shrinking local newsrooms due to insufficient resources and layoffs as the “biggest crisis” of journalism. Against this backdrop, this study seeks to explore the added value of combining data-driven reporting with traditional shoe-leather investigation in local journalism in Germany that often has to deal with wearingly repetitive stories about social life in municipalities in remoted provincial areas.

This study explores local data journalism through the four lenses (normative, structural, functional and roles) of Weischenberg's (1992, 1995) theoretical model of journalistic contexts.

Methodologically speaking, we conducted qualitative semi-structured interviews with nine data journalists working with German local dailies.

Results show that municipal administrations are often very reserved when being asked to provide data. Furthermore, data journalism is rarely institutionalised in local newsrooms because of lack of resources. Additionally, data-driven reporting is often done by single individuals who specialise themselves through external training camps and online courses. Within some news organisations data journalism is included in informal in-house workshops led by experienced staff. While supportive internal structures are helpful, informal regional networks that connect data journalists

across news organisations are considered to be far more important. Such networks might enable projects between different news organisations. Instead of seeing data journalism and local journalism as conflicting concepts, our interviewees suggest that enriching on-site reporting with facts and figures is a fruitful combination. By doing so, repetitive stories about the personal and everyday life of locals can offer to readers much more context and background information drawn from numbers. Moreover, abstract figures can be exemplified and personalised by connecting rows and values to people and voices, in order to counter the criticism of complex abstract metrics within quantitative journalism (Lowrey & Hou, 2018).

Abstract: Propuesta para la conferencia IAMCR 2019.

Sección de Periodismo e investigación: Periodismo y género.

Estudiante de DEH. Elizabeth Tiscareño García.

Dr. Oscar Mario Miranda Villanueva.

Miércoles 6 de febrero de 2019.

A 10 años de que se creara la Ley General de Acceso de las Mujeres a una Vida Libre de Violencia (LGAMVLV, 2007), las estadísticas oficiales mexicanas mostraron un incremento en las muertes de mujeres por feminicidio durante el 2017. El Secretariado Ejecutivo del Sistema Nacional de Seguridad Pública (2018) dio a conocer que los feminicidios fueron 671, mientras que durante el 2015 y 2016 se contabilizaron 389 y 588 respectivamente. En México, esta problemática se visibilizó a partir de 1993, cuando fueron localizados los cadáveres de doce mujeres en distintas partes de Ciudad Juárez, frontera de México con Estados Unidos (Wright, 2011). No obstante, en la actualidad la prensa escrita mexicana y las organizaciones civiles evidencian como también lo señalan las estadísticas, que las mujeres siguen siendo asesinadas por cuestiones de género. En esos crímenes existen factores como la misoginia, la sexualidad sádica y la construcción social de la masculinidad, aspectos inherentes al sistema patriarcal (Caputi, 1987; Monárrez, 2010; Russell, 2006a, 2006b; Segato, 2013; Vallejo, 2002). Desde el enfoque humanista se hace referencia a la violencia de género, el patriarcado (Alcocer, 2014; Amorós, 1992; Gallur, 2014; García, 2008; Hartmann, 1996; Lagarde, 1996; Lamas, 1986), y el feminicidio (Bonavitta, 2011; Carcedo y Sagot, 2000; Monárrez, 2010; Montaña, 2007; Russell, 2006; Segato, 2006; Rajs, 2014; Rodríguez, 2008; Valcárcel, 2008). Además, también está el ángulo de la prensa y la violencia doméstica o de género (Bullock y Cubert, 2002; Carll, 2003; Consalvo, 1998; McNeill, 2006; Meyers, 1994). Éste es un análisis de contenido cualitativo de cómo la prensa escrita mexicana aborda el tema de feminicidio durante el 2017, y de qué manera enmarca a las víctimas y victimarios o presuntos victimarios. La investigación se centra en los periódicos mexicanos: El Universal, La Jornada, Milenio y Reforma. Las preguntas de investigación giran en torno a: cuál es el lenguaje que utilizan los periodistas en la construcción de la noticia para referirse a víctimas y victimarios; cuál es el género del reportero, de las fuentes informativas y su relación con el tipo de lenguaje que utilizan; y cuáles son las coincidencias y/o diferencias en el lenguaje de dichos periódicos en la manera de

reportar a víctimas y victimarios o presuntos victimarios de feminicidio. Este estudio se apoya en dos aproximaciones teóricas: la agenda setting (Benton y Frazier, 1976; Ghanem y McCombs, 2001; Guo, Tien Vu y McCombs, 2012; Funkhouser y McCombs, 2001; Kim y McCombs, 2007; McCombs, 2006; McCombs y Shaw, 1972; McCombs, Shaw, y Weaver, 2009; Miranda e Iglesias, 2015; Scheufele y Tewksbury, 2007); y el framing (Ardévol- Abreu, 2015; Danés, 2017; De Vreese, 2004; Entman, 1993; Ghanem, 2001; Ghanem y McCombs, 2001; Reese, 2001; Sádaba, 2006; Semetko y Valkenburgh, 2000).

El tema ha sido tratado, en mayor medida, desde el ángulo de las víctimas; hay menos estudios empíricos sobre victimarios o presuntos victimarios (Lagos, 2008; Richards, Gillespie, y Smith, 2014; Taylor, 2009). A través de esta investigación se busca contribuir en la proyección que hace la prensa mexicana sobre ambos.

Title: [Panel] Alternative Media Journalism in Contemporary Turkey, Panel description

Session Type: Panel Submission

Authors:

Name: Murat Akser

Email: m.akser (at) ulster.ac.uk

Country: GB (United Kingdom)

Affiliation: Ulster University

Abstract: This panel looks at the structural, economic and political reasons why the current media system fails journalists in Turkey and led them to use alternative means of reporting. The panelists traces the beginnings of alternative media to a month long resistance and protest through the use of social media during OccupyGezi movement. The papers in the panel also outline the history of alternative media use in Turkey and the ways in which it has become a tool for the critics of the neoliberal economic system during president Erdogan's AKP rule since 2002. The papers concentrate on alternative reporting through social media use within social movements, its news formats and narratives and applies interdisciplinary approaches and research methods, ranging from cinema and visual arts to sociology, political science, content analysis and ethnographic study. The four papers look as challenges to journalism in Turkey in the digital age, discuss the problem of safety of journalists under Erdogan's authoritarian rule and examine how alternative media can open up new debate on journalism and democracy.

Abstract: Theoretical background: journalism culture in a twisted position

The 70th anniversary of the Universal Declaration of Human Rights is an excellent occasion to focus on the rights of minorities to be heard and to have a fair representation in the news. So far, a myriad of news studies show that voices of refugees are heard less often than those of authorities, politicians and experts. This is also the case in literal citations in news articles as in paraphrases (Benson and Wood, 2015; De Cock et al., 2018; Philo, Briant and Donald, 2013; Sumuvuori et al., 2016; Szcpanik, 2016). Chouliaraki and Zaborowski (2017, p. 613) call these practices “bordering” and they speak about a misrecognition of refugees as political, social and historical actors. Journalism culture finds itself in a twisted position that needs to be addressed when it comes to reporting diversity. Some journalists see it as their duty to report in a diverse way, while others associate diversity with political correctness. Research among journalists in six European countries (Bennett et al., 2013: 261) prove the urgency of this issue, because systematic standards about diversity are absent.

In today's journalism research, the reflection on the situation is lacking as seen from the perspective of reporters themselves on their journalistic strategies while reporting on and working with refugees.

Research objectives

The aim of this paper is to explore and compare journalists' self-reported strategies while covering the so-called 'refugee crisis' in three different cultural contexts. Public opinion is increasingly polarized and both left-wing and right-wing observers criticize journalists for presenting news with an overtly ideological focus. Content analyses made clear that Belgian news coverage shows regional diversity, with Francophone journalists showing more tolerance towards refugees and tending to be more in line with their Swedish counterparts. Still, refugees are seldom allowed to speak for themselves. This warrants attention and action by news professionals but also asks for in-depth reflections on reporters' difficulties. This may provide explanations for the outcome of their news production process and can lead to constructive solutions for future reporting and fruitful communication strategies used by NGO's as well to improve mutual understanding.

Methodology

We conducted 30 in-depth interviews with experienced journalists, covering the 'refugee situation' for news brands throughout three different cultural contexts (10 in the Dutch speaking part of Belgium, 10 in the French speaking part of Belgium and 10 in Sweden). The interviews are coded accordingly to qualitative traditions (open coding, axial coding and selective coding).

Results

Our findings revolve around three central clusters. First, we focus on the different objectives of the journalists. Second, we address the distance/position of the journalists in their reporting. Finally, we concentrate on the difficulties encountered by the reporters: we distinguish between the political and social sensitivity of the topic, the tense relationship with NGO's and the government, as well as the language barrier.

Affiliation: Independent Researcher

Abstract: In this presentation, we will evaluate video activism practices in Turkey from the Gezi Park Movement until today. Updating our research on video activism in the Gezi Park Movement , we would like to shed light on the current conditions of video activist journalism and the difficulties video activist reporters face under the authoritarian political regime. The Gezi Park movement represents a turning point not only in the history of social movements in Turkey, but also in terms of media activism, especially video activism. After this uprising, during which many media activism groups and initiatives have arisen, the state repression against dissidents became more systematic, and video activists keep working under severe conditions. Based on in-depth interviews with video activists, our research aims to understand the changing tactics of video activists.

Title: Professional Journalist or Knight Errant' ---The Contested Boundary of Investigative Journalism in Digital China

Session Type: Individual submission

Authors:

Name: Yuan Zeng

Email: yuanzenghk (at) gmail.com

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: The role of internet in journalism in authoritarian countries like China has been debated. Some scholars argue internet is constructive to journalism practices in China but limited to getting sources and discussion (e.g. Hassid & Repnikova, 2016); with Xi Jinping's ever-tightening control over cyberspace and press, some scholars began to view internet as a tool to stabilize authoritarian rules. More, mostly Western scholars, are suspicious about the role of internet, as it is argued to blur the boundary of journalism, and "citizen journalism" such as blogging threatens professional journalism (Carlson, 2007). With the end of a "Golden Decade" of investigative journalism in China, since Xi's term, both commercial and political/governmental pressures are seen foundering investigative journalism in traditional media (Tong, 2017). The number of investigative journalists have shrunk to the extent that some claim investigative journalism is dead in China. But with a number of former investigative journalists retreating from traditional media and freelancing on individual social media platforms (Wechat, Weibo), Chinese public in the past two years have witnessed a number of quality in-depth investigative reporting penned and disseminated on social media, evoking the government to respond. Against this backdrop, this paper tried to offer a fresh perspective to the discussion of the role of internet in journalism and social change in authoritarian society, by examining this new group of former professional investigative journalists going "knight-errants" (you xia) on social media in China. Distinct from citizen journalists, they are characterized by strong journalistic professionalism, thus in effect extending, rather than blurring, the boundary of professional journalism. This paper uses case study and interviews to explore this new genre of investigative journalists in digital China, to add new empirical and conceptual understanding on how investigative journalism in China is being contested differently than in heavily-studied Western societies. It argues that in a society where professional journalism is being gravely undermined by both political and financial pressures at organizational level, social media offers an extension in the institution of journalism, though admittedly with considerable restrictions.

Abstract: Social media platforms have become important sources of news for an increasing number of users around the world. In the United States, 67% report that they get their news from social media (Shearer & Gottfried, 2017). The same trend is also seen in many other countries. In Singapore, a small country of five million people marked by high levels of social media and smart phone penetration rates facilitated by an efficient information and communication infrastructure, heavy reliance on social media platforms such as Facebook and WhatsApp has become a significant feature of news consumption (Sin, 2018).

Social media platforms allow easy and quick diffusion of news, as users can quickly share information and news articles to their network (Lee & Ma, 2012). Such news exchanges typically occur outside the control of news organizations, fundamentally changing the way news gets disseminated (Hermida, 2012; Tandoc & Vos, 2016). News is now disseminated through interpersonal networks, facilitated by social media platforms. Therefore, while news has consistently been associated with its informational value (e.g. Gil de Zuñiga, Jung & Valenzuela, 2012) and its role in civic behavior and informing the citizenry to make democratic decisions (e.g.

An, Quercia & Crowcroft, 2014; Morgan, Shafiq & Lampe, 2013), this may not be a complete picture. The emergence of social networks as central in news distribution places the social aspect of news in the spotlight.

Building on the framework of reciprocity on social media, as well as on the uses and gratifications theory and the role of trust in the news, this current study seeks to examine what factors lead individuals to engage in news sharing. Using a panel survey involving 868 participants in Singapore who were surveyed twice, one year apart (e.g. 2016 and 2017), we predicted that frequency of news sharing at Time 2 can be explained by frequency of receiving news at Time 1. We also explored the impact of motivations for news sharing and trust in news shared on social media on news sharing frequency. The analysis found that the motivation for self-presentation and trust in news shared by one's social media network positively predicted news sharing on social media. Furthermore, the analysis found that receiving news at Time 1 was a significant predictor of sharing news subsequently at Time 2. This points to news being valued as a form of social currency.

Title: Data-critical or business-friendly? A comparison of journalists' Twitter networks and their reporting of data security

Session Type: Individual submission

Authors:

Name: Gerret von Nordheim

Email: gerret.nordheim (at) uni-hamburg.de

Country: DE (Germany)

Affiliation: Universität Hamburg

Name: Florian Meissner

Email: florian.meissner (at) hhu.de

Country: DE (Germany)

Affiliation: Heinrich Heine University Düsseldorf

Abstract: Media reporting of digital technology is often overwhelmingly dominated by voices related to the industry. This way, the debate is left to self-interested commercial actors instead of making it an object of public concern (Gillespie 2010). It is the case, for instance, in technological areas such as artificial intelligence (Reuters Institute 2018), autonomous vehicles (Taddicken et al. 2018), but also privacy and data security. Civil society or user perspectives have been marginalized in mediated debates about online privacy and data protection e.g. in the US and UK (Thorsen 2016), but even in privacy-sensitive Germany (Meissner, von Nordheim accepted).

The aim of this presentation is to better understand the forces behind this phenomenon. Being aware of several possible explanations, we were particularly interested in the theoretical lens of intermedia agenda-setting (Conway et al. 2015, Haim et al. 2018) given that journalists increasingly use Twitter as a news source (von Nordheim et al., 2018). We therefore investigated the interrelations between journalists' reporting of data security and their communicative networks on social media. Specifically, we looked into the case of Spiegel Online, Germany's leading quality news outlet on the web. We asked: 1) Which editorial departments (beats) are crucial for Spiegel Online's coverage of data security? 2) Which accounts do journalists of these beats follow on Twitter?

To answer our research questions, we employed a three-step methodological approach: First, we identified the beats that were responsible for most coverage of data security by attributing each Spiegel Online article tagged with the keyword "data security" since 2015 (n=64) to one of the outlet's beats. Second, we analyzed the accounts that journalists (n=11) of these beats follow on Twitter. Third, we conducted a content analysis to identify and categorize the sources in data security reporting (industry representatives, NGOs, activists, academics, politicians, etc.).

The results show that articles about data security were mostly published in the digital media and technology ("Netzwelt") beat (50%) and the economic and business ("Wirtschaft") beat (27%). The analysis of the Twitter accounts followed by the journalists of these two editorial departments revealed major differences: Netzwelt journalists follow a variety of sources associated with critical

data discourse like blogging experts, specialized politicians, activists, but also industry representatives. On the other hand, business journalists mostly follow other journalists and classic elite sources such as representatives of the federal government or of economic institutes. The content analysis of all 64 articles showed that the journalists' use of sources parallels their Twitter networks to a moderate or even high degree.

To conclude, the results implicate that Twitter is an important point of reference for journalists covering data security. However, the result is not necessarily an industry-friendly selection of sources, as demonstrated by Spiegel Online's digital beat that uses Twitter to keep an eye on data-critical sources as well. We therefore suggest that further studies investigating media coverage of technology should pay more attention to intra-organizational plurality.

Title: Citizen Perspectives on Communicative Rights in the context of post-Gezi Protests in Turkey

Session Type: Panel Submission

Authors:

Name: Eylem Yanardagoglu

Email: eyanardagoglu (at) gmail.com

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: The protests that began as a peaceful sit-in in Gezi Park in order to prevent the demolition of the trees for the construction of a shopping mall at the end of the May in 2013 in Istanbul turned out to be the one of the largest civil unrest in decades in Turkey. The protests spread to all provinces of the country after the news of police intervention on peaceful protestors spread on social media. The mainstream media "failed" to report in the first couple of days of the events increasing public's frustration over what they considered to be limitation of their rights of freedom of expression and assembly. Platforms such as Twitter were especially appropriated by digitally literate citizens who may or may not have had to "do" citizen journalism in mind. Indeed, research on alternative media indicate that boundaries between users and producers of media are blurred as part of convergence, increasing the capacity of ordinary citizens to participate in news provision. Since Gezi Park protests in Turkey, the involvement of citizens in media production and distribution manifest itself in the growing number of alternative media platforms. The data reviewed under this presentation are based on recent qualitative research projects conducted with citizen journalism networks as well as the most active users on Twitter in Istanbul. By exploring the ways in which citizens give meaning to their communicative acts, this research investigates how citizens reflect on their personal and social identities and on their communication based rights in Turkey in situations where the basic human rights are encroached.

Title: Shut Down on Air: Alternative Media in Turkey

Session Type: Panel Submission

Authors:

Name: Suncem Kocer

Email: suncem.kocer (at) khas.edu.tr

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: In the history of Turkish media, there has never been a moment like the current one, which is marked by the remarkable figure of unemployed journalists and the alarming number of journalists imprisoned on terrorism charges. Diverse mechanisms of direct intervention in and the micromanaging of Turkish news production by political power holders have included the assignment of state trustees to media organizations and the removal of TV stations from TURKSAT, the satellite broadcast cartel with a monopoly in Turkey, without appropriate court rulings within the last decade. Such examples of direct and indirect intervention in news media can certainly be multiplied, especially within the context of the state of emergency declared in July 2016. And, without question, the present reality has deep roots in the history of Turkish news media. However, in the current context Turkish media publics are also relating to the current reality in different ways than they were before. Here I argue that within the last few years, Turkish news media have become a significant subject matter of public debate especially on social media where the intricate relationships between news, politics, and economic interests have become a spectacle. The high number of journalists in prison, the black out of many news channels, and other forms of illegitimate intervention in media processes by political powers all transpired in front of the public eye. The spectacle of the state's approach towards journalists has rendered the workings of news media susceptible to scrutiny by certain publics. In this presentation, I focus on discourse around IMC TV, which has been shut down by the government following the coup attempt. IMC TV was an independent national news station that aspired to embody the voices of the subaltern groups including ethnic and religious minorities, poor masses, women, and LGBTQI. Following the coup attempt, the station was shut down with a state of emergency decree along with several other media institutions in the fall of 2016. The shutting down of IMC TV was broadcast live to its audiences making the shut down of a spectacle of censoring as well as resistance to it. Based on social media analysis and fieldwork in IMC TV and, I argue that media publics relate to oppressive governmental regulations and policies in reflexive ways by turning or bending discourse 'back upon itself to make it an object to itself and to refer to itself' (Babcock 1987:235). Thus, they counter not only the contemporary power center but also traditional notions of media that separate producers and audiences.

Title: Strategic agenda setting: How the military and militants influence conflict reporting

Session Type: Individual submission

Authors:

Name: Abdullahi Tasiu Abubakar

Email: abdullahi.tasiu.1 (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: City, University of London

Abstract: This paper examines the strategies security forces and insurgent groups employ to influence media coverage of their conflicts. It specifically uses the case study of the Boko Haram insurgency in Africa to analyse how the militants and the Nigerian military apply various techniques to control the reporting of the insurgency. It also attempts to assess how the deployment of these control mechanisms impacts on newsgathering and production. Agenda-setting and gatekeeping theories provide the theoretical framework for this study. The primary data were drawn from qualitative interviews with journalists and security forces' spokespersons in Nigeria, and from content analysis of press releases and newspaper publications. The research is ongoing but preliminary findings suggest that both the military and the militants routinely use information subsidies and intimidation tactics to influence the media coverage of the conflict. They also use the web and social media platforms to bypass the mainstream media and reach their audiences directly. Journalists source their stories substantially from the security forces and partly from the insurgents. This appears to shape the local media coverage of the crisis quite significantly.

Scholarship has highlighted the issue of using, or manipulating, the media by both state and non-state actors to advance their causes (Farwell, 2014; Ghosh & Scott, 2018; Price, 2015). Governments and corporate bodies use information subsidies and other devices to shape media coverage of their activities (Macnamara, 2014; Lewis et al., 2008). The Nigerian security forces and Boko Haram insurgents have equally developed their own media strategies (Abubakar, 2016, 2017) to pursue their goals. A decade of the Boko Haram conflict itself – which claimed an estimated 30,000 human lives and displaced more than three million people in Nigeria, Niger, Cameroon and Chad – has attracted considerable media coverage and some scholarly interventions (Abubakar, 2016, 2017; Thurston, 2017). This paper will add to this literature by examining both the media control mechanisms and their consequences on journalism production.

Abstract: Turkish journalists define themselves as liberal and historically assigned themselves the mission to inform the public, create public awareness and they must be in contact in opposition to the governing power. The successive Turkish governments, both conservative and liberal, tended to view the media as both an ally and as the enemy to be feared. Turkish government has learnt ways to control the media based on restrictive and undemocratic practices of media bosses. This study exposes the media control mechanism before and after the failed July 2016 coup attempt in Turkey and how they restrict public access to information and comments by journalists. In the process, it establishes that the government is all interacting with the journalists and the public at the level of fear of media. Due to this fear, Turkish government's media control can work to curb independent journalism and create a biased and government-friendly media system.

Title: Changes of Digital journalism in China: From 'Collective Journalism' to 'Celebrity Economy'

Session Type: Individual submission

Authors:

Name: Rong Zhang

Email: shoyoko22 (at) yahoo.co.jp

Country: CN (China)

Affiliation: Asahi Shimbun

Abstract: With the great development of the Internet, the circulation of traditional newspapers has continued to decline and the development of digital journalism has received more and more attention. Compared with traditional mass media, the Internet itself is more flat and more open to ordinary people, thus the definitions of 'journalism' and 'journalist' have also been challenged nowadays. Dahlgren pointed out that, journalism, particularly mass media journalism is greatly challenged or can even in crisis in the new era (Dahlgren 2013).

With regard to traditional journalism, values such as professionalism, objectivity as well as truth have been emphasized. However, in the Internet era, Citizen Journalism or Participatory Journalism has been developing so fast that professionalism and objectiveness are no longer necessary elements as before (Romano 2010). The online newspaper Ohmynews in South Korea has been holding its slogan as 'every citizen can become a reporter', and personal subjective emotions is allowed to appear in news as well. In China, although true practice of Citizen Journalism is difficult to identify, another type of 'journalism' has been running functions. In digital spaces where so called 'online events' happen, the information provided by unprofessional individuals is unavoidably fragmentary and sometimes intentionally or unintentionally mistaken. Nevertheless, in the process of checking and matching the information by vast net users, facts and truth are able to be confirmed and eventually reconstructed. This has been proposed as 'Collective Journalism' (Zhang 2017).

In China, some Internet space such as BBS (Bulletin Board System) and Weibo (mini-blog/ Chinese version of twitter) were excellent observation platforms for collective journalism. However, in recent years, BBS has lost its leading power for net users, and more Net Celebrities showed up on Weibo. Net Celebrity refers to someone who has become famous mainly on the Internet. Recent data shows that the number of net celebrities with more than 100,000 followers in China has exceeded one million, which implies that the digital space for ordinary people to produce 'news' has been returned back to famous people and stars again. Entertainment news is dominant on Weibo now.

Since Chinese mass media is considered to be tightly controlled by the Chinese government, an increasing number of media researchers are focusing on the digital journalism in China. Given the above background, this article is based on several original Chinese net celebrities' interviews as well as the analysis of the function of Weibo in China, aims to examine the trend of China's fast changing digital journalism in this new era.

Title: Scandal activation and aid/journalism dynamics in the 2018 #AidToo scandals

Session Type: Individual submission

Authors:

Name: Glenda Cooper

Email: glenda.cooper.1 (at) city.ac.uk

Country: GB (United Kingdom)

Affiliation: City University

Abstract: Between 2008 and 2017, stories in the UK media about sexual abuse by aid workers barely reached double figures each year. In 2018 however there were more than 200 in the first six months alone. What changed in 2018 to finally make these accounts become (literal) front-page news?

That year the aid agencies Oxfam GB and Save the Children UK both found themselves in the midst of high-profile sexual abuse scandals, after several women came forward detailing long-suppressed stories. The media coverage surrounding these scandals culminated in senior staff resigning, investigations by the Charity Commission and the International Development Select Committee and thousands of donors deserting both agencies.

Yet these stories had been known in the industry, and parts of the media for several years. They had even been covered - albeit briefly with little impact. This paper traces how the scandal reached tipping point in the public domain, through content analysis and interviews with significant players. It analyses how the aid agencies “managed” the stories for several years, by looking closely at the media techniques they employed. It charts the difficulty of such scandals moving from ‘latency’ to ‘activation’, and how the political and PR background of some of the aid agency players played a significant role.

It looks at whether the close, almost symbiotic relationship between aid agency and journalists allowed such stories to go little reported and it was only when journalists outside the development world finally began to investigate that these stories finally started to break – combined with the growth of alternative media spaces which gave whistleblowers an opportunity to group and share experiences. But it also analyses the aid agencies’ media engagement in the wake of these stories – from Oxfam’s Mark Goldring’s ‘murdered babies’ interview to Alan Parker and Save the Children’s six-figure sum paid on legal warnings to journalists. It concludes that 1. ‘outsider’ journalists were needed to break the stories 2. The role of whistleblowers who would be named and public was key and 3. Aid agencies’ traditional PR strategies proved outmoded in an #AidToo world.

Abstract: Automated journalism, i.e. the use of software and algorithms to automatically generate news stories without human intervention (Graefe, 2016), is bound to play an increasingly important role in the production of news (Dörr, 2016). For instance, large news agencies such as AP, Reuters, and AFP already produce thousands of algorithmic stories every month, and even smaller ones (e.g. Norway's NTB) are embracing this trend (Fanta, 2017). According to several scholars, automated journalism can profoundly disrupt journalistic labour (Lemelshtrich-Latar, 2015), but also presents flaws that may limit its spread (Clerwall, 2014).

Based on a systematic review of research published in 25 leading academic journals, we examined in detail the literature produced on automated journalism. We looked for the theories and methods most commonly used, as well as for perspectives on the rising strategies involving this technology.

Our systematic review showed that a wide range of theories, such as Actor–network theory and Articulation theory, were mentioned in articles using qualitative methods, predominantly in-depth interviews. Such articles tended to expose news professionals' reactions to automated journalism while papers with quantitative methods rather resorted to experiments to look into the readers' side. When looking at perspectives on the rising strategies involving automated journalism, our analysis resulted in three scenarios envisaged by media scholars: first, “combined journalism”, whereby a piece of software would supplement journalists' work in a form of human-machine marriage (Bucher, 2017; Linden, 2017; Wölker and Powell, 2018); secondly, “newsroom rearrangement”, whereby machines would take up routine tasks, and let reporters focus on more demanding activities such as investigative journalism (Van Dalen, 2012; Cohen, 2015; Graefe et al., 2018); and finally, “meta-editorial”, which would see journalists use their editorial skills to drive algorithms (Caswell and Dörr, 2018).

This paper aims at advancing our understanding of the impacts automated journalism has on news production. It informs news organizations on the rising strategies that involve automated journalism, and provides a roadmap for future research to map out and observe the implementation of the scenarios mentioned above. With creative and highly-skilled industries now being confronted

to automation, this paper is part of an emergent but still limited academic corpus documenting the intersection of artificial intelligence and human input in the workplace.

Title: A new news process' The journalists' perspective on news selection in the digital age

Session Type: Individual submission

Authors:

Name: Susanne Kirchhoff

Email: susanne.kirchhoff (at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg/Austria

Country: AT (Austria)

Affiliation: Universität Salzburg

Abstract: Digital journalism arguably led to the biggest shift in the production and distribution of news since the invention of modern journalism in the 19th century. Thus Emily Bell, director of the Tow Center for Digital Journalism, suggested in 2014 that „Adapting to a world where the people formerly known as the audience are not readers and viewers but users and publishers will mean changing not just tactics but also self-conception. Merely bolting on a few new techniques will not be enough to adapt to the changing ecosystem; taking advantage of access to individuals, crowds and machines will mean changing organizational structure as well.“ (Bell 2014)

However, research on media organisations has shown that institutional rules and patterns of behavior tend to be persistent because those who do journalism maintain their established habits, role images and vested interests until disruptive circumstances force them to adapt (Ryfe 2016: 374pp.). Focusing therefore specifically on the journalists' perspective on news selection, this presentation asks if we are indeed witnessing the emergence of a “new news process” (Jarvis 2009), a fundamental restructuring towards an audience- and technology-orientation, or if – at least for now – news media are merely “bolting on a few techniques”, while traditional news sources maintain their relevance and the rules of news selection remain mostly intact.

In order to understand the perceived challenges, changes and continuities in news selection we opted for a broad approach which considered potential factors on different levels. Taking the “hierarchy of influences”-model (Shoemaker/Reese 1996) as a starting point, we distinguished various levels of influence on news selection and identified the potential influence factors on each level through a comprehensive review of the literature on news selection. In sum, thirty-four possible influence factors were included, among them the specifics of editorial policies, newsroom hierarchies and resources (Boesman et al. 2015) and the impact of news values (Harcup/O'Neill 2017), news agencies (Boumans et al. 2018) and social media (Bossio/Bebawi 2016;

Weaver/Willnat 2016), audience interaction (Tandoc 2014), inter-media agenda setting and personal networks (Brüggemann 2012).

These thirty-four possible influence factors formed the basis for guided interviews with editors-in-chief and senior journalists in Austria (n=43). Following the research design of Q-sort technique and Q-methodology (Müller/Klas 2004; Schrøder 2016) the interview partners were invited to identify the most important influences on the routines of news selection and to discuss those that have changed the most in the past ten years as well as those that present the greatest challenges to current and future journalism. Results show that e.g. on the event-level a number of traditional news factors are still in place, but that journalists attribute a growing impact to e.g. “good news” and solutions-oriented journalism and to news that can be visualized and shared. On the source-level personal networks become more important in the eyes of the journalists while news agencies lose relevance, and on the organisation-level news selection is influenced by brand development as well as a lack of resources and a growing number of responsibilities.

Affiliation: Westfalian University for Applied Sciences

Abstract: 1. Introduction

The Twitter use of political journalists and the relationship between Twitter and journalistic professional norms is well documented. (Lasorsa, 2012; Parmalee, 2013; Lee, 2015; Canter, 2015; Hedman, 2016). Degen (2019) argues that German political journalists (GPJ) retain their norms while using Twitter, confirming Singer's (2005) normalization hypothesis. How journalists use Facebook has not been extensively explored (Hedman & Djerf-Pierre 2013; Rogstad 2014; Larsson & Ihlebaek 2017), although being the largest (Hughes et al. 2012) and most frequently used social network among journalists (Djerf-Pierre, Ghersetti & Hedman 2016). Journalists are not yet accustomed to a work-related use of Facebook (Santana & Hopp 2016) as they remain cautious towards mixing private and professional content (Reed 2013).

Research Questions

RQ1: How and in which manner do GPJ use Facebook?

RQ2: Do GPJ retain their professional norms on Facebook (Singer 2005)?

2. Literature Review

Journalists disseminate more private content on Facebook than Twitter (Rogstad, 2014; Saldana et al. 2017; Reed 2013; Santana & Hopp 2016). If used professionally, Facebook serves the purposes of self-promotion and advertising their media outlets' content (Holton & Molyneux 2015; Tandoc & Vos 2016; Djerf-Pierre, Ghersetti & Hedman 2016; Neilson 2016; Willnat & Weaver 2018). Facebook also helps gathering and distributing information, conducting interviews, and verifying sources (Hill & Bakker 2013; Jian, Liu 2018; Schmitz Weiss 2015; Raymond & Lu 2011; Saldaña et al. 2017; Larsson & Ihlebaek 2017).

3. Methodology and Hypotheses

Among GPJ accredited in the German Press Gallery (n562) those with a private or professional Facebook account were selected. Subsequently, an anonymized online survey was conducted in which they responded to questions about their usage patterns, self-presentation and user interactions.

The study tests Singer's (2005) normalization hypothesis which suggests that journalists retain their professional norms when they adopt new media channels.

H1: GPJ use Facebook to comment on political topics. (Lasorsa et al. 2012)

H2: GPJ distribute content from media outlets they are associated with on Facebook. (Schmitz & Weiss 2015)

H3: GPJ use Facebook to interact with their audience. (Tandoc & Vos 2016; Larsson & Ihlebaek 2017)

4. Results

RQ2: GPJ use Facebook predominantly privately and less professionally. The normalization hypothesis cannot be confirmed. RQ1: The professional use is primarily based on the promotion of the journalist's own work or their media outlet's content (H1). Facebook is not being used to comment on political events (H2). Audience interactions are limited (H3) and do usually not exceed the level of narrating discussions relating to a post or fact-checking information. Most survey participants do not have a social media strategy but use Facebook intuitively and do not consider themselves to be professional users and even underline their private identity. The study is limited in generalizability due the exclusive reliance on political journalists from the German Press Gallery. The sample is small and these journalists strongly identify with their media outlets and often refrain from becoming well-known public figures, making it easier for them to retain a journalistic distance to their audiences. Future research is encouraged and could explore how media consumers react to the content that journalists generate on Facebook.

Title: "He and the paper had merged into one" An Analysis of the News Coverage of the Death of Israeli Journalists

Session Type: Individual submission

Authors:

Name: Moran Avital

Email: moran.avital (at) mail.huji.ac.il

Country: IL (Israel)

Affiliation: The Hebrew University of Jerusalem, Israel

Abstract: In covering the death of public figures, the news media report on newsworthy events, while also creating a collective mourning space and serving as agents of collective memory (Gibson, 2007; Kitch, 2005; Kitch and Hume, 2008). This ceremonial mourning space enables both journalists and the audience to grieve on a societal level, as they deliberate on the symbolic place the deceased held within society. Within this broader framework, this study focuses on the social category of deceased journalists and the ways in which their deaths are covered by their colleagues. Through such coverage, journalists engage in a metajournalistic discourse (Carlson, 2015), while referring reflexively to their own interpretive community (Carlson, 2007; Zelizer, 1993) and the social significance of their profession. Accordingly, an analysis of the ways in which journalists cover the deaths of their colleagues can shed light on both journalists' professional self-perceptions and general social perceptions of death.

The theoretical background integrates several bodies of knowledge: (1) The meaning of death in ancient and modern cultures, and the ways in which groups mourn the passing of their members, such as the classic works of Durkheim (1915/1976) and Aries (1981); (2) The ritualistic and ceremonial functions of the media (e.g., Carey, 1989; Couldry, 2003; Dayan and Katz, 1994; Hjarvard, 2008); (3) The role of the media and journalists in shaping collective memory (Kitch, 2005; Neiger, Zandberg and Meyers, 2014; Tenenboim-Weinblatt, 2013; Zelizer, 2008; Zelizer and Tenenboim-Weinblatt, 2014); and (4) the metajournalistic discourse (Carlson, 2015) and shared self-reflexive discourse of journalists about the social meaning of their profession (Carlson, 2007; Zelizer, 1993).

This paper addresses three research questions: (1) Which themes and discursive means are invoked by Israeli journalists in shaping the meaning of the deaths of members of their own professional community? (2) What are the characteristics of the reflexive and metajournalistic discourse Israeli journalists perform following the deaths of their colleagues? And (3) Were there changes in the coverage of the deaths of news editors and journalists over the years?

The methodology consists of a qualitative analysis of 249 news stories published in three leading Israeli dailies (Haaretz, Yedioth Ahronoth and HZofe/Makor-Rishon), during the seven-days following the deaths of 15 Israeli newspapers editors and reporters, who died between 1956 and 2018.

My findings suggest that, first, throughout the decades there is a growth in personalized and emotional tone when relating to the deceased. Hence, we see a rise of subjective reporting without it being perceived as inappropriate journalistic practice. Second, the retrospective overview of the deceased's lives creates a linkage between their professional and national identities. The nation and the profession are not presented as contradicting loyalties in journalistic identity. Rather, they are constructed as complementing and sustaining one another. Finally, the journalists' reflexive discourse emphasized the social significance of the profession they shared with the deceased, while scarcely relating to any challenges or threats to journalism as a profession.

Title: Brazilian digital natives: which companies are moving away from the traditional legacy business model'

Session Type: Individual submission

Authors:

Name: Stefanie Silveira

Email: me (at) ssilveira.com

Country: BR (Brazil)

Affiliation: Federal University of Santa Catarina

Name: Elizabeth Saad

Email: bethsaad (at) gmail.com

Country: BR (Brazil)

Affiliation: University of Sao Paulo

Abstract: Recent studies and researches (HARLOW & SALAVERRÍA, 2016; MIOLI & NAFRÍA, 2017; SCOLARI & RODRIGUEZ-AMAT, 2018; WEISS et al, 2018; GARCÍA-AVILEZ et al, 2018; SALAVERRÍA, 2019) had indicated a growth of new online businesses, based on a start-up model, full-digital operation, and news content related to audience expectations and creative narrative formats in Latin America. In Brazil, specifically, there are at least 45 initiatives that were created in the last few years according to three mappings made by Agencia Publica (2014), Sembramedia (2016) and Volt DataLab (2017) and amplified by our own map research. These same references have also indicated that most legacy media businesses (based on traditional business/revenue models) had not changed or adapted to this new business ambiance. In our previous researches, we have found that innovation is a key concept and action that moves the change in a journalism context. Garcia-Avilez et al (2018) resumes journalism innovation as “the ability to react to changes in products, processes and services through the use of creative skills that allow the identification of a problem or need in a way that results in the introduction of something new that adds value to consumers, thereby promoting the viability this media organization”. Based on this scenario we intend to fulfill the following goals: to build a set of characteristics related to new online business formats and show how these indicators appear in Brazilian sample; to identify in this set how new online Brazilian businesses differ from a legacy media model. As a starting point, we’ve used the Salaverría’s (2017) typology but taking the innovation into account and the specific Brazilian cultural characteristics we needed to adapt the criteria. As our main hypothesis, we have that new Brazilian online businesses have many similarities to the legacy media model, considering that most of them have their roots on these previous companies. Consequently, our second hypothesis is that innovation in new Brazilian online businesses is not completely understood yet. The basic indicators used to analyze our sample are actions, products, business strategies, workers and working styles, and revenue sources. Authors like Kung (2017), Evens et al (2017), and Pavlik (2013) are also considered in our study, especially in the analytic phase. We’ve chosen a multi-method format considering the diversity of variables and resources in our media landscape. As so, the following steps were done: a) recent literature revision; b) sampling; c) analyze sample’s content related to typology using content analysis techniques; d) interviews and

data collecting; f) create a contextual framework for the findings. Our preliminary findings indicate that these new outlets are still linked to legacy media formats.

Abstract: The presence of intolerance and hate fueled speech in digital environments is not new but its relevance has significantly changed in the Brazilian context in the last year. The run-up to the Presidential election was clearly marked by two intertwined developments: increased political polarization namely on matters relating to minority rights and intense discourse production on social media. A confrontational strategy which deliberately tried to avoid traditional channels and/or methods of information verification and took advantage of the atomization and scale of networks dictated the political agenda whilst possibly establishing new behavior paths. Attempting to both identify these patterns of social network behavior and to assess their permanence after the end of the electoral campaign this study is focused on the production of hate speech on comments to news related tweets by 16 Brazilian media outlets between December 27th 2018 and January 13th 2019 (one week before and two weeks after the swearing in of the new President, Jair Messias Bolsonaro).

A dataset with 13,100 tweets relating to news stories gathering 394,115 replies was collected. A hate speech lexicon stemmed on Hatebase was used to identify offensive comments. We identified more than 600 pieces with replies containing explicit hate speech which were then categorized

according to hate target groups. We analyzed the source of these messages in terms of media outlets and news topic, in order to understand if current government related news provide an attractive environment for the hate speech phenomenon.

Furthermore, for the qualitative part of this work a few selected stories were observed in greater detail, employing content analysis, in order to assess if hate comments were anchored in political events or other comments.

The research has indicated that the production of hate speech remained relevant after the end of the electoral campaign, that inflammatory and derogatory discourse appears to be significant in news related to government officials' actions or speech, and that the social networks promoted chasm runs deep and will perhaps not be eliminated any time soon.

Country: BR (Brazil)

Affiliation: University of Pirauí

Abstract: Esta comunicación presenta resultados de un proyecto financiado por la Universidad del País Vasco y desarrollado por el grupo especializado en innovación educativa (KZBerri), centrado en los procesos de enseñanza-aprendizaje en materias vinculadas al ciberperiodismo. Este ámbito profesional y de conocimiento representa uno de los principales motores del avance y la renovación pedagógica que los planes de estudio en Comunicación han venido experimentando en las últimas dos décadas, reforma que en Europa quedó materializada en el año 2010 con la implantación del Espacio Europeo de Educación Superior (EEES). La Universidad del País Vasco (UPV/EHU) fue pionera en esta renovación al introducir ya en el año 1996 la asignatura optativa “Periodismo electrónico” y, posteriormente, en el año 2010, la materia “Redacción Ciberperiodística”, común para sus tres grados en Comunicación Social (Periodismo, Publicidad y Comunicación Audiovisual). Este curso-materia se ha convertido en un vivero de innovación didáctica y desde el año 2017 ha sido objeto de la aplicación de diversas metodologías didácticas innovadores. El paper examina una de estas metodologías, sustentada en la colaboración internacional virtual entre alumnado de la UPV/EHU y alumnado de universidades del área iberoamericana punteras en ciberperiodismo, concretamente, las brasileñas Mato Grosso do Sul y Pirauí, y las portuguesas Beira Interior y Oporto. Durante el primer cuatrimestre del curso 2018/2019, estos alumnos se organizaron en cinco grupos de trabajo, cada uno integrado por dos alumnos brasileños, dos portugueses y uno vasco, los cuales desarrollaron de manera conjunta y en inglés coberturas informativas en profundidad para el desarrollo de multimedia web-only stories. Para el análisis de la experiencia se han aplicado diversos métodos cualitativos (encuestas a alumnado y profesorado, grupo de discusión y análisis de interacciones para la colaboración virtual). Los resultados que ofrece el paper arrojan luz para comprender las ventajas e inconvenientes derivadas de la introducción de factores como la colaboración virtual para la internacionalization at home (IaH) (Crowther et al., 2000; Harrison, 2005; Knight, 2007; Holmes & O’Neill, 2012) y el fomento del

plurilingüismo (Ishikura, 2015) en un área como el ciberperiodismo. Fundamentalmente, permiten reconocer si, al igual que ocurre en otros ámbitos, también la enseñanza del ciberperiodismo puede converger hoy a nivel internacional (Iberoamérica) y en qué aspectos.

Palabras clave: innovación, metodologías, enseñanza, ciberperiodismo, internacionalización.

Title: Podcasting and constructive journalism ' changing audio narratives

Session Type: Individual submission

Authors:

Name: Mia Lindgren

Email: mia.lindgren (at) monash.edu

Country: AU (Australia)

Affiliation: Monash University

Abstract: Constructive or solution journalism is generating critical analysis from academics (see for example Hermans & Drok's overview in the 2018 special issue of Journalism Practice), as one way to reimagine futures of journalism and media. The journalistic approach is also engendering interest within media industries exploring ways to attract and engage with audiences. Proponents of this approach argue that the practice embodies the values of traditional, objective journalism while maintaining its core functions, such as holding governments accountable and alerting publics to potential threats. Critics see it resembling public relations or advocacy journalism. The premise is journalism that goes beyond coverage of social problems to provide roadmaps for solutions and spaces for action.

Little attention has been placed on the intersection between podcasting and constructive journalism. Applying constructive journalism to podcast forms, provides an unexplored opportunity to examine how audio storytelling can offer journalism a practice that facilitates human connection and understanding. Podcasting's ability to create high engagement with listeners is illustrated by 80% of podcast listeners in Australia listening to the whole way through an episode, staying tuned for an average 48 minutes (ABC, 2017). New York Times' the Daily podcast is just one of many examples of 'print' journalism tuning into the power of audio reporting. Audiences can listen to a ubiquitous smartphone delivering journalistic content in a conversational way through the intimacy of the human voice. It's an attractive media form; in the US, podcast listenership has increased by almost 50% in four years (Edison Infinite Dial, 2018).

This study applies a constructive journalism framework on podcast series about the global threats from 'superbugs', or antimicrobial resistance. It combines practice-led research methodology with content analysis of 'superbugs' podcasts to interrogate if and how podcast storytelling can demonstrate the impact of critical and independent journalism while also providing 'possibilities for action, prospects and hope, adding an additional "W" journalism question: "What next?"' (Meier, 2018). Informed by Meier's audience experiments highlighting the potential of audio narratives in constructive journalism, the study examines in detail what podcast genres and forms can enable listeners to come to grip with a significant global threat to human health and society.

Title: VERDADES EXPUESTAS: PERIODISMO DE INVESTIGACIÓN EN COLOMBIA

Session Type: Individual submission

Authors:

Name: Angela Tellez

Email: angelamarte21 (at) gmail.com

Country: CO (Colombia)

Affiliation: Uniminuto

Name: Lina Leal

Email: linamarialeal (at) gmail.com

Country: CO (Colombia)

Affiliation: Uniminuto

Abstract: Somos periodistas, docentes e investigadoras. Teníamos el objetivo de reconocer y visibilizar el periodismo de investigación (PI) en Colombia. Recorrimos diferentes regiones del país en busca de relatos de vida de periodistas que se han dedicado a esta actividad, tanto en zonas urbanas como rurales. Logramos identificar a los y las periodistas que lo han ejercido, así como los principales hitos históricos que suscitaron debates y fueron campo de desarrollo del PI en el país.

Algunos de los resultados de esta investigación se recogen en un libro con 35 relatos de vida, material de consulta que enriquecerá el ejercicio de la docencia, tan necesario en tiempos de la “post-verdad” y las noticias falsas. En los relatos se visibilizan persecuciones, amenazas y otras formas de violencia a las que han sido y son todavía sometidos los periodistas durante su ejercicio profesional.

El método para armar los relatos se relaciona con el que se usa al hacer PI, es el método que han utilizado periodistas colombianos como Arturo Alape: transcripción de entrevistas y anotaciones sobre el personaje, jerarquización de acuerdo con los momentos más dramáticos de las historias, y construcción del relato. Las entrevistas son una herramienta propia del oficio, y a partir de ellas se construyen historias. Se han realizado también una serie de piezas audiovisuales que aportan a la construcción de memoria. Todo esto da lugar a la primera obra completa en relación con la concepción, historia y reflexión del PI en Colombia.

El proyecto se realizó en 3 fases: En la primera se realizó un registro de documentos escritos y visuales (relacionados, contextuales y teóricos) desde 1900 hasta la actualidad. Un referente importante fue Gerardo Reyes, quien sostiene que “el periodismo de investigación es la reportería que se realiza a través de la iniciativa y el trabajo del periodista, sobre asuntos de importancia que algunas personas y organizaciones desean mantener en secreto”. La UNESCO también ha promovido el debate sobre la responsabilidad social del oficio y en 2013 elaboró un manual emblemático del PI, señalando que debe encarnar una labor “fiscalizadora” para el buen y equilibrado funcionamiento de un país y de una sociedad equitativa, ya que es un ejercicio de profundización en los hechos para plasmar y hablar al lector con la realidad tal y como es.

En la segunda fase se abordaron periodistas, algunos en las ciudades principales y otros en zonas alejadas y rurales, en las que se dificulta el ejercicio de esta labor. También se tuvo una mirada de género, y hacemos especial énfasis en los retos que enfrentan las mujeres al ejercer el PI: agresiones, intimidaciones, estigmas y discriminaciones.

Por último, se construyeron los relatos de vida y se realizaron las piezas audiovisuales. Con estos resultados esperamos tender un puente entre las formas tradicionales de realizar investigaciones periodísticas, y las nuevas formas de acceder y contrastar la información que permiten las nuevas tecnologías. Esperamos contagiar a nuestros estudiantes el amor por el trabajo riguroso y responsable en pro de la verdad.

Title: City journalist and the making of a music city

Session Type: Individual submission

Authors:

Name: Andrea Baker

Email: andrea.baker (at) monash.edu

Country: AU (Australia)

Affiliation: Monash University, School of Media, Film and Journalism

Abstract: The vibrant cultural economy, with its links to intense music activity and “urban sociability” (Creed-Rowan, 2017, p.1), has forced city journalists to assess what is a music city in their reportage. This paper asks three key questions. Is a music city a place of memory embedded in public and private spaces and venues? Is it a location in regional and global networks? Or is a music city, an arena wherein music communities form and reproduce themselves? Grounded in mixed methods research, based on rigorous, place-specific, exemplar music city case studies of Melbourne, Austin and Berlin, this paper highlights that a music city is all of the above. Tracing the discourse of urban sociability which illustrates the importance of a music city’s social, cultural and emotional life, over and above its economic value, it highlights the important role of city journalists within the music cities sphere. As Robert Ezra Park (1952, p.79) city journalist turned sociologist and co-founder (with Ernest Burgess and Louis Wirth) of the Chicago School of Urban Sociology in the US during the 1920s notes, “Great cities have always been melting pots of race and of cultures”. Author of *The Culture of Cities* (1938, updated in 1970) and long-time urban critic for *The New Yorker*, Lewis Mumford expands on Park’s point, by adding, “through a complex orchestration of time and space... life in the city takes on the character of a symphony” (1970, p.4). City journalist and author of the seminal text, *The Death and Life of Great American Cities* (1961) Jane Jacobs concurs, noting that the city is a lively creative village. She argues that, it is not the nation-state, but rather the city that is the true player in the global, cultural economy. Building on seminal work by Park (1952), Mumford (1938) and Jacobs (1961), the paper argues that journalists are the cultural branders and street theorists whose ethnographic approach offers critical insights into the urban sociability of music activity.

Title: Investigating Truths: How Arab investigative reporters are using data journalism to uncover stories

Session Type: Individual submission

Authors:

Name: Saba Bebawi

Email: saba.bebawi (at) uts.edu.au

Country: AU (Australia)

Affiliation: University of Technology Sydney (UTS)

Abstract: The historic evolvement of investigative reporting has not been systematic in the Arab world, nor has it developed in a regular and routine form. In fact, its emergence can be better characterised as chaotic and dispersed, where its successes in achieving change and making an impact have been occasional. Therefore, the evolution of investigative journalism does not translate into a continuous historical narrative; rather, it can be described as a cyclical evolution that is dependent on particular circumstances and conditions that relate to the media institution; the journalist; and the political, economic, and social conditions at the time. In light of this, access to data remains a particular challenge to Arab investigative reporters, where archival material is limited. In addition, in a region of high political activity and corruptive systems, providing access to information to citizens, including journalists, puts the government and officials in jeopardy; therefore, it is not within their interest to promote or facilitate any Freedom of Information (FOI) laws that facilitate access to information.

Yet Arab investigative reporters are finding ways of uncovering information and using data journalism to tell their stories, changing what used to be an 'emotive' form of Arab journalism to that of a fact-finding and fact-checking form of journalism. This study is part of a larger project that aims to understand how Arab investigative journalism is evolving independently of western journalistic models. Based on case studies and surveys, this paper will methodologically and conceptually discuss how Arab journalists in general—and investigative reporters in particular—are uncovering stories in light of the restrictions placed upon them within the Arab region, and yet also the opportunities that technological tools and digital storytelling have to offer.

Title: How Facebook Transformed News Production and Distribution: An Examination of News Media Organizations and Social Media Curators in Taiwan

Session Type: Individual submission

Authors:

Name: Hui-Ju Tsai

Email: hjtsai (at) mail.tku.edu.tw

Country: TW (Taiwan)

Affiliation: Tamkang University

Name: YU-PENG LIN

Email: aaxypli (at) nottingham.ac.uk

Country: GB (United Kingdom)

Affiliation: The University of Nottingham, PhD student in Film and Television Studies

Abstract: Throughout the years, news media has depended on social media platforms, such as Facebook and Twitter. According to a 2017 investigation by the Institute for Information Industry, Facebook is the most popular social media in Taiwan. To attract these Facebook users, news media organizations in Taiwan have generated a new role in the form of social media content curators. Content curators attempt to widely distribute news and to make it more visible on Facebook. As such, while content curators post news on Facebook, they also reintroduce the news to please the platform's users. The easiest way to reintroduce the news is to package it in a softer and more entertaining form. In other words, stories that appear more entertaining attract a greater number of users to news sites than stories that appear to tackle public issues. Content curators must also respond promptly and forcefully to Facebook's users, actions which are usually taken to make the news more visible and popular than to promote public discussion. In doing so, content curators adopt a potentially extreme strategy: to provoke or to please Facebook users and to increase the click through rate (CTR) or engagement rate for specific stories. In sum, content curators represent the growing trend of Facebook's influence and symbolize an evolution in news distribution and production from traditional journalism and the types of digital journalism that were prevalent years ago.

This research explores the role that content curators play in news distribution and production for news media organizations. The research also adopts the concept of Graham Murdock's Digital Commons (2005, 2013, 2018) and a critical political economic approach to social media (Fuchs, 2014, 2018). By applying this concept and framework, this research investigates structural factors, such as how the newsroom has changed since the introduction of content curators, and examines how the online practice of content commons is influenced by Facebook.

In order to explore the complete landscape of Taiwan's digital age, this research employs interviews and online ethnography for its methodology, questioning content curators from four major news media organizations—Apple Daily, Liberty Times, the United Daily News, and the China Times—and observing their online practices on Facebook, which include their approaches for reintroducing the news and their ways of interacting with Facebook users.

Finally, by shifting the focus away from Facebook's predominantly criticized algorithm, this research is expected to provide a new perspective on the development of digital journalism through the structural dynamic that the platform influences.

Title: When words fail us: Trauma and journalists

Session Type: Individual submission

Authors:

Name: Kerry Green

Email: kerry.green (at) unisa.edu.au

Country: AU (Australia)

Affiliation: School of Communication, International Studies and Languages University of South Australia

Name: Sharon Smith

Email: sharon.smith (at) mymail.unisa.edu.au

Country: AU (Australia)

Affiliation: University of South Australia

Abstract: Considerable research into the effects of difficult news assignments has revealed the potential to traumatise journalists (Ricchiardi 1999; Smith, Drevo & Newman 2017; Simpson & Cote 2006, and, in Australia, McMahon 2016; McMahon & McLellan 2008). While research has investigated the effects of trauma on the health of journalists, little research has been undertaken into the effects of trauma on journalists' most crucial skill – their ability to communicate. The lack of research is concerning, given that communicating is at the core of journalism's function in society. Society relies on having detailed and accurate access to information, to enable its members to make rational decisions – without good information, society functions at a less than optimal level. If journalists' ability to communicate is affected by traumatising assignments, are their messages to society damaged? The propensity for communication failure is recognised in terms like "dumbstruck" – where shocking situations leave people unable to speak. Professor Sandy McFarlane (Adelaide University) talks of traumatic situations "when words fail us" – when we find ourselves in situations so stressful that we are unable to explain or vocalise what is happening to us: We are literally struck dumb. For most, such situations are distressing, but for journalists they are doubly catastrophic. Being exposed to such situations may in itself be damaging; but to then be unable to use words – the very currency of journalism – is akin to stripping every vestige of professional worth from a journalist.

What happens, then, when journalists experience trauma? Can the experience be so challenging that those affected change the way they work? Is this why some journalists move into softer news like feature writing? Is it why others move out of the industry altogether? Perhaps a more interesting question to ask is: Does it affect the way people write? Do they move from news of conflict approaches to, say, human interest approaches?

This paper uses content and discourse analysis to examine the work of five Australian journalists who have recorded their experiences in difficult reporting assignments. It uses Leximancer software and discourse analysis to examine their bodies of work before and after stressful assignments, to reveal changes in the themes and news values they deal with. The research aims to provide insights into the ways in which traumatising reporting assignments can change journalists' approach to the news.

Title: [Panel] Pushing Boundaries: On Creativity as an Essential Toolkit for Professional and Academic Practice, Panel description

Session Type: Panel Submission

Authors:

Name: Cristina Archetti

Email: cristina.archetti (at) media.uio.no

Country: NO (Norway)

Affiliation: University of Oslo

Abstract: MODERATOR: Mark Deuze, University of Amsterdam, M.J.P.Deuze (at) uva.nl
DISCUSSANT: Nick Couldry, LSE (London School of Economics and Political Science),
N.Couldry (at) lse.ac.uk

FRAMING TEXT

The panel aims to demonstrate the potential of creativity in all aspects of academic life: teaching, research (method and presentation), as well as achieving work-life balance as a scholar. Bringing in experiences from the outside into the collegiate classroom, experimenting methodologically beyond the traditional quantitative/qualitative binary, and presenting work through ‘alternative’ mediums (such as poetry, song, dance, or any other kind of theatrical performance) does not necessarily mean sacrificing rigor and “scientificity.” To the contrary, integrating creative practices through all spheres of work as an academic opens up thus far unexplored avenues for pedagogical, theoretical and epistemological innovation. Creativity also raises opportunities for dialogue across research fields, with non-academic audiences and with practitioners, truly enabling a fusion of horizons.

RATIONALE

This panel is located in the context of a higher-education environment in which researchers are increasingly under pressure to prove their relevance to society, policy, professional practice and engage beyond the boundaries of academia. It also responds to the numerous “turns” that have taken place over the last decades in the Social Sciences and Humanities: invitations to pay attention to narrative, affect, materiality, practice, and embodiment. Although calls have been made to apply more creative methods—in political communication, for instance—or to investigate emotion—as in journalism and new media—these have only been partly followed up.

There is thus an urgent need to both question and push the boundaries of how we do media and communication research: the range of topics we investigate; the nature of the data we rely on; the tools we use; who we collaborate with; how we present and teach our work and who we communicate our results to; and for whose benefit. We argue that, by more deliberately embracing creativity as a concept as well as a lived practice, it is possible to pursue innovative, engaged and engaging research - while enhancing academic rigour.

The panel brings together scholars from across Europe who are in different stages of their careers. All are deeply engaged with creativity - in their teaching, in their lives outside of academia (doing theatrical work, making music, writing poetry), in the way they do research and try to publish their

work. The panelists discuss the multifaceted contributions creativity makes to the fields of media and communication research, from showcasing different conceptualizations of creativity and its role beyond the walls of academia (Deuze and Agirreazkuenaga), to illustrating the empirical contribution of creative practices (Archetti, Giese), the opportunities offered by creative non-fiction in producing text that is both engaging and geared towards making a difference (Kotisova), the contribution creativity makes to teaching (Tellería), to the part it plays in reflexivity and cross-disciplinarity in the research process (Wagemans). As an expert respondent, Nick Couldry (LSE) will offer his reflections on the work discussed in this panel.

Title: Re-skilling as form of co-evolution: Types of 'journalist experts' working for digital platforms

Session Type: Individual submission

Authors:

Name: Sarah GANTER

Email: sganter (at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Name: Abdelrahman Fakida

Email: abdelrahman_fakida (at) sfu.ca

Country: CA (Canada)

Affiliation: Simon Fraser University

Abstract: Digital platforms have integrated journalism as a business model into their own organizational DNA. In this paper, we examine the platforms' "communicative abilities" (Schmidt, 2008) to adapt journalist experts' knowledge according to own organizational imperatives. In doing that, we develop upon the idea of "co-evolution" (Latzner, 2013), which describes the process of interactions that result in gradual adaptations between different systems. Researching this gradual adaptation is important, as discussions about whether or not platforms are media organizations, are relevant for future regulatory decisions regarding the contents moderated and distributed through platforms (Napoli & Caplan, 2016). Journalism literature has examined professional role perceptions, identities and related normative considerations (Carlson & Lewis, 2015; Kreiss, 2019). New media has been described as a working environment in which re-skilling is a constant practice (Kotamraju, 2002). In the platform age, journalists are increasingly confronted with demands to re-skill according to organizational imperatives deriving from digital platforms. In our analysis, we define four different types of 'journalist experts' that are reinvented in the organizational environment of digital platform companies.

Our analysis draws from Kotamraju's study (2002) on web design skills and the reinvented worker. We collected documents issued by platform companies, in which roles of the "journalist expert" are manifested. Documents are job announcements of the platform companies particularly aimed at journalists, which we retrieved from the general job market sites like linkedin.com, xing.com, and journalism-specific online job markets, such as journalismjobs.com and indeed.com (N= 60). Findings of our qualitative thematic (Herzog et. al., 2017) analysis suggest that re-skilling of journalist expert is a common practice across digital platform companies. This practice triggers the rise of a new type of journalist, the 'expert journalist' -a journalist who is expected to cater their professional experience in different strategic positions to help digital platform companies navigating the tensions they experience as new players in the content industries. Our data show that types of 'expert journalists' vary across different digital platforms. Each of these types emphasizes different skill sets and places 'journalist experts' in different hierarchies and strands within the organizations. Different types emphasize the a) strategic ('the decision-maker') b) technical ('the

adviser’) c) implementational (‘the interpreter’) and d) communicative (‘the persuader’) importance for the company.

Title: Getting Under the Skin: Evocative Writing, Poetry and Performance in Political Communication Research

Session Type: Panel Submission

Authors:

Name: Cristina Archetti

Email: cristina.archetti (at) media.uio.no

Country: NO (Norway)

Affiliation: University of Oslo

Abstract: The paper draws on the presenter's experience of using creative methods, beside more "traditional" ones, to investigate and develop a new theoretical framework about the causes and political consequences of silence in the 21st century. The model is developed through the case study of the communication blackout surrounding involuntary childlessness (i.e. childlessness not by choice). Its mechanisms, however, can apply to other groups who are unable to get their voices publicly heard and whose identity is defined by embodied features (individuals affected by illness, disability, or sexual, racial and ethnic minorities).

The argument is that creativity—in the form of evocative writing, poetry and performance in this case—makes unique contributions to political communication research that are not limited to the use of unusual methodological tools but, importantly, also extend to breaking new conceptual ground. In relation to the study at hand, creative methods provided support to mapping the mechanisms through which suffering and pain felt inside the body translate into silence, exclusion from public debate, and lack of political representation—a process that happens through intermediate steps that involve, among others, the role of the media in the narrative construction of the body and the self. Such "embodied" understanding of silence significantly extends current explanations for this phenomenon that span sociolinguistic approaches, theories of stigma, the "spiral of silence," and the "sphere of deviance."

Creative methods, more specifically, made four contributions. First as a tool of investigation: in a field that tends to rely on the analysis of what is being explicitly said/written, they enable exploring what is embodied and unspoken. They also enable exploring new vocabulary for feelings, practices, circumstance for which silenced groups do not have other scripts than those provided by the "majority." Second, as a tool of engagement: by involving academic and external audiences both analytically and emotionally, creative methods support deeper understanding. Third, creative methods are a tool of reflexivity: by helping the investigator keep track of the "I" within the practice of research and identify, unravel, and develop those connections among data for which coherent words have not yet been found. In this respect, creative methods allow embracing a different way of working in which intuition (which always characterizes the research process, even if this remains largely unacknowledged) is valued and respected. Fourth, creative methods are a tool of change: particularly through the dimension of evocative storytelling, they have the power to transform reality. Stories are constitutive of reality, thus performative. Both in the perspective of the teller, but also in that of the listening audience, whether through a poem or a performance, a story

can help healing and restore damaged identities, thereby leading to (at least a beginning of) social and political change.

Abstract: In this presentation, we will argue that creativity is (or should be) a broadly conceived benchmark for scholarly practice, studies and education, with a triple implication: creativity is a concept that informs what we are looking for when educating or doing scholarly work, it is a guide for the range of pedagogical and research methods at our disposal, as well as an inspiration for the kind of stories we can tell about our projects.

Creativity tends to be perceived as either romantic, inspirational, or rational: as a mystical stroke of genius, as some kind of external force acting upon you, or as the result of hard work and commitment to the craft. In terms of politics and the economy it must be noted how the concept of creativity has been hijacked - especially since the late 1990s rhetoric of 'creative industries' and third-way politics - to capitalize on the romantic and inspirational attraction of creativity. Critically we also have to note how these views on creativity tend to ignore or bypass the distinctly networked, communal and social nature of creativity - as any creative act takes place (and is therefore produced by) a context (or caregiving, nurturing, challenging, pushing, encouraging, and otherwise instrumentally engaging others).

It is our contention that we have wrestle back control over the concept of creativity, and reclaim it as a crucial part of the craft of being a socially responsible academic. By way of example, we will highlight the role creativity plays in the work that we do in securing financing for our research, finding multiple ways to publish and disseminate our work, establishing a more or less healthy work-life balance, and embracing non-conventional students and pedagogies.

Title: Creative Nonfiction in Journalism Studies: Towards More Engaging and Engaged Research

Session Type: Panel Submission

Authors:

Name: Johana Kotisova

Email: johana.kotisova (at) ff.cuni.cz

Country: CZ (Czech Republic)

Affiliation: Charles University

Abstract: The paper aims at proposing, explaining and illustrating the use and advantages of “creative nonfiction” as a style of writing social science. Based on my ethnographic research of European “crisis reporters” professional identity and emotional labour, written in the form of a novel about a fictional journalist, I identify five main functions of the use of creative nonfiction in social-scientific research.

The first part of the paper is theoretical-methodological: it introduces creative nonfiction as a method of writing which brings together empirical material and fiction. The principle of creative nonfiction resides in combining the most reliable information (i.e. factual narrative) with an imaginative and narrative approach (i.e. fictional narrative). The method of writing grew out of “the new journalism” together with feminist and postmodernist criticisms of earlier qualitative research reporting simulating an “omniscient” narrative (the use of the plural by a single author, or passive voice) and out of their deliberate attempts to reposition the author and the reader. The theoretical framework thus consists not only of current applications of creative nonfiction in social-scientific research, but also of seminal work of major postmodernist sociologists, anthropologists, and literary theorists. Intimate links between social sciences and literature and the enriching potential of artistic inspiration have been recognized, for example, by Zygmunt Bauman and Clifford Geertz.

While creative nonfiction poses some challenges to the reader – most notably, the combination of fact and fiction in one discourse makes it complicated to determine the Genettian “reading horizon” or to focalize the narrative – and can raise concern about scientific rigour, it has also numerous advantages. In the second part of the paper, I specify how social-scientific research writing can profit from the intersections of the factual and fictional narratives. Drawing from my ethnographic data on crisis reporters and from current research, I identify and illustrate five main functions of these intersections: illustrative, allegorical, organizing, effective, and self-reflexive.

Finally, I discuss ethical implications of the approach, and suggest that writing social science in the style of creative nonfiction can help to produce more engaging and engaged texts. In other words, stretching the boundaries of social science by writing creative nonfiction can help to bridge the persisting gap between researchers, their communication partners, research participants and other relevant non-academic social actors.

Title: Finding the words: Experiencing cross-disciplinary collaboration in journalistic innovation through metaphor

Session Type: Panel Submission

Authors:

Name: Andrea Wagemans

Email: j.m.wagemans (at) rug.nl

Country: NL (Netherlands)

Affiliation: University of Groningen

Abstract: In this paper, I show how metaphors allow us to analyse and present cross-disciplinary collaboration in journalism innovation in a way that does justice to the complex, changing and multiple nature of such processes. I present a case study of a cross-disciplinary project aimed at developing and implementing a digital creativity tool for journalists (the EU Innovation Action INJECT1), in which I was involved as a researcher, marketer and tester. As such, I had unique access to stories previously untold, that I recorded in an auto-ethnographic research diary. Adopting an experiential approach to researching this cross-disciplinary project allowed me to gain experiential knowledge, adding a first-person embodied perspective. This is crucial, as much social and cultural practice is never. However, there is a challenge in adequately capturing the complexity, dynamism and messiness of experience in telling those stories, as well as a risk in subconsciously giving too much weight to our 'experiential luggage' in interpreting and presenting the data.

This paper explores metaphors as a specific language device to deal with these challenges in bridging embodied experience to academic analysis. It argues that, through metaphor, we are able to develop truly new understandings, capture movement, and tell multi-perspectival stories in our research. For Lakoff and Johnson (1980), metaphors “are capable of giving us a new understanding of our experience. Thus, they can give new meaning to our pasts, to our daily activity, and to what we know and believe”. As they are grounded in our experiences, metaphors are dynamic as well as multiple; a metaphor means something different to people with different experiences, and changes with experience. As such, understanding and describing the phenomena we study through metaphors leaves space for new, dynamic and multiple perspectives in our analyses.

Using free verse poetry and impressionist tales, I will illustrate how metaphors helped me to make sense of my experiences, give space to the experiences of others, tell multi-perspectival and non-linear stories about journalism innovation processes, and theorise multidisciplinary collaboration beyond disciplinary boundaries.

Title: Embodied Memories: Dance as an Access Point to Belonging and Identity in the Diasporic Space in Tower Hamlets, London

Session Type: Panel Submission

Authors:

Name: Julia Giese

Email: J.Giese (at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University London

Abstract: This paper explores the potential of community dance practice to gain a deeper understanding of the ways in which belonging and identity among diasporic groups are communicated. Only relying on language-based approaches, e.g. traditional qualitative interviews, typically results in the cul-de-sac of a 'silence-versus-testimony binary' where many marginalised voices are often not heard or not included. This is why this study proposes a more creative way to capture the experiences and processes of identity making among Bangladeshi women in Tower Hamlets, London.

Silence seems to be the predominant reaction to the traumatic political memories within this community. This is especially true for the gendered violence that many women experienced after the 1947 Partition of British India as well as during the Bangladeshi liberation war in 1971. Both processes led to a geopolitisation and nationalisation of women's bodies, which is why a methodology has to be applied that is able to directly access the body and put it at the core of its analyses. Further, the state of emergency in which women found themselves during Partition and the liberation war, and which made many of them refugees, is indefinitely prolonged through impunity of the violence committed against them and mechanisms of marginalisation, discrimination and racism existing today in the diasporic space in London.

While those stories have been collected through approaches of oral history within South Asia, the diaspora has only recently been included in those analyses. Accessing the diasporic space through a creative combination of multi-disciplinary methods from both the social sciences and performance studies, dance will be explored both as a field of political communication and knowledge-production, and as a method to explore embodied memories of political ruptures and migration. This research studies both professional and vernacular forms of dance among the Bangladeshi community in Tower Hamlets, London to include varied embodied stories of diasporic subjects. By shifting the attention to the performing arts as a carrier of women's memories and identities, this project can contribute to including silenced narratives of racialised, sexualised, gendered and religionised women to the making of history, and pays respect to their diasporic identities today.

Title: Improving Creativity with Design Thinking on Cross, Multi or Transmedia Projects

Session Type: Panel Submission

Authors:

Name: Ana Serrano Tellería

Email: ana.serrano (at) uclm.es

Country: ES (Spain)

Affiliation: University of Castilla La Mancha

Abstract: The aim of this paper is to present how Design Thinking is applied to the specific syllabus of 'Multimedia Journalism' given both a cross, multi or transmedia theoretical and practical approach. This subject is taught during the first four-month period of the fourth year in the Journalism Degree and it is conceived as a workshop in which students develop a cross, multi or transmedia project.

The official name of the subject is 'Multimedia Journalism Workshop'; although, since I started teaching it on 2016/17 course, I have incorporated the transmedia perspective into it. Why? Because I consider that the projects of the students may also be able to go from the multi or crossmedia base to the creation of the transmedia universe. In fact, I highly encourage them to embrace a transmedia development, at least, to try to experiment with it.

The main results observed in the process of applying the Design Thinking method to this type of projects are the relevance of developing prior conceptual maps and the ability to be flexible to adapt to the ongoing change. When students were interviewed about the benefits of dedicating the required time to reflect on the conceptual maps, they admitted that these maps assisted them to organize ideas and promote new ones (never imagined).

Stanford University's d.school[1] and The New School[2] have been outstanding references to follow when I decided to apply the Design Thinking approach to 'Multimedia Journalism Workshop'. Both Poynter.org[3] and Niemanlab.org also dedicated an in deep view on how this methodology has been applied successfully in education as well as in some media.

Preliminary conclusions obtained highlight the need for dedicating the required time to let students interiorize and properly understand the necessity and functionality of the conceptual maps before reaching a technology (application, device, platform, etc.). This appreciation is in line with recommendations given by some experts at laboratories such as RTVE.es, BBC.co.uk, Nytimes.com, Washingtonpost.com, Theguardian.es.

Despite deploying some difficulties at the beginning of the process for various reasons like: concretizing the objectives, prioritizing main and secondary issues/topics, wanting to apply/reach technology as soon as possible, loosing themselves in anxiety and so on; most students ended up their projects quite successfully. Even more, most of them also perceived their own difficulties during the starting process of developing the conceptual maps and perceived this method as a suitable one because it allowed them to recognize those problems in the right time to be able to

overcome them afterwards. Another input was that conceptual maps assisted them in imaging new ideas and the way to deploying them practically. They were astonished by how this method helped them to be creative.

Title: Journalistic professional roles as an object of study. A meta-research of international peer-reviewed journals.

Session Type: Individual submission

Authors:

Name: Enric Saperas

Email: enric.saperas (at) urjc.es

Country: ES (Spain)

Affiliation: King Juan Carlos University

Name: Ángel Carrasco-Campos

Email: angel.carrasco.campos (at) soc.uva.es

Country: ES (Spain)

Affiliation: University of Valladolid

Abstract: Research on journalistic cultures and professionalism has consolidated as an emerging field for international research on Journalism Studies in the context of the digital transition (Mellado, Hellmueller & Donsbach, 2017). For this disciplinary field, the study of the journalistic roles has a central position, as it should be considered one of the most innovative contributions for the scientific study of journalism in global societies. This presentation aims for a systematic observation of current academic research on the journalistic professional roles, by presenting preliminary results of the analysis of journalism research focused on journalistic roles as an object of study. Meta-research techniques have been applied to a sample of journal articles published on this regard by four top peer-reviewed journals over a five-years period (2014-2018). As peer-reviewed journals must be considered one of the main institutional framework for nowadays scientific communities of any discipline, its study is useful not only to explain how researchers develop and disseminate scientific knowledge, but also to understand the different agents involved in science and their knowledge interests.

The purpose of meta-research is to study scientific production published by peer-reviewed journals by the application of a coding protocol on journal articles, which is oriented to the systematic description of their structure and contents. Meta-research can be a methodological innovation for the study of scientific production in a complementary perspective to meta-analysis. While meta-analysis is a research modality based on complex statistic procedures oriented to observe the hypotheses and results published in journal articles and other scientific documents, meta-research focuses on the systematic study of research practices and procedures such as research interests, methodologies, research techniques and instruments, or the uses of theory. The authors of this proposal have designed a specific coding sheet which has been tested and applied in previous research (Saperas & Carrasco-Campos, 2015, 2018). This coding sheet includes 30 variables and 242 indicators to observe the core elements of research procedures (authorship, objects of study, research techniques, objectives and hypothesis, research instruments, theoretical frameworks). For the specific study of journalistic roles new variables were included.

The research objective for this paper is to describe the operationalization of research on journalistic roles published in 108 articles by the four leading peer-reviewed journals focused on Journalism Studies, according to the SJR-Scimago ranking on Communication: Journalism & Mass

Communication Quarterly, Journalism, Journalism Studies and Journalism Practice (all of these journals rank in Q1 of the aforementioned ranking). Specifically, it will focus on the identification of the geographical and institutional adscription of the authors of the papers (RO1), the research topics in which studies on journalistic roles were developed (e.g. political journalism, professional autonomy) (RO2), and the specific journalistic roles investigated on the sampled papers (e.g. watchdog role, advocacy role, civic role) (RO3). This research is part of a R&D project funded by the Spanish Ministry of Science, Innovation and Universities (National Programme for Fostering Excellence in Scientific and Technical Research by the Spanish Ministry of Science, Innovation and Universities).

Title: Beyond Fact-Checking and Verification: Incorporating Citizen Needs into Disinformation Countermeasures

Session Type: Individual submission

Authors:

Name: Eileen Culloty

Email: eileen.culloty (at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Name: Jane Suiter

Email: jane.suiter (at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: Disinformation presents a major threat to social and political stability as it undermines the legitimacy of factual claims and the role of journalism as a fourth estate. In response to this threat, there has been a rapid rise in online information supports that aim to safeguard citizens against false or misleading information. Fact-checking and verification initiatives determine the accuracy and authenticity of online content while trust labels evaluate the credibility of online sources. Globally, such initiatives are gaining support from a wide range of media outlets, policy actors, and technology developers. However, the effectiveness of these countermeasures is dependent upon their ability to address the information needs of citizens including the range of political, technological, and societal factors that underpin post-truth culture. Currently, the information needs of citizens are poorly understood and existing research indicates that corrections are ineffective for certain demographic groups and may even reinforce or amplify false information. In this context, we present a research agenda for incorporating citizen needs into disinformation countermeasures. Arguing against the assumption that disinformation may be countered through exposure to correct information, we propose that countermeasures need to be grounded in research from three overlapping areas: (1) a theoretical understanding of how new social and political identities are shaping the wider context of post-truth culture; (2) an empirical understanding of how citizens evaluate online information vis-à-vis their identities and prior beliefs; and (3) an empirical understanding of the effectiveness of different kinds of information support across demographic groups and disinformation contexts. Ultimately, we argue that efforts to counter disinformation need to shift from a fact-centred model based on authoritative corrections to a citizen-centred model that is responsive to diverse information needs, attitudes, and practices. This argument is supplemented with findings from focus group research in Ireland and Spain. Working with older (40-60 years) and younger (20-30 years) cohorts, we investigate the links between citizens media consumption patterns, attitudes towards controversial information, and evaluations of different kinds of information support. These findings contribute to a deeper understanding of the disinformation environment from the perspective of citizens and to the development of more robust countermeasures that meet the needs of citizens. This research is undertaken as part of a European Commission H2020 project on countering disinformation (grant number 825227).

Title: At the junction of community engagement, politics and media work ' Hyperlocal makers in Finland, Sweden and Russia

Session Type: Individual submission

Authors:

Name: Jaana Hujanen

Email: jaana.hujanen (at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki, The Swedish School of Social Science

Name: Katja Lehtisaari

Email: katja.lehtisaari (at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: According to previous research, the aims, functions and work practices of hyperlocal start-ups and citizen or community initiated information sharing vary (Konieczna & Robinson, 2014, Ahva, 2017). We know less about how emerging forms of local media and hyperlocal practitioners' perceptions on their roles are constructed as a part of wider media ecosystems and journalism cultures. However, this is a question of major importance as hyperlocal services can offer means to local communities as well as new groups of people to individual expression as well as social participation. In this article, we examine how Nordic and Russian hyperlocal practitioners conceptualize and define their roles and aims in relation to surrounding local communities, focusing on the possibilities, needs and limits given by the different media ecosystems and models (Dobek-Ostrowska, Glowacki, Jakubowicz, & Süközd, 2010; Hallin & Mancini, 2004). Of special interest are the notions of authorship, critical local information, community engagement and political participation. The data set, covering Finland, Sweden and Russia, allows comparison between media in democratic and non-democratic countries and answers the call for inclusion of non-Western countries in comparative studies on journalism (Hanusch & Vos, 2019). The data gathered includes surveys and in-depth interviews with hyperlocal practitioners. The data is analyzed using statistical and qualitative methods. Global trends seem to affect local media in similar ways in all of the countries studied. Most practitioners actively re-envision how and what kind of 'journalism' can be locally meaningful and enhance local connections. The perceived roles vary and intertwine, including those of (alternative) journalists, hobbyists, community activists, civic leaders and media entrepreneurs. According to our tentative results, differences between the roles and tasks imagined are embedded, among others, in the specificities of country's media model and media ecosystem. In other words, political and social contexts play a central role in how local media and information sharing practices evolve.

Title: [Panel] Formación de periodistas en perfiles emergentes en Iberoamérica, Panel description

Session Type: Panel Submission

Authors:

Name: Daniela Lazcano-Peña

Email: daniela.lazcano (at) pucv.cl

Country: CL (Chile)

Affiliation: Escuela de Periodismo, Pontificia Universidad Católica de Valparaíso

Abstract: Moderadora: Daniela Lazcano-Peña; Pontificia Universidad Católica de Valparaíso, Chile; daniela.lazcano (at) pucv.cl

Los medios de comunicación tienen un rol relevante en la protección de los derechos de las personas y la búsqueda de su bienestar, lo que obliga a una revisión constante de la profesión. Observamos que los medios viven un proceso de ‘ensayo y error’ ante los constantes vaivenes de la transformación digital, entorno cambiante que implica transformaciones en la identidad profesional (Flichy, 2004) con un cambio de tareas y herramientas que redefinen las figura del periodista digital o multimedia (Rotman, 2013; Deuze 2017). A esta realidad no puede ser ajena la enseñanza del Periodismo, que requiere una adaptación curricular acompañada con la realidad profesional, aunque sin perder su formación crítica; una propuesta que no sólo pasa por la incorporación tecnológica, sino por establecer un programa curricular transversal adaptado a los nuevos perfiles emergentes que implica la enseñanza en narrativas para multisoportes y con nuevas especialidades en las rutinas de trabajo, y donde perfiles profesionales como el periodista de datos, community manager, periodista multimedia polivalente, entre otros, aparecen como nuevos espacios de desarrollo profesional y desafíos formativos, en convivencia con perfiles profesionales tradicionales de Redactor; Gabinete; Investigador-docente-consultor; y Gestor de portales y editor (Aneca 2005).

En este contexto, presentamos una investigación internacional exploratoria cuyo objetivo es analizar la formación de los periodistas en perfiles profesionales emergentes mediante el análisis de la oferta universitaria de Periodismo en diferentes países iberoamericanos -Chile, México, España y Portugal- que permita establecer una comparativa y apuntar tendencias globales en la enseñanza periodística. La hipótesis de partida es que la oferta universitaria no se ha adaptado de manera decidida a los nuevos perfiles emergentes que demanda el mercado, con nuevos perfiles reconocidos en su oferta educativa como ‘salidas laborales’ de sus egresados.

El panel se configura con seis presentaciones. Cuatro de ellas recurren al análisis de contenido para sistematizar la oferta formativa que recogen las web públicas de las universidades con estudios de Periodismo en los países que conforman el panel, analizando dos categorías principales: perfiles periodísticos tradicionales y perfiles emergentes, presentes en el apartado ‘salidas laborales’ o ‘perfiles profesionales’. La muestra abarca 39 universidades españolas, 28 portuguesas, 27 chilenas, y una muestra representativa de las 400 universidades que ofrecen el grado en Periodismo en México, caso en que se analiza, además, cómo la enseñanza del periodismo se ha adaptado a contextos de violencia que tensionan derechos como la libertad de expresión e información.

Finalmente, se incluyen dos presentaciones centradas en los desafíos que enfrenta la enseñanza del periodismo desde la mirada específica de los estudios de audiencia y desde una perspectiva global.

La investigación señala la necesidad de que la formación de los periodistas vaya acompañada a los nuevos perfiles profesionales, especialmente centrada en una formación multimedia en tres roles diferenciados: periodista multimedia-generalista, gestor de redes sociales y periodista de datos. Una adaptación que requiere una revisión curricular enfocada en narrativas multimedia y multiformato, formación tecnológica autodidacta y especialización en nuevas rutinas comunicativas y conocimiento de las audiencias.

Title: Los perfiles periodísticos emergentes entendidos como salidas laborales. Estudio de caso de España

Session Type: Panel Submission

Authors:

Name: Pilar Sánchez-García

Email: pilar.sanchez (at) uva.es

Country: ES (Spain)

Affiliation: Universidad de Valladolid

Abstract: Esta investigación recurre a una metodología de análisis de contenido para analizar la oferta del Grado en Periodismo de las diferentes universidades españolas. En concreto, la muestra se delimita a la revisión de las web oficiales de 39 Grados en Periodismo correspondientes a universidades españolas públicas y privadas. El objeto de estudio principal es la información ofrecida en el apartado de ‘salidas laborales/perfiles’ recogida en los portales institucionales donde se informa de los posibles trabajos a los que se puede dedicar un periodista formado en España. Para su estudio se ha elaborado una ficha de análisis que recoge dos categorías diferenciadoras: perfiles periodísticos oficiales/tradicionales
perfiles emergentes

La primera categoría se centra, en este caso, en la comprobación del seguimiento por parte de las Universidades de los cuatro perfiles oficiales tradicionales establecidos por Aneca (2005): A. Redactor; B. Gabinete; C. Investigador-docente-consultor; D. Gestor de portales y editor. Sobre la información encontrada se codifican los perfiles oficiales que se incluyen en las webs del Grado en Periodismo y los que no se incluyen.

La segunda categoría cuantifica los perfiles profesionales emergentes, en referencia a los desarrollados en y para un entorno exclusivo digital y que han aparecido en la última década con mayor especialización como son: el periodista multimedia/polivalente; el gestor de redes sociales (community manager) y el periodista de datos, principalmente. Todos ellos, considerados en el apartado de salidas laborales más especializadas en el entorno multimedia.

Los resultados principales del estudio de caso referido a España confirman que todos los portales universitarios incluyen gran parte de los perfiles oficiales-tradicionales de Aneca (2005). En concreto, se contabilizan 8 webs con los cuatro perfiles oficiales-tradicionales detallados al completo. Los perfiles presentes en todas las universidades son: redactor (A); gabinete de comunicación (B) y ‘gestor de portales y editor de contenidos’ (C). El perfil oficial minoritario es el que tiene que ver con la figura de “investigador-docente-consultor” (D), ausente en más de la mitad de las webs institucionales.

Respecto a la categoría de la variable de ‘perfiles emergentes’ recogidos expresamente en las webs analizadas, se detallan en 15 webs. El perfil mayoritario es el gestor de redes sociales en más de una decena de estas webs. En cambio, resulta reseñable la casi ausencia de la mención expresa del periodista de datos que aparece solo en un portal universitario como perfil profesional del egresado.

Title: Does emotion matter' Exploring the relationship between animated news, emotions, and policy support

Session Type: Individual submission

Authors:

Name: Wai Han Lo

Email: janetlo85 (at) gmail.com

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Name: Ka Lun, Benjamin Cheng

Email: benjicheng (at) gmail.com

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: Research objectives

Experiment examined how the use of animation in news influences viewers' emotions in a way that bears on policy support. This study contributed to the literature by examining the impact of animation, as an emerging news presentation format, on viewers' affective response and on policy support. It was also the first study to investigate the mediation paths from animated news content to policy support via emotions, while past studies mainly focus on the cognitive effect of animated news.

Theoretical Framework

Past studies found that films, TV shows, and news coverage have ability to elicit emotions. For example, Mauss, et al. (2005) suggest that media induces emotional response coherent with the context. Past research found that individual experiences a greater sense of involvement in a vivid message, and in turn elicits different emotions coherent with the context. Animation in news involved multiple sensory components and these components contributed to the vividness of the message and in turn enhanced the viewer's experience of involvement. This study therefore proposes that the use of animation in news heightens level of emotions, anger in this case, that coherent with the context. Hence, the hypothesis as follows:

H1: Audience report feeling a greater intensity of anger when watching a news video with animation than when watching a video without animation.

Emotions tell what situation it is and help individuals to determine their action, and affects people's motivation and goals. For example, anger can inform an individual about fairness of the situations and raise the level of cognition of retributive actions. It increases the motives for an individual to revenge. At the same time, emotions help an individual to appraise their situations and make decision. Negative emotions influence the perception of injustice and discrimination. Individuals could feel sad and angry if they found the vulnerable group suffers from unfair treatment or in undesirable conditions. It may lead to greater empathy towards the vulnerable group, and generate greater support of policy that is favorable towards vulnerable group (Goodall, Slater & Myers, 2013)

H2: Level of anger is positively related with the level of policy support: enforcing the law that is favorable towards vulnerable group.

Methodology and Findings

Eighty participants were recruited in this study, and they were randomly assigned to view one of the designed news videos: those that use a animation, and those that do not use animation. We found that animated news induced audience emotions, which influenced policy preferences. H1 and H2 were supported. Practical uses of animation in news and related ethical issues were discussed.

Title: La relación entre salidas profesionales de los cursos de periodismo/comunicación, planes de estudio y perfiles de egreso: el caso portugués

Session Type: Panel Submission

Authors:

Name: Sandra Marinho

Email: sandra.m.marinho (at) gmail.com

Country: PT (Portugal)

Affiliation: Universidade do Minho

Abstract: Las salidas profesionales de los cursos de periodismo/comunicación son una forma en que los candidatos a la enseñanza superior evalúen la oferta formativa y tomen decisiones. Para eso, es importante que reflejen los contenidos de los planes de estudio y los perfiles profesionales que proponen. En un entorno mediático cada vez más digital y marcado por nuevos lenguajes y formatos periodísticos, es esperable que los futuros estudiantes tengan la expectativa de encontrar esas transformaciones reflejadas en los currículos. Sabemos, sin embargo, que los ritmos del mercado y de la academia no son los mismos. Sin embargo, a veces las universidades no estarán equivocadas al resistir los cambios que ocurren en las empresas o, al menos, en evaluarlas con precaución, y adoptarlas a un ritmo más lento.

Para comprender la relación entre las salidas profesionales de los cursos de periodismo/comunicación, los planes de estudios y los perfiles que existen (y emergen) en las redacciones, fueron evaluados los sitios web de los 28 programas de estudio de pregrado que ofrecen formación en periodismo o comunicación en Portugal.

Se destacan las siguientes conclusiones

Los cursos no dan mucha importancia a la información sobre las salidas profesionales (algunos no tienen esa información y otros son vagos, usando expresiones como "periodismo" o "periodista"); Entre los que publican esta información, se mantienen mayoritariamente las salidas profesionales correspondientes a perfiles tradicionales: "periodista de prensa, radio y televisión" y, en algunos casos, se añade "web", "multimedia" o "internet";

En Portugal, el modelo más común son los cursos de Comunicación con especialización en periodismo, y no hay separación en los sitios web entre las salidas profesionales de esta carrera y las áreas de Publicidad, Relaciones Públicas y Audiovisuales y multimedia (no podemos saber si es un "descuido" o una estrategia);

No existiendo esa separación (y asumiendo su intencionalidad), hay una aproximación de los cursos a la realidad del mercado, en la que se vive una disolución de las fronteras entre profesiones de la comunicación (con las ventajas y riesgos que esto puede representar para el periodismo y para los periodistas);

Los planes de estudio, en su mayoría, están en consonancia con la perspectiva tradicional de las salidas profesionales y tienden a estructurarse (aunque hay excepciones) en torno a los medios "prensa, radio y televisión".

Esta investigación tiene dos limitaciones importantes: sólo consideramos los planes de estudio y no miramos los contenidos (programas) ni entrevistamos a profesores o directores; (ii) el modelo más común son los cursos de Comunicación con especialización en Periodismo, por lo que es difícil, en algunos casos, "aislar" los datos referentes exclusivamente a los perfiles de Periodismo.

A partir de aquí, nos preguntamos: ¿hasta qué punto están la academia y el mercado articulados, en lo que toca a los perfiles profesionales? ¿Cuáles son los límites de esta articulación, es decir, en qué circunstancias la "lentitud" de la academia puede ser necesaria

Title: From Portable Document Format to Digital storytelling: evolution of successful online journalism in Spain

Session Type: Individual submission

Authors:

Name: Luisa del Carmen Martínez García

Email: luisa.martinez (at) uab.cat

Country: ES (Spain)

Affiliation: Universidad Aut3noma de Barcelona

Abstract: Twenty years after the publication of the first Spanish newspaper designed solely for the Internet, the ecosystem of information production has undergone profound changes. In Spain, these transformations have occurred in a context of economic crisis that has generated, among other things, precarious employment in the journalistic sector. There are currently 6,828 unemployed journalists, 50% more than in 2008 when the economic crisis began in the countries of central and southern Europe (APM, 2018).

The objective of this research is to know the evolution of online journalism in order to identify the characteristics of current digital storytelling. The success of the native media of the Internet is such that, in some cases, they come to compete for the audience with informative companies of greater tradition in Spain. For example, according to the Comscore ranking (2018), the first four online media with the highest audience outnumber two of the newspapers with the largest number of readers in paper and digital formats.

The methodology of the study is designed in two phases: one qualitative and one quantitative. The qualitative tool is the semi-structured interview with 6 executives of successful online journals to deepen in topics such as the evolution of journalism towards digital storytelling, the perspectives of the short-term business model and the strategies used to find an audience. The second phase of the research is the analysis of quantitative content of online newspapers that occupy the top ten places with the largest number of readers in Spain (Comscore, 2018). This section of the analysis focuses on knowing the specific forms of expression of digital storytelling.

The qualitative narrative of newspaper executives points to organic online journalism, which is constantly evolving because it goes hand in hand with digital and mobile technologies. One of the characteristics that, a priori, was considered positive of the Internet is the gratuity, however, those in charge of the media consider that to make quality journalism and independent in the short term, users will have to pay for the information. This contribution, say the interviewees, is a way to generate more trust among readers in a context of post truth and fake news.

The quantitative results indicate that the media analyzed produce multimedia information - corresponding to the possibilities of support- and that softnews are among the most read contents. The pink press and the television chronicle are sections that occupy important positions in the ranking of the most read contents of online media, something that executives also explained.

Finally, the testimonies and data obtained in this research reveal that Spanish digital media with a greater audience take advantage of the possibilities offered by the Internet and new mobile technologies. Most of the media have "laboratories" in which the dynamics of the test and error are constant, especially in the approach of some subjects, sections and business models, whose experimental cost is low in comparison with the dynamics of the traditional media.

Title: [Panel] Monitoring violations against journalists as part of a co-ordinated response to attacks on their fundamental rights, Panel description

Session Type: Panel Submission

Authors:

Name: Jackie Harrison

Email: j.harrison (at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Abstract: Despite international agreement on the establishment of a range of norms as global standards that act as benchmarks for the assessment of the safety of journalists, there remains an urgent need to improve the protection for all journalists to combat continued and increasing violations of their human rights and to preserve their human dignity. These violations occur both within and outside the digital environment in the form of a wide range of both lethal and non-lethal threats and attacks. Attacks on free and independent journalism diminish civil societies leaving an immiserated or non-existent civil space of resistance to the endless predatory powers of states, markets and other powerful non-state actors. Such a decline in sustainable news journalism reduces the capacity of states to develop inclusive knowledge societies for their citizens and undermines resilient digital infrastructures which facilitate the right of access to trustworthy information. Opportunities for academic engagement and practical input into impactful research on preventing, protecting and prosecuting crimes against journalists as well as contributing to development of norms and sustainable mechanisms has been advanced greatly by the recognition of the importance of the safety of journalists normatively within the UN's Sustainable Development Goals framework, particularly SDG 16.10 and 16.10.1 through the monitoring of the safety of journalists. Currently however, the monitoring of incidents against journalists is not carried out systematically, and information available is often incomplete, conflicting or difficult to analyse, with further difficulties arising when attacks are mediated by hidden technologies such as social messaging, and when many journalists, especially women, do not report such abuses and LGBTQI bloggers are often rendered invisible. The contribution of academia in partnership with other civil actors to address the questions and challenges of effective monitoring as a way of producing systematic information to fuel normative advocacy and guide institution building in the context of journalism safety is now ripe for theoretical and empirical co-development. This joint UNESCO/Journalism Safety Research Network (JSRN) panel brings together a range of academic and practical expertise to assess: 1) the assumptions underpinning SDG indicator 16.10 which bring opportunities to elaborate the notion of "safety" as well as challenges and possibilities for the operationalisation of impactful research (Guy Berger, UNESCO); 2) ways of improving the global monitoring of journalists' safety through new classification of violations and text analysis techniques (Diana Maynard and Sara Torsner, CFOM, University of Sheffield); 3) New ways to identify challenges to the safety of women journalists globally in order to mainstream gender within civil society organisations' initiatives (Silvia Chocarro, Article 19) and 4) Identifying the challenges facing women and LGBTQI bloggers in order to improve their protection through their inclusion in the monitoring of attacks and violations (Albana Shala, Free Press Unlimited).

Title: The why and the what in the monitoring of safety of journalists through building on the UN's 2030 Sustainable Development Agenda

Session Type: Panel Submission

Authors:

Name: Guy Berger

Email: g.berger (at) unesco.org

Country: FR (France)

Affiliation: UNESCO

Abstract: This paper examines the UN-agreed indicator for tracking progress on Sustainable Development Goal 16.10 which recognises the monitoring safety of journalists as a measure of “public access to information and fundamental freedoms”. The analysis identifies this as an opportunity to elaborate the notion of “safety” and also to promote research momentum in this space. Unpacking the assumptions underpinning the indicator, the paper further explores the challenges in operationalising research in terms of the associated metadata - including the emerging concept of “other harmful acts” which extends focus beyond traditional types of attacks on journalists. The fragmentation of existing monitoring efforts by diverse actors is contextualised. Finally, an assessment is presented of the possibilities for research to feed into “voluntary national reviews” at country-level as well as at the “High Level Political Forum” on sustainable development held at the UN General Assembly each year.

Title: Mixed-methods approach for monitoring the safety of journalists: data collection, categorisation and analysis

Session Type: Panel Submission

Authors:

Name: Diana Maynard

Email: d.maynard (at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Name: Sara Torsner

Email: sktorsner1 (at) sheffield.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Sheffield

Abstract: Improving the monitoring of journalists' safety requires first and foremost the collection of relevant data. This in itself is not a trivial process because recording of incidents is not carried out systematically, and information is thus inaccurate, incomplete, conflicting or difficult to analyse. This paper investigates the utility of combining traditional data collection and survey techniques at a country-level with new methods of aligning and categorising these forms of disparate information, in order to build a clearer picture of not just isolated incidents, but temporal pathways from minor threats through to lethal violence and geo-localised behavioural patterns. Aiming to contribute towards the strengthening of the global monitoring of violence and abuse against journalists in line with SDG 16.10.1 (which proposes to measure a range of physical violations against journalists), we examine country-level data gathered by local civil society organisations in countries like Colombia, Mexico, Serbia and Somalia, from which we can propose methodological solutions to problems of data gaps and the harmonisation of cross-country datasets. We present findings from a survey identifying the range and type of data collected locally, map opportunities and challenges for data generation and management, and discuss prospects for exchange around best practices. Finally, we show how moving from a traditional template structure to a more hierarchical classification of violations, and using text analysis techniques to extract relevant facts from unstructured free text reports enable clearer analysis to be undertaken of both the wider picture and individual incident scenarios.

Title: Under-researched and often invisible: Identifying the challenges facing women and LGBTQI bloggers

Session Type: Panel Submission

Authors:

Name: Albana Shala

Email: shala (at) freepressunlimited.org

Country: NL (Netherlands)

Affiliation: Free Press Unlimited

Abstract: A gender sensitive approach to the safety of journalists is an evolving approach. It should take into account the fact that an increasing number of women and LGBTQI bloggers and journalists work alone, mainly in a digital context and are not affiliated to any organization or union. As such they are not researched and do not count, becoming the weakest link in the communication process. The online- offline threats and attacks often encourage them to become even more invisible, thus not represented. The presentation/paper will be an attempt to identify the challenges that women and LGBTQI bloggers face and the ways how they could collaborate and organize themselves, being recognized as under threat and in need of protection by the authorities, the national mechanisms for protection and by the civil society organizations which promote safety of journalists.

Title: Making news personalization fair: what are news readers' concerns and what can be done about them'

Session Type: Individual submission

Authors:

Name: Jaron Harambam

Email: j.harambam (at) uva.nl

Country: NL (Netherlands)

Affiliation: Institute for Information Law - University of Amsterdam

Abstract: Media companies increasingly invest in various digital technologies that use algorithms to select news items by relevance based on people's online behavior (and other characteristics). While these technologies enable media organizations to be more receptive the needs and wishes of their consumers, they also pose considerable individual and societal challenges. People may, for example, inadvertently end up in "filter bubbles" as they would only see what they already know or find interesting. News personalization can also lead to information asymmetries between different societal groups as some might be structurally deprived from certain types of news, making it hard for them to participate in democratic debates. Lastly, and perhaps most importantly, it is often unclear how these recommendation algorithms precisely work and what consequences they have for the information people (don't) get to see. Why certain news items are suggested, and others hidden, remains generally obscure to most consumers. News outlets hardly communicate their personalization strategies, let alone what this means for the individual news reader and her news diet. This is not (just) mal-intent: explaining the workings of such curating algorithms is notoriously difficult. In short, news personalization has many advantages, but needs to well guided in order to prevent nefarious societal consequences.

In this multi-disciplinary research project we therefore set out to shed more light on these issues by elaborating the notion of fair news. What does fairness mean in an algorithmically saturated media ecosystem? This is a complex issue and raises important questions from a number of different perspectives. Previous research has focused on media experts (practitioners and scholars) to answer this and related questions as a start towards algorithmic transparency in the news industry, but we argue that the ideas of consumers are just as important to consider. They are, after all, the ones who need to be informed while reading the news. In this sub-project, we therefore explore what aspects of news personalization readers are concerned about (1), how they think about fairness in this context (2), and how their concerns can be best mitigated (3)?

To answer these questions, we organized five focus groups (each 4-6 participants) with news readers from a large Dutch media conglomerate in which we discussed these topics in a structured manner. Each session contained three parts. In the first part we openly gathered the ideas, concerns and expectations of news readers about news personalization. Subsequently, we used different scenario's to have participants reflect on this issue more specifically. Finally, we discussed different solutions along three central categories (explanations, user control and regulations), and let our respondents prioritize them. In this paper we present the results of this study and embed it in

broader discussions about the rise of various AI/machine learning technologies, and how to ensure that public values and fundamental human rights are ensured.

Title: Disputing journalistic practice. Civic data journalism and its reciprocal influence on news media

Session Type: Individual submission

Authors:

Name: Raul Ferrer Conill

Email: raul.ferrer (at) kau.se

Country: SE (Sweden)

Affiliation: Karlstad University

Name: Stefan Baack

Email: stefan (at) mozillafoundation.org

Country: DE (Germany)

Affiliation: Mozilla

Name: David Cheruiyot

Email: david.cheruiyot (at) kau.se

Country: SE (Sweden)

Affiliation: Karlstad University

Abstract: The role of non-profits in the growth and transformation of data journalism is today being acknowledged in practice and research (Baack, 2017; Cheruiyot & Ferrer-Conill, 2018). While providing an entrepreneurial impetus to data-driven practices, they are also playing a complementary role to legacy news media in truth production, either intentionally or unintentionally (Spyksma, 2017). This study assesses how civic data organizations extract journalistic norms and inject data-driven practices that influence how newswriters understand and practice journalism. These ‘explicit interlopers’ (Holton & Belair-Gagnon, 2018) and ‘ancillary organizations’ (Lowrey et al., 2019) operate at the periphery of legacy news media organizations. We argue that these peripheral actors are influenced by traditional journalistic discourse and at the same time challenge and influence contemporary news production. Drawing from metajournalistic discourse theory (Carlson, 2016) and new institutional theory (Ryfe, 2017) we propose a conceptual model of news production that is defined through practitioners’ perceptions of data journalism, tempered by journalistic as well as civic organizational goals. The model explains how journalism is affected by peripheral actors, such as civic data journalists that extract and adopt traditional journalistic practices and in turn inject data-driven practices into traditional news organizations, modifying news production. The theoretical discussion is supported by interviews with independent data journalists (mainly project leaders and country representatives) of civic technology organizations in Europe, Sub-Saharan Africa and South America. The civic technologists engage in ancillary data projects and training programs with legacy news organizations. Findings suggest these actors find themselves in a liminal journalistic space where they both accept and dispute journalistic norms and practice while infusing their own knowledge to change and shape journalism. Thus, these civic technologists show a reciprocal influence on legacy news media that is often unacknowledged and unquestioned. This paper expands our current understanding of individuals and organizations

practicing and reciprocating data journalism at the periphery of news media with a wide geographical reach.

Title: Challenges of Investigative Journalism in Nepal: The case of Kantipur Daily and Nayapatrika daily

Session Type: Individual submission

Authors:

Name: Usha Kiran Regmi

Email: ladykiran.usha (at) gmail.com

Country: NO (Norway)

Affiliation: NLA University College, Kristiansand, Norway.

Abstract: Nepal is a developing country where democracy is flourishing and the institutions aren't stable yet. The rampant corruption, crimes, human rights abuses, unaccountability and violation of press freedom are some of the issues that have weakened the institutions. Investigative journalism plays a significant role exploring the details of such wrongdoings. Despite the fact that numbers of media outlets have been increasing after the end of Maoist civil war in 2006, press freedom in Nepal is still limited (Paudel, 2017). Therefore, the risk of reporting the issues which an interest group or government tends to keep secret, is still a daunting task in Nepal.

The key challenges of investigative journalism in Nepal, expected before this research was conducted, were the weak media economy, lack of trainings and workshops for the journalist, instrumentalization of the media by power interest groups, and low wage rates for the journalists.

Research Questions:

1. What resources are set aside in Kantipur National Daily, and Nayapatrika National Daily for investigative journalism?
2. What do they regard as the major challenges for doing investigative journalism in Nepal?

Methodology:

This is a qualitative explorative research in the areas of investigative journalism in Nepal. For this research, I have chosen in-depth interview as a method of data collection. Likewise, I have applied purposive sampling method to choose the informants along with the print media outlet for the interview. Altogether 10 informants are interviewed, 5 from Kantipur National Daily, and 5 from Naya Patrika National Daily. These two broadsheet dailies are the widely circulated newspapers in Nepal. Besides, these two media outlets maintained their position in the history of investigative journalism in Nepal.

The data collected is analyzed using media practice theory, and global muckraking theory. Media practice theory, in a hand; helps to understand the media practice culture of the respective country (Couldry, 2012). Global muckraking theory, on the other hand, studies about the demand and supply of the investigative reporting in that particular country (Feldstein, 2006).

Outcome of the research:

The outcome or the result of the study demonstrates that investigative journalism requires the sufficient amount of investment by a media outlet and an interest of a journalist. Besides, the media organization needs to appreciate the journalists' effort of identifying and bringing out the investigative issues.

The research outcomes highlight the need and importance of investigative journalists that it is significant for the accountability of government, interest groups (political, and business). Besides, the result has identified the key challenges faced by investigative journalists during story production, and helps to prepare a good environment for the investigative journalism in the days to come.

Title: Superman will not save you (unless I allow it): Examining the role of the foreign media in Bolsonaro's Brazil

Session Type: Individual submission

Authors:

Name: Cesar Jimenez-Martinez

Email: c.a.jimenez-martinez (at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University

Abstract: In a context of nationalist and populist movements reaching electoral success in the West and beyond (Bonikowski, Halikiopoulou, Kaufmann, & Rooduijn, 2019; Eatwell & Goodwin, 2018; Judis, 2018), the campaign and subsequent election of Jair Bolsonaro as President of Brazil was followed with interest by media from all over the world. The foreign coverage of Bolsonaro's triumph largely highlighted the implications that his administration will have not only for the current fragile political, economic and social situation in Brazil, but also for liberal democracies around the world (e.g. Al Jazeera, 17 October 2018; The Guardian, 3 October 2018). Significantly, due to the consistently biased and partisan tradition of Brazil's national media (Albuquerque, 2017) and the increasing facility of foreign media organisations to, thanks to digital technologies, get involved in local and national debates (Orgad, 2008, 2012), commentators within Brazil not only stressed that the foreign media apparently had a more 'objective' view of Bolsonaro, but some of them also hoped that foreign journalists could become a de facto opposition to Brazil's current president (Buarque, 2018; Sá, 2018; Winter, 2018).

Drawing on more than forty interviews with foreign correspondents covering Brazil, local journalists and past government officials, this paper empirically examines the hopes of these commentators, as well as the assumption that the foreign media are 'powerful' actors within Brazil. The findings suggest, firstly, that the label 'foreign media' is used to define what is actually a narrow number of outlets, mostly based on the United States and Western Europe. Secondly, although these media organisations are perceived as authoritative voices that can potentially broaden internal debates (e.g. Orgad, 2008, Boudana, 2014), such authority is actually filtered and exploited by local actors, who use this foreign coverage to advance pre-existing domestic debates. In other words, despite the critical views towards Bolsonaro that may emerge from foreign media organisations, their impact within Brazil will actually be limited, given that such coverage will be shaped by national actors in order to serve their own interests.

The findings of this case study are significant for other settings as well. They challenge the view, traditionally supported by theories of cultural and media imperialism –and that still resonate within Latin American scholarship–, which portray the national media as victims that should be protected against the power of American and Western European organisations (Schiller, 1992; Fuchs, 2010). At the same time, they put in question theories of contra-flow and globalisation (Straubhaar, 1991; Thussu, 2006). Instead, they paint a much more nuanced picture, in which local and national actors willingly subject themselves to the perceived authority of the foreign media, but only as means to move forward their own internal political, economic and sociocultural agendas.

Email: michael.oswald (at) uni-passau.de

Country: DE (Germany)

Affiliation: University of Passau

Abstract: The impact of news media on the perception of public issues is more important than ever. In times of fake news and reinvigorated populism they play a crucial role as a critical corrective for public opinion. Especially terroristic acts committed by the self-described Islamic State (IS) have attracted public attention within the last years. Here news media face a dilemma: They are expected to provide accurate information without serving as news outlets for the terrorists (Steuter, 1990; Wilkinson, 1997). Consequently, it is a matter of framing (D'Angelo, 2002; Entman, 1993) of how news media (should) report on terroristic acts.

News media frames of terrorism (e.g., Hoewe & Bowe, 2018; Powell, 2011, 2018; Speer, 2017) as well as their effects (e.g., Farewell 2014; Papacharissi & de Fatima Oliveira, 2008; Sikorski et al., 2018) are well-documented. Little is known about the question to what extent news media set agreeing or contesting frames (Chong & Druckman 2013, Dekker & Scholten, 2017). Especially in German-speaking countries (Germany, Austria, Switzerland) there are hardly any empirical findings on news media framing of IS terrorism.

This study therefore aims to investigate the framing of terroristic acts committed by the IS in German-speaking news media from June 2014 to June 2016 representing the peak of IS propaganda activities and news coverage (Bender, 2017). Specifically, the study focuses on dominant frames (RQ1), differences between the various news media (RQ2) as well as temporal changes (RQ3). To answer the research questions, a qualitative content analysis of print and online articles (N = 156) was conducted. The frames were deductively-inductively operationalized following Entman's (1993) framework with focus on problem definition, causal interpretation, moral evaluation, and proposed solutions.

The study identifies five dominant frames in the analyzed news media (RQ1). The violent collective frame presents the IS as a powerful and violent group being a threat for western societies. The western media culture frame explains the effectiveness of IS propaganda by its orientation to

western standards. The fallible society frame blames western societal structures for facilitating the recruitment of terrorists. In connection with these frames the powerlessness frame emphasizes that western societies struggle with the uncontrolled dissemination of IS propaganda via social media. The debunking frame encompasses context information about terroristic strategies with focus on the effects of IS propaganda videos. Regarding the differences between the various media outlets (RQ2) it could be observed that Austrian and Swiss news media put emphasis on contesting debunking aspects. In contrast, German news media rather focus on aspects of violence and powerlessness. There are also temporal differences (RQ3). While the violent collective frame dominates in the first period of news coverage and after single terroristic acts, balancing aspects are increasing in the course of time.

Based on these results, the analysis critically reflects the challenging role of news media regarding terroristic communication strategies. The study therefore aims to contribute to a better understanding of media logics and the handling of terroristic messages.

Title: News media and journalists on Twitter ' How they conform to the mass media logic and social media logic'

Session Type: Individual submission

Authors:

Name: Mikko Villi

Email: mikko.villi (at) jyu.fi

Country: FI (Finland)

Affiliation: University of Jyväskylä

Name: Janne Matikainen

Email: janne.matikainen (at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: News media in many countries have adopted Twitter as their principal and dominant social media platform. Also journalists in their professional role are particularly active on Twitter, often more so than on platforms such as Facebook or Instagram. Interestingly, it seems that the news media and the journalists use Twitter for different purposes (e.g. Bruns & Burgess 2012; Canter 2015; Lee 2015; Barnard 2016; Canter & Brooks 2016): the news media focus on sharing their content, but journalists act on Twitter in more diverse and extensive ways.

The aim of this paper is to shed more light on this disparity by analyzing how news media and journalists utilize Twitter and comparing their Twitter use. A more specific approach is provided by employing media logic as a theoretical framework. Media logic refers to practices and processes that are particular to different media forms (Altheide & Snow, 1979). We further divide media logic into mass media logic and social media logic. Mass media logic is based on the attributes of professionalism, competition and one-way communication. In contrast, in their synthesis, van Dijck and Poell (2013) emphasize programmability, popularity, connectivity and datafication as key features of the social media logic. Importantly, as a social media platform, Twitter in many ways follows the mass media logic with its content flowing to a rather anonymous audience in a one-to-many manner. This can be one reason for those working in news media to often regard Twitter as their preferred social media platform. (AUTHORS 2015)

The data for the study is collected by studying the activity of Finnish news media and journalists on Twitter during a one-month time span. In Finland, Twitter is somewhat of an elite media, stereotypically used mostly by journalists and politicians. We select 20 of the most followed Finnish journalists on Twitter and the accounts of 10 of the largest news media outlets in Finland. We collect the data from a Finnish social media data archive. As method we combine quantitative and qualitative content analysis. We classify the tweets according to a role structure formed in our earlier work (AUTHORS, 2017).

Our initial hypothesis is that when journalists use social media, the contradiction between the mass media logic and social media logic is apparent in their practices. On the one hand, journalists belong

to and act in the structures of news media, and on the other, they are individuals who integrate their professional and personal identities on Twitter. By contrast, news media form a traditional and established institution for which it can be difficult to conform to the social media logic.

Title: Digitization and continuity: The convergence of newsrooms in Bolivia

Session Type: Individual submission

Authors:

Name: Victor Quintanilla Sanguenza

Email: vico_qs (at) hotmail.com

Country: BO (Bolivia)

Affiliation: Universidad Iberoamericana Ciudad de Mexico

Abstract: Previous studies on the impact of technology on journalism tend to conclude that it has left behind traditional practices, norms and values (Altmeppen, Donges y Engels, 1999; Pavlik, 2004). Others, focused on journalistic convergence, tend to approach it as a management process, developing ideal models of editorial integration (Dailey, Demo y Spillman, 2005; Erdal, 2011) that reflect realities different than those of Bolivian journalism. This paper examines the nuances of the development of newsroom convergence in the Bolivian press, particularly in the newspapers La Razón and Página Siete.

The convergence models developed by García Avilés et al. (2009) contributed to the theoretical matrix of the present analysis, but they were also problematized. The study was equally nourished by the rest of the revised literature on journalistic convergence, a concept that, when referring to a multidimensional process (Salaverría y García Avilés, 2008) and obeying a plurality of approaches, becomes elusive (Avilés, Aliaga y Masip, 2008; Barrios y Zambrano, 2015).

Under a qualitative methodological approach—which included in-depth interviews and participant observation with editors, journalists, area managers and directors—convergence was investigated based on a variety of factors. In the first, that of news routines, we explore the workings of the print and digital newsrooms in each newspaper, their encounters and disagreements, as well as the tensions that convergence generates. We examine the role of institutional policy—linked to the establishment of objectives, the issuance of internal regulations and the allocation of material and human resources—in the process of convergence, with its scope and limitations. Finally, we analyze the perception of journalists regarding the phenomenon, emphasizing the relationship between it and their professional identity; as well as training needs stemming from the new work environments, and if these are echoed in the media.

The results suggest that although the digitalization of communication platforms has involved changes for journalists and their work, the logic of traditional journalism, anchored in the printed form, still persists in convergent environments. In addition, we find that convergence develops, not as integration, but as an occasional cooperation of newsrooms in terms of data exchange and mutual information alerts. This process generates two types of tension: one generated by the resistance of print journalists to collaborate with their colleagues in the digital newsroom, and the other originated when the former refuse to share scoops with the latter. It's a struggle between two different journalistic cultures, one seeking to impose itself and remain in force above the other. Thus, the research allows us to demystify those theoretical currents that point to the rupture of

traditional journalistic practice as a generalized phenomenon, motivated by technological development.

Abstract: Los estudios de alcance global plantean el desafío de articular las trayectorias de investigación de los países participantes con propuestas de métodos de investigación que sistematicen la diversidad. La experiencia preliminar en Worlds of Journalism Study (WJS) permitió explorar algunas de estas cuestiones para entender mejor la forma en que Latinoamérica se inserta en el campo de los estudios de medios y de periodismo mundiales.

Latinoamérica cuenta con una prensa vigorosa y con referentes reconocidos internacionalmente, ha mantenido lazos de intercambio cultural y periodístico con Europa y Estados Unidos. Argentina, Brasil y Perú tienen en común instituciones dedicadas a la enseñanza del periodismo de larga data y medios referenciales para un mercado de 44 millones de habitantes en el caso argentino, 32 millones en el caso peruano (CEPAL, 2016) y 209,5 millones en el caso brasileiro (IBGE, 2019).

A pesar de ello, no existen muchos diagnósticos de la situación profesional del periodismo en esos países. La realización de estudios cuantitativos con parámetros comparativos globales plantea el desafío de contar con bases confiables para realizar muestras, situación difícil en países sin información pública confiable y sistemática ni producción académica que se ocupe de la situación profesional del periodismo desde variables duras (datos demográficos, ingresos, formación). Un metaanálisis de las líneas teóricas de los estudios de periodismo en Latinoamérica señala un enfoque más ensayístico y sociológico, pocos estudios sistemáticos y baja participación de los autores latinoamericanos en las publicaciones (Mellado, 2010).

Este punto de partida se constató en la primera ola del estudio WJS realizado en Argentina entre 2012 y 2014 (Amado y Waisbord, 2018) así como en Brasil desde el estudio piloto (2007-2011). También aparece en las indagaciones preliminares de Perú.

En este marco, cabe preguntarse por la producción académica sobre las condiciones en las que se ejerce el periodismo en estos países (enfoque, alcance y metodología), para entender mejor cómo se inscribe la tradición latinoamericana en los estudios de periodismo mundiales (Hanusch y Hanitzsch, 2017). Y qué puede aportar a los estudios locales (Waisbord y Mellado, 2014) la participación en grupos globales (Weaver y Willnat, 2012), especialmente en tiempos en que la digitalización del trabajo periodístico genera contextos y condiciones de trabajo extendidas.

Abstract: Collaborative journalism has been highlighted as one of the features in online outlets, given the importance of public participation in keeping and attracting audiences. In an age of crisis and cuts in newsrooms, participatory formats have increased, placing the traditional role of journalists under pressure (Carpentier, 2015). The growth of online journalism seems to point to two paths: mass-mediated journalism, where traditional roles tend to be maintained, and the participatory forms that lead to innovative production formats (Metzger, 2007). Participation was also defined as crowdsourcing in the news organizations (Howe, 2006), which makes it possible to use audience talent (crowd). The levels of crowdsourcing are arguable, but it can be part of the journalistic process of providing, selecting and publishing information (Aitamurto, 2017). In digital platforms, audience participation traditional roles gave way to a wide variety of formats (Wahl-Jorgensen, 2015). Online interactions also stresses out concepts of collaboration, sharing, interaction or participation (Carpentier, 2011). This study case focus on the participatory dimensions in the digital news outlet P3. Two preliminary studies (Frias, Lima, 2014 & Frias, Lima, Sampaio, 2016) gave us previous results that allowed to gauge some new tendencies in collaborative journalistic approaches. To a better understanding of these forms of participation it is important to briefly depict P3. It was launched in 2010, and it was the result of a partnership between the University of Porto and the portuguese newspaper Público. P3 became an exclusively online project (2011) and it is an innovative proposal in a digital platform. Its main features are defined by the editorial statement: "P3 was born for all young people (but not limited to) who are apart from traditional newspapers for lack of identification with the topics they debate. It is a generic news website (...) made by young people and for young people." Furthermore, it embraces the idea of public participation: "(...) The proposal and the promotion of interactions in social networks are a main concern that reinforces the incentive for users' participation. In other words, we rely on your texts and your images." P3 is the result of a new conception of journalism,

especially in the sense that the boundaries between traditional producers of content and users tend to blur (Briggs, 2007). This research project takes in consideration the previous framework and the sample in this study case analyses data collected during the first five years of the P3 project (September 2011 to September 2016). The data were collected from the online database of the newspaper and the categorization and parameters are based on the previous studies. It results from a SPSS quantitative approach and the cross of the intended variables. This approach allowed the profiling of collaborative journalism forms and several levels of participatory behavior and interactions. The data also gave us meaningful results in the mapping of main topics in participation, as well as formats, namely image, text or others. The study also analyses the sources in the news, but given its complexity, only preliminary results are presented.

Keywords: collaborative journalism, participation, P3, big data, online journalism

Title: Incivility, Anger, Outrage: Towards a New Paradigm Shift in Political Journalism'

Session Type: Individual submission

Authors:

Name: Lia-Paschalia Spyridou

Email: l.spyridou (at) cut.ac.cy

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology

Name: Raphael Sofokleous

Email: rxsofokleous1 (at) gmail.com

Country: CY (Cyprus)

Affiliation: Cyprus University of Technology

Abstract: Much academic research on journalism has expressed concerns about political coverage reducing politics to a horse-race, emphasising scandals and negative events, and personalising politics rather than focusing on issues and institutions (Kaid & Strömback, 2008; Takens et al, 2013). These editorial styles contribute to a cynical and disparaging form of political journalism, which fuels citizens' apathy and mistrust (Kuhn & Neveu, 2002) and cannot contribute to an informed and active citizenship.

Efforts to further analyse cynical and disparaging forms of political journalism have produced various terms, such as 'dumping-down' (Barnett, 1998), 'infotainment' (Jebril, Albæk & de Vreese, 2013), 'incivility' (Leduff, 2012; Gervais, 2014) and more recently 'populist coverage' (de Vreese, 2017, Kavada, 2018). Whilst infotainment and dumping down are well-explored concepts, less work has explored incivility in media discourses.

Incivility can be used as an ideological weapon to create disdain for opposing views (Gervais, 2014), and it can be used as a mobilizing tool against the 'other side' (Herbst, 2010). Most often uncivil narratives are based on a rhetoric which seeks broad appeal through the deliberate expression of anger (Wahl-Jorgensen, 2018). Anger has always been central in political communication to gain and maintain support (Ost, 2004). Sobieraj and Berry (2011) argue that incivility can sometimes "transform into something grander: outrage" (p. 20). What distinguishes incivility from outrage are the tactics used to provoke negative emotions, and particularly anger (ibid).

Drawing on the concept of incivility in political journalism, this study explores the representation of Yanis Varoufakis, SYRIZA'S controversial ex-Minister of Finance in Greece. The study is based on 89 videos created by professional media and circulated on YouTube between January 2015 and September 2017. The Google search yielded 502 videos. Amateur videos, videos of less than five seconds duration and videos containing comments in English were eliminated. In order to investigate the presence of incivility in journalistic discourses, we coded for 13 types of uncivil (outrage) variables proposed by Sobieraj and Berry (2011). Then, in order to have a more nuanced analysis, we employed valence framing (de Vreese and Boomgaarden, 2003; Schuck & de Vreese, 2006). Preliminary findings show extensive use of uncivil discourse, exemplified in ad hominem attacks and misleading or patently inaccurate information.

The study contributes to the broader discussion of a paradigm shift towards an emotional regime in political journalism. Although emotions are part of the political life, and opinion journalism is (and should be) well-accepted, what are the boundaries of (in)civility? What are the dangers of employing journalistic discourses that downgrade impartial and accurate reporting masqueraded as 'anger'?

Affiliation: Department of Environment Science, Tsinghua University

Abstract: Through statistical analysis of a large amount of real and false news, fake news detection evaluates the authenticity of news text based on the accuracy and certainty of the analysis. Computer scientists have devoted a lot of efforts to develop fake news detection system for the purpose of dealing with the widespread fake news in the post-truth era, but journalism studies haven't paid enough attention to the emerging technology or the consequences it brings to media ecology. How is intelligent technology used for news verification, and what are the main principles of the two main models, the news content model and the social context model used in verification? What are the ethical challenges facing these two models? What is the mismatch between the technical thinking of intelligent news verification algorithms and the complex logic of fake news? How to improve the effectiveness of technology used to solve the social phenomenon of fake news? Breaking the barriers of journalism Studies and computer science, this paper will take a technical perspective to analyze the mechanism, logic and value of content-model-based algorithm and social-context-based algorithm, the two mainstream algorithms of fake news detection systems. The use of AI automated news verification technology is a useful attempt and trend of cooperation between the computer field and the media industry to block fake news. The media need to clarify the technical principles and operational logic of the automatic verification system, and consider the progress of computer technology in solving the problem of journalism practice. At the same time, we need pay more attention to the directional deviation and value risk of the algorithm in solving fake news problem.

Abstract: The concept of Cultural distance (CD) initially developed by Geert Hofstede and defined by other researchers (e.g. Raza, Singh & Dutt, 2002) as the degree to which cultural norms, worldviews, attitudes, perceptions and ideas differ between countries, has been widely applied in cross-culture comparison studies. For example, scholars have examined how it has influenced trading between two countries. In particular, research indicated that the bigger the cultural difference between two countries, the more negative effects it would have on the amount of trade (Tung and Verbeke, 2010).

Similarly, it could also be used to explain the extent to which how a cultural product of one country is accepted or framed by another country's people or the news media. The assumption is that the larger the cultural difference, the more negative evaluation the people or the news media will have on the cultural product. Such assumption is rather commonsensical but the influence of CD could be moderated by various factors. The case of Traditional Chinese Medicine (TCM) as the cultural product of China could illustrate such complexity. The influence of CD on the acceptance and TCM in another country could be minimized if the country is the origin of some precious wildlife, which could be taken as ingredients of TCM. Despite its curative effects, the fact that TCM uses parts of animals and plants as the ingredient of its medicines has aroused strong criticism from people/news media in countries where there are such wildlife.

Besides, the population of Chinese immigrants in one country might also affect the acceptance of TCM in the nation. However, there have been few studies on how exactly CD, origin of TCM

ingredients and population of Chinese immigrants influence or moderate the evaluation of TCM in a country's news media.

To fill the gap, this study will do a quantitative content analysis of mainstream news media's reports on the TCM in 12 countries (two mainstream newspapers from each country) which vary in terms of CD to China, origin (or not) of TCM ingredients and population of Chinese immigrants to gauge the influence of these factors to the reporting of TCM. The dependent variables will include the tones of news reports (positive, neutral or negative) and the frames used by the news media to report TCM. In this study, not only issue specific but also generic frames (see De Vreese 2005 for classifications between the two types of frames) will be coded so that the findings from the study could serve as more effective reference for further studies examining the news reports of other cultural products from China.

Abstract: La cobertura periodística de áreas de conflicto no es exclusiva de países en guerra. En las últimas décadas, en varias regiones de Brasil, los periodistas son forzados, intimidados o asesinados por grupos paramilitares (milicia), policías, narcotraficantes o por orden de políticos y empresarios acusados de corrupción.

El informe de 2018 de la Federación Nacional de Periodistas apunta un crecimiento del 36% en los registros de violencia contra periodistas brasileños (FENAJ, 2019). En los meses previos y durante las elecciones generales de 2018, la Asociación Brasileña de Periodismo Investigativo identificó 85 ataques digitales (la mayoría "exposición indebida" en las redes sociales) y 71 ataques físicos contra periodistas (hostilidad, acoso y agresión), totalizando 156 casos de violencia (ABRAJI, 2018). Estos informes nacionales se asemejan a contextos más amplios: el último informe de la organización Reporteros sin Fronteras mapeó 80 asesinatos de periodistas en el mundo. Casi la mitad de los profesionales murieron en países que no están en guerra (RSF, 2018).

Este artículo examina los itinerarios metodológicos de la investigación "Brasil: Estudio de Riesgo y Resiliencia entre Periodistas", sobre seguridad de periodistas, realizada en dos estados brasileños (Acre, en la región Amazónica que limita con Bolivia, y Minas Gerais, estado de la región sudeste con el mayor número de municipios) y en una metrópoli, la ciudad de Río de Janeiro. La recolección de información fue realizada mediante un cuestionario con 44 preguntas cerradas y abiertas, con enlace a la base Qualtrics.

Los parámetros utilizados incluyen la no identificación de los periodistas, la selección de profesionales en áreas de riesgo físico acentuado, localizadas en región de frontera, o en espacios urbanos donde amenazas personales llegan vía internet. El objetivo es analizar las especificidades regionales y profesionales de la actividad periodística y verificar las dinámicas de los estudios de campo sobre la base de los resultados preliminares.

Hughes et al. (2017:4) sostienen que "unos pocos estudios han examinado empíricamente cómo la violencia contextual, la inseguridad pública y la desigualdad económica influyen en los entornos de trabajo de los periodistas en las democracias." En Brasil, el ambiente de inseguridad ha generado mayor violencia y el trabajo del periodista es fuertemente influenciado por dicha situación. Estos son los puntos centrales para este artículo.

Title: Melodrama and television news: a methodological proposal to measure arousal, enjoyment, identification and emotional contagion and their relationship with news recall

Session Type: Individual submission

Authors:

Name: Constanza Mujica

Email: mujicaholley (at) gmail.com

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Name: Ingrid Bachmann

Email: ibachman (at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Abstract: Several authors criticize current journalism for its simplification of issues through its focus in personal stories and the intensification of emotional content (Franklin, 2005). According to these definitions, the information media have lost quality and have moved towards the trivialization of public discourse (Blumler y Gurevitch, 1995). The omission of significant events is understood as an oversight in the discussion of public affairs (García-Avilés, 2007), indispensable for the preservation of democracy (Gripsrud, 2000).

In the other pole, some argue that the despise for personalized and emotional contents is rooted in an “excessively rationalist model” (Uribe, 2007). They contend that it does not acknowledge the role of emotions in cognitive processes (Damasio, 2005) and their potential to increase the levels of comprehension to involve and implicate citizens through the integration of data in a subjective level (Uribe, 2007).

The procedures described by both groups can be linked to the Latin American tradition of melodrama studies. Those descriptions consider some of the characteristics of traditional melodrama as detailed by several authors (e.g. Martín Barbero, 1995): archetypical characters; pathetic enuntiations and visualization of pain, presence of rhetorical figures of excess, focalization on the personal and domestic.

In a prior experiment, we determined that the use of melodramatic resources is not detrimental to the recall and comprehension of journalistic information. Melodramatic news were perceived as more interesting and attractive, and favored higher recall (Mujica y Bachmann, 2018).

Given the prior research’s scope the assessment of the factors that explain that positive was not possible. Literature proposes four mediators to explain them: arousal (Lang et al., 1999), enjoyment (Vettehen et al., 2008), identification (Fuenzalida, 2002), and emotional contagion (Bas y Grabe, 2015).

The current paper will present an experimental methodology that considers the operationalization and measurement of these variables and of information recall and comprehension.

It proposes the use of a 2 (socioeconomic status of participants) x 2 (low or high level of melodramatic treatment) design. The number of male and female participants will be equivalent so as to control gender effects. The experiment considers the elaboration of news stories about four different topics. For each of these stories two versions were edited with two different levels of

melodrama. Every participant will be exposed to four stories, two with high levels of melodrama and two with low levels of melodrama. In the current presentation one of the pairs of stories will be shown to exemplify the ways in which melodramatic levels were controlled.

We will also present an instrument that includes self-report measures of the effects. It considers the contributions by Bas y Grabe (2015), Grabe et al. (2015); Vettehen et al (2008), Igartua y Muñiz (2008) y Myrick y Wokdynski (2015), among others.

This methodological proposal intends to contribute in the study of media effects, specifically on the study of information recall and comprehension. This experimental outlook seeks to add relevant data to the mostly normative discussion on the journalistic quality (or lack thereof) of melodramatic news coverage.

Title: Indian Journalists Speak: A Localized Understanding of Their Views on the Extrinsic and Intrinsic Dimensions of Journalism

Session Type: Individual submission

Authors:

Name: Jyotika Ramaprasad
Email: jyotika (at) miami.edu
Country: US (United States)
Affiliation: University of Miami

Name: Thomas Hanitzsch
Email: thomas.hanitzsch (at) ifkw.lmu.de
Country: DE (Germany)
Affiliation: University of Munich

Abstract: In contrast to the oft-used hegemonic perspective, and thus evaluation, of non-Western journalism found in most journalism studies research, this paper takes a kaleidoscopic view to explore journalism in India as organic to its local origins. The paper provides views of 527 Indian journalists from big and small towns, English and local language media, a spectrum of media types, private and government, on the extrinsic influences they face and the intrinsic values they espouse. The Indian journalistic context is complex—enormous, fragmented by language, region and politics, and characterized by political parallelism, market logic, and values about journalism as both independent and serving social change. The findings have a similar complexity.

The method used was survey. Data was collected (by 2015) on extrinsic and intrinsic dimensions, using a five-point Likert scale measuring agreement with statements. The variables constructed from the statements were emergent rather than imitative of previous studies.

Overall, journalists indicated the greatest influence from procedures (access, laws, resources, time limits) and the least from political factors (government, business); subscribed to the interventionist (influence social change, public opinion), accommodative (entertain/orient audiences), and monitorial role to about the same degree (above average) and much less to a collaborative (support government) role (below average). They espoused absolutist ethics to a high degree and subjectivist (personal decision making) ethics the least (about midpoint); and trusted regulatory (courts, police) institutions more than they trusted representative (government) institutions.

Key differences that emerged were: journalists from state media embraced more collaboration; private media journalists were ethically more exceptionist; older, better paid journalists perceived greater autonomy, were ethically less absolutist, and indicated greater political influence and smaller organizational and economic influences; and journalists who valued religion were ethically more absolutist and subjectivist, more collaborative, and perceived greater personal networks' influence.

This is evidence of the sheer complexity of the Indian journalistic scene. The state media feel social responsibility and thus collaborate, and private media espouse market logic that fosters exceptions to absolutist ethics. The younger workforce that joined the exploding media market post-liberalization faces precarity and hence less autonomy, and given their junior positions feels

organizational and economic influences but not political influences because these do not filter down. In contrast, the older guard, in higher positions, are subjected to the pressures of political parallelism from owners and senior management. In this collectivistic country, where the professional and the personal often mix, those journalists with greater value for religion feel either a duty-bound ethical absolutism or subjectivism, are more collaborative and perceive more personal networks' influence. Further evidence of complexity was found in the lack of a pattern in the relationship between extrinsic and intrinsic factors.

The study is important because while India represents "the rise of the rest" of the world, there is a scarcity of large, systematic, empirical studies of Indian journalists, that are also quantitative, largely because data collection of the type represented by this study--based on a random sample with a small margin of error--is very difficult in India.

Affiliation: University of East Anglia

Abstract: How do Chinese conceptualisations of dignity, peace and harmony shape humanitarian reporting found in the output of the Chinese satellite TV network, CGTN, and the wire agency, Xinhua? In what ways is this journalism informed by President Xi's increasingly centralised approach to public diplomacy, which culminated in his announcement that all international media were to be amalgamated into a single 'Voice of China'? And what do journalists do when there are conflicts between their own values, practices and priorities, and those of the Chinese state? This paper discusses data drawn from a global study of humanitarian journalism, including extensive content analysis, ethnographies, and semi-structured interviews with nearly 200 journalists around the world. Although the "humanitarian emergency" has been widely believed to be a Western construct, we found that Chinese international media are some of the most prolific providers of this kind of humanitarian reporting. This is because of the ways in which it allows Chinese news organisations to avoid potentially "controversial" political issues, including discussions of the causes and contexts of suffering. Indeed, humanitarian reporting was found to be key to China's efforts to make friends across borders by promoting itself as a bringer of global order and cooperative partnership between developing countries – in opposition to the imperialistic rescue narratives of the West.

Thus the newsgathering practices of journalists working for Chinese international media are profoundly different: with states, rather than non-governmental actors, being viewed as being the primary humanitarian actors. In particular, journalists were expected to prioritise positive narratives about Chinese aid workers or peace-keepers, as well as the constructive measures taken by their diplomatic allies. But our study shows that Chinese international media were not monolithic; rather, editorial control could be surprisingly patchy, varying across space, time and language.

Both Chinese and non-Chinese journalists took advantage of this: actively engaging in strategic position-taking to evade the harshest restrictions, or making compromises with their Chinese managers. However, they also carried out hidden transcripts of partial subversion; and sometimes

even came together in acts of collective defiance, in order to uphold their own journalistic and humanitarian values. We conclude that this demonstrates that even in the most tightly-controlled media, journalists actively engage in boundary-work with their funding state according to their own ideas of integrity and truth-telling.

Title: Twitter, elections and ambient journalism in South Africa

Session Type: Panel Submission

Authors:

Name: Tanja Bosch

Email: tanja.bosch (at) uct.ac.za

Country: ZA (South Africa)

Affiliation: University of Cape Town, South Africa

Abstract: Globally, Twitter and other social networking sites have changed the way journalists practice their craft; with Twitter in particular used to disseminate news, but also used as a news source and research tool. Hermida (2010) has referred to the shift in the relationship between audience and journalists as ‘ambient’ journalism – i.e. fragmented and omnipresent journalism which is a collective effort involving producer and consumer. Social media and ICTs have come to play a key role in political resistance and activism across Africa, and their role in journalism has also become more prominent with the growth of the mobile internet making internet access more widespread.

Twitter has grown into a vast news and information network, creating opportunities for user-generated content sharing. However, journalists play more of a gatekeeping role, and journalists and media organisations are often at the centre of Twitter communities and debates, with users frequently retweeting posts from established individuals or organisations. In the South African context specifically, there are several political factions with respect to political discourse on Twitter, including mainstream media, black nationalists, the white right, liberals, international left and South African left etc. Within the context of the upcoming 2019 national election in South Africa, the growth of fake news and contested truths; the proposed paper explores how journalists (and citizens) use Twitter for election related discussion and debate; and whether social media journalism serves human dignity, ethics, responsibility and ‘truth’.

Using a mixed methods approach comprising social network analysis and qualitative content analysis of a sample of tweets from prominent journalists’ social media feeds, the paper explores how South African journalists negotiate professional norms and practices. Moreover, it will consider what role journalists play in the social media news ecosystem at election time, with specific refer to gatekeeping, partisanship, and personalization; and how Twitter may be changing normative journalistic practices.

Title: A model proposal to assess the relationship between journalists' labour conditions and journalistic performance

Session Type: Individual submission

Authors:

Abstract: This paper presents an analysis model proposal to evaluate the relationship between journalists' labour conditions, especially the precarity of work, and performance, by means of quantitative measurements and exploratory data analysis using statistical techniques. The measurements are derived from a set of questions supported by literature reviews and applied to professional Brazilian journalists. Answers are compiled into a matrix of indicators that are then filtered, grouped, and normalized before composing the indexes used in the analysis.

With this model, it is possible to do inferences about three dimensions related to intrinsic work conditions of journalists: intensity and work environment; performance on journalistic practice and satisfaction with work. The first group is the result of questions about routine, type of contract, work time balance etc. The second group presents information on decision making, influences on work and autonomy etc. The last group analyses the well being of each worker. Those three dimensions are then submitted to correlation analysis, enabling the assessment of the relationships between work conditions and performance. In a pilot experiment with Brazilian journalists, the model exhibited medium to high levels of correlation. The study is part of in-progress doctoral research at the Federal University of Santa Catarina, Brazil, whose main goal is to understand how the journalists' labour conditions can interfere with the quality of news. The model proposed in this paper will be complemented with a content analysis.

The research is based on previous studies about precarity of work (HARVEY, 1992; MÉSZÁROS, 2011; ALVES, 2013; STANDING, 2014; ANTUNES, 2015; SENNET, 2015), journalists' labour conditions (SCHUDSON, 1981; ACCARDO, 1995; GARCIA, 2009; WEAVER; WILLNAT, 2012, 2014; MICK; LIMA, 2013; FIGARO; NONATO; GROHMANN, 2013; ÖRNEBRIG, 2016; MIRANDA, 2017; HANITZSCH; HANUSCH, 2017), job quality (BUSTILLO et al, 2011; EUROFOUND, 2012), and journalism quality (PICARD, 2000; MARINHO, 2011; MOMPART, 2013; ANDERSON, 2014; LACY; ROSENSTIEL, 2015).

The media business had become the stage of pressures relative to the audience, performance, results, cuts, and layoffs. The professionals are underpaid and overwhelmed, had purchasing power decreased, quality of life deteriorated, and are more prone to physical and psychological illnesses (ACCARDO, 1995). Örnebring (2018, s.p.) defines precarity in journalism as "the new normal". In Brazil they are suffering "a strong deterioration of working conditions" (MOREIRA, 2017, p. 4):

76.1% had their average working hours increased and 57% claim that the credibility of journalism is decreasing.

It can also affect ethics principles (FRIEND; SINGER, 2007), media transparency (CHRISTOFOLETTI, 2010) and credibility (CARRO, 2016). For example, in the United Kingdom, 25% of journalists admitted to had published some information without checking it due to lack of time (THURMAN et al, 2016). Thus, it is necessary to advance on methodologies and research models capable of evaluating precarity of work and journalistic quality. The overpressure, career instability, and risks in their duty and personal life poses a negative impact on journalists performance and consequently on the quality of information that is publicized.

Keywords: journalists' labour conditions; journalism quality; precarity of work.

Title: Dimensions of Social Media Logics: Mapping the Impact of Twitter and Instagram on Journalistic Performance

Session Type: Individual submission

Authors:

Name: Alfred Hermida

Email: alfred.hermida (at) ubc.ca

Country: CA (Canada)

Abstract: There has been more than a decade of research in journalism studies on social media, with hundreds of studies examining how journalists and news organisations have adopted and/or adapted to Twitter, Facebook, Instagram, YouTube, and Snapchat (Lewis and Molyneux, 2018). The research has largely documented how social media has developed as spaces for the cultural production of news, surfacing tensions over professional control and what Bentivegna and Marchetti (2018) described as “hybrid normalization” by journalists. Much of the scholarly work examined social media through lenses drawn from journalism studies to reveal how the interaction between social media and established norms and practices, such as impartiality, verification and gatekeeping, (Gulyas, 2013; Hedman and Djerf-Pierre, 2013; Lasorsa, Lewis, and Holton, 2012; Zeller and Hermida, 2015).

Such work has been valuable in analyzing how journalists integrate social media into their daily news work. But, as Lewis and Molyneux (2018) suggest, it is time to consider blind spots after a decade of research. This paper answers that call for researchers to address the biases and assumptions that have coloured research into social media and journalism practice. It advances a conceptual map for analyzing journalistic performance on social media that takes as its starting point the materiality of a platform, cognizant that the materiality of media has always influenced, and been influenced by, practice. In contrast to previous mediums for journalism, social media spaces operate beyond of the institutional control of news organizations and outside the logic of journalism (Hermida, 2016).

This paper focuses on Twitter and Instagram as two examples of social media spaces that offer specific affordances to journalists in terms of narrative forms, textual-visual cues, and audience relations. Although the term affordances is often used to distinguish the physical and structural conditions that a particular technology offers (Hayes et al., 2016), our approach includes specific characteristics of social media platforms extend beyond technical affordances (Dijck and Poell, 2013). Specifically, it maps journalistic performance through the following dimensions of Twitter and Instagram: 1) aesthetics; 2) genre conventions; 3) Rhetorical practices; 4) Structure and design; 5) Interaction mechanisms; 6) Intentionality. Such a framework extends previous research into

journalistic performance (Mellado, 2015; Mellado et al., 2017) by adding dimensions to investigate the potential redefinitions and/or reinterpretations of established roles given the specific logics of social media platforms.

Abstract: In recent years, public dissatisfaction with and skepticism about the performance of professional news media and journalists has alarmingly increased. The public debate about journalism credibility in general and ‘lying media’ accusations in particular mainly address the question of whether journalists live up to their ideals; that is, whether journalistic values and normative standards regarding their work find their adequate implementation in the final news product that is made known to the public.

To address such questions, previous studies in journalism have analyzed the gap between role conceptions and perceived role enactment, or discrepancies between individual journalistic conceptions and the performance of professional roles for individual countries. These studies showed that the gap between ideals and practices seem inevitable due to the various external constraints that limit the possibility for journalists to fully meet their preferred professional roles in everyday practice.

Nevertheless, there is a lack of empirical studies analyzing how the gap between ideals and performance manifests itself at the level of the news organization, and across countries with different political, economic and media system contexts. At the same time, little is known about the discrepancies between reported journalistic behavior and actual practice, in comparison to the roles journalists find important to accomplish.

The investigation of the gap between journalists’ perceived role enactment and media performance has important implications for journalism as a profession, as it sheds light on the potential discrepancies between what journalists claim to do and what is actually performed when reporting the news – hence, discrepancies that are pivotal to recent public and academic debates about the social responsibility and credibility of contemporary journalism.

To better understand the forces driving such discrepancies, the present study analyzes the professional behavior of individual journalists within a broader organizational and societal context. Based on standardized operationalizations of the disseminator, watchdog, loyal-facilitator, civic, service, and infotainment roles, journalists’ reported role enactment was measured based on a survey with 643 journalists from 33 media organizations in nine countries - Argentina, Brazil,

Chile, China, Germany, Hong Kong, Ireland, Spain, and Switzerland-, and compared to the average performance of these roles in 19,908 content analyzed news published by their media organizations.

The results show a significant gap between perceived enactment and media performance across all six roles. In all cases, journalists assure they perform each professional role more frequently than what the average role performance rate of their respective news organizations actually indicates. For all countries and across all organizations, the biggest gap was found with regards to the civic and the watchdog role, while the smallest gap was found for the interventionist role. The data additionally revealed significant differences in the size of the gap across countries, organizations, and journalists. Most consistently, the magnitude of the gap between reported journalistic behavior and media performance depended on the journalists' individual level of perceived autonomy in the newsroom, the news outlets' orientation as either popular or elite, and the level of press freedom in the respective country.

Findings will be discussed regarding their implications for journalism as a profession in times of decreasing media trust, and the risks of relying only on journalists' self-reports when studying journalistic and media cultures.

Abstract: PRESENTATION IN SPANISH

La prensa escrita es el medio de mayor credibilidad en Colombia. Si bien no es el de mayor consumo, es el que permite profundizar y desarrollar con mayor amplitud las noticias de interés a nivel nacional. El Estudio General de Medios en el 2016 encontró que los 10 periódicos más leídos de Colombia son: El Tiempo, ADN Bogotá, Q'hubo Medellín, Al Día Barranquilla, Publimetro, Q'hubo Cali, Q'hubo Bogotá, El Espectador, Q'hubo Cartagena y El Colombiano. Dos de estas publicaciones son de carácter gratuito y circulan fundamentalmente en la capital del país. La publicación Q'hubo, que circula en cuatro ciudades de Colombia, y el periódico Al Día, son medios tabloide de carácter sensacionalista. Frente a este panorama surge la preocupación de explorar a qué contenidos mediáticos está expuesto el colombiano promedio cuando decide acceder a la información en los diarios colombianos. El objetivo de este proyecto investigativo es efectuar un análisis de contenido que permita develar la estructura informática que predomina en los 10 periódicos de mayor circulación.

Si bien la profesión del periodismo ha sido altamente ponderada incluso por el Nobel de literatura Gabriel García Márquez, cuando sentenció que el periodismo era el mejor oficio del mundo, aspectos tales como el ejercicio del periodismo y sus productos no han sido suficientemente analizados en Colombia, dejando por fuera muchos aspectos que todavía ameritan una profunda investigación científica. Algunos estudios previos han abordado temas como la satisfacción del periodista frente a su remuneración salarial (Gutiérrez 2010). Otros han explorado la cobertura de temas como la guerra, el conflicto armado y el posconflicto desde la cobertura dada por los medios a estos hechos (Tamayo & Bonilla 2014) (Barajas, 2016). Así mismo encontramos estudios que exploran elementos tales como la satisfacción laboral y barreras que impiden el ejercicio de la

profesión (Arroyave & Blanco, 2005). No obstante, se evidencia un vacío investigativo en la clase de contenido que predomina en los medios informativos impresos en el contexto nacional.

Dado que el 50% de los medios de mayor circulación se enfocan en hechos violentos y tragedias ocurridas a nivel local surge el interés de explorar este tema. El presente estudio analizará los contenidos de la prensa en Colombia a través de la metodología del análisis de contenido. Se ha partido de una muestra de 3 meses a través de la figura de semana compuesta de los 10 periódicos de mayor circulación a nivel nacional. Se han identificado variables como titulación, fotografía empleada, lenguaje, extensión de noticias principales, noticias internacionales, sección de columnas de opinión, entre otros factores que ilustrarán los aspectos informativos esenciales de estos medios. Nos atrevemos a vaticinar que una porción importante de contenidos deja por fuera información relevante a nivel internacional, columnas de opinión que iluminan temas de interés nacional y además, que géneros mayores del periodismo tales como la crónica y el reportaje pasarán a un segundo plano.

Title: Revisando las características del periodismo digital bajo la mirada de los Derechos Humanos y de la accesibilidad comunicativa

Session Type: Individual submission

Authors:

Name: Marco Bonito

Email: marcobonito (at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal do Pampa - UNIPAMPA

Name: Larissa Conceição dos Santos

Email: larissa.conceicaos (at) gmail.com

Country: BR (Brazil)

Affiliation: Universidade Federal do Pampa - UNIPAMPA

Abstract: En el escenario brasileño, según el último censo demográfico (IBGE 2010), el 24% de la población residente posee algún tipo de discapacidad, en números absolutos, las personas con algún grado de deficiencia suman 45,5 millones. Este dato debería servir como referencia para propuestas de políticas públicas que respeten los Derechos Humanos y promuevan la ciudadanía de estas personas, sin embargo, las conquistas legales generalmente no se cumplen y lo poco que se hace no contempla los intereses y necesidades de las Personas con Discapacidad (PcD). A partir de lo expuesto, es necesario reconocer que la comunicación es un Derecho Humano fundamental, reconocido por la ONU y luego una persona sin acceso isonómico a las informaciones pasa a estar en situación de vulnerabilidad social y está alzada de su ciudadanía plena.

En ese sentido, el trabajo tiene por objetivo reflexionar acerca de la importancia de la formación de profesionales de comunicación con conciencia ciudadana en favor de la accesibilidad comunicativa (Bonito, 2015), ante el panorama político-legal en Brasil, en lo que se refiere al Estatuto de la persona con discapacidad (2015), que exige la obligatoriedad de la oferta de accesibilidad comunicativa en los sitios y servicios de radiodifusión (Radio y TV). Se adopta la investigación de la investigación, investigación de contextualización, la investigación bibliográfica y la investigación teórica como estrategias procesuales metodológicas para reflexionar críticamente sobre el modelo teórico del Periodismo Digital, a partir de los conceptos propuestos por Palacios (2003) y de las 7 características sistematizadas por Canavilhas (2014), a saber: (1) hipertextualidad, (2) Multimedialidad (3) interacción (4) memoria (5) Instantaneidad (6) Personalización y (7) la ubicuidad.

A pesar de la contribución presentada por los autores, se observa que el campo de investigación en Periodismo Digital aún no discutió debidamente las cuestiones de la Accesibilidad Comunicativa como una de las características fundamentales y esenciales de los Modelos Teóricos del Periodismo Digital. En este sentido, este artículo se propone a problematizar inicialmente esta necesidad, sugiriendo la inclusión de la Accesibilidad como parte integrante del modelo teórico, es decir, como una octava característica esencial a la reconfiguración del modelo de producción web-periodística, en pro del respeto a la diversidad funcional humana, sus derechos a la comunicación isonómica, promovidos por la Declaración Universal de los Derechos Humanos (ONU, 1948) y en virtud de la Ciudadanía Comunicativa (Mata, 2014). Para ello, presenta una reflexión crítica a partir de los

contextos históricos y sociopolíticos de las personas con discapacidad en Brasil, así como relaciona las cuestiones a los Derechos Humanos en la perspectiva de la promoción de la Ciudadanía Comunicativa.

Por último, comprendemos que la reflexión teórico-crítica y la enseñanza en periodismo, a través de una educación comunicativa inclusiva, contribuyen directamente a la formación de sujetos comunicantes con conciencia ciudadana y al desarrollo de procesos comunicacionales accesibles que puedan transformar el ethos mediático a lo largo tiempo.

Abstract: La industria periodística mexicana ha tenido una transformación profunda debido a los nuevos espacios digitales para la difusión de información; a cambios importantes en la comercialización de productos informativos, y al impacto de fenómenos mediáticos como la desinformación y las llamadas noticias falsas (Ireton & Posetti, 2017). Las empresas periodísticas tradicionales han perdido no solamente buena parte de sus ingresos debido a cambios en la manera de publicitar productos y servicios por parte de las organizaciones, sino también han perdido la confianza de lectores y consumidores de información por el surgimiento de empresas que hacen uso de nuevas narrativas multiplataforma y transmediáticas, las cuales proporcionan mayor confianza y veracidad, tratamiento ético (Zion & Craig, 2018 ; Friend & Singer, 2007) en sus contenidos, mostrado con ello, ser más atractivas sobre todo para los consumidores de información más jóvenes. Estas nuevas empresas periodísticas se han adaptado a los cambios en el consumo de las narrativas informativas (Hill & Bradsaw, 2018) y han sorteado con éxito los problemas financieros de las empresas tradicionales, muchas de las cuales se han visto resistentes a los cambios y han mostrado poco conocimiento del contexto digital.

En esta investigación se analiza de forma cuantitativa, a través de encuestas, y cualitativa, con la realización de focus groups, entrevistas a profundidad y análisis de contenido; el impacto social, político y cultural en jóvenes universitarios de la Ciudad de México de seis propuestas de periodismo alternativo (Martínez & Sierra, 2012) digital: animalpolítico.com, sin embargo.mx, culturacolectiva.com, sdpnoticias.com, pijamasurf.com y sopitas.com.

Abstract: Media representation of the migrations, migrants and refugees has been an important area of media studies. It gained momentum with the emergence of the pan-European crisis caused by the abrupt incoming of the refugees from the Middle East in 2015. Severe humanitarian, economic, political and security issues have prompted the re-examinations of the interdependence between media representation and the public perceptions of refugees. Recent research show that media coverage in the EU countries, has been mostly focused on the negative consequences of the arriving of refugees and the elite voices (Hovden, Mjelde & Gripsrud, 2018). Usually “voiceless” refugees are represented as “threat” to cultural values, economy and security of the host countries (Smets & Bozdağ, 2018), and framed either as “vulnerable” or as “dangerous outsiders” (Georgiou and Zaborowski, 2017). However, most of the research examines media representation of refugees, while the media framing of crisis is underexplored. Furthermore, academic evaluation of the media coverage outside the EU countries is still limited. Therefore, this paper aims to contribute to the existing scholarship by examining media framing of the refugee crisis in Serbia.

Based on inductive reading of media texts and previous studies (Benson & Wood, 2015; Kim et al, 2011) we have pre-defined: three “problem” frames – discussing challenges for political system, society and refugees; two “causal” frames – ascribing (un)legitimate causes to migration; and two “solution” frames – introducing humanitarian/defensive measures for solving the crisis.

Additionally, we have examined whether the problem and solution frames were assigned to the external (outside Serbia) or internal (Serbian) actors. We have analyzed sampled media text from main national TV and print media in period 2015 -2017, totally 2089 texts. Our results show that refugee crisis was dominantly framed as problem for refugees in external political systems and societies, which usually exercised defensive solutions, while response to crisis of the Serbian government was highly “humane”. Furthermore, our study demonstrates significant presence of refugee voices in comparison to other European media. Such findings are interpreted within previous conclusions according to which media and political debates are nationally contextualized in relation to: transit/destination position of the country; past experiences with seeking or offering refuge; and strength of right wing political actors (Triandafyllidou, 2017).

Title: Caracterización, encuadres, fuentes y agendas en el cubrimiento en medios nacionales del proceso de paz y el postacuerdo en Colombia 2013-2018.

Session Type: Individual submission

Authors:

Name: Mario Morales

Email: moralesm (at) javeriana.edu.co

Country: CO (Colombia)

Affiliation: Profesor asociado Universidad javeriana

Abstract: (PRESENTATION IN SPANISH)

Luego de dos años de implementación de los acuerdos, fruto de un diálogo de 60 meses entre el gobierno colombiano y la guerrilla de las Farc, y la llegada de un nuevo gobierno del partido de oposición, el proceso de paz está en crisis. Una investigación, fundamentada en un observatorio de medios, monitoreó de manera simultánea y censal cerca de 21 mil piezas periodísticas publicada o emitidas en los medios nacionales de prensa y televisión Colombia, con el fin de caracterizar temas, fuentes, narrativas, estéticas, encuadres y tratamiento informativo del cubrimiento realizado al acontecimiento más importante de Colombia en el último medio siglo.

La ingente investigación, desde la perspectiva de los estándares de calidad periodística, que se dividió en 10 fases, al tiempo que aportó una metodología dinámica y flexible, para adaptarse a los constantes cambios propios de un proceso de paz, ha entregado resultados parciales a manera de insumos para reflexión y debate de medios, periodistas, investigadores, docentes y estudiantes de periodismo.

Una vez concluido, el proyecto permite el análisis consolidado, tanto cuantitativo como cualitativo, del valor agregado periodístico de los medios mencionados, que contempla 7 ejes que van desde el contexto, adecuación y coherencia informativa, el origen de la información, la base investigativa, la tematización, el manejo de las fuentes, hasta las formas utilizadas, la ética periodística y el encuadre de cada una de las piezas periodísticas. En el instrumento de análisis se establece la distinción entre la producción informativa y la formación de opinión, contraste que permite evaluar de manera independiente la calidad en el cubrimiento de registro, por un lado, y la pluralidad en el debate y análisis de los hechos por otra parte.

El proyecto encontró carencias sensibles en la manera como construyeron los medios audiovisuales y escritos sus agendas, sus narrativas y sus estéticas en medio del conflicto armado, que se mantenía latente en medio de las negociaciones, y la posterior implementación de los seis puntos acordados; así mismo, la investigación responde inquietudes que se suscitaron a lo largo de estos 7 años en relación con los enfoques distintos y encuadres diferentes en el cubrimiento de cada medio; con los desafíos éticos y referentes de calidad, con el periodismo a favor de la paz o la guerra en este cubrimiento; con los imaginarios y representaciones que construyeron dichas narrativas informativas y de opinión; y, finalmente, establecer el saldo pedagógico para periodistas, medios y academia.

Los indicadores de la matriz de análisis han sido contruidos a lo largo de 14 años de trabajo investigativo durante los cuales se han realizado 15 proyectos de observatorios de medios sobre distintas temáticas, con base en las teorías periodísticas como la Agenda Setting, Framing, Noticiabilidad, Calidad Periodística y fundamentos deontológicos con apoyo en ciencias sociales.

Title: Youth Poverty and Precariousness as a Social Trend. The Role of Media Discourse in Representing Urban Inequality.

Session Type: Individual submission

Authors:

Name: Marta Castillo

Email: mcastilloglez (at) gmail.com

Country: ES (Spain)

Affiliation: Autonomous University of Madrid

Abstract: Impoverishment and deprivation processes have emerged as salient themes in Spanish media discourse after economic crisis, to the point of constituting what sociologists have coined as new poverty (Armstrong, 2018; Bauman, 2004; Goode & Maskovsky, 2001). In the light of the increasing media production on the so-called new poverty, this paper seeks to capture the emergence of the phenomenon, shedding light into the constitutive features of this new social (and media) understanding of poverty within the city of Madrid (Spain).

By taking an innovative theoretical framework, that draws on discourse studies and by establishing an interdisciplinary dialogue with both communication and interpretive sociology, this proposal is concerned with the aestheticized depiction of young adult new poor (16-29) in the digital media ecosystem. To that end, the research is intended to analyze on the one hand i) the discursive (re)construction of the processes of impoverishment affecting young adult urban sectors in online press, ii) delving into the power mechanisms and the technologies of the self (Foucault, 1988) that permeate such discourses and iii) determining their social effects.

In doing so, stylization understood as the “knowing deployment of culturally familiar styles and identities that are marked as deviating from those predictably associated with the current speaking context” (Coupland, 2001: 345) emerges as one of the most recurring resources deployed by digital press when addressing social inequality and precariousness at the present time. In this respect, the paper focuses on the particularly aestheticized and stylized representations of the precariat (Standing, 2011) that frame youth impoverishment and precariousness as a fashion, a social trend or a lifestyle to be follow amidst young disadvantaged collectives, thus promoting an array of role models to adhere.

Title: The journalism of rape: an analysis of the news reportage of sexual violence in India

Session Type: Individual submission

Authors:

Name: Einar Thorsen

Email: ethorsen (at) bournemouth.ac.uk

Country: GB (United Kingdom)

Affiliation: Bournemouth University

Name: Chindu Sreedharan

Email: csreedharan (at) bournemouth.ac.uk

Abstract: At least 125 rapes are reported to police every 24 hours in India, with sexual violence either ignored or sensationalised by the news media. Despite this, there has been only limited attempts to understand the issues and challenges involved in the news reporting of sexual violence in India. Fadnis' (2017) research that focussed on the 2012 Delhi gang rape case identified a highly patriarchal newsroom environment, repressive working conditions for female crime reporters, and male reporters who lacked the mindset to pursue diverse story angles. This is echoed by Kanagasabai (2016) and Pain (2016), who looked at urban newsrooms of mainly English publications. Taking a broader view to account for the diversity of India's newsrooms and the culturally specific challenges facing journalists regionally, we present findings from one of the largest multi-language studies on the representation of sexual violence: Media Action Against Rape (MAAR).

We begin with an analysis from a comparative content analysis, covering ten newspapers across six languages for a three-month period (June to August 2018). We compare how victims and accused are described, the location and type of rape crime, and which sources are mentioned or afforded a voice in relation to rape and sexual violence. We uncover distinct variations in news reporting in different regions and languages, which reflect the complex media landscape and cultural differences across India. These differences highlight the need for a more nuanced approach to media representation and sexual violence, and provide evidence for the need for targeted interventions.

Following this, we explore specific challenges experienced by journalists when reporting on rape and sexual violence. For this we draw on more than 180 semi-structured interviews across 13 languages conducted during 2018-2019, covering newspapers, television, radio and online journalists from the six regions of India. We explore how news reporting of sexual violence is routinised; challenges for journalists in breaking through cultural barriers; editorial direction and follow-up stories; difficulties when interacting with sources; and the need for culturally specific, gender-sensitive reporting. Our research also uncovers a significant gender imbalance in newsrooms, with respondents describing sexual harassment and assault, both in the workplace and during fieldwork as a journalist.

Abstract: En una sociedad en la que existe una sobreabundancia de información en los medios de comunicación digitales, en la que prima la celeridad y la brevedad —tanto en la producción como en la recepción de los contenidos—, donde existe una ‘burbuja de desinformación’ favorecida por Internet y las redes sociales, en una sociedad inmersa en una crisis global donde la precariedad del periodismo conduce a informaciones de escasa calidad, que no se distinguen de la infoxicación, con circulación masiva de fake news, algunos profesionales de la información se plantean ofrecer un trabajo riguroso y contrastado, no destinado al consumo rápido y que trata con respeto a sus usuarios (Blumtritt, David y Köhler, 2010). Así, surge el slow journalism, el periodismo reposado, el periodismo que trata contenidos en profundidad, al que se han referido autores como Whitworth, A. (2009); Rosenberg, H. y Feldman, C. S. (2010); Juntunen, L. (2010); Rauch, J. (2011); Brabazon, T. (2013); Neveu, E. (2014); Barranquero, A. (2013) y Rosique, G. y Barranquero, A. (2015). Un periodismo literario, cultural, creativo, de pensamiento libre, abierto, que aborda temas sociales, políticos o culturales, donde se trabajan las informaciones desde otros enfoques. En esta ponencia se analizan cinco revistas que surgen a comienzos del siglo XXI, tanto en versión impresa como digital, con un estilo innovador. Son proyectos periodísticos basados en contenido preferentemente cultural: ARCADIA (Colombia), JOT DOWN (España), LETRAS LIBRES (México), GATOPARDO (Colombia) y YOROKOBU (España). El trabajo se fundamenta en estudios de caso con una revisión de las características generales de estos medios, tipo de empresa y plantilla, utilización de nuevas tecnologías y redes sociales. La investigación añade otros aspectos cualitativos a través de entrevistas en profundidad a fundadores y profesionales de las cinco revistas culturales; todo ello ofrece una perspectiva teórica y una mirada transdisciplinar sobre el periodismo cultural narrativo. La investigación pone de relieve la prioridad de un periodismo de contenido, reposado, con temas que no forman parte de la agenda de otros medios. Este periodismo cultural narrativo se centra en la literatura, la cultura, la historia, la ciencia, la crítica, el pensamiento y la actualidad —sobre todo, tratados desde una mirada atemporal—. Sus constantes

vitales se fundamentan en el teletrabajo, la colaboración y en una red de talentos. Los fundadores de las cinco revistas hablan de ansiedad informativa, creativa y cultural. Son prácticas innovadoras de un periodismo de calidad, que sirve para interpretar la profunda transformación digital y "para pausar y ayudar a comprender esa velocidad informativa que nos habita" (Rincón, 2017).

Palabras clave: slow journalism; periodismo narrativo; periodismo de calidad; periodismo reposado; periodismo cultural.

Title: Access to information in oral cultures: Legislation vs. negotiation

Session Type: Individual submission

Authors:

Name: Terje Skjerdal

Email: terje.skjerdal (at) nla.no

Country: NO (Norway)

Affiliation: NLA University College

Abstract: Many countries around the world have passed access to information (ATI) legislation in the past decade, not least in Sub-Saharan Africa, which is the base for the current study. More specifically, the study focuses on four countries in Eastern Africa which all have embraced ATI laws lately: Ethiopia (2008), Uganda (2011), Rwanda (2013) and Kenya (2016). The aim of the study is to describe experiences that journalists in the four countries have with the new legislation, which is introduced to make it easier for reporters and citizens to search and retrieve public information. In-depth interviews were conducted with experienced reporters and editors from various media houses, mostly in the capital cities of the four countries.

Although practices with information retrieval are somewhat different between the various media cultures and media outlets, the study found common experiences among the journalists covered by the study. Firstly, although it is clear that media professionals are aware of the new legislation, access to information (ATI) requests have not become part of the daily news routine. Few of the informants, if any at all, have attended trainings in how to use the new legislation. Secondly, the journalists perceive the exemptions allowed by the ATI regulation to be so broad that officials easily can find a reason to reject an information request if they so wish. The time limit for giving the information is also seen as a hindrance. Few of the researched media houses have a practice of lodging formal complaints when an information request is rejected, even though the legislation allows such complaints. Thirdly, on the positive side, the ATI legislation creates a sense of equity between journalists, insofar as all journalists have an equal right to request information, contrasting previous times when sharing of information often was restricted to named reporters according to reputation and kinship with higher officials.

Most interestingly yet, the study points to a paradox in information retrieval practices in the researched countries: While ATI legislation, often inspired by regulation in European countries, treats information as essentially written, much information-sharing taking place between public offices and the media in East Africa and the Horn of Africa is not about exchange of documents and records, but more about negotiated oral communication. Arguably, this is one of the reasons why journalists tend not to use ATI laws very actively in their daily news work.

Abstract: Political characters play leading roles in public agendas of media outlets and social media, especially on elections time (Alonso-Muñoz & Casero-Ripollés, 2018; Cardenas, Ballesteros, & Jara, 2017; Justel-Vázquez, Fernández-Planells, Victoria-Mas, & Lacasa-Mas, 2018) and when they had high governmental roles such as presidents, prime ministers or mayors of main cities (Ette, 2017; Marland, 2012; Schlehofer, Casad, Bligh, & Grotto, 2011). In this sense, political communication researcher have approach studies about the effects of political messages on media (Conway-Silva, Filer, Kenski, & Tsetsi, 2018; Walgrave, Sevenans, Van Camp, & Loewen, 2018), the interaction between media and political candidates (Ghasemi Tari & Emamzadeh, 2018), the interactions of political journalist and their audiences (Nuernbergk, 2016), the coverage and journalistic treatment of media through political parties (Vidal, 2018) or the representation of a particular politician in the discourses of media.

Enrique Peñalosa, current Mayor of Bogotá (Colombia) have been having to cope with an unfavorable image since the beginning of his period. According to Bogotá Cómo Vamos (2017) poll, 84% of citizens have an unfavorable image of their Mayor. This sentiment through the burgomaster is common in media discourses, public opinion manifestations, social media, and some parody media outlets that, using humor and irony, critique the management of Peñalosa. One of these parody media is Actualidad Panamericana – AcPa (actualidadpanamericana.com). An independent media dedicated to publish and disseminate parody and fake news base on real facts and hard news from traditional media companies.

Peñalosa is a target that is constantly present on this media's agenda, they have published a total of 49 news about him since January 1st, date of his possession as Mayor, until October 31 of 2017, the cut-off date of the present study. We aim to understand how fake news published by AcPa frame the personal and political profile of Mayor Peñalosa and to what extent that profile is approaching or moving away of the profile presented by EL TIEMPO - ET, a traditional national media of Colombia.

Using an exploratory sequential mixed method, we first analyzed 23 news regarding Mayor Peñalosa and published on AcPa. In these phase we could identify the personal and political characteristic of Peñalosa portrayed by the satirical media. The most recurrent ones: wealthy, naïve, unrealistic, immature, untrustworthy, on the personal side; and, unfaithful, underqualified, megalomaniac, with a distant relationship with his people, regarding his political performance. With those result, a content analysis was completed on 48 news about the Mayor published on ET and 41 published on AcPa.

Our results suggested that close to what was stated by Balmas (2012), the parody news media present a negative portrait of the Politician in all of the texts studied, while the hard news media where more balance in its discourse, but with a tendency to a positive portrait of Peñalosa (74% of hard news presented a positive image). An even though in most of the characteristic the profile presented by satirical and hard news media were opposed, both coincided on presented the mayor as an unreliable politician.

Title: How does digitization lead to precarization in the field of journalism' Findings from a post-crisis context.

Session Type: Individual submission

Authors:

Name: Dimitris Trimithiotis

Email: dimitris.trimithiotis (at) yahoo.fr

Country: CY (Cyprus)

Affiliation: University of Cyprus

Name: Sophia Stavrou

Email: sofias (at) ucy.ac.cy

Country: CY (Cyprus)

Affiliation: University of Cyprus

Abstract: This conference paper aims at contributing to the discussion on the impact of recent advances in communication technology and the growth of digital media on journalistic practice. The originality of the present study is the objective to connect broader analyses of the effects of digitization of work (Brown, Lauder, Ashton, 2011) with research on the precarization of the journalistic field (Fenton, 2011). The study intends to move beyond the idea that digitization of work directly leads to unemployment for “outdated” journalists or, on the contrary, to the creation of new job areas in the field of journalism and media calling for training in new technological skills. Rather, it suggests that digitization operates in more indirect ways, by bringing changes in the journalistic practice, methods, temporality, markers of achievement, as well as in the journalistic content itself and its principles of selection, and broader journalistic roles (Hanitzsch, 2007). More specifically the study shows that the development of online technologies has transformed practices of news production and circulation opening up new possibilities for journalism in terms of time and space. However, at the same time, digitization brought a standardization of journalistic work leading, in turn, to a de-professionalisation of work skills. The latter has as consequence the de-skilling of journalism graduates and practitioners, contributing to turning the journalistic field into a particularly precarious working environment. This is predominantly the case in contexts strongly hit by the economic crisis. Taking as example the case of the Cyprus context, the discussion rests on empirical research based on 45 in-depth semi-structured interviews with graduates and employers in the media field, conducted in 2017-2018 in Cyprus, and complemented by statistical secondary data.

Title: The (Post)colonial Nation ' How journalism shapes national identities in South Asia and the UK

Session Type: Individual submission

Authors:

Name: Antje Glück

Email: A.Glueck (at) tees.ac.uk

Country: GB (United Kingdom)

Affiliation: Teesside University

Name: Anirban Mukhopadhyay

Email: anirban3 (at) illinois.edu

Country: US (United States)

Affiliation: University of Illinois

Abstract: Journalism is a central institution for constituting collective memory and shared identities in contemporary societies. Taking the “nation” as a starting point, journalism is essential in supporting and enhancing the constitution of shared memories, grand narratives and “imagined communities” (Anderson, 1991; Zelizer & Tenenboim-Weinblatt, 2014).

This turns especially relevant when looking at the intertwined past of the United Kingdom and India. Their shared history as colonizer and colony, as former British Empire and subordinate colonial subject reflects essentially within their public and media discourses, which are marked by mutual observations, references, emotions, and interpretations of a common (post)colonial past.

Seen from a decolonizing perspective, the Indian sphere uses these references to the UK and its current politics to emancipate from the former colonial power and as reference to determine one's own identity (Mishra, 2019; Nandy, 1983; Tharoor, 2017). On the British side, the year 2017 was marked by journalistic remembrance of the partition of the Indian subcontinent in 1947. Both events appear as traumatic; constituting turning points in each nation's re-examination of what national identity constitutes and how it is shaped by the other.

The conference paper examines these tensions, asking how journalism (re)shapes national identities in interlinked countries. The study draws on a sample of newspaper opinion pieces (through LexisNexis), talkshows (through broadcasting archives) and news reports of major British and Indian print and television outlets, which will be analysed using Foucault's Critical Discourse Analysis. This is combined with interview statements of around 50 journalists across the two countries together with an analysis of their activities on Twitter, reflecting about their way of covering topics around the “nation” more in detail. The cross-national comparative approach incorporates two very different media settings and elite discourses, with India being known for a dramatization and sensationalism of news while the UK follows a more reserved approach.

The paper shows that notions of journalism are not universal, but translate into cultural specific norms of journalistic performance and self-understanding.

Title: Monitoring metrics on mobile: The use of analytics within the Australian Broadcasting Corporation's Mobile Team

Session Type: Individual submission

Authors:

Name: Catherine Young

Email: catherine.young (at) uqconnect.edu.au

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: The digitalisation of journalism has fundamentally changed the way in which journalists understand and access their audience. The journalist-audience relationship has been redefined by audience analytics: sophisticated online tracking tools that reveal detailed information about audience members and their preferences. Analytics software present new opportunities for journalists to reach, target, and understand audiences. A growing body of evidence suggests that analytics tools are becoming a common feature of digital journalism. Metrics are now widely collected and distributed within newsrooms and play a substantial role in informing news content and driving editorial practice. Simultaneously, the online medium has facilitated the emergence of 'new' news providers (Humprecht & Esser, 2018). Audiences have become fragmented as news is now distributed by many publishers across many digital platforms (both journalistic and non-journalistic), including websites, automated news bots, chat programs, mobile apps, digital assistants, virtual reality apps, and social media (Newman, Fletcher, Kalogeropoulos, Levy, & Nielsen, 2017; Singer, 2017). Consequently, the media environment has become saturated and highly competitive.

However, limited scholarship has explored the relationship between audience measurement and diverse publishing platforms, especially in the context of news and chat apps (Zamith, 2018). Additionally, little is known about the range of data that is collected across different platforms, and how such data might be incorporated into newsroom strategy and journalistic production. This paper addresses these gaps and contributes to our understanding of journalists' use of audience analytics through an ethnographic exploration of the Australian Broadcasting Corporation's Mobile Team. This editorial team is responsible for the publication of news across the organisation's mobile platforms: a Facebook Messenger chatbot, Apple News and the organisation's own ABC App.

Through participant observation and semi-structured interviews, the study investigates mobile journalists' use of audience metrics to determine how such data (along with organisational context) shapes journalists' conception of their audience, including what types of audience data are collected and how, and how audience data is analysed and interpreted. It also seeks to understand how journalists' understanding of the audience influences their use of digital platforms and the news production process. The researcher spent three weeks at the ABC News Digital headquarters in Brisbane, Australia. During this period, the researcher observed the daily activities and conversations of journalists within this team and attended both editorial and team meetings. Bourdieu's field theory is employed as a theoretical framework. Specifically, this study approaches

the audience as journalistic capital, in order to investigate how analytics tools shape journalists' perceptions of the audience and how journalistic practice and news production may be shaped around the types of audience-based capital that journalists aspire to accumulate. Findings from this research will help to characterise current newsroom use of analytics data in the context of mobile news dissemination, and examine the impact of such data upon editorial strategy and future journalistic practice.

Title: Limits and areas: What is permissible and what is not for women in the city

Session Type: Individual submission

Authors:

Name: Ozgun Dincer

Email: odincer (at) media.ankara.edu.tr

Country: TR (Turkey)

Affiliation: Ankara University Faculty of Communication

Abstract: This study mainly aims to understand what extent do the discourse spreading in social media is reflected in the mainstream media.

In recent years the rate of violence against women has shown a remarkable increase in Turkey. The lack of regulations to protect women is likely to increase this trend. Especially through social media, non-governmental organizations have made significant efforts to attract public attention to the increasing rate of violence against women and to raise awareness of women's rights. Thanks to these efforts public awareness and reaction to such issues has remarkably changed. Ordinary people have started to support campaigns and initiatives that draw attention to these issues through social media; thus it becomes one of the key tools for those who want to discuss a neglected issue and provide support for the necessary legal arrangements.

On the other side, in parallel with socially and politically increasing conservatism, some people who are in front of the public use conservative language in their speeches. How women should be and behave in private and public spaces, especially in public spaces in city life where they meet other men (who are not family members). Such as how women should be dressed on the street, how they should behave, what they can or can not do.

The aim of this study is to investigate, what kind of language the mainstream media use? Is it a language that reflects the growing interest in the society or in parallel with the increasing political conservatism is it a language used by some actors.

Turkey's five largest newspapers to be selected for this study. The news published in the last three months of 2018 will be analyzed through critical discourse analysis and the extent to which discourses in social media reflect on news discourse will be analyzed.

Title: Evolving barriers to investigative journalism in Latin America: an intra-regional analysis of influences

Session Type: Individual submission

Authors:

Name: Vanessa Higgins Joyce

Email: vhjoyce1 (at) txstate.edu

Country: US (United States)

Affiliation: Texas State University

Abstract: Investigative journalism in Latin America moved from the shadows to the mainstream media as democracies replaced the authoritarian and dictatorial governments of the 60s and 70s. From exposés that brought down corrupt governments, to cross-country collaborations investigating big pharma's influence on health access, Latin American investigative journalists experienced success in recent years. However, their working environment is not entirely free of barriers. A 2013 study found that journalists in the region still experienced pressures from powerful elites in the region, a maintenance of clientelist practices. More recently, Latin America has experienced a boom in digital-native, entrepreneurial news organizations, many of which were seeking more independence.

This study analyzes the influence of organizational and social institutional forces on individual's (journalists') perception of barriers to the practice of investigative journalism. It tests for the varying degrees of influence of the different levels, within a media sociology approach. It surveyed 1094 journalists from 20 Latin American and Caribbean countries in December 2017. The questionnaire was designed in English, translated into Portuguese and Spanish, and distributed to approximately 15,000 subscribers to a database of journalists, journalism students, and educators of a nonprofit outreach program of the author's Research Unit. This database included 7,467 Spanish-speaking subscribers and 8,039 Portuguese-speaking subscribers. The survey included journalists, journalism professors and student. This current study focuses on the perceptions of journalists only. An earlier qualitative analysis had found that journalists in Latin American were perceiving influences in their investigative work stemming from different levels of influence. This study categorized barriers to investigative journalism as "attacks/pressures," "lack of resources," "lack of training," "editorial constraints," "issues with sources/ data-related issues," and "lack of independence." It analyzed if journalist's media platform, categorized as "digital native/online only" and "non-digital platforms" influenced their perceptions of barriers to the production of investigative journalists. It also analyzed if the ownership of the media organization the Latin American journalists were working for, categorized as "private/commercial," "government/political," "non-profit/cooperatives" influenced their perceptions of barriers to the investigative journalism production. It found neither media platform nor media ownership to be significantly related to journalists' perception of barriers to investigative journalism in the region. It then looked if there were different regional differences that could account for differences in the perceived barriers to investigative journalism in the region. This study combines the 20 Latin American and Caribbean countries into five Geo-cultural regions, more specifically Brazil, Mexico, Central America and Caribbean, Andean and Southern Cone. It found significant differences in how journalists from these five regions within Latin America perceived barriers to the production of

investigative journalism. Journalists from Mexico were more likely to indicate “attacks/pressures,” while journalists from Brazil were more likely to indicate “lack of resources,” and journalists from Andean countries more likely to mention “access and credibility of sources/data.” These findings indicate that, while organizational level influences may restrict journalist production and shape content, influence of those social institutions in those five Latin American Geo-cultural regions may be restricting the production of investigative journalism, so relevant in democratic societies.

Title: The Localization and Conceptualization of Convergence: The Historical Remapping of Digital Journalism Education in China

Session Type: Individual submission

Authors:

Name: Weihua Wu

Email: weihua.wu (at) cuc.edu.cn

Country: CN (China)

Affiliation: Communication University of China

Name: Xiangmin Zeng

Email: weihua.wu (at) cuc.edu.cn

Country: CN (China)

Affiliation: Communication University of China

Abstract: Many studies have been noted about the challenges that communication professionals and journalists have faced on their journey into the digital age in China. But in some ways, digital journalism educators have had it even harder. It's one thing to learn to communicate via new media and platforms, but quite another to teach hundreds of students how to encounter with the new possibility and difficulties of storytelling, ethics and accuracy from a brand-new techno-driven perspective, not to mention the ideology situated within the Chinese journalism education with Marxism-view.

First of all, this article examines the rise and transformation of digital journalism education in China with an emphasis on the localization and conceptualization of media convergence. After providing background on China's demographic and telecommunications landscape, the article reviews the discussion and debate of China's re-conceptualization of media convergence in scholarship which has impact on the following response of college-based curriculum-redesign and the rise of majors in relation to the practice of digital journalism in China.

Secondly, this article also remaps the complicity of the return of ideology to China's digital journalism education. While much attention has been devoted to the government's regime of regulation and control, this article takes a socio-cultural approach, drawing from historical examination to understand how various pedagogy discourses and policy of high education have been articulated to the uniqueness and the "Chineseness" of digital journalism education in China.

Within a speeding-up technological environment, a highly commercialized socialist society, and the party-journalism education discourse, the emergence and transformation of digital journalism education has opened up new spaces for understanding the socio-cultural image of China.

Title: Trust in Journalism. Need for Differentiation

Session Type: Individual submission

Authors:

Name: Bernd Blöbaum

Email: bernd.bloebaum (at) uni-muenster.de

Country: DE (Germany)

Affiliation: University of Münster

Abstract: Trust in journalism and the media is analysed in many studies in a very general way. (Edelman 2019, Eurobarometer 2018) When media and journalism are surveyed as a general construct or as a collective category, it remains unclear what the respondents exactly mean when they answer the respective question. Therefore, the literature on media trust repeatedly demands a more differentiated approach to measuring trust in journalism (Blöbaum 2014; Dietz et al. 2006; Fisher 2018). What do recipients rate when asked about media Trust: the media system? Individual media formats such as TV, radio or press? Do they think of specific fields of coverage such as politics, business or sport? Do their answers relate to journalists as a group or particular journalists or to specific topics?

In order to find answers to these questions, representative surveys were conducted in Germany in 2017, 2018 and 2019 (N: 1017 - 1044). In these surveys, the references of trust were differentiated on four levels:

- Level of the media system (trust in the media)
- Level of media organisations (trust in specific programmes)
- Journalist level (trust in journalists in general and trust in well-known anchormen)
- Level of journalistic topics (trust in media content)

The study was conducted as a standardised online survey and is a representative survey of people between the ages of 14 and 64 with Internet access in Germany (Online Access Panel).

The results demonstrate the necessity of a differentiated view on media trust. The figures determined for trust in journalism differ, in some cases considerably, depending on which objects of trust are addressed in the question.

At this point, some of the results will be presented as examples. They will be discussed intensively in the lecture.

33 % fully or rather agree to the question on trust in media in general (55 % rather disagree or do not agree at all). Trust in the fields of political and sports topics is significantly higher: 53 % fully/rather agree (covering politics) and 73 % fully/rather agree (covering sports issues). 42 % trust journalists in general and 50 % trust Claus Kleber an anchorman of a nationwide news programme. Two third rather disagree or do not agree at all when they are asked about their trust in reporting on refugees in Germany. (Source: IfK trend studies 2017-19)

It turns out that sports reporting is clearly more trusted than reporting on political issues. Reporting on refugees has led the media in Germany into a crisis of trust from which they have not yet recovered. This topic polarises more than others.

In Germany, as in many other countries, a lack of trust in the media or media scepticism is regarded as a problem that affects the entire democratic community. The study shows that there are various attitudes among the population with regard to trust in journalism. Specific reference to trust seems to increase the figures referring to trust issues. The study also shows that there are fields of reporting, such as refugee/migrant issues, where media seem to have to work against a loss of trust over a longer period of time.

Title: When Journalists go "Below the Line": Comment Spaces at the Guardian (2006-2017)

Session Type: Individual submission

Authors:

Affiliation: University of Leeds

Abstract: “Below the line” comment spaces are one of the most popular forms of user-generated content. Such spaces are important because they give audiences a space to debate news content with each other—and journalists themselves—and this could, in theory, shape the practice of journalism. Such engagement informs widely debated theories of participatory and reciprocal journalism, and has been given renewed impetus recently as many newsrooms shift to subscription based models that often emphasise building online community.

While comment spaces have been extensively studied, this paper identifies two important gaps in research. First, no study has focused on how the journalists themselves engage below the line. Second, there is a lack of longitudinal research that assesses how and why comments spaces have changed over time. Addressing these gaps may help to explain the variation in practice, and to understand the barriers and opportunities that shape participation. This paper addresses these gaps.

Based on a longitudinal research design (2006-2017), this paper analyses how Guardian journalists engage in “below the line” comment spaces; what factors shape this engagement; and how this has evolved over time. The article combines a large-scale quantitative analysis of the total number of comments made ($n = 110,263,661$) and a manual content analysis of all comments made by 26 journalists ($n = 5448$) and their broader writing practices with 18 semi-structured interviews conducted in two phases (13 in 2012 and 5 repeated in 2017-18). The results show that there is considerable interest in comment spaces amongst readers, with exponential growth in user commenting. Furthermore, there has been significant engagement below the line by some Guardian journalists, and this is often in the form of direct and sustained reciprocity. Journalist commenting has waned in recent years due to difficulties coping with the volume of comments; changes in editorial emphasis; concerns over incivility and abuse; and a decrease in perceived journalistic benefits of commenting, alongside the rise in importance of Twitter. When journalists comment,

they do so in a variety of ways and their comments are often substantive, significantly adding to the story by, for example, defending and explaining their journalism practice.

Affiliation: Sina We, Deputy Chief Editor

Abstract: This presentation discusses issues of business journalism and entrepreneurial journalism at the age of digitalization. The advancement of digital technology has created tremendous opportunities for the development of entrepreneurial journalism and business journalism: digital platforms provide journalistic entrepreneurs with huge potentials to create and transmit content online; meanwhile, business journalists are also increasingly transforming to the digital platforms with the multimedia skills. In this vein, business journalism and entrepreneurial journalism training and education with digital skills and interdisciplinary knowledge are crucial for educators and practitioners alike around the world. Therefore, the current paper introduces educational and practical experiences in developing business journalism and entrepreneurial journalism, and discusses challenges ahead for interdisciplinary skills-training.

Title: The influence of the journalists' capital on their safety decisions in IS controlled regions: a cross border study conducted with journalists covering the conflict in Syria, Iraq and Libya

Session Type: Panel Submission

Authors:

Name: Abeer Soliman

Email: abeer.saady (at) gmail.com

Country: DE (Germany)

Affiliation: Erich Brust Institute, Dortmund University

Abstract: The aims of the study about safety of journalists in the conflict zones a comparative research from three countries (Iraq, Syria, and Libya) to investigate, what influence the safety decision making of the Journalists covering the conflict in regions controlled by Jihadi groups and they operating in Islamic State (ISIS) regions in the three countries.

Furthermore, the methodology focused on the Bourdieu lens and the hierarchy of influence, analysis 30 semi structured interviews The sample is formed of international, local and citizen journalists covered the conflict in ISIS controlled regions in Iraq, Syria, and Libya.

The research tests a hypothesis that the social, economic, and cultural capitals of journalists influence decision making of the journalists when operating in IS regions. I argue that the symbolic capitals increase or decrease the agency of the journalists in the IS Controlled journalistic field, the time frame for the case study is when the self-proclaimed Islamic State (IS), controlled physical regions. Thus, the relation I investigate is between 2013 to 2017 (The rise and fall of the Caliphate).

This study will present the opportunities this cross-cultural opens and the challenges I met when conducting it. In addition, the results building block toward a necessary analysis of the safety decision making of journalists in conflict zones.

Keywords: journalists' capital, safety of journalists, ISIS, conflict zone

Title: Challenges of Investigative Journalism in Nepal: The case of Kantipur Daily and Nayapatrika Daily

Session Type: Individual submission

Authors:

Name: Usha Regmi

Email: ladykiran.usha (at) gmail.com

Country: NO (Norway)

Affiliation: NLA University College, Kristiansand, Norway.

Abstract: This research is about the challenges of investigative journalism in Nepal. This thesis has explored the challenges, and experiences of investigative journalists working in three different print media outlets: Kantipur Daily, Nagarik Daily, and Nayapatrika Daily respectively.

This qualitative research is prepared on the basis of in-depth interviews with ten informants. The whole research is more focused on challenges, and experiences of investigative journalist, and mechanisms they use while doing investigative reporting. The findings in this research are analyzed using muckraking model of investigative journalism.

The lack of separate bureau of investigative journalism in media outlet, low investment in media for investigative journalism, and deadline pressure to do investigative reporting are the basic challenges. Moreover, the impact of commercialization in media, and media' alliance with interest groups have impacted investigative journalism in Nepal.

To improve the quality of investigative journalism in Nepal, it is needed to assure the professional safety and security of journalists, establishment of separate bureau of investigative journalism, and trainings and guidance should be provided to journalists to refine their skills of investigative reporting.

Key words: investigative journalism, challenges, and experiences, RTI, Nepal.

Title: The algorithm made me do it! Predictive policing, cameras, social media and affective assessment

Session Type: Individual submission

Authors:

Name: oscar gandy, jr.

Email: oscar.gandy(at) asc.upenn.edu

Country: US (United States)

Affiliation: University of Pennsylvania

Abstract: Christian Sandvig and his colleagues (2016) helped to set the research agenda for communication and information scholars concerned about the impact of algorithmic techniques for the generation of strategic intelligence for corporate and government decision-makers. Much of the research that followed was focused on the nature and extent of the biases and errors that emerged when assessments and recommendations affected the life chances of racial and ethnic minority population segments (Barocas & Selbst, 2016). Attention to the impact of these systems has just begun to be developed with regard to the challenges associated with the law, and its defense of the fundamental rights of members of those groups. This paper examines those concerns as they apply to the use of algorithmic systems by urban police, judges, and other central actors within the criminal justice system (CJS) in the United States (Kroll, et al., 2017; van Brakel & de Hert, 2011; Whittaker, et al., 2018; Winston, 2018).

Although the use of cameras for the surveillance of target areas within urban centers has been the subject of critical assessment almost from the beginning of their use, much of that work was focused on the behavior of the human monitors that determined what the central focus of those cameras would be, as well as the nature of the behaviors that would trigger the movement of officers to the scene (McPhail, et al., 2013). Increasingly, however, the work of human monitors has largely been re-assigned to semi-autonomous computer systems, guided by artificial intelligence resources, updated routinely through the use of machine learning techniques (Berman, 2018; Mateescu, et al., 2015). The use of cameras, especially those by officers on foot patrol, or in motor vehicles is described, but a primary focus of this paper is on the computer-aided analysis of the images captured by these devices.

The capture and use of images from mobile cameras, the analysis of social networks as well as affective assessments of individuals and members of groups derived from automated analysis of social media text and images, as well as other transaction-generated information (TGI) that has come to be referred to as “big data,” has been recognized as contributing to the development of a transformative moment in the nature of policing (Brayne, 2017; Degeling and Berendt, 2017; Hu, 2017; Manovich, 2018). The application of these and other informational resources to the development of predictive policing has been recognized as presenting a genuine threat to the traditional meaning of “reasonable suspicion” and related justifications for the application of Fourth, Fifth and Fourteenth Amendment rights to the targets of police engagement (Cohen, 2019; Ferguson, 2015, 2016; Joh, 2014; Maharrey, 2018).

This paper will explore these threats, with special regard to their likely impact upon the life chances, well-being, and social construction of members of racialized population segments in the foreseeable future (Carney & Enos, 2017; Turow, et al., 2018).

Title: Derecho a la propia imagen como parte esencial del derecho al olvido en Chile: Problemática jurídica y análisis casuístico

Session Type: Individual submission

Authors:

Name: Fernando Gutiérrez Atala

Email: fgutierrez(at) ucsc.cl

Country: CL (Chile)

Affiliation: Universidad Católica de la Santísima Concepción (Chile)

Name: Angela Moreno Bobadilla

Email: angmoreno.ang(at) gmail.com

Country: CL (Chile)

Affiliation: Universidad Andrés Bello

Abstract: La ponencia pretende analizar la situación del derecho a la autoimagen en el contexto de la legislación chilena, específicamente por su vinculación con nuevos casos abordados por la justicia del país, tal como ha sucedido previamente en otras naciones, principalmente en Europa, Rusia o Japón, donde se ha aplicado el derecho a ser olvidado respecto de la información publicada en internet.

Para orientar el análisis, la presentación comenzará con una revisión de las normas legales existentes en Chile, para luego confrontarlas con los casos más conocidos que se han registrado hasta la fecha y que están creando jurisprudencia en el país. Se abordarán temas como la imagen como parte esencial del derecho al olvido en el ordenamiento jurídico chileno, la situación actual del derecho a la propia imagen en el ordenamiento jurídico chileno, la imagen como elemento esencial del ámbito jurídico protegible por el derecho al olvido en Chile, el análisis casuístico chileno, la “condena social” y la aparición de una necesidad reguladora, además del enfrentamiento del Derecho al olvido vs. Derecho a la Información.

A juicio de los ponentes, el imperio tecnológico actual y los múltiples efectos que ésta puede tener en la vida diaria de cualquier sujeto es y seguirá siendo un tópico de investigación y reflexión permanente, con cualquiera de los prismas con que se mire: personal, jurídico, profesional, comunitario, etc. En ese contexto, resulta de vital importancia el levantamiento de información teórico-normativa y su puesta en perspectiva a partir de la realidad casuística, que es el objetivo de este texto, pues a partir de ella surge el análisis y aparecen las propuestas que guiarán el debate académico y social.

Title: La ampliación del reconocimiento del derecho a la libertad de expresión y su vinculación con el ejercicio de derechos sociales en la jurisprudencia de la Corte Interamericana de Derechos Humanos: los casos "Lagos del Campo" y "San Miguel Sosa"

Session Type: Individual submission

Authors:

Name: Damian Loreti

Email: dloreti(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad de Buenos Aires - Facultad de Ciencias Sociales

Name: Luis Lozano

Email: lozanodoporto(at) gmail.com

Country: AR (Argentina)

Affiliation: Universidad de Buenos Aires - Facultad de Ciencias Sociales

Abstract: El 31 de agosto de 2017 y el 8 de febrero de 2018 la Corte Interamericana de Derechos Humanos (Corte IDH) pronunció dos condenas muy severas contra el estado de Perú y contra Venezuela, respectivamente, por la violación de varios artículos de la Convención Americana sobre Derechos Humanos (CADH) en perjuicio del líder sindical Alfredo Lagos del Campo en el primer caso y respecto de Rocío San Miguel Sosa, Magally Chang Girón y Thais Coromoto Peña en el segundo.

La Corte IDH consideró que Perú violó los siguientes derechos del afectado: artículo 13 de la CADH que protege el derecho a la libertad de expresión; artículo 16 que protege el derecho de libertad de asociación; y – por primera vez en la Historia– se dictó una condena específica por la violación del artículo 26, que dispone los Derechos Económicos, Sociales y Culturales de este tratado, con motivo de la vulneración del derecho al trabajo, en particular de los derechos a la estabilidad laboral y de asociación. En el caso “Sosa San Miguel”, por distintas mayorías, se determinó la violación de los art. 23, participación política, 13, libertad de expresión, y 8 sobre acceso a la justicia. Y, nuevamente, en relación con la libertad de expresión, se entiende violado el artículo 26 de derechos sociales.

Este trabajo está orientado a rescatar y divulgar en el ámbito académico no específico de los estudios de derechos humanos los principios que amplían el reconocimiento del derecho a la libertad de expresión, de información y comunicación por su novedosa vinculación con los derechos sociales, tales como la libertad sindical, la representación de los trabajadores y el derecho al trabajo.

Ha de decirse que el reconocimiento de los derechos sociales y su justiciabilidad se configura por primera vez con “Lagos del Campo” y de allí su relevancia como leading case en el sistema interamericano. En términos comparados, el TEDH ya había consagrado este reconocimiento, y particularmente en relación con el Artículo 10 de la Convención, en diversos casos tomados como antecedente por la Corte Interamericana.

Al mismo tiempo, se buscará incorporar una evaluación sobre qué se ha de entender –en esta lógica de expansión de derechos– por interés público como valor sustantivo y también referencial, dado su necesario involucramiento en el análisis de los extremos de “fin legítimo a proteger” y “necesidad social imperiosa”, requisitos ambos para la aplicación de responsabilidades ulteriores en el ejercicio de la libertad de expresión de acuerdo con la Convención Americana.

Title: Hate Speech, Human Dignity and the First Amendment

Session Type: Individual submission

Authors:

Name: Chris Demaske

Email: cd2(at) uw.edu

Country: US (United States)

Affiliation: University of Washington Tacoma

Abstract: Hate crimes and hate speech happen across the globe but there is no uniformity in how those offenses are treated. Most countries, with the exception of U.S., prohibit some degree of and international treaties such as The International Convention on the Elimination of all Forms of Racial Discrimination also seek some level of restriction (Knechtle 2006, Brown 2015). ‘Hate speech’ is a messy, highly contested concept with its meaning changing depending on the context of who is using it and to what ends (Gelber 2017). Defining the term as specifically as possible at the onset is of paramount importance because without proper definition, scholars and lawmakers talk past each. In addition, if the end goal, as it is in this presentation, is to produce a constitutionally regulable category of speech, then the parameters of what constitutes hate speech must be clearly articulated. My intention is to offer a legalistic definition that will work within a U.S. context to enable the courts to think in a more nuanced capacity about how they might assess hate speech restrictions. I am suggesting that the category of regulable hate speech should be situated somewhere between protection of human dignity (Glensy 2011, Waldron 2014, Wright 2006), a laudable goal that will not work within the constructs of the First Amendment, and the viewpoint neutral legal options currently available, which ignore much of what makes hate speech a particularly heinous type of speech. In moving forward, the best approach will be informed by the dignity emphasis underpinning many international laws and regulations. While it may seem that the First Amendment makes this path impassable, there exists room for the courts to adjust the pre-existing content-neutrality principle and the true threats doctrine in order to open up a space for protecting both freedom of speech and the intrinsic right to be recognized. In this presentation, I review work conducted on defining hate speech. I then address the various harms associated with hate speech. Understanding the possible harms that it causes will facilitate a further refining of the term to help situate it better within a U.S. free speech context. Finally, I offer a definition of hate speech that will best protect both human dignity and freedom of speech and illustrate how this might work through analysis of *Giles v. Davis*, a 2005 Third Circuit Court of Appeals case dealing with on-campus hate speech.

Title: The new EU Audiovisual Media Services Directive will affect YouTube, Netflix and TV broadcasting equally, although its effect will not be felt immediately

Session Type: Individual submission

Authors:

Name: Loreto Corredoira

Email: loretoc(at) ucm.es

Country: ES (Spain)

Affiliation: Professor School of Communication Complutense University Madrid, Spain

Abstract: This arduously agreed Directive (1) is part of the Digital Single Market of the European Union, an array of policies which gives us as citizens a number of rights which were unthought-of before: free data roaming in Europe, the possibility of using our on-line subscriptions throughout the Union: in other words, content such as Netflix, Amazon Prime Video or Spotify travel with us without being blocked by the new geolocation detected by an internet connection; and, what is more, enhanced data protection and network neutrality, preventing discrimination affecting price or location because of price or speed of navigation – an audiovisual service map of Europe which has been difficult to construct, but which still requires further steps. That means more regulation, which, it is to be hoped, will not be a constraint to the media, enterprises, creators and the public. The 2018/1808 Directive is on the Statute book and another is on the way – the Copyright Directive – which, although it is in its final stages, may never be passed on account of the dissolution of the EP. Our wish is that it should not become law in view of a number of odious points it contains – as the well-known YouTuber Altozano explains (<https://youtu.be/ilEsBgbm7Fo>).

Anticipating the 2020 law will also help to avoid linear TV being left behind

Given the explosive growth of Netflix, HBO, YouTube – as platforms of worldwide TV services and productions, and with a global audience – customer service considerations and the rules of fair competition may mean that regulations are anticipated de facto, without any loss of profitability. It would be desirable for there to be an agreement between the actors involved before the parliamentary act comes into force. Some companies are already taking steps in that direction. In respect of the advertising of certain products, YouTube announced some time ago that it would not accept certain content and advised that it might use blocking.

For the good of all concerned, we should not wait until 2020; this is especially true in respect of advertising and of the absolute freedom of public communication which the platforms benefit from at the present time. The market and audience protection may be cannibalized during this period in which audience share, data consumption and advertising will all increase.

It is to be hoped that member states, or rather civil society, universities and audiovisual enterprises themselves will undertake campaigns to increase media literacy. This article is written in fulfillment of that duty.

By the way, as I write this, I am listening to a music program from a public TV channel, via the screen of my TV set, which has no antenna connection and which I control from the Wi-Fi of my mobile phone. Know what I mean? It's another world.

(1) Directive (EU) 2018/1808 of the European Parliament and of the Council of 14 November 2018 amending Directive 2010/13/EU on the coordination of certain provisions laid down by law, regulation or administrative action in Member States concerning the provision of audiovisual media services (AVMSD)

Title: Cambios en la regulación de la publicidad en la Reforma de la Directiva sobre la comunicación audiovisual

Session Type: Individual submission

Authors:

Name: Martinez Esther

Email: esther.martinez.pastor(at) urjc.es

Country: ES (Spain)

Affiliation: Universidad Rey Juan Carlos

Abstract: La Reforma de la Directiva 2010/123, de 10 de marzo de 2010, sobre servicios de comunicación audiovisual permite diferenciar cuatro principales cambios en torno a los aspectos de las comunicaciones comerciales: 1) normas de carácter general aplicadas a cualquier comunicación comercial, 2) normas para publicitar determinados productos servicios (alimentos y bebidas, juegos de azar y bebidas alcohólicas); 3) normas especiales para concretos target (menores) y; 4) normas para determinadas modalidades publicitarias (como emplazamiento de producto o patrocinios, entre otros).

Además de incluir importantes novedades como introducir en su ámbito de aplicación a las plataformas de intercambio de vídeos como YouTube y seguir insistiendo en la correlación y autorregulación para una adecuada práctica publicitaria en la que se incluyan de forma voluntaria los principales operadores económicos de la publicidad, asociaciones y Administraciones Públicas.

Abstract: En el actual ecosistema hipertecnologizado merece la pena destacar la idea de cultura participativa (Jenkins, 2014) que se relaciona con determinados valores: diversidad, inclusión, horizontalidad, democracia y relativa ausencia de barreras para cualquier forma de expresión y compromiso cívico. Una cultura participativa sería aquella en la que los miembros sienten cierto grado de conexión social y se generan espacios para la comunicación interpersonal. Las prácticas ciudadanas en los nuevos medios permiten avanzar hacia la construcción de una auténtica ciudadanía digital: activa y participativa, además de consciente y crítica. Una de las formas de participación e implicación en acciones sociales y políticas que ha tenido gran difusión y aceptación en los últimos años, ha sido el de las firmas de peticiones a favor de alguna causa social, política, medioambiental, etc., a través de Internet (e-peticiones). Este tipo de participación se caracteriza por su sencillez; en principio no requiere de grandes destrezas tecnológicas y simplemente hace falta acceder a una de las múltiples plataformas que existen en este momento en España (por ejemplo, Change.org, Avaaz.org, Mifirma.com, Oiga.me, Peticiones.org) para completar la firma cumplimentando un conjunto de datos que permiten verificar la veracidad de la identidad. El extraordinario crecimiento de este fenómeno ha comenzado a crear interés en el ámbito académico. Así hay referencias previas que han abordado el análisis de las características de algunas de estas plataformas, la manera en que los diarios digitales tratan las iniciativas y a las propias plataformas de e-peticiones, el modelo de negocio o las características, estructura y contenido de las iniciativas que difunden, pero todavía no hay ninguna investigación que haya trabajado los aspectos que aquí se abordan. En esta comunicación se presenta el perfil, las motivaciones y la repercusión de este tipo de participación, utilizando para ello los datos resultantes de un cuestionario que han respondido universitarios españoles de ambos sexos.

Abstract: Au nombre des enjeux qui se présentent dans notre société numérisée figure en bonne place la protection de la vie privée (Cassili, 2014). Les risques sont nombreux, protéiformes et complexes. Si la nécessité de la protection contre les ciblage commercial et politique commence à être mieux reconnue, c'est largement grâce aux lanceurs d'alerte comme Edward Snowden, qui a révélé l'ampleur de la surveillance de masse exercée par cinq gouvernements démocratiques, et Chris Wylie, qui a révélé les dessous du scandale Facebook-Cambridge Analytica, remettant en question tant les résultats des élections étasuniennes de 2016 que ceux du référendum sur le maintien du Royaume-Uni au sein de l'Union européenne tenu la même année. L'adoption de lois protégeant les lanceurs d'alerte tant en Amérique du Nord qu'au sein de l'Union européenne peut donner à penser que le droit du public à l'information et la liberté d'expression se portent bien et que les développements technologiques font désormais l'objet d'un monitoring rigoureux. C'est oublier qu'Edward Snowden est en exil en Russie par crainte de ne pouvoir bénéficier d'un jugement équitable s'il rentre aux États-Unis (Amnistie internationale, 2016) et les nombreux cas qui font l'objet de représailles dès que le lancement d'alerte se fait dans l'espace public (Gerbet, 2019; Zafra, 2018), peu importe par ailleurs l'enjeu faisant l'objet de l'alerte. Nos sociétés d'information se seraient-elles transformées en société de surveillance où l'État détient le monopole de la surveillance légitime ? Nous proposons de revenir ici sur le cas de deux lois canadiennes visant à protéger les divulgateurs d'actes répréhensibles. Il s'agira d'abord de se pencher sur la notion de lanceur d'alerte en passant en revue la façon dont les 2 lois conçoivent les facteurs de

l'identité, de la motivation, de la nature des révélations et des modes d'expression qui le légitiment (Foegle, 2014). L'exercice nous permettra de comparer les lois entre elles, mais aussi de les contraster avec le cas emblématique d'Edward Snowden. Au moment où on assiste à la montée d'une gouvernance algorithmique et de « sciences » prédictives reposant sur le traitement de nos traces laissées en ligne (De Filippi, 2016), notre analyse contribuera à documenter les potentialités de réalisation du droit du public à l'information et de la protection de la vie privée en contexte nord-américain.

Title: Children's location tracking and their right to privacy in a mobile media world

Session Type: Individual submission

Authors:

Abstract: The use of apps, wearables and smart devices is omnipresent in the lives of children. They are active users of Google, Facebook, Instagram, TikTok, Snapchat and Fortnite, which are often accessed through mobile devices (Unicef, 2017) and allow for real-time sharing of personal information (Montgomery & Chester, 2015). Many providers track their users', including children's, location – irrespective of the necessity thereof for the functioning of the service. It has been claimed that Google, for instance, tracks the location of its users which is then used to facilitate targeted advertising (Forbrukerrådet, 2018). In addition, tracking technologies are offered by commercial companies to parents who want to keep abreast of the location of their child through smart phones or smart watches. Research has established that the constant tracking of one's location can reveal sensitive details about that person's life, such as his or her home, work, school location, religious and political views, personality, habits, health, medical issues, and sexual orientation (Forbrukerrådet, 2018; Reyes et al., 2018; Valentino-DeVries et al., 2018). Such practices put the child's right to privacy increasingly under pressure in today's digital world.

The proposed paper aims to analyse the child's right to privacy in this context. The theoretical background is the comprehensive typology of privacy, developed by Koops et al. (2017), which consists of eight basic types of privacy – bodily, intellectual, spatial, decisional, communicational, associational, proprietary, and behavioural – with an overlay of a ninth type, informational privacy. The proposed paper aims to identify which types of privacy are at stake in relation to location tracking of children. Building on this, the paper will evaluate – from a children's rights perspective – whether general legislative instruments such as the European Union's General Data Protection Regulation or the Council of Europe Convention 108+ are sufficient to protect the best interests of the child (article 3 United Nations Convention on the Rights of the Child). Under the former standards, for instance, sensitive data are afforded additional protection (article 9 GDPR; article 6 Convention 108+). However, even though sensitive data may be inferred from location tracking, 'location' is not included as such a special category of data. Another question is whether child location tracking practices are fair (article 5 GDPR; article 5 Convention 108+). Fairness is one of the fundamental data protection principles, but it remains vague. Similarly, recital 38 GDPR states that children's personal data merit specific protection, but this remains equally elusive. The paper will reflect on how these abstract notions can be interpreted with regard to the collection and

processing of a child's location data. Finally, the proposed paper aims to investigate whether and how children are actually informed about location tracking on their devices, in compliance with current transparency standards (article 12 GDPR; article 8 Convention 108+). Acquiring more insight in the complexities of the child's right to privacy in an increasingly digital world will not only enrich scholarly debates but will also allow for the formulation of recommendations towards stakeholders such as policymakers, data protection authorities and children's rights ombudspersons.

Title: Contesting Intermediary Liability and Ownership in Digital Copyright Policy

Session Type: Individual submission

Authors:

Name: Lucas Logan

Email: loganp(at) uhd.edu

Country: US (United States)

Affiliation: University of Houston - Downtown

Abstract: This paper is an analysis of past and current trends in intermediary liability and copyright, with an emphasis on ongoing E.U. proposals. I begin with an overview of intermediary liability [IL] policy – protections that online service providers have from illegal user-generated content – and then offer a case study of proposed copyright legislation in the E.U. The proposed legislation are Articles 11 and 13 of the E.U.’s Directive on Copyright in the Digital Single Market, and would force intermediaries to filter all user-generated content through a database of copyrighted works (Doctorow, 2018). I close by arguing that the problems of IL are part of a crisis of ownership where an increasing amount of the Internet is disputed through negotiations between rights-holders, tech companies, and the state. Creators and consumers are shut out of policy processes and unable to control how they use communication technology to interact online.

The literature review on IL and copyright includes an analysis of contributions from UNESCO (MacKinnon, 2014) and the Center for Democracy and Technology (2012), as well as examination of scholarly discussion from Litman (2001), Drahos & Braithwaite (2002), and Lessig (2006). This literature assists in the formulation of guidelines and theoretical discussion about what the best practices in IL and digital copyright policy should be, and how those practices can best benefit intermediaries and rights-holders as well as users and creators.

The case study considers the broad mandate of the Articles, which would order platforms to pay fees for linking to articles and to create filtering systems that would overlook legal uses of works such as parody. IL protections have traditionally functioned to prevent service providers from censoring users over legal concerns (MacKinnon, 2014). In contrast, the Articles incentivize large companies including Google and Facebook to censor content in order to avoid legal troubles. These filters also endanger innovation and competition by being prohibitively expensive for start-ups.

I conclude that Articles 11 and 13 are harmful to intermediaries and users. They are also significant because they represent a trend of reduced ownership and loss of control by users and creators online. The Articles are reflect the conflict between tech companies trying to best monetize user-generated data, and rights-holders trying to best control access to digital content. The rights of access and control by users and creators are shut out of the policy-making process altogether. Regulatory reforms should emphasize the ability of users and creators to flourish alongside tech companies and rights-holders without eroding standards of intermediary liability or contributing to censorship.

Abstract: (PRESENTATION IN SPANISH)

Por su potencial persuasivo como variable periférica (Buchholz & Smith, 1991; Petty, Cacioppo, & Schumann, 1983; Priester & Petty, 2003) los testimoniales son un objeto muy regulado (Federal Trade Commission). En España, el Real Decreto 1907/1996, de 2 de agosto, sobre publicidad y promoción comercial de productos, actividades o servicios con pretendida finalidad sanitaria regula la publicidad de los productos que ofrecen beneficios para la salud exceptuando los medicamentos dispensados sin receta médica que tienen su propia legislación. Ello incluye bebidas, alimentos, productos de belleza e higiene, adelgazantes y los complementos alimenticios (CA). El punto 7 del Artículo 4 de Prohibiciones y limitaciones de la publicidad prohíbe aportar testimonios de profesionales sanitarios, personas famosas o conocidas por el público o pacientes reales o supuestos como medio de inducción al consumo. Así, el objetivo del presente trabajo es analizar la presencia de testimoniales para comprobar el cumplimiento con la legislación que regula la publicidad de CA y el tipo de testimonio en la radio generalista en España.

Para tal fin, se realiza un análisis de contenido de todos los spots emitidos en 2017 y que ha permitido conformar un corpus de 165 anuncios diferentes de la categoría de productos de CA, que fueron emitidos un total de 10566 veces. A partir de los antecedentes, las variables analizadas fueron el tipo de testimonial (Brownfield, Bernhardt, Phan, Williams, & Parker, 2004; Choi & Kim, 2011; Chung, Hwang, & Kim, 2007; Kaphingst, DeJong, Rudd, & Daltroy, 2004; Main, Argo, & Huhmann, 2004; Shaw, Zhang, & Metallinos-Katsaras, 2009; Wallack & Dorfman, 1992) y de testimonio (Kaphingst, 2004; Keel & Natarajan, 2012; Perelló-Oliver & Muela-Molina, 2017; Stern, 1991; Tulloch, 2014).

Los resultados muestran que el 40% de spots utiliza determinados testimoniales que la ley no permite como doctores, consumidores y famosos, éstos últimos con una presencia inusual para CA que no tiene en la publicidad radiofónica. Así, uno de cada cuatro spots está protagonizado por

famosos y líderes de opinión como periodistas cuyo código ético no lo permite. Asimismo, de todos los spots de CA emitidos, casi la mitad (42,2%) cuenta experiencias personales que las celebridades confiesan tras haber utilizado o consumido el producto. Y en más de la mitad (55,3%) se trata de médicos y doctores que prescriben la marca anunciada como la solución definitiva para el problema de salud que padece el oyente. En ambos casos, en primera persona del singular para reforzar la veracidad del testimonio ya que los doctores son considerados expertos en salud y son percibidos como una fuente creíble en la que el consumidor confía.

Del elevado número de anuncios ilícitos que vulneran los derechos de los consumidores -como ha mostrado la investigación- derivan implicaciones para diferentes stakeholders como anunciantes y medios de comunicación. Pero también en materia de regulación y autorregulación que precisan un mayor control y seguimiento de la publicidad de productos relacionados con la salud como los CA que son considerados de alta implicación para el consumidor.

Affiliation: Universidad Mayor - Facultad de Humanidades - Escuela de Periodismo

Abstract: El estudio analiza las categorías del mercado relevante y el pluralismo estructural, entendiendo por tal el conjunto de mecanismos que, sin afectar el contenido, permiten conocer la diversidad de mensajes y efectuar un control de la concentración de los medios. En el caso chileno, tal función le corresponde a la Fiscalía Nacional Económica (FNE), la que recibe información relativa al cambio de propiedad de cualquier medio de comunicación, y cuyo informe favorable es necesario para las operaciones que involucren a medios titulares de una concesión (radio y televisión). En ese contexto cabe destacar, que el estudio antecesor a la presente propuesta[1], consideró aspectos fundamentales concluyentes como la escasez del espectro radioeléctrico, que siendo el motivo más poderoso para la intervención estatal se ha visto sin embargo alterado por la digitalización de la televisión y la radio y por el desarrollo de Internet. Un ejemplo de lo anterior ha sido Noruega el primer país del mundo en terminar las concesiones radioeléctricas para las radios FM, proceso que comenzó en enero de 2017, lo que supone el principio del fin de las emisiones por dicha frecuencia tradicional. La iniciativa del país nórdico procura que existan más canales de radiodifusión y con ello más diversidad de contenidos. La industria de la televisión de pago –de cable y satelital- también experimenta importantes cambios, pues ha surgido un fenómeno conocido en Estados Unidos como «cord cutting». Dicho término da cuenta del retiro a gran escala de clientes de servicios de televisión de pago –en especial del cable- en favor de plataformas de Internet como Netflix, Amazon, Hulu y YouTube, por citar algunas. Dicha tendencia se advierte que podría observarse en países como Chile en donde la alta penetración de Internet[2], así como la sofisticación creciente de los modelos de conexión y la velocidad de la misma, pone de manifiesto dos aspectos fundamentales: la familiaridad general de los chilenos con el uso de la Red y el ajuste que esto implica en la democratización de la información.

Objetivos y metodología

El objetivo general de la investigación consistió en definir el concepto de pluralismo estructural y las categorías del mercado relevante de televisión y radiodifusión digital.

Objetivos específicos

Conocer las formas de consumo que se presentan en jóvenes chilenos de 18 a 24 años con uso de Internet plenamente generalizado, en las plataformas digitales de la televisión y la radiodifusión on-line.

Medir la sustituibilidad de la demanda en el grupo de jóvenes chilenos de 18 a 24 años (millennials) del consumo de los contenidos en las plataformas digitales de la televisión y la radiodifusión on-line.

Determinar la relación entre las preferencias de las audiencias-usuarios y contenido-consumo en las plataformas digitales la televisión y la radiodifusión on line.

Metodología

La metodología que se seleccionó para la presente investigación consta de dos etapas: una primera etapa de carácter inductivo centrada en el análisis del pluralismo externo (diversidad de voces en el sistema) e interno (diversidad de mensajes al interior de cada medio), y una segunda etapa que consiste en una encuesta de medición de hábitos y tendencias de consumo en las plataformas digitales de televisión y radiodifusión de los jóvenes chilenos en el rango etario de 20 a 24 años; de carácter exploratorio. Diseñada para estudiantes millennials en edad universitaria de la Región Metropolitana, Región de Valparaíso, Región del Biobío y Región de Antofagasta. Estas cuatro zonas territoriales representan el norte, centro y sur de Chile, y las tres primeras concentran 71% de la matrícula de la educación superior en Chile.

La muestra considera 2000 jóvenes, que residen en las regiones mencionadas. Para la selección de la muestra se realizó un procedimiento estratificado, considerando la siguiente composición demográfica que se estimó relevante para el estudio, según los datos del último Censo 2017:

- a) Composición por sexo
- b) Composición por nivel educacional

El estudio además describe criterios o tendencias que pueden constituirse como aporte para inferir alguna línea o doctrina relacionada con el mercado relevante, lo cual debería ser la base para una futura regulación normativa y también puede servir a instituciones como Subtel, Anatel, Archi y el Consejo Nacional de Televisión entre otras

Un aspecto fundamental, relacionado con el mercado relevante y el pluralismo estructural radica en si el régimen jurídico aplicable al mercado de los medios de comunicación es el adecuado.

Title: Age verification mechanisms on pornographic websites: protecting children, platforms or both'

Session Type: Individual submission

Authors:

Name: Argyro Chatzinikolaou

Email: argyro.chatzinikolaou(at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University

Abstract: In their navigation of the online environment, children may come across or seek out for harmful internet content such as pornographic material. In fact, according to studies, adolescents have become significant users of internet pornography (Mead, 2016). They consume pornographic content either as part of their sexual education and exploration or for pleasure, ignoring age restricting indications or adult content warnings. Research shows that repeated consumption of pornography at a young age might have a negative impact on their development (HM Government, 2017; Narayanan et al, 2018). Risks are being acknowledged and intensified regulatory attempts to ensure that children cannot access adult content websites have emerged. The most prominent example is the latest amendment to the UK Digital Economy Act regarding the mandatory implementation of age verification (AV) mechanisms on platforms that host pornographic material for commercial purposes. As laid down in the legislative text, non-compliance on behalf of the platforms instigates financial penalties. Moreover, age verification tools are listed in the new EU Audiovisual Media Services Directive as potential measures for protecting minors from viewing harmful content, such as pornography, on videosharing platforms.

Online age verification mechanisms constitute technical measures that verify the age of the user who attempts to access or obtain age-restricted content and may consequently block access to such material. The methods implemented by websites hosting pornographic material for blocking access to users under the age of 18 vary, yet their success rate is contested (LexisNexis, 2017). Moreover, technical solutions engaged for solving this problem usually necessitate the documentation of the users' personal data (for instance, electronic Identification (e-ID)) and therefore raise additional concerns on the protection of other fundamental rights of the users, such as their right to privacy. The focus of this paper is twofold. On the one hand it aims at exploring whether the implementation of AV mechanisms succeeds in advancing the level of protection for children as well as indicating potential shortcomings affecting their rights to protection, but also participation and expression, in the online environment. On the other hand, it explores the manner in which the liability of platforms is affected in terms of efficiently restricting children from accessing the content they host. The research will draw on both social science and legal doctrine on the operation of AV mechanisms and their impact on children's online behaviour as well as on EU policy and legislative documents with regard to the responsibilities and liability of platforms and intermediaries, and data protection.

Title: Tecnología y derechos humanos: el papel del derecho (de y a la información) en el momento actual

Session Type: Individual submission

Authors:

Name: Ignacio Bel

Email: ignaciobel1947(at) gmail.com

Country: ES (Spain)

Affiliation: Professor of Communication Law

Abstract: Cada vez es más penetrante el papel de las tecnologías, ya no tan nuevas, en la marcha de los acontecimientos, sobre todo si las relacionamos con la comunicación y más concretamente con el papel de los medios en la sociedad actual. Lo que debía ser en teoría una ayuda para la metainformación, para el desarrollo comunicativo de las sociedades, está sin embargo derivando en situaciones que claramente debilitan los derechos de los ciudadanos.

Acabamos de cumplir setenta años desde que la Declaración Universal de Derechos Humanos fue proclamada. Nadie duda que su contenido supuso un avance verdaderamente extraordinario en la defensa de los derechos humanos. Muchos gobiernos han ido incorporando su contenido, en mayor o menor medida, de tal manera que el progreso global en esos campos ha sido claramente uno de los hechos positivos en la última mitad de siglo.

Pero junto a esa Declaración, de forma paralela, han ido naciendo lo que se dio en llamar las Nuevas Tecnologías, que han supuesto un avance extraordinario en el campo tecnológico en todos los aspectos del saber humano y muy especialmente en el informativo, entendiendo este término en su acepción más global, no solo referido al informativo clásico.

Y en medio de ese proceso, que nos lo podemos imaginar en forma paralela, ha ido naciendo el Derecho de y a la información, que siendo un “hijo” de la Declaración Universal, ha tenido que ir dando respuestas, no siempre acertadas, al otro campo, al tecnológico, en este caso si referido al proceso informativo. La dificultad, en algunos países como España, fruto del enfoque napoleónico del derecho, es que, durante muchos años, incluso después de la promulgación de la Declaración Universal, las normas jurídicas referidas a la información, se entendían como parte del derecho administrativo, o sea norma que formaba parte del poder estatal, lo cual dificultaba enormemente el derecho de los ciudadanos para gozar de su derecho a la información, emanado de la declaración de 1948.

Esto es particularmente difícil de entender en la mentalidad anglosajona y muy especialmente si nos atenemos a la primera enmienda “Libertad de culto, de expresión, de prensa, petición y de reunión”, por la cual se prohibía, entre otras cuestiones, realizar ninguna Ley de prensa que coartase la libertad de expresión, hecho que ha durado hasta nuestros días.

A medida que esta dualidad ha ido desapareciendo y se ha avanzado decididamente en el enfoque de considerar a las normas jurídico informativas como parte del derecho constitucional, se ha potenciado de manera decisiva el disfrute del derecho a la información por parte de los ciudadanos. Sin embargo, esta situación, que nunca la hemos podido considerar idílica, porque el choque entre la información y el derecho ha sido, es y será constante, se ha visto complicada con el nacimiento y posterior desarrollo de las llamadas nuevas tecnologías, como hemos señalado al inicio de estas líneas. El desarrollo tecnológico, en el campo informativo, ha supuesto un desafío al derecho de la

información, que en no pocas ocasiones, no ha sabido dar la respuesta adecuada ni en el fondo, ni en la forma, y sobre todo, en el tiempo debido a las demandas que se le pedían.

Abstract: Do European media care about and uphold Human Rights - and does it matter? “Innocent until proven Guilty” is a legal maxim rooted in a long history of civil rights and provided for, among others, in Article 48 in the European Charter of Human Rights and Fundamental Freedoms and in Article 11 in the UN Declaration of Human Rights. The recent EU directive 2016/343 on presumption of innocence aims at preventing the social tarnishing of crime suspects in the public sphere and provides a regulatory ‘partner’ to the well-established case law of the ECHR providing for due process and a fair trial.

Given a remarkable historical comprehensive regulatory framework at global, supranational and national levels, mature democratic systems and fairly robust journalism cultures of self regulation, the conditions for a culture of crime reporting which upholds the human right to be presumed innocent until proven guilty are arguably optimal.

Through the lens of governance of information and media treatment of human rights, this paper explores crime reporting online in seven European countries. Against the background of national media landscapes, the paper identifies patterns of reporting on suspects and accused individuals in Austria, Croatia, Hungary, Spain, France, Greece and Malta. It explores further the broader conditions of information generation and dissemination deriving from legal frameworks, the technological affordances to publish rapidly and elements of journalistic cultures, which, we argue, contribute to a) an uneven picture of crime reporting across nations b) a systemic undermining of the right to presumption of innocence and c) a conflict in following the letter of the law and subverting its spirit. The paper also identifies institutional and cultural features manifest in best practices of reporting.

The comparison content-analysed crime-related news published in quality and tabloid press as well as in online-only press, from June to September 2018 with geographical and legal variety as well as variety in the size of media markets.

Keywords: governance, human rights, presumption of innocence, online media, journalistic cultures.

Title: The algorithmic governance of information and communications

Session Type: Individual submission

Authors:

Name: Sara Bannerman

Email: banners(at) mcmaster.ca

Country: CA (Canada)

Affiliation: McMaster University

Abstract: This paper will critique the responses of platforms and governments to fake news and other information and communications policy dilemmas by drawing on the concept of 'algorithmic imperialism'. In part one of the paper, I define algorithmic imperialism, drawing on Jin's (2015, 2013) notion of 'platform imperialism.' This notion of platform imperialism builds on concepts of cultural imperialism (Schiller, 1969) as evidenced in an international communication system "characterized by imbalances and inequalities between rich and poor nations (MacBride 1980, 111–15) that were "the outcome of fundamental historical inequalities" (Jin 2015, 40). Second, I note that algorithmic imperialism, like platform imperialism, can be seen as the fusion of nation-state political interests with capitalist expansion. Used by multinational corporations and nation states alike, algorithmic tools and techniques help to lay the groundwork for deepening and intersecting global inequalities (Barbrook and Cameron 1996; Crenshaw 1991; Eubanks 2011, 2018). Third, I argue that algorithmic imperialism fuses the problems associated with both imperialism and algorithmic governance. Algorithms are posed as a tool of governance that responds to various problematizations in information and communications governance, including fake news. However, the algorithmic governance of information and culture by global platforms incorporates the political problems associated with algorithmic bias, scale, and speed. The global and historical context of the global algorithmic governance of information and communications means that problems of alienation from technologized political processes (Medina 2015), and colonial cartography (Shepherd 2015), among others, are compounded globally, while the benefits (of advertising revenues and data services) accrue to a relative few. Algorithmic governance of information and communications takes place in neocolonial context, and requires a decolonial response (Ali 2016). Drawing on these points, this paper elaborates the concept of algorithmic imperialism in relation to the algorithmic governance of information and communications governance.

Title: The Vulnerable Internet: FOSTA-SESTA and the Safe Harbor

Session Type: Individual submission

Authors:

Name: Kearston Wesner

Email: kearston.wesner(at) quinnipiac.edu

Country: US (United States)

Affiliation: Quinnipiac University

Abstract: In April 2018, U.S. President Donald Trump signed into law a duo of controversial bills that claim to curb online sex trafficking. The Allow States and Victims to Fight Online Sex Trafficking Act and the Stop Enabling Sex-Trafficking Act, collectively known as FOSTA-SESTA, make it illegal to “knowingly assist, facilitate, or support sex trafficking.” The law was conceived mainly to target the shadier practices of the website Backpage, which, according to a U.S. Senate investigation in 2017, facilitated child trafficking. Most importantly, FOSTA-SESTA amended Section 230 of the Communications Decency Act, which immunizes websites from liability for third-party content.

With the historically robust protections of Section 230 shrouded in uncertainty, some companies reacted harshly to the passage of FOSTA-SESTA. Google, Microsoft, Facebook and Twitter, for example, proactively began to censor adult content or even ban sex workers’ accounts altogether. Legal commentators suggested that the companies, unable to parse the vague language of FOSTA-SESTA, elected instead to chill users’ speech. The voices of sex workers were abruptly and thoroughly silenced. Even more concerning, crime data suggests that FOSTA-SESTA has failed to stymie sex trafficking. Some reports even claim trafficking and abusive practices have increased. These reports extend beyond U.S. borders too. Sex workers overseas, lacking relatively safe avenues to advertise, have reported an increase in work-related violence.

Adding fuel to the fire, commercial enterprises such as Disney and 20th Century Fox publicly supported FOSTA-SESTA, signaling that even though their website-related activities were wholly unrelated, they expected some benefit from the law’s passage. Indeed, these companies could use FOSTA-SESTA as an avenue to chip away at the Digital Millennium Copyright Act (“DMCA”) safe harbor, which shields websites from liability for copyright infringement by third parties. Extending the rationale of FOSTA-SESTA could result in the government broadly requiring websites to police third-party content. Shifting these policing requirements to websites that host third-party content would ultimately be disastrous, especially for smaller sites that cannot bear that burden.

This paper first provides the historical background for the safe harbors articulated in Section 230 and the DMCA. It asserts that FOSTA-SESTA undermines the free speech-protective practices, particularly Section 230, that fortify the architecture of the internet. FOSTA-SESTA not only fails to achieve its asserted objectives, it functionally encourages widespread censorship, particularly of marginalized and vulnerable voices. Furthermore, the paper demonstrates how FOSTA-SESTA can be weaponized by companies to diminish the safe harbor protections of the DMCA. Resolving these

concerns is critical, especially given that (1) these laws have directly impacted not only U.S. citizens, and (2) some parliament members have expressed their desire to pursue the passage of similar laws in the U.K. Thus, the issues explored in this paper extend beyond the boundaries of the U.S.

Finally, this paper fills a gap in the current research. Although news articles and blogs have discussed FOSTA-SESTA, a Westlaw search shows only 13 secondary sources that address FOSTA-SESTA. And of these, zero articles analyze the possible impact FOSTA-SESTA could have on the DMCA safe harbor.

Title: El nuevo reclamo revolucionario del siglo XXI en México: la repartición espectral.

Session Type: Individual submission

Authors:

Name: Rolando Guevara-Martínez

Email: rolandoguevara(at) comunidad.unam.mx

Country: MX (Mexico)

Affiliation: UNAM /EPCSG

Abstract: El reclamo en la época de la Revolución Mexicana sobre la “repartición agraria” ha llegado a su versión moderna de la “repartición espectral”. Pocos tienen la posesión de este recurso fundamental para ejercer los derechos a la comunicación en su vertiente de acceso a las tecnologías de la comunicación e información (TICs).

De la tierra al aire, las cosas han cambiado. Nadie, en teoría, tiene derechos adquiridos sobre los bienes nacionales. Sin embargo, en los tiempos de las TICs es necesario repasar esto, pues existe una confusión teórica sobre la posesión de los bienes públicos como el espectro radioeléctrico, el cual es un insumo esencial para operar la infraestructura de los servicios públicos de telecomunicaciones, cada vez más necesario hoy en día.

Sin embargo, el nuevo reclamo de “repartición espectral” tiene una realidad: la concentración comercial y el argumento de la insuficiencia espectral.

La propuesta es encontrar una luz en el camino. El contexto actual en México tiene al parecer un nuevo espíritu revolucionario, propio del siglo XXI, a través del reconocimiento de derechos fundamentales como el de acceso a Internet.

Asimismo, se requiere de un régimen especial para el acceso al espectro radioeléctrico basado en el rango constitucional que tienen, por ejemplo, las concesiones para uso social, incluyendo las comunitarias e indígenas.

Por tanto, una nueva realidad se vislumbra en México y, basados en evidencia empírica, se afirma que es necesario el acceso a más espectro radioeléctrico por agentes que no lo subutilicen ya que éste no puede estar en “manos muertas” (como era el reclamo revolucionario de hace más de 100 años). Ello con el objetivo de reducir la brecha digital y permitir que más población tenga el beneficio de las TICs.

Abstract: En la actualidad, el acceso a la información es imprescindible para el correcto funcionamiento de la sociedad y para el desarrollo personal y profesional. El periodismo de datos, de investigación, de precisión... precisa información en bruto sobre la que trabajar, por eso el derecho a acceder a la información es esencial en el mundo de la comunicación. Pero no son solo los profesionales de la información los únicos que necesitan la transparencia de las instituciones públicas para realizar su trabajo. También los académicos, los investigadores, abogados, emprendedores... precisan que la información pública esté a su alcance, tanto por la publicidad activa, como por medio de las preguntas que se hagan ejercitando el derecho de acceso. En los países occidentales se han aprobado leyes sobre transparencia y acceso a la información pública que permiten obtener conocer la información en manos de los poderes públicos. El problema se plantea cuando para conseguir una determinada información el peticionario se encuentra ante una negativa esquiva que dilata la entrega de la información, un procedimiento farragoso que desanima y hace desfallecer a quien necesita una información de forma rápida. En la comunicación se expondrá una experiencia sobre el derecho de acceso a información que en principio debe ser pública pues compromete fondos públicos. Se hicieron dos solicitudes de información sobre los profesores universitarios con méritos de investigación reconocidos y, de momento, los peticionarios hemos sido "toreados" por la Administración con argumentos "peregrinos" que nos han llevado ante los tribunales. Cuáles son los argumentos esgrimidos para no dar la información y, cuál ha sido el proceso y los tiempos empleados serán expuestos en la comunicación, para finalizar con unas propuestas de mejora del sistema de transparencia en España.

Title: Revising open justice for the digital era

Session Type: Individual submission

Authors:

Name: Jane Johnston

Email: jane.johnston(at) uq.edu.au

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: The ability of courts to administer justice and uphold social order depends on maintaining public confidence in their capacity to carry out this role fairly and impartially (Blackham & Williams 2015). This requires courts to show their work to the public, using the principle of open justice – that is, the public scrutiny of judicial proceedings. While courts usually actively embrace this legal principle, they have eschewed the idea of proactively seeking publicity or responding to criticism. The result is that courts are less equipped than other arms of government, or the corporate sector, in managing the changing communication and media environment they face as they enter the 2020s (Johnston 2018). This paper examines why special social, cultural and legal considerations have impacted on courts management of the communication and media environment. It uses a case study approach to examine recent changes within the Australian courts and also considers how the issue has impacted courts internationally. It reports on the most recent developments within courts' communication and publicity, including the employment of professional communication and media staff, media judges, the use of judgment summaries, streaming of audio judgments, and televised court proceedings. The paper concludes by proposing how courts might continue to expand these strategies and progress their open justice agenda as they enter the new decade.

Title: A True Right or A Fake One' - Discussion on the right of claiming to introduce abortion and the right to abortion in Taiwan

Session Type: Individual submission

Authors:

Name: Chiayi Chen

Email: sop0613(at) gmail.com

Country: TW (Taiwan)

Affiliation: Department of Law, National Cheng Kung University

Abstract: The purpose of the study is to discuss the freedom of speech of minors, which is if it is just an abstract right, or it is substantive. The right to freedom of speech of minors in Taiwan is not restrictive. However, this does not reflect on various rights. Among them, the most controversial issue is abortion of minors. This thesis is aiming at this interesting topic and in-depth discussion. Nowadays, young people enjoy their freedom of speech on various media, but does it mean the freedom of speech is equal to the right, which allows minors to put their speech into practice? In order to go further on this topic, this thesis will focus on the area of abortion. Do minors have the right to abort? According to the laws in Taiwan, minors may not abort without the consent of the legal representative. Even though it is absolutely no doubt that minors can express the message of wanting an abortion, they do not have the right to make it. For those who are under 20 years old, they are under the protection of speech, yet the actual rights are limited. Do we consider this fair? By discussing about different propositions, this thesis expects to make a bold interpretation of the communication rights and legal substantive rights of Generation Z, and to create more possibilities for the development of communication law.

The research method of this thesis using Document analysis and In-depth interview. By Document analysis, this thesis will collect other studies in the same field, and point out the relevance of the research of this thesis. By In-depth interview, this thesis intends to interview 5 to 6 people, who has had similar experience before or who are encountering this kind of problems. The conclusion of this thesis will summarize the results of interviews and make references to the results.

Key words: Freedom of speech. Minors. Abortion. Right of Abortion. Communication rights. Substantive rights

Title: la censura disfrazada

Session Type: Individual submission

Authors:

Name: Isabel Serrano Maillo

Email: miserran(at) ucm.es

Country: ES (Spain)

Affiliation: Porf. Derecho Constitucional

Abstract: Estamos viviendo en los últimos años una creciente labor legislativa orientada, en teoría, a limitar los discursos de odio y, por ende, a castigar aquellos que han llamado delitos de odio. Digo en teoría, porque la realidad es que este tipo de normas está incidiendo en la libertad de expresión de los ciudadanos. En el derecho a decir lo que queramos aunque moleste. Como decía Orwell, “si la libertad significa algo, es el derecho a decirle a la gente lo que no quiere oír”. Esta forma de legislar y las últimas reformas penales que introdujeron entre otros, los delitos de odio, ha planteado un debate sobre si estas están limitando la libertad de expresión de una manera injusta y desproporcionada. Las declaraciones que eran chistes simples u opiniones simples hasta hace poco, ahora pueden ser castigadas como delitos de odio, las opiniones que no reproducen el sentir de lo políticamente correcto se consideran discurso del odio, machista, fascista.... La libertad de expresión no es un derecho absoluto e ilimitado, ¡obvio!, pero necesita de una protección especial dentro de las democracias. La libertad de expresión tiene como objetivo crear una opinión pública libre. Es por eso debe respetarse y considerarse preferente, incluso si algunas opiniones son diferentes o contrarias a lo que piensa la mayoría. No tendría sentido proteger una libertad de expresión consistente, tan solo, en replicar aquellas ideas más populares y correctas. ¿Dónde poner el límite? El objetivo de esta comunicación es poner en evidencia la proliferación de este tipo de normas sobre discurso del odio en España y en Europa y analizar, a través de casos reales, cómo su aceptación nos está llevando a asumir como normal la censura. Se trata de normas generalmente imprecisas, poco claras y que habitualmente se aplican de manera arbitraria, lo que, además, provoca una gran inseguridad jurídica. En esta comunicación se pretende demostrar que estas leyes implican una clara, desproporcionada e inaceptable limitación a la libertad de expresión. Algo que debemos combatir.

(Para la realización de este trabajo, además de referirnos a otros autores como Coleman, Pérez Madrid, W. Bull, etc. Se hará un repaso legislativo y jurisprudencial.)

Title: News diversity for diluting disinformation: a fundamental rights perspective

Session Type: Individual submission

Authors:

Name: Judith Vermeulen

Email: judith.vermeulen(at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University, research group Law & Technology

Name: Eva Lievens

Email: E.Lievens(at) ugent.be

Country: BE (Belgium)

Affiliation: Ghent University, research group Law & Technology

Abstract: With the EU elections coming up in May, the European Commission is urging the signatories of the EU self-regulatory Code of Practice on disinformation to step up their game (European Commission, 2019). In September 2018, Google, Facebook, Twitter, Mozilla and the advertising sector committed themselves to contribute to solutions to the challenges posed by the dissemination of “verifiably false or misleading information that is created, presented and disseminated for economic gain or to intentionally deceive the public, and may cause public harm” (European Commission, 2018). ‘Voluntarily’ drawn up by the industry, the Code aims to achieve the objectives set out in the April 2018 Commission’s Communication on “Tackling online disinformation: a European approach”. In the latter, four overarching principles were put forward to guide any action in that respect, one of which being: “to promote diversity of information to enable citizens to make informed decisions based on critical thinking” (European Commission, 2018). The aforementioned Internet giants accordingly committed to invest in features and tools that make it easier for people to find diverse perspectives about topics of public interest (‘EU Code of Practice on Disinformation’, 2018). That, however, seems to remain just a promise so far. Indeed, from their recently submitted progress reports, the Commission concluded that, as of yet, user empowerment mechanisms are insufficiently being deployed and additional action will have to be taken by the start of the electoral campaign (European Commission, 2019).

Against this background, the question arises whether and how the argument that enhancing news diversity might “uncover, counterbalance, and dilute disinformation” (European Commission, 2018) is underpinned by a ‘right to diverse information’, stemming from article 10 of the European Convention on Human Rights and article 11 of the EU Charter of Fundamental Rights. While it has been argued that a diverse news offer fosters public debate, ultimately securing democracy (UN Special Rapporteur on Freedom of Opinion and Expression et al., 2017), this paper will explore whether the right to freedom of expression and information and the positive obligations stemming from the above-mentioned articles, include a right to diverse information – in particular in times of elections – and, hence, require stronger measures than an industry-drawn code of conduct in order to tackle disinformation. In order to uncover this, human rights instruments, policy documents, case-law and doctrine will be examined and interdisciplinary input from political and social sciences will be included.

Title: A Decade of CoE Digital Constitutionalism Efforts: Human Rights and Principles Facing Internet Privatized Regulation and Multistakeholder Governance

Session Type: Individual submission

Authors:

Name: Meryem Marzouki

Email: Meryem.Marzouki(at) lip6.fr

Country: FR (France)

Affiliation: CNRS & Sorbonne Université

Abstract: While attempts to conceptualize normative developments in the online environment are almost contemporary with first efforts to define and adopt Internet-related policies since the mid-90s (Celeste 2019), a more holistic definition of the concept of digital constitutionalism was only recently proposed as the set of various efforts “to articulate a set of political rights, governance norms, and limitation on the exercise of power on the Internet” (Gill et al. 2015). Since then, a growing number of scholarly work adopted this umbrella definition to explore more in depth the contribution of specific actors to digital constitutionalism (see, e.g., Padovani & Santaniello 2018).

This proposal addresses the case of the Council of Europe (CoE) as a major contributor in this framework. In the last decade, the CoE has adopted no less than 34 soft law instruments specifically dealing with the online environment. While other entities such as ‘Data Protection’ and ‘Cybercrime’ have concentrated on the international Treaties they respectively have in charge, the ‘Media and Internet Governance’ Division seems to have balanced the non binding nature of its own instruments with their quantity, their variety, and the width of their scope.

The proposed paper analyzes this true fabric of international soft law for the online environment that this CoE Division has become. It is structured around three main research questions: why the turn to such an intense activity in 2006; the kind, scope and substance of the considered 34 soft law instruments and especially the reasons for this choice of non binding instruments; the cooperation and tensions that punctuated the drafting and adoption of the considered instruments during the ten years period.

The multidisciplinary approach draws from communication studies, international and human rights law, political science and international relations. It shows a strong empirical dimension, based on data collection through interviews, document analysis and archival research, and enriched by the author’s unique experience of participant observation, from 2005 to 2013, to different CoE committees of experts.

The paper shows that CoE digital constitutionalism efforts and results cannot be isolated from both endogenous transformations and exogenous shifts that intensified in post-WSIS Internet governance. The former relates to the internal transformations of International organizations, as also confirmed in the literature in other global governance sectors. The latter is a direct consequence of the shift in how human rights and principles are envisaged and debated - from the traditional focus

on state obligations and state enforcement to an increasing involvement of private actors to play a prominent role - accompanied by a shift to multistakeholderism.

Title: Cultural Commons: An Examination of Lebanese People's Knowledge of Copyright

Session Type: Individual submission

Authors:

Name: Veronica Alwan

Email: alwanveronica(at) gmail.com

Country: LB (Lebanon)

Affiliation: Notre Dame University - Louaize

Name: Christy Mady

Email: christymady(at) gmail.com

Country: LB (Lebanon)

Affiliation: Notre Dame University - Louaize

Abstract: Among the Arab countries, Lebanon was the first to legislate a copyright law in 1924 besides signing and joining a number of international conventions such as the Berne Convention for the Protection of Literary and Artistic Works, Universal Copyright Convention and the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations. The 1924 copyright law was only amended in 1999 when the Lebanese parliament issued an Act replacing chapter VII of the 1924 Act.

While Lebanon has been on the forefront of copyright legislation in the Arab world, it still does not have a copyright law to deal with online material and the sharing of digital information on social media platforms. Add to that, and although many studies exist on copyright (Abdallah, 2013; Obeid, 2001; Rabah, 2001), none of these studies assesses Lebanese people's awareness of the law in Lebanon. This study, therefore, investigated the Lebanese people's awareness and knowledge concerning copyright and the use of the copyrighted material online. Moreover, this study offers a framework and suggestions for a new copyright law for the country - noting that the current law was issued in 1999 before the existence of the Internet in Lebanon.

To investigate the topic, the study used both the quantitative and qualitative research methods. A questionnaire was sent out and filled in by 533 respondents in the winter of 2018. The questionnaire asked about the use of social media, knowledge about the copyright law, awareness of copyright and respect of online copyright material. For the qualitative research method, face to face semi-structured in-depth interviews were conducted with parliament members and copyright lawyers including member of parliament Georges Okais, judge Charbel El Helo, lawyer Joseph Chamoun and lawyer Dolly Farah. The interviews covered the law's application, hindrances, complications and shortcomings. The questionnaire's results were also shared with the interviewees to get their feedback and recommendations for the putting together of a framework for a new copyright law in Lebanon.

Findings of the questionnaire showed a lack of knowledge concerning the online copyrighted material despite the fact that the Lebanese were in general aware of copyright as a concept. Findings also showed the nonchalance of the Lebanese who they do not file complaints against

copyright violators. The findings demonstrated as well that Lebanese know that they should take permission to use others' work but they do not. They do not apply the rules. The study revealed that age and education were not major factors when it came to knowledge about copyright. More importantly, it showed the urgent need for the suggested copyright law – an initiative that was welcomed by the interviewed law makers and members of parliament.

Abstract: La televisión e Internet son dos medios claves desde un punto de vista publicitario: año tras año, su liderazgo en términos de inversión publicitaria así lo constata (Infoadex, 2018). Los avances tecnológicos han transformado las formas de consumo y acceso a los tradicionales medios de comunicación y han posibilitado el desarrollo de nuevos formatos publicitarios. Convergen los medios y las acciones de comunicación se hibridan. En este contexto, la progresiva introducción de la televisión inteligente –Smart TV– y el también progresivo grado de penetración del estándar Hybrid Broadcast Broadband (HbbTV) han facilitado la creación de nuevos servicios que utilizan de manera complementaria la conectividad broadcast a través de la TDT y la conectividad broadband a través de Internet (Uteca, 2018).

Nacido e impulsado por la industria audiovisual europea, en España el conocimiento y uso del HbbTV se incrementa progresivamente al ritmo del factor de convergencia (Boronat, Montagud, Marfil y Luzón, 2018). Televisores conectados, decodificadores y dispositivos multipantalla posibilitan experiencias más interactivas y personalizadas y, también, de monetización y control de la actividad del telespectador que interactúa con los contenidos publicitarios (Fondevila, Botey, Rom y Vila, 2018) con los consiguientes riesgos en términos de privacidad del usuario (Irion y Helberger, 2017). En un contexto de revisión y actualización de la normativa europea en materia audiovisual y de privacidad, ¿hasta qué punto el legislador comunitario y estatal contempla los riesgos que esta convergencia entraña para los destinatarios de estas nuevas modalidades de publicidad televisiva interactiva?

El objetivo del presente estudio es identificar, describir y analizar los retos legislativos de la publicidad interactiva en la nueva televisión híbrida. ¿Qué normativa regula la publicidad televisiva interactiva difundida a través del HbbTV? ¿Se contempla este tipo nuevo tipo de publicidad en la nueva normativa en materia audiovisual, de privacidad en el entorno digital y de protección de datos

personal? Mediante un modelo mixto que combina la metodología descriptiva y analítica, el trabajo presenta un análisis del contenido de la legislación comunitaria y estatal en materia de servicios audiovisuales, publicidad y privacidad en el entorno digital aplicable a la publicidad interactiva difundida a través del HbbTV.

Los resultados de la investigación constatan una carencia de regulación que contemple específicamente el HbbTV y, en consecuencia, la publicidad interactiva difundida a través de la televisión híbrida. Sobre la base de los resultados obtenidos, el trabajo concluye con una síntesis del marco jurídico básico aplicable a esta modalidad publicitaria y una serie de propuestas para paliar los déficits en la regulación de la publicidad interactiva en HbbTV.

Title: La privatización de los derechos en el entorno digital

Session Type: Individual submission

Authors:

Name: Leopoldo Abad

Email: abad.fhm(at) ceu.es

Country: ES (Spain)

Affiliation: CEU San Pablo University Madrid

Abstract: Conciliar los legítimos intereses de las empresas privadas que ostentan un papel central en el ecosistema digital con los derechos de los ciudadanos, y especialmente con sus derechos fundamentales a transmitir y recibir informaciones y opiniones con total libertad es cada vez más complejo en el ecosistema digital.

A ello se añade una posición respecto al aseguramiento de estos derechos por parte de los poderes públicos estatales limitada. Las razones son variadas, pero podíamos destacar: 1) el carácter transnacional de la sociedad digital impide la aplicación de las regulaciones estatales que siguen el principio de territorialidad; 2) las iniciativas regulatorias en Internet de carácter transnacional surgidas en el marco de las organizaciones internacionales tropiezan con el modelo regulatorio imperante basado en la gobernanza a través de diversas entidades privadas; 3) la tradición regulatoria en el ámbito de la comunicación ha considerado que la función que debe desarrollar el Estado es meramente garante del ejercicio de las libertades por los particulares, pues toda intervención se ve como injerencia o incluso censura.

Ante esta situación, los grandes gigante de Internet se encuentra en una posición de dominio cuasimonopolístico (algunos de ellos como Google o Facebook, sin el cuasi), y adquieren un poder sustitutivo del poder de Estado pues establecen las condiciones de ejercicio de las actividad en Internet a través de sus condiciones de uso o términos de servicio, llegando a actuar con funciones cuasijurisdiccionales para valorar si se está ejercitando las libertades de información y opinión de forma correcta o no, como pone de manifiesta el ejercicio del derecho al olvido por parte de Google o las consecuencias del artículo 13 de la propuesta de Directiva comunitaria sobre derechos de autor en el mercado único digital.

Autores como Morozov destacan la censura llevada a cabo por el sector privado y su propio poder regulador en el desarrollo de términos de servicio, normas y prácticas que rodean el filtrado y eliminación de determinados contenidos en línea. Los gobiernos sencillamente no son capaces de emprender la compleja tarea de reglamentación de Internet, que ha dejado a las empresas privadas su carga y su poder regulador. Intermediarios como Google, You Tube y Facebook han logrado un dominio que, en términos prácticos, significa que los activistas digitales están obligados a comprometerse con estos mecanismos si buscan audiencias globales. Un ejemplo aquí es la confianza de la comunidad de derechos humanos en You Tube, Facebook, Twitter y otros operadores comerciales después de una ola inicial de sitios independientes que no pudieron competir por la atención de las masas.

Incluso la efectividad de los mensajes alternativos es limitada debido a que las formas de comunicación/información mayoritarias son la redes sociales donde se acentúa la idea de la disonancia cognoscitiva. Ello es contrario a la idea de pluralismo como bien social, entendido que el pluralismo requiere de intercambio de ideas.

Title: PRIVACY IN PUBLIC SPHERE WITHIN DECISIONS FROM ECrtHR AND TURKISH SUPREME COURT ON COMMUNICATION, TECHNOLOGY AND HUMAN DIGNITY

Session Type: Individual submission

Authors:

Name: Seldağ Gunes Peschke

Email: seldag.peschke(at) gmx.net

Country: TR (Turkey)

Affiliation: Ankara Yildirim Beyazıt University Faculty of Law

Abstract: The improvement of mobile phones in the last 10 years, made the access of people to internet easier and faster. However, this rapid distribution of information brought up some legal issues along. The protection of personal data and privacy in the digital world became the most discussed subjects in the last years.

According to European Data Protection Supervisor (2015), 'Opinion 4/2015 Towards a New Digital Ethics Data, Dignity and Technology', privacy is one of the fundamental human rights which is an integral part of human dignity. As it is stated inside the constitutions of many democratic countries, the respect and protection of human dignity is the duty of all state authority. Therefore, data protection and privacy have constitutional dimensions on the basis of the guarantees of human dignity and personhood.

Privacy can be described as one's own space which he/she doesn't want to share with the public and limit the access of the others to his/her personal information, data or secrets. Privacy cannot be localised as home or family, which is associated with certain procedures and it can be in everywhere, also in the middle of public places. By the technological developments, impact of digital technology on right to privacy has changed. The people are watched 24 hours by cameras in streets or inside buildings. Companies monitor their staff's emails and web searching habits. Under these conditions there is a need to balance the right to privacy and the public interest. In the last years there are many cases from the ECrtHR on breach of privacy which is regulated in article 8 of the European Convention on Human Rights. As it is stated, everyone has the right to respect for his private and family life, his home and his correspondence. Privacy is regulated under the article 20 of Turkish Constitution and in some other codes. For example, Turkey has Data Protection Code which is very new since 2016 in accordance to EU Directives.

For the protection of the individuals, the effective application of international law in different countries is very important. Therefore, there is a need to harmonise national legislation with international regulations and to take the international court decisions into account in national States. In this presentation, the effect of communication technology on human dignity and privacy in public sphere will be discussed within decisions from ECrtHR and Turkish Supreme Court.

Title: HACKING, LEAKING AND DATA DUMPING: BARTNICKI V. VOPPER AND THE STILL-UNSETTLED LAW OF REPUBLICATION

Session Type: Individual submission

Authors:

Name: Erik Ugland

Email: erik.ugland(at) mu.edu

Country: US (United States)

Affiliation: Marquette University

Abstract: One of the disquieting effects of the Digital Age is the ease with which private data can be illegally captured by hackers and revealed by leakers or intermediaries. The laws in most countries provide strict punishments for those who engage in computer crimes involving the acquisition of private material. The law is less clear, however, about the extent to which people can be civilly or criminally liable for publishing or re-publishing information that was illegally obtained by someone else.

In the United States, a key Supreme Court precedent seems to give publishers strong protections in these situations. In *Bartnicki v. Vopper* (2001), the Court held that those who disclose illegally acquired information are protected by the First Amendment, provided: 1) they played no part in the illegal acquisition of the material, and 2) the material addresses a matter of public concern.

In media reports about hacking and leaking incidents, journalists and commentators regularly overstate the extent of *Bartnicki*'s protections, treating it as essentially a grant of absolute immunity and overlooking either the "public concern" condition noted above or the concurring opinion by Justice Breyer, which narrowed the scope of the ruling. They also commonly overapply *Bartnicki* by referencing it in coverage of cases like *Bollea v. Gawker* (involving a leaked sex tape) where it has limited relevance.

These flawed media accounts mask the fact that *Bartnicki* is simply not the robust, anchoring precedent that many people assume; it is, rather, a cautious, narrow and somewhat ambiguous first step by the Court into this domain, and a precedent whose utility and durability are even more uncertain in light of new technologies and changes in the makeup of the Court. New cases involving the republication of stolen or hacked information are arising every day, from Donald Trump's leaked tax returns to the DNC's hacked emails to Jeff Bezos's intercepted text messages. After 18 years, the law is still not clear about who has immunity in these situations.

There is an urgent need to fill these gaps and to provide some legal certainty by addressing some unanswered questions: Is *Bartnicki* protection limited to journalists? Can organizations that acquire and then "dump" huge caches of data always rely on *Bartnicki*? What constitutes a matter of public concern? What level of constitutional scrutiny should apply to laws limiting republication of stolen data?

The purpose of this paper is not to outline a normative solution but to help initiate that process by providing a comprehensive assessment of judicial interpretations of *Bartnicki*. The authors will conduct a case analysis and thematic analysis of all federal and state court decisions applying *Bartnicki* to understand how courts have answered the questions the Supreme Court left open in 2001. The ultimate goal is to be able to identify the remaining points of disagreement or

uncertainty (in terms of outcomes, doctrine and theory) and to establish a roadmap for scholars, judges and policymakers as they seek to bring clarity to this important but still-unsettled area of law.

Title: 'Centuries old and tradition bound': Can Constitutions Adapt to Guarantee Fundamental Rights Online'

Session Type: Individual submission

Authors:

Name: Rodrigo Cetina Presuel

Email: rcetinapresuel(at) law.harvard.edu

Country: US (United States)

Affiliation: Harvard University

Name: Jose Manuel Martinez Sierra

Email: jose_martinez(at) harvard.edu

Affiliation: Harvard University

Abstract: Internet, and new communication technologies, in particular social media, have proven to be a challenge to constitutionalism in general and to fundamental rights in particular. Constitutional guarantee of rights such as the right of citizens to freely impart and receive information an opinions online is mostly exercised through a handful of social media platforms controlled by a handful of private companies that in practice, have tremendous power to set the conditions for expression in said platforms (Rosen, 2011; Klonick, 2018). Another example of this is personal and data privacy protection, under pressure by a business model based on pervasive surveillance of people and the extraction of profit through personal data processing (Zuboff, 2015) which in turn, also gives these companies tremendous power to decide the degree of privacy people are afforded (Cohen, 2012; Hildebrandt, 2017).

One assumption that has emerged around the conflicts above described is presuming that the most veteran constitutions, those that are “centuries-old and tradition bound” (McKeown, 2014), face the greatest challenges to adapt to a new reality and to effectively guarantee rights in the online context than more novel constitutional frameworks, for example in relation to the principle of territoriality applied to platforms that are not constrained by physical space or national borders (Balkin, 2018); or state action aimed at guaranteeing the capacity to speak (Yemini, 2019) by trying to interfere as little as possible and by seeking a balance between the protection of both privacy and expression online (Youm & Park, 2016).

This work analyzes jurisprudence from the Court of Justice of the European Union in relation to articles 7, 8 and 11 of the EU Charter of Fundamental Rights from a comparative perspective with a selection of jurisprudence from Member States in order to determine if indeed there has been a qualitative leap that has allowed the European Union system to adapt and face the aforementioned challenges successfully in comparison with older national constitutional orders.

Title: Tracing the Tensions between Disputed Rights and Contested Truths in the Context of Right to Information: Turkey's Case

Session Type: Individual submission

Authors:

Name: Tugba Asrak Hasdemir

Email: tubahasdemir(at) gmail.com

Country: TR (Turkey)

Affiliation: AHBV University Faculty of Communication

Abstract: Many valuable studies question the nature and features of the interaction between government and citizen in the modern state structure. The right to information is one of the rights which play leading role to promote the interaction between government and citizen. This right has important ties with the freedom of thought and expression as well as citizen's right to ask their government to be accountable. It is a "right" with political and social implications: On the one hand, it can be a measure of the openness of the society, on the other hand it can give citizens a sense of ownership, and serve confidence in the legitimacy and appropriateness of public administration.

In Turkey, the regulations and practices related with the right to information, as the instrument of making the acts and actions of the government "public", came to the agenda on the beginning of 2000's. The law on the right to information was enforced in 2004. This presentation aims to investigate legal procedures and practices of the right to information in Turkey. The most significant practices of the right to information and the main problems encountered in the application process during the period 2004-2018 will be handled and elaborated by considering the worldwide experiences and the discussions on the issue. Within that respect, this study will also explore the decisions of the Council of Cassation of Right to Information in Turkey, as the final authority, which reviews the decisions related with partial or full refusal of access to information and documents by regarding the limitations in the legislation.

The statistical data on the applications for the access to information is made to public by the Turkish Grand National Assembly every year. Also, the decisions of the Council of Cassation of Right to Information are regularly published on its website. In our study, we will analyze this data and information and try to determine certain trends and explore some disputed issues in the practices of the right to information within the period between 2004-2018. Besides the data and the information related with the right to information, we consider the assessments and criticisms of the academicians, lawyers and experts on the practices and decisions related with the right to information in our analysis. Finally, the last part of the presentation is reserved for evaluations and recommendations based on the findings of the study, which can serve to advance the right to information and encourage the interaction between the citizens and the government.

Affiliation: Universidad Mayor - Facultad de Humanidades - Escuela de Periodismo

Abstract: El estudio analiza las categorías del mercado relevante y el pluralismo estructural, entendiendo por tal el conjunto de mecanismos que, sin afectar el contenido, permiten conocer la diversidad de mensajes y efectuar un control de la concentración de los medios. En el caso chileno, tal función le corresponde a la Fiscalía Nacional Económica (FNE), la que recibe información relativa al cambio de propiedad de cualquier medio de comunicación, y cuyo informe favorable es necesario para las operaciones que involucren a medios titulares de una concesión (radio y televisión). En ese contexto cabe destacar, que el estudio antecesor a la presente propuesta[1], consideró aspectos fundamentales concluyentes como la escasez del espectro radioeléctrico, que siendo el motivo más poderoso para la intervención estatal se ha visto sin embargo alterado por la digitalización de la televisión y la radio y por el desarrollo de Internet. Un ejemplo de lo anterior ha sido Noruega el primer país del mundo en terminar las concesiones radioeléctricas para las radios FM, proceso que comenzó en enero de 2017, lo que supone el principio del fin de las emisiones por dicha frecuencia tradicional. La iniciativa del país nórdico procura que existan más canales de radiodifusión y con ello más diversidad de contenidos. La industria de la televisión de pago –de cable y satelital- también experimenta importantes cambios, pues ha surgido un fenómeno conocido en Estados Unidos como «cord cutting». Dicho término da cuenta del retiro a gran escala de clientes de servicios de televisión de pago –en especial del cable- en favor de plataformas de Internet como Netflix, Amazon, Hulu y YouTube, por citar algunas. Dicha tendencia se advierte que podría observarse en países como Chile en donde la alta penetración de Internet[2], así como la sofisticación creciente de los modelos de conexión y la velocidad de la misma, pone de manifiesto dos aspectos fundamentales: la familiaridad general de los chilenos con el uso de la Red y el ajuste que esto implica en la democratización de la información.

Title: Combating fake news: Meaningful gamification for the public to enhance their critical thinking skills and media literacy

Session Type: Individual submission

Authors:

Name: Ling-Yi Huang

Email: lingyi0713(at) gmail.com

Country: SE (Sweden)

Affiliation: Linnaeus university

Abstract: To combat fake news, the social media giant Facebook has announced that its 27 fact-checking partners across the world now have access to a new tool powered by machine learning and designed to help reviewers identify and take action against false content faster.

However, to combat fake news cannot just rely on the companies and machines. To empower the public with media literacy and critical thinking skills can help increase the awareness of fake news and identify them. The goals of this study are to design a gamification mechanism applied to all kinds of news website for the public, to enhance their media literacy and critical thinking skills and therefore to help the public identify fake news.

In order to motivate the public to train themselves and to practice the learned skills in everyday life, this study borrowed the concept “meaningful gamification” and designed a gamified platform to assist the teaching and to promote self-training for the general public. Nicholson (2012) introduced the term “meaningful gamification” which emphasizes that connections between game elements and important aspects of learning activities should be presented to help the user make relevant connections between aspects of the non-game activity and his or her own learning goals and desires. Accordingly, a meaningful gamification system in education needs to encompass a wide variety of users’ backgrounds, desires, and skill sets. Some gaming elements including goals, challenges and quests, progress, feedback, competition and cooperation, actual grading, visible status, access/ unlocking content, freedom of choice, freedom to fail, storytelling, new identities and roles were employed in this gamified platform.

Several teaching goals are designed to put into the players’ manual booklets: (a) introduction to critical thinking, (b) introduction to media literacy, (c) introduction to Toulmin’s argument model, (d) critical thinking skills, (e) introduction to argument fallacies, (f) media argument fallacies, (g) critical thinking strategies, (h) critical discourse analysis and (i) visual culture and (j) fake news and politics.

The media literacy and awareness of fake news scale (MLAFN) will be developed by this study. The scale and the Critical Thinking Test Level II (CTT- II) will be employed in this study. Participants will be recruited from the college and join the experiment for 5 weeks. A pretest-posttest control group design will be employed. Repeated measure analysis of variance and structured interviews will be employed for the analysis of the effectiveness of the gaming mechanism. Hopefully, this study can contribute to the enhancement of media literacy and critical

thinking skills of the public and can help raise the awareness of fake news and sharpen the skills to identify them.

Title: ICT and Media Education Curriculum for Teacher Training

Session Type: Individual submission

Authors:

Name: Alfonso Gutiérrez-Martín

Email: alfonso.gutierrez.martin(at) uva.es

Country: ES (Spain)

Affiliation: University Teacher. Full Professor

Name: Alba Torrego-González

Email: albatoregogonzalez(at) gmail.com

Country: ES (Spain)

Affiliation:

Abstract: Teacher education is in dire need of consistent criteria that can circumscribe a critical approach to media education and digital literacy. This proposal offers a nuanced view of the difference between training teachers for the use of ICT (or the so called “digital competences”) and teacher training in media education. We argue that, in order to address professional training for educators and, more specifically, the initial training of teachers in media education, it is imperative to clarify concepts, avoid reductionism and design concrete, feasible plans. Prioritizing technical training is among the most frequent types of reductionism, and this can be detrimental to more critical and reflective approaches. In general, teacher training focuses on the mastery of educational technology rather than media education. Moreover, ICT approaches are more focused on “learning to know” and “learning to do” than on “learning to live together” and “learning to be.” As a result, attitudes and values tend to be relegated to the background.

In this paper we propose new approaches to media education research and a revamped ICT and Media Education curriculum model for teacher training.

Title: Media psychology: challenges of competence-based curricula and employment (Case of Georgia)

Session Type: Individual submission

Authors:

Name: Mariam Gersamia

Email: mariam.gersamia(at) tsu.ge

Country: GE (Georgia)

Affiliation: Ivane Javakhishvili Tbilisi State University

Name: Maia Toradze

Email: maia.toradze(at) tsu.ge

Country: GE (Georgia)

Affiliation: Ivane Javakhishvili Tbilisi State University

Abstract: The purpose of this research is to identify the core competencies for media psychology curricula and common criteria which employers consider in the process of employing media psychologists. The research holds significance for adjusting interdisciplinary educational programs and in particular, advancing media psychologists' competency matrix (graduate program's learning outcomes).

This research answers the questions as it follows:

1. What core educational competencies/learning outcomes are to be met by media psychologists (by completing graduate level)?
2. According to what criteria (in employers' opinion), knowledge and skill-based competencies media psychologists might be employed in Georgia?
3. what are the basic gaps and recommendations to be considered for adjusting higher educational programs?

Employers from 35 organizations (media, marketing and research organizations, governmental and non-governmental agencies) in Georgia answered the close and open-ended questions in 2018.

Media psychology is an emerging sphere and in Georgia it has already started to develop in the interdisciplinary context. The field might have a unique condition for development in the region for its unique media landscape: Georgian media managed to survive under omnipresent Soviet propaganda, but the legacy still looms large on the country's media landscape. For now, Georgia is in a condition of so-called hybrid war and struggles with anti-western propaganda.

According to the results, 71 % of employers do not have in staff media psychologists and up to 45 % wish to employ specialists with such competencies; there is a low awareness about media psychologists and 39 % still do not know if they want to employ them in Georgia. Still 75 % of employers would offer trial period to them. Majority of respondents (82%) answer, that knowledge and skill based competencies with emphasis of psychology is critically important (61 %) or

important (21 %) for journalists (in particular); 88 % of employers think that media employees should have a good understanding of the negative and positive phenomena/effects of Media (TV, Radio, Print and online) product, should be ethical (reduce stigmatization and strengthening stereotypes, not use hate speech, etc.); They should know, how fake, biased news and propaganda effects peoples' mind and perception of reality.

According to the research the core competencies for media psychology curricula have been shaped. The research is a valuable resource for educators in modernizing educational programs by taking into consideration employment requirements and fine-tuning accreditation standards.

Title: INNOVATION IN MEDIA AND COMMUNICATION STUDIES: A SOUTH AFRICAN CASE STUDY

Session Type: Individual submission

Authors:

Name: Ylva Rodny-Gumede

Email: yrodny-gumede(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg, Department of Journalism, Film and Television

Name: Colin Chasi

Email: ChasiCT(at) ufs.ac.za

Country: ZA (South Africa)

Affiliation: University of the Free State

Abstract: In this paper we discuss the possibility of a discipline of media and communication that is innovative, pluralistic and open in ways that conduce to development. Based on a set of in-depth interviews with a select group of South African scholars teaching and researching in the discipline, we establish the extent to which they regard media and communication study as a field which is innovative. Innovation here talks to a discipline that is imaginatively open to a myriad of different, diverse and divergent contributions relevant to the human endeavour of understanding the world in ways that better humanity. In doing so, we explore the extent(s) to which the discipline is perceived by scholars in the field as variously enabling, encompassing and embody innovation in research, teaching, curricula, theory, methodology, resourcing, and community outreach. As such the paper addresses the breadth of involvements articulated that support or inhibit innovation.

Title: Online children in Kosovo, use of the Internet and experiences

Session Type: Individual submission

Authors:

Name: hasan saliu

Email: hasan.saliu(at) aab-edu.net

Country: AL (Albania)

Affiliation: AAB College

Abstract: Current studies in European countries have shown that in recent years there has been an increase in the use of internet by children aged 9-16 years old, while parents are increasingly being shown to be ineffective in exercising parental control when it comes to the presence of abuse and pornographic online products. About 15 percent of households in 25 European countries are considered to be "incompetent families" to exercise the necessary control over harmful online phenomena for their children (Paus-Hasebrink et al., 2013). While there are no studies on the amount of internet use in Kosovo, there some reliable sources (alexa.com) which prove that Kosovo is a wide user of social networks compared to the European countries. The country makes a specific exception from other countries by having an online portal as the most visited site in contrast to European countries, i.e. google which is ranked first. For this reason, the study is focused on three study fields/scopes of online children: the use, activity, and risk factors, viewed in relation to parents, school and friends. The main purpose of this study is to identify the real situation of online technology usage in Kosovo, the time spent online and the products consumed on the internet by children aged 9-16, and to raise social awareness and offer empirical data also useful for media education. Quantitative and qualitative methods will be combined for the realization of this study project, which is ongoing and funded by the Ministry of Education of Kosovo and with the author of this abstract as the bearer of the project. About 2000 children from different schools in Kosovo, urban and rural, of both sexes aged 9-16 were surveyed through a standardized questionnaire. Another questionnaire was designed for parents to compare and test results from children's responses. The standardized questionnaire (Livingstone et al. 2011) used in conducting the online "Kids Online" survey in 25 different EU countries has been adapted to the social and cultural context of Kosovo. Parents of this age group have been interviewed in order to test the veracity of the children's questionnaire. In other words, the detailed survey is structured so that questions make the child accountable for his online experiences. The current data analysis concluded that higher education parents are more inclined to supervise their children in terms of time and how to use the Internet than less educated parents are. Meanwhile, children from smaller families are less exposed to online dangers compared to the children from larger families (families with more children).

Title: Data Literacy and Media Literacy. Is an integration possible and desirable

Session Type: Individual submission

Authors:

Name: Leo Van Audenhove

Email: lvaudenh(at) vub.ac.be

Country: BE (Belgium)

Affiliation: IBBT-SMIT Vrije Universiteit Brussel

Abstract: Data literacy seems to be the new kid on the block in the growing attention to different forms of literacies. The reason for the growing attention lies of course in the fact that data, in all its forms, starts to have an enormous impact on our daily lives. Some of those evolutions are clearly situated in the field of media, such as search engines, recommendation engines, personalization of news, etc. However, some of these data driven evolutions are situated in fields outside of media such as smart cities, smart environments, data-based strategies and policies, etc. This evolution provides us with new opportunities, but also brings possible dangers with them such as filter bubbles, fake news, social sorting and digital exclusion mechanisms.

The question then is, what is the relation between media literacy and data literacy? Are current models for media literacy sufficient to understand data literacy? What are the similarities and what are the differences? How can we adapt models to integrate data literacy within existing models and frameworks? The literature on data literacy does not necessarily help, because the literature seems to go in all directions, covering data literacy, statistical literacy, algorithmic literacy, numeracy, etc. Furthermore, the existing research focus on data literacy at the level of the individual, at the level of sectors and organizations, in relation to skills sets and competencies, etc. Yet, we all feel that individual users need new critical skills to understand the use of data, its effects on their individual life and behavior, and the possibilities of making informed choices in relation to data.

In our paper we will first map the current discussion on data literacy by analyzing a broad body of publications in the field and clustering them in terms of definition, scope, target group etc. This provides us with a base to better understand the discussion and to make informed decisions as to how it relates to media literacy. Second, we will use the competence model on media literacy as developed by the Knowledge Center for Digital and Media Literacy Flanders/Belgium to map similarities and differences and discuss them in detail. We will propose possible adaptations to the competence model to integrate the concept of data literacy. Third, we will identify and map existing data literacy projects on the extended competence model. What competences are well covered? Where would we need new approaches to teach specific skills and competences? The last analysis—apart from informing our own work—can inform new actions in the field of data/media literacy.

Title: Assessing the media literacy of adolescents (13-15 years old) in information search and multimedia creation

Session Type: Individual submission

Authors:

Name: Julia Bihl

Email: julia.bihl(at) uclouvain.be

Country: BE (Belgium)

Affiliation: Université catholique de Louvain

Name: Pierre Fastrez

Email: pierre.fastrez(at) uclouvain.be

Country: BE (Belgium)

Affiliation: Université catholique de Louvain

Abstract: In this presentation, we report on the first results of an international study (2018-2022) on the assessment of the media literacy of teenagers related to online information search and multimedia creation, in the French-speaking community of Belgium (Université catholique de Louvain, our team), Québec (Université du Québec à Montréal), France (Université de Rouen) and Switzerland (Université de Genève).

We consider media literacy as a set of competencies. Competencies involve “a personal ability to adapt oneself to novel situations in new and non-stereotypical ways” (Rey, Carette, Defrance, & Kahn, 2012, p. 13) that exceeds the mere acquisition and mastery of knowledge and skills, and includes the contextual selection and combination of the most relevant among them in complex situations. Our theoretical framework draws on prior work to distinguish between competencies pertaining to the semiotic, technical and social dimensions (Fastrez, 2010) of information search and multimedia creation. Additionally, we examine the relationship between the level of media literacy of individuals and their dispositions towards self-learning (Carré, 2005; Grasset, 2016). Our work combines different types of instruments that have traditionally been used separately. On the one hand, cognitive approaches to media and digital literacy tend to measure knowledge and skills through standardized tests (Gui & Argentin, 2011; Mittermeyer, 2004; Thirion & Pochet, 2008; van Deursen & van Dijk, 2010) and self-assessments (Literat, 2014; van Deursen, Helsper, & Eynon, 2015), which do not account for how individuals mobilize their knowledge and skills in the context of novel situations. On the other hand, critical-cultural approaches have focused on the qualitative description of situated media practices (e.g. (Aillerie, 2011; Coutant & Domenget, 2014)), which lack generalizability, and seldom make the leap from practice description to competence assessment (Litt, 2013; Martens, 2010). Our project is structured in three cumulative phases on three different samples. Phase 1 (2018-2019) includes a survey of information search and multimedia creation practices, the assorted self-assessed competencies, and dispositions towards self-learning. Phase 2 (2019-2020) will combine the survey with a test including simple tasks requiring predetermined bits of knowledge or skills, and a complex task (producing an explanatory website summarizing a web search) drawing on their knowledge and skills. Phase 3 (2020-2021) will add qualitative interviews with a subsample of respondents to the survey and test.

Data collection for Phase 1 (self-reported competencies and practices, dispositions towards self-learning) is underway with a large sample (N=2000 in each country) of 13 to 15-year-old adolescents, and will be completed in May 2019. Our presentation will focus on the first results concerning the relationship between self-assessed competencies and declared practices, as well as on the relationship between self-assessed competencies and declarations toward self-learning items. A correlation between perceived media literacy and perceived self-learning would cast a light on media education and education towards learning to learn in autonomy as being potentially mutually beneficial. More generally, the project will produce a multifaceted model of media literacy articulating its elementary levels (knowledge and skills) with its advanced levels (competencies), and a multilevel measurement method that could be adapted to other age groups and media activity domains. The results will also inform media education public policies, by identifying how to reduce media competencies gaps.

Title: Control of mobile phones in Norwegian Secondary Schools

Session Type: Individual submission

Authors:

Name: Yngve Nordkvelle

Email: Yngve.Nordkvelle(at) inn.no

Country: NO (Norway)

Affiliation: Inland Norway University of Applied Sciences

Abstract: Since 2012 many countries reached a critical point where more than 50% of the young generation owned a smartphone. In Norway, the prevalence of students using mobile phones extensively during school hours became a topic in the media. In 2013 a national media event hit the top news. Two schools had banned the use of mobile phones on the school premises. Subsequently a number of leading media figures were interviewed and gave statements about how regressive and backward-looking such a measure was, most notably from the director of the National government institute for the promotion of ICT in education. This paper evolved from the media debates emerging from the event and was developed as a participatory action research project with the two schools in question. The aim was to elicit the reasons for the restrictions on mobile phone usage, how it was implemented, how teachers, students and parents were involved, and how they experienced the process. It appeared to be a number of incidents of cyber bullying, nude photographs from the girls' gym wardrobe etc, and apparent lack of a responsible digital behaviour, which sparked off the restrictive turn. On one of the schools the initiative came from the students' body, claiming that time during recess had turned into an "alone together" event. The research design commenced with a series of focus group interviews with students, parents and teachers of the two schools. Results were discussed with the involved parties and developed to a survey of the entire student body. The first finding was that the school leaders had prepared the initiative properly by involving the democratic institutions for students and parents, who were very supportive. The second finding was that most students supported the initiative, agreeing with the stated aims, and the output they experienced with a significant drop of cyber bullying, more active recesses, more focused class activities and less worries for digital disturbances like messages, sms, instagrams etc. The resistance towards the regulations came from two groups: older boys who felt this was an infringement of their human liberties, - and a group of teachers who felt that mobile phones primarily needed to be seen as a valuable pedagogical tool. The strongest supporters were parents who expressed a state of helplessness towards the extensive use of digital media in their children's lives. The teachers found a significant improvement in the learning environment of the schools, and embraced the return to the "pre-mobile-phone" era. More laughs, more positive interactions and more time on task during lessons was greatly appreciated.

Abstract: The study portrays the social media literacy of madrasa students in Bangladesh. The main objective of current research is to understand the knowledge level of social media literacy of madrasa students. Social Media Literacy is the knowledge and ability to competently handle the digital content (such as posts, texts, images and audio-visual content) created for or published on social media platforms. Facebook, Instagram, YouTube, Twitter etc. are the popular social media tools among the youths of Bangladesh. Though most of them are using social media, not everyone exhibits the ability to properly interact with the content or create appropriate content for it. This study focuses on the social media literacy of madrasa students -both Qawmi Madrasa and Alia Madrasas, aged 16-22 studying in higher secondary level and up. The researchers gathered opinions of 825 students, both male and female, of 36 Madrasas all over Bangladesh. Among them 13 are Alia Madrasa and 23 are Qawmi Madrasa. The methods of survey and content analysis are used in the current study. Uses and gratification theory is applied here which guided the research. This study tries to illustrate the respondent's medium of access to social media, daily usage habit, preferred type of content, trend of post or sharing content and understanding of digital crime and punishments etc.

Keywords: Social media, Media literacy, Madrasa students

Title: Travelling cycle radios for children's rights: concerns and expressions from their own voice

Session Type: Individual submission

Authors:

Name: Daniela Lazcano-Peña

Email: daniela.lazcano(at) pucv.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Valparaíso

Name: María Paz Gálvez-Pereira

Email: maria.galvez(at) pucv.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Valparaíso

Abstract: Showing the experience of using mass media in non-formal school context as means to empower children and young people to exercise their citizen role is the aim of this work as well as enhancing the knowledge and strengthening the practice of their rights.

We focused on the experience of “Radios abiertas por los derechos de la infancia” which was implemented in 2018 by the Escuela de Periodismo of the Pontificia Universidad Católica de Valparaíso (PUCV), in the context of the celebrations regarding the month of childhood organized by the municipality of Valparaíso.

“Radios abiertas” was a travelling cycle of radios, carried out in four public schools. In each session a radio clinic about the fundamentals of radiophonic language was conducted for students. Subsequently, they had to plan and perform a live radio conversation programme in presence of the rest of the school community. The main theme was children’s rights from a participatory methodology approach. The introduction and discussion about rights (Knowledge) was the core of the training phase. In the planning and performing phase students themselves were the ones who freely decided which right to address and from which point of view (Put into practice).

The paper proposal is organized in two phases: (I) a case study of the experience of "radios abiertas" as a way of systematizing a model of a radio clinic for working media education with children; and (II) an analysis of the radio programs thematic content carried out in the cycle. The latter to identify the concerns, approaches and perspectives that the students themselves express when reflecting on their rights, and where topics such as sexual identity, the right to play and non-discrimination stand out among the predominant tendencies.

This experience is part of a line of scholastic journalism that the Escuela de Periodismo-PUCV develops. It is an educational approach grounded on a sociocultural process in which various actors participate both formally and informally, and that transcends the institutional spaces of the educational process. Studies on the subject have shown that community culture in educational communities has a positive impact on student’s learning (Batle, 2010; Reyes, 2017; Rodríguez

Gallego, 2013) not only in their academic performance, but also in the training of social, civic and social commitment skills.

In the particular case of scholastic journalism activities as a space for media education, we observe that they can supplement the curriculum in aspects such as reading promotion, language and written expression, but above all, as a space for new learning in social, cultural and civic dimensions.

Abstract: This paper examines three critical media education programs designed for a subset of young individuals in India who have limited access to new media technologies and rely on traditional media and offline, community-driven, spaces to forge social ties and communication networks. Studies indicate that individuals in countries of global south, especially India, inhabit media ecologies that are informed by the cultural, social, political, and economic dynamics characteristic of their everyday experiences. We argue that for educators to design and implement effective media education programs to promote civic participation among young individuals, they must de-center technology and adopt an approach to knowledge production that explores questions of audience, production, text, and interpretation, within the imaginaries of caste, class, religion, and other social identities.

We have selected these three media education programs- Budhan Theater, Main Kuchh Bhi Kar Sakti Hun, and Youth Ki Awaaz- based on the following criteria

- a) these programs are people-led and entail discourse/s of change or resistance
- b) they unpack the interaction between mediated (online/offline) and lived realities of the people/community involved
- c) these programs encourage the participants to enact their civic engagement through involvement in activities such as articulating issues, identifying alternatives, creating/circulating content, building support groups/networks, and so on

We have evaluated these media education programs based on the theoretical framework developed by the International Association for the Evaluation of Educational Assessment (IEA) because this framework allows to examine the locus of participation around issues of community involvement (membership), negotiation with local power structures (rights), and production of alternative truth regimes (critical participation). Based on the evaluation of these three cases, we argue that media education programs must be designed to include the use and analysis of different channels of communications, such as place-based communication, offline community engagements, social and cultural norms, and every day interactions, as potential sites to encourage practices of civic engagement among young individuals in India.

Based on our analysis we conclude that while designing media education programs for young individuals in countries of the Global South it is important to take into consideration four dimensions of their media cultures:

- a. Socio-political/civic identities
- b. Dominant channels of communication
- c. Local issues particular to their lived realities
- d. Access to media channels

We conclude that participants must own the knowledge production process and identify as members, negotiate with power structures for their rights, and works towards ideating, implementing, and nourishing the process of change through their active and critical participation.

Abstract: In the last years smart toys and internet connected toys have become increasingly present in the toy market as well as in the education industry. Media representations play an important role in shaping shared imaginaries around emergent technologies such as smart and internet connected toys. Such media representations influence discourses on children, media and technology and they can be seen as cultural seismographs for broader challenges of modernity (Springhall, 1998). They can be divided into three approaches: a) cultural pessimism, b) media euphoria, and c) critical optimism (Süss et al., 2018; XXX & Aliagas, 2017). This presentation will analyze actual discourses on smart and internet connected toys and children with a special focus on those under eight years of age. We do this by relying on a content analysis of media coverage in twelve European countries and Australia collected during the Christmas season of 2016/2017, and reporting on a follow-up study in Germany and Austria during the Christmas season of 2017/2018, as well as by presenting further analysis of trends for 2019. In these studies on the media coverage of smart toys media commentaries and advertisements were analysed by quantitative and qualitative content analysis in order to understand whether and how the emerging market of smart toys has already entered the discourses on children. Based on this data and compared with the actual diffusion of the toy market, we will present a framing of anticipated and perceived risks and opportunities, associated values, expectations and anxieties.

Title: Developing Digital Literacy through Mobile Learning and Narrative Persuasion in Adolescents

Session Type: Individual submission

Authors:

Name: Isabel Rodríguez de Dios

Email: isabel.rodriguez(at) upf.edu

Country: ES (Spain)

Affiliation: Pompeu Fabra University

Abstract: The ongoing development of digital devices and their presence in our daily lives has made digital literacy and digital skills essential to be successful in our society. In the specific case of adolescents, there has been growing interest in researching whether they have developed the level of digital literacy and digital skills that are needed to function effectively in this environment. At the same time, concerns about online risks behaviours, such as contact with strangers, have emerged. Although, it has been claimed that adolescents could avoid such risks by improving their level of digital literacy, research has shown that more digital skilled adolescents experience more risks. Consequently, researchers have started to focus on coping strategies, since their use could mitigate the negative impact of online risks. Therefore, the present study focuses on the development of digital literacy and coping strategies for facing online risks.

In this sense, research has shown that the use of mobile learning is successful in promoting learning outcomes and can offer learning benefits. Moreover, mobile learning applications that use constructivism and gamification elements have positive effects on knowledge achievement and motivation. Likewise, literature has shown that the use of narratives, compared to nonnarrative formats, is more effective in changing attitudes, beliefs and behaviours. Accordingly, mobile learning and narrative persuasion have demonstrated their effectiveness for educational outcomes. However, they have not been combined in research until now. Consequently, the goal of the present study was to develop a mobile application with narrative contents for increasing digital literacy and the intention to use coping strategies, and to evaluate its impact on adolescents.

Thus, a mobile application with narrative contents was developed considering the mobile learning, constructivist, gamification and narrative persuasion theories. This application was intended to teach digital skills and active coping strategies for facing online risks to adolescents. A quasi experiment was conducted for evaluating its impact with a sample composed by 245 adolescents between 12 and 16 years old.

Results indicate that the mobile application was effective, since its use raised the level of digital literacy and the intention to use active coping strategies when facing online risks. Moreover, identification with the protagonist of the narrative and mobile application acceptance predicted the impact of the app. On the other hand, gender and age of the participant and previous experience with online risks did not moderate the impact of the app. Consequently, our findings show that mobile learning initiatives can be effective regardless of adolescents' individual characteristics. In conclusion, the results of the present study confirm that mobile learning and narrative persuasion can be successfully combined for developing digital literacy in adolescents and therefore for educational outcomes.

Abstract: The history of media education in Latin America is closely connected to social movements of popular culture and education as well as movements of alternative communication. In regards to Latin America, these movements are firmly rooted in the pedagogy of Paulo Freire, who was an advocate for liberal and democratic education, creating literacy projects for youths and adults. His methodology provided learners with the capacity to read and was in direct contrast to the traditional school model, which was exclusionary and authoritarian. These movements also draw inspiration from practices like those of Mario Kaplun, who proposed a popular participative communication that could make changes in politics. This configuration led to organizing around the concept and paradigm of Educommunication, which was identified, systematized and reframed by academia through studies that gave society the knowledge it needed to qualify and strengthen these social practices. Educommunication thinks about the relationship between communication and education through concepts such as the horizontal nature of relationships, a shared construction of knowledge, an awareness of the cultural diversity of those involved in the teaching/learning process, respecting human rights and valuing freedom of expression, critical reading of the media and communication technologies, qualifying media products in educative processes, and helping youths to use the powerful technological resources at their disposal wisely. Despite its widespread use across all of Latin America in social intervention projects, often through non-governmental organizations, it was in Brazil where it achieved institutional consolidation. It became a guideline for building public policies in several areas, including Education, Environment, Health, and Human Rights, on both a national and regional level. It has recently become a field of specific professional

activity with the emergence of different types of training courses, including higher education. This paper aims to tell the story of the field in Latin America and build up its distinctiveness, specifically the paradigm of Educomunication. From this contextualization, we shall describe the main initiatives, studies, authors and projects which have led to the institutionalization of professional training in the field and to Educomunication becoming a guideline for public policies in many areas. Lastly, we shall discuss the challenges and perspectives within this field.

Title: Teaching Gender and Sexuality in a Critical Media Literacy Framework: Curriculum, Pedagogical Interventions and Auto-Ethnographic Reflections

Session Type: Individual submission

Authors:

Name: Ruchi Jaggi

Email: ruchi.jaggi(at) gmail.com

Country: IN (India)

Affiliation: Symbiosis Institute of Media and Communication, Symbiosis International (Deemed University), Pune, India

Abstract: The study of gender and sexuality in post-graduate communications programmes which are driven by an industry-oriented focus, largely requires an understanding of the following – contextualizing the need to conduct them; analysis of the interface between content and process; and evaluation of the pedagogical interventions. Education and training take it upon themselves to create competitive professionals. However there is a gap when it comes to structured media literacy interventions to understand the ideology of media representations even in communications programmes. It is in this context that I argue for an integration of media literacy framework to guide the curriculum and pedagogy of media education in the Indian context. Using the principles of liberatory pedagogy (Freire, 1998) and multiple literacies (Kellner, 1998), this research study builds a framework to understand the constructs of gender and sexuality using popular culture artifacts in a critical media literacy framework by students of media departments/institutes. While other socio-cultural markers including caste, religion and class are significant to this discussion, this study delimits itself to gender and sexuality. The relevance of both these constructs in critical in the Indian context because of multiple factors but a skewed sex ratio – 940 females for every 1000 males (Census, 2011) and the recent judicial verdict (Sep 6, 2018) that decriminalized homosexuality in India make this focus pertinent. Additionally, a dipstick test with educators from fourteen different media departments/institutes of Indian universities revealed that there is dearth of exclusive courses in gender and sexuality in media departments. This study documents the syllabus, pedagogical interventions and student reflections over the last three years (2016, 2017 and 2018) across two courses – Media & Culture Studies (taught in the first year of the MA – Mass Communication) and Communication Theories & Culture (taught in the first year of MBA – Communication Management) at Symbiosis Institute of Media and Communication, Pune, India. Using critical thinking and value-based framework as keywords, the aforementioned courses were developed in a liberal arts context. The study details how I have endeavoured to use the critical media literacy trajectory to help media students discuss, deliberate and reflect upon and representation and discourses on gender and sexuality in popular media narratives from textual, institutional and audiencehood perspectives. These pedagogical interventions were followed by assignments of different kinds which comprised creative writing, textual analysis and even media productions to critique and create media messages with alternative narratives on gender and sexuality. Using Chang's (2008) conceptualization of autoethnography, the study concludes with an analysis of students' reflections on their understanding of these concepts through these lectures and activities. One of the most crucial questions for me was to investigate how critical media literacy helps students to analyze the complexity of media texts and the audience's engagement with them.

While textual analysis of media content worked as pedagogical interventions; it was the students' responses that helped make sense of their understanding of the narrative of gender and sexuality embedded in their media environment.

Title: Digital Media Literacy and Mindfulness in a Thai context; The process of developing a conceptual framework for generating an initial intervention

Session Type: Individual submission

Authors:

Name: Monsak Chaiveeradech

Email: mchaiveeradech(at) bournemouth.ac.uk

Country: GB (United Kingdom)

Affiliation: Bournemouth University

Abstract: The movement of digital media literacy in Thailand has been continuously developing and becoming more important for more than 20 years (Wirunrapan 2018). Many researchers have mentioned about a Buddhist concept of mindfulness to enhance Thai people being conscious when they are dealing with problems, difficult, or unpredictable circumstances. The current research findings from Gabai and Nupairoj (2017) proposed that integrating Buddhism philosophy into media literacy subjects in the education core curriculum might be a good strategy, while students use their mindful awareness to support the skills and competencies. Similarly, Krutasaen (2013) considered that one of the developments of media literacy learning's process approach is self-awareness. This approach integrates with Buddhist teaching to encourage and acknowledge people to understand themselves, while they consume the media. Additionally, some researchers and scholars have sought to apply Buddhist concepts to digital media literacy, which are concepts related to a critical thinking process (Kleebpung 2017).

According to UNESCO (2011), the terms of content are differently interpreted from multicultural context so understanding the cultural differences is the important part of competencies to identify the values of multicultural context. In particular, mindfulness, or Sati in Thai, is the key role to deal with Thais daily routines that links with the law of cause and effect in Buddhist concept. Mindfulness can make them presently aware of, appropriately act and react to situations at that moment. My research premise is mindfulness or Sati in this Thai context represents the state of encouraging oneself to pause the distracted thoughts and then come back to review oneself. This is a kind of self-reflection, which is to try to understand the actions that happened, describe what they did, and summarize the consequences that they received. That is why digital media literacy education in each country should be rethought and reframed in order to catch up with the change of technologies.

Therefore, this paper intends to share the development process of the conceptual framework, which is derived from the initial idea formulated from the current literature review and in-depth interviews with 27 Thai participants; policy makers, academics, online content creators, and consumers. This conceptual framework explains the relationship between digital media literacy, critical thinking, and mindfulness that initially generate a pilot intervention to cultivate digital media literacy for Thai people. I as a researcher consider that combining the Buddhist concept of mindfulness to educate digital media literacy might be the way to simplify the complicated theory to relate Thai consumers' experiences. It is not just the way to access the information in new media platform; it is the way to

get the idea of critical understanding, aware to ask questions that become part of an individual's skills in their daily life.

Key words: Mindfulness, Digital Media Literacy, Conceptual Framework, Intervention

Title: Media education in formal education: diagnostic exercises

Session Type: Individual submission

Authors:

Name: Juat Jaani

Email: juta.jaani(at) ut.ee

Country: EE (Estonia)

Affiliation: University of Tartu

Name: Halliki Harro-Loit

Email: halliki.harro(at) ut.ee

Country: EE (Estonia)

Affiliation: University of Tartu

Abstract: Media education in formal education is somewhat different from other subjects as teachers and pupils synthesize their media knowledge and skills from very different sources and practices. Thus, even pupils within the same age group (the age group of this study is 11-13) have different basic skills and knowledge on media performance, depending on their background and actual personal experience. This creates a challenge for teachers who need to know: where should I start from? According to media education should be dialogic, meaning that it involves negotiation between existing knowledge that students already possess, their experience with media, and the new information that the teacher makes available (Buckingham, 2003; Schilder, 2019: 29)

For such challenge we propose a feedback and feed-forward tool that enables teachers to plan media education trajectories that take into consideration the previously acquired skills and knowledge of certain group of children. We propose a concept of diagnostic exercises: feedback tool for a teacher and concurrently a peer feedback tool that actively involve learners in the learning process (e.g. Wasson, Vold 2012, 256). It is important to point out that we do not attempt to propose standardized media literacy quantitative assessment tool or a tool for assessment of media literacy levels (e.g. Rosenbaum 2007; Celot, & Tornero 2010).

While any toolkit could capture the full spectrum of skills, habits and propensities teenagers acquire as daily media users. Therefore we selected three topic areas that are compulsory in Estonian national curricula: 1. critical assessment of media sources and information reliability (part of critical thinking); 2. public communication ethic: informational self-determination, privacy and defamation (public communication ethics is part of general moral education and character building approach and includes also some basic knowledge on legal regulation); 3. basic genre awareness (Bawarshi & Reiff 2010) on news, marketing texts and fictional content. The latter is part of general knowledge on how the media creates and represents reality (e.g. Cortoni, LoPresti, Cervelli 2015).

Planning a learning trajectory on media education requires key components including self-analysis on media usage and set of knowledge on media. Feedback tools include checklists, narratives (with dilemmas the learner has to choose or aspects the learners need to recognize), biased texts and texts that represent different propaganda means; texts where the learner needs to find out (and reflect his/her analysis) which is the author's position related to the subject matter etc.

This study presents three model exercises (one from each topic area) and the results of the tests carried out in classroom environment. The pupils (n 20) were asked to use the diagnostic exercises

(15) and discuss the results. Then short interviews were conducted with teachers in order to find out if and how the exercises and peer feedback from pupils would help her to plan media education trajectory for this group of pupils. After modification of exercises the second test was conducted. In this study we shall present the exercises teachers and students perceived as most useful.

Title: Hidden in plain sight: Critical media literacy for STEM students on the neoliberal campus

Session Type: Individual submission

Authors:

Name: Shobha Avadhani

Email: elcsv(at) nus.edu.sg

Country: SG (Singapore)

Affiliation: National University of Singapore

Abstract: This paper argues that there is a pressing need for an augmented form of critical media literacy education as states and corporations increasingly connect their operations for the stated purpose of smart governance. Through an explanation of the design and implementation of a writing module on algorithmic culture in a Singapore university, the paper makes the case that the location of this module in the writing centre of the university enables it to function as an extra-disciplinary form of critical pedagogy that reaches the technical class (Ellul, 1964).

As governments around the world set their sights on developing the system of technologically defined urban governance known as “smart cities”, it has become clear that the processes and politics surrounding the algorithms that drive smart governance are not unmitigatedly benign (Beer, 2017; Finn, 2017; Gillespie, 2016). To use Langdon Winner’s terminology (1980), far from being the “democratic technology” that it was envisioned to be, the internet and its subsequent avatars have evolved as “authoritarian technologies”, imbricated in deepening surveillance (Zuboff, 2019), inequality (Eubanks, 2018; O’Neil, 2016), and other forms of loss of agency.

Associated with these shifts, education in general has been moving from humanist to instrumental (Bullough, Goldstein & Holt, 1984), and as students are encouraged to take up courses that prepare them to work in STEM fields, scholars have noted the need for a humanities approach (Nussbaum, 2016). Critical media literacy education, which can be a balancing force for this curricular shift due to its location at the intersection of technology and critique (Kellner & Share, 2007), is conspicuously absent in countries that have embraced the authoritarian capabilities of algorithmic governance (Buckingham & Domaille, 2009). Where there is critical interrogation, this largely takes place within disciplinary spaces marked out for the humanities rather than the sciences, resulting in the exclusion of STEM students from the consciousness raising that arguably should inform their decisions as the technical class (Okoye, 2017).

Recent events in Singapore and other parts of the world highlight the need for an engaged form of technological citizenship that runs counter to the more authoritarian forms that have arisen. While the authoritarian project is not new, the introduction of algorithmic governance makes more urgent the need for a form of media literacy that considers the political and cultural impacts of algorithmic governance and creates the conditions for imagining new forms of agency. This paper argues that the writing module it describes in depth is a step in that direction – made more effective because it is hidden in plain sight on the campus of a university where monetizable scientific research outputs are prioritized over critical intellectual engagements, in a country that many look to as a model for algorithmic governance.

Title: The Development of Media Literacy in Chinese Societies: From Grassroots Efforts to Institutional Support

Session Type: Individual submission

Authors:

Name: Alice Y. L. Lee

Email: aliceleee(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Department of Journalism Hong Kong Baptist University

Abstract: Media literacy education has been rigorously conducted around the globe for half a century. In the Chinese communities, including Taiwan, Hong Kong, and Mainland China, it has just developed in the past two decades. This paper examines the formation and development of media literacy education policy in these Chinese societies.

This paper aims at (1) examining the development of media literacy in Taiwan, Hong Kong, and Mainland China; (2) reviewing the official policies toward media literacy education; and (3) analyzing the similarities and differences of the development of media literacy in these three Chinese societies. The analysis is based on both document analysis and interviews.

All three regions started developing media literacy education in the 1990s. In Taiwan, the concept of TV literacy was first put forward in 1996 by a university professor, and then many educational materials on media literacy were published by advocates working at NGOs. After their patient lobbying, a Media Literacy White Paper was announced by the Taiwan government in 2002. However, no concrete educational policy was formulated. Until the rise of the post-truth era, the Educational Ministry has finally decided to include media literacy into Taiwan's national curriculum in 2018.

Hong Kong educators and youth workers also have great concern with the influence of the media on young people since mid-1990s. In 1998 the first series of media literacy textbooks were published by enthusiastic school teachers. A bottom-up media literacy education movement was launched in the city. Educational officials appreciated the movement but no official support was granted. Yet, in recent years, the Educational Bureau has started promoting the information literacy framework in all schools and provided training on media and information literacy (MIL).

The first article on media literacy was published in Mainland China in 1994. Over the years, media education has gradually grown in the country. The promotion of media literacy in China mainly depended on the effort of enthusiastic media educators. Their agency efforts have brought media literacy education to many schools and children's centers. The advocates also kept on lobbying the educational officials. In 2017, media literacy was finally accepted by the Guangdong Province Educational Ministry as an elective subject in the provincial educational curriculum.

These three societies have different socio-political and media environments, but their media literacy programmes have similar trajectories in terms of their development, moving from being supported by individual advocacy to later receiving institutional support from educational authorities. However, the goals, curricula, and targets of media literacy education are considerably different in each of these three Chinese societies. Nevertheless, the findings show that the transitions to a knowledge-based economy, revolutionary technological development, and

educational reform have all contributed to media literacy policy formation while simultaneously exerting different effects and generating different media literacy outcomes.

Title: Educational reforms in Rwanda: confronting the challenges of journalism education in digital and commercialized institutional contexts.

Session Type: Individual submission

Authors:

Name: Margaret Jjuuko

Email: margarert.jjuuko(at) gmail.com

Country: RW (Rwanda)

Affiliation: University of Rwanda

Abstract: The expansion, restructuring and financing of the tertiary sector that begun several years ago in East Africa and other parts of the world, have meant that classes are not only larger but varied in terms of students' competences and innovations. Undergraduate (and postgraduate) courses, increasingly financed by student fees, tend to follow the lead of the market-meaning utopia, whereby tuition fees, from private students are increasingly becoming a source of revenue or additional funding for universities. Despite the increase in size and diversity of student population, teaching resources, including human and technical, have remained the same. In journalism and communication education, where coaching methods and close attention to individual students is not only crucial but students' access to ICTs and other training resources, is a must. Cognizant of the fact that large classes and inadequate resources are unavoidable in capitalist global markets, this study investigates how journalism teachers and students at three universities in Rwandan are coping with these veracities.

The study is predominantly qualitative and explicitly draws on three approaches: documents review and analysis of literature and relevant policy documents that facilitated the reform agenda (1999 - 2013); focus group discussions (FGDs) with students and individual in-depth interviews with journalism educators. It is theoretically informed by two theoretical perspectives: Political Economy and the Educational Change Model (ECM). Political economy is concerned with the degree to which economic structures influence political or social and cultural outcomes and recognises the importance of institutional or economical structures (McChesney, 2003). Within the current trajectories of educational reforms, tertiary institutions in Rwanda are increasingly viewed as structures based on free markets within a capitalist economy.

The Educational Change Model suggests that reform programs should be gradually introduced in three phases: the Initiation phase, the Development phase and the Consolidated phase (Pendergast, Main, Barton, Kanasa, Geelan and Dowden, 2015, p: 6). The periods associated with each phase are indicative only and can be accelerated through the alignment of enablers. In the Rwandan context, teaching resources, among other factors, are conceptualized in this study as either enablers or inhibitors to the progress and success or failure of the overall educational reform processes. Among other contentions, I will argue, that current educational reforms in Rwanda have compromise the quality of journalism graduates and professional standards.

Key words: Rwanda Journalism Education, Educational reforms, Political Economy, Educational Change Model.

Title: Creativity as a 21st Century Skill: preparing 21st century students for a global society

Session Type: Individual submission

Abstract: The term “21st century skills” is used to refer to a range of abilities and competencies that children need to acquire to succeed in a global society, and that go beyond what has conventionally been taught in the traditional education system and classrooms. In a constantly changing digital society, how do we prepare students to be successful in the so-called ‘knowledge society’? Educating new generations of students grown up with social media and digital games is not easy within the traditional teaching approaches. Initiatives such as Partnership for 21st Skills points out the significant relevance creativity skills has acquired in the education sector in order to transform schools, education, future citizens and tomorrow’s world.

The “21st century skills” are framed in a context in which creativity is considered one of the key skills of the Learning and Innovation Skills, along with critical thinking, communication and collaboration –known as the 4Cs–. The best way to find new opportunities and face uncertainty in a global society is to nurture social innovators and creative thinkers (Trilling & Fadel, 2009; Sternberg, 2010). Thus, creativity is considered as a higher order thinking skill that cuts across different activities and sectors.

There are many ways to foster creativity (Robinson, 2011), but the aim of this paper is to examine and determine the extent to which specific creativity training programs foster creative thinking in students and help educate 21st century learners. Therefore, this project assesses the effectiveness

and efficiency of specifically designed workshops and materials to assist secondary school teachers in the Spanish public school system to promote creative thinking in their classrooms.

Based on an eight-week implementation period, this paper reflects how exclusive creativity games used during several weeks in class, based on the feedback given by the teachers and a student survey, determine the empowering qualities of using creativity as a core skill in secondary education.

Creativity is a skill needed for success in the 21st century, but it necessarily requires a creative climate dimension (Ekvall, 1996) and projects and assessments that connect to current curriculum (Beghetto & Kaufmann) while simultaneously stimulate and engage students. Creativity as a 21st century skill is aimed to revolutionize education and transform how future generations are taught for the challenges that lay ahead.

Title: Media Education for the Inclusion of At-Risk Young People

Session Type: Individual submission

Authors:

Name: Mari Pienimäki

Email: mari.pienimaki(at) tuni.fi

Country: FI (Finland)

Affiliation: Tampere University

Name: Sirkku Kotilainen

Email: sirkku.kotilainen(at) tuni.fi

Country: FI (Finland)

Affiliation: Tampere University

Abstract: At-risk youth, those at the edge of dropping out of school and eventually society, are of ongoing global concern. In Finland, the amount of NEET youth (not in employment, education or training) has nationally increased since 2010 (Alatalo et al. 2017), except in 2018 due the rising economy (Suomen nuorisotyön tilastot 2019). This situation threatens to increase youth marginalisation, meaning that young people drift away from typical life paths, for instance, due completing only comprehensive school and being unemployed for too many years (Myrskylä 2012). Although youth marginalisation is more widespread in countries other than a Nordic Welfare state such as Finland, it is still a serious problem for Finnish society, as it is persistent. Although there have been diverse attempts to improve this situation by government, NGO's and art and research initiatives, there is a lack of critical discussion on media education for supporting marginalised and at-risk youth. The proposed paper describes a pedagogy that, besides developing multiliteracies (see Cazden et al. 1996; Cope, & Kalantzis 2010), awakens the motivation, hope and courage of at-risk youth to be active agents in their lives as well as including them as citizens-to-be in society, instead of citizens-to-become. By this, we mean that the youth are presently accepted as worthy citizens despite their difficulties, not seen as persons outside of the society to be integrated back into it. An extensive action-based qualitative study was conducted, consisting of eight substudies implemented in 2015–2017 with youth institutions around Finland. Each substudy included a media workshop promoting youth media-making as self-expression for participation through public media. The workshops were attended by nearly 100 young people, mostly ages 15–22. The youth displayed diverse challenges, such as social and learning difficulties or encountered challenges in language or life situations. The data of the action study include mainly researchers' observation diaries handling activities in the workshops and young people's and youth workers' interviews. As a result of the study, there is proposed a media pedagogical model for the support of inclusion of at-risk young people. The model contains five key features of media education as everyday practices: safe spaces, caring interaction, trust in competence, creative media-making and authentic agency. The goals are to advance at-risk youths' motivation to participate, communicative media skills, autonomous agency, relatedness and experiences of inclusion in educational settings and in society.

Title: Teacher-student Interaction on Facebook'A Qualitative Analysis of Student Perceived Teachers' SNS Disclosure.

Session Type: Individual submission

Authors:

Name: keng-yu Chang

Email: justdoit326783(at) gmail.com

Country: TW (Taiwan)

Affiliation: National Chengchi University, College of communication.

Abstract: The two-way, interactive, non-anonymous social network service(SNS) attributed to the transformation of network technology leads to a type of interaction which has more interpersonal communication characteristics, allowing users to bring real-life relationships into the online world. Therefore, teacher-student interaction, the point-to-face interpersonal interaction, can also happen on (be transferred to) the SNS.

In Taiwan, 80 percent of the population are active Facebook users in 2018. The high usage rate forced many teachers to establish computer-mediated teacher-student interactions in various forms for different purposes. However, the flat and equal interpersonal relationship on Facebook is very different from the Asian tradition which emphasizes the authority status of teachers, and considers the teachers' self-disclosure in the classroom unnecessary. These differences show that when the teacher-student interaction front is extended to the SNS, the society's expectation of the teacher's professional role changes, making the teacher face the anxiety of how to properly expose themselves.

The past similar research often used experimental methods and asked respondents to check a fictional teacher's Facebook profile, which may not be able to fully explain the complex interpersonal interactions. Consequently, this study mixed two qualitative methods such as, In-depth Interviews and Focus group discussions to provide new research materials to make up for the lack of empirical research on such phenomena by investigating high school students' perceptions of teachers' self-disclosure on Facebook and changes in expectations of teachers' professional roles. All participants are from the same public high school in Hsinchu, Taiwan, and meet the conditions that (1) have more than two Facebook friends are school teachers, (2) have contact with these teachers in real life, and (3) the online relationships continue to these day. The interviews were conducted individually, with an average of 90 minutes for each respondent.

The results include the students' perception about the frequency, valence, and content type of the teacher's disclosure. The analysis found that compared with the teachers' presentation of subject knowledge and teaching profession on Facebook, the disclosure with caring and intimacy meets students' expectations more since the expectations is related to students' desire of prying into the private life of teachers. The study also found that teachers have to be aware of the open and non-anonymous platform characteristics and take different disclosure strategies, as well as properly using the information about students obtained on SNS.

The research results confirm that SNS brings a new channel for teacher-student interaction, but it also causes some problems, such as the expectation gap and the extension of teachers' working hours and work areas. By understanding students' perceptions and expectations of teachers' self-disclosure on Facebook, this study hopes to reduce the anxiety of teachers' professional role performance on social media, and provides some perspectives about the problems caused by the current development of technology.

Title: Communication, Journalism and Social Media Literacy: the story of 16 young multimedia feature pieces.

Session Type: Individual submission

Authors:

Name: Fernanda Bonacho

Email: fbonacho(at) escs.ipl.pt

Country: PT (Portugal)

Affiliation: Escola Superior Comunicação Social / Instituto Politécnico de Lisboa

Abstract: Scholars and journalists have long hoped that media education is positively related to social goals such as political and civic engagement. We have been searching for the best ways to promote critical thought, particularly among youngsters, due to current desinformation times. This paper purposes to discuss the main inferences of a literacy pilot experience with young adults, conceived not only to develop their critical thought but also to understand the actual use of communication, information and social media among youngsters. The experience was developed between March and May 2018, as part of a journalistic literacy research plan hosted at ESCS/Lisbon Polytechnic Institute. Monitored by researchers and professionals with a solid experience in the field of journalism and communication sciences, TJAME - Transliteracia Jornalística: até que o mundo fique tal como é (Journalistic Transliteracy: until the world becomes itself), the work focused on a wide range of selected activities and immersive journalistic practices for participants finishing their high school studies and those already pursuing their journalism undergraduate education. There were more than 70 students from Lisbon and the agenda triggered informal but informed analysis and monitored discussions. Participants were asked not only to attend subject seminars and analyze different journalistic pieces, but also to create multimedia pieces and invited to publish them in the online newspaper 8.^a Colina. Thus, by producing these 16 feature multimedia stories they were challenged with media language in the context of our media system and online society (language literacy); they had to understand the visual and sound messages and the construction behind them (representation literacy); they had to comprehend media platforms in terms of its power and discourse (media production literacy); and they were able to check the public collaboration in our media culture (collaboration literacy). The results illustrate some of the contemporary contradictions between the youth's familiarity with communication platforms and their lack of knowledge about the complexity of media and journalistic procedures.

Abstract: This Communication presents the results of the research project CATS&ZS «Children, Apps, Tablets and Smartphones from Zero to Seventeen».

Research Focus-Target: CATS&ZE-“Children, Apps, Tablets, Smartphones, Zero to Eight”

R. Focus-Target : CATS&NT-“Children, Apps, Tablets, Smartphones, Nine to Twelve”

R. Focus-Target: CATS&TS“Children, Apps, Tablets, Smartphones, Thirteen to Seventeen”

We present the data collected in the range Nine to Twelve (NT) at the city of Salamanca, Spain in this age group. Our Research aims to bring a valuable spotlight onto children and adolescents in these three age groups. We present the results of our Research Project “CATS&ZS” in Spain Phase I, age group Nine to Twelve.

Main Hypothesis:

H1: The predominant use of Smartphones and Tablets among the children in age group NT is mainly done at home and as a form/type of entertainment consumption, not Educationally-oriented.

H2: Most parents do not pay/invest in apps specifically dedicated/oriented for the education and/or entertainment of their children in the different age groups, parents do not supervise or understand risks and opportunities in these devices. Brand and Marketing consumption is frequent and invasive and not supervised or “child-protective-regulated”.

H3: The digital natives are in the process of adapting to the technologies, they need help and active-observation by formed and informed parents when using them.

H4: The simultaneous use of Smartphones and/or Tablets while consuming television or as a substitute for it –second and third screen phenomena-, is common among children in all age groups, NT.

H5: The Tablet and/or the Smartphone are “supporting” devices among children in the age groups NT and do not yet exert the relevance of other devices-instruments related to education and entertainment.

- Methods: 1st-We undertake a continuous Literature-Academic revision on Educational, Consumer Behaviour, Communication, Threats, Risks, Weaknesses and Opportunities for Children Education in tablets and smartphones, we analyse reports and investigation in the uses and consumptions in Tablets and Smartphones with a multidisciplinary approach and focus.
- 2nd We run a Face to Face in classroom supervised questionnaire to 189 children in the age group, 9 to 12 and 286 parents at the city of Salamanca, children and their parents were randomly selected in all schools.

Conclusions:

1. The ability to negotiate behavioural habits and digital methods-technologies for education and entertainment is critical. Education and communication user-consumers' patterns still tend to be approached as predominantly cellulosed-based at school vs "outside-patterns".
2. The technologies through which children now engage with all forms of knowledge are constantly changing with the widespread use of an array of digital, interactive and personalized devices in particular Smartphones and Tablets.
3. The acquisition and development of abilities and conscient critical use of "Internet" for all audiences including children-adolescents, parents and teachers in Tablets and Smartphones is crucial for a competitive and "sane" educational, economic, social, political and cultural progress in Europe.
4. We detect a Tech-Use-Gap in the lack of penetration of these devices and digital-educational methods associated to Tablets and Smartphones at the physical school.

Title: My Technological Pathway to Information: The Benefits and Risks Model of Online Information Seeking and its Implications on the (Online) Information Seeking Literacy of Adolescents and Adults

Session Type: Individual submission

Authors:

Name: Nathan Stoler

Email: stoler(at) gmail.com

Country: IL (Israel)

Affiliation: Tel Aviv University

Name: Elad Segev

Email: eladseg(at) gmail.com

Country: IL (Israel)

Affiliation: Tel Aviv University

Abstract: Purpose

The research examines the role of definitions of information and the perceptions of information seeking of adolescents and adults in their information seeking behavior.

Theoretical Background

The contemporary literature shows how children and adolescents negotiate the role of new information and communication technologies in their lives (boyd, 2014; Jenkins, Ito & boyd, 2015). They contest current definitions of privacy (boyd & Marwick, 2011), negotiate context in social media (Marwick & boyd, 2014) and perceive differently than their parents the role of social and mobile technologies in interacting with friends and family (Livingstone, Haddon, Gorzig & Olafsson, 2011; Schofield-Clark, 2013). Even more, they hold different beliefs and attitudes towards many technological aspects, from piracy, through learning to creativity (Palfrey & Gasser, 2013). However, the role of these definitions and perceptions on how they build their information seeking literacy (Case & Given, 2016; Shenton, Nessel & Hayter, 2008) needs further investigation.

Method

Using the grounded theory approach (Larkin & Thompson, 2012), 35 interviews were conducted, with 17 adolescents (13-18) and 18 adults (40-55). The interviews were conducted using the Think-Aloud Protocol.

Findings

Adolescents defined information in a narrow way which was only goal-oriented. Information was considered as such when they felt they needed something, like preparing homework or choosing a movie to watch with their friends. Incidental encounters with information, such as randomly browsing the internet were not defined as "information". Adults, on the other hand, used a wide-definition of information. For them, the definition of information was abstract and included every possible situation (e.g. day-dreaming or watching a movie on Netflix).

It emerged from the interviews that while their definition of information was narrow, adolescents held wide perceptions on how the information seeking process should take place. For them, search tools must be used in a non-systematic way. Hence, no limits should be put on what they defined as “the natural flow of information on the internet” (e.g. clicking on push notifications as they are being delivered and choosing the first results on Google) and new criteria for evaluating information should be created while performing information seeking tasks. These wide perceptions, characterized by the belief that no restraints should be put on the information seeking process, served them in finding good information, feeling positive emotions and succeeding in finding answers to questions. They were afraid that narrowing their perceptions might risk the benefits they aimed to achieve.

Adults, on the other hand, defined information in a wider perspective, but held narrow perceptions of the information seeking process. For them, using a systematic method for information seeking, controlling the flow of information (i.e. deciding what, where and when to consume information) and using predefined criteria to evaluate information served them in gratifying their information needs. They believed that widening their perceptions might risk them in getting unwanted results, bad information or feeling negative emotions.

Conclusions

The benefits and risks model of online information seeking, that emerged from the findings, is illustrated in Figure 1. It shows that the interaction of narrow and wide perceptions with the desired benefits users want to achieve and the risks they wish to avoid create four areas. Those areas show that wide and narrow perceptions can be perceived as leading to desired benefits, but also to potential risks, from which searchers wish to avoid. Two areas represent the benefits of wide perceptions (Flexibility) and narrow perceptions (Order). The other two represent the fear of wide perceptions (Losing-Focus) and narrow perceptions (Fixation). This model helps in understanding based on which definitions and perceptions adolescents and adults develop their information seeking literacy, that in their eyes, lead them to desired benefits and to avoid information risks.

Title: PARTICIPATORY VIDEO AND MEDIA LITERACY: Questioning identities through filmmaking.

Session Type: Individual submission

Authors:

Name: Dorneles Neves

Email: dodaneves(at) gmail.com

Country: PT (Portugal)

Affiliation: Universidade do Porto

Name: José Azevedo

Email: jmpazevedo(at) gmail.com

Country: PT (Portugal)

Affiliation: Universidade do Porto

Abstract: Context

The availability of low-cost and ubiquitous media technologies does not necessarily mean that what young people are already creating and publishing on the internet represent their agency and voice. Beyond access to technology, there must be access to an understanding of what is being created and the discourses being reproduced in their media production.

Purpose

This study attempts to raise awareness through critical media education, specially audiovisual media, of groups of young women from marginalized areas. It is a challenge this research aims to address by leading the participants to deconstruct and then construct images through an action research based on participatory video.

Methods

Participatory video (PV) is a set of techniques to involve a group or community in shaping and creating their own film. PV enables participants two things: access to the means of media production and self-representation according to their own aesthetic and cultural conventions. The participants were twelve young women from the age of fifteen to eighteen years old coming out of marginalized areas from João Pessoa, Brazil. Participants had access to three workshops where it was discussed the relationship between media and society, and also video production techniques. Each workshop was three hours long and had a theoretical as well as a hands-on moment where the participants could manipulate the video equipment and put into practice theoretical concepts. The theoretical-practical class was finished with a moment to participants share their conclusion, opinions and doubts. The participants were divided into three four-girl groups and to each produce a short-documentary where they should interview people from their communities to answer questions about women and representation.

There were two types of data collected from the participants. The first is the documentaries produced by them, and the second one was two questionnaires based on the template of the evaluation toolkit available by the European e-Media Education lab. This method was chosen to evaluate their media literacy competencies and to assess the progress of the participants during the PV intervention.

Results

The results from the questionnaire suggest an improvement of media literacies competencies. The comparison between the average answer from the first and the second questionnaire shows an increase of competencies to critically identify and understand values, representation and stereotypes conveyed in the media, and to identify key concepts of media culture.

Three short-documentary were made. The first asked the question of “What is it to be a woman?”, the second short-documentary was produced around the theme of “Black, poor and conscious women“, The third short-documentary investigates how the feminism movement is presented in professional and school environments.

Significance

The results show an improvement in the ability to analyze and produce audiovisual media messages, and the short-documentaries produced by the participants served as a way to express the voices of the participants and their communities and also to question their identities.

Title: Teenagers as digital apprentices. A case study of the transmedia skills and informal learning strategies of adolescents in Spain

Session Type: Individual submission

Authors:

Name: Maria-Jose Masanet

Email: mjose.masanet(at) upf.edu

Country: ES (Spain)

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Name: María-José Establés

Email: mariajose.estables(at) upf.edu

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: We present the results of the Spanish context of a study carried out with adolescents within the Transmedia Literacy international project. Our aim is to identify the transmedia skills that teenagers have and the informal learning strategies carried out to acquire them. Therefore, the research is based on the following main questions: What can teens do with media? and how did they learn to do it? These central questions include other secondary questions that focus on teenagers' media practices and motivations, consumption, playing, creation and dissemination of contents. To do this, the project followed an ethnographic approach based on the precepts of short-term ethnography (Pink and Morgan 2013). This methodology is appropriate for being carried out within a shorter time period compared to that of traditional ethnography. Given the time limitation of the project and the difficulties involved in working with different educational contexts and environments at an international level, this methodology is suitable for creating contexts in which researchers can go deeper into research questions in a short and intense period of time.

This research followed five steps: Contact with schools and consent management; Administration of questionnaires about teens' socio-cultural backgrounds and their media access, habits, uses and perceptions; Creative participatory workshops to immerse the researcher and explore the media practices and universes of adolescents and their informal learning; In-depth interviews and media diaries were carried out to deepen discourses about media practices and about media in general; Online observation of the teens' favourite websites, media celebrities, and online communities. We worked with two schools from Barcelona that differ in terms of location, cultural context, income level, and average education level.

The results show that teenagers have different transmedia skills but they have them to very varying degrees. Their acquisition of these skills is conditioned by their motivations, attitudes and context. YouTube is a key source of information and learning of transmedia skills among the adolescents of the study. The study findings show that young people rely mostly on imitation and "learning by

teaching” strategies to acquire new skills. Based on these results, the myth of the digital native is deconstructed and the concept of ‘digital apprentice’ is proposed: adolescents who have been born and raised in a media environment that has provided them with a digital space for learning about this digital world, that is, for acquiring transmedia skills. In this space they can find answers to their doubts based on their practices and media uses. Their motivations are a key element in this sense. They follow traditional models such as ‘imitation’ and ‘learning by teaching’ but in new virtual spaces and with new actors (peers, influencers,...). This can be considered collaborative learning that would be complementary to school learning but never a substitute. These virtual spaces provide unprecedented opportunities for cross-generational and cross-cultural learnings (Ito et al. 2013) in changing environments.

Title: History of Media Education in the Czech Republic: From Comenius` Inclusion to Disconnection

Session Type: Individual submission

Authors:

Name: Lucie Römer

Email: lucie.romer(at) fsv.cuni.cz

Country: CZ (Czech Republic)

Affiliation: Charles University Prague

Abstract: Education available to everyone, reading and explaining newspapers at schools and teaching about media by using media – these are some of the key contributions of philosopher and educator Jan Amos Komenský to both Czech and international media education (Sloboda, 2018). Komenský (internationally known as Comenius) started a swift development of the discipline in Czech lands in the 17th century, which lasted until the beginning of the 20th century. By then, media education had become a firm part of the public debate, training of teachers took place and the first textbooks were published (Jirák & Šťastná, 2012). WWII and the communist regime (1948-89) brought the development to a halt.

The resurrection of media education at schools after 1989 has had moderate success. It became a compulsory cross-sectional subject at elementary schools and grammar schools in 2004. However, unlike Comenius` vision, the current Czech media education is highly exclusive and disconnected. As it is not compulsory for vocational high schools, most of these schools completely omit it, leaving the majority of Czech high school graduates untouched by media education. There is little communication between the teachers of media courses, as well as between them and the policymakers and academia. The learning-by-doing approach is scarce and most teachers have no media education training (Člověk v tísní, 2017; Jadrná, 2016).

The proposed paper will present both the history of Czech media education, stressing the contribution of Comenius to the international community, and the current state. Further, it shall present some of the recent initiatives which are trying to overbridge the disconnection and also improve other media education issues, such as dealing with new literacies, with the lookout for the future.

Besides media education practice, the paper shall summarise Czech research in the field, which has exploded over the past 20 years. Apart from using the local literature, the contribution shall operate with original data from author`s doctoral thesis research (Media Education at Vocational Schools in the Czech Republic), namely data from interviews with Czech media education teachers and class observations.

The proposed paper might be relevant to the international audience because it will address the history, presence and future expectations of media literacy education practice and research in a post-communist country in transition, where media education still is a treasure left for few lucky

ones. This experience, along with specific attempts to improve the situation might be inspiring to the international community.

Title: [Panel] "The Truth is Out There': The Ever Growing Importance of Media Literacy in the Digital Age, Panel description

Session Type: Panel Submission

Authors:

Name: Philip Auter

Email: auter(at) louisiana.edu

Country: US (United States)

Affiliation: University of Louisiana at Lafayette

Abstract: The definition of media literacy is evolving in this era of digital technologies. It is no longer just about helping students become competent, critical and literate in all media forms and cross platforms, so that they can interpret and analyze media messages but also teaching them the basic ability to exercise citizenship in a global society by understanding and contributing to the the issues and challenges of the time. Additionally, it is vital that they know how to accurately interpret past messages.

But contested truths are becoming the norm, not the exception. Fake news, claims of fake news attached to legitimate news, disinformation, online hate speech and other adversarial behavior are polluting our communication channels. Meanwhile, the true meaning of past messages becomes lost in the mists of time. Young people are becoming cynical and do not trust media. How can our students learn to decipher media and use it for the betterment of society?

This panel aims to learn about and share effective strategies used by educators internationally to promote media literacy education in service of civic engagement and to bring meaningful and positive change to global society at large.

Title: Introducing Media Literacy to Students in Egypt

Session Type: Panel Submission

Authors:

Name: Naila Hamdy

Email: nailah(at) aucegypt.edu

Country: EG (Egypt)

Affiliation: American University Cairo

Abstract: The Arab region has its own media literacy movement and arguably, its own reasons for introducing media literacy courses to its curricula. Egypt the most populous country in the region has been recognized for its social media savvy youth. However, the widespread use of internet applications is not just for activism or political participation, as witnessed in the past and noted in literature, but also as a day-to-day information seeking and sharing platform. This underlines the importance of introducing the core concepts of media literacy to students. Such instruction should not be limited, to preparing students to evaluate and become critical consumers of media messages but also to become effective citizens who can create and disseminate their own media to support civic engagement.

A detailed snapshot of the design and experience of teaching a new media literacy course at the American University in Cairo, Egypt will be presented at this panel. The rationale behind the design and the success of the course will be highlighted.

Title: Was there a point to that joke' Subtle Promotions of Diversity and Civil Rights in 1960s American sitcoms.

Session Type: Panel Submission

Authors:

Name: Philip Auter

Email: auter(at) louisiana.edu

Country: US (United States)

Affiliation: University of Louisiana at Lafayette

Name: James Black

Email: BLACK_JE(at) mercer.edu

Country: US (United States)

Affiliation: Mercer University

Abstract: Twenty first century Americans often look back at mid-20th century TV and see disparity in representation as well as inappropriate treatment of women and people of color. “Normalcy” was presented in the situation comedy household as a suburban white family, usually with two parents and two to three children. Father worked at a business, mother ran the house, and the children went to school. Humor centered around mom burning the roast, dad closing a business deal, or one of the children learning a “life lesson” after breaking a minor household rule. For the most part, minorities, if present, were relegated to the background. Women maintained stereotypical accepted norms of housewife or school child.

Meanwhile, in the real world, the United States was experience the beginning of the end of legal segregation. Although there are differing views about when the Civil Rights Era began, it became more visible and active in the early 1950s and continued to grow throughout the 1960s. And during the early 1960s, what has been termed the “Women’s Movement” (aka: “Second-Wave Feminism” went beyond women’s legal rights and focused on expanding their role in the family, the workplace, and society. Both issues, along with the Korean War, the Vietnam war, and the ever-present threat of the Cold War, were a prominent part of TV news and American society throughout the 1960s.

Were 1950s and 1960s TV sitcoms places for “white male America” to escape reality? Perhaps. But while they consumed this purely entertainment oriented content, they may have been receiving some subtle messaging. Although not the majority, some TV programs with more of a fantasy / horror approach -- although they had all white casts, seemed to promote diversity. Horror sitcoms like The Addams Family and The Munsters celebrated uniqueness and upended the definition of “normal”. And the sitcom Bewitched, about a mortal man marrying a witch, not only addresses issues of women’s rights, but hits at the issues surrounding interracial marriage -- without a minority to be seen.

Was Hollywood trying to send a subtle message to white America during the Civil Rights Era and the Women’s Movement? Were they trying to raise important issues without raising their viewers’ ire? We will explore these concepts.

Title: Audiences are Being Attacked from All sides: Assessing Battlefronts in the Information War

Session Type: Panel Submission

Authors:

Name: Phillip Madison

Email: phillip.madison(at) louisiana.edu

Country: US (United States)

Affiliation: University of Louisiana at Lafayette

Abstract: Now more than ever we need greater media literacy. This includes understanding the content of messages, how we process messages, and the motives behind the creation of mediated messages."The information war is real, and we're losing it," Westneat (2016) tells us. While Macedonian fake news promoters gear up to cash in on ad revenues related to the 2020 elections, increasingly wary eyes look at the Chinese and Russian weaponization of social media, and health supplement vendors continue to enjoy profits from questionable products with fake news as a sales vehicle, both domestic and global propaganda mills are enjoying a golden age. Reality appears to no longer be a concern for various groups vying for power throughout the world; bias and outright falsehood push both socio-political agendas and ad revenue. In many countries such as the US and India, the spread of fake news through tech services such as YouTube and Whatsapp has led to violence and murder. This presentation explores a variety of propaganda sources, their ownership, and their motives and incentives for production. Understanding such motives, whether they are associated with political or financial gain, is critical for becoming media literate in the richest information ecosphere in history. Through media literacy, particularly in understanding content producers' motives, we may be able to prevent the violence and cultural divisions created by propaganda mills.

Abstract: The organization of this Congress reminds us of the celebration of the 70th anniversary of the Declaration of Human Rights. Everyone has the right to live in dignity, have a voice and have visibility, have access to information and social participation. But in the age of new technologies, artificial intelligence, automation, big data and robotics, do they all have the same opportunities? It seems to us that the elderly are having difficulty getting into the race, but cannot be left behind. Societies are getting older. The number of elderly people in Portugal exceeds two million, according to the National Institute of Statistics (2017). The population is ageing and the skill gap between young people and older adults is increasing, as the OECD (2018) alerts in the Implementation Guide for the Skills Strategy for Portugal.

The digital literacy “Keys For Life” workshops, taking place in the municipality of Coimbra, in Portugal, aim to improve the day-to-day ICT skills. The participants are elderly people that seek out the workshops by curiosity, willingness to learn, or the need to use mobile phones, tablets and computers.

Digital skills are promoted through the use of e-mail, text and photo editing, Internet search and the interaction of social networks. Participants practice these digital skills for different purposes, as an example, they use online health services and consult news portals.

In order to evaluate the results of the project, we develop a participatory action research methodology. We evaluated the participants' progress through participative observation of the workshops. Content analysis was performed over the publications and online interactions within the group, the texts they write about the experience, and the testimonies they share on Facebook. The evaluation strategy is based on Fetterman's Empowerment Evaluation principles (2005).

Participants reveal themselves quite engaged when they have the opportunity to talk to family members who are distant through videoconference. They surrender to the fascination of seeing their previously written text appear on the computer screen and then fly through the email, Messenger or WhatsApp to its destiny.

Compromised with Freire's perspective of Pedagogy of Autonomy (1996) we propose a critical digital approach that empowers the elderly to compensate the delay of the gap in the competences race and in the consequent reading and participation of the world.

Keywords: critical digital literacy, empowerment evaluation, elderly

Title: Data and privacy literacy: The role of the school in educating children for a datafied society

Session Type: Individual submission

Authors:

Name: Sonia Livingstone

Email: s.livingstone(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: Of the many calls upon educators, one of the most recent is that children should be taught about their online privacy and data, given today's increasingly datafied society. This poses a new challenge for schools already struggling to address e-safety, online identity and reputation, coding, information navigation, misinformation and "fake news," digital dimensions of sex and relationships education, screen time and mindfulness, and more. How can children be educated about commercial and state uses of their data, when this involves complexities of data protection and privacy regulation that most adults – including parents and teachers – hardly understand?

This paper reports on the findings of a systematic evidence mapping of the available research followed by with 28 workshop-style focus group discussions with children of secondary school age (11-16 years old) and, separately, interviews with parents and educators. Real-life scenarios and exemplar digital experiences were used to facilitate the discussions and to ensure that children were engaged in deliberating on the opportunities, risks and practical dilemmas posed by the digital environment.

We argue, first, that a functional skills-based approach to the digital interface (teaching about terms and conditions, age requirements, privacy settings, etc.) is necessary but not sufficient. To exercise their rights as agents and citizens in a digital world, children will need a deeper critical understanding of both the digital environment (including its business models, uses of data and algorithms, forms of redress, commercial interests, systems of trust and governance) and, indeed, of the wider society.

Second, drawing on Nissenbaum's notion of privacy as contextual integrity, we distinguish three privacy contexts – interpersonal, institutional and commercial – arguing that children have not only a better understanding of interpersonal privacy than either institutional or commercial privacy but

also that they try to apply this understanding to the privacy management of their school and of the commercial digital environment. While older children have a greater understanding of the commercial environment, across all ages, children experience a series of confusions and misguided assumptions which merit an educational response.

We find that children are very aware that there is much they do not know. In the workshops, they asked over and over again: Who has got my personal data and what do they do with it? Why do they collect, share and sell my information? When data are deleted, are they really gone? These are not questions that can be answered quickly or easily, and each question reflects a curiosity about the networked and commercial data economy behind the interface of the screen with which users directly engage.

Reflecting on our interviews with parents and teachers, we conclude that just as with citizenship education, in relation to data protection the school is not only the site of education but also a microcosm of the wider society. If schools became transparent and accountable in their processing of student data, they might have better prospects of teaching data and privacy literacy to their students.

Title: International student experience and the importance of voice

Session Type: Individual submission

Authors:

Name: Lee Edwards

Email: L.Edwards2(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: LSE

Name: Nancy Thumim

Email: n.thumim(at)leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: This study addresses the experiences of international students studying for an MA in Media and Communications in the UK, during the year 2015-2016. The study explored the links between their emotional, affective experience of studying in the UK, and the different ways in which they reflected on that experience in relation to their academic engagement. Ultimately, we wanted to consider how a holistic understanding of the student experience could inform and shape approaches to learning and teaching international students in HE. The study challenges the increasingly marketised discourse of student experience as something measurable and measured, located primarily in the classroom and owned by higher education institutions in the host country through its translation into a specific, marketable form of reputation. Instead, we rehabilitate the idea of student experience as an affective, personal and vital aspect of international students' journey through M-level education. We thereby reassert the importance of student experiences grounded in diversity, difference, and individual human experience. Data was collected through interviews, focus groups, diaries and blogs during the course of the academic year, and we prioritised the students' own voices in the analysis. The findings show that students' experiences were characterized by both positive and negative experiences. Positive aspects included self-discovery and empowerment through new opportunities to travel, to live independently, to make new friends and to create a new 'home' during their time abroad. More negative experiences included uncertainty and anxiety, some language difficulties, missing family, friends and food from the home country. In conclusion, we argue that, as well as revealing a broader and more meaningful notion of student experiences, the material gathered for this project leads to two key observations: Firstly, our methodological emphasis on hearing the students' own voices generated narratives that were remarkable in their eloquence, expressiveness and beauty, in sharp contrast to the awkward discomfort often displayed in the academic writing we require students to produce. We argue that this issue of voice and where it can be expressed within an MA programme requires attention. Secondly, we argue that the data from this project produces a compelling counterweight to international student stereotypes, latent racism and language barriers – which we suggest are sometimes entwined in how the UK academy meets and listens to the international students on which it so heavily relies. This observation suggests that finding ways of listening to students' own voices is a vital part of de-westernization agendas in the academy – not only for the quality of our teaching but also for the vitality of our research. MA teaching should be a dialogue, and the

teaching we offer should find ways to share knowledge and listen to our students' experiences as knowledge.

Title: What digital experts' strategies to engage with and evaluate online content tell us about how to promote digital literacy through the national curriculum in the United Kingdom

Session Type: Individual submission

Authors:

Name: Gianfranco Polizzi

Email: G.Polizzi(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: Educationalists' and policymakers' decisions to promote digital literacy through the national curriculum in the United Kingdom have failed to consider the expertise of digital specialists such as information, IT and media professionals. Informed by semi-structured interviews with digital experts in the United Kingdom, enhanced by a diary methodology and a conversational approach to the think aloud method, this paper explores how the experts draw on their expertise to engage with and evaluate online content. In doing so, it reflects on what digital literacy entails, what type of digital skills and knowledge are crucial for engaging with and evaluating online content, and how the national curriculum in the UK is and may be expected to promote digital literacy. It is argued that how the experts engage with and evaluate online content involves not only reflections on the nature and origin of information along with contextual knowledge, but also functional and critical digital skills and knowledge about the internet and the broader digital environment in synergy with the practice of using multiple sources. More specifically, this paper reveals that functional knowledge about what the internet affords is crucial for engaging with and evaluating online content, and so is a critical understanding of the digital environment as embedded in power structures, in relation to internet-related socio-economic issues along with the internet's democratising potentials and structural constraints. Addressing how the national curriculum in the UK can benefit from the expertise of digital specialists, this paper argues that there is a disconnect between what digital literacy entails for evaluating online content, and the potential of the curriculum to promote it. While subjects such as Citizenship, Computing and Media Studies encourage students to learn skills and knowledge that are crucial to digital literacy, this paper suggests that the curriculum needs to be revised to meet such an expectation. More specifically, it is argued that Citizenship should be more focused on teaching students not only about the positive potential of the internet for democracy but also about the constraints that it can place on it. While Computing is beneficial for teaching functional digital skills and knowledge about the internet, it needs to place more emphasis on how to evaluate online content, and on the social implications inherent to what the internet affords. Finally, as Media Studies allows students to develop a critical understanding of the digital environment but is taken by only few students at GCSE and A levels, elements of this subject should be made compulsory in primary and secondary education.

Title: MEDIA EDUCATION, SPIRITUAL COMPETENCE AND HUMAN DIGNITY Proposal for an Analysis and Intervention Grid

Session Type: Individual submission

Authors:

Name: Patricia Cortés

Email: pattyradio(at) yahoo.com

Country: BO (Bolivia)

Affiliation: CEPIES -UMSA

Abstract: The lack of awareness of citizens around the world about the uses and abuses that can be made when using information and communication technologies is evident. Rights such as privacy, spirituality and dignity are involved. How can we make a substantial improvement in this relationship of communication, technology and dignity?

This question leads us to reflect on the growing development of information and communication technologies and the urgency to improve media production and, at the same time, to strengthen the diverse competences of the receiver, of the human being. This implies that the latter needs to develop competencies that lead him to strengthen a responsible attitude toward and from the messages established by these new means of communication.

From this perspective, our initial question can be formulated as follows: Among the competences that the human being should have in the face of media messages, what role does spiritual competence play, how should it be understood within media education and in the perspective of preserving human dignity?

To address these questions, we start with the main results of our previous research on the communicative dimension of media education (dialogue and cognitive decentration) in order to delve into the anthropological-philosophical dimension and deal with the aspects of spirituality and human dignity

On this occasion we wish to offer researchers and those in the field of education and the production of media messages a proposal of "Analysis and Intervention Grid" on spiritual competence (based on communicative and educational competences). Our proposal is based on the theoretical contributions of Arnaud Join-Lambert, Walter Lesch, Henri Derroitte, André Fossion, Marie-France Daniel, Jean-Pierre Meunier, Paul Ricoeur, Paulo Freire Mario Kaplún, among others. In the experimental part our indicators emerge from research results with children and adolescents - that is, people with identity, spirituality and dignity - after having been exposed to various types of media messages in different geographical, social and cultural contexts.

As a general conclusion, it has been observed that the understanding and the subsequent application of spiritual competence in media education - within formal, non-formal and informal educational processes and at any stage of life - can contribute considerably to strengthen the values noble and to preserve human dignity in the midst of all kinds of contrary currents.

Title: My teacher has a YouTube channel. I wonder where its media competencies come from

Session Type: Individual submission

Authors:

Name: Juan-José Boté

Email: juanjo.botev(at) ub.edu

Country: ES (Spain)

Affiliation: Universitat de Barcelona

Abstract: Most teachers of all educational levels have YouTube channels. This permit to connect them among younger generations but also to be known among other audiences. At the same time, their videos are used to review lessons. Students' parents also connect in most cases with teacher watching its videos. The question besides here is if this aspect, publishing videos, is enough to ensure digital media competencies into next generations. Media competencies in YouTube comprises several issues. Video recording, marketing, graphic design, oral speech and didactics if videos are educational. Is likely that teachers with YouTube presence have learned these competencies by themselves. Therefore, these competencies are not shown in education faculties. For instance, in countries like Germany or the United States teachers acquire media competencies through elective courses during basic teacher training (Tiede, Grafe, & Hobbs, 2015) or additional certificates to their training career.

Media competencies in education comprises several elements, also with students training (Grafe & Breiter, 2014). According to that, teachers need not only to be YouTube publishers, but also being able to apply its knowledge to the class. This would be a way to ensure media competencies for longer generations. Depending on the ages, different technologies could be used, while other will have to way to further ages. The relation of teacher knowledge about the use of media has a strong relation on how the teacher later uses it in class. Nevertheless, not only to tech savvy teacher would need to show media competencies in class, but also as much teachers as possible.

Media literacy at the same time facilitates to have media competencies. However, media competencies and media literacy have different terminology and different discourses (Weigand, Zylka, & Müller, 2013). This situation provides different understanding about the topic how media competencies can be acquired. Media literacies are as a set of competencies associated with accessing, communicating messages.

Media competencies not only corresponds to communication through social media, but also through other types of media. These media can be integrated, for instance, developing a lesson plan integrating digital media. Being more specific, examples of theses competencies can be the use of Wikipedia to develop writing strategies, the use of Wikidata to manage ethical use of information, to create presentations online or being able to do a speech with a recorder.

This paper is a literature review discussing media competencies that future teachers can acquire during its basic training at the university.

Email: pedrojeronimo.phd(at) gmail.com

Country: PT (Portugal)

Affiliation: Universidade da Beira Interior

Abstract: The end of journalism has been routinely announced in the last couple of years (Jones, 2009; Charles e Stewart, 2011). The digital circulation of content; the crisis of news outlets classic business model, with distribution oligopolies now capturing 60 to 75% of the world's digital advertising revenues; the rise of tabloidization and infotainment; the de-professionalization of journalists and newsrooms, a hard won 20th century conquest (Schudson, 2003); a new set of amateurs, influencers, and hard to classify new players (Grubisich, 2005; Gillmor, 2006; Rosen, 2006; Lewis et al., 2010) are eroding classical journalistic practices. As a result, a new media ecology (Scolari, 2012); unfamiliar content-spreading models (Papacharissi, 2010; Jenkins et al., 2018); a disinformation crisis shaking the foundation of western journalism, that manifested in Brexit, and in the American and Brazilian elections, with the untamed spread of propaganda and fake news, assisted by AI (bots and algorithms), constitute a set of new challenges posed to consumers, producers and educators alike.

Older people (65 and up) are more likely to spread fake news on facebook (Guess et al., 2019), while young people are more savvy in dealing with dubious information. The EU Kids Online project found that children (9 to 16 years old) are more likely to be exposed to threats and dangerous online content than 10 years ago. Among the many risks detailed, those who weren't born and have not come to know the classic ecosystem of journalism, and for whom the idea of accurate, collected, verified, and "true" information has the same face value as viral, plausible information, circulated by influencers is a real one.

Quality independent journalism is consubstantial to liberal democracies - not a sufficient condition, but certainly a necessary one.

In this project, "Cientificamente Provável" promoted by the Portuguese Science Funding Agency (FCT) we developed, together with a group of basic and high schools located in Covilhã, in inner central Portugal, a set of articles and pedagogical materials on media literacy in journalistic contexts. The kit is composed of lectures, video presentations and exercises, and will have

sequential experimental presentations in March of 2019, in Basic and Secondary Schools, for an estimated audience of 300 students aged 12 to 18 years old.

These initial presentations will gather feedback to develop a free access multimedia product destined to teachers and educators, with basic contents on media literacy in the journalistic field.

The project is part of the Scientifically Probable FCT program, and the research project

Remedia.Lab, a regional press revitalization program with public funding.

The results intend to shape the new emerging audiences, and are expected to contribute to clarify the role of journalists in the era of mobile journalism, online journalism and citizen journalism, and to promote awareness and understanding on the importance of verifiable, independent and curated information among youths. The premise is that journalists will continue to act as mediators between the people, power, and deliberation in democratic societies; and that educating new audiences is vital for the future of both.

Title: The Public Realm as a Shelter

Session Type: Individual submission

Authors:

Name: Leena Ripatti-Torniainen

Email: leena.ripatti-torniainen(at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: The paper elaborates the topic I introduced at IAMCR 2018 MER Section in Eugene, Oregon. I then discussed an analytical comparison between the polis and the cosmopolis interpretations of the public realm (Weintraub 1997). Referring to Biesta's (2012) tripartite concept of education as qualification, socialization and subjectification, I observed that the emphasis on the polis interpretation in the modern West suggests that public realm related educational practices may tend to operate as qualifying and socializing practices within the existing orders, traditions and ways of being. In contrast, the cosmopolis interpretation highlights the unknown and strange character of the public realm without aiming to overcome difference. The polis bound educational practices, such as citizenship related practices, easily turn into normalizing practices (Biesta 2012). In the IAMCR 2019 paper, I will argue that focus on the unknown and strange in the public realm would, instead, reveal room for unknown forms of subjectivity.

Drawing on scholarly history (e.g. Arendt 1958; Sennett 1977), I identify a concept of the public realm as a shelter for the unknown. In both actual and abstract terms, the public realm has provided room and protection for persons and issues that have been excluded from communities or consciousness. Homeless sleeping on the street may be the most explicit materialization of the public realm as a shelter for the excluded Other.

Discussing with contemporary philosophers of education Zhao (2012) and Todd (2015), I suggest that the educational power of the unknown lies its capacity to weaken our confidence as agents. Instead of comforting and strengthening our competent Ego, the unknown Other, again actual as well as abstract, may take us to the end of our world, even to the thresholds of human being (Kearney & Semonovich 2011) and our subjectivity. Such probability has increased due to the significant shifts in humans' environmental, social and cultural relations.

I conclude that the public realm as a shelter for the unknown means room for our transforming, vulnerably emerging subjectivities. The paper connects with the conference and the section call in relation to the topic of human dignity as well as to the questions of voice and visibility.

Affiliation: University of Minho - Communication and Society Research Centre

Abstract: One of the trends of the last decades was the emergence of a movement to affirm citizens' rights vis-à-vis the media, translated in particular into the creation and fostering of observatories. This movement was developed in parallel with a series of studies on bringing media accountable, in the light of their social responsibility.

Media and Information Literacy (MIL) may be considered an expected component of this drive that values the citizens and communities' engagement in relation to the media. In fact, information and knowledge production about the media field, as well as the development of critical thinking and citizen empowerment about the media, seem to be bridges and common points both for media observatories and for media literacy initiatives and projects. However, literature review does not allow a strong confirmation for this proposition, although the work of media observatories is by its nature functional to media literacy.

With this paper, the authors intend to discuss the role of MIL observatories for MIL policies and practices, starting from the case of MILOBS - Media and Information Literacy Observatory, which resulted from a partnership of several Portuguese public institutions with responsibilities and intervention in media literacy. It will highlight the context and genesis of the project, its characteristics, the difficulties of its implementation and the contributions it intends to make to the different actors in the socio-educational, cultural and political domains. The aims are three-fold: to underline that in the current context of network communication, with its potential and its risks, it is fundamental to link local contexts with the international/global dimension; to empower people regarding the media sphere; and to emphasize the procedural dimensions of policies regarding media and information literacy.

Abstract: El desarrollo de las tecnologías de la información y comunicación (TICs) junto con la ubicuidad de los sistemas de comunicación móviles, la masificación de las redes sociales y los avances en sistemas inteligentes y de virtualización está generando ecosistemas sociales de alta complejidad, los cuales se fundamentan en la convergencia de plataformas (físicas y virtuales), medios y contenidos (Biggs & Johnson, 2012; Pratten, Scolari, & Aarseth, 2016; Rebolledo-Bustamante, 2016). Este nuevo contexto socio-tecnológico plantea nuevas formas de interrelación entre las personas, su entorno y los contenidos que reciben. Precisamente, en este último punto, esta convergencia tecnológica permite que la información sea creada por diversos actores en forma independiente o colaborativa y, a su vez, transmitida en múltiples direcciones, formatos y medios. Esta realidad no es ajena al campo de la educación; por el contrario, introduce nuevos retos y oportunidades para impulsar el desarrollo de procesos formativos integrales y transdisciplinarios. En este sentido, uno de los recursos que están siendo investigados para ejecutar acciones educativas que estimulen la asimilación de conocimientos en los estudiantes de todas las edades, y en particular de las universidades, es la Narrativa Transmedia (NT) (Elordui, Fernandez, Penafiel, & Retolaza, 2014; Gutiérrez Pequeño, Fernández Rodríguez, & De la Iglesia Atienza, 2017). Así, en la literatura encontramos varios estudios que analizan diversos aspectos del diseño, creación y difusión de contenido transmedia en el alumnado universitario (Del Mar Grandío-Pérez, 2016; Gutiérrez Pequeño et al., 2017).

En este trabajo, aprovechando las características de la NT para mejorar los procesos de comprensión y retención estudiantil, presentamos una aproximación para generar un ecosistema de aprendizaje que usa a la NT como catalizador de los procesos de docencia y aprendizaje colaborativos y mediado por pares. Todo ello, a través de la generación y difusión de contenidos transmediales con valor social, cultural y artístico, y en un entorno virtual de aprendizaje. Como caso de estudio, describimos en forma amplia, el trabajo y resultados alcanzados en la implementación del modelo propuesto en el sexto ciclo de la carrera de Comunicación Social de la Universidad Politécnica Salesiana del Ecuador, en la materia de Estética de la Imagen.

Title: MOOCs: Challenges to human communication

Session Type: Individual submission

Authors:

Name: Norma Medina

Email: norma.medina.uaa(at) gmail.com

Country: MX (Mexico)

Affiliation: UNIVERSIDAD AUTÓNOMA DE AGUASCALIENTES

Abstract: The Open Educational Movement, guided by one of the fundamental human rights, has bet for more than a decade to the democratization of knowledge through MOOCs (Massive, Open and Online Courses).

These courses that emerged in 2008 in Canada, have spread across all continents proclaiming open access to educational opportunities for all. However, the review of experiences is not very encouraging, since it is evident that many of the beneficiaries of MOOCs already have academic degrees.

On the other hand, the massiveness of these courses test the communication process and fosters an atmosphere of anonymity, although it is important to recognize the interculturality that occurs in these open education environments that attract students of multiple nationalities.

The interconnection that can be achieved in MOOCs was contemplated from its creators Siemens and Downes, through their proposal of Connectivism as a theory of learning in the age of networks, therefore it is important to account for the extent of connections between those who participate in a MOOC.

According to the above and with the intention of exploring the MOOCs of the Mexican context, the research presented in this paper, carried out in 2016-2017, highlights the real possibilities that the participants have to communicate in these open education environments, due to the massive nature that characterizes them.

The results are part of a larger study that aimed to identify the profile and training of MOOC teachers and facilitators from four Mexican universities, as well as ways to interact with the participants.

The study was of an exploratory nature, with a qualitative approach in which four professors and four facilitators of MOOCs of two private and two public universities participated as informants. Interview guides were designed and applied online for further analysis. In particular, the categories referring to communication practices were the following: possibilities of interacting, frequency and opportunity of communication, strategies, advantages of communication and suggestions to promote communication in MOOCs.

The interviewees agreed on the difficulty of establishing one-to-one communication in MOOCs, however they have developed asynchronous communication strategies that allow them to follow up on learning.

Finally, in the conclusions, we discuss the breakdown of the paradigm represented by MOOCs, the challenges to develop communication and above all, the opportunities they have to assert the right to education to which every human being aspires.

Affiliation: Porto University

Abstract: Keywords: Visual literacy, Methods, Theory.

Context

The exposition to images in our daily life is now massively shared. Although, visual literacy has not deserved recognition in the educational system. Youth presents low levels of literacy but there is no clear training available. Those major contradictions are in part a result of a lack of conceptual clarification and the consequent operationalization difficulties.

Purpose

In this study we address the problems enunciated above by presenting a new method of visual literacy measurement as well as a designed structure for training university students on visual literacy.

Methods and Results

A content analysis of the published literature on visual literacy was conducted over the last ten years. The study considers the online web search; two data-bases were consulted on web science and Scopus. In the Web science had 82 papers and Scopus 94 papers. The quantitative and qualitative results from the content analysis is presented. And discussed in terms of the main conceptual definitions presented in those papers.

A comprehensive model based on that assessment is offered and mostly important the implications for the the evaluation procedures are discussed.

Accordingly, to Bowen (2017), the learning assessment methods of visual literacy have used to understand how digital users analyze, interpret and create images with some objectives to a target group. In the last years, those measurement methods rely on psychological theories such as behaviorism and constructivism (Fosnot & Perry, 1996). Those methods are Bloom's Taxonomy (Newton & Martin, 2013), the SOLO Taxonomy (Bowen, 2017), and Housen's Measuring Aesthetic Development (Housen, 1983). Each method has different dimensions of the measurement

of knowledge and learning. Bloom's Taxonomy uses a behaviorist approach, while Structured Object Learning Outcome Taxonomy (SOLO) and Hosenfeld's Measuring Aesthetic Development are constructivist. While the constructivism "draws a picture of knowledge and understanding being slowly constructed" (Woollard & Pritchard, 2013, p. 5). These knowledge allow them to improve the learning quality process.

Significance

The importance of findings shows a more precise method of evaluation and design effective approaches to training visual literates as well as critical thinkers. To be visual literate implies to understand the different meanings of images and many contexts. Images can be digitally manipulated as information. It means they can create fake news and threaten Democracy.

Title: Media Literacy Education and Children's Right to Communicate: Disputed Rights, Contested Truths in Turkey's Case

Session Type: Individual submission

Authors:

Name: Tugba Asrak Hasdemir

Email: tubahasdemir(at) gmail.com

Country: TR (Turkey)

Affiliation: AHBV University Faculty of Communication

Abstract: The right to communication is one of the important topics discussed widely by the communication researchers as well as media professionals, practitioners and other persons/sectors related with the issue. Beside other human categories, children and youth, and their relations with media including new media are specifically addressed by the international documents. The UN Convention on Rights of the Child (1989) is one of the international legal documents which refers to children's rights to communicate in a range of important ways: children's right to express their views freely in all matters affecting them (Article 12), freedom of expression (i.e. to seek, receive and impart information of all kinds) through any medium of the child's choice (Art. 13), freedom of association and peaceful assembly (Art. 15), protection of privacy (Art. 16) and to mass media that disseminate information and material of social and cultural benefit to the child, with particular regard to the linguistic needs of minority/indigenous groups and to protection from material injurious to the child's well-being (Art. 17). Implementing the UNCRC is a task for governments, but the thinking and values underpinning this framework have also served as a rallying call for public, private and other persons/sectors seeking to improve children's rights and well-being.

Media literacy education might provide important means for enabling children, youth to safely enjoy their right to communication. The history of media literacy education can be traced to the first half of the 20th century in the world. As the first step, we can see uses of different kind of media in education and then "media literacy" as a course has become a part of formal and/or non-formal education at different levels. Regarding Turkey's position to media literacy education, we can say that the issue of media literacy has appeared on the agenda of academic studies and various meetings since the beginning of 2000s. Also the studies and discussion on media literacy in Turkey have been encouraged by the project to include media literacy course into the school curriculum. This course has been educated countrywide since 2007-2008 school years. As a further step, the curriculum and textbooks of the media literacy course were modified in 2013 with the target of acquainting students with the information and the skills which enforce them as young and critical audiences of traditional and new media.

In this respect, this presentation aims to elaborate media literacy education in Turkey by regarding their contributions and challenges for the development and enforcement of children's right to communicate. For this purpose, the media literacy curriculum and textbooks will be investigated by considering leading educational policies, practices which are sensitive to children's communication rights on the issue of media literacy at the international levels. Based on the findings and investigations, the concluding part of the presentation is reserved to further evaluations and

recommendations for formulating media education policies and practices which advance children's right to communicate.

Title: Social media, smart phones and unaccompanied refugee children: the possibilities and limitations of media education

Session Type: Individual submission

Authors:

Name: Anamaria Neag

Email: aneag(at) bournemouth.ac.uk

Country: GB (United Kingdom)

Affiliation: Bournemouth University

Abstract: It was July 2015, and thousands of asylum-seekers camped out around Budapest's Keleti railway station. Europe was once again on the verge of crucial change. It was the start of an on-going process dubbed by the media the 'European migration crisis'. Since then, several thousand asylum-seekers have arrived on the continent, triggering widespread debates about migration and human rights. Among those seeking asylum, the most vulnerable are, undeniably, unaccompanied children. By 2017, more than 150.000 unaccompanied minor asylum-seekers have been registered in different EU countries. European authorities and NGOs stress the need for suitable integration policies. Previous research talks about 'connected migrants' (Diminescu, 2008), and the relevant IT skills that refugees have (Gillespie, 2016). However, this presentation will address the question of whether digital technologies and (social) media can be useful tools for addressing the challenges of integration. Moreover, beyond this it will look at whether these platforms can enable individual expression and social participation for these young people. The findings are based on rich data gathered through interviews, participant observation and digital ethnography in the Netherlands, Sweden and Italy, and through participatory action research carried out in the UK. The presentation will build upon the lived media experiences of these children and will focus on how the process of migration has changed children's media use, and how digital technology enables children to make sense of their new lives in Europe. In line with the conference's theme, our findings show both the immense importance of the children's background in gaining a voice online, and the possibilities that lie ahead, but only if social and economic capital is available to unaccompanied refugee children. The presentation will end with a discussion on the importance of ensuring mentors' and social workers' media competencies. For unaccompanied youth these are the only people who can truly help in navigating the maze of social media and digital technologies.

Title: Gamification of sports media coverages: an infotainment approach to last Olympics and Football World Cups

Session Type: Individual submission

Authors:

Name: Jose Luis Torrijos

Email: jlrojas(at) us.es

Country: ES (Spain)

Affiliation: Universidad de Sevilla

Abstract: Along decades sports journalism was underrated and used to be called 'toy department' (Rowe, 2007), but in the digital world it behaves much more as a real laboratory of new formats, new storytelling techniques and disruptive ways of engaging audiences. In many ways sports journalism is nowadays at the forefront of the innovation in journalism and it even has demonstrated that some ideas and experiences stemming from sports, especially during the coverage of mega-events like Summer and Winter Olympic Games and Football World Cups, were successful and, consequently, were emulated by other journalisms (Rojas Torrijos, 2018). Mega sporting events become increasingly captivating spectacles (McGillivray, 2014) and produce their own media narratives (Wenner and Billings, 2017). In this sense, sports journalism has given birth to liveblogging and multimedia longform, and has built new patterns of data journalism visualisations and predictions, formats of video or even native content adapted to each social media platform and mobile devices.

Among other trends, sports media coverages of mega-events are more and more visual, infographic, data-driven and customised through interactive pieces which add value to previews, analysis, reports and features. These coverages are also oriented to gamification of news (Ferrer Conill and Karlsson, 2016), an infotainment approach to events developed by media outlets as an original and effective way to capture more audience's attention and put them into context before sports competition starts. Interactive newsgames turn out to be a key element for sports outlets inside their digital strategy to increase their user engagement rate from a softer news and entertaining content.

This paper analyses gamified sports pieces developed by international media outlets during the last two Olympics (2016 Summer Olympics in Rio and 2018 Winter Olympics in Pyeongchang) and Football World Cups (2014 in Brazil and 2018 in Russia). By showing and explaining the results of these projects, we pretend to shed more light on the way sports journalism is exploring new storytelling models to transform traditional coverages into an involving, social and fun activity for fans and so make them feel like at the same core of news production process in the digital age.

Title: USA Gymnastics: The worst #MeToo sex scandal in sport

Session Type: Individual submission

Authors:

Name: Linda Fuller

Email: LFuller(at) worcester.edu

Country: US (United States)

Affiliation: Worcester State University

Abstract: Betrayal. Guilt. Shame. These are MY feelings about the sex abuse scandal relative to the USA Gymnastics team, since I never covered them in my extensive reportage on female Olympians (Fuller, 2016, 2018). IAMCR/Madrid will allow me to make amends, presenting the background to how, over two decades, some 368 young gymnasts alleged sexual assault by coaches, gym owners and staff but the Olympic arm USA Gymnastics failed to report them and take action. Only after an intensive report by IndyStar and the USA Today Network did the horror come to light—a classic case of the importance of Media/Sport.

Title: Mourinho at Manchester: An Anatomy of Power (Or the Lack Thereof)

Session Type: Individual submission

Authors:

Name: Neil O'Boyle

Email: neil.oboyle(at) dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: At its core, the theme of the 2019 IAMCR Conference in Madrid – ‘disputed rights and contested truths’ – is essentially about power. In this paper, I draw on John Kenneth Galbraith’s bestselling book, ‘The Anatomy of Power’ (1985), to examine the operation of power at the world’s most valuable football club, Manchester United (£3.1bn).

Throughout history, the ‘personality’ of supposedly powerful persons (including football managers) has attracted significant attention, but Galbraith argues that this has greatly exaggerated the role of personality in the exercise of power. Against this, he argues that we are now living in the ‘age of organisation’ – an age in which even the most charismatic personalities are subject to the collective will of the larger group. On 27 May 2016, José Mourinho was appointed manager of Manchester United. On 18 December 2018 – just four months shy of completing his three-year contract – the club let him go. In this paper, I employ Galbraith’s exposition of power to analyse Mourinho’s relatively short managerial career at Manchester United, drawing some broad conclusions from it. The paper is divided into three parts.

In the first part, I describe Galbraith’s detailed study of instruments and sources of power, and examine a selection of commentaries on famous football managers, including those by players. It is within this context that I then turn, in the second part, to examine Mourinho’s time at Manchester United. To develop a sense of how the initially celebratory narrative surrounding his appointment gradually changed over time, I present findings from an analysis of more than a hundred articles on the BBC Sport website. BBC was selected because it is an avowedly non-partisan news source, and the analysis here is framed and guided by Galbraith’s study. Ultimately, I argue along with him that it is the organisation that is the paramount source of power.

In the final part of the paper, I consider a new form of power that could not have been anticipated by John Kenneth Galbraith when writing in the 1980s. Numerous observers have recently documented the emergence of new disruptive digital technologies and the seismic impact of social media in particular. (More critical scholars have focused on the power of the technology companies behind these innovations). Here I consider how the social media-enhanced commercial power of some players has implications not only for managerial power but also for the organisational power of football clubs. In Galbraith’s terms, we can suggest that social media have become both instruments and sources of power, and that these generally complement but also sometimes conflict with the power of organisation. In concluding the paper, I point to some recent journalistic accounts which suggest that what I call ‘player promotional power’ – power that delivers commercial returns

for both player and club alike – can sometimes overwhelm the influence of the club's manager, as singularly charismatic as that manager may be.

Title: Interaction, promotion or patriotic education' Exploring the social media uses of Chinese athletes under the national sports policy

Session Type: Individual submission

Authors:

Name: Yanfan Yang

Email: yangyf1997(at) gmail.com

Country: CN (China)

Affiliation: Peking University

Abstract: China sports industry witnesses a big transformation over the last two years. For the last century, China has paid much attention to the glory of the Olympic Games. With the changing national policies, China currently turns to the national fitness development. In order to welcome the 2022 winter Olympics, a series of activities to promote the popularization of snow and ice sports was organized.

These promotions show the government intending to uses social media and returning the focus back to the athletes. The development of social media “has a profound impact on sports industry” (Pegoraro, 2010, p. 501). Since the 2016 Summer Olympics held in Rio de Janeiro, Weibo became an important stage for sports news, athletes-fans interaction, sponsorship and promotion. According to the official data released by Sina, the amount of interaction on the Weibo reached 61.9 million on the opening day of Rio Olympics, and the total amount of reading of related topics amounted to 10 billion. Sun Yang, Zhu Ting, Zhang Jike and other athletes were mentioned the most. Also, a series of stickers and memes became popular. Fu Yuanhui, a swimmer, used “Hong Huang Zhi li” during an interview, or a kind of power that is mighty enough to manipulate the universe, to describe her hard work, which became a hit on the internet.

More and more scholars began to explore athletes self-use of social media. (e.g., Du, 2014; Gregory, 2009; Hambrick, Simmons, Greenhalgh & Greenwell, 2010; Pegoraro, 2010; Wang & Shi, 2012). Scholars found that the social media provided the audience a medium to express emotions, thus enabling the audience and the sport's characters to develop virtual interpersonal relationships (Weiss, 1996). However, there are few studies on the active use of Weibo by Chinese athletes and the interaction between athletes and fans under the new sports policy. Many scholars in China pay attention to the media image of athlete and brand effect brought by it (Luo, 2013; Liu, et al., 2016). Hence, this study fills the gap by exploring the tweets posted by athletes and the interaction between Chinese athletes and their fans on Weibo, in order to see what characteristics does the athlete's interaction with fans; how does this interaction affect fans' activity and how athletes' social media uses help promoting sports under China's national sports policy.

A content analysis of weibo posted by Chinese athletes is conducted. Athletes from the different sports categories are randomly selected. Also, an in-depth interview will be conducted. Results show that only a few Weibo were promotional, indicating that the potential of achieving promotional objectives has not come to athletes' full awareness. However, they did try to promote

national fitness and patriotic education using the role of athletes. Suggestions are athletes enhance the relationship with fans so as to enlarge the sport and the national policies per se.

Title: Sports betting advertising: Too much money to ignore and too vaporous risks to acknowledge

Session Type: Individual submission

Authors:

Name: Hibai Lopez-Gonzalez

Email: hlopez(at) idibell.cat

Country: ES (Spain)

Affiliation: Bellvitge Biomedical Research Institute (IDIBELL), Barcelona, Spain

Name: Susana Jimenez-Murcia

Email: sjimenez(at) bellvitgehospital.cat

Country: ES (Spain)

Affiliation: University Hospital of Bellvitge

Abstract: Sports betting is becoming a fundamental by-product of sport commodification. Although many scholars argue that gambling practices date back to the origins of sport, the advent and popularisation of the internet has provided a new impulse for sport gambling behaviour. Online betting on sport is the most rapidly-growing form of gambling, accounting for about half of the online gambling industry in Europe. Betting products are widely advertised in media sport platforms, jerseys, stadium banners, and other marketing formats. From an economic point of view, the blooming of sports betting only calls for extra care regarding integrity issues (i.e., match fixing), which could devalue sport competitions. However, from a public health perspective, such blooming of the sport gambling market brings forward issues of gambling-related harm and addiction.

This paper summarises research conducted over the past three years on the topic of advertising and sports betting and its impact on problem gambling. The paper covers data from (1) a content analysis of sports betting advertisements from the UK and Spain; (2) a cross-sectional survey-based study with regular sports betting; and (3) a focus group study with Spanish sports bettors undergoing treatment for gambling disorder whose primary gambling form was sports betting.

As a particularly salient form of contemporary media sport, betting commercial communication introduces sport fans to a world of fun and money-winning that only depends on their ability to adequately use technological devices (particularly smartphones) and their knowledge of sport. Advertisements generally overemphasise the skill components of gambling, underestimating the luck-based components of figuring out the outcome of sport competitions. Many advertising techniques build on psychological distortions to present information relevant to gambling in a way as to induce illusion of control, heuristics, cognitive biases and other irrational cognitions about gambling. These studies provide important implications as to how regulate sports betting, and make the case for a more scientifically-grounded evaluation by the sports industry of the gambling-related risks, not only from the point of view of the fairness of its competitions but concerning the health of its consumers.

Title: The Rise of Media Sport Portals: Live Streaming Services, Coverage Rights Markets and the Platformisation of Television

Session Type: Individual submission

Authors:

Name: Brett Hutchins

Email: brett.hutchins(at) monash.edu

Country: AU (Australia)

Affiliation: Monash University

Name: Bo Li

Email: libo(at) sau.edu

Country: US (United States)

Affiliation: Miami University (Ohio)

Abstract: The growth of over-the-top (OTT) Internet and mobile video streaming services is a major development in the distribution, transmission and consumption of global media sport. Heavily-capitalised services such as Tencent Video, DAZN and Amazon Prime Video are intervening in coverage rights markets and changing how live sport is experienced and shared across television, computer, game console, tablet and smartphone screens. This paper identifies and analyses six defining characteristics of OTT live sport streaming, and outlines three services (Tencent Video, DAZN and Amazon Prime Video) that operate across Asia, the UK, Europe, the Americas and Australasia. Its argument is that, first, live sport streaming is a key means by which television content and practices are escaping the boundaries of broadcast media, while also continuing to perpetuate the logics of television coverage and viewing practices. Second, drawing on Amanda D. Lotz's conceptualisation of portals, it is proposed that these services are establishing new norms concerning how media sport is accessed and curated and, as such, their arrival signals an historic shift in the global marketplace for sport coverage rights and the media systems through which live content circulates.

Rotterdam

Abstract: In today's world, football has the power to mobilize and entertain massive amounts of people across Europe and worldwide. In the words of an editorial from The European newspaper, football, "previously viewed as a 'slum sport'" has been transformed in "the common currency of popular European culture" (as cited in Schirato, 2007). Although attending to the football field remains for most fans an exciting experience, television is the most popular medium to watch football across Europe (Repucom, 2014; 2016). Within the current sociopolitical context, we consider it relevant to take a look at how the media deals with the representation of marginalized and/or minority groups, also in sports media. Previous research has found a systematic association of Black players with "natural" physical athleticism while White athletes are relatively often represented in terms of leadership, rationality and perseverance (Buffington & Fraley, 2008). With televised men's football acting as an important frame of reference for audiences to give meaning to racial and ethnic diversity (Bruce, 2004), we are interested in exploring racialized discourses in football coverages and highlights. Earlier research on the topic has mainly focused on the content of these discourses and - to a lesser extent - on the reception of these by the audience. In our research, we want to combine content, production and reception in one project across four different European countries, namely Spain, The Netherlands, Poland and England. We use a mixed methods approach, combining quantitative and qualitative data. In this presentation, we present some preliminary findings on the content analyses of weekly football highlights in the Spanish media, using racial/ethnic categories that go beyond the Black-White categorization that is commonly used in such studies. Our analysis is informed by insights from media studies and cultural studies and findings will be placed in a wider societal perspective.

Title: Selfies instead of goals' An Analysis of the influence of social media activities of football stars on German live TV sports coverage during the 2018 FIFA World Cup.

Session Type: Individual submission

Authors:

Name: Benjamin Held

Email: benjamin.held(at) w-hs.de

Abstract: 1. Introduction

The rapid development of social media "had a profound impact on the way sports are created, delivered and consumed" (Sheffer & Schulz, 2013). While the players use their channels to build their own brand, sports journalists use the opportunity to apply social media as a research source. At the same time, they also recognize the difficulty of obtaining exclusive content (Nölleke, Grimmer & Horky, 2017). This study takes a closer look on how the social media activities of football stars influence the German live TV sports coverage during the 2018 FIFA World Cup.

2. Literature Review & Theoretical approach

Football became "mediatized and visualized" as a result of constant commercialization (Krotz, 2016). The sports coverage is getting more complicated by social media. The Internet has given associations, clubs and players the opportunity to distribute their content directly to their target audience, bypassing the gatekeeper function of the media (Nölleke, Grimmer & Horky, 2017; Grimmer, 2014). At the same time, the economic interests and influences of professionalized PR make it difficult to obtain and gather independent information (Williams & Chinn, 2010; Wiegand, 2014).

3. Central research questions

The central research question of the study is: What influence do the social media activities of the world stars in professional football have on the live TV sports coverage during the FIFA World Cup 2018?

In the course of this question the following hypotheses were examined:

- Selected social media activities of football professionals are cited as part of the live TV sports coverage of the Football World Cup.
- Football professionals are distributing more exclusive content through their own social media channels than they reveal in interviews with the media of live TV sports coverage.

4. Methodological approach

The study is based on two quantitative content analyzes (Früh, 2015). The social media channels of various football stars and the content of the live TV coverage of the public broadcasters in Germany were analyzed to find possible content-related matches.

A sample of extreme cases was chosen for the social media analysis (Brosius et al., 2016). On this basis, the respectively most popular football players of the five leading football nations (FIFA World Ranking) were chosen.

The selection of the research material of the live TV analysis is based on the social media analysis. The live TV analysis will focus on the games of the nations of the selected players. The analysis was limited to the group phase.

5. Results

The results of the study show that the media of live TV sports coverage can withstand the pressures of social media. Although the reaction range of the selected professionals was extremely large, the content was not included in the live TV sports coverage. Instead, especially the live event has shaped the coverage. It seems like that during tournament phases like the World Cup, there exist two parallel medial worlds – the live TV sports coverage and the Social Media Universe. And both worlds have their own Gatekeepers.

Title: Self-tracking and recreational sports: A social-communicative phenomenon

Session Type: Individual submission

Authors:

Name: Veera Ehrlén

Email: veera.ehrlen(at) jyu.fi

Country: FI (Finland)

Affiliation: University of Jyväskylä

Abstract: Sports-related self-tracking is increasingly popular in recreational sports. Leisure sport practitioners use wearable devices that are connected to online platforms such as Sports Tracker or Strava to record and share their exercise data. Worldwide, the market for wearable devices is estimated to nearly double by 2021 (International Data Corporation, 2017).

Importantly, self-tracking is not only about oneself. According to Lupton (2014), self-tracking is a 'profoundly social practice'. Lomborg and Frandsen (2015) conceptualize self-tracking as a communicative phenomenon by proposing that it is about interacting with a digital system, with oneself, and with peers. Literature on the first two dimensions of self-tracking communication is extensive. However, apart from a few studies (e.g. Smith & Treem, 2017) little is known about the social-communicative dimension of self-tracking.

The paper complements existing literature by examining what social factors motivate sports practitioners to use self-tracking platforms. Moreover, it investigates the social limitations of data sharing. Data for the study was collected using online questionnaires and in-depth interviews directed toward Finnish trail runners. Questionnaire data was collected to recognize broader patterns of the use of self-tracking devices and platforms, whereas interviews were conducted to go deeper into the meanings the practitioners ascribe to self-tracking. Altogether 125 trail runners (46 % females, age $M = 39.9$ and $SD = 8.5$) participated in the questionnaire, and of these participants seven were interviewed in-depth.

A statistical analysis of the questionnaire data verified the wide extent and variety of the use of self-tracking platforms, as well as the importance of self-tracking as a motivator for physical activity. An inductive content analysis of the interview data identified information sharing, comparison, and recognition to be the main social-communicative aspects that motivated the use of self-tracking platforms. Additionally, the analysis identified ordinariness and privacy as reasons that limited data sharing. Based on these results, the paper argues that motivation for physical activity does not only come from personal tracking, but importantly, from communicating about self-tracking with other practitioners. Furthermore, the paper sheds light on the role of social ties and interpersonal communication in promoting physical activity.

Title: The Peace Games': Media representations of North Korea at the 2018 Winter Olympics

Session Type: Individual submission

Authors:

Name: Peter English

Email: penglish(at) usc.edu.au

Country: AU (Australia)

Affiliation: University of the Sunshine Coast

Name: Richard Murray

Email: r.murray1(at) uq.edu.au

Country: AU (Australia)

Affiliation: University of Queensland

Abstract: North Korea's last-minute participation in the 2018 Winter Olympics began a cooling in both cross-border and international tensions that soon led to peace talks. What started with the reopening of the border hotline between the two nations quickly turned into a unified Korea marching in the opening ceremony, heralding the beginning of the "Peace Games". The inclusion of the combined team created a variety of news angles that were focused on sporting and non-sporting topics, highlighting the intersection of sport and politics on a global stage.

This paper examines the representations in media reporting of North Korea at the 2018 Winter Olympics. Issues such as sport, politics, sports diplomacy and novelty are explored through the lens of Bourdieu's field theory, against the background of the shifting and disrupted sands of the journalism industry. Utilising a content analysis of major online news providers from five regionally and internationally significant nations – North Korea, South Korea, Japan, the United States of America, and Great Britain – it examines what was included in articles dealing with North Korea's return to the global sporting arena. The time-frame of the analysis started on January 3, 2018, when the border hotline between North and South Korea reopened, and concluded a week after the Winter Olympics on March 3.

A total of 660 articles were analysed, with two-thirds predominantly about the Winter Olympics, and the remainder mentioning the event in some form but predominantly about another topic. Despite the global sporting status of the event, athletes were included in stories slightly more than a third of the time. By comparing the representations by online newspapers among the five nations, it helps to understand the different narratives applied when reporting on North Korea in both sporting and broader contexts. The results suggest the sporting field is smaller than the political field in relation to North Korea and the Winter Olympics.

Title: Unglamorous but Pivotal Concerns: Sport Media Ownership and Intellectual Property

Session Type: Individual submission

Authors:

Name: David Rowe

Email: d.rowe(at) westernsydney.edu.au

Country: AU (Australia)

Affiliation: Western Sydney University

Abstract: The media-sport nexus, despite appearances, is not a seamless coincidence of interests, structures and practices. Each institution has its own priorities, and has sought to exercise power over the other. These struggles for power explain why ownership and control in sport and media have far-reaching social, cultural, political and economic consequences. Understanding the entire 'media sports cultural complex' does not only involve grappling with issues of ownership and control, but there can be no comprehensive or effective grasp of the phenomenon without a thorough grounding in the rather unglamorous world of rights deals and distribution agreements. Although those interested in sport, especially dedicated sport fans, have (legitimately) much more interest in, and knowledge of, contests on the field of play rather than the stock market, they also become quickly aware of financial changes when they affect their access to their favourite mediated events. Cultural citizenship remains a central issue in media sport because its concerns operate as a check on capital to 'slice and dice' mediated public culture in a manner that is exclusively focused on private economic interests. Media sport has been subject to deeply disruptive technological changes ranging from the printing of the sport news to the live broadcast of major events. The latter remains the most economically important point of reference in the arena of sport, exercising the enthusiasms of sport watchers, sport organizations, and media/information technology companies alike. Sport's importance as a form of physical culture is undiminished, and only a small proportion of sport-related activity is professional. However, it is elite sport that is the 'engine room' of the global sports economy, and that is only the case because, across the last century or so, it has been made globally available through the profound interpenetration that has created 'MediaSport'. But the media-sport nexus is historically dynamic and increasingly volatile. The rise of 'networked media sport' may not yet have resulted in 'sport beyond television', but it is creating a world where social media rival institutional media for influence on sport, and where competitive sport gaming (e-Sport) competes with the more traditional flesh-and-blood forms for players, spectators and capital. This paper argues that, despite the 'weightless' appearance of such digitally-inspired sport, weighty issues of ownership and control remain central to what is played, who gets to see it, and who materially benefits from the mediation of sport.

Title: Anything can happen in women's tennis, or can it? An empirical investigation into prejudice in sports journalism

Session Type: Individual submission

Authors:

Name: Ladislav Křišťoufek

Email: ladislav.kristoufek(at) fsv.cuni.cz

Abstract: “Anything is possible in women’s sports” is a sentence with variations used by some sports journalists, as well as audience members, which reflects a widespread and seemingly uncontested truth about female athletes and their ability to perform consistently at peak levels in comparison to men. Frequently highlighting women’s instability, the underestimation of female athletes by predominantly male sports journalists and experts has repeatedly been described in analyses of sports media (e.g. Bernstein & Galily, 2008; Bruce, 2012 or Schmidt, 2016). This unequal treatment is often supported with an appeal to “common sense” or reference to past competitions of which the author or speaker had personal experience.

One such example of media prejudice against female athletes is found in the world of women’s tennis where the “anything can happen” attitude has particular traction, as we explored using media content analysis of the Czech media.

Fortunately, tennis is one of the most popular and most bet on sports around the world which means detailed data are available for essentially all matches played at the professional level decades into the past. We thus aim to test the “common sense” and “experience” of women’s tennis which purportedly justifies the claim that female players are less predictable and less results-stable than their male counterparts. To do so, we utilize Jeff Sackmann’s database

(<https://github.com/JeffSackmann>) which goes back to the 1970s. Combining ATP and WTA tournaments, it gives a dataset of around 250,000 matches. We approach the hypothesis of the “anything can happen” effect through logistic regression with the higher ranked player winning the match being the predicted variable. As a crucial variable to test our hypothesis, we use the effect of the rank difference of the players and how this effect differs between men and women. The less predictable outcome means that the rank difference plays a lower role, i.e. if the women’s matches are less stable or less predictable, the effect for the subpopulation should be lower. In addition, we control for other effects – surface, age difference, tournament stage, tournament level, and actual rank in the sense of Top 5, Top 10 and Top 100 players. The results are rather shocking.

The women’s matches do not show higher instability or lower predictability at all, rather it is the other way around – the men’s matches show lower dependence on rank difference. This is true both for the entire sample going back to the 1970s but also for the more current sample starting in the

year 2000. The depth of the dataset allows for various testing hypotheses and subsamples. One example is to limit testing to Grand Slam matches where the difference between men's and women's results are believed to be more profound. However, even for this specific restriction, the results remain qualitatively the same as for the whole sample.

The underestimation of women's sports is sometimes used by sports media editors to explain the minor coverage in comparison to men's sports (Boyle, 2006). Our results show that this underestimation is based more on bias than reality.

Title: 'Moneyball Plus': Sports Journalism in the Age of Big Data

Session Type: Individual submission

Authors:

Name: Marisse Gabrielle Panaligan

Email: marspanaligan(at) gmail.com

Country: PH (Philippines)

Affiliation: Institut für Journalistik und Kommunikationswissenschaft, Universität Hamburg

Abstract: In 2003, the publication of Michael Lewis' best-selling book Moneyball created the mythology of Big Data among professional sports leagues in the United States. Quantification is already central to such a competitive field which determines winners and losers via scorekeeping, but the arrival of Big Data made statistical analysis even more relevant in the production of sports knowledge. A decade later, the development of motion tracking camera technology paved the way to an even deeper datafication of sports—the next stage of the analytics revolution dubbed as 'Moneyball Plus.'

As an integral component of mediated sport, sports journalism reflects this affinity for numbers. However, one of the key issues is the underlying tension between the god-like attribute of Big Data as a trusted oracle of objective truth and the more humanistic nature of journalistic storytelling. This study examined how this tension plays out in the journalistic process of a data journalism website with a devoted sports section—FiveThirtyEight. Using quantitative content analysis on the website's articles on the National Basketball Association, four different aspects of the journalistic process were examined: data sourcing, data use, data visualization, and data contextualization.

Drawing from the Journalism as Assemblage theory, FiveThirtyEight's epistemological practices were inferred based on the 'objects of journalism' it puts together to produce a journalistic output. These objects are the raw materials collected by journalists to be used as facts or evidence, such as quotes from interviews, visual objects like photos and videos, and numerical figures from a statistical database. This materialist approach recognizes the active processes within the journalism artifacts themselves, especially of the number as a 'communication medium.'

The study found that FiveThirtyEight did not appear to be concerned with balancing quantitative evidence against human observation. On the average, each article cited 16 statistical objects in the text and typically used a table or a chart to visualize the data. However, more than 80 percent of the articles (N=241) did not include a single quote, and a measly 8 percent quoted multiple human sources who can put the numbers into context. This appears to be partly due to the expertise of the journalists themselves, who often did not need to consult other sources in order to explain both the numbers and the basketball phenomena.

In terms of data use, statistical objects were classified into different types. Traditional statistics are basic categories of easily countable events recorded by scorekeepers and generally considered misleading and inadequate by analytics experts. Advanced statistics, meanwhile, are developed metrics based on calculations of combined statistical categories. Surprisingly, the two were almost

equally used by FiveThirtyEight, as both appeared in more than 81 percent of the articles. These could be because complex Big Data metrics, despite their explanatory power, tend to be abstract, which creates a necessity for simpler numbers collected through human perception in order to be understood by the lay audience. In this sense, the humanistic aspect of journalism is still kept despite the rise of datafication in sports.

Affiliation: Universidad de Sevilla

Abstract: La presencia de la mujer en el ámbito del deporte competitivo moderno casi siempre ha sido figurativa: musa, animadora o azafata. A pesar de esto, la participación femenina se ha incrementado en los últimos años con roles de mayor protagonismo: deportista, entrenadora o dirigente. Sin embargo, las mujeres se enfrentan a otros obstáculos que no padecen los hombres para su participación en el deporte (Dunning, 2003). Las agresiones contra las mujeres en el deporte son en su mayoría de género y cuentan con elementos despectivos. Son múltiples los escenarios en los que se presenta la violencia de género y la discriminación en el contexto deportivo. Las formas de violencia en el ámbito deportivo femenino suelen ser más invisibles y abarcan desde las deportistas de cualquier disciplina hasta las entrenadoras, directivas o árbitras (Arguello, 2018). A partir de esas consideraciones, esta comunicación tiene como objetivo principal analizar el tratamiento televisivo de casos de violencia contra las árbitras en Brasil y España. Igualmente, el estudio busca reflejar qué piensan las mujeres que actúan profesionalmente en el arbitraje sobre cuestiones relacionadas con la violencia de género en el ámbito deportivo. Para la elaboración del estudio, se utilizarán una selección de piezas de programas informativos de televisión de TV Globo (Brasil) y Atresmedia (España), que divulgaron casos de violencia contra las árbitras durante el año 2018. Además, los datos serán complementados con la realización de grupos focales exploratorios (Gondim, 2003) con árbitras deportivas. El material seleccionado se organizará en torno a categorías de análisis obtenidas de los registros de los contenidos. En el material televisivo seleccionado se muestran sobre todo las agresiones verbales y físicas contra las árbitras cometidas por jugadores, entrenadores, dirigentes y aficionados. Asimismo, el discurso adoptado por los canales televisivos revela un punto de vista crítico en relación con la violencia de género al tiempo que reclaman más igualdad en el arbitraje. Los resultados obtenidos en este estudio permitirán discutir sobre la repercusión informativa de la violencia contra las árbitras.

Title: Staging the Soccer World Cup Final 2018: an international comparison of five countries

Session Type: Individual submission

Authors:

Name: Hans-Joerg Stiehler

Email: hansjoerg.stiehler(at) yahoo.de

Country: DE (Germany)

Affiliation: University of Leipzig, Saxonia, Germany

Abstract: The Football World Cup is a media event with a global reach (Dayan & Katz 1992; Couldry 2010). Their finale is elaborately staged - "on location" in the stadium and by the broadcasting TV stations all over the world. The entire broadcast of the final of such sports events takes more than twice the playing time. The following research questions will be examined using the example of the 2018 FIFA World Cup in Russia: Are there global patterns in the staging of the final of the 2018 World Cup, especially in the pre- and post-reporting? Which formats/sub-formats and which programme dynamics are achieved?

The study compares television coverage in four major media markets: Europe (Germany, Switzerland), Asia (Japan), North America (USA), Latin America (Mexico).

The empirical analysis itself is based on the theoretical concept of infotainment (Thussu 2008). The subdimensions of infotainment include dynamics, storytelling and emotional style (Früh & Wirth 1997). On these dimensions, effects can be achieved which increase the entertainment experience and thus the attractiveness of sports events (even if this appears secondary in the case of the World Cup final) (Stiehler 2007).

The programme material (original recordings) was subjected to a multi-stage quantitative content analysis. The five versions of the coverage ranged from 3.5 hours (Switzerland) to 4 hours (all other channels). They were first broken down into programme segments („rough structure“ with categories as pre- and post-reporting, half-time and half-time break, ceremonies such as pre-game show and award ceremony) and measured in terms of duration. Differences between the various national versions result mainly from the extent to which the ceremonies in the stadium were observed (before and after the match) or more broadcasting time was produced in the accompanying studio.

Subsequently, the respective sequences („fine structure“) were examined. Here, the sub-formats, the dominant themes and the actors of a particular sub-format were analysed in detail. The number of sequences within the pre- and post-reporting is extraordinarily high, their length varies between 30 seconds and 2:30 minutes (average). Contrary to expectations, the post-reporting is less analytical. Here the images of joy and disappointment dominate - with deviations from channel to channel. Nevertheless, all national versions have sequences with "balance sheets" of the World Cup - the German version, as expected, with a long sequence on the failure of the national team and its consequences.

The first findings underline the large amount of media technology and human resources with which the channels stage the event and ensure a dynamic process of long pre- and post-reporting.

However, it remains within the framework because these are routines (studio discussions, pre-produced articles about country and people or final's individual players, advertising blocks, etc.) that were developed and used in the course of the four-week World Cup. The question of global

patterns or national peculiarities of the staging cannot yet be answered, as only three of the five versions have been analyzed.

Title: Retransmisión televisiva y videoarbitraje en el deporte. Efectos del VAR en la narrativa del directo

Session Type: Individual submission

Authors:

Name: Joaquin Marin Montin

Email: jmontin(at) us.es

Country: ES (Spain)

Affiliation: University of SevilleDepartamento de Comunicación Audiovisual, Publicidad y LiteraturaFacultad de ComunicaciónUniversidad de Sevilla

Abstract: El desarrollo tecnológico en los sistemas de producción y realización audiovisual ha redefinido el sentido del deporte que transforma sus reglas y se adapta a las exigencias de la televisión (Whannel, 1995). Las repeticiones instantáneas constituyen uno de los recursos habituales de las retransmisiones televisivas del deporte (Owens, 2007). En la realización deportiva las repeticiones se utilizan para aclarar situaciones polémicas y mostrar aspectos que han pasado desapercibido en directo. A su vez, las grandes competiciones deportivas han aprovechado las herramientas televisivas para mejorar los sistemas de arbitraje, modificando el flujo reglamentario de diferentes disciplinas (Benítez, 2013). El primer deporte en utilizar recursos audiovisuales para apoyar las decisiones arbitrales fue el fútbol americano en 1985. A partir de ahí, otros deportes (tenis, rugby o baloncesto) han ido incorporando herramientas tecnológicas televisivas y virtuales (Instant Replay, Challenge o Hawk-Eye) que ayudan a deliberar situaciones del juego difícil de apreciar a primera vista por los jueces deportivos. A pesar de su popularidad, el fútbol ha sido de los últimos deportes en adoptar la revisión de vídeo al reglamento de sus principales competiciones. Por otro lado, la incorporación de estas tecnologías altera la dinámica del deporte y se convierte en un nuevo recurso para el discurso televisivo. A partir de estas premisas, esta comunicación tiene como principal objetivo analizar la aplicación del videoarbitraje en el fútbol con la implantación del sistema Video Assistant Referee (VAR). De igual modo, el trabajo busca examinar como el VAR modifica el relato narrativo de las retransmisiones en directo. Para la elaboración de esta investigación, se han seleccionado diferentes situaciones de partidos televisados por cadenas españolas en los que se aplicó el VAR, correspondientes a la Copa Mundial de la FIFA Rusia 2018, LaLiga Santander 2018-2019 y Copa del Rey 2018-19. A partir de los registros seleccionados se podrá valorar la manera en la que televisión refleja el momento del VAR y como incrementa el suspense durante la retransmisión. Los resultados obtenidos en este estudio permitirán obtener que cambios ha supuesto la difusión televisiva del VAR así como discutir las primeras diferencias respecto a otros sistemas de videoarbitraje ya implantadas en otros deportes.

Title: [Panel] Crossing the borders' A comparative perspective on the communication about national sport, Panel description

Session Type: Panel Submission

Authors:

Name: Jörg-Uwe Nieland

Email: Joerg-Uwe.Nieland(at) gmx.net

Country: DE (Germany)

Affiliation: Zeppelin University Friedrichshafen

Name: Christiana Schallhorn

Email: christiana.schallhorn(at) uni-wuerzburg.de

Country: DE (Germany)

Affiliation: Julius-Maximilians-University

Abstract: Sport is a central element in all societies worldwide. This goes along with an enormous interest in media sport that is very popular among viewers in many parts of the world. Especially, when national teams or athletes from different countries take part in sporting competitions, media attention is high even beyond national borders, sometimes even across continents. However, because of its popularity and reach of its coverage, media sport also has both a political and a societal importance. Therefore, it is an exciting question to examine different perspectives on media sport in a country-comparative way. Thus, a comparison of similarities and differences in the media coverage and the impact of media sports in different countries might provide further insights into the countries' media systems, sport systems, and political cultures. As a result, the relationship between "national sport" and global sporting events becomes particularly interesting.

The panel's presentations start from a comparative perspective on several aspects: 1. Each paper will focus on one or more issues (e. g. sporting event, sporting discipline) and compare empirical findings of its representation in the media or effects caused by media coverage in at least two countries. 2. Each talk will be given by speakers from different countries so that a high degree of internationalization will also take place within the panel and thus, reflect national peculiarities of sports communication. 3. The studies deal with different types of media in order to examine several issues. This will contribute to the debate on the importance of traditional and new media in (global) sports communication.

The overall objective of the panel is to discuss what constitutes "national sport" and "media sport" and what differences and similarities come to light when comparing sports communication in different countries. The comparison shows not only the importance of sport and sports disciplines, but also of nationalism, identity and integration. This makes it all the more exciting to look for relationships between the media frameworks of national sport and global sporting events. After all presentations, the potential and limitations of the comparative perspectives in sports communication research will be discussed together.

Title: Alpine-skiing and football in Austria and Germany: The diffusion and reach of social media in two different national sports

Session Type: Panel Submission

Authors:

Name: Philip Sinner

Email: philip.sinner(at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg

Name: Sascha Trültzsch-Wijnen

Email: sascha.trueltzsch-wijnen(at) sbg.ac.at

Country: AT (Austria)

Affiliation: University of Salzburg

Abstract: Football and alpine-skiing belong to the most commonly practiced grassroots- but also competitive-sports in Austria and Germany. Moreover, men's football and alpine-skiing are genuine mediasports (Horky, 2009, p.305f.): National Bundesliga and international games (Champions League and Europa League) as well as broadcasts of matches of the national teams belong to the most-seen TV-events in both countries, but they are also of prime importance for radio and written journalism. The same applies to broadcasts of FIS World-Cups and Alpine-World-Championships (male/female); this is particularly true for classics like Streif-downhill in Kitzbühel and Kandahar-downhill in Garmisch-Partenkirchen or events like night-slaloms in Schladming and Flachau. The importance of such events is an integral part of popular culture (Jacke, 2004, p.21). In addition, football and alpine-skiing take on the role of "national-sports" (Horky, 2009, p.300): These are characterized by "long tradition" and "ritual character" and they play a role in processes of national identity building. Austria is known as a winter sports nation and skiing is understood as part of the national identity (Karner, 2011). This is also true for many German regions, however, the national sport in Germany is football. Latest since the so-called Wunder of Bern (1st FIFA-World-Championship-title 1954), triumphs are identity-building factors and important topics within the society.

Social media have become increasingly important in society as well as in sports communication. Therefore, we are dealing with their diffusion and reach within the named field. Offering new media-channels, social media encourage diversity in many ways: as additional parts in "media repertoires" (Hasebrink & Popp, 2006), as tools of organizational-communication (Pleil & Zerfaß, 2014, p.731) and as communication-channels (Schmidt, 2011, p.135) for associations, clubs, athletes and fans. Proceeding from the concept of "communicative figurations" (Hepp, Breiter & Hasebrink, 2018, p.7f.), we will offer an analysis of the social media acting of 1) leading football-clubs (German and Austrian Bundesliga, organizational level) and 2) leading skiers from both countries (World-Cup-cadres male/female, individual level). This is based on a quantitative manual web screening (Plum, 2010, p.22) which is complemented by a qualitative content analysis.

The results illustrate similarities and differences on organizational and individual level. Findings will be discussed against the background of national contexts and identities but also with regard to the different sport disciplines, including organizational structures and socio-economic conditions.

Title: E-sport: media becoming sport

Session Type: Individual submission

Authors:

Name: Kirsten Frandsen

Email: imvkf(at) cc.au.dk

Country: DK (Denmark)

Affiliation: Aarhus University

Abstract: During the last couple of years the IOC has been negotiating with the e-sports community about a possible future role in the Olympic program. Meanwhile, an increasing number of other traditional sports organizations have engaged themselves with e-sport. Across Europe and the US this involves a range of professional clubs, of which around 196 in 2018 was estimated to have entered the e-sports scene (Stewart 2018). This trend has been underpinned by e-sport becoming part of the program of a rapidly increasing number of US colleges and universities since 2014, and by e-sport becoming part of the activities offered by a still increasing number of leisure-oriented and civil-society based amateur clubs in a North European context.

This paper discusses e-sports' current integration into the frameworks of traditional sports organizations from the perspective of mediatization (Hjarvard 2013, 2014; Frandsen 2014; 2016), arguing that this is a process of institutional change of sport, where values and practices from a globalized digital gamer's culture and gaming industry now intersect with existing institutional values and practices from the institution of sport. More than 10 years ago e-sport was described as a new cultural formation mirroring traditional sports' event structures and business models, yet also "the product of the logic of media, communication and information flows" (Hutchins 2008, p. 857). E-sports' advances to sport and traditional sports organizations' actual integration of e-sport illustrate how these logics for the moment affect the institution of sport in both direct and very fundamental ways. In that process we can observe not only how logics from digital media and the gaming culture in different ways intersects with logics from sport, but also how traditional mainstream sports media, and the mixture of values and practices stemming from their historically shaped relationship with sport plays an institutionalizing role in e-sports' ongoing integration into the institution of sport. (Borowy & Jin 2013; Hallmann & Giel 2018; Hutchins 2008). Drawing on cases mainly from the North European context the paper analyses how an increasing number of traditional sports organizations on all levels currently engage themselves in e-sport in different ways, and it discusses what kinds of negotiations, tensions and structural changes that are entailed in this particular process.

Until now digital media have largely affected sport owing to their ability to change and enhance communicative structures in and around the sporting activity. Thus, they have called for a re-conceptualization of the relationship between sport and media, as sport has become media. E-sport provides a different case, being defined as an "area of sport activities in which people develop and train mental or physical abilities in the use of information and communication technologies"(Wagner 2006). Therefore it calls for yet another reconceptualization of the relationship from "one of structural interrelation – respective industries and end-users serving the

others' needs in terms of content, audiences and profit – to material integration”(Hutchins 2008). E-sport adds to this, as the current process of integration into formal sports organizations supports that media are becoming sport.

Title: Supporters, Consumers or Cheerleaders' Analysing the Media Reaction to Recent Developments in the Efforts to Neo-Liberalise Football

Session Type: Individual submission

Authors:

Name: Colm Kearns

Email: colm.kearns4(at) mail.dcu.ie

Country: IE (Ireland)

Affiliation: Dublin City University

Abstract: Conventional business wisdom dictates that market diversification is good for the consumer, while elsewhere, many assessments of social media have been optimistic about the potential it affords consumers to 'talk back' to big brands. Taken together these assertions could form quite a rosy picture for 21st century football fans and their relationship with the increasingly globalized 'top clubs' in the upper echelons of the sport's competitive and financial hierarchy. However, an alternative view is that football clubs' negotiation of a diversified television rights market and online communications platforms have actually accelerated neo-liberal globalization of supportership in a manner which fundamentally changes the relationship between fans and clubs. Drawing from previous investigations into fan resistance to efforts to further monetize and sanitize their experience as football supporters (McManus 2013; Numerato 2015; Gerke 2018), this paper explores whether advancements in communication technologies have ultimately facilitated what might be termed the 'neo-liberalising' of football supportership.

Free and Hughson (2006) have discussed how the globalised and commodified nature of modern 'top clubs' undermine the notion of organic community on which they were founded, while simultaneously facilitating new, more marketable conceptions of what constitutes authentic supportership. The latter half of the twentieth century saw many successful football clubs gain fans from well beyond the bounds of their local community and, in doing so, transform from community enterprises into international brands. However, they often maintained a degree of informal communal obligation in their relationship to their supporters, a responsibility often enforced by the supporters themselves, who, 'see themselves as stakeholders in the professional club and as the embodied spirit of the club itself, with management, coaches and players merely serving as the current stewards of the club' (Gerke 2018, 933). However, social media and other globalised communication developments have fostered a sense of perceptual flattening between the more active fans and those content to be consumers, aiding 'top clubs' in their efforts to neo-liberalise their role and that of their supporters.

This trend has not gone unnoticed in sports journalism circles, with journalists often the target of online ire from fans who view their role as supporters as unilaterally denouncing any criticism of their club. Many of these media responses have questioned whether advancements in communications technology, which theoretically afford fans wider options and a stronger voice, have actually been shaped to neutralise the subversive potential of football supportership by attempting to transform the role of the football fan into that of consumer-cheerleaders. This paper attempts to analyse these journalistic accounts with a view to constructing a theoretical framework

to account for the significance of this shift in fan-club relationships. Specifically, it examines three articles from separate publications (*The Blizzard*, *Football365* and *When Saturday Comes*) and attempts to frame their responses to these developments within wider media debates on the complicating effects of the internet on public debate and conceptions of truth and accountability. In doing so, this paper is intended to provide a platform for further discussion of the effect of technological globalisation on the position of sports fans.

Title: Life beyond clickbait sports journalism: a transnational ethnographic study of the cult football magazine market

Session Type: Individual submission

Authors:

Name: Christopher Tulloch

Email: christophertulloch(at) gmail.com

Country: ES (Spain)

Affiliation: Senior Lecturer in Journalism - Universitat Pompeu Fabra, Barcelona

Abstract: The Twitter-fuelled media culture in which we operate (Hutchins & Boyle, 2017; Zelizer, 2018) has recently produced contradictory backlash effects known such as the boom of slow or long form journalism (Le Masurier, 2016) and the unexpected consolidation of niche magazine markets (Barranquero-Carretero & Jaurieta-Bariain, 2017) aimed at consumers who opt out of the speed cult dynamics of contemporary information supply and demand. One such market is that of the specialized sports product and in particular the international phenomenon that is the football magazine market. Building on some initial ideas launched at the IAMCR conference in Oregon in June 2018, this paper has since broadened its perspective by analysing eight prestigious magazines from seven different countries (USA, UK, Spain, France, Austria, Sweden and Germany). Eight in-depth interviews have been carried out with the editors of these publications (Howler, Panenka, Libero, SoccerBible, So Foot, 11 Freunde, Offside and Ballesterer). All the conversations were conducted between October and November 2018 and later transcribed for detailed comparative analysis. The results of this qualitative and ethnographic research will be presented for the first time at IAMCR Madrid 2019. Given the ambitious nature of this study, the authors made the decision to narrow down their analysis in order to take a more in-depth look at four specific issues.

First, the importance of design aesthetics and format innovation. One of the most interesting conclusions of the interviews was the key role played product interface regarding artwork, presentation and style. In this sense, an editor referred to “how compelling visual can be in terms of drawing people into reading”. Second, the expansion of the content agenda. All editors coincided in the need to go “beyond the 90 minutes” and revindicate stories which go further than the professional playing field. Such examples include stories on football as a tool of integration for refugees, the women’s game or as one editor said “stories about third-tier clubs that say something about society”. Third, the nostalgia factor. The intelligent incorporation of history whether referring to players, clubs, stadiums or fashions emerges as a driving factor in the success of these magazines. One of the interviewees eloquently referred to his magazine as one which aims to capture the “vinyl market” while another said there is a “giant content warehouse in everything retro or vintage”. Finally, the business model. Given the comparatively modest nature of their sales figures and subscriber lists, the authors pushed the editors of these magazines to explain their financial sustainability, current business model and plans for the future.

These four issues are then pulled together by the authors to draw some wider conclusions regarding the long-term viability of such counter offensives in the clickbait-dominant context of contemporary sports journalism.

Title: Juegos Olímpicos, medios y nacionalismo: análisis de la cobertura del deporte cubano en The New York Times y El País desde Montreal 1976 hasta Rio 2016

Session Type: Individual submission

Authors:

Name: Victor Hasbani

Email: victorhasbani84(at) gmail.com

Country: ES (Spain)

Affiliation: Universitat Pompeu Fabra

Abstract: El periodismo deportivo se ha visto implicado en los últimos 50 años con la construcción de discursos que trascienden el ámbito del deporte. En ellos se involucran aspectos de primer orden como el género, la raza y la formación de la identidad nacional. Una parte fundamental del nacionalismo aplicado a la comunicación deportiva ha sido la construcción, a través de la cobertura mediática, de iconos deportivos nacionales que tienen la capacidad de arrastrar la afición. Los Juegos Olímpicos, como gran evento transmitido a nivel global, son un espacio clave para la creación y legitimación de estos héroes. Gran parte de la literatura académica sobre la relación entre Juegos Olímpicos, medios y nacionalismo se ha centrado en países como en Estados Unidos (Billings, Angelini y MacArthur, 2018), si bien es pertinente ir más allá para ahondar en la situación en otros contextos como el ámbito latinoamericano. Precisamente, Cuba ha sido el país que más éxitos ha obtenido en los Juegos Olímpicos, considerando la proporción entre su número de habitantes y medallas logradas. A través de la cobertura realizada por medios como Granma, las hazañas de Teófilo Stevenson y Alberto Juantorena, así como los éxitos en béisbol y del conjunto femenino de voleibol han servido al país caribeño como herramienta para legitimar su propio modelo socialista entre sus habitantes. Dicho esto, es preciso investigar de qué forma la prensa internacional de referencia ha relatado semejantes éxitos.

Con el objetivo de ahondar en este ámbito, esta investigación (1) ofrece una revisión de la literatura sobre la intersección entre deporte, comunicación y nacionalismo; y (2) analiza la mirada internacional sobre el deporte cubano. Se examinan los resultados del análisis de contenido sobre un total de 251 artículos publicados en The New York Times (Estados Unidos) y El País (España) durante los Juegos Olímpicos, desde Montreal 1976 hasta Río 2016. Los datos de los dos periódicos se han recolectado de forma sistemática a través de bases de datos internacionales y se han codificado mediante una herramienta construida ad hoc. Se ha confrontado el trabajo de los dos periódicos desde un punto de vista cuantitativo y cualitativo. Se explora el volumen de publicación; el género periodístico de las piezas; la agenda deportiva; el género de los protagonistas; el lenguaje utilizado y la conexión entre cuestiones deportivas y políticas.

La investigación revela que en ambos periódicos se dedicó una gran atención a temas extra-deportivos (relación entre política y deporte cubano, características del modelo deportivo socialista e incidencia de los boicots en Los Ángeles 1984 y Seúl 1988). Respecto a la agenda deportiva se aprecian diferencias relevantes: el boxeo es la especialidad más cubierta por The New York Times (37,12% de su producción periodística), mientras que éste se encuentra casi ausente en El País, que dedica un 30,01% de sus publicaciones al atletismo. El béisbol representa el segundo deporte para

el rotativo norteamericano (18,10%), mientras que ocupa un discreto espacio en El País (10,51%). El análisis también señala las diferencias de género durante la cobertura del período estudiado.

Abstract: In this study, we investigate how hybrid cultural identities of famous soccer players are framed in the TV coverage of the FIFA World Cup 2018. That way, we examine the role of nationalism and its impact on attribution of failure and success in sports media. We build upon previous research addressing the construction and representation of national identities in sports coverage (e.g. Ličen & Billings, 2012). Respective studies overwhelmingly found that sports media tend to reinforce national stereotypes and to engage in patriotic sports coverage. Especially when covering international events, media construct national identities to strengthen the frame of ‘us’ versus ‘them’ (Poulton, 2004). Often, media refer to national attributes in order to explain victory and defeat. However, in recent times, such explanations fail more than ever before e.g. Poli, 2007). Nowadays, players in national teams do not necessarily share the same national and cultural background. How does this affect sports coverage that tends to reinforce national identities to establish scenarios of ‘us’ versus ‘them’ and to explain outcomes of games?

To address this question, we analyze the TV coverage of German and Swiss players who attracted wide public attention by identifying themselves with their Turkish respectively Albanian roots just before and during the World Cup. German players Mesut Özil and Ilkay Gündogan posed for photographs with Turkish president Recep Tayyip Erdogan during his campaign for a constitutional reform in Turkey. Swiss players Xherdan Shaqiri and Granit Xhaka celebrated their goals against Serbia by making “double eagle” signs, thus referring to a national symbol of Albania.

The coverage of these two cases, and of the cultural identity of soccer players of foreign heritage in general, is examined in live commentaries as well as pre- and post-match-analyses of in total four matches of the German and Swiss national teams. We compare the broadcasts in Germany and

Switzerland as directly involved countries with the television coverage in Austria, whose team did not participate in the World Cup.

First results show that the “double eagle” affair is most extensively covered in the Swiss post-match analyses. However, the cultural identity of the Swiss players of Albanian heritage is already a topic before the match against Serbia, due to the difficult relations between Serbs and Albanians after the Kosovo conflict. The case is also discussed in the German and Austrian broadcasts. In both countries, Swiss soccer experts play an important role by giving some background information and sharing their – critical – point of view regarding Xhaka’s and Shaqiri’s actions.

Affiliation: Indiana University

Abstract: The Football World Cup belongs to the biggest media events of the world, the character of the event is both national and international (Haynes & Boyle, 2017). Nationalization and globalization are important areas of research in sports communication. With the perspective of imagined communities topics have been the national identification of fans (Mikos, 2006) and the national impact of reporting (Buffington, 2012). Recently, topics like working rights or migration a growing European influence were shown. More and more, football seems influenced by the European Champions League. Concerning international club teams and the growing player's relationships within the national teams King (2006) explained a transnationalism of tournaments we call "continentalization". This leads to research questions:

- Is there a continental or European impact on the World Cup?
- What is the influence of this impact on journalism?

In the examination, first the rosters of each team competing in the 2014 and 2018 World Cup were analyzed, based on an examination of the 2006 WC (Mikos, 2007). An impact of the European continent and an increasing influence of Asia were demonstrated. Second, based on a longitudinal analysis of TV broadcasts since 1994 (Horky, Clavio & Grimmer, 2018) with a quantitative content analysis a development of journalistic reporting can be shown. Third, a qualitative content analysis of the broadcasts of the 2018 World Cup final in four different continents is looking for a broader way of dealing with the aspect of continents. First results show a growing influence of the European and Asian continent, but a small impact of continents on the reporting of the 2018 final. Concerning the European Brexit debate and a growing impact of Asia with the 2020 and 2022 Olympic Games as well as a Chinese bid for the World Cup these results seem to be of interest.

Title: Do not mix sport & politics! Sport and health in electoral campaigns in Germany and the USA

Session Type: Panel Submission

Authors:

Name: Jörg-Uwe Nieland

Email: Joerg-Uwe.Nieland(at) gmx.net

Country: DE (Germany)

Affiliation: Zeppelin University Friedrichshafen

Name: Soeren Henn

Email: henn(at) g.harvard.edu

Country: US (United States)

Affiliation: Harvard University

Abstract: The paper asks how political parties in Germany and in the USA have engaged with the subjects sport, exercise and health in their election campaigns. The paper first discusses the general relationship between sports and politics and second, considers election campaign spots and the election programs directly.

Given the increasing importance in recent decades, politics cannot ignore sports and its staging potential. Sport not only creates a “we-feeling”, but sport has even become responsible for the “public mood” of nations—and thus part of the political culture of a country (see Reicher, 2013). Sport in general, especially football in Germany and American football, baseball and basketball in the USA, is an ideal projection surface for politics. Informative and factual political campaigns have become less effective and so symbolic or affective-emotional appeals gain the upper hand. In the study, campaign spots and election programs in both countries, Germany and the USA, were analyzed. We ask, if the campaigns are able to sensitize politics and voters to the interests of sport.

The electoral programs of the five major parties represented in the Bundestag and the two parties in the US-Congress were examined with regard to the categories proposed by the German Olympic Sports Confederation (DOSB): first “Sports funding”, second “Strengthening of volunteering”, third “Candidacy and organization of sport events”, fourth “Modernization of sports facilities”, fifth “Health services provided by sports clubs”, sixth “Lifelong learning via sports” and seventh “Maintain social values and enable diversity”.

The methodical approach and the theoretical basis of our study is located in the tradition of the Party Manifesto-Research (see Budge & Klingemann, 2001; Klingemann et al., 2017) and the research on election commercials (see Holtz-Bacha, 2000; Schicha, 2019). Our study focuses on the question of whether and in what form the sport's power/function of identification and integration, the health aspect and the promotion of sport (Sportförderung) in the electoral programs and election campaign spots are addressed.

The finding - that sport is scarce in the electoral campaign spots - is in direct contradiction to the growing importance of sport and its organizations in both countries. The sports organizations obviously did not succeed in sensitizing politics and voters to the interests of sport. The paper discusses the consequences in a comparative perspective.

Title: From Rio to LA: Legacies and Impacts of Olympic Games

Session Type: Individual submission

Authors:

Name: Tanner Cooke

Email: tannercooke(at) gmail.com

Country: US (United States)

Affiliation: Portland State University

Abstract: “The world is watching”, “The biggest stage on earth”, and “A moment when the world comes together”; these are all ways fans, critics, journalists and athletes describe the Olympic Games. A mega-event like none other, the Olympic Games has continuously grown—in scale, scope, and impact—since its origins. Its media presence is unparalleled and highly coveted. Passionate sports fans religiously follow their countrymen’s successes and failures, and even those who regularly avoid sport often catch some of the action if their new found hero has a chance at eternal glory. The symbolic presence the Olympic Games offers to cities, regions, nations, and governments is second to none, and is only remotely challenged by its fellow mega-event the FIFA World Cup. As such, it is hard to overstate the social and cultural importance of focusing on mega-events in the scholarly study of sport, media, culture, and politics. With the continued processes of neoliberal globalization, mega-events have exploded in popularity and likewise attracted international capital investment, and the attention of developing economies. Many places consider mega-events as a way to establish global recognition in the new global economy and a form of symbolic power from the globally available media presence. From Beijing to Rio de Janeiro emerging economies have invested heavily in winning the right to host such events, and present a new image of a modern and global society. Even so-called developed cities and regions have hosted the games as a way to increase symbolic presence and redevelop specific districts in the post-industrial city—London 2012. However, since the 2012 London Olympic Games, the standards of bidding and hosting have continued to change dramatically. London set a precedent that included the concept of legacy in to the bidding process—that is, what will be the legacy of the Olympic Games for the host city, people, etc. Each bid after London has included a legacy initiatives in their bids as a way to attract the mega-events to their location. Accordingly, this research attempts to evaluate the proposed legacy initiatives from two specific cases, Rio 2016 and the newly won Los Angeles 2028. Rio, now two years past completion, provides the case to see the effects and manifestation of the proposed legacies, while the Los Angeles bid provides an early stage case study to understand and critique the discourse surrounding the proposed legacies. Ultimately, this research takes a critical perspective and interrogates the social and cultural value of the proposed legacy initiatives, considers who benefits and who loses from the initiatives, and analyzes whether or not the legacies promote pro-social values. Using the lens of neoliberal globalization, this research will articulate how the inclusion of legacy initiatives are often superficial in their approach, and regularly lead to unintended legacies that ultimately cause more harm than good for the average citizen of the global host city. Moreover, this research will consider how those legacies come up short in considering the impacts related to the environment and stakeholders other than sports fans.

Abstract: Esports according to the specialized research company SuperData are expected to be worth 2.3 billion dollars in 2022 a growth of 53% from the 1.5 billion dollars the industry was worth in 2017 (2018). This growth not only involves sponsorships, investments or prize pools, it also has impacted the consumption of streaming content of popular esports videogames in specialized platforms like Twitch.tv, Facebook.gg, YouTube, YouTube Gaming, among others. According to SuperData, gaming video content in these platforms generated a revenue of 5.2 billion dollars (2017), and esports events like the League of Legends tournament World's 2018 which accumulated 6.2 billion hours of watched content according to Riot Games (2018). This phenomenon creates a space where people have constant interaction with the videogames, the esports scene, the streamers, the athletes, other fans and other gamers. Firstly, this article discusses the processes involved in the creation of a robust streaming community around a competitive videogame, therefore attracting a bigger fan and gamer base; creating the opportunity for the videogame to become an esports. This paper analyses how the spectatorship of competitive videogames through streamers or professional players creates communities, thus creating a cycle of constant community reinforcement and continuous growth. These community creation processes ignore the boundaries in between online and offline bonding. Through the statistical analysis of online questionnaires, of self-reported streaming and esports spectators, distributed via internet forums of online gaming and esports communities and streaming channels in Latin America; the authors expect to help in the understanding of emergent ways of spectatorship that involve active participation, their relationship with sports (esports) and an alternative way of creating community through sports and entertainment.

Abstract: Nowadays, sports programs have become spaces of great influence due to the status acquired by sports and everything that surrounds it. These types of journalistic programmes use the microblogging network to get closer to their fans and increase their visibility.

Spanish radio discovered social networks in the 2009-10 season (Peña and Pascual, 2013: 124) and soon became a new tool “to strengthen and build a renewed relationship with its audience providing it with a virtual meeting and socializing space” (Ramos del Cano, 2014: 1). Thus, “the community of a particular radio network is no longer only composed of its listeners, but this it is enriched with the addition of the ‘social audience’” (Videla and Piñeiro, 2013: 86).

In recent years, the microblogging network has become a tool that is generally used in sports journalism and affects the collection, publication and coverage of sports news (Butler et al., 2013; English, 2014). Twitter has grown into a meeting space where journalists can promote stories (Schultz and Sheffer, 2010), monitor news and discuss topics with the users interested in the latest sports news (Sherwood and Nicholson, 2013).

This paper analyses the profiles of the 5 most listened to radio sports programs on the Twitter platform. NodeXL software, one of the main open source analysis programs for networks (Hansen et al., 2010), is used to discover hidden patterns of meanings creating a semantic and a hashtag network. This software is also used to study the flow of information within the network and to identify which are the most important profiles. To do this, in this research we analyze the 3,200 most recent messages posted in the profiles of each of the most listened-to radio sports programmes (N=16.000).

Title: Fan reaction through the lens of big data: Breaking down the Cristiano Ronaldo-Juventus transfer on social media

Session Type: Individual submission

Authors:

Name: Adolfo Nieto

Email: adolfo.nieto(at) uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Name: Emilio Fernández Peña

Email: emilio.fernandez(at) uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: The shock and turmoil in the world of football around the Real Madrid's all-time top goalscorer move, Cristiano Ronaldo, considered one of the greatest players in football history, to Italian giant Juventus in the summer of 2018 had its reflection on social media, where fans expressed their comments directly to the player's posts on Facebook and Twitter. This paper studies the impact that transfer had on the online public opinion using the big data tools Netvizz and Twitter Capture and Analysis Toolset (TCAT), which have been designed for academic use, to monitor and collect data (Borra & Rieder, 2014).

Social media has embedded in sports in a very short period of time and, as a result, there is a need to understand the resources, the nuances and the power they possess. The process of demolishing the barriers between sports idols and their fans has led to the rapprochement between the two, which has modified or expanded the traditional forms of that interaction, i.e., now many athletes use social media as a way to interact personally with their fans (Hutchins, 2011) because they can control their messages and images (Gregory, 2009). But these platforms have also allowed fans to convey their feelings and get a sense of community when their opinions are supported by others.

The unprecedented number of indicators that big data can retrieve from users' interactions, always respecting the privacy conditions and the personal configuration (Rogers, 2013), could reveal what in Psychology is called anomic behaviours (Nester, 1989), that occur outside the formal group structure. Anonymity frees the individual from considerations of politeness and can lead them to be arrogant or offensive, although social networks not only foster violent feelings but mostly passionate ones: love, suffering, anger, disappointment.

These emotional scenarios connect well with the consumer, who demands brands to transmit sensations, stories where both (brand and consumer) are protagonists. Therefore, sporting events are the perfect framework to make a transcendent connection with the potential client, to engage with them.

From the perspective of business marketing, engagement is defined as "a behavioural manifestation toward the brand or firm that goes beyond transactions" (Verhoef, Reinartz and Krafft, 2010: 247), and includes "all consumer-to-firm interactions and consumer- to-consumer communications about the brand" (Gummerus et al., 2012: 858). In this context, engagement can be considered as an affective and cognitive bond with a personified brand or product, in our case, a football player.

By examining the engagement of these interactions, we can provide an overview of the sentiment that prevailed among fans, outlining opportunities for brands to identify obstacles to the effective dissemination of commercial messages and assess performance targets, and for athletes to improve their personal brand management when a major shift in their careers is about to happen.

This investigation has been possible thanks to the research project: Social networking and football: violence, the participation of the public and the ecology of the communication, funded by the Ministry of Economy and Competitiveness of Spain in the 2016-2018 call.

Abstract: En la actualidad, los diferentes estudios sobre información deportiva a nivel nacional e internacional han demostrado diferencias de género en el tratamiento que reciben las y los deportistas. Apenas existen estudios que se centren en la información local y regional y profundicen en la presencia y el tratamiento con perspectiva de género.

El objetivo de esta comunicación es analizar si en las desconexiones territoriales de medios nacionales y en los medios regionales existen diferencias respecto a otros estudios en la presencia y el tratamiento de los y las deportistas y los temas y los deportes tratados.

La muestra está formada por un total de 4.590 noticias. Se ha utilizado la ficha de análisis planteada por Sainz de Baranda (2014), donde la variable género de protagonistas principales de la información será la que constituya la variable independiente. Para la proporción de espacio dedicado a las personas que aparecen en la información, en la prensa impresa se ha calcula en cm²; para la prensa digital se ha utilizado el número de caracteres; y para la radio y la televisión los sonidos.

Para el análisis de los resultados se ha realizado un análisis descriptivo e inferencial de los datos (tablas de contingencia, Test de Chi-cuadrado y ANOVA) con un nivel de significación estadística de $p < .05$.

Del total de 4.590 informaciones analizadas, el 6,1% están protagonizadas por mujeres frente al 87,10% que están protagonizadas por hombres. Un 3% de las informaciones son `mixtas`, donde hombres y mujeres comparten protagonismo y un 3,9% corresponden a un protagonista `neutro`. Según el medio analizado –diario impreso, diario digital, televisión o radio- encontramos diferencias estadísticamente significativas ($p=0.001$) en relación con quién es protagonista de la información. Nuevamente vemos reflejado un elevado protagonismo masculino en la información deportiva navarra, los hombres son protagonistas del 87% de la información de los diarios impresos, del 90,1% de la información de los diarios digitales, del 86,1% de la información en televisión y del 86,6% de la información en radio.

Abstract: As sports journalism is normally placed in the field of infotainment and often questioned and challenged as real journalism (Rowe, 2007; Sugden & Tomlinson, 2007), it has struggled to defend its mission and professional values. The professional canons and values of sports journalism are less clear and consensual than those of other fields of specialty. Sports journalists either fail to assume such standards as part of their functions (Márquez Ramírez and Rojas Torrijos, 2017) or are "poorly prepared" to conduct the more difficult tasks associated with the "fourth power" associated to political journalism. Since journalistic professionalism is deeply connected to the notion of autonomy (waisbord, 2013), are sports journalists "professional" in the sense that the classic theory on professions and professionalism entail?

This paper is based on in depth interviews with 60 sports journalists in Mexico City and the northern city of Hermosillo, Sonora. We argue that while sports journalism in Mexico has struggled to conform itself as a professional occupation to gain legitimacy and public recognition against other actors, it had slowly been up to their actors –sports journalists— to establish the preferred norms and professional values that best epitomize professional practice, such as passion. At the same time, through a comparison of national and subnational journalists and their role conceptions and practices, we argue that even those incipient professional norms that have slowly configured the sports journalism field have been eroded by both digitalization and commercialism in ways that severely undermine the autonomy of journalists. For example, the mastery of knowledge and technical skills posed by new digital technologies and social media have, in fact, rendering less professionals and qualified sports journalists.

Title: Radical football fans behavior in social networks - Case of Study: El Clásico 2017/2018

Session Type: Individual submission

Authors:

Name: Oriol Figuera Godoy

Email: oriol.figuera(at) uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Name: Emilio Fernández Peña

Email: emilio.fernandez(at) uab.cat

Country: ES (Spain)

Affiliation: Universitat Autònoma de Barcelona

Abstract: The radical fans, popularly known as ultras or hooligans, have been on the football fields for a long time. Spain has two of the most successful teams in the football history, FC Barcelona and Real Madrid, whose fans have enmity for years because of political, ideological and sports reasons (Viñas, 2005). El Clásico, the match between these two teams, is one of the most viewed sports events in the world.

This research analyses the activity generated on Facebook and Twitter by the ultras of those teams during El Clásico in 2017/2018 season of La Liga. The radical fans studied are Ultras Sur from Real Madrid and Supporters Barça from FC Barcelona. We don't include Boixos Nois in the investigation because they were expelled from Barça's Stadium in 2003. Despite this, it is important to mention that some members of Boixos Nois now are part of Supporters Barça.

This research aims to shed light on the use of social networks by the most radical fans of Spanish football. Our goal is to find out the engagement, nature and typology of the content generated by the ultras. The analysis of the data obtained will allow us to show empirically through the social networks the level of violence outside the stadiums.

The violence in the stadiums has been going on for many years, and now it seems that the extremist attitude has been transferred to social networks (Cleland, 2014). The research team wants to devise some possible mechanisms to regulate the activity of the football radical groups of La Liga in the social networks.

About the methodology, we could say that our research uses two tools developed by Digital Methods of the University of Amsterdam to analyze big data. Netvizz is software to study Facebook through their APIs always respecting the privacy politics of the platform (Rieder, 2013). The other software is TCAT also works throughout the APIs of Twitter. These virtual tools allow us to extract and analyze big data during a specific period of time in the most successful social media platform (Rieder et al., 2015). The methods developed are complemented by interviews with specialists in social networks and radical groups of Spanish football. We study El Clásico from the day before to the day after the match.

In the results, we will see that the language used by the ultras on Facebook is more provocative and aggressive than violent. In the last years, the radical fans started using more the metaphorical violence than the physical (Giulianotti et al., 1994). They try to scare and intimidate the rivals singing chants, shouting, using aggressive language or burning pyro. They hit or assault the other fans less than they used to do it in the late '80s (Adán Revilla 1998; Viñas, 2005).

This paper I would present is related to my Ph.D. dissertation, which is framed in an I+D Research Project funded by Ministry of Economy and Competitiveness of Spain.

Title: "All even on style points" - Authobiography as the medium of female athletic identity

Session Type: Individual submission

Authors:

Name: Flóra Csatári

Email: fcsatari(at) eusp.hu

Country: HU (Hungary)

Affiliation: Eötvös Loránd University

Abstract: Sport is the number one news topic on which women are most likely not to report and the third most likely in which women not to be present in any medium (GMMP 2015). Manliness seems to be an inseparable characteristic of sportsmanship as an ideal type. Sportsman in a broader sense not only means an athletic man; it can be understood as a moral ideal as well. To a certain extent, autobiography as a medium offers a unique narrative position for female athletes. As perceived authors and principal characters of their own books, they can challenge this discourse and the available overt sexualized and/or ultra-feminine role models of it. In autobiographies, female athletes can have more narrative power to identify and represent themselves as athletes or even as 'sportsmen'. This presentation gives a narrative analysis of the autobiographies of the thirty-nine-time Grand Slam champion American tennis player, Serena Williams (titled: On the line) and the five-time Grand Slam champion Russian tennis player, Maria Sharapova (titled: Unstoppable – My life so far) from the point of view of cultural and gender studies. It reflects on the problematic aspects of authorship and authenticity with regard to the practice of ghost writing, moreover it identifies similar narrative strategies in the above-mentioned books. Williams constructs a powerful feminine type of sportsmanship, which appears as a role model. Sharapova merges her private and her public selves in an identity in which celebrity plays a more dominant role than femininity. Her purpose is not to set a role model and motivate the readers, her book is written out of a will of self-understanding. They both reflect on how they use their femininity as an athletic tool, they both give their personal definition on sports morality.

Key words: gender studies, sportsmanship, identity, autobiography

Title: les vedettes sportives comme moyen de communication des marques en Côte d'Ivoire

Session Type: Individual submission

Authors:

Name: Katia Ouattara

Email: ouattarakatia(at) yahoo.com

Country: CI (Côte d'Ivoire)

Affiliation: Université Peloforo Gon Coulibaly de Korhogo

Abstract: La publicité est l'un des outils de communication les plus utilisés dans nos sociétés. A la télévision, sur internet ou en ville, nous sommes constamment sollicités par les spots ou les affiches publicitaires. Les marques recherchent ainsi à travers ce moyen de communication à influencer les consommateurs en vue de l'écoulement de leur produit ou service. L'on constate, ces dix dernières années, une utilisation de plus en plus importante des célébrités sportives comme moyen de séduction des publics cibles. Ainsi, il nous est apparu pertinent de porter notre regard sur l'usage de ces personnalités à travers ce type de media. Cette réalité nous conduit aux questions suivantes : quelles sont les stratégies persuasives utilisées, à travers les stars sportives, pour séduire les consommateurs ivoiriens ? Et quels en sont les messages ?

La méthodologie utilisée pour cette étude est la sémiologie qui s'appuie essentiellement sur le modèle binaire (dénotation et connotation) de Roland Barthe cité par Adam et Bonhomme (2014 :285), tel qu'appliqué par lui dans le cadre de l'analyse de la publicité des patates Panzani. Barthe distingue trois types de signes présents dans l'image publicitaire : les signes iconiques (l'image), les signes plastiques (dimension esthétique) et les signes linguistiques (tout ce qui relève des mots écrits). Concrètement, il s'agit d'énumérer, à partir de chacun de ces trois signes ce que l'on voit et d'en interpréter les diverses significations.

Notre corpus est composé de dix affiches publicitaires que nous avons analysées afin de dégager les stratégies persuasives et les messages sous-jacents. Ce travail révèle plusieurs stratégies persuasives utilisées par les annonceurs pour séduire les consommateurs : utilisation des vedettes sportives comme porte parole des marques et surtout comme promoteur des produits du fait de leur jeunesse, de leur élégance, et de leur notoriété. Ces promotions sont d'ailleurs le plus souvent faites à partir des espaces de compétitions lieu d'exercice de leur métier. En raison du faible niveau d'alphabétisation des populations, on assiste à l'usage d'un langage simple, etc.

Title: Reproduction of Indian national identity and Gender Binaries in Sports Advertising: A Study of Cricket themed Campaigns in India

Session Type: Individual submission

Authors:

Name: Kulveen Trehan

Email: kulvin_78(at) rediffmail.com

Country: IN (India)

Affiliation: Guru Gobind Singh Indraprastha University , New Delhi , India

Abstract: Sports advertising is one of the most visible media in creation and reproduction of national identities . Sports can both define a culture and express it. The Indian national identity has been dominating the discourse in the recent years. A unique national identity for India is being created and catered to especially by the media. Billings (2014) notes that Sports media has been central to the discourse on construction of a ‘nation as an imagined community to construct national sameness and differences to the other national collective’ as outlined by Cilia , Reisegl & Wodak (1999). Billings (2013) and Butterworth (2010) saw use of social identity gratifications in international sports and conceptions of nationalism in media sport consumption. Construction of national identity focuses on culturally meaningful pattern of signs and symbols and their meaning making along with dominant cues in the verbal narrative of sports media content. Sport because of its ability to hold audiences captive , creation of human drama , carefully crafted binaries of identity(Jhally, Guttman1996, Jackson,1988) and nationhood (Rowe,1996) acquires value as a socio-cultural commodity . Sports advertising has often served as a potent media text being a visible marker of promotional culture, consumption and capitalism that celebrates competition, achievement (Jackson,2012). Kennedy and Hills (2009) in ‘ Meaning between the Gaps – Humour and Identity in Rugby advertisements’ underline the use of national stereotypic signifiers , hierarchy of identities and the translation of meaning system of heterosexual masculinity and national identity onto the brand advertised. Cricket makes up the largest chunk of sports related media content produced and consumed in India. Boria Majumdar calls Cricket India’s “ de facto national sport”. Much of sports programming is dedicated to cricket in India. Therefore, cricket themed campaigns become the conduits of social communication and spheres of ideology making them a valid media text to study signification and meanings .

Research Questions

1. What are the patterned signs of the India National Identity in Cricket Advertising?
2. Are the recent Cricket ads legitimizing jingoism and nationalist regression?
3. How do binaries of gender interact with national identity in ads?
4. Do the Cricket advertisements deploy tropes of victory of the underdog, or avenging defeat from the mightier?

Methodology

A semiotic analysis of the cricket advertisements, Neighbour Vs Neighbour (Asia Cup,2018) #JerseyKnowsNoGender (T20 World Cup 2018), Cricket Ka Asli King Kaun (Ind Vs Nz,2018) and Mauka Mauka (India vs Pakistan, World Cup 2015) was done . These campaigns gathered maximum viewership on Youtube. Semiotic analysis of the campaigns revealed patterns of signs, meanings and their ideological simulations. Signifiers were identified and signification affixed

based on Kennedy and Hills step by step guide to Analysing Media Sport (Sports, Media and Society, p29-32). Derrida's deconstruction and Barthes semiotics guided the analysis. Post structural critique forms the theoretical foundation of semiotics in the present study. Post structuralism argues that 'the orchestration and manipulation of signifiers' (sound, words, images etc.) determine the quality and the nature of the signified, hence inverting the relationship between them unlike proposed in linguistic structuralism (Lee, 2015).

Title: Global Sports-Media Complex competition in France and Francophone Africa

Session Type: Individual submission

Authors:

Name: Gerard Akindes

Email: gakindes(at) gmail.com

Country: QA (Qatar)

Affiliation: Josoor Institute

Abstract: Global sport broadcasting landscape has transformed substantially since the 1990s. These transformations have led to an increased competition for domestic and international broadcasting rights acquisition. Satellite and digital technologies open national or continental league games to a global audience. These technologies along with the liberalization of broadcasting laws in many countries gave the possibilities to national and international pay-tv broadcasters to penetrate targeted local markets by broadcasting locally or internationally hosted or produced sporting competitions.

For pay-tv broadcasters, live football and sport audiences as potential subscribers became an important business driver. Canal +, the first pay-tv broadcaster in France acquired the rights to broadcast the French professional football league, Ligue1, in 1984. In parallel to the French market Canal+ also became the first pay-tv provider in Francophone Africa.

From the pioneer years of Canal+ in France and Francophone Africa with mostly French football broadcasting, sports television broadcasting evolved in France and Francophone Africa with a more competitive mediascape. In France BeIn Sports owned by Qatar entered the French sports broadcasting market acquiring the French professional football league Ligue1. In Francophone Africa, the Chinese owned Startimes is today now competing with Canal+ in Francophone Africa. Without a direct causality, can the transformations observable in Francophone Africa be linked to France television broadcasting competitive transformations?

The paper is a comparative analysis of the transformation of the sport broadcasting landscape in France and Francophone Africa. The first two parts of the paper describe the evolution of the sports broadcasting landscape in France and Francophone Africa. The second section of the paper analyzes the implications of new entrants in Francophone Africa sports broadcasting landscape. In conclusion the paper discusses possible correlation between France and Francophone sports broadcasting transformations.

Title: Equestrian sport, Influencers and identity.

Session Type: Individual submission

Authors:

Name: Aage Radmann

Email: aage.radmann(at) nih.no

Country: NO (Norway)

Affiliation: Norwegian School of Sport Sciences

Name: Susanna Hedenborg

Email: susanna.hedenborg(at) mau.se

Country: SE (Sweden)

Affiliation: Malmo university

Name: Lovisa Broms

Email: lovisa.broms(at) mau.se

Country: SE (Sweden)

Affiliation: Malmo University

Abstract: The aim of this presentation is to map out and analyse stable cultures in social media.

One of the most popular sports among Swedish and Norwegian girls and women is equestrian sports. This can be seen not only in the number of members in the Equestrian Federations, but also in relation to social media. Numerous blogs, Instagram, twitter and snapchat accounts are devoted to horses and horsey people. In this presentation Norwegian and Swedish social media influencers are studied.

According to Hirdman (2018) the constant flow of faces and bodies, the constant viewing, is characteristic of our time and perhaps the most revolutionary and profound experience of the media-driven society. It is a form of sociality where we can look at (un)familiar content, hidden from the eyes of others and be part of a community. We create emotional bonds of closeness and intimacy to media characters such as “Influencers”, people we do not know in personal and never meet. Relationships that we sometimes can experience as stronger and deeper than those we have for friends and family. This is a form of medial sociality (Thompson 1995) connected to attention economy (Miah 2017). It is “broadcasting of human emotions” contextualised in a relationship that we can control and fill with our own perceptions and expectations (Reeves & Nass, 1996). Social medias potential for informing, mobilizing, organizing and coordinating will be discussed (Larsson & Olsson, 2016).

This presentation is based on a study of the six most followed influencers on Instagram in the horse sector (3 from Sweden and Norway respectively). The number of followers were between 8000 and 365 000.. The influencers’ posts and comments to these posts were followed every day for one month (9/10–9/11 2019). Except Instagram Facebook, twitter, Youtube and Blogs was followed. A

netnographic method (Berg 2015) was used and our observations were documented using thick description (Geertz 1973).

The study shows that some of the Influencers use mixed social media in their communication with their followers others just broadcast their message. The most common themes concern: private life, knowledge about horses and general advices for (horse) life. Commercialization and admiration where important parts of the content and the use of pictures and emojis created an atmosphere of cozyness and happy life. A medial sociality, communicating an onstage version of life and a strong impression management from the Influencers was created.

Title: "ROY'S TURKISH DELIGHT": Football, Nationalism and the Representation of Turkey in the British Sport Media

Session Type: Individual submission

Authors:

Name: Nilufer Turksoy

Email: nilufer.turksoy(at) emu.edu.tr

Country: CY (Cyprus)

Affiliation: Eastern Mediterranean University, Faculty of Communication and Media Studies

Abstract: Nationalism is an old form of particularism; it creates marginalization, polarization and inequalities of power between the Self and the Other. “The Other is always constructed as an object for the benefit of the subject who stands in need of an Objectified Other in order to achieve a masterly self-definition” (Pickering 2001, 71). Western thinking is founded upon the logic of binary oppositions: heroes versus villains, civilized versus primitive, and good versus evil, or sane versus mad. As social actors, media institutions are the primary vehicles for the circulation of binary forms of representations that emphasizes the differences between the Self and the Other (Poole 2002; Said 1978, 1997). They can use representational and conceptual systems to construct meanings in relation to the Other. Western media’s coverage of an international event, in this case a football competition, raises some ethical questions about the choice of specific lexical items and textual manipulation.

Drawing on the work of Stuart Hall’s representation theory, this study examines how Turkey, a nation located on the semi-periphery of Europe, is represented in Western sports media outlets. By looking at the role that sections of the British sports press plays in their construction of the Turkish national identity, I evaluate the Euro 2016 and Euro 2004 reporting of the UEFA European Championship qualifying matches between Turkey and England. I employ qualitative content analysis as a method of inquiry (Schreier 2012; Berg 2001). The corpus consist of 170 news outlets, published in two different time frames: Euro 2016 and Euro 2004. I apply a combination of lexical, thematic and narrative analysis , and I question the way that Turkey is represented in the British sport texts.

The style, manner and language used in the presentation of football games between Turkey and England reveals that the British media outlets cynically disseminate the notion of the Turkish national team as a weak opponent, which England need not take seriously. They were intent on ridiculing the Turkish team and exercising cultural hegemony over Turkish culture. This reportage works well in giving Turkey a low-status and an orientalist angle. Furthermore, a reductionist and over-simplified forms of representation is used to degrade Turkey as an inferior country that does not belong to Europe. Especially, British tabloid journalists were inclined to portray Turkey as an Asian country. Findings also suggest that the discourse of the “West” and the “Rest” is alive in the modern world.

Affiliation: Beijing Sport University

Abstract: Following the 2016 Rio Olympics, the Olympic Channel was launched on August 21, 2016. This multi-platform website provides content of Olympic Games, News, Originals Series and Live sports events to promote Olympic spirits throughout the world. Applying framing theory, this research analyzed 653 Original Series videos focusing on issues of nation and gender from Aug 21, 2016 to Dec 31, 2017. Compared to traditional media such as newspapers and television, the Olympic Channel has a unique advantage.

The study found that the Olympic Channel is trying to cater to the younger generation's habits. For instance, "Original Series" records athletes in a documentary way, making the images of athletes more vivid and solid, narrowing the gap between the athletes and fans. In regards of the content of the Olympic Channel, it has been enriched from traditional focus on the event that represents the spirit of competition, to the Olympic humanistic spirit. The top five sports in Olympic Channel (track and field, skiing, swimming, basketball and gymnastics) vary from the top five most-covered Olympic events (gymnastics, track and field, swimming, diving, volleyball) in traditional sports media. The Olympic Channel's "Original Series" promotes the Olympic spirits mainly by telling characters' stories, nearly 60% are non-Olympic champions, which is another difference to traditional media. The characters include not only athletes, but also coaches and sports instructors involved in the Olympic movement. The shooting perspective also extends to ordinary athletes, and the multiple identities of athletes' outsides the field. In terms of gender, males and men's sports (46.3%) were still maintained the major position of sports coverage, the amount was larger than

coverage females and women's sports received. In addition, the coverage on men was related to their games and athletic abilities, while about women were more exposure to their personal life. The framing of coverage for the Olympic Games is yet to completely free from the stereotypes of traditional Olympic coverage on nationality. The uneven coverage of different types of countries and sports on Olympic Channel virtually increases the gap of people's awareness and exposure to sports among countries at different economic levels, may eventually create an imbalance in the spread of the Olympic spirits.

The result shows that the Olympic Channel is IOC's first step into a changing media environment, trying to secure the younger generation's understanding towards Olympic spirits. Placing the overall amount of coverage in a global context, how to make the Olympic Channel the primary medium for young people around the world to embrace the Olympic spirits requires the IOC to focus more on the content and propensity of the Olympic Channel. The true meaning of the establishment of the Olympic Channel is not only the transformation of media format, but also the transformation of Olympic culture "decentralization".

Abstract: Como muchos otros contenidos mediáticos, los programas deportivos de opinión en la televisión también informan y ofrecen a sus audiencias datos y puntos de vista sobre temas específicos y lo hacen (como es usual en todo proceso de comunicación que busca persuadir y generar adherencia) a partir de utilizar estrategias argumentativo-retóricas (recurriendo al lenguaje verbal, sonoro y visual). En el caso específico de los programas televisivos que se centran en el tema de futbol como “Futbol Picante” (que en México se transmite por ESPN) y “El Chiringuito” (MEGA TV España), es evidente que se trata de dos programas que buscan informar y persuadir a sus audiencias para que se mantengan consumiendo sus contenidos a partir de dar estadísticas, presentar resúmenes de partidos, editorializar, analizar y opinar sobre partidos, etcétera. Se trata de dos programas especializados en futbol cuyo formato ha sido muy exitoso (como lo demuestra el tiempo que ambos han durado al aire). El problema es que en muchas ocasiones este tipo de programas de periodismo deportivo de opinión en la televisión al estar enmarcados dentro de ámbito del info-entretenimiento, son denostados y criticados por ciertos sectores intelectuales al considerar que construyen una imagen repetitiva, simple, predecibles y estereotipada del balompié profesional, a veces hasta banal e incluso hasta superficial (ya que no van más allá de la cancha y la especulación). A partir de este desprecio y de la escasa producción académica en México y América Latina que existe sobre este tipo específico de programas, en esta tesis se compartirán los resultados de una investigación sobre Futbol Picante” (ESPN) y “El Chiringuito” (de España) observados como organizaciones, comparando las diferentes estrategias retóricas-argumentativas que utilizan los periodistas que ahí colaboran. Esto a través de un análisis cualitativo, la herramienta de recolección de datos es la documental.

La base de este trabajo es documentada a través de autores como Andrew C. Billings, Mike McNamee, Willian Morgan, Robert Simon, Steffen Borge, Paul Davis, Leslie Howe y John Nauright, quienes con sus estudios en diferentes ámbitos del deporte apoyan a su contribución a los estudios de la comunicación y medios deportivos.

Abstract: Digital games are one of the main cultural industries. According to the Global Games Market Report (Newzoo, 2018), the global games market generated \$137.9 billion in 2018, 91% from which corresponding to digital games. There are more than 2 billion frequent players in the world (Newzoo, 2018), and what had appeared as an entertainment product in the 70's soon became much more.

E-sports are an emerging phenomena worldwide. The competitive play of digital games appeared as a local popular activity in South Korea in the 2000's, but rapidly conquered the players and fans all over the world. Nowadays E-sports are already recognized as a sport, there are being created federations to support players and it is being discussed the possibility of integrating E-sports as a demonstrative sport in 2024 Olympic Games.

We would like to argue that E-sports are one of the activities that best illustrate the dynamics of network communication (Cardoso, 2005, 2008). What had appeared as a digital media phenomenon, shortly became a legacy media content. Media companies throughout the world are investing in broadcasting E-sports competitions and establishing partnerships with individual content producers that are contributing to the emergence of a new professional activity - digital games streamers (Taylor, 2018). Additionally, E-sports are asserting themselves both as a cultural and a creative industry. They are part of a complex network of media, game producers, players, individual digital content producers, and more and more brands that see this emergent type of sports as a fertile territory for experimenting different marketing strategies.

E-sports already compete with traditional media for marketers' attention. According to Statista (2019), the E-sports market revenue has grown from 130 million dollars revenue in 2012 to 906 million dollars in 2018. The value of this sector is expected to continually increase until 2021, Statista (2019) forecasts that it would reach a total revenue of 1,65 billion dollars. Over 80% of the revenues still have as primary sources sponsorships and advertising. From 2012 to 2017 the time spent by Twitch viewers watching video content on the streaming platform have increased from 72 billion to a record of 355 billion minutes (Statista, 2017), contributing to the consolidation of Twitch as a dedicated streaming platform. E-sports involve mass audiences, offering then different channels for implementing marketing strategies, targeting particular audience segments, E-sports competitors and fans, articulating the investment on legacy and digital media, as well as on live events. From championships sponsorship, the constitution of their own teams, SEO and SEA

strategies implementation, direct work with streamers that are asserting themselves as micro-influencers, to the investment on content marketing in particular, there are different opportunities for marketing in E-sports and it is important to fully understand them.

Based on a mixed methodology, this paper intends to discuss the growing relevance of E-sports as a networked media phenomena and to present the particular case of Portugal. We will present the data of a exploratory qualitative research aiming at in deep characterize the Portuguese E-sports media ecosystem, contextualizing it amid the global E-sports reality, through the analysis of quantitative data about the E-sports market worldwide.

Title: Shadows beyond the boundaries and the pitches: An Analysis of caste and sport in Indian Cinema.

Session Type: Individual submission

Authors:

Name: Venkat Nagesh Babu Karri

Email: kvn(at) tiss.edu

Country: IN (India)

Affiliation: Centre for the Study of Contemporary Culture, School of Media and Cultural Studies Tata Institute of Social Sciences, Mumbai, India

Abstract: Popular discourse as well as academic writing around sport in India is dominated by cricket, hockey and football. Works of Guha (2005, 2014, 2017) Sen (2015), Majumdar (2017) have been influential in taking into account the sports of cricket and football largely.

Within the limited academic writing on sport in India, there is precious little by way of an analysis of caste. The work of Guha (2006) on the Palwankar brothers is an exception in this regard. But the work unpacks caste through historiography. Caste was not a framework of analysis.

Caste is the Indian system of social stratification based on hierarchy that limits participation of the various classes of people through a curtailment of access to resources material, social and cultural.

It further locks lives in notions of ritual purity and profanity. It has historically been used to subjugate populations and sport is not an exception. Despite this there has been not only participation, but also sporting excellence by the members of subdominant castes in India.

Within the writing on sport in Indian cinema, an analysis of caste is found in Majumdar (2001) and Manuthakkaren (2001) but this discussion is limited largely to the film Lagaan (Gowariker, 2001).

As above these works have do not use caste as a framework of analysis but as an outcome.

This paper will analyse the representation of caste and sport in Indian Cinema through a selection of films released in the time period of 1980-2018. This it will do through a critical analysis of representation in film texts within Indian cinema. The texts were chosen through a purposive sampling to allow for an examination of the categories of sport and caste. The texts were chosen to go beyond the usual categories of cricket and football to include the sports of track and field, cycling, boxing, hockey, carroms, and wrestling.

Further caste as a concept within this analysis will range from the dominant to the subaltern.

Such an analysis has repercussions not only for unraveling the politics of participation and popularisation of the sport but also policy formulation for representational diversity in sport. An outcome of this paper has bearing on the ideas of cultural citizenship.

Title: Discourses of Women's Sport: Pop-up Comments in Live Sports Streams

Session Type: Individual submission

Authors:

Name: Riikka Turtiainen

Email: rmturt(at) utu.fi

Country: FI (Finland)

Affiliation: University of Turku Digital Culture

Abstract: The research findings have proved for decades that there is gender inequality in the sports world. However, women's sport coverage on television has failed to evolve much. Women's sport has a secondary status compared to male sports and the female athletes are constantly treated differently. (E.g. Messner 1988; Kian, Bernstein & McGuire, 2013; Cooky, Messner & Musto, 2015; Domeneghetti, 2018.)

In recent years, the media sport scholars have paid attention to mobile media sport and second screen practices (Hutchins, 2018). The television is still a dominant sports technology and it can define and maintain the popularity of the mainstream sports. However, social media plays nowadays an obvious role in sports and it can be utilized to compensate the lack of coverage of women's sports on traditional broadcasts (Vann, 2014). For example, social media platforms offer a chance for the sports organisations to present live video streams targeted especially for the fans of the female athletes. One of the platforms offering live video stream is Facebook which launched its Live feature in 2016. Live video streams can be seen as a social medium combining the real-time video and the text-based chats. Therefore, this recent phenomenon is described as social live-streaming. (Rein & Venturini, 2018.)

In this study, I examine the pop-up comments on Facebook's live sports streams with qualitative online content analysis. I analyze the character of the comments posted during the Women's Rugby World Cup final (2017) and during the women's final events in the CrossFit Games (2018). I categorize this research material in three main groups: expressions of fandom, performance related comments and negative criticism – by negative criticism I mean comments used primarily for insulting. I want to know if the live sports streams contain gendered comments such as deprecation or sexual objectification of the female athletes. My aim is also to find out how the pop-up comments are structured: do they form a discussion or are they just separate comments without any proper responses. So how social the sports live-streaming really is? And finally, does it bring an alternative approach to women's sports like the hypothesis is.

Abstract: In recent years, there has been a rise in scholarly attention to online coverage of female athletes and women's sport. This interest is linked to the emergence of social media as a novel way for athletes to cut out “the middle man”. For undermined, under-represented female athletes having direct interaction with the public via social media, presents an opportunity to empower women to defy masculinist narratives.

Indeed, in examining gender differences on Instagram researchers found that women typically depicted themselves in active poses, thus challenging mainstream media representations of them as passive. However, women who had posed, did so in more sexually-suggestive ways than men (Smith & Sanderson 2015), which prompted researchers to question whether women feel compelled to strike a seductive pose when photographed.

With this in mind, one should consider how the advent of social media provides athletes with an opportunity to portray themselves. Do they present themselves as sex objects for the masculine gaze? Do they construct an "apologetic identity" (Barnett, 2017), emphasizing the time and energy they sacrifice for their sport, whilst maintaining traditional feminine roles? Do they continue to enforce the message that for female athletes, skill is not enough, that looks, and “ladylike” behavior are as important?

To answer these and further questions, 300 photographs posted on Instagram by prominent Israeli women athletes were sampled in early 2019. Athletes were selected based on activity level on Instagram and the number of followers they had. The corpus of the study was then subject to a Grounded Theory analysis (Glaser & Strauss, 1967).

The findings indicate that most of the photos posted by the athletes feature them in active poses, wearing professional clothing during training or competitions, far from the mainstream media representation. However, the Instagram profiles that were analyzed differ regarding the combination of professional and personal life. On the scale between these two aspects, three prevalent types of Instagram users emerge:

The professional athlete – common amongst track and field athletes whose photos are focused primarily on training and competitions.

The human athlete – these athletes present a mix of professional and personal photos (on vacations, in family moments etc.) giving their followers a glimpse into their non-athletic identity.

The pro Instagram athlete – these athletes are “digital natives”. They are younger, have more followers and use Instagram in a more varied ways: promoting brands, participate and initiate joyful “challenges”, upload social photos and use emojis to accompany the photos.

These differences are explained mainly by factors related to the athletes’ age and the type of sports. In our in depth analysis we aim to look further into these findings and analyze more closely the different types of photographs in order to answer our research questions.

Title: Analytical and Operational Model of Transmedia News Coverage of Planned Events: The Case of the 2018 FIFA World Cup Russia

Session Type: Individual submission

Authors:

Name: Renira Rampazzo Gambarato

Abstract: Similar to the transmedia dynamics observed in entertainment, transmedia journalism operates by expanding journalistic narratives on integrated media platforms, in which the audience is involved in a committed way, adding and sharing content through digital environments, especially via online social networks. Transmedia journalism is an elastic term with a wide variety of theoretical possibilities. For Tellería (2016), transmedia journalism is a field scarcely explored and with plenty of possibilities to be implemented. In sum, transmedia journalism is characterized by the involvement of (a) multiple media platforms; (b) content expansion; and (c) audience engagement. Transmedia journalism can take advantage of different media platforms such as television, radio, print media, and, above all, the Internet and mobile media to tell deeper stories. The content expansion, opposed to the repetition of the same message across multiple platforms, is the essence of transmedia storytelling and, therefore, should be the focal point of transmedia journalism as well. The enrichment of the narrative is facilitated by the extended content. Audience engagement involves mechanisms of interactivity, such as the selection of the elements to be explored, the option to read a text, watch a video, enlarge photographs, access maps, click in hyperlinks, and share information through social networks. Moreover, audience engagement deals with participation via, for instance, remixing content and creating original user-generated content. Participation is intertwined with other concepts, especially empowerment and involvement, enhancing the journalistic experience.

Theoretically, this paper discusses the current contributions to the conceptualization of transmedia journalism (Gambarato & Alzamora, 2018) and focuses on the potentialities of applying transmedia dynamics to the news coverage of planned events. The empirical approach addresses Gambarato and Tárzia's (2017) original analytical and operational model that outlines the main features of transmedia strategies focused on the coverage of planned events in news media. Planned events are temporal occurrences that are usually well schematized and publicized in advance. For instance, the Olympic Games and other major sporting events, such as the FIFA World Cup, are recurring

planned events. The relevance of this model is its contribution to overcoming the difficulties of transposing transmedia logic to the journalism realm. The difficulties comprise, for instance, the complexity of the journalism activity in general (Canavilhas, 2014), the necessity of designing and planning distinct paths and content to be produced across multiple media (Renó, 2014), and issues regarding journalism time-constrained brevity (Moloney, 2011). To demonstrate the application of the analytical and operational model for transmedia news coverage of planned events, the case of the transmedia news coverage of the 2018 FIFA World Cup in Russia is presented. The focus is on ten features of the transmedia news coverage produced by the Brazilian broadcaster Globo Network: the premise and purpose, structure and context, news storytelling, worldbuilding, characters, extensions, media platforms and genres, audience and market, engagement, and aesthetics.

Title: Bifurcated Images of Japan: Liberal Commercial Chinese Newspapers' Production of Japan-related News

Session Type: Individual submission

Authors:

Name: Tiantian Diao

Email: dttian23(at) connect.hku.hk

Country: CN (China)

Affiliation: The University of Hong Kong, Japanese studies

Abstract: Japan is one of the most important foreign countries in China's international relations as she is one of China's closest neighbors and most important trading partners. However, due to war history, political friction and geostrategic rivalry, news narratives about Japan are closely monitored by the state, but often contested by different actors in the political system. This research aims to examine what kinds of news narratives about Japan were produced by the Beijing News, the Oriental Morning Post, and the Southern Metropolis Daily during 2009- 2015. Chinese news media workers perceive these three commercial newspapers as having a liberal stance in the Chinese ideological spectrum. Through in-depth interviews with reporters and editors who are in charge of producing these reports, this research seeks to explain why such kind of news narrative was produced. The existing scholarly work has focused on how the historical war image of Japan in Chinese media was manipulated to defend CCP's regime legitimacy (Blair, 2007; Dirlik, 1991; Downs & Saunders, 1999; He, 2007a, 2007b) and how the anti-Japanese public opinion was manipulated through controlling the Chinese media to serve CCP's Japan policy (Reilly, 2012, 2014; Stockmann, 2010; Weiss, 2013). Although illuminating, this body of research "stressing on the linkage mechanism of the media" (Baum & Potter, 2008) has oversimplified Chinese media as just CCP's propaganda toolkit. They did not look into how and why such the portrayal of Japan was produced, furthermore, they ignore the numerous news coverage on Japanese social issues. Therefore, it is necessary to recognize the perspectives of the news producers themselves, especially when considering that not only the drivers of propaganda, but the market and localized journalistic professional logic also drive Chinese media in general.

This research is based on the media sociology perspective (Shoemaker & Reese, 1996, 2013) and adopted the news production ethnographic approach (Cottle, 2007; Ilan, 2015). It examines the journalistic "field environment" (Lei, 2016) of Beijing, Shanghai, and Guangzhou and analyses the narrative of Japan-related news of three newspapers. In-depth interviews with a total number of 29 current and previous journalists and editors were conducted.

This research shows the reports about Japan are not always the result of state-mandated censorship but often reflects the interaction of both market forces and the constraints of the journalists' professional competence. When covering sporadic issues to Sino-Japanese relations, for example, the Sino-Japanese island disputes and the wartime history, the news narrative stands for the "national interests of China". This "less-informative" narrative stems from reporters' lack of Japanese language training, readers' popularly accepted frames of Sino-Japanese war history, and the self-censorship of newspapers. The image of Japan as impenitent was amplified. When the three

newspapers depict Japanese social issues, the selection of news topics is based on journalists and editors' intention to provoke reflections on China's own problems. The 'self-otherization' of China motivates journalists to cover such topics as Japanese environmental issues, soccer system, and the aging society. The multifaceted and bifurcated image of Japan was presented in these three newspapers.

Title: Escaping a rock and a hard place: the documentary sector between art and business

Session Type: Individual submission

Authors:

Name: Eline Livémont

Email: eline.livemont(at) vub.ac.be

Country: BE (Belgium)

Affiliation: imec - SMIT - Vrije Universiteit Brussel

Name: Willemien Sanders

Email: w.sanders(at) uu.nl

Country: NL (Netherlands)

Affiliation: Utrecht University

Abstract: Due to its specific character, as both an audiovisual media product and an art form, documentary finds itself stuck between artistic aspirations and commercial constraints.

Documentary professionals in Europe are particularly concerned with the future of documentary as a space for public debate, as material and immaterial public support is decreasing. In addition, new technologies, such as new digital distribution platforms, disperse audiences. While they increase creative opportunity as well as interest in documentary (Austin, 2007), they have not yet resulted in robust alternative revenue sources. This precarious position complicates the formulation of a clear policy for the sector.

In 2017, the European Documentary Network (EDN, www.edn.dk) initiated the Media and Society project in an effort to develop policy recommendations to strengthen the documentary sector in Europe. Part of this initiative was a stakeholder consultation with professionals in the documentary sector. Filmmakers, producers, commissioning editors, policymakers and other documentary professionals were invited to share their experiences and opinions. We took part in this project by (1) developing a survey (N=211), by (2) guiding EDN in conducting focus group interviews (N=7), and (3) by analysing the results. The main question that accompanied this research was: how do stakeholders situate the European documentary sector within the wider context of arts, culture and media industries? Due to the limited study of documentary within Cultural/Creative Industries research, and because of the project parameters, we opted for a bottom-up approach, akin to grounded theory. This led to a survey with multiple quantitative questions about financing, production and distribution practices. The focus group was guided by perceived challenges, opportunities and policy priorities for documentary.

It is evident from the data obtained that the documentary sector is a fragmented and economically fragile sector, characterised by a multitasking culture (Bilton, 2007), a flexible labour market (Blair, 2001, 2003; Steine and Schneider, 2013), small incomes and turnover, and a dependency on public funding (Sørensen, 2012; Zoellner, 2009). The results further suggest that documentary suffers from its ambiguous character as both part of entertainment and television, and fine arts (Chartrand, 2001, 2016).

On the one hand, respondents see documentary as a form for diverse cultural expressions with a clear societal role (Choi, 2018), that requires government protection. Filmmakers typically combine their art with other (documentary-related) jobs (Bilton, 2007). This might account for an observed lack of networks, collaboration and knowledge exchange. On the other hand, respondents see documentary as a medium capable of attracting larger audiences, potentially profitable through digital/online exploitation (Sørensen, 2014) - especially when focusing on new digital and/or interactive forms and formats. However, knowledge about proper innovative forms still needs to be developed (Ibrus and Ojamaa, 2014). The responses echo the lack of a coherent business model (Baumann and Hasenpusch, 2016) and linear television's continued relevance (Doyle, 2016).

Title: La transformación de los procesos de producción publicitaria en España en la última década (2008-2018)

Session Type: Individual submission

Authors:

Name: Ana Visiers

Email: avisiers(at) villanueva.edu

Country: ES (Spain)

Affiliation: Lecturer, Media Studies, Centro Universitario Villanueva, Madrid, Spain

Abstract: La investigación mostrará, a través del análisis de los resultados de más de 20 entrevistas en profundidad realizadas a profesionales del sector publicitario, la realidad actual de los procesos de producción, los profesionales que intervienen y el rol de cada uno de ellos.

La investigación científica coincide en señalar el organigrama de producción de los anunciantes, las agencias y las productoras antes de la crisis económica española de 2008, como un proceso lineal en el que el anunciante contrataba a una agencia para la realización de una campaña. A su vez la agencia subcontractaba a la productora para la realización del spot audiovisual. No obstante, algunos estudios más actuales ponen en evidencia que estos procesos se han modificado.

Teniendo en cuenta la información facilitada anualmente por InfoAdex respecto a la inversión publicitaria en España (datos de 2017), la recuperación del sector es un hecho. Sin embargo, a través de una investigación basada en entrevistas en profundidad a profesionales del sector, se confirma que algunos de los cambios que se podían achacar a la crisis, siguen produciéndose tras la crisis económica.

Con el objetivo de conocer estos cambios, la presente investigación profundiza en las diferencias y similitudes de los procesos antes y después de la crisis, a través de la experiencia de los profesionales que intervienen en la realización de los spots publicitarios en España.

Los resultados obtenidos ponen en evidencia que los conocimientos audiovisuales de los anunciantes en España han aumentado, que se han producido cambios en las estructuras de las agencias y en las productoras, y que por todo ello las formas de producción son diferentes en la actualidad.

El objetivo de la presente investigación no se limita por tanto a exponer los nuevos procesos, sino que el resultado sirva para proponer un modelo de producción en la que se mejore la relación de los que intervienen y los resultados en cuanto a la relación calidad/presupuesto.

Palabras clave: Sector publicitario, producción publicitaria, procesos de producción, crisis económica, España.

Title: The sociality of transforming Hong Kong cinema

Session Type: Individual submission

Authors:

Name: Shih-Chen Chang

Email: chang17tw(at) gmail.com

Country: TW (Taiwan)

Affiliation: Dept. of Journalism and Communication, Chu Hai College of Higher Education, HK

Name: Fangyu Chen

Country: CN (China)

Affiliation: School of Communication, Baptist University, Hong Kong

Abstract: Based on the analysis of local film worker's self-description, this research focuses on the sociality of transforming Hong Kong cinema.

“Media capital”, an idea proposed by the media scholar Michael Curtin who takes Hong Kong film and TV industry as the case to characterize a city where talents and money cluster for its vigorous media performance. However, Curtin doubts that Hong Kong can maintain the privilege after its film industry has deeply integrated with mainland China as many senior filmmakers have moved northward for more joint-production projects and enjoyed popularity with greater box-office performance, meaning Hong Kong's geographical clustering effect was dampened due to the rise of Beijing and Shanghai. Obviously, the coproduction arrangement endorsed by government, especially after the bilateral trade agreement CEPA was signed in 2003, results in uneven and asymmetrical development of both sides.

When compared to the prosperous coproductions, those minor Hong Kong-made movies today demonstrate experiential styles that it is said the New Wave of Hong Kong cinema emerges in recent years. As Hong Kong film industry is alive still, it could be an interesting case for cultural industry study that profit-driven motivation could not dominate cultural activities solely while something else backing current Hong Kong cinema needs to be explored. As the transforming genre of Hong Kong cinema has been illustrated by film studies scholars, this research focuses on the sociality of transformation. To understand the localization patterns of industrialized cultural activity, this research investigates the local cluster of Hong Kong film workers with in-depth interview. Under the theoretical frame of capital conversion, which was proposed by Pierre Bourdieu and used for cultural field studies, it is hypothesized that local film workers would have more solid social and cultural capital when they cannot secure economic capital today. Besides, there should be some conversion strategies to realize their cultural/social capital.

After analyzing the eighteen participants' self-descriptions, this study has some findings: 1. The rule of division of labour is not followed strictly that film workers were expected to be multi-skilled and ready for unexpected urgent problem-solving. 2 The lack of storyboard enables the inclusive and collective creativity, instead of the top-down production process. 3. The intense production,

usually the result of tight budget, nurtures the efficiency-first work value which allows the Hong Kong film workers to distinguish themselves from counterparts. 4. The honored workers who are good at efficient problem-solving have better chances to be re-hired and promoted. 5. The high efficiency is embedded in Hong Kong background, which is strengthened by the Cantonese-centered connections. 6. The traditional mentorship has been challenged that seniority is less respected and gradually replaced by the meritocracy belief. 7. The better honored film workers in this cluster will have more opportunities to participate inter-national/regional productions and like to use local cultural elements for his/her own film production, which reflects his/her team's impact.

Title: The role of SEO as homogenization element in journalistic content writing in Spain

Session Type: Individual submission

Authors:

Abstract: Strategic justification. When in the early nineties of the twentieth century the process of internet hatching and its conversion from a mere communication infrastructure to a huge content store takes place there are no search engines to access but directories with links to web pages grouped by themes, whose maintenance is carried out by human operators. In 1993, the Massachusetts Institute of Technology launched the Wandex service, which facilitates the tracking of contents, although with levels of precision that are still very rudimentary.

The situation changes dramatically since 1998 due to Google, who sees in the pointed shortcomings a significant business opportunity. The implementation of an own algorithm, known as Page Rank, implies that the positioning of a web page depends not only on the webmaster but also on the external links that the site receives, arguing that if the content is used as a reference its quality will be good. An environment is configured in which, in theory, the search engine rewards quality and unique content, natural link building (instead of meaningless links) and respect for the best practices manual developed by Google. However, practice denies such an approach. It is the widespread use of robotics and algorithms for the production and distribution of news that nowadays can more quickly damage quality journalism.

Hypothesis. This particular scenario leads in Spanish case towards a homogenization in the writing of journalistic contents, conditioned by SEO positioning rather than factors of a strictly journalistic nature. We consider that this situation impacts on: the texts of the information, which often abuse on the key words and adopt a redundant writing style; the headlines, in which a clear tendency to sensationalism is perceived as a way to get the internet user click; the structuring of the short links within the URL of the website that must be provided to the CMS, in which sometimes computer programming tricks, closely linked to the clickbaits previously exposed, are found allowing the proliferation of fake news.

Methodology. In order to examine the impact that SEO techniques have on the writing of journalistic contents, we focus our attention on digital native cybermedia, selecting the five that have the largest number of unique visitors in Spanish market: El Confidencial, El Español, OK Diario, El Diario and HuffPost.

Once the sample was determined, individual interviews were carried out with journalists and technician responsables that are carrying out their activity in each of the selected cybermedia, as well as an analysis of the content related to the different information generated in these cyber-journals.

Affiliation: Universidad de Valencia

Abstract: Los medios de comunicación digitales cierran su primera etapa de 25 años de consolidación con un futuro aún inimaginable (Salaverría, 2019). Su evolución, en paralelo al desarrollo tecnológico, se traduce en una convergencia mediática multifactorial en torno a nuevos modelos de negocio, soportes cambiantes, vinculación con la audiencia y el despliegue de nuevas narrativas (Deuze, 2003; Lawson-Borders, 2006; Quandt & Singer, 2009). Un entorno que propicia una revisión constante de sus transformaciones y, precisamente, este cuarto de siglo de comunicación digital se presenta aquí como un punto de inflexión propicio para revisar una de las aristas del cambio mediático: el desarrollo y aplicación real de la narrativa multimedia en la información de actualidad.

El periodismo digital encuentra entre sus múltiples desafíos actuales, el de la redacción y edición de noticias. La construcción del mensaje constituye una de las piezas diferenciadoras mediante el uso de narrativas que reflejan dinámicas internas y externas de la producción periodística. Los estudios relacionados con el lenguaje multimedia constatan un proceso dual en el que conviven la mera réplica de las convenciones narrativas de los medios tradicionales (Manovich, 2000; Himelboim, 2010) junto con una creatividad ilimitada propia de la narrativa integrada o hipermedia (Landow, 1995; Paul y Fiebich, 2004; Cover, 2006; Larrondo, 2009; Napoli, 2010; Arias-Robles y García-Avilés, 2018). En medio de ambas realidades narrativas, los cibermedios despliegan a diario diferentes niveles de profundización de los tres rasgos principales a su alcance: hipertextualidad, multimedialidad e interactividad (Nielsen, 1995) y que Scolari (2004) aglutina en las tres gramáticas: textual, gráfica e interactiva. Un despliegue narrativo que aún va más lento y limitado de lo previsto (Palau-Sampio, 2007; Salaverría, 2019).

Para constatarlo, esta investigación se centra en el análisis de la producción multimedia de medios web en España, donde conviven más de 3.000 digitales en activo y de los que un tercio son nativos digitales (Salaverría; Martínez-Costa; Breiner, 2018). El objetivo es analizar la práctica real de la narrativa multimedia en la producción de contenidos destacados de actualidad en medios digitales españoles. Para ello, se recurre a la metodología de análisis de contenido aplicada a dos periódicos nativos digitales (elconfidencial.com y eldiario.es) y otros dos con matriz impresa (elpais.com y

elmundo.es) durante un período de cuatro meses. Sobre una muestra acotada y aleatoria (N=560) se analizan 25 variables en torno a los elementos de hipertextualidad, multimedialidad e interactividad.

Los resultados reflejan una limitada narrativa multimedia en las informaciones de actualidad más destacadas de los medios analizados y la casi inexistencia de narrativa hipermedia. Se constata un abuso de la hipertextualidad con prácticas repetitivas que redirigen a la web del medio; un uso limitado del multilinguaje con predominio de fotografía y vídeos suministrados, sin edición propia; y que la interactividad de la audiencia predomina en los medios no nativos y centrada en temáticas concretas de política o internacional. El estudio alerta, en definitiva, del predominio de una 'narrativa multimedia de inmediatez', poco elaborada e innovadora, ligada a noticias de actualidad que ofrecen los hiperenlaces y la imagen como único elemento 'disruptor' del diseño de producción digital.

Title: Will it Travel': The Local vs. Global Tug-of-War for Telenovela and Turkish Dizi Producers

Session Type: Individual submission

Authors:

Name: Carolina Acosta-Alzuru

Email: cacosta2410(at) gmail.com

Country: US (United States)

Affiliation: University of Georgia

Abstract: Dramatic serialized content currently enjoys a dominant position in the television and OTT global market (Roxborough, 2018). Simultaneously, production, consumption and audience metrics are changing due to digital technologies (Farveen, 2019; Laporte, 2016). In this environment, long-established telenovela production powerhouses—Mexico, Brazil and U.S. Telemundo—face new opportunities and threats that complicate some of the differences between their local and global audiences. With newly elected presidents, Brazil's and Mexico's political and economic conditions are in flux. Telemundo is finally neck and neck with Univision in their quest for the top spot in U.S. Spanish-language television. These two U.S. networks currently navigate the political landscape for Latinos and Latin American immigrants—their main audiences—as drawn by the Trump administration. In addition, new non-Latino-American players, such as Turkey, have been displacing telenovela producers in several markets, including on their own turf (Bowen-Tombari, 2018). Turkish dramas—dizis—have made a global footprint. Annual revenue from overseas sales of Turkish TV shows surpassed \$350 million in October 2016 (Vivarelli, 2017) and continued to exceed the \$300 million mark in 2017, giving Turkey a 25% share of the international market for television fiction ("Turkish TV series, productions showcased at Cannes series festival," 2018). Like Mexico and Brazil, Turkey is undergoing its share of political and economic changes. But, unlike the Mexican, Brazilian and U.S. Spanish-language television markets that are dominated by two broadcasters, the Turkish local market is more complex and intensely competitive with five networks engaged in a nightly cutthroat battle, plus an added layer of strong production companies.

As production decision makers for both telenovelas and dizis factor in their national audiences and contexts, and the global market trends, the perennial tension between prioritizing the domestic or the international market has become even more critical. Underpinned by how they rank local ratings versus global sales, these tensions influence the writing, casting and production processes.

Based on in-depth interviews and observations in Miami and Istanbul, and heeding Caldwell's call for examining media production cultures as "social communities in their own right" (2008, p. 2), this paper examines the tensions between local and global markets for telenovelas and Turkish dizis, and how they impact their production.

Title: Love at First Sight: Narrative Strategies of Media Brand in the Introduction from News APP Download Pages

Session Type: Individual submission

Authors:

Name: Dixin Xia

Email: 634803000(at) qq.com

Country: CN (China)

Affiliation: Sichuan University

Abstract: Being faced with more and more fierce competition, most media choose to use different forms of materials to display media brand cultures, values and their interests of information products, which means various narrative strategies of media brand. As the most characteristic information product of the times, news APP becomes an important exhibition of brand value which extends the Screen Time from download pages to using interfaces. As a result, the introductions of news APP in the application store establish the foundation for users to fall in love with the product at first sight and become the starting station of brand communication. In this study, 95 comprehensive news apps were selected from the top 200 news applications of Apple App Store in China, taking their product introduction text as the research object and analyzing their different components such as cultural perception, function introduction, user feedback and contact message by referring to the Telecom Cellular Model. This paper attempts to explore the narrative strategies of brand communication from the perspectives of symbols, authority basis, emotional interests, functional interests, brand personality and ideal customers. From this, we can get a glimpse of the establishment methods of media brand in China and the culture circle of information which has been built already.

Affiliation: Beijing University of Posts and Telecommunications

Abstract: The iteration of television and Internet media follows the law of media evolution. From the perspective of media environment, this study made long-term observations on the correlation between TV content and trending topics on social media, and conducted in-depth interviews with 20 users. According to the research results, the changes and future development of TV social function are reviewed from three dimensions: user attributes, technological development and content type. According to the “Tetrad of media effects”, when the Internet technology reconstructs the media environment and sets off a massive communication revolution, the "disembedding communication" that shrinks time and space has been "enhanced" and has overcome the traditional “on-the-spot communication”. Then, the social function of traditional media represented by TV became "obsolete". In the future, the emergence of intelligent communication technology will be the possible answer to solve the contradictory puzzle between TV and social function. It'll "reverse" the form of people's communication through the scenarized media and promote the "retrieve" of social function of TV. This will push “Human-Computer Separation” turn to “Human-Computer Interaction”, and further connects the user's mind to trigger emotional identity, thus returning to the interpersonal communication with the present of body.

Title: [Panel] Análisis de las mediaciones ante las innovaciones tecnológicas, Panel description

Session Type: Panel Submission

Authors:

Name: Francisco Bernete

Email: fbernete(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: Como es sabido, las innovaciones tecnológicas provocan cambios en los procesos de producción y reproducción de las sociedades. Su aplicación en un campo, (por ejemplo, la industria del automóvil), genera cambios en otros (p. e., la distribución de bienes o la planificación urbanística), lo que, a su vez, desencadena consecuencias sobre otros (p. e, el empleo, la demografía, las organizaciones, normas, relaciones, percepciones, etc.). En muchas ocasiones, la aplicación de innovaciones tecnológicas en los sistemas productivos y reproductivos provoca desajustes y obligadas transformaciones en los modos de vida de aquellos sectores de población que se ven afectados por los cambios. Esta es la razón por la cual las tecnologías han sido utilizadas con fines mediadores. Se ponen al servicio de la mediación social que se considera necesaria para el progreso de un determinado modelo de sociedad.

Una forma de mediación social es la mediación comunicativa, la que se lleva a cabo al informar de lo que existe o sucede, de modo que ese objeto de referencia tenga un lugar en la conciencia de los usuarios de la información. Por este motivo, las producciones de noticias, artículos, fotografías, etc. son analizadas en muchas ocasiones como prácticas mediadoras, que unos emisores de información llevan a cabo afectando a las visiones del mundo de unos receptores.

Las innovaciones en las TIC provocan cambios en este tipo de mediaciones sociales, pero no solo en aquellas que afectan a la producción de los media: con los dispositivos, aplicaciones y redes creadas por las TIC en las últimas décadas, están transformándose los modos de iniciar, mantener o finalizar interacciones personales; o los modos de producir y distribuir representaciones sobre los agentes sociales; o los modos de combinar grandes relatos con textos brevísimos, emoticonos, memes, etc. y de transitar entre ellos, cumpliendo, a la vez, funciones de emisores y receptores. Son algunos de los desafíos que los “nuevos medios” presentan para el análisis de las mediaciones.

Title: Repercusiones de la tecnología en nuevas formas de producción mediática

Session Type: Panel Submission

Authors:

Name: María Cadilla-Baz

Email: mcadilla(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: El desarrollo tecnológico y la socialización en el uso de las TIC están afectando de manera más o menos intensa y rápida a todos los ámbitos de nuestra vida. Esta incidencia se hace sentir también en las actividades productivas, entre ellas -y de manera muy sensible- las dedicadas a la producción y distribución de información en el ámbito de la comunicación pública.

Nos encontramos en un momento histórico en el cual cualquier individuo, únicamente con un teléfono móvil y una conexión a Internet adquiere unas capacidades comunicativas sin precedentes, lo cual entraña grandes retos y amenazas para aquellas instituciones que antaño gozaban del privilegio de erigirse como fuentes de información hegemónicas sobre lo que acontece en el mundo. Pero es que además, la gran capacidad transformadora de la tecnología tiene una afectación directa sobre la producción comunicativa de los llamados tradicionalmente medios de comunicación de masas y, por ende, en la manera en que se articulan los datos para la conformación de los relatos sobre lo que acontece en el mundo.

Un ejercicio comparativo de la producción comunicativa de diversos diarios españoles, en sus versiones impresa y digital, respecto a un mismo fenómeno (en este caso, el auge del partido VOX en las elecciones autonómicas andaluzas del 2 de diciembre de 2018) ha permitido a casi un centenar de alumnos de Periodismo observar y reflexionar sobre este fenómeno a través de una práctica docente que se desarrolló en la asignatura de Teoría de la Comunicación.

Se comprueba que el espacio virtual proporciona a los medios nuevos escenarios y espacios noticiosos, en los que también ocurren cosas que merecen ser contadas. Pero al tiempo que amplía sus objetos de referencia, también permite la generación de otro tipo de relatos, enriquecidos merced a las nuevas capacidades expresivas y a los múltiples mecanismos de verificación de la información que, por otra parte, también son herramientas susceptibles de usos con fines de control social.

Title: Juventud y actividades de ocio mediadas por las TIC: Nuevas dimensiones en las formas de viajar.

Session Type: Panel Submission

Authors:

Name: José Antonio Alcoceba Hernando

Email: alcoceba(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: Juventud y actividades de ocio mediadas por las TIC: Nuevas dimensiones en las formas de viajar.

La globalización y el uso de las Tecnologías de la Información y la Comunicación (TIC) han transformado profundamente los modelos sociales, económicos, culturales... La evolución tecnológica, además de estar determinada por el propio desarrollo productivo que origina los avances y progresos científicos, también lo está indefectiblemente por los usos, las prácticas y las representaciones que llevan a cabo los sujetos con dicha tecnología. En este sentido, las generaciones juveniles actuales son pioneras en la incorporación de las TIC a sus prácticas sociales, por aprendizaje, manejo y cercanía cultural.

Los avances tecnológicos han permitido crear entornos de comunicación totalmente nuevos, que no están sujetos a un medio físico y en los que la información se sitúa en el espacio virtual. Estos entornos rompen la unidad de tiempo, espacio y actividad. El ciberespacio se presenta como un ámbito de información, construcción, creación, aprendizaje y descubrimiento, en los que los jóvenes se desenvuelven con especial soltura.

La evolución del consumo del ocio relativo a los viajes y las vacaciones en la era de la globalización ha sufrido grandes transformaciones, reflejo de la complejidad social actual, donde todo se transforma en producto comercializable, que difiere, como sostiene Dachary, del modelo turístico de masas consolidado en el siglo XX en pleno auge de la sociedad de la producción, y cuyo eje era el trabajo y la familia, que tenía como contrapartida las vacaciones, entendidas éstas como el descanso físico y mental y la integración familiar.

La globalización, además del aumento de los viajes, también ha transformado radicalmente los contextos y escenarios relacionados con el tiempo de ocio y el turismo. La estacionalidad tradicional de las vacaciones, así como sus periodos relativamente prolongados de descanso (semanas, quincenas, mes), ha dado paso a un modelo de consumo de ocio más fragmentado en las formas de disfrute del ocio se han vuelto más imprevistas, breves y diversas.

La virtualización de las formas de ocio, comienza desde la propia planificación del viaje; ya no se trata simplemente de informarse y contratar los servicios al modo tradicional a través de una agencia, un mayorista o una compañía, sino que estas actividades lúdicas se conciben como un proceso que...

- Se desea. Las TIC permiten experimentar virtualmente el viaje navegando por internet a veces por el puro placer de desearlo.
- Se planea. El uso de las TIC en la planificación del viaje se ha impuesto por su comodidad, facilidad, flexibilidad y precio.
- Se busca. Los medios de comunicación tradicionales como cauces de información turística han dado paso a la búsqueda activa de información en internet.
- Se contrata. La facilidad que ofrece Internet y sus múltiples plataformas turísticas y de viaje, conlleva la adquisición de servicios de manera inmediata.

Title: La mediación de las TIC en las relaciones interpersonales

Session Type: Panel Submission

Authors:

Name: Belén Casas-Mas

Email: bcasas(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: Esta comunicación ofrece un estudio sobre las mediaciones a las que contribuyen las Tecnologías de la Información y la Comunicación (TIC) cuando se producen las relaciones interpersonales. Vivimos en un momento de transformación sociohistórica que afecta a los vínculos con las personas que forman parte de nuestra red de contactos, ya sean familiares, parejas, amigos o conocidos. Esta tipología de comunicantes se ha podido establecer aplicando modelos discriminativos para describir rasgos característicos que distinguen a cada segmento de sujetos cuando interactúan online. El estudio se basa en el análisis estadístico de datos que proceden de una encuesta realizada en España a una muestra representativa de 2800 internautas de entre 16 y 74 años. Los resultados se pueden dividir en tres ejes principales: el tipo de uso social que realizan los usuarios online; la preferencia de los mismos cuando se relacionan cara a cara, frente a sus interacciones mediadas por las TIC; y la evolución de la denominada “brecha digital” referida a las relaciones interpersonales.

Se comprueba que el uso social que se hace de estas tecnologías presenta un carácter instrumental o afectivo en función de la relación que se tenía previamente o de los lazos que se establezcan con las personas implicadas.

Se indaga en la valoración que realizan los internautas de las interacciones mediadas tecnológicamente frente a las que realizan de forma presencial. Esta valoración difiere en cada categoría de comunicantes en función de variables relacionadas con el nivel de estudios, el estatus socioeconómico, el ámbito familiar o el laboral. Además, se han encontrado diferencias que afectan al género en algunas de las categorías de comunicantes; por ejemplo, en las interacciones familiares. Y se identifica que la brecha digital está disminuyendo en todos los grupos de edad, aunque continúa presentando valores más altos entre el colectivo de personas mayores.

Id: 20914

Title: La 'otra' brecha digital: el desarrollo desigual de la virtualización entre el trabajo productivo y el reproductivo.

Session Type: Panel Submission

Authors:

Name: Coral Hernández Fernández

Email: mclhernandez(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: En la sociedad globalizada, la virtualización de los procesos ha ido ganando terreno en aras de la prevalencia de valores instrumentales de eficacia, eficiencia y rentabilidad económica, aplicados a los ámbitos productivos y reproductivos de la vida social. Sin embargo, según demuestra la investigación realizada, en el ámbito de lo reproductivo y, especialmente en aquellas tareas en las que dichos valores no son prioritarios (tareas domésticas y cuidado de personas y de hogares), el grado de virtualización es muy escaso y vinculado casi exclusivamente al crecimiento orgánico del uso de internet, dando lugar a una brecha digital que distancia a quienes están dentro y fuera del sistema productivo.

En este sentido, la virtualización de las tareas domésticas parece corresponderse con la extensión al hogar de las dinámicas adquiridas en otros ámbitos, como símbolo de estatus y de éxito social: en general, son los individuos más tecnológicos y conectados en los ámbitos productivos quienes en mayor medida han incorporado soluciones virtuales al ámbito doméstico (actividades culinarias, compras y gestiones online...). Se trata de personas pertenecientes a familias acomodadas de entre 50 y 60 años que están conectados permanentemente a Internet por su trabajo y forma de vida. En lo que se refiere al cuidado a personas (del hogar o de otros hogares), el principal elemento motivador para el uso de soluciones virtuales parece ser la necesidad de estar permanentemente conectados con el hogar de referencia (familias con dificultades o con hijos con progenitores mayores o enfermos). Los perfiles de los usuarios que más recurren a la virtualización de estas tareas muestran una mayor presencia de gente relativamente joven (personas de 30 a 39 años) y que no están integradas en el ámbito productivo (estudiantes y personas que se autodenominan "amas de casa", con mayor incidencia entre las mujeres), de lo que se infiere además que también en el territorio virtual se sigue reforzando el tradicional papel de la mujer en el cuidado de las personas.

Title: La convergencia y los desafíos de los "nuevos medios"

Session Type: Panel Submission

Authors:

Name: Francisco Bernete

Email: fbernete(at) ucm.es

Country: ES (Spain)

Affiliation: Universidad Complutense de Madrid

Abstract: El análisis de las mediaciones que ha dado frutos para mejorar nuestro conocimiento sobre las funciones sociales cumplidas por las producciones de la prensa, la radio o la televisión, tiene que ampliarse y adaptarse ante las innovaciones tecnológicas.

Existen nuevas formas de mediar con las TIC y su análisis tiene pertinencia para saber cómo afectan al conocimiento, el consumo, el ocio o las relaciones sociales en general. Esas nuevas formas de mediar están condicionadas por elementos de distinta naturaleza: entre ellos, las posibilidades técnicas, las regulaciones de su uso y las expectativas y demandas de los usuarios.

La producción comunicativa de nuestro tiempo se caracteriza por ser extraordinariamente abundante, con profusión de imágenes, de transmisión sincrónica y de alcance mundial. Al tiempo, es sabido que, en esa producción, ocupan un lugar muy relevante las representaciones estereotipadas y prejuiciosas, basadas en informaciones sesgadas, o sencillamente falsas.

Es posible que los usuarios -convertidos o no en productores de información- tengan muchas facilidades para encontrar en los múltiples medios de comunicación un agregado de datos, canalizados en los formatos prototípicos de las redes sociales construidas en y mediante internet: tweets, titulares de noticias y artículos, hipertextos, etc. Y también es posible que ese torrente de datos, proporcionados de forma gratuita, incluso personalizada, actúen como un festín que da satisfacciones inmediatas y, al tiempo, les aleja de otros relatos y otras interacciones expresivas y ejecutivas, que podrían ofrecerle unas representaciones más completas de la realidad, sin merma de la diversidad de perspectivas. Expresado de otro modo, la abundancia informativa es esencialmente redundante.

Abstract: In China, Local Television Station (LTVS) specifically refers to the Municipal-level TV Station whose number has reached 293 with employees accounting for around 65% of the total number of TV workers by the end of 2017.

As a major component of the media production, media workers play a significant role in the production of the local TV station. However, due to the impact of social media and peer competition, the LTVS is suffering the problem of staff turnover, unreasonable talent structure and a decline in professional identity. Given that the Chinese government has launched policies to promote media convergence and transformation in response to new changes in media area, these problems were widely thought to impede the progress of media convergence and transformation in the LTVS.

The study is designed to investigate the occupational identity of local TV workers and its factors. Previous researches have indicated that the occupational identity represents the central mechanism of control over one's work value, attitudes and behaviors. Thus, this research could observe the ideology of the local TV practitioners under media convergence and transformation. Also, the study evaluates individual and contextual factors to the occupational identity which could, to a certain extent, further our understanding concerning the production relationship of the local TV especially based on the growth of digital media and mobile communication systems in China. The first task is to design a two-part questionnaire including The Chinese Local TV Workers' Occupational Identity Scale and the influencing features, based on the Vocational Rating Scale (Thomas C. Barrett, Howard E. A. Tinsley, 1977) and the vocational identity development theory (Skorikov, V., & Vondracek, F. W., 1998). The second step is to measure the factors significantly related to the occupational identity of the local TV workers via multiple regression analysis. The third step is to take a certain proportion of samples from the participants in the questionnaire for in-depth interviews, and make further explanations on the research results. A total of 587 workers completed the questionnaire and 68 of them were involved in the in-depth interviews.

The study found that the job satisfaction and willingness of continuity to career lower the overall evaluation of occupational identity, which may indicate that there is a problem with the welfare of employees of the LTVS in China. Additionally, the influence of individual factors on occupational

identity has been proved to be basically similar to previous studies. The special media management and the growth of new media in China, however, have significantly negative effects on the occupational identity. This reflects that in the era of media convergence and transformation, the optimization of media management and the objective perception of new media are especially important for enhancing the occupational identity of the Chinese local TV workers.

Title: Innovation and Knowledge-based Dynamic Capabilities in the Media Production Process

Session Type: Individual submission

Authors:

Name: Min Hang

Email: hangmin(at) tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University, China

Name: Weijia Li

Email: thummtcea01(at) qq.com

Country: CN (China)

Affiliation: Tsinghua University

Abstract: This paper provides an empirical study on the media production process in a digital era, with a focus on the impact of knowledge-based dynamic capabilities and innovation on the media organizational learning.

The strategic management theories propose that innovation and dynamic capabilities are among the critical factors that help to improve the efficiency of the organizational production. With the advancement of digital technology, the media production process is getting to be increasingly knowledge-intensive, thus the knowledge-based dynamic capabilities are among the core successful factors for media organizations.

Applying interdisciplinary theories that include the theories of Resource-based View (RBV), Knowledge-based Dynamic Capability and the theories of media production, these authors conducted site investigations in four media clusters in Beijing, where over hundred media content producing companies, cultural design companies and new media companies are located in.

Data from 157 surveys indicate that there is a significant relationship between the knowledge-based dynamic capabilities and media organizational innovation during the media production process, and this relation is moderated by the environmental dynamics that include chaos brought by the technological advancements, complexities in organizational communication and etc. Findings from the empirical study suggest that the higher the environmental dynamics, the stronger linkage between the knowledge-based dynamic capabilities and media organizational innovation.

From the micro-level, the study provides implications to the organizational production of media companies. A number of knowledge-based dynamic capabilities that include the knowledge coding capability, knowledge sharing capability and knowledge recombining capabilities have been proposed, and their impacts on the organizational learning and production have been analyzed, so as to improve the organizational efficiency of the media production.

From the meso-level, the study compares production process of different genres of media, including print, video and social media, in order to find out knowledge-based capabilities associated with

different types of media, so as to understand the industry specific features of various types of media business.

From the macro-level, the paper discusses media systems and policies that help to facilitate the market deregulation and to improve the culture of media innovation, through which the use of new technology can be rewarded and strategic renewals in media production are promoted.

The paper also addresses the issue of duality in media production: on the one hand, media products have explicit commercial value, therefore, the goal for media production is to strive for business success; and on the other hand, media products and services have implicit social values, hence the process of media production also highlights the positive externality to the society. These duality of media products, together with the theoretical and managerial implications of media productions are also discussed in the current article with empirical evidences.

Title: Mapping "The Circuit of Culture": A Study of Regional Digital Mediascape in India

Session Type: Individual submission

Authors:

Name: Srikanth Nayaka

Email: srikanth.kanth21(at) gmail.com

Country: IN (India)

Affiliation: Department of Humanities and Social Sciences Indian Institute of Technology
TirupatiTirupati-Renigunta Road Tirupati 517506

Abstract: With the proliferation of new media technologies in recent times, the production and consumption of media content underwent significant changes. The production and the disseminating of media content are no longer hegemonic and monopolistic. Earlier, big media corporations produced and standardised media content in terms of its genre and form. With emerging digital media platforms like YouTube becoming available to all, the production of alternative narratives and media content by non mainstream media producers increasing in recent times. In fact, the YouTube as digital media platform offers many opportunities to these emerging non mainstream media producers to develop a content which is both the counter or alternative to mainstream or supplement to it. The objective of this paper is to understand this emerging regional digital mediascape in India and map its 'circuit of culture' (Du Gay et al., 1997). This paper is a preliminary attempt and part of larger project to understand the dynamics of this powerful nonmainstream and emerging subculture. Few studies in India have focused on this phenomenon which includes Sangeet Kumer's (2016) comprehensive review in his 'YouTube Nation' and Sriram Mohan and Aswin Punathambekar's (2018) interesting study of 'Localizing YouTube'. To understand this phenomena theoretically, this study makes use of different conceptual frameworks drawing from cultural studies to globalization studies. Within this backdrop, this paper looks at select popular Telugu YouTube channels and adopts the method of textual analysis to demonstrate the emerging regional subculture in India.

Title: The impact of global film productions on the local audio-visual labour market

Session Type: Individual submission

Authors:

Name: Jaka Primorac

Email: jaka(at) irmo.hr

Country: HR (Croatia)

Affiliation: Institute for Development and International Relations

Abstract: This presentation draws on the case study on the impact of the global film productions on the labour market in the Croatian audio-visual industry. Drawing on the political economy of media and communication approach (Mosco, 2008; Mosco and McKercher 2008) the article argues how for a deeper understanding of labour market dynamics in audio-visual industry a more contextual approach is needed (Coe and Johns, 2004; Curtin and Sanson, 2016; Murdock and Golding, 2016). The research results show the interconnectedness of global film productions and the local labour market on two levels: the sectoral and the organizational. The analysis of the organizational level shows that Croatian audio-visual industry is like any other (European) small-scale industry with fluid labour market that is characterized by semi-permanent work-groups, the domination of project-to-project work, where networking is paramount for continuous employment and where learning-by-doing prevails as an educational model (Blair 2001, Randle and Culkin 2009, Apitzsch 2013, Eikhof and Warhurst 2013; Jones, 2000). In this way, on the organizational level Croatian audio-visual industry is a part of the global production and distribution chains and it easily connects to the global audio-visual workforce demands brought about by the foreign film productions (Miller et al, 2005). However, on the sectoral level, there are number of specific factors stemming from particular socio-political and historical framework (that affect the development of local labour market and consequently of the overall audio-visual industry. These include the political pressures on the independent agency HAVC, the unstable legislative framework that is not well adjusted to the film sector, the tradition of foreign film production in Yugoslavia, and the weak unionisation of workers in this sector. These specificities on the sectoral level consequently influence the organizational level of the labour market in the audio-visual industry, and thus makes it opened to the influence from the foreign film productions and their continuous demands on the local labour market(s) worldwide (Conor, 2011, 2015; Goldsmith and O'Regan, 2005; Elmer and Gasher, 2005; Szczepanik, 2013, 2013) . The case study also indicates the precarious work in audio-visual industry in the former Yugoslavia, which opens further research questions on the continuous fragility of project-to-project work in different political systems.

The case study was based on the exploratory sequential mixed-method design (Cresswell, 2009) that combined the analysis of the quantitative indicators – i.e. fiscal indicators of the Foreign Film Incentive Programme provided by Croatian Audiovisual Centre, data from Croatian Bureau of Statistics and Croatian Employment Service; and qualitative data – based on the expert interviews (Bogner, Littig and Menz, 2009) with key stakeholders of audio-visual production in Croatia using the interview guide approach (Patton 2002).

Key words: audio-visual industry, global film productions, Croatia, political economy of media and communications, labour market.

Title: La Film Commission como herramienta de dinamización de la producción audiovisual en un territorio: el caso de España.

Session Type: Individual submission

Authors:

Name: Isabel Sarabia Andúgar

Email: isarabia(at) ucam.edu

Country: ES (Spain)

Affiliation: Universidad Católica de Murcia

Name: Josefina Sánchez Martínez

Email: jsanchez(at) ucam.edu

Country: ES (Spain)

Affiliation: Universidad Católica de Murcia

Abstract: El interés en convertir un territorio en un escenario de rodaje de producciones cinematográficas, series televisivas o cualquier otro tipo de producto audiovisual, constituye el principal motor de la puesta en marcha de una Film Office o Film Commission en cualquier localidad, comarca, provincia, región.

La misión de una oficina de rodajes es poner en valor, no solo las bondades de los paisajes, monumentos, clima de un territorio o la capacidad de su gente de acoger equipos de rodaje (logística, predisposición de los ciudadanos) sino también dar visibilidad tanto a los recursos técnicos audiovisuales como a recursos profesionales con los que un equipo de rodaje podría contar en esa ciudad.

Al margen de los indudables beneficios económicos que supone el desplazamiento a un territorio de un equipo de producción audiovisual en términos de gastos en hospedaje y la posterior explotación turística de la presencia de una producción de éxito en el territorio, no cabe ninguna duda que las comisiones filmicas suponen un instrumento para la industria audiovisual en la medida en la que contribuye a facilitar servicios de diferente índole: solicitud de permisos, identificación de localizaciones, directorios de profesionales, empresas, etc.

Con esta investigación se pretende, en primer lugar, establecer el mapa de Film Commissions/Film Offices en España; en segundo lugar, identificar el modelo de gestión de estas oficinas; y en tercer lugar averiguar los servicios ofrecidos al sector de la producción.

Se trata, por lo tanto, de ofrecer un estudio sincrónico sobre la presencia de las Film Commissions/Film Offices en el territorio español a 2019 y su aportación a la industria audiovisual.

Para lograr los propósitos descritos, el método de trabajo establecido consiste en la localización de las comisiones filmicas en España; en el diseño de una ficha de análisis que sirva para sistematizar la recogida de datos a partir de la consulta de las páginas web y de la realización de las entrevistas telefónicas con los responsables de las distintas empresas; y finalmente en el tratamiento de la información.

Title: Film co-production between the UK and China and the politics of Soft power

Session Type: Individual submission

Authors:

Name: Yanling Yang

Email: y.yang5(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University London

Abstract: This research explores the role of film co-production in soft power collaboration in the context of the UK's global post-Brexit role and the new era of UK-China relations. Existing research on film co-production has mainly focused on either US-China arrangements or China's Pan-Asian partners. With China on course to be the world's largest film market by 2020 and the UK eager to access the benefits, film co-productions under the 2014 UK-China Treaty remains under-researched. This paper will take the documentary film *Earth: One Amazing Day* as a case study.

I will first conduct document analyses to outline conceptual thinking about soft power in both nations and detail the differing approaches to the practice of soft power with a focus on film co-production. The data collection will include three types of public documents both in Chinese and English: official government policies and regulations, academic works and national reports, and non-academic and informal documents from trade journals and inter-industry reports. Based on scholarly literature reviews, specialised reviews, and related reports concerning the aforementioned Treaty, I will select potential interviewees including but not limited to the following sectors: a) government policymakers relevant to film industries from both the UK and China, b) film industry professionals and, c) some influential subsidiary interviewees. Finally, I will collect data assessing the global presence of the case study to evaluate the efficacy of this film in projecting soft power.

This research is distinguished by not only focusing on film co-production between the UK and China, but also through providing film insiders' views on the present soft power generation. By combining the latest primary and secondary empirical research, this paper contributes to the understanding of soft power in both empirical and theoretical terms. It therefore represents a potential transformative intervention in intercultural media collaboration related to soft power through detailed document analyses and consultation with diverse film practitioners from both Chinese and English sources.

Title: Sound Work, Creativity, Service, and Gender. Production Cultures in German Public Service Radio

Session Type: Individual submission

Authors:

Name: Kiron Patka

Email: kiron.patka(at) uni-tuebingen.de

Country: DE (Germany)

Affiliation: University of Tübingen

Abstract: During its 100 years of existence, radio has developed a specific production culture. In German Public Service Radio, typical production setups in the studio involve contributors of different professions: DJs, journalists, actors, musicians, directors or ‘Tonmeister’ are surely considered the responsible staff who may claim authorship and creativity. On the other hand there are those I call ‘sound workers’ – sound engineers and sound technicians. Sound workers have been present in radio’s broadcasting and production studios for decades, and often still are now, but I argue that their role regarding content and aesthetics of music, radio drama, or radio programme has often been vague and even contested (cf. Martensen 2017).

Moreover, academic research on radio production has neglected these professions, probably assuming that they do not contribute to the medial outcome in a substantial way. Instead, agency, creativity and authorship has been ascribed to journalists, directors, or presenters of radio shows in particular. Most of the work on radio production takes into view a managerial or even organisation/industry level without considering the micro-level of actual production work within the studio (e.g. Kleinsteuber 2012).

In my talk, I will shed some light on these sound workers below the line, focussing on the age of tape machines (~1945 to ~1995) in Germany and drawing mainly on oral history interviews. While often regarded as technical staff and thus only in charge of operating machines, sound workers often see themselves as ‘auditory designers.’ With respect to music recording, Horning (2004) describes sound workers as musical architects, thus underlining their role in fabricating the aesthetics of the produced piece. In a similar way, sound workers can be seen as architects of the auditory flow/stream (cf. Stadel 2016) of radio programmes.

I will show that especially in German post-war radio stations, sound work was a highly gendered profession (Patka 2018). Since the allies have re-started broadcasting in Germany after WWII, there were remarkably many trained women in technical radio jobs. Up until the mid 70s, the central staff training system has offered two training courses for sound technicians that were officially dedicated to men, and women respectively. Accordingly, male and female sound workers within radio stations were allocated different tasks. Unsurprisingly, this produced a divide not only with respect to financial income and job opportunities, but also with respect to accountability and creativity. While women, operating tape machines, developed specific skills and their own body of knowledge, they still were regarded as ‘helpers’, doing ‘service’ and manual work in order to support the creative crew (cf. Birdsall 2017).

My research is based on oral history interviews, in parts being conducted by students in my seminar on radio production studies; a second resource is archival material. I will provide information from an ongoing research project, so the talk will be open to discussion and does not aim at presenting final results.

Title: Back to the Country: Slow Reality Television Production in China

Session Type: Individual submission

Authors:

Name: Shuo Liu

Email: s.liu7(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University London, UK

Abstract: Shuo Liua*

aMedia and Creative Industries Institute, Loughborough University London, London, E15 2GZ

In China, the transition to an increasingly commercialised and competitive television environment fuelled a search for innovative program formats. Reality television, borrowed or adapted from formats originated in Europe and North America, offered a ready-made option. With more than 400 million viewers Supergirl, adapted from a singing contest format, became one of the most successful TV shows in Chinese broadcasting history confirming the genre's ability to engage mass audiences and establishing reality television as a central component in program planning. Alongside continuing adaptations of imported formats recent years have seen an increasing growth of formats that speak to national conditions.

Since the beginning of 2017, a new strand of reality television programming has emerged in China promoted as slow TV. Unlike the pioneering programs in the genre, produced in Norway, the 'slow' in "slow reality show" does not mean the program is longer than usual. The normal playtime is about one and half hours. Rather, this kind of program aims to show a slow-paced lifestyle. Most are focused on life in small rural communities and invite well-known personalities to live in a reconstructed modern rural house and run a B&B or meet different people in the countryside.

Back to the Field is one of the most significant and popular examples of this new genre with 2 billion views on the Mango TV online platform, and 4.2 billion posts on Weibo.

This research takes Back to the Field as a case study. Drawing on in-depth interviews with the program director and managers it explores the key elements informing the thinking behind the program, placing its development in the context of current changes in the competitive Chinese television market, and the search for program innovations that address the increasingly felt stresses of urban life and capitalize on the new rural romanticism.

Title: Thinking Outside the Box: The Rise of Korean Independent Productions and Web Dramas

Session Type: Individual submission

Authors:

Name: Jennifer Kang

Email: jmk623(at) gmail.com

Country: US (United States)

Affiliation: DePauw University

Abstract: In South Korea, a new media form called web dramas have started to receive attention from the industry. Web dramas are not simply television dramas moving online, but something more, as they depart from television conventions to become optimized for the ultimate mobile viewing experience. They refer to the professionally-produced serialized dramas made for Internet platforms and are noted for their short narratives – 5 to 20 minutes per episode – which cater to the mobile audiences. In particular, independent production companies have been at the forefront of web drama productions.

The diversity of online distribution platforms is often celebrated as opening up paths for new players to participate in content production. This is evident in the case of the Korean media industry, where the broadcast networks, SBS, KBS, and MBC, hold most of the shares of the media market. In a media industry where resources, structures, and policies are concentrated on network television, independent production companies have struggled to survive. These companies rarely benefit from the success of their content because they are forced to comply with the networks' demands. Unfair contracts that surrender the independent companies' creative control and copyrights over to the networks is a problematic, but common industrial practice to this date. However with web dramas, independent producers no longer have to rely on the networks' limited distribution system and their demands, which contributes to opening up greater space for experimentation in storytelling, style, and representation.

This paper examines how the independent production companies' position outside of the dominant television structure enables different types of innovation and distinctive challenges to existing the contemporary state of television as a medium. Particularly, I extend the status of being "independent" by incorporating McLaughlin's argument that "expert practitioners" who exist within cultural industries can raise theoretical questions when their daily experiences differ from institutional norms. For Korean independent producers, it was not only the open distribution of the Internet, but also the critical stance that came from being independent that allowed them to figure ways to depart from longstanding television industry conventions. Based on 21 interviews with independent producers, I found that many of them were fully aware of their limited agency, especially in comparison to the legacy players. As such, they employed a series of tactics to survive – tactics that often led to innovations in content, form, and business models. Rather than seeing independent production companies' status of being independent as simply a reason for their disadvantages, I show how producers used their marginal status to introduce new practices to web drama production – practices that they perceived help "solve" the problems of existing media industries. For instance, the casting practice of offering special perks to celebrities to appear in web

dramas in lieu of high payment was conceived out of the critique of legacy players' tendency to devote large funds to casting and neglect other production elements. Such efforts in turn, helped web dramas shift away from television dramas conventions and develop its own set of formal-aesthetic traits.

Title: Same as 100 years ago' Examining the Value Chain of Feature Films

Session Type: Individual submission

Authors:

Name: Natalia Ferrer Roca

Email: natalia.ferrer(at) udg.edu

Country: ES (Spain)

Affiliation: Universitat de Girona

Name: Sílvia Espinosa Mirabet

Email: silvia.espinosam(at) udg.edu

Country: ES (Spain)

Affiliation: Universitat de Girona

Abstract: Media production processes are experiencing constant change. Due to digitalisation, media convergence, the democratization of new technologies and associated innovations, the internal and external dynamics of feature film production processes have been modified – and are currently being further modified – around the world (Ferrer-Roca, 2017, 2019; Iordanova & Cunningham, 2012; Kehoe & Mateer, 2015; Trowbridge, 2013). However, there are production processes within a film value chain that have “barely changed since the days when the Lumière brothers created the very first moving images more than one hundred years ago” (Puttnam, 2004, p. 15). Therefore, this paper aims to highlight these – apparent – contradictions by offering an examination of the four main steps of a feature film value chain: conception and development, production [including pre-production and post-production], distribution and exhibition. First, the paper introduces the film value chain’s within a theoretical and conceptual framework and, by providing a literature review, it points out that one of the main challenges when reviewing literature in this area is precisely the lack of consistency in concepts. Second, it moves on to illustrate the methodological challenges encountered, as well as the strategies applied by the researcher when conducting this study. Precisely, it provides methodological reflections and analyses of the process of conducting this research based on the value chain analysis of the New Zealand feature film industry. In this case, the study has applied a qualitative approach based on semi-structured interviews with key actors and stakeholders along the New Zealand film value chain. It highlights the challenges of access to information and the difficult task of generalising as every feature film project is unique and faces some exclusive production processes. Finally, the paper shares the findings on the analysis of the film value chain for three different types of productions: bottom-tier, middle-tier and top-tier features (Ferrer-Roca, 2017) – highlighting their similarities and explaining their differences – within a New Zealand context. The paper aims to point out, on the one hand, that many film production processes in putting a film together has remained the same for the last hundred years and, on the other hand, it illustrates the methodological challenges in studying the processes of film production.

Country: CN (China)

Affiliation: University of Nottingham Ningbo China

Abstract: This paper presents the initial findings from an ongoing project to design a mobile app which will enable short movies by British film makers to be distributed on the Internet in China. The project involves a number of academics in the schools of International Communications, Computer Science and Geography at the University of Nottingham's UK and China campuses working with a Nottingham-based film company to develop the app for commercial use.

While the academics on the project have a good theoretical understanding of the Chinese short movie market, they want to test their hypotheses with an experiential intervention into that market. This type of intervention is particularly needed in a market that, while extremely lucrative (Deloitte 2017), needs to do more to improve the quality of film-making (Makinen 2016). Like the Silicon

Valley platforms which monopolise the means by which short movies can be hosted and distributed, and hence dispense only derisory amounts of money to the creators of the original content (Srnicek 2017; Taplin 2017; Timberg 2015), the powerful BAT (Baidu, Alibaba and Tencent) platforms monopolise the Chinese market too and create the same problems for creators.

One of the most effective ways of making money on the Chinese market is through the use of advertising, a business model which is strongly supported by the Chinese regulatory framework (Fei & Zhou 2016). This does not, though, really benefit the original creators of content. Therefore, the researchers on this project are exploring ways in which China's highly developed micro-payment infrastructure might facilitate reasonable financial rewards for these creators as well the platforms on which their content is hosted.

Currently at proof-of-concept stage, the proposed app represents a means by which the researchers can work with industry partners and the local Ningbo government to create a distribution platform which will enable British short movie makers to licence their films and receive a reasonable return on their creative investment. This paper will report on the progress to date and evaluate whether this type of platform might be usefully developed in short movie markets in other jurisdictions too.

Name: Teona Chakvetadze

Email: teona.chakvetadze2016(at) gipa.ge

Country: GE (Georgia)

Affiliation: Georgian Institute of Public Affairs

Abstract: Increasing consumption of social media as a source of information along with the spread of disinformation has challenged journalists around the world to adopt new ways and practices of online content verification. Georgia, the country of 3.5 million people, is not an exception when it comes to countering the Russian propaganda, coming through diverse channels from its northern neighbor.

Being the most popular social network in Georgia, Facebook has increased the concern among the media activists due to its role in an upswing in nationalism and conservatism as a result of the effectiveness of Russia's misinformation campaign (Lomsadze, September 19, 2017). According to Media Development Fund research (2017), many Georgian online news media legitimize the propaganda and hate speech through re-publishing posts and statuses from Facebook and not providing additional commentaries. The same research shows the increase of propagandistic messages against the USA (25%) compared to the previous year (9 %), against the North Atlantic Alliance (18,4%) and the West (14.1%) in general, and negative messages against the EU that have doubled (13,4%), coming from certain online media outlets.

Since there is no policy regarding disinformation and propaganda in the country, it grows fast in online media. Several professional teams, such as Myth Detector by Media Development Fund, Factcheck.ge by Ethics Charter of Georgia, check against the diverse types of disinformation on a

regular basis, including Russian propaganda; but a very few media outlets use resources to verify and debunk the social media content.

While “journalists today have an imperative - and an opportunity - to sift through the mass of content being created and shared to separate true from false, and to help the truth to spread” (Silverman, 2015), adhering to the journalistic norms and ideals, such as impartiality, objectivity, and accuracy (Golding and Elliot, 1979; Shapiro et al., 2013) requires the fruitful verification of social media content (Schifferes and Newman, 2013). How do Georgian media outlets handle the Russian disinformation and misinformation to serve their public and inform them is the purpose of this exploratory research.

Employing the mix of ethnographic methodology and the in-depth interviews with the Georgian leading online newsrooms’ strategies against propaganda, focusing on their verification routines and methods applied to social media content verification, this research will contribute to understanding of the internal dynamics of the media production process within the Georgian online media outlets and explore their views of the journalistic role within the wider propagandistic environment.

Title: Print hegemony: the elusiveness of web-first production logics in a Swiss legacy newspaper

Session Type: Individual submission

Authors:

Name: Andrew Robotham

Email: andrew.robatham(at) unine.ch

Country: CH (Switzerland)

Affiliation: Académie du journalisme et des médias, Université de Neuchâtel

Abstract: Recent studies of news production have largely focused on innovation and fringe journalistic practices. While this has brought helpful insights into tomorrow's newsmaking, those daily practices of dual print-digital journalism that still dominate the industry remain understudied. News workers are faced with the many contradictory logics that such a double production entails, and adjust and negotiate between these in an ongoing attempt to resolve this dilemma.

This submission aims to refocus on more mainstream newsmaking by studying the interrelatedness and power (im)balance between the print and online versions of the Swiss newspaper *Le Temps*, thanks to a combination of a newsroom ethnography, document analysis and interviews. Although the production system underwent a redesign in 2015 in a shift towards a more dynamic web-first publishing logic, many of its attributes continue to impose themselves on the digital output.

This case study identifies and deconstructs production factors, especially those imposed by the respective imperatives of the print and web editions. These are typically inscribed in 'budget meetings', publishing tools as well as symbolic constructs. This research shifts between frames of reference, analyzing how these factors—generally studied in isolation—combine, compete and lock horns.

Empirically, we follow the precarious coming into being of the parallel web and print stories for a random given day. Observing and describing the complex trajectories of news stories, as they move down a virtual production line, an ANT inspired methodology is used to specifically focus on form-related effects of 'production (f)actors': the more or less programmatic actions—often blackboxed—of persons and technologies that successively define and transform content along the way.

This research shows how, in spite of clear prescriptions aimed at favoring the digital edition, numerous factors imputable to the imperatives of the production of a physical newspaper strongly shape the digital edition. In particular, editorial temporalities and relational spatial factors are found to be at the heart of this power struggle.

Many workers in newsrooms sense that the elusiveness of web-first news formats indeed has something to do with the print newspaper. But this research confirms this hunch by pinpointing previously hidden factors, thereby providing at least some answers as to how a dozen or so innocuous sheets of newsprint can prove to be quite so hegemonic.

Abstract: Every television programme passes through various production stages from conception to final text. They might differ in extent and detail, but they are more or less consistent for any production. This panel focuses on the very beginning of this process of creation, when ideas for programmes are conceived, selected and shaped. This development process in film and television production is a crucial yet a relatively undocumented area of media production studies. In an era of plenty, where television content is abundant and competition fierce, the ability to develop interesting ideas, scripts and television formats presents an even more valuable skill that channels, production companies and streaming services can use to differentiate themselves from their competitors. In this context, idea and project development are of great strategic importance for both production staff who want to secure jobs and for the television channels/networks that depend on a steady supply of programme ideas to fill their platforms. But this is not a straightforward process. Rather, it bears creative, economic and political challenges as it is shaped by multiple actors with different objectives and priorities, uneven power relationships, shrinking resources and extensive secrecy.

Our panel explores the socio-cultural and economic factors that determine this particular production phase in order to take us closer to an answer to one of the central questions of media production research: Why do media texts take their particular form? The papers in this panel discuss project development in the television industries across a range of different territories and genres. They provide multiple perspectives on the relationships between television channels and production companies, helping to explain the particularities of the resulting representations.

Paper 1 discusses editorial regimes and resulting creative pressure in the development of factual entertainment programming for Danish television channels, highlighting tensions between novelty and consistency, experimentation and familiarity. Paper 2 investigates the script development of TV drama in Flanders. It focuses on the effects that changes in the television industry, including transnational influences, have on the collaboration between screenwriter, production company and television channel and its implications for TV drama as a genre. Paper 3 focuses on project development for non-scripted entertainment programmes in the context of transnational industry

structures and the format trade. Drawing on a Dutch case study, it explores the tensions between the global and the local in this process. Paper 4 explores the relationship between broadcaster-publishers and independent production companies in factual programme development. Drawing on data from the UK and Germany, it highlights the impact of power, genre and commerce on contemporary programme development.

All papers are based on empirical data gathered through a combination of ethnographic observation, interviews, and document analysis. Jointly they aim to further our understanding of this so far little investigated area of television production. They draw attention to the role of power relationships, commercial priorities and transnational influences in this creative process to explain why certain stories and issues are selected for the public exposure through television platforms - and others are not.

Title: Constructing Entrepreneurial Subjectivities in Post-socialist Cultural Industries: The Case of Polish Videogame Industry

Session Type: Individual submission

Authors:

Name: Anna Ozimek

Email: aozimek(at) tlu.ee

Country: EE (Estonia)

Affiliation: Tallinn University

Abstract: In this paper, I will discuss the construction of entrepreneurial subjectivities in the context of Polish videogame industry. Drawing on 44 semi-structured interviews with Polish videogame workers and key industry organisations, this contribution engages with the conference theme by investigating working conditions in Polish videogame industry and workers' perspectives on their often uncertainty project-based employment.

This paper aims to provide empirical and theoretical contribution to critical media industry studies. Firstly, this paper explores working lives of game workers positioned outside main videogame development regions – North America and Asia-Pacific. The focus on Polish game workers enriches academic/our knowledge not only about Eastern European videogame production but also discusses the under-researched subject of post-socialist creative labour (Szczepanik, 2018). Secondly, this contribution engages with a discussion about construction of 'entrepreneurial subjectivities' in the context of post-socialist cultural industries. The idea of 'enterprise' and its relation to new forms of workers' subjectivity has been derived from Foucault's works (2008). Through Foucault's interpretation entrepreneurial subjectivity is inherently a neoliberal subjectivity which is developed as result of historical socio-economic changes that removed previously known institutional and organisational buffers of economic risk. In a broad sense, these changes are associated with the rise of casual work and the shift of responsibility from employer to employee. Previous studies about creative labour present creative workers as ideal entrepreneurial subjects and discuss how workers are embracing an 'entrepreneurial ethos' and apply a variety of strategies to adapt to the uncertain, precarious and often informal environments of work (McRobbie, 2016).

This contribution expands further this discussion by investigating the construction of 'entrepreneurial subjectivities' in the CEE region. Similarly, as in the case of Scharff's (2015) studies, Polish videogame workers' understandings of their work situations was marked by aggressive individualism, emphasis on personal responsibility and repudiation of structural inequalities. However, interviewees also attempted to negotiate various discourses about their work and link them to their local economic and socio-cultural contexts such as socialist past of the country, uneven economic development and prevalence of conservative culture. Therefore, inspired by anthropological studies which focus on analysis of economic behaviour in the Eastern European countries (Makovicky, 2014; Dunn, 2004), I argue for recognising contradictions and complexities within construction of entrepreneurial subjectivities also embedded in a specific economic and socio-cultural context of the post-socialist countries.

Title: Gatekeeping within the simplicity regime ' The creative pressure in television idea development

Session Type: Panel Submission

Authors:

Name: Mads Møller T. Andersen

Email: mandersen(at) cc.au.dk

Country: DK (Denmark)

Affiliation: Aarhus University

Abstract: This paper investigates the kinds of creative pressure that can occur when gatekeeping editors at a television channel want to maximise creativity. By drawing on theories about gatekeeping and creativity, and in particular Keith Sawyer's four evaluative regimes (Sawyer 2013), the paper analyses how evaluative regimes are used in TV idea development sessions at the Danish public-service TV channel DR3. The paper contributes by emphasising how creativity in television production can best be described as a complex interplay between a series of social mechanisms where systemic structures and powerful editors play an important role in the evaluation of, which products and ideas are "creative".

The findings from my analysis indicate that the desire of gatekeeping editors to maximise creativity can place significant creative pressure on developers. Creative autonomy is often described as highly desirable, but these findings challenge such notions of autonomy in media industries and suggest that developers might be more comfortable working with familiar genres and find it difficult to follow vague briefs from their editors about so-called experiments. In this sense, greater autonomy can lead to greater expectations and a creative pressure on the developers who are responsible for delivering new and experimental ideas.

Using observations, interviews and briefs from this case study, the paper's analysis also indicates that a simplicity regime is used in their TV idea development with ideas being judged constantly as to whether they are clear and simple enough and that this might be a domain-specific challenge for TV production. In this development process, the developers as a group have a very well developed sense of their superiors' taste, also known as discerned savvy (Draper 2014), which they use to identify whether an idea is likely to get approved by the gatekeeping editors.

Additionally, the findings suggest the presence of a tension and an antithesis between branding (consistency) and creativity (novelty). Because consistency and novelty work against one another, channels must prioritise between these two when developing new programmes and decide to what degree they want to be known for familiar genres used in previous programmes or want to associate the channel brand with new formats and unfamiliar genres.

Title: "Make it more Borgen-y" Shifting TV drama writing in the age of Netflix: the case of VRT in Flanders

Session Type: Panel Submission

Authors:

Name: Tim Raats

Email: Tim.Raats(at) vub.be

Country: BE (Belgium)

Affiliation: Vrije-Universiteit Brussel

Abstract: Shifting viewing behavior, cut-backs on the level of public broadcasting, a migration of advertising spend from legacy to online players, and the introduction of over-the-top players like Netflix, Amazon and HBO Go, have clearly affected production and distribution of television drama in Europe.

On the one hand, new platforms and services bring about new opportunities for sales and recoupment of TV drama production. On the other hand, these shifts have increased fragmentation of existing TV drama financing and increased competition between players (Raats and Wauters, 2018; Raats et al. 2016; Doyle, 2016; Lotz, 2018). This is especially the case in smaller television markets, which are traditionally more dependent on public support, have a limited domestic market and have less potential on the international market due to lower budgets and contextual barriers such as language or cultural proximity.

Yet, the popularity of European drama on platforms like Netflix, and the uptake in export of domestic European drama (on services such as Walter Presents), clearly show the cross-border potential of fiction. Productions that have been sold internationally, are often the result of a clear focus on compelling storytelling and high-quality screenwriting. Indeed, the global success of Danish TV drama partly stems from the Danish public service broadcaster's distinct strategy that prioritizes narration/storytelling and privileges screenwriting in the production process (Novrup Redvall, 2013). Strategies like these have been picked up widely, not in the least in Flanders (Dutch-speaking part of Belgium). In Flanders, the volume of television drama productions gradually increased since 2010, and recent years have also seen an uptake in export, with titles as *Hotel Beau Sejour*, *Sense of Tumor*, or *Professor T* being sold internationally.

What makes Flanders somehow different is that TV drama is almost entirely driven by independent producers, and management and decision-making within the public broadcaster VRT, is highly made on the level of channels, rather than a distinct vision on drama as a genre. This creates a specific role for VRT, in which screenwriting collaboration differs on a case to case basis and thus provides additional challenges when developing long-term strategy as a public broadcaster with regard to TV drama production.

This paper contextualizes the increased emphasis on screenwriting and storytelling in Flanders, by focusing on an analysis of the screenwriting process of *Tabula Rasa* (2017, VRT and Caviar), which gained domestic and international acclaim. The main question we wish to address is, firstly, to

what extent shifting production and distribution strategies have affected the screenwriting process of VRT drama, how this has impacted the notion of distinctive TV drama or quality in Flanders, and thirdly, to what extent the powerplay between four different actors (screenwriters, independent producer, co-producing partner, VRT) enables or hampers screenwriting of high-end drama. The paper draws on analysis of different documents in the writing process (treatments, notes, email correspondence), interviews with VRT representatives, the head writer and showrunner of the series, and executive producers. Interviews were conducted from 2016 to December 2018.

Abstract: The development of TV programme ideas is increasingly taking place in a transnational context. Around the world, independent TV production companies are owned by multinational conglomerates and the trade in TV formats facilitates the exchange and integration of ideas, production practices and standards across borders (Chalaby 2016). Whereas industry members themselves celebrate creative synergy and inspiration as the key benefits of transnationalisation, scholars see the rise of a cosmopolitan elite of media workers who share their international orientation, practices, and standards (Kuipers 2011; 2012). Recently, scholarly attention for the actual effects of transnationalisation on TV production organizations, executives, practices and content has grown (Baltruschat 2010; Esser 2016; Havens 2014). This paper focuses on the process of idea development in the transnational field of TV production. How does the development of TV programme ideas actually come about in this field? To what extent is idea development inherently transnational? And how is this transnational orientation concretized in everyday work practices?

Data for this study was collected during 10 weeks of participant observation and interviews at a Dutch independent production company that was founded in 2018 by two Dutch TV executives together with the American production and distribution giant MGM. Processes and practices of developing, pitching and pre-producing non-scripted entertainment shows were observed. The analysis is multimodal, combining insights gained from the interviews with those of the participant observation.

The results show how foreign ownership, the global format trade, and international personal networks in the production industry shape the selection, development and sales of new programme ideas. By analysing one project in further detail, this study shows how the development of entertainment programming is situated in a complex force field in which not only the global market and international ownership structures, but also personal networks and local production contexts

affect the output of production companies. We argue that transnationalisation encompasses more than ownership structures and format adaptations; it is deeply and banally rooted in everyday practices in the TV production industry. However, the celebratory accounts on the benefits of transnationalisation, articulated by managers and executives alike, are countered by a complex forcefield that is both locally and globally situated.

Title: Commissioning and independent production: Power, risk and creativity

Session Type: Panel Submission

Authors:

Name: Anna Zoellner

Email: a.zoellner(at) leeds.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Leeds

Abstract: In the context of digitalisation, global economic integration and legislative liberalisation, cultural production has been dramatically transformed, altering the production context and broadcasting environment for television producers. The introduction of new communication technologies and platforms, and the rapid expansion of the global television market place have increased competition, audience fragmentation and consequently changed practices and priorities in television production. This paper explores what the continuing uncertainty and change in the television industries means for the development of new programme content.

It investigates the implications of systemic structures for creative agency in a broadcaster-publisher system, exploring the relationship between commissioning editors at television platforms and independent production companies who compete for a commissioning contract. Asking how and why specific content is selected for representation, the paper highlights the relevance of socio-cultural and economic factors for this process, including the role of genre values, professional identity, and territorial particularities (such as the implications of transnational positioning and language).

The paper draws on ethnographic and interview data from development teams in British and German production companies who specialise in factual and documentary production. The paper demonstrates how (a) the tensions between commercial aspirations and public service/genre values, (b) the uneven power relationships in the commissioning system, and (c) the inequalities of an increasingly concentrated sector where multinational 'super-indies' compete with (and increasingly acquire) small and medium-sized companies all impact on the creative strategies employed by development teams. These include firstly, attempts at greater rationalisation, standardisation and control in the production practice, and secondly, creative compromise in the creation of the text. In the case of factual programme production, this involves risk aversion in the commissioning process, an increase of formatted and serial programming, and an emphasis on the extraordinary and the extreme in factual content or form with links to celebrity culture. All of these tendencies contribute to a generic shift of television documentary and a reinterpretation of cultural values and professional identity of programme makers.

The data shows great similarities between the two studied territories rooted in cultural proximity and similar industry structures, but it also highlights differences based on different cultural attitudes towards genre and commercialism and different standing in the transnational context. These results highlight the methodological and theoretical relevance of genre and national context for media

production research, suggesting the need for a more theoretical and methodological conceptualisation of these factors in media production studies.

Title: Objectivity, subjectivity, and the Other in South African documentary production: navigating the 'circle of looks' in a multicultural society in transformation.

Session Type: Individual submission

Authors:

Name: Elizabeth Louw

Email: lieza.louw(at) wits.ac.za

Country: ZA (South Africa)

Affiliation: University of the Witwatersrand

Name: Phyllis Dannhauser

Email: phyllisd(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: Documentary filmmakers are increasingly called upon to be aware of the consequences of the power imbalances in the filming context. Ruby (1980:156) points out that filmmakers have an ethical, political, aesthetic, and scientific obligation to be reflexive and self-critical. This is even more so in a society like South Africa, with sharp divisions along racial, ethnic, economic lines and a myriad different perspectives and cultural contexts.

This paper is structured in the form of a wide-ranging conversation between two South African documentary filmmaker-academics. Unpacking several theoretical perspectives in the light of their personal and professional experience, they examine the relationship between vulnerable subjects and the filmmaker, and how the filmmaker shapes the personal histories of subjects in the production process. Power imbalances inherent in the documentary production process, if acknowledged and confronted, can allow marginalised voices to emerge. Trinh rejects the notion that documentary offers the viewer an uncomplicated window into reality (Trinh, 1992:96). This 'cinema of the authentic image' which harnesses the technology of film in the pursuit of naturalism and the illusion that we are watching the real world unfold. The authors argue that the way to avoid this aesthetic is through the inclusion of personal stories and a dialogue with both subject matter and participants, what they call being 'objectively reflexive'. This position of detachment, while being completely responsive and open, enables creativity and engagement with technology, while not losing sight of the human subjects involved. Trinh (1992:104) describes the process as follows: 'Creativity and objectivity seem to run into conflict. ... What I see is life looking at me. I am looking through a circle in a circle of looks'. Filmmakers working within this collective of voices cannot aspire to a completely objective view of the world and the people in it.

When working in multicultural communities like South Africa, Botha (2011:313-314) advocates for a kind of indigenous research (also applicable to filmmaking) which is 'ethically and culturally appropriate' to the study of indigenous people. By acknowledging the interconnectedness of 'physical, mental, emotional, and spiritual aspects of individuals with all living things and with the earth,' these kinds of indigenous knowledges can seek to address issues of colonialism and the postcolonial rejection of the West as the only authorised creator of knowledge about the world and 're-establish the experiences and ways of knowing that have been silenced by dominant western knowledge communities' (Botha, loc.cit.II).

Title: Producing "not so important" news in online media

Session Type: Individual submission

Authors:

Name: Dimitris Trimithiotis

Email: dimitris.trimithiotis(at) yahoo.fr

Country: CY (Cyprus)

Affiliation: University of Cyprus

Abstract: This conference paper examines the production process of ‘not so important’ news in online media, such as the news on European Union (EU) affairs. The paper aims at observing: (a) the extent to which online reporting could generate more prominent, more pluralistic and less ethnocentric coverage; (b) the extent to which the journalistic culture and the newsworthiness of the topics affect the production process in online news media. Numerous studies on European integration have underlined the paradox that whilst European Union policies have a considerable effect on the lives of member states’ citizens, the policy-making process itself does not attract appropriate attention by citizens (Banchoff and Smith 2005; Eriksen and Fossum 2004). A number of studies exploring the role of the media in this phenomenon argues that media rather contribute to the formation of the above paradox (Gleissner and De Vreese 2005; Koopmans 2007, Statham 2008). The main argument is that the domestic media contribute to the public’s inadequate awareness by providing little and partial visibility to EU-related affairs. Given the emergence and establishment of online news media, a number of studies have argued that there is a need to reconsider the role of online journalism and its potential contribution to citizens’ political awareness via more extensive dissemination and pluralistic analysis of political activities (Deuze 2003; Tumber 2014), including EU politics (Michailidou, Trenz and De Wilde 2014). Although many academics in journalism studies argue that developments in political journalism need to be studied in relation to larger social, financial, technological and political factors (Albæk et al. 2014; Benson 2014; Kuhn and Neveu 2002), most of the existing studies on EU coverage are limited to a content analysis approach. The originality of this paper is that it explores how and to what extent online media report about EU events, as well as what factors influence this coverage. The above issue is scrutinised in the Cypriot context: a context where the economic crisis has negatively affected both the working conditions in newsroom and the public opinion on EU. The research draws on a multi-method research design that approaches the journalistic coverage of politics in online media at the level of both the process of production and the message. The analysis is based on an interview survey with news producers of six online media that differ regarding their journalistic culture and on a corpus of 252 news reports on European Union politics delivered by these media. The findings suggest that online technology leads the media to decrease their investment in both personnel and in time for the coverage of “not so important” topics. Fewer personnel and time for news production lead to the reduction of authentic coverage, which is easily replaced by reports from news agencies and institutional press releases – that is reinforcing churnalism. However, media with different journalistic cultures exploit in their own way the potential of online medium: for maintaining and reinforcing their existing profile with fewer personnel and less time spent.

Name: Xavier Ribes

Email: Xavier.Ribes(at) uab.cat

Country: ES (Spain)

Affiliation: Autonomous University of Barcelona

Abstract: At the end of September 2018, two years after its birth (June 7, 2016), Podium Podcast had a catalogue of 66 sound products distributed in 447 episodes with more than 1,000 listening hours of podcasts in Spanish. A repertoire that grows daily. Undoubtedly, the aim of Prisa Radio to create a platform which enhances the production and distribution of podcasts in Spanish (Moreno, 2017) has been more than achieved. In line with other initiatives such as Radiophotopathy and Panoply (Bonini, 2017), this enterprise open up new market expectations for the Spanish radio industry with an economic model still sustainable in advertising investment and the on air broadcasting (Martí, et al., 2015).

Podium Podcast adapts to the new dynamics of consumption (Moreno, 2017, Amoedo & Martínez-Costa, 2016). On the one hand, it breaks the traditional structure of radio communication (Ortiz Sobrino, 2017; Gonzalez & Salgado, 2011). On the other, it promotes a sense of commitment between the content and its potential audience (Jenkins et al., 2015).

This paper analyzes this new platform as a whole and determine its differentiating characteristics in terms of production and distribution of sound content on the net. This study is part of the research “The podcast in the digital sound environment: podcast modelling proposal”, carried out by the Catalan Radio Observatory (GRISS-UAB), which analyze the new model of production and distribution of radio broadcasters in the digital context where the podcast becomes the central axis of the audio business model. For this research, we elaborated an own proposal of modelling the different types of podcast in current digital sound ecosystem. This is an integral classification model

which explores features related with content, production, advertising, distribution, consumption and social networks. The methodological approach designed provided quantitative and qualitative data, obtained from content analysis and in-depth interviews with those responsible for this innovative project. The content analysis was structured around variables (32) that delve into the variety of content that make up its catalogue, formal and narrative features of the products, production and distribution strategies of its content and the use of social networks such as Facebook, Twitter and YouTube. The sample analyzed the products offered on the platform at September 2018. The interviews allowed to obtain information in relation to the conception, philosophy, objectives and the market positioning of this project.

The results show that Podium Podcast offer is focused on informative, entertainment (mainly serial fiction) and hybrid (infotainment) content. There are both original products and the presence of current programs or the sound archive files of Cadena SER (talk radio station of PRISA Radio). New forms of financing are included such as branded content or syndications with existing podcasts. A notable problem was observed in the tagging of its products, derived from divergent strategies according to the way of distribution. The analysis revealed that Podiumpodcast.com acquires a transmedia dimension in the use of social networks, especially on YouTube, where its products present an audiovisual narration and also offer additional content aimed at satisfying other consumer needs.

Title: Journalism for mobile devices in social media (JD2MS), the adoption of new narratives in search of new experiences

Session Type: Individual submission

Authors:

Name: Nanachara Sperb

Email: nanacharasperb(at) gmail.com

Country: BR (Brazil)

Affiliation: Instituto Federal Catarinense - Universidade Tuiuti do Paraná

Abstract: Brazil has 120.7 million internet users and 42.1 million households connected to the network. The smartphone is the device used by 96% of users to access internet, of which 77% use social media and 55% access news content. Mobile journalism explores the potential of digital technology and it engages the reader/user in multimedia immersion practices. In these possibilities of communication offered by Instagram Stories there is a process of innovation by traditional vehicles that migrated part of their production of content to the social media. Mobile journalism is a practice that creates new semantics in the way of bringing information to the user through an innovative platform. In addition, doing journalism on mobile devices in social media (JD2MS) involves creating new experiences by bringing information. It also reflects on how to format the narrative and what kind of experience end-users will experience. This is because JD2MS is not just about new support, but about new narratives, new solutions for news publishing aimed at better ways of serving the public, exploring the full potential of technology. We analyze the narratives practiced in JD2MS as a new format, based on the functionalities of the digital technology of the platform. Instagram is the network with greater engagement and preferred by 47.1% of users among social media. The profiles followed for this paper are: (at) jornaloglobo (O Globo), (at) folhadespaulo (Folha de S.Paulo) and (at) estado (Estado). Initial observations of these profiles point that the practice of JD2MS is incipient and not yet consolidated, since there is a discrepancy in the way of performing both by the same vehicle at different times and among the newspaper companies. It also shows that new narratives implanted especially in Instagram Stories, used in a differentiated way by each vehicle. Inspiration in traditional formats is noticeable. By similarity, this can lead the user to feel more comfortable to follow journalism on a platform that had previously served for entertainment. The use of the Instagram's own resources (gifs, mentions, hashtags) also acts on the familiarity of the reader. By using social media to make journalism, communication vehicles enjoy the potential of reaching the platform, as well as the existing public and the gratuitous creation and use of profiles.

Abstract: The development of online platforms guided by algorithms and supported by new business models converted in the primary way through which people gather resources or promote their activities, either online and offline. Authors, such Jenkins (2006) and Patel (2017), argue that the increased popularity of social media platforms in recent years has opened up cultural production to almost everyone who can access it, resulting in a proliferation of amateur cultural production and collaborative co-creative production.

The development of online platforms guided by algorithms and supported by new business models converted in the primary way through which people gather resources or promote their activities, either online and offline. Authors, such Jenkins (2006) and Patel (2017), argue that the increased popularity of social media platforms in recent years has opened up cultural production to almost everyone who can access it, resulting in a proliferation of amateur cultural production and collaborative co-creative production.

Online crowdfunding is conceptualized as a collaborative system to raise funds for specific projects, and crowdsponsoring is the sum of donation and reward-based models without financial reward for backers who voluntarily adhere. Its application to arts is growing internationally (Bannerman, 2013), with some effectiveness evidences about its potential as a tool for social engagement and value co-creation. Scholars argue that one strength of sharing economy is the so called “crowd asset, linked to non-monetary benefits of crowdfunding as crowd wisdom and feedback, considering the crowd as a source of information” (Marom, Swart, Grell 2015 : 2). Therefore we question what are the crowd asset resources and by who and how are they capitalized. In this paper we intend to investigate the characteristics and effects of online platforms and algorithms application to creative industries and artistic projects’ production and communication within crowdfunding ecosystem.

We aim to describe and analyze how online platforms and algorithms materialize their technicality and social constructions, as well as which affordances are provided to their users.

We pretend to integrate this analytical perspective with the more in depth (personal and professional) experiences of 2.0 media makers, creative industries workers life-histories to

understand the challenges and market pressures that they are facing and which are the future priorities about their career development and skills required.

To achieve our objectives we select as case-study the main Portuguese crowdsponsoring platform, drawing on quantitative and qualitative data, to cross social media analysis, content and statistical analysis with in-depth interviews with platform's managers and users.

Recent implementation of different models to share creative and economic resource share, online and offline, are considered for further research development and comparison.

Title: Business journalism and public relations in Zimbabwe

Session Type: Individual submission

Authors:

Name: Collen Chambwera

Email: cchambwera(at) gmail.com

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: This article explores the relationship between business journalists and public relations officials in Zimbabwe. It explores the nature of interaction between business journalists and public relations officials seeking to promote good corporate image, and how that influences what is available in the news concerning corporates. While similar studies have been carried out, these have for the most part been situated in advanced capitalist economies such as Europe and the USA. This study makes a departure from such and focuses on an economy that was described by Zimbabwe's former Reserve Bank governor as a casino economy. It is an economy that has sometimes seemed to be on autopilot due to alleged lack of leadership from authorities. The media environment in the country is characterised by polarisation between public but state-controlled media and privately-owned media. The study therefore also explores the relationship between journalists and public relations official in the context of this polarised media environment. Situated in the sociology of news production, the study explores to what extent the media in Zimbabwe act as arenas for corporates to present packaged ideas of themselves while at the same time constructing certain versions about corporates to the public. Using semi-structured interviews with selected journalists from the state-controlled and privately-owned media, and public relations officials from Zimbabwe's corporate sector, the study establishes that journalists and public relations officials have a mutually respectful and beneficial relationship. The difficult economic conditions have given public relations officials leverage over journalists, but there is often resistance from journalists to do 'public relations' work for corporates.

Key words: Zimbabwe, Business journalists, Public relations officials, media, economy

Title: When Media Production is Multiplied by Policies: A Case Study on the South China Film and TV Center

Session Type: Individual submission

Authors:

Name: Xi Chen

Email: jcxchen(at) scut.edu.cn

Country: CN (China)

Affiliation: South China University of Technology/Cornell University

Abstract: This paper observes the establishment (2016) of the South China Film and TV Center as a media base in Guangdong, a key locale on the south route of the “One Belt One Road” initiative (aka The Belt-and-Road initiative) and the recent practices in the South China Film and TV Center. The Center was established when the Chinese government implemented a series of policies at State level, which reflects China’s strategic practices respectively in the media industry, the cultural and tourism industries, and the regional development. Therefore, the paper begins with an investigation on: (1) the legislative practices at State level: the media-convergence policy and the film industry promotion law; (2) the institutional restructuring of the Chinese government: the merger of the China National Tourism Administration and the Ministry of Culture; (3) China’s regional development strategies: from the Guangdong-Hong Kong-Macao Bay Area domestically to the overseas Belt-and-Road region in the neighborhood of South China. Based on the policy studies related to the media production in South China, a field study of the industrial practices of film and TV companies in the South China Film and TV Center, their productions and the domestic and overseas markets particularly the Southeast Asian market is also conducted to probe into the local practices in terms of (1) the local and regional policy-making to stimulate and promote media productions and distributions inside and outside South China; (2) actions the local governments in Guangdong province has taken to develop their media industries by merging with the tourism industry; (3) comparative studies of Guangdong as a media production area in South China and other areas, e.g.: Beijing in North China, Shanghai and Zhejiang in East China, and Huoerguosi as a unique media financial center to explore the interactions between strategies and the media industry and reactions of the market, with the aim to examine China’s readiness to establish the proposed cultural-maritime Silk Road by adopting transnational film and TV production as a State-level strategic practice.

Title: Big Data and The New Norm of Production Analysis in Chinese Screen Industry

Session Type: Individual submission

Authors:

Name: Xiao Wang

Email: addie3184(at) hotmail.com

Country: NL (Netherlands)

Affiliation: Utrecht University

Abstract: Nowadays, the idea of datafication has been highly mentioned and broadly used for scientific and commercial purposes. It transforms the known world into another distinct spectacle through entangled informational ‘quantum’. As the big data laboratorial-commercial cooperation models regarding physics studies succeeded, the idea of data-driven technologies starts to infuse into various knowledge-scope. It is increasingly adopted in socio-humanistic disciplines, particularly media studies. Datafication is shaping current Chinese media sphere and screen industry; meanwhile, develops a new norm in evaluating commercial screen products such as films and TV shows, analogue to customer research, during pre-production and publicity. Along with the expansion of use of big data technologies, the intricate questions are forthwith raised: how the application of big data performs in screen industry where farraginous data carried by multi-medium or omni-media; whether it might replace or partially replace man work in the industry, referring to McLuhan (1964) and Baudrillard (1994). The dispute comes to further normalcy when it is intermingled with the big data technologies at production stage. Sometimes, it might doubt that big data could undermine the creativity of Chinese screen industry and the aesthetics (Kant: 1790) of Chinese creative workers, if the mechanisation of creativity cannot be processed in appropriate methods (Amarel: 1966).

It is controversial that simple datafication might not reveal the authentic information, as this research notes: data-driven technologies and algorithmic systems are far from straightforward, due to the complexity of textual analysis of media contexts. Socio-cultural data are rather easily discriminated in opaque ways through subjective bias written into the programmes, which can be intentional or unintentional. At another end of audience reception studies, data are analysed by neuroscience and physiology researchers in taxon order, namely neurocimatics (Hasson et al., 2008). It is believed that these data can explicitly show the internal reactions of audience other than those collected by computational programmes online. Hence, the advance of data methodology needs to be concerned while processing data analysis of current social and humanistic studies.

Unlike using big data technology in the areas of natural science, many Chinese pan-entertainment big data enterprises currently still put efforts on the ‘conservative’ digital data mining and opinion data analysis via a single type of convergent mediums, while several companies are also able to prolong the scope of the research subjects to behavioural data analysis of audience receptions under their own enterprise properties. In this research, the discussions are taken in political-economics and cultural approaches. In order to exemplify, the fieldwork conducts several interviews of two big data entertainment companies who are both specialised in screen production.

Keywords: big data, Chinese screen industry, audience studies, textual analysis, mechanisation of creativity at production stage

Title: National cross-innovation systems vs platformization: Very small and very large media enterprises co-innovating with tourism, education and health care

Session Type: Individual submission

Authors:

Name: Indrek Ibrus

Email: indrek.ibrus(at) tlu.ee

Country: EE (Estonia)

Affiliation: Tallinn University

Name: Ulrike Rohn

Email: ulrike.rohn(at) tlu.ee

Country: EE (Estonia)

Affiliation: Tallinn University

Abstract: The paper reports on the results of a large scale research project that investigated the co-innovation processes between audiovisual media (film, TV, videogames, VR, AR, etc.) industries and three other sectors – education, tourism, health care. The empirical research took two years to carry out, involved 7 Nordic and Baltic countries (Estonia, Latvia, Lithuania, Finland, Sweden, Denmark, (Northern) Germany) and consisted of 144 interviews with industry professionals and policy makers, as well as of ethnographic research on start-up companies operating between industries and documentary research.

In conceptual terms the study combined economic studies of innovation systems with studies of mediatization, media convergence and trans- and cross-media studies and with other approaches within media and culture studies. As part of such interdisciplinary work and theory development we elaborated on a new concept, cross-innovation, referring to co-innovation and convergence processes taking place between different sectors of digital service economies. The proposition is that digitisation and mediatization processes are conditioning new inter-sector dialogues and the emergence of new cross-innovation systems at the borderlines of formerly distinct industries. The study put a special emphasis on the opportunities and challenges for small countries and their media industries as they build locally relevant cross-innovation systems in the era of media globalisation and platformization of services.

The findings tell a series of complex stories. Among others: how global platformization (in terms of Jose van Dijck) of tourism undermines the emergence of related cross-innovation systems in small countries; how fragmentation of local education and health care markets does not enable the scalability of innovations, but protects local innovation systems for being overtaken by global platform giants; how incumbent private media industries prefer not to directly co-innovate with the public sector, especially in the area of education, and therefore a new sub-sector – EdTech sector – has been emerging as a transitory system, facilitating cooperation between media, tech and education sectors; how strong policy support for developing a “VR health” cluster produces a dynamic set of start-companies experimenting with new opportunities, but are challenged by health information systems being highly fragmented and therefore limiting opportunities for scalable growth; how start-up companies innovating in these areas get demotivated by the risk of global platforms entering the same fields.

In this paper we will present the main findings of the project – the main motives as well as challenges for media industries in small countries when cross-innovating with other sectors in the era of platformisation and mediatisation.

Title: Time norms and temporal frames in media work

Session Type: Individual submission

Authors:

Name: Anne Soronen

Email: anne.soronen(at) uva.fi

Country: FI (Finland)

Affiliation: Univeristy of Vaasa

Abstract: Regardless of the studies referring to acceleration of time in journalistic work or crunch culture in game development, the empirical research on the role of time norms in media work is scarce. In our research, the main question is: What kind of time norms and temporal practices dominate in journalistic work and game development?

We perceive time norms as shared patterns of expected temporal activity, which affect media employees' relation to time management, deadlines and prioritization of tasks (cf. Aeon & Aguinis 2017). We focus on perceptions and practices that make visible, question or reinforce time norms and temporal frames in media work.

Our data was collected in two Finnish media organizations, a small game studio and an editorial office of a local newspaper, from December 2017 to June 2018. Our principal method was a photo-interview in which participants took photos in work situations in which they somehow “felt” or took notice of time or temporality. After that, we conducted interviews in which the participants recounted how temporality or time management related to their photos. Discussing the photographs facilitated a more free-flowing informal dialogue between the participant and the researcher than would arise from talk-alone interviews. Moreover, the photographs made the ways participants structure time more concrete and contextualized.

In both organizations, the “core work” is associated with the tasks that forward directly the final media product. However, work processes require also other activities and practices that are not reflected when thinking one's working hours and time management. The main difference between the organizations' temporality is the work rhythm, which is faster and more hectic in the editorial office compared to the game studio, in which people move almost daily between projects but deadlines are not usually pressing. In the photo-interviews, game developers produce themselves as technical experts and problem solvers (see Whitson 2018) who reflect time mainly in the situations when they negotiate with the technology or anticipate the duration of stages of the work. Journalists perceive themselves as professionals who meet continuously the challenge to produce content on schedule and fulfill both organizational and professional expectations (see Reich & Godler 2014; Zelizer 2018). Their work involves competing temporal frames that they negotiate and reconcile in a routine manner. These parallel temporal frames are linked to professionalism, efficiency and common goals of the newsroom. Altogether, our study indicates that in the studies of media work it is important to explore organization-specific time norms and temporal frames because they affect media employees' capacity to produce high-quality content and compose a supportive work community.

Title: Role of Community Radio to increase Agricultural production

Session Type: Individual submission

Authors:

Name: Saroj Prasad Paudel

Email: spojhel(at) gmail.com

Country: NP (Nepal)

Affiliation: Krishi Radio (First and only Agricultural Radio Of Nepal)

Abstract: Nepal is an agricultural country with 76% of the population involved in farming and 28% of the land is used for agriculture. However, owing to the lack of agricultural awareness, a large number of youth are fleeing from the agriculture profession to trade or other employment. Dhading, a neighboring district of the Kathmandu valley, has been popular for the vegetable production for decades, and it has been exporting 25% of the Kathmandu valley's total vegetable consumption. There are seven community radios in the district that promote agricultural issues through various radio programs to foster awareness and motivation to farming with modern technology. Additionally, other commercial local radio stations also produce at least two hours of radio program everyday related to farmers and farming in the district.

In this research paper, I would like to argue that community radios in Dhading are an effective medium to promote agricultural awareness and motivate the young generation in agro-farming with modern approaches. The research will specifically focus on whether the radio programs on farmers and farming have helped in making farmers aware of new farming skills and motivating local youths to farming.

This study will employ qualitative case study approach with three distinct data collections methods: five focus group discussion (FGD) with seven to nine persons on each group, 10-15 key informant interviews (KII) of 45 minutes to one hour in length, and three to five field observations to compare and evaluate the claims by participants of FGDs and KII. According to Yin (2009), three distinct data collection methods will increase the accuracy and reliability of the research data. All the focus group participants will be local farmers, and they will be asked questions related to their awareness about the new technology skills and farming approaches. After the FGDs, the researcher will visit the fields to verify the claims by FGD participants and the actual farming situation in the field. After analyzing the data of FGDs and field observation, key issues will be identified and based on that the potential KII participants will be selected. KII will be a mixed group comprising radio program producers, community leaders in villages, and government officials in the district responsible for agriculture development.

The following questions will guide the FGDs and the KII: Are the farmers aware of local radio programs about agriculture farming? Are the programs helpful in learning new information and skills to support their farming? Is there any noticeable difference in farming productions before and after radio programs? Are the second generation of farmers have demonstrable interests in farming? Is there any relation between their interests and radio programs? How sort of radio programs can be more effective in promoting farming awareness?

The findings of the study will be analyzed by using grounded theory approach (Strauss and Corbin, 1990), in which open coding, axial coding, and selective coding process will help systematically analyzing the data of the three methods. The outcome of the study will be helpful in assessing the effectiveness of radio programs in facilitating farmers' concerns.

Email: maru_sanchezr(at) hotmail.com

Country: MX (Mexico)

Affiliation: Universidad de Guanajuato

Abstract: En México existen más de 40 mil ONG registradas ante Gobierno, y más de 120 millones de habitantes. En Guanajuato, entidad ubicada en el corazón del país existen 1132 ONG y casi seis millones de habitantes, por lo cual se considera que existe una baja densidad asociativa, asociada a otras problemáticas de estas organizaciones como la falta de regulación y reconocimiento; problemas de financiamiento y desconocimiento de las acciones de este sector, las cuales en general se dirigen a la resolución de problemáticas de índole colectivo.

El objetivo de este trabajo es realizar un diagnóstico acerca de los mecanismos de comunicación que utilizan las ONG registradas en el estado de Guanajuato (México) lo cual permita comprender la efectividad de estas y proponer estrategias low cost para que logren mayor reconocimiento por parte de sus grupos de interés (colaboradores, donadores, beneficiarios y voluntarios).

El estudio se divide en dos etapas. La primera tiene una aproximación cuantitativa, con una muestra incidental de 150 ONG, a las cuales se les aplicó un instrumento en línea, para identificar si contaban con actividades sistematizadas de comunicación. La segunda etapa tuvo un enfoque cualitativo-hermenéutico y consistió en analizar algunas ONG que manifestaron sí realizar dichas actividades. Así, la investigación es mixta y tiene un alcance descriptivo y un enfoque no experimental.

Con el diagnóstico y el análisis fue posible identificar que las ONG en Guanajuato no han logrado identificar la importancia de las estrategias de comunicación interna y externa para lograr un mejor funcionamiento y sobre todo para lograr reconocimiento y visibilización de sus actividades.

Actualmente poco menos de la mitad de las organizaciones analizadas no realizan campañas de marketing, y el resto sí, principalmente a través de redes sociales y de una página institucional de internet, por lo cual el aspecto tecnológico surge como una constante.

Como conclusiones se proponen diversas estrategias que las ONG pueden adoptar, las cuales no implican grandes gastos, pero sí un compromiso firme para la implementación y el seguimiento de estas.

Abstract: Colombia, after the signing of the 2016 peace accords in Havana, is living and undergoing changes not only in its geo-socio-political condition, but also in its media condition: From telling the story of war to beginning to narrate peace, to confronting even the tensions of fake news. The present paper gathers two types of corpus that cover January - June 2018: the narratives in community radio stations of the center of Colombia and the photographic narratives in national and Spanish digital media. The question that the research investigates revolves around a macro question that covers the two media records: What are the journalistic narrative strategies used: a) the magazines of community radio stations in Colombia, and b) photography in native and non-native digital media in Colombia and Spain, with respect to the representation around peace, having as a framework "The Final Agreement for the End of the Conflict and the Construction of a stable peace"?

The research is of a qualitative nature, AD-Discourse Analysis was carried out, instruments were designed, Nvivo software was used, semantic networks, focus group interviews and data triangulation were used.

The goal of the study is to design digital communication strategies that, on the one hand, in a collegial manner with the teams of the community radio stations strengthen and make visible their mission by giving a voice to those who have not had it in the construction of social fabric and, therefore, in the construction of peace for the country. On the other hand, to propitiate some guidelines that from the visual narrative exalt stories and paratexts (Genette, 2001) that propitiate an iconic/indicial narrative (Eco, 1986), from frames (Entman, 1993) that emphasize the inclusion and not the stigmatization of actors, objects and socio and geo-political spaces of the country, both from the native and non-native digital press (Piscitelli, 2009) of Colombia and Spain. Our preliminar results suggest a concern, in the first place, to strengthen the pedagogical role and the empowerment of voices that do not have voices (Osses, 2013) in the digital radio ecosystem. Secondly, to rescue the contribution offered by the theory of Framing, insofar as it dynamizes a way of meaning the world (Barthes, 1990), cutting off access to other possible visions; and suggesting both for the digital media of Colombia and Spain, an interest in narrating a representation of public opinion in the face of the hegemonic elite of the digital media company or for not narrating the feelings of the most vulnerable population in these internal conflict of the country: peasants, indigenous people and the child population.

Title: A study of the relationship between critical thinking, health anxiety, exhibitionism, agreeableness and the spread of rumors on SNSs among middle aged and elderly people in China

Session Type: Individual submission

Authors:

Name: Di Wang

Email: dwang(at) must.edu.mo

Country: MO (Macao)

Affiliation: Macau University of Science and Technology

Abstract: With the popularity of social networking sites, rumors also found their way on these sites. Wechat, one of the most popular social networking sites in China, found and refuted rumors 490 million times in 2017 (Pengpai, 2018). Health is the most popular rumor topic in WeChat. Among the users who spread rumors, middle aged and elderly people are disproportionally more than other age groups (Sina, 2018).

Many scholars have tried to explain the motivations behind the spread of rumors (Allport & Postman, 1947; Rosnow, 1991). However, few studies have tried to explore what individual characteristics lead to the spread of rumors. This study shall examine the predictors of health related rumor spreading on Wechat Moment among middle-aged and elderly adults.

First, critical thinking could be related to the spread of rumors among middle-aged and elderly people. As people get older, their cognitive abilities are also getting worse (Whalley, Deary, Appleton, & Start, 2004). Many scholars found that critical thinking ability and the spread of rumors are negatively correlated (Chorus, 1953; Shibutani, 1966).

In addition, health anxiety may be another predictor of rumor spreading of middle aged and elderly people. Many studies have found that anxiety can lead to the spread of rumors (DiFonzo & Bordia, 2002; Rosnow et al., 1988). However, most of these studies have focused on situational anxiety. Studies have shown that chronic anxiety can also lead to the spread of rumors (Anthony, 1972). Middle-aged and elderly people are prone to health problems and may have high chronic health anxiety, which may motivate them to spread health rumors to reduce their health anxiety.

What is more, people who are high in exhibitionism may have a strong motivation to share what they know on SNSs. Therefore those high in exhibitionism may be more likely to spread health related posts on SNSs to show how knowledgeable they are.

Finally, many SNS rumors ask audiences to forward the posts by appealing to the emotions, fear and other techniques. People who are high in agreeableness may be easily persuaded to forward the rumor message on SNSs.

To test these hypotheses, 307 middle-aged and elderly adults who are over 45 years old were referred by undergraduate students from a university in China, to fill in an online survey with embedded experimental rumors. Results showed that critical thinking was negatively related to rumor spread intention, health anxiety and exhibitionism were positively related to rumor spread intention, while agreeableness was not significantly related to rumor spread intention.

Title: The Influence of Social Media Bots on Youth Political Activism

Session Type: Individual submission

Authors:

Name: Mina Momeni

Email: mina.momeni(at) ryerson.ca

Country: CA (Canada)

Affiliation: Ryerson University

Abstract: In recent years, youth have garnered mainstream attention for their online collective action. For instance, in 2018, American teenagers organized a national school walkout to protest US gun laws by mobilizing via social media. Seven years prior, young Egyptians used social media to raise their voices against the autocratic government to demand change in the Egyptian revolution. What potential do Canadian youth have for engaging in such activism? As of 2017, 22.7 million Canadians were active social media users, with 84% being 18 to 34 year olds (Gruzd et al., 2018). Although many youths are engaged in social media for entertainment purposes, these platforms may be utilized by them to become politically active. Nevertheless, youth activism can be influenced by diverse forms of political manipulation on social networks. One of the complex mechanisms for this manipulation is software robots (bots), which can produce content and interact with humans automatically on social media with the purpose of imitating and changing their behaviour. For example, bots may artificially increase support for a political candidate and influence the outcome of an election, which is a great concern for democracy. Scholars have explored the various functions of bots, which include encouraging political speech (Savage, 2015), influencing political events (Stieglitz, 2017), and more importantly, playing a significant role in the spreading of fake news (Shao et al. 2017). Crucially, according to Canadian scholars McKelvey and Dubois (2017), “There has been limited academic work on political bots in Canada”; and they argue that Canada has neglected how important it is that bots are altering the country’s political discourse. Therefore, there is a considerable gap in research exists that this study can fill in an attempt to bring more awareness to this issue. This study explores the involvement of social bots in youth political activism in Canada by using the case study of the Ontario student walk out in protest of the premier of Ontario’s educational cuts. It also explores the various types of social bots and their characteristics, and moreover recent efforts to detect bots on popular social media platforms.

Title: "Jóvenes y sucesos: Tratamiento informativo en la prensa digital española."

Session Type: Individual submission

Authors:

Name: Javier Olivar de Julián

Email: javier(at) cristalfor.com

Country: ES (Spain)

Affiliation: Universidad Internacional de La Rioja (UNIR)

Abstract: Resumen

Introducción: El estudio del tratamiento informativo sobre accidentes con víctimas jóvenes puede ayudar a mejorar la elaboración de este tipo de noticias con un enfoque preventivo y también a preparar campañas institucionales más eficaces. Esta investigación analiza los aspectos formales y emocionales de noticias relacionadas con accidentes de tráfico, ahogamientos, caídas accidentales y suicidios. Si bien se han realizado varias investigaciones sobre el tema (Munoz-Munoz & Salido-Fernandez, 2018; Soto, & Sánchez, 2016), la novedad del presente análisis radica en la conexión directa de la variable “víctima joven” con el tratamiento informativo de la prensa digital y las cuatro principales causas de muerte externas en España. Metodología: Se han seleccionado seis periódicos generalistas digitales españoles: los diarios inmigrantes digitales elpais.com, elmundo.es, abc.es y lavanguardia.com y los diarios nativos digitales elconfidencial.com y 20minutos.es. Posteriormente, se ha realizado un análisis de contenido cuantitativo, recogiendo a través de Mynewsonline una muestra representativa de piezas periodísticas (n=4.733) relacionadas con el objeto de estudio y seleccionadas mediante la técnica de la semana construida. Resultados: Los resultados indican un alto número de noticias publicadas sobre víctimas mortales jóvenes en accidentes de tráfico respecto al resto de informaciones por otras causas externas, un bajo índice de registros de noticias sobre jóvenes relacionadas con las drogas y un tratamiento informativo más exhaustivo y sensacionalista en sucesos sobre jóvenes y niños que en otros rangos de edad. Discusión y conclusiones: Desde un punto de vista deontológico se observa que las noticias sobre jóvenes presentan con mayor frecuencia un alto grado de sensacionalismo. Esto podría interpretarse como un reclamo por parte de los medios, buscando una mayor audiencia que genere un mayor beneficio económico. A la vista de los resultados, se echa en falta un mayor esfuerzo ético de los medios de comunicación para evitar el sensacionalismo y para cumplir con las principales directrices de los códigos deontológicos del periodismo (Díaz-Campo & Segado-Boj, 2015).

Title: Believing Online Rumors: Climate of Public Support and Internet Use

Session Type: Individual submission

Authors:

Name: Stephanie Jean Tsang

Email: stsang(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: Fake news and rumors often arise when individuals in a society have unbalanced access to information, especially when authorities, such as government officials, are the only ones holding information. Fake news and rumors have become a concern for many, as they are quickly spread, influencing public opinion and impairing both individual and societal decision-making processes.

According to Greenhill and Oppenheim (2017), the likelihood of an individual believing a rumor “has nothing to do with predispositions such as gender, age, education, and income.” In fact, they argue that factors like worldview, threat perception, and prior exposure explain variations in rumor adoption. To extend their line of inquiry, this study has tested the effects of perceived public support, whether one sees the public to be supporting oneself, on rumor adoption.

Specifically, this study explored whether and how factors like Internet use and perceived public support predicted individuals’ belief in online rumors. It was expected that the extent to which individuals viewed themselves as occupying majority or minority positions within society would impact their belief in online rumors that conflicted with government statements.

In this study, data from the Chinese General Social Survey collected by the National Survey Research Center at Renmin University of China was used. This was collected in China in 2015 (N = 12,000). Results suggested that the climate of public support had no effect on heavy Internet users’ belief in online rumors. However, among light Internet users, those who perceived themselves as occupying minority positions were more likely to believe online rumors than those who perceived themselves as occupying majority positions.

Given the prominence of online rumors, it is necessary to study factors that make individuals more likely to believe them over and above information released by government officials. This study suggested that infrequent Internet users’ perceptions of their minority or majority status may play a role in their belief in online rumors.

Title: It's Not the Technology, Stupid: How the 'Echo Chamber' and 'Filter Bubble' Metaphors Have Failed Us

Session Type: Individual submission

Authors:

Name: Axel Bruns

Email: a.bruns(at) qut.edu.au

Country: AU (Australia)

Affiliation: Digital Media Research Centre, Queensland University of Technology

Abstract: Following the surprise victories of Brexit and Trump in 2016, even Barack Obama (2017) warned that “it’s become safer to retreat into our own bubbles”, thereby linking increased electoral volatility and polarisation with concepts such as “echo chambers” (Sunstein 2001) and “filter bubbles” (Pariser 2011). The politicians, journalists, and scholars who support these concepts suggest that, with online and social media as the key sources of information for an ever-growing percentage of the public (Newman et al. 2016), echo chambers and filter bubbles are chiefly responsible for the emergence of communities that espouse contrarian and counterfactual perspectives and ideologies, and for their disconnect from the mainstream.

Echo chambers are said enable these groups to reinforce their views by connecting with likeminded others; filter bubbles to shield them from encountering contrary perspectives. Such disconnection from and ignorance of alternative perspectives is assumed to result from a combination of individual choice, in selecting the news sources to consult or the social media accounts to follow, and the algorithmic shaping of such choices, as search engines, news portals, and social media platforms highlight and recommend some sources over others. As platform algorithms learn from the users’ choices, and users make those choices predominantly from the options promoted by the algorithms, a self-reinforcing feedback loop gradually curtails choice to an increasingly narrow and homogeneous set of options.

Rigorous empirical evidence for the operation of such processes is sorely lacking, however. Building on empirical studies that show no significant evidence of filter bubbles or echo chambers in search (e.g. Haim et al. 2018; Krafft et al. 2018; Nechushtai & Lewis 2018) or social media (e.g. Beam et al. 2018; Bruns, 2017), this paper argues that echo chambers and filter bubbles principally constitute an unfounded moral panic that presents a convenient technological scapegoat (search and social platforms and their affordances and algorithms) for a much more critical, fundamentally human-made problem: growing social and political polarisation. This is a problem that cannot be solved by technological means.

Research shows that even – indeed, perhaps especially – the most hyperpartisan users still encounter material that challenges their perspectives, and engage with users who represent opposing views (e.g. Garrett et al. 2013; Weeks et al. 2016). The central question is what they do with such information when they encounter it: do they dismiss it immediately as running counter to their own views? Do they engage in a critical reading, turning it into material to support their own worldview, perhaps as evidence for their own conspiracy theories? Do they respond by offering counter-

arguments, by vocally and even violently disagreeing, by making ad hominem attacks, or by knowingly disseminating all-out lies as ‘alternative facts’? More important yet, why do they do so? What is it that has so entrenched and cemented their beliefs that they are no longer open to contestation? This is the debate we need to have: not a proxy argument about the impact of platforms and algorithms, but a meaningful discussion about the complex and compound causes of political and societal polarisation. The ‘echo chamber’ and ‘filter bubble’ concepts have seriously distracted us from that debate, and must now be put to rest.

Title: From Stigma (Wailao) to Name Rectification (Yigong)' The Politics of Representation in Taiwanese News of Foreign Workers (1989-2018)

Session Type: Individual submission

Authors:

Name: Chunyen Chang

Email: cychang(at) mail.ncnu.edu.tw

Country: TW (Taiwan)

Affiliation: National Chi Nan university, R.O.C.(Taiwan)

Abstract: There were many studies in the past have pointed out that mainstream news discourse has a high influence on living conditions of foreign workers in the receiving society. These studies analyze the media representations of foreign workers, and point out that the mass media basically plays a mechanism of othering. At the same time, the host society has always been the social structure that oppresses foreign workers (Bauder, 2005; Bauder & Gilbert, 2009; Rasinger, 2010; Familara, 2013; Cheng, 2016). However, reflecting on this kind of research has a tendency to regard the news media as a monotonous mechanism to consolidate a repetitious social structure that is the exclusion and oppression of others. Correspondingly, the mainstream news discourses have become an exclusive social construction without the possibility of playing a mechanism to accommodate minorities such as foreign workers. This paper argues that most of the relevant research perspectives ignore the possibility of changes in social structure, and therefore ignore the possibility that the role of the media will change under different social conditions. From the perspective of critical discourse analysis, the news discourses are close to the process of social change. It can also actively shape the practice of politics and society, and affect the social living conditions faced by foreign workers (Fairclough, 1995; Wodak, 2001). The rise of the name rectification movement around the world illustrates the variability of news discourse. Inferior groups can use name rectification to establish the sovereignty of cultural discourse and subvert the exclusive classification framework and power relations (Chiu & Chiang, 2012; Wang et al., 2018).

After the creation of the world-famous economic miracle, Taiwan entered the economic transition period after the 1980s. Foreign workers from Southeast Asia became Taiwan's increasingly dependent labor force. By 2018, their number has exceeded 700,000, and become the fourth largest group. However, they are also the most vulnerable group in Taiwan and have long been regarded as "others within others" (Tseng, 2004). The term "Wailao" (foreign labor) implies various class discriminations from the receiving society. The migrant-friendly movement that has emerged in Taiwan in the past decade has called on Taiwanese to use "Yigong"(migration workers) to call them and to try to subvert their social status. The migrant-friendly movement is close to Taiwan's development towards a human rights society. In fact, since the 1990s, Taiwan's mainstream value has been: to engage in social self-reform with multiculturalism. In this context, the research question raised in this study is: from foreign workers to migrant workers, from stigma (Wailao) to name rectification (Yigong), how does media representations of foreign workers change? This study will analyze the news discourses of foreign workers in Taiwanese mainstream newspapers from 1989 to 2018, and critically reflect on the role of the news media, whether it changes in response to

different social conditions. In conclusion, this article will discuss whether mainstream media in Taiwan can become a public sphere that accommodates outsiders.

Title: Smartphone and Social Media Usage and Addiction: A Survey of Generation Z

Session Type: Individual submission

Authors:

Name: Niaz Ahmed

Email: niazahmed2020(at) gmail.com

Country: US (United States)

Affiliation: Professor Emeritus, Saint Cloud State University, Minnesota, USA

Abstract: The smartphone and social media usage has grown exponentially among the general public and specifically within the Generation Z known as “Gen Z” or “Gen Zers” (Statista, 2015). The Generation Z is the demographic cohort born during the mid-1990s to mid-2000s and has followed the Millennials or Generation Y (Seemiller & Grace, 2016; Wood, 2013). In terms of the size of Gen Z, current estimate indicates that about one-third of world’s 7.7 billion people are Gen Zers (Miller & Lu, 2018).

While the advantages of the smartphone and social media are recognized, excessive use may have negative consequences, such as loss of productivity due to distractions at work, school, and family settings (Montag & Walla, 2016; Lin, Lee, Lin, & Chang, 2015). Social media may have certain negative effects such as increased stress, reduced face-to-face interactions, lower self-esteem, and depression (Hawi & Samaha, 2016; Pew Research Center, 2016; Nazir & Samaha 2016).

Although a significant amount of research has been done about the use of smartphone and social media among Generation X and Y, insufficient research exists about smartphone and social media addiction among Generation Z. Since the digital world is changing rapidly every year, it is important to track its usage and impacts on an ongoing basis for detecting any trends and correlations and for identifying significant implications for counseling and intervention for parents, educators, and policy makers.

This study contributes to the evolving knowledge by examining the implications of the addictive use of smartphone and social media among Generation Z. A survey was completed by a non-random sample of 415 students at State University of New York in Oneonta during the academic year 2017-2018.

The results revealed that more than half of Gen Zers spend nine hours or more in a typical day using their smartphones, and nearly one-third use social media for 7-10 hours per day. In terms of Gen Zers’ exposure to fake news, 9 in 10 students indicated that they had seen some news on social media that turned out to be fake news. More than half of Gen Zers use digital communication most often than face-to-face communication, and believed that smartphones had deteriorated their relationship skills and actual relationships, and that the use of social media had decreased their face-to-face communication.

Furthermore, more than half admitted that they were addicted to the Internet and social media, and that the use of social media had negatively affected their academic achievement, writing skills,

relationship skills, and actual personal relationships. As for Generation Z's political attitudes and behaviors, three-fourths asserted that the social media negatively affected their attitude toward the government and politics, deteriorated their social trust, and had increased their stress level sometimes.

The data analysis indicates that the Gen Zers are spending an excessive amount of time on their smartphones and social media, and that much of the consequences are negative. These findings may have significant implications for counseling and intervention for parents, educators, and policy makers.

Title: Why reading the news, political interest and political knowledge is not enough: The mediating role of discussion frequency for network heterogeneity

Session Type: Individual submission

Authors:

Abstract: The US Presidential Election 2016 and the pervasive partisan flow of information about the presidential candidates online have revived the notion of ‘filter bubbles’ (Pariser, 2011) and ‘information cocoons’ (Sunstein, 2006). Journalists, critics and opinion makers were quick in identifying the scapegoats of the surprising turnout of the election, blaming social media for creating an information environment that has reinforced existing beliefs and strengthened political polarization (cf., Stroud, 2010; Knobloch-Westerwick & Meng, 2011). In fact, personalized algorithms (e.g., on Twitter, Facebook) may enforce people’s tendency to solely reside in information environments and social circles that affirm their personal opinions, attitudes and points of views (cf. Pariser, 2011).

However, not only has recent research casted doubt on the so-called ‘filter bubble’ (Nelson & Webster, 2017; Zuiderveen Borgesius et al., 2016), part of the theoretical rational is also imperfect: citizens and voters are not active on the Internet or social media 24/7. Surely, recent figures show that 77% of Americans go online every day and 26% of Americans are online almost constantly (Perrin & Jiang, 2018). Yet these findings do not rule out that American citizens also get exposed to views and opinions about politics and current affairs when interacting with their peers in real-life settings. After all, the majority of people goes online for leisure and entertaining purposes rather than for political reasons (Park, Kee, & Valenzuela, 2009; Quan-Haase & Young, 2010). And political beliefs, attitudes and voting choices are still vastly influenced by face-to-face conversations with family members, friends and neighbors (Berger, Meredith, & Wheeler, 2008; Huckfeldt & Sprague, 1995).

It is in this vein that the discussion about the prevalence of like-minded information cocoons (Sunstein, 2006) needs to better incorporate the offline scenery theoretically and empirically. Furthermore, research needs to better explain why and under what circumstances people are more likely to encounter opinions and viewpoints that differ from their own - both online and offline (cf.

Choi & Lee, 2015; Lee, Choi, Kim, & Kim, 2014; Sunstein, 2018). Our research question thus reads: What are the structural processes that lead citizens to escape their common social circles when talking politics and public affairs?

To answer this question, we investigate the unique mediating role of discussion frequency for the manifestation of discussion network heterogeneity among citizens by using a two-wave representative panel survey in the US. Results do not only confirm previous findings that have identified (online) news use and discussion frequency (Brundidge, 2010) as influential factors for the degree of citizens' network heterogeneity, we also provide compelling insights for the important role that political interest, political knowledge and the consumption of news via various platforms play in this respect. Last, this study makes an important contribution in showing that the frequency of political discussion functions as the key element in explaining the mechanism that leads politically interested, political savvy citizens as well as regular news consumer to seek a more heterogeneous discussion network, disrupting the dangerous 'filter bubbles.'

Title: Social acceptance of new technologies: accompanying research and scientific advice

Session Type: Individual submission

Authors:

Name: Corinna Lüthje

Email: corinna.luethje(at) uni-rostock.de

Country: DE (Germany)

Affiliation: University of Rostock

Abstract: Social acceptance of new technologies is an important task of science communication. According to Wüstenhagen, Wolsink and Bürer (2007) social acceptance combines three dimensions: social-political acceptance, community acceptance, and market acceptance. Social acceptance can be achieved in a process of collective assessment, understood as complex interactions between technology and society, of a given project, integrating a plurality of actors (Fournis & Fortin 2017).

The aim of the interdisciplinary Space(at) Sea-Project is to develop artificial islands. The communication part of the project aims to accompany the design process and to promote the social acceptance of this new technology. First step of the communication research was a study on the experiences, needs and wishes of current and future inhabitants in order to make a suitable design for Living(at) Sea. A two-phased procedure was used. The first step was a survey of the project partners with the purpose to learn about their information needs. The second step was a qualitative questioning of experts (people with at least several months experience of living and working in artificial and isolated habitats). The interview guideline was based on the results of the survey of the project partners. The outcome of the investigation is a list of functional requirements for the design from the users' perspective in terms of comfort, availability, working conditions, design of the living area and the outdoor area, social life, leisure, safety, shopping, and ecology. Particularly aspects of media and communication were stressed by the participants.

Title: Polarization of opinions in social media: Investigation of the formation and fragmentation of discourse of localism in Hong Kong

Session Type: Individual submission

Authors:

Name: Miranda Ma

Email: miranda(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: Political discourse arises when it seizes discursive opportunities in the society by exploiting the social, political and cultural cleavages. It also evolves and transforms across the changing social and political contexts (Steinberg, 1999). This paper seeks to investigate the formation, transformation and fragmentation of the discourse of localism in Hong Kong. It is argued that the rise and evolution of the localism discourse is a response to the ethnic-civic cleavage in the society. Moreover, by examining the representations in the mainstream and alternative media, it is found that alternative media have facilitated the emergence of the localism discourse, but at the same time, reinforcing the fragmentation and polarization of the discourse in recent years.

The discourse of localism arising in Hong Kong focuses on the preservation of identity and autonomy of local citizens in resisting the growing political infringement by the Chinese authoritarian State into the political and social affairs of the Hong Kong Special Administrative Region (HKSAR). It also signifies the unprecedented realignment of the political dichotomy between the “pro-establishment camp” and the “democratic camp” that has been prevailing for decades in the political spectrum in the Hong Kong society. It is considered as a disappointment towards the democratic camp as it has adopted strong “anti-China” positions than the democratic camp overall (Kwong, 2016).

The traces of the localism discourse can be connected with the series of heritage preservation movement in the 2000s, whose activists fought to protect not Chinese high culture but mundane sites rooted in the everyday life of Hong Kong people. This notion of localism discourse embraced a post-materialist’ critique of capitalism, rejecting and carrying a ‘civic-oriented’ identification. However, the term localism was then fragmented into a more ethnic orientation in the later stages, striking for self-rule and autonomy in a more vigorous manner (Veg, 2017).

This paper, drawing on content and textual analyses from mainstream and social media, investigates how the social and political cleavages in the post-handover context in Hong Kong have paved the way for the rise and fragmentation of localism discourses. Moreover, the roles of social media in leading to formation of fringe voices, as well as facilitating polarization and ‘cyberbalkanization’ of the opinions among the localists would also be discussed.

Title: Party Identification and social distance on the third-person and first-person perceptions--take an example of the 85°C Bakery Café incident

Session Type: Individual submission

Authors:

Name: Yah-Huei Hong

Email: alicehong0323(at) gmail.com

Affiliation: Soochow University

Abstract: After Taiwan President Tsai Ing-wen passed through Los Angeles to buy a coffee at 85°C Bakery Café, the café has since received a barrage of attacks from Chinese citizens and state media by accusing it of supporting Taiwan independence and undermining China's sovereignty. Food delivery companies in China have removed the café's products from their platforms. 85°C Bakery Café lost \$120 million in stock market overnight.

Responding to the incident, Tsai Ing-wen claimed that Beijing's pressuring of Taiwanese businesses is not helpful to the peaceful development of cross-strait ties. However, the media of China reported that anything related to Tsai Ing-wen has become a market taboo for Taiwanese companies. Even though many Taiwanese media called the Chinese government's claim "Orwellian nonsense," some other media criticized that Tsai tried to manipulate the 2018 election via her stop by the café, which aroused people's anger toward Tsai.

However, not everyone had a negative attitude toward Tsai. Pan-green group always support Tsai no matter how, so they might perceive the media messages about the incident have impacts on others, but it definitely won't influence their attitude toward Tsai. For pan-blue group who always dislike Tsai, they might perceive the media messages have influenced them to more dislike Tsai, but not necessarily has the same impact on others. The pan-green's perception is so called the third-person effect hypothesis (Davison, 1983) and the pan-blue's perception is the first-person perception (Atwood, 1994; Gunther & Mundy, 1993). According to the literatures (Cohen, Mutz, Price & Gunther, 1988; Meirick, 2005), social distance can be a mediated variable for the third-person effect, thus this variable will also be taken into account in this study.

To explore how much people dislike President Tsai, a big data analysis was applied by using QSearch Trend software, which covers 850000 media fan pages and personal fan pages. And to verify the third-person and first-person perception, an online survey was utilized. The InsightXplorer Limited in Taiwan was commissioned to conduct the online survey and the sample for this study was drawn from its Cyber Panel database - the biggest database in Taiwan, and 1000 random samples were collected finally.

The findings of the big data analysis showed that there were more than 26000 Facebook Unlikes for the President Tsai concerning this incident. The results of the online survey indicated that pan-green group tended to have the third-person perception, no matter for comparing self to others who live in the same county or different counties. However, there is no significant difference when comparing the people who live in the same county to the people who live in different counties. That also means for the pan-green group the hypothesis of social distance was not supported. Nonetheless, for the independent people, all of the three comparisons above showed significant difference. Third-person effect really exists among the independent people. Finally, the first-person perception surprisingly did not appear in the pan-blue group. The authors will provide possible reasons for the above results in the end of the full paper.

Title: Information Processing, (Mis)information, and the Role of Social Ties on Social Media in Turkey

Session Type: Individual submission

Authors:

Name: Suncem Kocer

Email: suncem.kocer(at) khas.edu.tr

Country: TR (Turkey)

Affiliation: Kadir Has University

Name: Cigdem Bozdag

Email: cigdem.bozdag(at) khas.edu.tr

Country: TR (Turkey)

Affiliation: Kadir Has University

Abstract: Against a backdrop of an increasingly polarized media culture, Turkey ranks first in a list of countries where people complain about fake news, according to the recent Reuters Digital News Report. While fake news circulate through social media platforms and digital communication channels fast and wide, publics in Turkey engage with news and information increasingly through social media platforms and instant messaging services. In a context like Turkey where media are utilized as a gizmo of political propaganda, users' engagement with online information is especially politicized. In this paper, our argument is twofold. First, different types of social ties play a key role in publics' access, assessment, and dissemination of content against a backdrop of increased political polarization. Second, Turkey presents a significant context for studying information processing behaviors of social media users in relation to strong and weak social ties (that is the strength of their bonding through invested time, emotional intensity, intimacy and reciprocal services) and for understanding dynamics behind the spread of misinformation. Focusing on Facebook, Twitter, WhatsApp, and Instagram, our research data will be collected through utilization of multiple research techniques including focus groups, media diaries, and semi-structured interviews. The timeframe is within the 4 months before and after the local elections in Turkey on 31 March 2019. Social media users in Turkey develop strategies of content assessment and circulation and tailor their strategies according to their specific target audiences and social ties by utilizing the tools of specific platforms. We claim that a cross-platform analysis looking at users' perceptions and experiences in different platforms and with divergent social ties is key for understanding how and to what end (mis)information is being received and circulated through the Internet.

Title: Influence of Media Exposure on Perceptions of Media Credibility: The Mediating Role of Political Knowledge

Session Type: Individual submission

Authors:

Name: Mistura Salaudeen

Email: 18481264(at) life.hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Email: 18481809(at) life.hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Name: Steve Guo

Email: guo(at) hkbu.edu.hk

Country: HK (Hong Kong)

Affiliation: Hong Kong Baptist University

Abstract: With the rapid advances in new media technologies, rise of partisan reporting and rampant presence of fake news, the need to investigate public perceptions of media credibility has assumed new social relevance and historical urgency. This study examines the extent to which different patterns of media exposure influence credibility judgment. On the assumption that rational evaluations are information based, we elaborate the relationship by looking at the mediating role of current event knowledge. The study is contextualized in Hong Kong where local print media and their audiences are the main units of observation. Operationally, at the news consumption end, we construct a scale ranging from non-users through skimpy scanners to avid readers. At the perceptual end, we separate credibility evaluations into three categories: perceived public interest of the media, perceived information quality produced by the media, and perceived metropolitan connection of the newspaper. We propose that regular exposure to newspapers is likely to lead to high knowledge of current political issues and consequently lead to poor perceptions of newspaper credibility. Analyses of valid data from a random sample survey of 529 local Hong Kong residents reveal several interesting findings: 1) There is a significant positive correlation between the frequency of respondents' newspaper readership pattern and their level of political knowledge, albeit at a superficial level, suggesting that regular readers of newspapers in Hong Kong are more conversant with current events than less frequent readers and non-readers of newspapers. 2) There is a significant negative correlation between respondents' level of political knowledge and their perceptions of newspapers' credibility along the dimensions of public interest and metropolitan connection. 3) However, we found a non-significant relationship between respondents' political knowledge and their perceptions of newspapers' information quality. These findings indicate that respondents with high knowledge of current political issues have poor perceptions about the public interest and metropolitan connection of newspapers, thereby judging the credibility of newspapers harshly. Also, we deduce that the more time respondents spend reading newspapers, the more

knowledge of local issues they have, as opposed to their limited knowledge of non-local events. Furthermore, there is no direct relationship between respondents' level of political knowledge and the quality of information disseminated by Hong Kong newspapers. Thus, political knowledge mediated the extent to which respondents evaluated the credibility of newspapers in Hong Kong. Theoretical and social implications are discussed.

Affiliation: Tsinghua University

Abstract: The extent to which nationalist discourse is transferred between the upper authority and the people remains unclear. That is, does it follow a top-down or bottom-up direction? Taking Chinese nationalism on social media as a research context, this study applies a network agenda-setting (NAS) approach to empirically analyze how nationalist issues are connected and are thereafter transferred among different actors, including official organizations, social media influencers, and ordinary individuals. Based on large-scale data discussing two interrelated nationalism events on the microblog Weibo (N of total tweets= 25,185), supervised machine learning is employed to identify issue categories while semantic network analysis is completed to construct issue networks. The results of multiple regression quadratic assignment procedure (MRQAP) indicate that, on one hand, the assumptions of NAS are supported (i.e., when discussing the same event, organizations and influencers set the agenda-- issue networks--for individuals) and, on the other hand, the construction of nationalism somewhat follows a bottom-up direction (i.e., how individuals discuss one nationalism event impacts the way influencers and organizations discuss the subsequent event). Implication is discussed: First, this study shows good potentials to extend the application of NAS, from election to nationalism; Second, it empirically clarifies the direction of construction of nationalist discourse in the online settings, shedding light on the role of Internet in interfering in discursive production of nationalism; Third, it brings forth a reconsideration of “individual” and “media” agenda in an era of social media.

Title: "You're All Fake!": Imaginaries of Manipulation and the Representation of Public Opinion on Social Media

Session Type: Individual submission

Authors:

Name: Yoav Halperin

Email: yoavhal(at) gmail.com

Country: US (United States)

Affiliation: New York University

Abstract: This paper examines the growing public awareness of manipulative agents that seek to derail political conversations on social media in Israeli society. Particularly, it investigates the manner in which this awareness is shaping Israeli Facebook users' interpretations of their online experiences. Drawing on a two-year ethnographic study of political interactions between right-wing and left-wing Facebook users in Israel, I show that many users have become alert and often reference the widespread online presence of automated bots, paid commenters, and provocation-loving trolls. I argue that users' constant (yet often speculative) allusions to the presence of manipulative agents allow these users to negotiate, challenge, and raise competing claims regarding whether certain prominent voices on social media are reflective of actual public opinion.

The existence of manipulative agents on social media has by now become a well-established fact. As studies show, over the past two years manipulative online actors have been deployed in campaigns to influence public opinion in a host of countries across the globe, including Israel (Bradshaw & Howard, 2018).

While crucial for understanding how manipulative actors and misinformation campaigns are shaping online information environments, however, scholarly attempts to detect and measure the scope of such operations only tell part of the story. Just as significant is the fact that ordinary social media users have become aware of the potential possibility of being exposed to various manipulative agents. Users today, in Israel as in other places, understand that the social media environment is filled with fake profiles; they know that many of the comments and posts they encounter online may be authored by automated bots; and they realize that other users with whom they interact may very well be disingenuous trolls. Manipulative agents, in other words, do not just manipulate users' imaginaries, but also give rise to imaginaries of manipulation. Their potential presence breeds a culture of online suspicion and often embroils users in arguments over what, and more importantly, over who is actually "real."

The aim of this paper is to elucidate some of the main facets of this culture of suspicion, and to analyze the ways in which it plays into how public opinion manifests itself on social media. To do so, I rely on interviews I conducted with politically-engaged Israeli users between 2016-2018, as well as on a qualitative analysis of discussion threads that appeared on widely-followed Facebook pages during this period. Drawing on such materials, I address Israeli users' understanding of and reaction to manipulative online agents such as "fake profiles," paid-commenters, and trolls. I examine why and when certain users choose to label their interlocutors as manipulative agents. And

most importantly, I show how such acts of labeling and allusions to the ubiquity of manipulation perform an important discursive function, in that they enable users to either resist or advance competing online representations of the Israeli public's political positions.

Abstract: Throughout its roughly six decades of history Artificial Intelligence (AI) has gone through phases of enthusiasm, in which the prospect of thinking machines was envisioned as a proximate future, as well as through phases of disappointment, in which its promises seemed far to be fulfilled. In the last few years, however, AI has experienced a new “summer” (Natale & Ballatore 2017) with the launch and the experimentation of products such as intelligent assistants, semantic search engines and self-driving cars, and the emergence of a rising range of fictional and non-fictional narratives through which visions of intelligent systems are represented and imagined at a socio-cultural level (Goode, 2018). As a recent report underlined, these visions run the risk of exaggerating both hopes and fears about AI, affecting public debate and the governance of these technologies (The Royal Society 2018).

The panel aims to explore the socio-cultural impact of fictional and non-fictional narratives of AI, focusing especially on a particular strand of representations and visions about AI: the portrayal of relationship between machines and humans as shaped by empathy. As media historian John Durham Peters (1999) famously underlined, empathy is a key component of the dreams and fears that people have attributed to communication media throughout history. For what concerns AI technologies, the idea of love and empathy between humans and machines has been a long-standing trope in science fiction, however it has recently gained new momentum as the idea of building sympathetic relationships with robots and AI systems entered into wider discussions about machine agency and ethics (Gunkel, 2012). Yet, narratives on “emotional” or “empathic” AIs do not only affect the social and cultural perception of an artificial alterity. Crucially, they also reveal the way in which human agents perceive and imagine themselves as social beings, whose humanity is defined and informed by their relationships with others. In this sense, narratives and visions about AI also provide new pathways to imagine and reimagine political and social issues such as inequality, individual rights, and human dignity.

Moving from this twofold narrative dimension of AI narratives, the panel aims to explore how different actors such as digital media companies, researchers, and sci-fi authors have narrated and articulated empathic relationships between humans and intelligent machines. Furthermore, the panel

aims to investigate how fictional and non-fictional narratives coming from different fields may influence each other, thus contributing to the construction and the articulation of a social imaginary of AI. By comparing and intertwining exemplary case studies, five panelists embracing different national and institutional contexts, career stages, and disciplinary approaches will explore how narratives of empathic intelligence have shaped and driven social discourses on the rise of AI in society.

Title: A Beautiful Play: Deep Blue, AlphaGo and the Social Trust in AI

Session Type: Panel Submission

Authors:

Name: Paolo Bory

Email: paolo.bory(at) usi.ch

Country: CH (Switzerland)

Affiliation: USI Università della Svizzera italiana

Abstract: Since the birth of computer sciences, artificial intelligence has been studied, tested and imagined through board games like chess and Go. In the last decades, after a long series of experiments at academic level, also digital media companies have used board games to test and especially to show the progress of their new intelligent systems. In this context, challenges between human champions and new prototypes of AI have been portrayed as watershed moments in which a new artificial mind has come into being, even threatening the supremacy of the human race. Furthermore, games like chess and Go, coupled with spectacle, have become a distinctive narrative tool to expose not only new technological artefacts, but also new forms of human-machine interaction. The paper compares two key-events that marked the narratives around the emergence of AI in two different time frames: the game series between the Russian world champion Garry Kasparov and the IBM supercomputer Deep Blue held in New York in 1997; and the GO game series between the South Korean champion Lee Sedol and DeepMind's artificial intelligence AlphaGo held in Seoul in 2016. Relying on a corpus of primary and secondary sources such as newspapers and specialized magazines, biographic books, the live broadcasts and the main documentaries reporting the challenges, the paper investigates the way in which IBM and Google DeepMind used the human-machine competition to narrate the emergence of a new, deeper, form of AI. In particular, the comparison between the two narratives highlight how the Kasparov-Deep Blue match was presented by broadcasting media and IBM itself as a conflictual and competitive form of struggle between human kind and a 'hardware-based', 'obscure' 'humanlike' player. While on the other hand, the social and symbolic message promoted by DeepMind and the media conveyed a cooperative and fruitful interaction with a new 'software-based', 'transparent' and 'un-humanlike' form of AI. The two case studies show how AI companies mix narrative tropes, gaming and spectacle in order to promote in different ways and through different values the newness and the main features of their products. In particular, recent narratives of AI based on human feelings such as beauty and trust can shape the way in which the presence of intelligent systems is accepted and integrated in the near future. In this regard, the narrative of the game series with AlphaGo is an example of how the imaginary of AI can be exploited in the AI sector to convey the idea of a trustable and ethic company, capable of creating cooperative and empathic prototypes of new intelligent companions.

Title: Unhinging the Discourse: Is Public Debate about Artificial Intelligence Contaminated or Enriched by Science Fiction'

Session Type: Panel Submission

Authors:

Name: Luke Goode

Email: l.goode(at) auckland.ac.nz

Country: NZ (New Zealand)

Abstract: AI experts frequently express a double-edged attitude towards science fiction. On the one hand, sci-fi can be a rich source of inspiration for technologists themselves, influencing career paths, aspirations and even specific projects. On the other hand, it is frequently accused of filling the heads of the general public with bad science, unrealistic expectations and 'magical thinking.' Typically, of course, mainstream science fiction dramatises AI through scenarios that depict it acquiring—or at least provoke the question of whether could actually acquire—'sentience,' and with it the capacity to experience rather than merely simulate feelings such as resentment, vengefulness, humiliation, love, compassion, joy, or empathy. The appeal of an AI-based sci-fi narrative also commonly hinges on its power to evoke an empathetic response towards AI 'protagonists' on the part of audiences.

AI experts understandably worry not only that lay members of the public are ill-equipped to disentangle plausible science from fictional dramatisation, but also that sci-fi tropes seep all too easily into popular news and non-fictional media narratives that fixate on the prospect of AI 'going rogue' or robots 'rising up' against their human masters — or alternatively, that human relationships will be irreparably damaged as we develop increasingly intense bonds with machines that tend to our emotional needs. Moreover, there is justified concern that, in the shadow of science fiction, popular coverage of AI is frequently missing the point because it fixates disproportionately on 'sexy' but largely speculative narratives about general purpose and anthropomorphic AI, at the expense of focusing more on the narrow purpose AI applications and algorithms that are already transforming society in powerful but relatively opaque or poorly understood ways.

In this presentation I will explore the way science fiction figures as part of broader concerns that public and media discourse around AI has become 'unhinged' from reality. But I will also argue that we need to consider the other side of the ledger and ask what positive role this popular culture genre can play in fuelling public debate about AI and its potential role in shaping the future. Science fiction certainly plays an important role in popularising (if not democratising) interest in an increasingly important but complex technological domain beyond the narrow realm of expert and elite interest groups. But more than this, I want to claim that it has a unique role in provoking important questions about post-human subjectivities and about ethical and emotional relations between human and non-human entities — questions that urgently need to be aired as AI grows in sophistication, complexity and social scope, but which risk being sidelined by scientific and technocratic discourses. To that extent, I will suggest that science fiction is capable of 'unhinging' the discourse in some valuable and productive as well as problematic ways.

Title: If Software is Narrative: Joseph Weizenbaum, Artificial Intelligence and the Biographies of ELIZA

Session Type: Panel Submission

Authors:

Name: Simone Natale

Email: s.natale(at) lboro.ac.uk

Country: GB (United Kingdom)

Affiliation: Loughborough University

Abstract: Software is usually studied in terms of the changes triggered by its operations in the material world. Yet to understand its social and cultural impact, one needs to examine also the different narratives that circulate about it. Software's opacity, in fact, makes it prone to being translated into a plurality of narratives that help people make sense of its functioning and presence. Focusing on the case of Joseph Weizenbaum's ELIZA, widely considered the first chatbot ever created, this paper proposes a theoretical framework based on the concept of 'biographies of media' to illuminate the dynamics and implications of software's discursive life. The case of ELIZA is particularly relevant in this regard not only because of its relevance in the history of digital media – the programme was in fact, as Andrew Leonard (1997) put it, 'bot erectus, the first software program to impersonate a human being successfully' – but also because ELIZA became the centre of competing narratives, whose trajectories largely transcended the actual functioning of this programme and shaped key controversies about the implications of computing and AI (pp. 33–34).

While ELIZA's creation at the Massachusetts Institute of Technology (MIT) in 1964–1966 was inspired by programmer Joseph Weizenbaum's determination to stress the illusory character of computers' intelligence, some of the narratives emerging from it reinforced the idea that machines think and understand language in similar manners as humans. Consequently, the software became a contested object that was interpreted as evidence in favour of two different, even contrasting visions: on the one side, that AI provides only the appearance of intelligence; on the other, that it may actually replicate intelligence and understanding by artificial means. In this sense, the case of ELIZA shows that the polarization of ongoing debates about AI is part of a longer history, on whose trajectory this article sheds further light.

Drawing on Weizenbaum's writings, on computer science literature, and on journalistic reports about Eliza, the paper discusses the programme's reception within computer science and AI research as well as in the popular sphere. As ELIZA's alleged capacity to talk attracted the attention of wide audiences in the United States and the world, and Weizenbaum's book *Computer Power and Human Reasons* (1976) became a popular success transcending the boundaries of the discipline, his creation presented AI in ways that sharply contrast with the vision of human-machine symbiosis that have dominated computer science since the 1960s. The paper will argue that the impact of this alternative vision was not without consequence, guiding the development of critical approaches to digital media as well as actual technologies and pragmatic strategies within AI research aimed at exploiting humans' liability for deception in their interaction with machines.

Abstract: The significant role of Social Networking Sites (SNSs) as an online communication platform is growing rapidly in modern society. Considering the huge influence and importance of SNSs, we need to pay careful attention to its negative impacts as well as positive aspects. There is growing concern that people often post alcohol-related contents online, which may result in increased alcohol use and following problems. This phenomenon becomes more problematic when it comes to adolescents' SNS use since alcohol-related postings can trigger problematic drinking among adolescents which itself is already a serious problem in the US as well as South Korea.

Many studies already had reported concerns about binge drinking and related problems among young adults including college students in both countries. A number of previous studies have suggested that exposure to alcohol-related content is positively related to alcohol consumption (e.g. Boyle et al. 2016; Huang et al., 2014; Miller et al., 2014; Moreno et al., 2014; Westgate et al., 2014). Although the studies focusing on an overall model of alcohol-related posting motivations are scarce, there are still some studies that mentioned one or two specific intentions for alcohol-related posting. The current study includes the motives of alcohol identity clarification, relationship maintenance, entertainment, information, social norm, and self-expression as reasons for referring to alcohol on SNSs. Thus, this study aims to investigate the motivation of SNS alcohol-related posting among young adults. Then it proposes that three kinds of cognitions about alcohol: a) belief about outcomes of drinking (i.e., alcohol expectancies), b) the perceived pervasiveness of drinking

(i.e., alcohol norms), and c) prototype of the typical drinkers (i.e., alcohol prototypes) can affect the motivations of posting alcohol-related content. Also, the study examines cultural differences between the US and Korea.

203 American participants and 233 Korean participants completed an online survey measuring alcohol use, Facebook use, alcohol expectancies, alcohol norms, alcohol prototypes, experience of exposure to alcohol-related postings, alcohol-related content posting behavior, and the motivations of alcohol-related content posting.

The preliminary results using path analysis showed that alcohol expectancies was a positive predictor of the motivations for relationship maintenance, entertainment and information and exposure to alcohol-related postings was a positive predictor of the motivations for identity clarification, relationship maintenance, social norms and self-expression. Some cross-cultural differences were obtained as well.

This research is meaningful to modern society in the US and Korea especially, since problematic drinking and consequential adverse effect are major issues amongst young adults in both countries. As exposure to alcohol-related posting is known to trigger drinking behavior, defining the motivation and understanding cognitive process of alcohol-related posting on SNSs should be a meaningful action towards preventing alcohol-related posting behavior. Related departments or SNS managers may refer to this study to secure users from alcohol-related contents that may cause social problems. Since the study has the limitation that it focuses on participants with a certain age and two nationalities only, future research may attempt to extend this study by including different age groups or other nations.

Title: Powerful Communication - Career Advancement in Communication Science

Session Type: Individual submission

Authors:

Name: Franziska Thiele

Email: franziska.thiele(at) uni-rostock.de

Country: DE (Germany)

Affiliation: University of Rostock

Abstract: In 1984 Bourdieu published a book called *homo academicus* in which he analyzed the power structures of the scientific field in France. In his work he identified several forms of capital into which scientists invested to accumulate power. 35 years have passed since then and the digitalization as well as the widespread usage of the internet have changed old and created new forms of communication within the field of science, thus altering the possible capitals scientists can invest into. Especially social media such as (academic) social networking sites, microblogs and blogs, but also new forms of (open access) publications have induced changes onto the scientific field. This raises the question, if the description of the capitals of science needs to be altered as well. Social scientists have been found to be rather active users of social media (Nicholas & Rowlands 2011; Moran, Seaman & Tinti-Kane 2012). As media are the material object of communication science it is likely that the knowledge about new media innovations and their usefulness for scientific communication is high among communication scientists. Thus the research question “what communication strategies communication scientists apply in order to accumulate power in their field” was developed. 16 German communication scholars from all three status groups (doctoral students, post-docs and professors) were interviewed in qualitative interviews on how their communication had changed since they first started studying and what communication strategies they found most useful for career advancement in the field of communication science. The interviews were analyzed with the qualitative content analysis by Mayring (2010). On the foundation of Bourdieu’s work, the interviews with the German scientists as well as current findings from literature the author has developed a theoretical model of communicative capitals, which scientists can invest into, in order to advance their career. Those communicative capitals are publications, teaching, presentations (e.g. on conferences), networking, presence in journalistic media and the use of social media (like Twitter, Academia or Facebook). The most important factor for the interviewees -as eight of them mentioned it - was networking as communication science is a small subject. “You know each other, you know how the others tick, you can't just step on your toes. And I think in this constellation it is important with whom you can work and with whom you are connected and who supports you if necessary.” (professor, male). The interviewed considered publications in international, peer-reviewed journals as the second most important factor to advance their career. Presentations were found to be less important, but helped to increase visibility, which was also the case with presence in journalistic media and activities on social networks, which according to the interviewees gained importance. Teaching was not considered to be an important factor “Nobody gets a professorship for good teaching.” (professor, female) This indicates that it might make sense to add the presence in social media as a new form of scientific capital and that presence in journalistic media as a form of outreach is getting more attention.

Abstract: Southern European countries have become crucial spots in the reception of refugees and migrants. Even when Greece and Italy have been on the focus of the Mediterranean crisis, other destinations such as Spain are becoming a new spotlight in 2018. This paper analyses the stream of Twitter messages in Spanish referring the boat Aquarius just before and after the announcement of Spanish President Pedro Sánchez (around noon of June 11, 2018) to authorize and welcome the ship. Hate speech refers to all the discourses that deteriorate the image of a person or a group of individuals based on their inherent or acquired condition. Based on previous studies that have found that certain events can trigger and even modify the public perception of refugees (Zhang & Hellmüller, 2017; Nightingale et al., 2017), we hypothesize that the average of negative messages as well as the hateful comments increased after the official announcement to welcome the Aquarius. We retrieved raw tweets at large-scale in real time using the Stream API of Twitter from June 8 to 17, 2018 (N=26,237), filtering those that declare language in Spanish and include “#Aquarius” in the field text. Two independent coders with previous training content analyzed the complete sample in order to obtain the General Sentiment (-1 Negative, 1 Positive, 0 Informative/Neutral), the inclusion or not of Hate Speech towards refugees and Hate Speech towards politicians. These categories overpassed the inter-coder reliability test ($K\alpha > 0.70$) in a random sub-sample of 1,000 messages. In addition, we run automated sentiment analysis based on a lexicon or dictionary, using SentiStrengt to the get the Language Sentiment. We found that most of the messages were positive (54%), informative/neutral (16.1%), or unrelated or written in other languages (5,8%). However, we found a significant part of negative messages (24.1%) that included hate speech against refugees (12.1%) and rejection against politicians (812%). The automated sentiment analysis detected a non-significant bias of negative words ($M = -0.04$, $SD = 1.69$). When we compare the online hate speech against refugees before ($M = 0.17$, $SD = 0.38$) and after ($M = 0.16$, $SD = 0.37$) the announcement, our analysis found that there were not statistical differences between the two groups, $t = 0.523(10120)$,

$p > 0.05$. By contrast, the general positive sentiment significantly increased from 0.31 (SD=0.79) to 0.4 (SD=0.88), $t = -3.375(1342.697)$, $p = 0.000$, and also the language sentiment became significantly less negative from -0.16 (SD=1.63) to -0.02 (SD=1.69), $t = -2.701(1496.475)$, $p = 0.000$. This means that even when the amount of hate speech against refugees remain similar, the messages discussing the Aquarius topic became in general more positive after the Government announcement, leading an opposite direction of our original hypothesis. We conclude that there was a high support in Twitter in Spanish regarding the welcoming of the boat Aquarius, and that the amount of online hate speech against refugees or politicians was not modified by the official announcement, and that by contrast this decision increased the positive sentiments. As limitations, we acknowledge that these results cover only the initial social media reactions and that supervised sentiment analysis may produce better results in the automatic classification.

Abstract: The public sphere has long been argued to be an essential element of strong democratic societies (Dewey; Habermas). The value on news to society often builds on the contribution of news to the public sphere and a healthy democracy, contributing vital resources for processes of information gathering, deliberation, and action (Fenton). Newspapers are an important forum in this public sphere, and indeed for a long time were considered the preeminent institution of the public sphere (Habermas). People expect the news to provide them with useful, reliable, and amusing information (Coleman et al.). Though the Fourth Estate has been a flexible concept, the ideal of the media as a Fourth Estate remains grounded on the notion that the media play an essential and highly political role with regards to the checks and balances that hold the powerful to account, a role that is at the core of the media's self-definition as the Fourth Estate (Schultz).

Critical theorists have long questioned these ideal-type expectations of the press. There is little empirical evidence to support the claim that the media are meeting the expectations that justify their rights (Callaghan and Schnell). Numerous studies have shown that the press does not live up to the ideals of a Fourth Estate (Curran and Seaton; Fenton), especially regarding the watchdog and civic journalistic roles (Hallin and Mellado; Hackett). Contrary to the watchdog role, some scholars argue that such coverage, perhaps intentionally, benefits those best served by public silence (Djerf-Pierre and Shehata), an argument consistent with perspectives found in critical media studies, such as the propaganda model (Herman and Chomsky).

This article reports on a study in which we set out to find evidence relevant to assumptions prior to normative debates over the role of the media in public debate. We conducted a systematic, longitudinal and in-depth analysis of newspaper coverage of the framing and problematization of the chicken meat production industry in the UK over three decades. We operationalised normative expectations through a series of concrete expectations against which we contrast the results of a two stage framing analysis: first, a theory-driven inductive stage (building on the work of Entman, Chong and Druckman), followed by a second and deductive stage.

While it might make sense – both theoretically and empirically – to ask of individual or collective actors what role they played, asking these questions of the media presumes that they are able to provide such accounts, that individual level results speak to collective characteristics, and that they behave as a coherent actor. Our epistemological challenge then was to develop an understanding of the role of media without starting out from the presumption of their coherence as an actor. The path we chose was, through painstaking examination of a case, to describe the mechanics of the process of public debate in, through and with the media, and then discuss the implications of our empirical findings for our understanding of the role of the media in such processes.

Title: Communicating with fictional television: 'Lifeworld' and 'practical sense making' revisited

Session Type: Individual submission

Authors:

Name: Susanne Eichner

Email: seichner(at) cc.au.dk

Country: DK (Denmark)

Affiliation: Aarhus University

Abstract: Research on the cultural circulation of television is underpinned by either cultural imperialism theory or the works of those rejecting it. Yet, both camps still take the concept of nation as their starting point. In this paper, I provide a way of conceptualizing the engagement with fictional television series as social practices, pleasures and meaningful consumption within the idea of lifeworld (see Schutz & Luckmann (1973) and Habermas (1981/1984). I argue that the television drama series provide practical sense making to their viewers (Weiß 2001): that is to say, that viewers engage meaningful with the cultural products regardless of their national or cultural belongings. Instead of operating within the logic of culture, practical sense making is located in the social and within an interactionist perspective rather than within culture. It refers to meaningful topics for viewers which resonate with their life circumstances, their life phases, their value-belief system and attitudes and their central life course themes: in short, they resonate with the viewers' lifeworlds. This enables viewers to negotiate thronging topics and relevant themes regardless of how culturally close or distant they might feel to the presented way of life. In other words, television fictions do not only appeal because they are similar to our own views, cultures or norms or raise curiosity related to their exoticism, but they also appeal because they allow us to negotiate topics that are of particular relevance at a particular moment in our lives. The present perspective on audiences and reception process takes as its point of departure active and acting audiences that are "doing media" (Eichner 2017) as part of their social, everyday life activities. Audience doings are hence everyday life practices that are meaningful by providing "practical sense making" to the viewers both individually as well as socially. This paper draws on empirical data from a worldwide 9-country audience study using focus groups and individual interviews.

Title: Bidirectional oriented communication of public institutions: the case of Quebec City, Canada

Session Type: Individual submission

Authors:

Name: Osiris González Galván

Email: osirisglezgalvan(at) gmail.com

Country: MX (Mexico)

Affiliation: Université Laval

Name: François Demers

Email: Francois.Demers(at) com.ulaval.ca

Country: CA (Canada)

Affiliation: Université Laval

Abstract: The contemporary public space allows the birth of new varied forms of interactivity among the actors, thanks to the new media structure that is integrated by digital micro ecosystems. These micro-ecosystems can be appropriated by the actors, individually or collectively, to achieve a specific objective.

This text is interested in a case of collective appropriation, specifically one of the subaltern elements of the State: public institutions. This study focuses on Quebec City, capital of the province of Quebec, Canada; and the interactions that this institution develops with other actors through the digital platform YouTube.

The study of the presence and activity of Quebec City on this digital platform was made based on two general premises: first, that the appropriation of institutions is carried out in an ideal of public communication, based on the democratic idea of promoting horizontal and bidirectional exchange. And the second premise, that the appropriation of new media is a gradual and differentiated process for each group of public actors.

This research suggests that there is a change in the conditions established in the communication contract that public institutions establish with other actors; this new engagement develops in three levels: 1) Functional, 2) Decisional and Political.

The Functional level aims to inform citizens about the services offered by the institution; the decision level, is responsible for the description of public policies, current and future; while, the political level, is related to electoral issues and political debates at the municipal level.

These three levels generated by the new communication contract generates three types of discourse that is determined by the new position adopted by citizens and public institutions, as well as a new set of rules that are the subject of constant debate and negotiation.

Title: Theorizing Twitter as an Instrument of Civil Society for Freedom of Speech'

Session Type: Individual submission

Authors:

Name: Friedrich Krotz

Email: fkrotz(at) yahoo.de

Country: DE (Germany)

Affiliation: University of Bremen

Abstract: In the 1920s, the dramatist Bertold Brecht demanded a reversed radio with which people could not only listen but also present their own ideas and comments. In some ways, Twitter is such a thing – in a written form, not by spoken language.

However, today Twitter has a bad image: full of hate speech and fake news, abuse by politicians like Trump, manipulation by organized groups or paid agents, far too many bots that can't be recognized, programmed to influence public opinion. It seems that Twitter as an arena for the freedom of speech has turned into an arena of manipulation, lies and aggression. This today is discussed mainly in terms of what truth is, and with reference to the personal morality of the single individual Twitter users. In addition, laws are being passed in various countries that allow or even oblige Twitter management to control and delete participants' tweets, without taking into consideration that this may end in censorship. Of course, such discussions and such laws are necessary in specific cases. However, such a reverse written radio, on which everyone can express his or her views, must also be viewed from the perspective of freedom and democracy.

Thus, with reference to the mediatization approach, it seems necessary to ask, how Twitter may become helpful for making the public sphere more democratic as an instrument of civil society.

Then other ideas are coming up:

- o If we look at the media character of Twitter: People usually learn to write and read, but hardly anyone has ever learnt to engage in discussions with unknown people by means of writing – the use of Twitter thus requires a specific kind of media literacy. This media literacy must also take into account that with regard to globalization, individualization, and diverging cultural orientations, misunderstandings may happen easily.

- o If we look at the interests of the owners, they mainly collect data in order to earn money and thus disturb political communication by ads, which is forbidden for example for German Television news. This contributes to mistrust of the users.

- o If we look at the internal organization of Twitter, it is not recognizable who wrote a tweet in which interest, and this makes communication complicated and may contribute to insecurity and anger of the participants, as there are politicians catching votes, robots which ultimately do not react to arguments, professional agents, who do their jobs, and mobbing celebrities.

- o In addition, it would be important to look at more comprehensive theories that show how societal conditions affect people's communication: Jean Paul Sartre („the hell, that are the others“), Herbert Marcuse („The onedimensional man“), Erich Fromm („The fear of freedom in capitalistic societies“), David Riesman et al. (“from inner- directed to other-directed”) for example have been concerned with that.

Presenting and discussion these ideas with reference to empirical research, we will develop some proposals how to change Twitter such that it may become more focused on democratic necessities and the use of civil society.

Title: Communicative resources in digitalized societies. An essay on the ecology of mediatization.

Session Type: Individual submission

Authors:

Name: Irene Neverla

Email: irene.neverla(at) uni-hamburg.de

Country: DE (Germany)

Affiliation: University of Hamburg

Abstract: Recently, the discourse on enraged societies and on dystopy rises, claiming that mediatized and highly digitalized societies overcharge individuals excessively, and so would media industry, journalism and social media do. What was called “nervous society” around 1900 is now debated as enraged society or “affective publics” (Papacharissi 2015), focusing mostly on the impact of digitalized mobile communication. Obviously, periods of extensive dynamics in social and media change fuel these debates.

This paper aims to conceptualize the current debate from the perspective of communication theory, particularly concerning three resources of communication: time, space, attention. These are fundamental components in the ecology of highly mediatized societies, and will be discussed not only in terms of challenges but also of resilience on individuals and societal level. Based on theoretical considerations some core empirical data will be explored.

Capitalism and digitalization seem to ‘annihilate’ time and space. Data from media analyses and audience and users’ research show that today more stimuli are processed in shorter time periods, thus accumulating the speed of communication or even providing synchronicities. Similarly, ‘annihilation’ of space seems to provide ubiquitous shifts between close and distant places, thus creating ‘non-places’. How can individuals cope with ‘annihilations’ of time and space vis-a-vis non-changing biological rhythms (like metabolism) and thus respect nature? How can society respect human rights, economic justice and a culture of peace under the pressure of speed and non-places? How could we, individually and as communicative communities, adapt resilience and find alternative modes to cultivate communicative resources?

For the communicative resource of attention, besides time and space, also mental, cognitive and emotional capacities of inclusion and exclusion are required. Again, the issue of challenges and resilience arise. Patterns of public attention are coined, if not dominated by routines of journalism as core institution of public communication, but also by social media and its algorithms. What is the impact of journalistic routines (like scandalization, dramatization, entertaining) and algorithms (like number of users and likes) on the public attention? How would we define and dispose communicative waste, garbage, information-overkill? How do we define and store information, that we consider worth to be kept on safe places, for the individual and for collective memory and thus for future generations?

Finally, this conceptualization of communicative resources touches upon the ecological concept of sustainability, which usually refers to natural resources like water, or to material goods.

Consequently, this paper will raise the question whether our handling of communicative resources meets “the information needs of the present without comprising the ability of future generations to meet their own (...) information needs.” (Berglez et al. 2017: XXII).

Abstract: This study considers the potential uses of virtual reality technology for the benefit of the public relations of NGOs and charity organizations. Due to their immersive potentials, virtual reality simulations offer new possibilities for the enhancement of recipients' empathetic responses. This study does not just focus on the correlation between this relatively young technology and its influence on empathetic sensitivities, but also on virtual reality's potential to enhance prosocial behavior (Rössel 2010). For these reasons, this study considers virtual reality primarily from the perspective of social psychology and embeds theories of empathy in the context of the media (Früh & Wunsch, 2009).

The stimulus used in this research is a documentary which deals with the issue of the water crisis in Ethiopia and tells the personal story of a young girl. Due to the portrayal of the problematic conditions for the girl herself and the ways in which the narrative builds suspense, the video can be categorized as very emotional and empathetically stimulating. Its content is particularly relevant as stimulus material, because numerous emotions are mentioned throughout the narrative of the video.

The experimental study was conducted with two experimental groups, whereby 30 test people received the stimulus material as a virtual reality simulation and a second experimental group of another 30 test people, paralleled in terms of age, gender and educational level, viewed the stimulus in a two-dimensional format.

Based on the collected and statistically evaluated data, consisting of measurements of emotional reactions, empathy values and information on the willingness to donate, it could be determined that the immersive experience has a significant influence on the perceived emotions, the degree of empathy and prosocial behavior in the form of donations.

The results of this experimental study strengthens not only those organizations that have already realized VR projects, but also encourages other organizations who have not yet engaged with the technology. It demonstrates an enormous potential for immersive experiences in terms of the sensitization of people to crises worldwide and the increasing of donation amounts, which can be seen as one of the primary goals of charitable organizations.

Title: Testing the Heuristic-Systematic Model of Information Processing for Public Support of Carbon Neutral Pledges

Session Type: Individual submission

Authors:

Abstract: One of the challenges of communication research is to move beyond the understanding of the human mind as an impervious black box (Geiger & Newhagen, 1993). As such, there are numerous theories and models that explore variables and pathways that influence how people process information to create knowledge. This analysis contributes to this scholarship by testing the effectiveness of the heuristic-systematic model (HSM) of information processing for predicting public support of carbon neutral pledges. Within HSM, there exist two qualitatively different information processing pathways that drive knowledge creation and judgement: heuristic and systematic. Heuristic processing is a quick, associative information-processing mode using low-effort cues, while systematic processing is slower, methodical, and requires more cognitive effort (Chaiken & Trope, 1999). Different topics and variables, such as ability and motivation, influence the direction and strength of individual information processing.

In this study, we use structural equation modeling (SEM) to analyze how citizens in Utah process information about municipal government carbon neutral pledges since four Utah governments have made pledges. According to the United Nations Framework Convention on Climate Change, carbon neutral pledges are actions that organizations, businesses, and governments take to measure and report greenhouse gas emissions, reduce their overall emissions, and offset the remaining emissions. In recent years American perceptions about climate change have become increasingly heated, emotional, and polarized along partisan lines (Hart & Nisbet, 2012; McCright & Dunlap, 2011). Manipulating anger or information frames could influence how people process climate change information. Therefore, after testing the HSM model, we examine the impact of a 2 (emotion) x 3 (frame) experiment embedded in an online survey (N = 942) where participants read an online article about local government carbon neutral pledges with either an economic, environmental, or moral frame, containing reader comments that were either angry or neutral.

We found that individual motivation and ability significantly increased systematic processing, but not heuristic processing. Additionally, the systematic processing route was the only significant pathway influencing support for carbon neutral pledges regardless of frame presented. This pattern was also observed among respondents in the anger condition. However, among those exposed to the neutral condition, both systematic and heuristic processing were significant paths to support for

carbon neutral pledges. The implications of our findings, which emphasize the importance of anger as a motivator of systematic information processing, are discussed.

Title: Polarized social media collective action framing: The case of LGBTQ protests in a Muslim nation

Session Type: Individual submission

Authors:

Name: Jeffry Oktavianus

Abstract: The fight for LGBTQ equality is still ongoing, but the progress seems astonishing as many parts of the world make strides in protecting the LGBTQ individuals (Kiprop, 2017). However, the rejection of the LGBTQ community remains strong in numerous countries, particularly in Muslim nations. Indonesia, the world's largest country, shows the strongest refusal compared to its counterparts in Asia and the Pacific (Pew Research Center, 2013). In this country, LGBTQ behavior is deemed destructive and immoral, although in these past years some activist groups have tried to eradicate the discrimination (Siregar, 2018).

Recently, there was also a heated discussion related to LGBTQ in Indonesia after an executive of Go-Jek, an online transportation application, posted his support toward LGBTQ community on Facebook during Coming Out Day (October 11, 2018). The post became viral and sparked a public furor. Many citizens expressed their disappointment on social media, particularly Twitter. They engaged in a collective action using the hashtag #uninstallgojek to encourage other Indonesians to boycott the company that later became a trending topic on the platform (Sumardi, 2013). However, the protest also garnered mixed reactions as many also defended the company and the LGBTQ group on Twitter, bearing the same hashtag (Widyastuti, 2018). Both groups engaged in the debate and attempted to voice out and mobilize the other Indonesians to take their stances.

This present study aims to investigate the message characteristics and the actors of both groups (pro and contra LGBTQ) in the protest of #uninstallgojek. This research is grounded in the theoretical framework of collective action framing (Gerhards & Rucht, 1992). Framing can increase the salience of an issue in the people's perception which is crucial to mobilize participants, garner more support, and disarm the counter group (Entman, 1993). Past studies have identified three different frames in collective actions or protests: diagnostic (emphasis on the problems), prognostic

(emphasis on the solutions), and motivational (emphasis on reasons to participate) (Goh & Pang, 2016).

This study scrutinizes the collective action frames by conducting a Twitter content analysis. A total of 33,979 tweets embedding the hashtag #uninstallgojek were collected for the study. A data cleaning was performed to remove the duplication and irrelevant tweets. A total of 6,308 tweets remained for further analysis. Aside from message frames, these following codes were found to be a part of the initial coding scheme: actors (e.g., public figure, NGO, government, and so on), user activeness (active or passive users, measured by the number of posts), user popularity (high popularity or low popularity, measured by the number of followers), message themes, and message tones. The findings of this study will extend the scholarship of collective action frames in social media which is still rather scarce. It will also offer insights regarding the public concern in a Muslim nation related to the issue of LGBTQ support.

Affiliation: Anna University

Abstract: In line with globalization and technological innovation, digital media is swiftly growing and taking over the world. Online activism or digital activism is an important aspect of the internet. Following the popular digital activist movements, where authoritarian governments and rulers have been upturned, digital activism sheds light and impacts social issues, one such prominent event is the Arab Spring (Wilson & Dunn, 2011). Internet activism goes far beyond surpassing geographical and temporal walls that is associated with political and social issues (Bennett, 2003).

#MeToo movement is an uprising of the voices of women and men who have been subjected to sexual harassment. Initially, the #MeToo movement began in the America; it was founded by Tarana Burke in 2006. The movement gained momentum in the recent past in India- in 2018, but the volume of the protest is ground breaking. The survivors recounted and narrated horrific events where they were sexually abused in multiple online media. The movement has brought to spotlight, how the digital arena is a key platform in harnessing the expressions of various individuals.

The paper discusses the digital participation of individuals in the form of Facebook posts, Instagram posts, Tweets and blogs. The public opinion process transcends individual opinions in to a collective opinion. Also, the use of social media in these mass movements happens in line with the agenda setting theory which brings to the attention of the public and policy makers, a set of issues that needs quick attention. The research highlights the importance of the collective, in case of #MeToo, women who have been affected by sexual violence thereby bringing a debate about consent, and how the spiral of silence theory facilitated the movement, and still stands true since it's conception.

The paper identified and studied the various posts in social media platforms- Facebook, and Twitter regarding the #MeToo movement in India during the period of October-December 2018. Some participants preferred to ask other victims to speak up about such events undergone by them whereas some participants sought legal justice for their torment. Facebook allows 'sharing' of a post put up by an individual or page and Twitter allows 'retweeting'. The process of sharing these stories and accounts of victims indicated the presence of spiral of silence theory phenomenon to be true. The quantitative study focusses on the number of shares and retweets and the possible

reactions to the accounts, thereby providing a liberating opinion for participants who expressed themselves.

Title: Successful Edutainment YouTuber, Successful learning' Examining The Interaction Effects of Enjoyment and Positive Emotions on Learning

Session Type: Individual submission

Authors:

Name: You-Ting Ding

Email: dorcass2670(at) gmail.com

Country: TW (Taiwan)

Affiliation: Graduate institute of Mass Communication, College of Communication, Fu Jen Catholic University

Abstract: Entertainment-Education (EE), refers to “the intentional placement of educational content in entertainment messages” (Singhal & Rogers, 2002, p. 117), has been popular since the online platform such as YouTube provided effective entertaining and learning environment. Many YouTubers are successful in creating series of learning video clips to help audience to learn and have fun. Wojcicki (2018) indicated they invested \$20 million in YouTube Learning to support education creators. In Taiwan, the most popular teaching English YouTube channel named RayDu English has over 2 millions subscribers.

According to Fredrickson's (2004) broaden-and-build theory, positive emotions can broaden people's momentary thought-action repertoire and broadened mindsets can help for novel and creative actions. Pride, a positive emotion related to the confidence in an individual's learning achievement and it can drive people to work hard in the tasks (Tracy & Robins, 2004). Positive emotions are also related to enjoyment. Pleasure can lead to greater enjoyment (Oliver & Bartsch, 2010). Trigwell, Ellis, & Han (2012) found students had a deep approach to learning in the state of a strongly positive and weakly negative emotions. However, competing theories argue that enjoyment only positively predicted subjective knowledge (the feeling of being informed), not objective knowledge. (Schneider et al., 2015; 2016). Therefore, the current study aims to investigate the interaction effects of enjoyment and positive emotions on learning. In addition, because most of the English teachers in Taiwan are females, the current study also includes gender stereotype as a factor of audience's enjoyment.

This study employed a 2 (Female YouTuber v. Male YouTuber) x 2 (More challenging learning content v. Less challenging learning content) online experimental design. This research chose the most popular English-teaching YouTube's channel in Taiwan, which named RayDu English to examine viewers' emotion after watching a two-minute cutting video and whether the viewers' emotion would affect viewers' enjoyment and learning. In particular, this research focused on emotion “pride,” because people take seriously on learning English in East Asia culture. The result showed that those who watched a female Youtuber English-teaching video had more enjoyment than those who watched a male Youtuber English-teaching video. Positive emotion ($b = .71$) and negative emotion ($b = -.15$) would affect enjoyment in different way, and enjoyment would positively affect viewers' learning ($b = .31$). Participants' learning were affected by both positive emotion and negative emotion but had no difference with the gender of youtuber. Surprisingly, pride did not predict enjoyment and learning. The theoretical implications and limitations were discussed.

Title: Presumed effect of fake news on the global warming in a cross-cultural context

Session Type: Individual submission

Authors:

Name: Seong Choul Hong

Email: hong21(at) kgu.ac.kr

Country: KR (Korea, Republic Of)

Affiliation: kyonggi University

Abstract: 1. Introduction

Fake news is often used in political, terrorism, crime, natural disasters, and financial news. However, science is also a prey of fake news. Specifically, global warming is one of most utilized science topic in the fake news. Despite most scientists recognize that man-made climate changes are happening, but a few argue that it is anything to be worried about. Famous politicians joined to fuel to the fire, by asserting that increased global temperatures could be a natural climate shift, not caused by greenhouse gases. Many scientists worry about fake news' effect, because fake news may hurt public support and change policy on climate change. In this vein, the current study tested the presumed effect of fake news on global warming. Specifically, the relationship between the third-person perception of fake news and its related behaviors needs to be explored in a cross-cultural context.

2. Methods

The study mainly aims to test whether cultural constructs influences on the third-person perception and its corrective actions. Thus, participants were recruited in the countries with different levels of cultural constructs (individualism, collectivism, and high & low uncertainty-avoidance). A total 770 people from India, Spain, Korea, and United States.responded to an online survey through Qualtrics Panels with conditions of gender and age splits in May, 2017.

3. Results

First, the study tested whether the third-person perceptions of fake news actually occurred. The study found that perceived media effects on self and others had some significant discrepancies in the four nations, $t(769) = 11.886, p < .001$. The largest third-person gaps were found in the United States, $t(188) = 8.092, p < .001$ and the smallest third-person gaps were in India, $t(168) = 2.817, p < .01$.

By using Amos, the study conducted a path analysis with maximum likelihood estimation. As individualism increases, the third-person perception increases. However, collectivism increases, the third-person perception decreases. Amos results illustrated that presumed media effect was a good predictor of related behaviors. But the third-person effect negatively influence on only the regulation, not on donation. We also examined the link between cultural constructs and the behavioral component. Collectivism positively associated with the corrective action of donation, while uncertainty-avoidance turned out a positively predictor of support for regulation as preventive effect.

4. Conclusions

The current study found that the self-other disparity in presumption of fake news was related to cultural constructs such as individualism and collectivism. However, individualism contributes to enlargement the gaps between self and others but collectivism devoted to decreasing the gaps. Moreover, the presumed media effect was the more robust predictors of the corrective actions. Even though fake news spread faster and bring more emotional reactions of recipients than real news, worries over fake news and its effect may be moderated by cultural factors such as individualism, collectivism, and uncertainty-avoidance.

Title: Deliberation, justice and punishment in two controversial issues involving violence: reduction of the age of criminal responsibility and Femicide Law in Brazil

Session Type: Individual submission

Authors:

Name: Gabriella Hauber

Email: gabihauber(at) gmail.com

Country: BR (Brazil)

Affiliation: Federal University of Minas Gerais/Brazil

Name: Rousiley Maia

Email: rousiley(at) gmail.com

Country: BR (Brazil)

Affiliation: Federal University of Minas Gerais/Brazil

Abstract: This study focus on the Deliberative Theory to analyze how people express and defend their points of view about two controversial issues concerning violence: the reduction of the age of criminal responsibility and the Femicide Law. While several studies about online deliberation investigate the procedure of online discussions, such as justification, respect and civility, we are interested in the content of the reason-giving, especially in how ordinary citizens discuss different types of violence and demand punishment for them. We argue that there are deliberative moments in online conversations where, for example, citizens engage with the arguments of others, at the same time that they can not be expected to be constantly in cooperation (Goodin, 2005, Steiner et al., 2017). In the perspective of Critical Theory, the resolution of conflicts and a possible decision-making in a deliberative process would take place through mutually acceptable and justifiable argumentative exchanges that would lead to a final understanding (Cohen, 2009; Habermas, 2011). We believe that analysing online conversation from deliberative theory, by observing how people justify their opinions, may reveal nuances about citizens' preferences. We contend that different popular conceptions of justice are related to the way in which adolescents, men and women are seen. Whereas most Brazilians are in favour of reducing the age of criminality, the need for a specific law against femicide is constantly questioned.

The demands for harsher punishments and a more rigid justice system in relation to increasing crime have long existed, but it has been reinforced along with the growth of the so-called "conservative wave". However, there is widespread cry for stricter punishment for adolescents. This study draws on different data: a sample of news on the Femicide Law and on the reduction of the minimal age of criminal responsibility that are shared on Facebook pages, and comments on such news on Facebook collected during the electoral period. We apply content analysis as a methodological strategy. We created the following categories to analyse the material: a) Problem definition: cultural; social; criminal; isolated case; others; not applicable; b) Attribution of guilt: only blames the victim; condemns the crime, but blames the victim; blames the aggressor; blames the Brazilian legislation; blame culture / society; others; not applicable; c) Proposal for a solution to the violence: the victims to protect themselves; apply the current legislation; cause suffering to the aggressor; arm the population; proposing public policies; other; not applicable; d) Arguments

against and favourable to Femicide Law and Penal age reduction. Thus, we expect to find a higher incidence of punishment claims, with less call for mitigating factors of violence, in the case of adolescent compared to men who committed femicide (H1) and the severity of violence interfering more on the demand for punishment in the case of men than in the case of adolescents (H2).

Title: Everyday Encounters in a City of Compounded Crisis

Session Type: Individual submission

Authors:

Name: Afroditi Maria Koulaxi

Email: a.m.koulaxi(at)lse.ac.uk

Country: GB (United Kingdom)

Affiliation: London School of Economics and Political Science

Abstract: While the “refugee crisis” has disappeared from our vocabulary and screens, crisis stills defines imagination and practice in cities that are now challenged through the arrival of refugee waves. As significant numbers of migrants have now settled in European cities, there is a need to reflect on how Western subjects perceive “others” vis-à-vis their own identity. Thus, the presentation aims to explore how mediation of migration (different modes of communication, from face-to-face encounters in the city to the digital encounters on social media platforms) can also be considered as condition of identity formation, through its particular meanings that are always contextual.

The proposal promises a comparative study that explores everyday encounters with newcomers in a city of compounded crisis, and interrogates how locals react to and negotiate their mediated encounters (with newcomers) through their own experience. Aiming to examine how individuals construct meanings of identity, the paper offers an innovative approach by asking individuals to articulate their own understanding of identity through their experience of newcomers in their neighborhoods as well as by observing the complexities of everydayness in the city. This provocative research design aims to understand how media power might be contested by embodied encounters between newcomers and settled residents. A comparative approach in this context has the potential to explore how the embodied encounters with newcomers problematize the mediated, but also how the mediated ones have shaped the embodied.

It is timely, as it addresses identities in the city in crisis through the lens of mediation. Taking a closer look on the Athenian reality, in the heart of Greece, it seems that the so-called “refugee crisis” is a dimension of a broader context of compounded crisis in the city. It unpacks the reasons why Athens, that still feels the repercussions of receiving large numbers of migrant populations, is a paradigmatic case study to consider taking into account the following: a) the interaction of several crisis that contribute to the city’s urban decay; b) the strong contextual dimension in mediated and embodied encounters with newcomers; c) the intersectional identities of Greek individuals; and, d) the history of encounter and historicity of alterity in this context.

My presentation seeks to demonstrate the importance of studying the role of mediation (symbolic power of the media and how audience, as consumers of the media, engage with the respective power) in accommodating and/or disrupting dominant/hegemonic identities in a crisis-ridden urban context. It is vital to understand how media can become resources for settled residents’ identity and how social positions are encountered, created and contested through particular urban spaces and everyday spatial practices.

Keywords: mediation; encounters in the city; identity; crisis

Title: Citizenship, Exile and Sites of Contested Identities: The case of Mediated Narratives of Muslims in India

Session Type: Individual submission

Authors:

Name: Ruma Sen

Email: rsen(at) ramapo.edu

Country: US (United States)

Affiliation: Ramapo College

Abstract: From social media to mainstream news today, citizenship is being discussed and debated mainly because of the fears associated with the refugee crisis that has now taken on global proportions. Perhaps the single largest consequence of the post 9-11 world has been the concern over what happens to countries torn asunder by wars, both from outside and within their borders. Contiguous to these conversations has been the discourse on citizenship, its parameters and circumstances/contexts, with the discourse being increasingly about questions of belonging and legitimacy. Media's role in these conversations is undeniable, especially in today's climate of a parallel discourse of "news and perspectives" running through social media platforms, where the discussion continues to pivot around who can and should stay within the borders, and who should be kept out.

This paper draws from a larger ethnographic study to demonstrate the deep disconnect between mainstream media's biased and limited accounts and the community's own narratives of their lived experiences. Through this paper I explore the ways in which members of displaced Muslim communities in Gujarat, India create spaces of articulation and animate their discourses of resistance as they struggle against the larger conspiracy of silence engineered by mainstream media and the forces of the nation state. The aim of the ethnographic study was to explore the correlation between socio-economic factors, class-based politics and the strategic use of religion by power-brokers across all political platforms to fuel dissatisfaction and dissent.

Sentiments that have festered in the minds of a billion-plus population for over six and a half decades have now polarized the country into irreconcilable factions with deep-rooted mistrust toward each other, which in turn have framed contemporary politics and provide future frameworks for the political economy of the nation. As Kausar argues, "although the Muslim community in India has been facing the disruptive forces of Hindu communalism ever since the decline of the Moghul Empire in India, these were never so violent and destructive as what the Muslim Indian community is experiencing today" (2006, p. 353). The displaced folks of Gujarat embody their own and the trials of other similar groups across India.

All the participants of this ethnography record their own lived experiences through the multiple phases of riots and other acts of violence they faced in and around Ahmedabad. Ironically, while historical and mediated accounts of the riots and communal violence exist, there are no narratives of lived experiences, recorded either in media or through research studies. This ethnographic data reveals unprecedented insights into identity constructions by members of these displaced Muslim

communities of Ahmedabad. These are participants whose lives have been irrevocably altered by the violence-induced displacement and migration within their own homeland, who continue to occupy the barely visible margins and be strategically exploited by power-brokers.

Title: Reimagining Technology

Session Type: Individual submission

Authors:

Name: Jeremy Swartz

Email: jher(at) uoregon.edu

Country: US (United States)

Affiliation: University of Oregon

Abstract: This paper presents disciplinary suggestions for mediated communication that can account for increasingly multidimensional interactions and transactions of technology. Technology is assumed as practical arts, tools, techniques, processes, moral knowledge and imagination to navigate our everchanging world (Carey, 2009; Marvin, 2009). In a broad sense, technology also can be understood as methods of intelligent inquiry and problem-solving (Dewey, 1930; Johnson, 2014). But technology is not merely a tool, fix or repair. In a scale, pace, and pattern sense, technology can be understood as complex systems of organisms and their ongoing relationships with their environments.

This presentation presents thoughts on the history and definitions of technology and issues relating to value(s)/valuing/valuation, intelligent inquiry, and problem-solving. In this way Eric Schatzberg's (2018) recent historical study of the conceptualization of technology speaks directly to this point.

"... the instrumental concept of technology effaces the role of human agency [and] restricts this agency to a narrow technical elite or the rare inventive genius. ... [while] the cultural concept of technology is human centered, stressing use rather than novelty."

It also considers technology through the lens of a complex systems approach. This is exemplified by the relationships between biological, environmental, and emerging pattern recognition systems (e.g. machine learning and deep learning).

The presentation concludes with references to recent interdisciplinary research and development, suggesting that mediated communication researchers might benefit from considering a more expansive and inclusive notion of technology. It is where value and/or values are understood in relationship to the distinction between valuation and valuing.

Title: New ecosystem of fake news and its influence: How a natural disaster in Japan turned into a political storm in Taiwan

Session Type: Individual submission

Authors:

Name: Chen-Ling Hung

Email: hungchenling(at) gmail.com

Country: TW (Taiwan)

Affiliation: Graduate Institute of Journalism National Taiwan University

Abstract: This study aims to examine the new ecosystem of digital journalism between Taiwan and China. Based on the case study of “Kansai Airport Event”, it will analyze how weak journalism welcomes fake news/misinformation and endangers democracy and decision making.

The story started with Typhoon Jebi which hit Japan in September 2018 and paralyzed Osaka.

Kansai International Airport was forced to shut down and took emergent measures to relocate 2600 foreign travelers. To everyone’s surprise, what happened to the tourists from China and Taiwan caused a political storm in Taiwan and led to the suicide of a Taiwanese envoy. The tragedy is seen the result of a series of misinformation /disinformation which forced the political system to response in an extreme way.

What happened in the Kansai Airport? What kind of information/misinformation were made and shared? How did a natural disaster in Japan turn into a political storm in Taiwan? To answer these questions, this case study will sort document and trace information flow across borders and media platforms. Frame theory will be applied to identify story tellers and their narratives. In result, this study will bring reflections on how media, prosumers and the government response to the new communication ecosystem, what we call the post-truth era (Godler & Reich, 2017).

The literature of digital journalism emphasizes on the openness of news production and distribution (Lowrey, 2011). The new ecosystem is joined by traditional media, online media, bloggers, and social media which share stories and define meanings (Picard, 2015). It welcomes the era of “we media” and celebrates the empowerment of grassroots participation (Gilmore, 2004). It also puts journalism standards in risk since truth verification and public interests are not the primary rules any more. While disinformation is fuelled by new technology, as UNESCO (2018) warns, this kind of information disorder is an “unprecedented global threat”.

Based on the theoretical framework, the information flow of this case echoes the ecosystem of digital journalism. The chaos started from a report circulated on Chinese online media, claiming that Chinese consulate in Osaka evacuated 750 Chinese from Kansai Airport. Chinese users commented that their “mother country is so powerful”. On the other hand, an article posted online complaining of the inaction of Taiwan’s embassy also attracted attention. Online discussion between Taiwan and China became sources of the daily newspaper and 24-hour TV news channels, which produced a strong theme of pointing fingers to Taiwan’s embassy in Japan, even though the truthiness of online information was not well verified.

Put in the context of market driven journalism, partisan media and political rival between Taiwan and China, Taiwanese media frame news story into the competition between Taiwan and China to inspires people’s emotions for their interests both economic and political. The price is the quality of public discussion and policy making as well as media’s credibility.

This study fits the conference theme “Communication, Technology, and Human Dignity: Disputed Rights, Contested Truths”. It also fits CCAM section with its concerns on “journalism practices from below, citizen journalism, challenges to journalism in an era of fake news and social media”.

Abstract: The income inequality is one of the major challenges of our societies and one of the main topics on the recent political agenda (Pickett & Wilkinson, 2015: 132), especially since the global financial collapse. As Mike Savage (2016) affirms, inequality is everywhere: in the representations that the media makes of reality, as well as in our daily social life or in social networks. Over the past years, there has been an increase interest and the topic has been gained importance. However, scientific investigation on this phenomenon is still scarce. Paying attention to digitally mediated conversation, this research focus on Twitter as a digital platform and social network used for set the topic in the agenda. Consequently, this paper wants to shed light on the flow of information about the concept of income inequality on Twitter during the year 2018. Social media have the potential to facilitate more participative democracy and a disruptive value for challenging traditional interests and modes of communicative power (Loader & Mercea, 2011). Thus, we focus on identifying how public opinion is created and disseminated in relation to the concept of "income inequality" in Twitter. That is, determine who are the main actors that promote and disseminate the debate on income inequality and the original sources of the information. From a methodological point of view, based on the work of Adrienne Russell (2017), we propose an analysis of "the networked hive of connective media users" (ibídem: 48). According to Jose van Dijck (2013) the ecosystem of connective media involves the social media platforms, as well as the users and the media, and the relationships established among them. In that sense, media and user become completely dependent on one another. Data were gathered during the year 2018 and it was collected using the Twitter advanced search with the keyword 'income inequality'. Later, we analyse the data to establish the network with the free software Gephi and also we analysed the links on the tweets to identify and describe the information flows. The results suggest the existence of a hierarchical network in which traditional media accounts are the main actors of the information spread. They are therefore the ones who guide the conversation

around the concept of income inequality. Secondly, it has been detected that the information disseminated on the network comes from reports made by NGOs that had been published by media outlets. Hence, non-institutional democratic actors as NGOs, together with traditional media, emerge as political agents that place the income inequality debate into the social media agora.

Title: Mediatized Homophobia: Exploring the meanings and domains of homophobia on Social Media (SM)

Session Type: Individual submission

Authors:

Name: Bridget Alichie

Email: bo.alichie(at) unizik.edu.ng

Country: NG (Nigeria)

Affiliation: Nnamdi Azikiwe University

Abstract: Social media (SM) has gained astounding growth and popularity worldwide as a veritable tool used by a wide variety of users in creating ideas and meanings of their virtual world, and to authenticate civic engagements around societal issues that affect them. Specifically, scholarly sources across the globe have noted the increasing use of SM networks as a voice among minoritized populations on critical social issues like sexual orientation, racism, religious oppression among others.

Within Nigeria, scant queer literatures have also dubbed the SM the alternative safe spaces for Lesbians, Gays, Bisexuals, Transgenders and Queer persons (LGBTQs). The SM platforms are adjudged to tools rapidly facilitating the needed voice and visibility to formulate emotional and social discourses on their “right to belong” among the LGBTQs as minoritized group. This is widely perceived as a function of a turbulent religious, political and legal Nigerian context, following the anti-gay laws in Nigeria under the Same Sex Marriage Prohibition Act (SSMPA) on January 2014. These incidences have since opened on a huge discourse on state-sponsored homophobia in Nigeria among local and international civil society organizations. Conversely, it exposes the need to explore private domains of home and family, especially the private users of SM. Thus, eclipsing the minoritized LGBTQs from personally defining what online freedom means for them. However, to explore this, a queer research of this nature in Nigeria, LGBTQs who are criminalized would be potentially unwilling to be reached. Consequently, a qualitative digital ethnography is employed to elicit primary data electronically. Having sought and received the support of The Initiative for Equal Rights (TIERs), the only Nigerian-based Not-For-Profit organisation currently working on rights of sexual minorities, this research adopts a snowballing approach. By this, Facilitators at TIERs serve double roles of Key Informant Interviewees (KIIs) and gatekeepers to help recruit 10 potential In-depth Interviewees (IDIs) among LGBTQs over anonymous closed social media groups. All ethical Concerns will be strictly adhered to and interviews will use online completion and submission forms. The following specific objectives will be explored: (1) In what forms do experiences of homophobia manifest against LGBTQs on SM platforms? (2) What is the relationship between state instituted homophobia under the anti-gay law and expressions of online homophobia by private users? (3) In what ways do online expressions of homophobia impact on SM participation for LGBTQs? (4) How are LGBTQs in Nigeria navigating online homophobia against them as sexual minorities?

Drawing on the Foucauldian discourse analysis, this research will ultimately unpack how knowledge about certain issues in society are constituted in tandem with social practices, subjectivities as well as the power relations that drive knowledge production. Evidences are drawn

from findings evidence to discuss the implications of these developments on minoritized populations in order to suggest practical remedial measures to online homophobia.

Title: Memeing elections: The affective politics of memes in the 2018 Colombian presidential campaign

Session Type: Individual submission

Authors:

Name: Valeria Cortés

Email: v.cortes(at) javeriana.edu.co

Country: CO (Colombia)

Affiliation: Universidad Javeriana

Name: carlos barreneche

Email: barrenechec(at) javeriana.edu.co

Country: CO (Colombia)

Affiliation: Universidad Javeriana

Abstract: Internet memes, along with GIFs, selfies, 280 characters texts, and other native digital objects, have become central elements in the rhetoric of online discourse today. Political memes usually carry with them provocative messages powerful enough to mobilize public opinion, to the extent that they are often weaponized in political campaigning and disinformation strategies. During the last US presidential elections took place the first so-called “great meme war” (Nagel, 2017), where actors from the political fringes (the Alt-right movement) attempted to influence the political climate on the Internet through the propagation of memes -carrying the expression of anger and fear of disaffected white young males along with white supremacists themes. Noteworthy in this case is the way how Trump’s team successfully capitalized and harnessed these networks as part of the campaign strategy.

After the 9/11 attacks and the war on terror, a new media regime has taken central stage in which media act mainly through the modulation of collective human affect to mobilize populations, in contrast with the previous media regime in which communication was oriented mainly towards truth (symbolic representations/ideology) (Grusin, 2010). Today this shift is ever ore present, when in the age of social media, emotion, social prejudice, and personal beliefs (epistemic bubbles) seem to have overtaken facts and rational deliberation in online political discourse. It is therefore critical to look into how the circulation of affect, favored by the affordances of social media (short formats, the privilege of visibility over narrativity, and rapid circulation), is shaping public opinion and political campaigning (Castells, 2008; Samson, 2012).

This paper will discuss the results of a research project that traced the affective tones of memes during the last Colombian presidential campaign, looking at memes’ formal characteristics, sentiment, intentionality and reach, and how these variables relate to the very dynamics and temporalities of such political contest. In order to do so, the data analyzed was extracted from Facebook groups during the campaign period, including both internet memes produced by users, and their associated circulation and sentiment metrics (so-called Facebook “reactions”). A sampling strategy was implemented with the aim of representing the whole political spectrum in dispute. The final analysis 1) illuminates how different politically-oriented Facebook users (from

the left to the right) appropriated the language of memes in order to express political views and influence public opinion; 2) compares differences in use and formal rhetoric across the spectrum; and 3) maps the specific affects that mobilized their circulation within those networks in order to characterize motivations (from fun and critical irony to militancy).

Abstract: La elección de Jair Bolsonaro para presidente de la República de Brasil es el más reciente acto electoral en el que las redes sociales online (RSO) han tenido una fuerte influencia. Aunque hay pocos estudios sobre este caso, el hecho de que el candidato no haya realizado ninguna actividad política presencial en la segunda vuelta, junto con la declarada oposición de gran parte de los intelectuales brasileños y de los grupos mediáticos más fuertes, lleva a que las RSO surjan como el canal decisivo para su elección. Un rápido análisis a lo que ocurrió en estos espacios durante la campaña, sobre todo en Facebook, Instagram y Twitter, permite verificar que la oposición al actual presidente tuvo también una fuerte campaña en las RSO, recurriendo a hashtags de gran éxito como #EleNã por lo que WhatsApp podría haber sido palco importante porque es una red cerrada y tiene una intensa utilización en Brasil, en particular a nivel de grupos familiares.

Esta investigación busca verificar qué tipo de contenidos fue más compartido en los grupos familiares de Whatsapp durante la campaña presidencial brasileña de 2018 y, de éstos, qué porcentaje contenía información falsa. La relevancia del estudio se justifica debido a la dificultad de acceso a datos de dicha aplicación y porque durante la campaña electoral se comentó en la opinión pública que este canal era una fuente de desinformación. Se ha llevado a cabo el análisis cuantitativo de 472 publicaciones compartidas en diez grupos de familia. El acceso a los datos fue posible gracias a la colaboración de ciudadanos que atendieron nuestra convocatoria para participar en el estudio. Los resultados señalan que la imagen fija con texto corresponde al tipo de contenido más circulado en los grupos y que un 60% de las publicaciones posee información total o parcialmente falsa. Los hallazgos corroboran la existencia de un círculo de desinformación entre los usuarios de WhatsApp.

Title: The Influence of Journalistic Style in Online News: Reporting on a Violent Attack Abroad

Session Type: Individual submission

Authors:

Name: Ashley Riggs

Email: ashley.riggs(at) unige.ch

Country: CH (Switzerland)

Affiliation: University of Granada/University of Geneva

Abstract: Part of a larger interdisciplinary and cross-cultural study on cultural representation in online news, this paper seeks to demonstrate that journalists' stylistic choices significantly affect content and messages, influencing, in turn, the way news consumers perceive the people and societies reported upon. Scholars in translation studies and crisis communication (e.g., Federici, 2016; Schäffner, 2014) have called specifically for applying stylistics to the study of online news and have argued that more research on the linguistic characteristics of cultural interactions during times of crisis or conflict is urgently needed. In addition, work on cultural translation (Maitland, 2016) and cosmopolitanism (Bielsa, 2016) has demonstrated the value of considering media output as a means for readers to engage with the foreign. The paper draws from these disciplines and theoretical areas and contributes to filling the existing research gap by sharing findings from the analysis of a corpus of online news from England, Spain and Switzerland.

To investigate stylistic features, articles from mainstream online newspapers of each country were selected. All addressed the deadly attack that took place in Nice, France on 14 July 2016 and were published shortly thereafter. Given the location of the event, the journalists were reporting on a foreign society and place. Therefore, they acted as intercultural mediators, whose ethical role is to improve communication between cultures. Yet various studies have found that, instead, journalists often engage in "othering" (Allan, 2014 [2010]) and sometimes both rely on and perpetuate prejudices, in particular where Muslims/Islam and foreign countries are concerned (e.g., Brownlie, 2010; Ogan et al., 2014; Piquer Martí, 2015; Rane, Ewart & Martinkus, 2014). Investigating style sheds light on how this occurs and it may, in turn, encourage reflection and changes in practice. The stylistic characteristics of modality (terms which communicate levels of certainty, possibility, probability and doubt), alliteration and metaphor, as well as the term 'jihad' and its derivatives, and information about French society, were analyzed using QDA Miner. Results include uses of modality which give suppositions or other unproven content a patina of fact; diverging uses of symbolically powerful metaphors which also reflect news sources' political affiliation; uses of alliteration and metaphor that are likely to heighten fear and distrust of cultural "others". However, left-leaning newspapers tend to historicize and contextualize more, which can offset the fear and distrust. Finally, there is a surprising tendency in one source for journalists to misuse the term 'jihad' and its derivatives, despite the clear indications about this term provided in the newspaper's own editorial guidelines.

It is hoped that this paper will persuade fellow participants of the value of examining stylistic characteristics of news and how they contribute to reinforcing or challenging prejudices – a significant issue given the media's influence on public opinion, policy and cultural debate and given the right of the "cultural other" to be represented with dignity.

Title: Sarcastic Much! The Importance of Humor as Means of Being Uncivil When Commenting News Articles

Session Type: Individual submission

Authors:

Name: Andrés Rosenberg

Email: aarosenb(at) uc.cl

Country: CL (Chile)

Affiliation: Pontificia Universidad Católica de Chile

Abstract: Can humor be perceived as an uncivil expression on online communication?

Public opinion on online forums such as news comments, are usually pointed out as a battleground of uncivil, impolite and aggressive speech. Moreover, it is particularly troublesome when this type of speech revolves around domestic politics, since these issues are supposed to evoke deliberation among informed citizens. However, amidst common expression of incivility, such as stereotyping and profanity, humorous expressions (e.g. irony and sarcasm) -while being present- are usually left out from academic analysis on online uncivil speech (Papacharissi, 2012; Chen, 2014), most probably because they are hard to measure, since humor is strictly ingrained within a specific culture, and different receivers are bound to disagree on whether a commenter has been sarcastic or not.

As part of my doctoral dissertation, I conducted a content analysis of 4,620 news comments on the Chilean presidential elections of 2017. Among other things, I analyzed whether humor was used by these news users to either attack the article's topic, or to attack another users' previous comment. Three independent coders were trained and achieved a satisfactory agreement on capturing humorous speech as means of being uncivil (88% agreement, Krippendorff's $\kappa = 0.66$.)

Findings from the analysis show an impressive growth of incivility when the variable "humor" is incorporated: 31% of comments have at least one form of incivility, whether it is profanity, stereotyping or insulting someone, but when humor is incorporated -as means of being uncivil- more than half of the comments (52%) contain either uncivil traits or humor.

Considering these findings, a theoretical discussion is presented as to explain why humor needs to be incorporated into uncivil speech analysis, and how such expressions are used by users as an alternative and effective way of insulting another person or group without any the more common forms of aggressive expressions. Some of the explanation can be found in the affordances news's comment sections offer, like posting images such as "memes", and the moderation of swear words, which can lead to users being more creative with their insults and use sarcasm and irony as means of camouflage their true thought.

Title: Why the critical discourse analysis is a viable method on analysing medial constructed reality as symbols'

Session Type: Individual submission

Authors:

Name: Danny Schmidt

Email: danny-schmidt(at) web.de

Country: DE (Germany)

Affiliation: PhD Student

Abstract: The construction of reality has different sources of theory. The cognitive construction (Maturana, 1982), the social construction (Luhmann, 1984), the medial construction (Schulz, 1976) and the symbolic construction (Jäger, 2009) of reality for instance are methods of epistemology that depends relational to each other. The basic of epistemology in a constructivist approach is the context of knowledge with no direct ontological access. The media holds a vital function in that process because "The function of the media is to create the common sense and the social memory. The media processing the reality by creating, updating and expanding the social memory. (Luhmann, 1996, S.82). So, to analyse medial construction of reality means, to analyse the social memory. The critical discourse analysis is one approach to analyse the construction and reconstruction of the social memory or as Jäger (2009, S.223) stated: "Discourse analysis demonstrate the use of resources in the context of truth that is accepted within the society at a certain time". The resources in the context of truth are by Jäger's approach all visible in the collectivistic symbols of a society or as Jäger (2009, S.133) stated: "with the resources of symbols that are shared by all members of a society it is possible to construct a social reality and we can see how these resources are framed by the media".

The so called "cold war discourse" was researched by comparing the coverage of the Brisbane G20 Summit in November 2014 by the German newspapers Frankfurter Allgemeine Zeitung, Süddeutsche Zeitung and Der Spiegel. The result of that research project showed the potential of collectivistic symbols to create plausibility in an environment of possibilities and therefore reduce complexity within the social system. For instance, the term "Berliner Mauer" directly relate to the Berliner Mauer (1961-1989) and is narratively interrelated to several historical events, political wise, cultural wise, value wise etc. "This narrative-network is the base to establish cultural consent in a certain cultural space" (Jäger & Jäger, 2007, S.54). That interrelated narrative network lead to narrative possibilities and phrases like "Die Mauer in den Köpfen" or "Mauerspecht" that are part of the common sense and the social memory and thus able to construct certain reality.

Title: Resistance to Facts and Hate Speech: Turkish Netizens' Reactions against Syrian Refugees

Session Type: Individual submission

Authors:

Name: Tirse Erbaysal Filibeli

Email: tirse.erbaysalfilibeli(at) comm.bau.edu.tr

Country: TR (Turkey)

Affiliation: Assistant Professor, Bahçe'ehir University

Name: Ayberk Can Ertuna

Email: canertuna(at) gmail.com

Country: TR (Turkey)

Affiliation: Ph.D.

Abstract: In today's network society, everyone is a digital 'prosumer'; not only passively consuming, but also producing and distributing content. However, in the post-truth era, this leads to the spread of not only information based on facts but also false and harmful contents; in other words 'fake news', and it is causing information disorder. The populist anti-immigration rhetoric, like many other politically motivated topics, also relies on the wide circulation of false contents about refugees, who are one of the most disadvantaged groups in all around the world.

According to the latest figures by official sources, the number of Syrians refugees in Turkey is more than 3 million 600 thousand. However, for many scholars studying migration, this is a contested figure; because with tens of thousands of "unregistered" migrants, the number is expected to exceed 4 million. The negative perception of refugees is increasing in the country as more refugee camps are closed and more Syrians are enforced to live in the outskirts of cities each day. In the latest research, nearly 67% of respondents stated that they were "not pleased" with the presence of Syrian refugees. In 2017 this number was nearly 55%. The mainstream media is both provoking and profiting from the negative portrayal of refugees with discriminatory rhetoric. The most notable effort against media's polarizing role came from the Turkish verification initiative: Teyit.org. Until June 3, 2019, 28 fake contents about Syrian refugees in Turkey had been fact-checked by Teyit.org.

In this study, despite the rising popularity of the term "fake news", we prefer to use a classical term 'disinformation' for signifying the deliberate creation and sharing of false claims about refugees. Herein, the complex socio-political, cultural and economic structures should be taken into account to better understand motivation, actors and strategies behind disinformation. In this context, by referring peace studies, especially Johan Galtung's theory on 'vicious cycle of violence', we define 'disinformation' as a form of 'cultural violence'. In order to understand, if the disinformation about Syrian refugees causes hate speech and hatred actions against refugees, netizens' comments below ten of the most viral fact-checked contents were analyzed within critical discourse analysis by using Nvivo Qualitative Data Analysis Software. Our analysis shows that almost 50 % of all comments had been coded under the categories as 'hate speech' or 'discriminatory language'. Furthermore, according to our findings, sarcasm was used by the netizens to discriminate the refugees and/or criticize the government policies on migration, in addition to this people mostly saw refugees as

economic, administrative and/or cultural threat. So, all these posts spreading disinformation about issues like ‘economic support provided for refugees by Turkish Government’ or ‘rising number of birth rates’ provoke people and fire up both hateful and discriminatory rhetoric. Consequently, despite all the efforts of both verification organization and some responsible people to fact check false claims, discourses targeting the refugees persistently increase.

Title: Spanish University Students and Television: Young audience's opinions about their relation with traditional TV channels and new Platforms

Session Type: Individual submission

Authors:

Name: Juan Francisco Gutiérrez Lozano

Email: jfg(at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga (Spain)

Name: Antonio Cuartero Naranjo

Email: cuartero(at) uma.es

Country: ES (Spain)

Affiliation: University of Malaga (Spain)

Abstract: The young and child population in Spain, those young people between 12 and 24 years old, are moving away, progressively and quickly, from the consumption of traditional Television to online platforms. In 2018 there was a historical record in the decrease of its follow-up of traditional TV (10% less than in 2017). Although young people still represent a prominent group among the traditional Television audience, now this age group spends the most of their time on the Internet (3 hours and 31 minutes person/day; Kantar Media Data-Barlovento, 2018). But despite of this, Spanish youth continue to monopolize much of the mainstream television contents, since characters of their age are commonly present in both fiction series and entertainment Television programmes, and also in the most famous reality-TV formats. The aim of this paper is to describe and analyse the opinions of the Spanish youth audience about their representation as group in traditional television channels. Specifically, we will go inside the answers of a group of university students (between 18-22 years old; sample to be determined but expected to be around 200 informants) to know better their opinion about those contents as well as on the engagement strategies developed by fiction and entertainment productions of both the Spanish Public Services and also commercial channels. In the same trend, we want to know how they evaluate the attempts done by these broadcasters in order to rejuvenate their audience and also to engage juvenile publics in their digital tools like social networks or websites. The methodology carried out will be based on quantitative/qualitative survey, through a questionnaire that will collect the opinion of Spanish university students about their presence on TV contents and their current relationship with traditional television. The questionnaire will be divided into three blocks of questions: the first, on the ways of Youth representations; the second, to know what formats or genres are their favourites; the third, to inquire about the degrees of agreement/rejection about aforementioned strategies. Finally, we would like to identify their perception of how the specific social problems of Youth are shown by traditional TV channels in comparison with new online platforms such as Netflix.

We hope that the research will gather information to check whether, despite the fact that traditional television consumption decreases, young people still have a stable contact with these channels; or if the success of platforms products such as 'Elite' (Netflix) is due to the fact that they could find there a better portrayed of their aspirations or concerns. On the other hand, we also want to know their opinions about how traditional television repeats certain attitudes or stereotypes when it comes

to representing issues such as gender violence, bullying or sexual identity among the youth population.

This research is part of the National Research Project CSO2017-85483-R 'JUVEN-TV: New consumption versus old stereotypes: analysis of the reception by Spanish youth of their current television representations', funded by the Ministry of Science, Innovation and Universities of the Spanish Government.

Title: How does Opinion Diversity Differentiate among Platforms with Different Digital Architecture' A Comparative Study of Jiang Ge Event in China

Session Type: Individual submission

Authors:

Name: Kaiyuan Ji

Email: jky18(at) mails.tsinghua.edu.cn

Country: CN (China)

Affiliation: Tsinghua University

Abstract: Social events are increasingly discussed online, where ideas concerning public interests frequently appear along with daily chatting. For example, a crime of passion, known as Jiang Ge Event, was intensively discussed in terms of legal institutions across countries, ethic, details and progress across different SNSs. Although Internet as a space for political communication attracted some attention, few study explored online discussion where political implications appear unexpectedly. Thus, this paper will explore how digital architecture encourages opinion diversity among platforms.

This paper adopts the definition that digital architecture is the composite of functions, designs and operation strategies. Three kinds of digital architecture are employed as analytical framework. Classification means architectures that afford for presenting topics and perspectives in several categories. Filtering mechanism affords for selective exposure of information, such as censorship, moderation of hashtags and hyperlinks. Classification and filtering influence the possibility of whether multiple perspectives could be viewed. Network structure affords for connections between accounts, including following mechanism and groups centers. This influences the introduction of different ideas and their potential to be discussed, because ideas flow along interpersonal network in SNSs.

Content analysis is conducted to analyze justification process of online discussion. Justification process is measured in topics, perspectives and quality of justification to reflect opinion diversity. Posts are collected from Zhihu and Sina Weibo from November 9 to December 31 in 2017. 466 posts of Weibo and 107 posts of Zhihu are analyzed after stratified sampling. Responses are collected and sampled to analyze the refute or observation compared with posts. Also, discourse analysis is employed to compare digital architectures for further explanation.

Research findings indicate that network structure of Weibo induces centralized interpersonal network where one-way interaction from opinion leaders to audience appears. Opinion leaders in Weibo are news media and entertainment celebrities, so both posts and responses center on truth and emotion with homogeneous responses. Network structure of Zhihu encourages decentralized interpersonal network with multiple centers depending on quality of justification. Also, more interaction between centers and audience can be observed. Accordingly, posts of Zhihu center on law institutions and ethics with high quality of justification found in both posts and responses. Posts of Zhihu are classified into distinctive topic hashtags controlled by operators and hyperlinks of different perspectives are recommended. Thus, classification enhances the impact of network

structure to proactively inspire diverse opinions in Zhihu. Classification in Weibo fails to clearly present different perspectives, leaving network structure dominating one-way flow of ideas. Additionally, extreme emotional justification will be filtered in Zhihu, and content of posts support this feature.

Moving beyond observation on single platform or feature, this study explores how digital architecture encourages diverse opinions. To explain specific casual effects, survey and interview to investigate user behaviors based on media affordances are necessary for further studies. Except for opinion diversity, more aspects of online discussion should be studied.

Abstract: Spanish companies that receive public funds to execute their Research, Development and Technological Innovation (R&D&i) projects must comply with communication and transparency obligations, which are established in European and Spanish regulations. Despite the proliferation of Digital Social Networks (DSN) these are not included within the communication requirements. Therefore, the objective of this research is to analyze whether the companies that receive R&D&i funds use the DSN to complement the communication actions. The study focuses on the companies that have received support from the Center for Industrial Technological Development (CDTI), the main Spanish organization that manages R&D&i aids. The profiles of Facebook, Twitter, Instagram, YouTube, Pinterest, Google + and LinkedIn are observed for 24 months. The conclusions indicate that social networks are practically not used to complement the communication obligations required by the reference regulations. It would be necessary to include them within the communication requirements in order to increase their impact and reflect on the contents to be published, when they should be published and in what social networks they should preferably be done.

Abstract: During the last five years the technological communication development in the Arab cyber culture has been extended not only in time, space and content, but also in creating a new types of “ Social Network Sites” in Arabic language that converge between the local narrative identity and the new social communication technologies.

The aim of this research is to analyze the development of several socio-cultural criteria related to the online elements that grasp processes in the modern Arabic cultural and art formats. Using a qualitative and quantitative methods in this study on several private and collective social media (Facebook and Instagram) pages have an objective to analyze the innovative contents that highlight the identification of the hyper local-social interactivity participations and its changing narrative aspects. It requires observing profoundly this hybrid Arabic cyberspace represented in some alternative communities.

These social media networks pages provide valuable and different styles of knowledge among the abundance of information that are invading our world. Analyzing these chosen pages provide discussing and comparing among their socio-cultural narratives regarding the variety of ages, jobs, social concepts, experiences, ideologies, various activities, etc. These groups create a new intra-connected network while they are sharing all types of information. It is necessary to focus on the development of the cultural interactive environment among the Egyptians on social media to measure the aspects of democratization in this transitional society.

In this research, there is a need to use an exploration method to measure the social media practices; asking questions about its capability to enhance a parasocial interaction within the Arab community. This research could help in gathering the heterogeneous social media elements that could develop cohesion, unity, and shared experiences among virtual/real relationships in the society. This study could a sample for mediated cultural studies on regional and international perspective. It reveals a step forward for an international adaptation in different regions.

Title: Media ideologies and media repertoires of 'alternative media'-users between selective criticality and pragmatic trust

Session Type: Individual submission

Authors:

Name: Christian Schwarzenegger

Email: christian.schwarzenegger(at) phil.uni-augsburg.de

Country: DE (Germany)

Affiliation: University of Augsburg

Abstract: Long before Donald Trump's Twitter handle became eponymous as a relentless stream of alternative facts and political agitation, populist ideologies have repeatedly aimed to establish media ecologies of their own as a means to bypass the critical journalism. In recent years, the rise and proliferation of mostly online media outlets related to the new political right could be observed in the US and in many European countries. Besides such new "alternative media" related to the populist-right, also media financed by Russia, e.g. Sputnik News and RT- Russia or media outlets which spread conspiracy theories or dubious information have gained prominence as self-proclaimed alternative media.

The emergence of these new alternative media coincided with a purportedly decreasing trust in journalism as well as social and political elites. The Reuters Digital News Report 2018, indicates that mistrust in legacy media may eventually result in an increased use of alternative media and unconventional sources of information.

Alternative media has always been a debated term, but was rather related to socially progressive ambitions and pro-democratic political goals while 'ulgy alternative' like the right wing political media remained widely understudied. These new alternatives in the contrary are typically discussed in relation to propaganda, disinformation, and the spread of fake news, echo chambers and how they contribute to political polarization or ultimately as a threat to democracy and not as alternative media.

Most of the public and academic discussion about them is focused on the contents and the kind of (mis-)information, which they share and what impact there communication efforts could possibly have on the mainstreaming of radical stencils in public opinion, the propagation of populist views or specifically the outcome of elections. Potential effects of these media are often inferred from their contents. Little is known however about the users of these "new alternative media", their motives and mindsets and the meaning they attribute to these media as well as the role they play in the media repertoires of their respective users.

This papers addresses this research gap as it provides a perspective on media repertoires, media ideologies and media practices of users of a diverse alternative media (populist political right; sceptical/conspiracy and pro-Russian). Based on a 29 in-depth interviews with alternative media users it shows that the alternative media play very different roles in the media repertoire, and that this role is based on personal dispositions, media epistemologies and previous experiences.

Alternative media are used either as balancing sources, which users do not necessarily trust, but suggest that they can cope with whatever biases they have. Others see them as critical counter-publics challenging the status quo, while others uncritically accept them as truth, deeply identifying with them and a community around them. Users generally considered themselves critical thinkers, who cared a lot about seeking the truth and objective reporting; rarely reflecting that these newly found sources may be unreliable. The research sheds light on the complex diversity of motives and practices why and how people use dubious alternative media while allegedly seeking the truth.

Title: Stepping into celebrity adventure shoes: an analysis of Uganda's domestic tourism trends: case study #Tulambule (let us tour) Instagram and Tweeter handles 2016 - 2018

Session Type: Individual submission

Authors:

Name: Ann Mugunga

Email: ann.mugunga(at) gmail.com

Country: CN (China)

Affiliation: Hong Kong Baptist University

Name: ANGELLA NAPAKOL

Email: angelsbeny(at) gmail.com

Country: UG (Uganda)

Affiliation: Uganda Christian UNiversity

Abstract: This paper seeks to examine celebrity following as a driver of domestic tourism in Uganda. The content on #Tulambule (let us tour) Instagram and Twitter pages from 2016 – 2018 shall be collected using API and data scrapping; and analysed using R to establish the multiple linear regression models. Domestic tourism shall be studied as the dependent variable and celebrity tweets and retweets, the frequency and popularity of certain tourist sites and number of tourist posts of the other handle users and followers, as independent variables. The authors will examine the relationships between the role of leisure involvement with celebrities' mention and destination popularity (measured by destination likes, posts, tweets and retweets on #Tulambule Instagram and Twitter). The paper shall rely on the social influence theory as well as the concept of celebrity fandom to examine the trends of domestic tourism in the country; and the goal is to advance our understanding of how following a celebrity or public figure's social media page influences domestic destination traffic in the global south.

Key words: Domestic tourism, social influence, celebrity fandom, tulambule, social media

Title: Gender Equality on/of YouTube. The Friction of Participatory Culture and Unequal Commercial Logic of Social Media

Session Type: Individual submission

Authors:

Name: Christine Linke

Email: christine.linke(at) uni-rostock.de

Country: DE (Germany)

Affiliation: University of Rostock

Abstract: The video-platform YouTube is worldwide one of the most important and widely used social media networks. Its user-based structure enables communication in online public spheres and new transmedia discourses. Nevertheless, the actual processes of empowering people and representing diversity has to be questioned and analyzed regarding YouTube's potential of participation (Jenkins et al. 2015) und connectivity (Dijck 2013). Previous studies found that male actors are most successful and hence more visible (e.g. Wotanis et al. 2014). Our research question therefore was, "How is gender equality enabled on/of YouTube and are there differences regarding visibility and production?" We hereby conceptualize gender as socially constructed, in social situation enacted („doing gender“ West/Zimmermann 1987) and intersectionally interwoven with other categories of difference (Winker/Degele 2011).

To answer our research question with empirical focus on German language YouTube we followed a multimethod approach combining a quantitative content analysis of YouTube-channels (N=2000 Videos based on the 1000 most view German language channels) and an interview study with 14 female YouTubers (focusing on production conditions and culture).

The findings of the content analysis show an unequal visibility of gender in German language YouTube: Female protagonists are notably underrepresented. Within the 1.000-top-channels the amount of female YouTubers is under 20 percent. Within the -100-top-channels the ratio of female versus male protagonists is by 1:2 (29% compared to 69%). Only 2% of the protagonist identified with another gender. Female YouTubers became mainly visibal with "traditionally female" topics (like beauty) and service oriented formats (like how-to). They talk more often about their "passion" and hobbies. Males on the contrary more often articulate their profession. Further findings regarding the visibility in public versus private spaces and the articulation of emotion and relational topics also suggest a different representation of gender on YouTube.

The findings of the interview study reveal that while creativity and self-determination are strong motivation for female YouTubers, they often experience friction between commercial, pop-cultural and individual purpose. They address gender stereotypes on the hand as problematic but on the other hand as effective way to attract a (young) community on YouTube. Gender clichés, so the explanation, are easy accessible and promote the channel to a broader audience. All participants have experienced hate speech, especially when they produced content beyond the commercial mainstream. They reflect on the logic of YouTube with its enormous pressure to constantly produce new content, which again promotes normalizing and stereotypic orchestrations of gender.

Overall the findings of both studies highlight existing gender difference on YouTube that are profoundly connected to the commercial mechanisms and unequal structures of YouTube. The contribution is elaborating this argument as well as the intersectional dimensions of inequality

beyond gender on/of YouTube in more detail. Furthermore the German findings are connected to the international research body and the impetus for future research is discussed.

Title: Methodological approaches on user comments research: a typology and a proposed framework aimed to know what citizens matter.

Session Type: Individual submission

Authors:

Name: Gloria Diago

Email: gloria.gomez.diago(at) urjc.es

Country: ES (Spain)

Affiliation: Rey Juan Carlos University

Abstract: This proposal contributes to the line of inquiry on new comments with a twofold aim: to enrich the review of scientific literature with attention on the methodologies applied and to suggest a possible research direction. First, we briefly introduce the need of new approaches for journalism research. Second, we situate the study of comments as a form of civic and or political participation, and propose a typology of research on this topic: 1) assessing comment's contributions to democratic life, 2) identifying journalists' and web editors and moderators perceptions, 3) generating a profile of commentators, 4) identifying the features of news more commented. Third, we suggest a line of research intended on identifying what citizens matter through the analysis of the most commented news. The schematic proposed will aid researchers understand how citizens view their political environment and to anticipate outcomes of collective direct participation, such as elections and referendums.

Title: Brazil's media system: from political parallelism to power group

Session Type: Individual submission

Authors:

Name: Joao Junior

Email: jferes(at) iesp.uerj.br

Country: BR (Brazil)

Affiliation: Instituto de Estudos Sociais e Políticos ' IESPUniversidade do Estado do Rio de Janeiro
' UERJ

Abstract: The theoretical debate about media systems around the world has, which has the contribution of Hallin and Mancini at its core, has often taken Brazil to be a case of political parallelism that roughly mimics media systems in Southern European countries, where the democratization process was belated and sometimes incomplete if compared to the American model.

Some authors have even claimed, based on the analysis of empirical evidence, that the Brazilian media system portrays one of the main features of Hallin and Mancini's typology, which is political parallelism, an alignment between media outlets and the ideological spectrum stretching from left to right. Thus, despite the fact that there is no direct connection between media ownership and political parties, there is an observable distribution of media outlets across the ideological spectrum. This take on the Brazilian media system has been criticized by authors who claim that the concept of political parallelism is an importation of a model concocted to describe European media systems that does not properly apply to Brazil.

By using a quantitative analysis of the sentiment and content of news published by Brazil's chief newspapers (Folha de S. Paulo, Estado de S. Paulo e O Globo) and of the most popular news TV program (Jornal Nacional), from 2014 to the present, I intend to show that not only political parallelism cannot be observed, but also that the Brazilian big press has changed its mode operation from a political actor allied to conservative political forces to a political actor allied with the branches of government that are not dependent on the vote: the Judiciary and the Office of the Public Prosecutor (Ministério Público).

In the conclusion, I will call attention to the need of correctly conceiving the media in Brazil not as a watchdog, a fourth power, or even a mediator between branches of government, but as a group endowed with political power and shifting alliances.

Title: Against the Law: BitTorrent as Pirate Technology

Session Type: Individual submission

Authors:

Name: Fidele Vlavo

Email: fvlavo(at) gmail.com

Country: MX (Mexico)

Affiliation: Universidad Iberoamericana

Abstract: Following a historic trial launched in February 2009, a Swedish court condemned the four administrators of the famous file-sharing website, The Pirate Bay, to one year of imprisonment for their involvement in copyright infringement. Initially based in Sweden, this site was set up in 2003 to facilitate peer-to-peer file-sharing using BitTorrent technology. In half a decade, TPB built its reputation to become one of the most visited websites on the internet. As a response, entertainment companies and anti-piracy organisations, aided by law enforcement and national governments, embarked on a steady dismantling of the file-sharing website. Indeed, for years, media corporations have lobbied for the control of intellectual property and the redeployment of copyright laws to digital media. (1)

Yet, critics have also observed that legal victories over digital platforms have limited impact because new technologies are rapidly developed to counter legal restrictions. (2) BitTorrent is such technology. This protocol facilitates the retrieval and transfer of digital files from various locations without the need for the site to hold any files. (3) This constitutes a radical shift from previous legal cases involving websites that provided users with digital storage and streaming functions. (4) By contrast, BitTorrent does not require platforms to host digital content, let alone copyrighted material. For this reason, websites owners argue that they cannot be made liable for copyright infringement. (5)

In this paper, I propose to examine the use of BitTorrent as a creative technology of resistance. The argument developed here is that BitTorrent exemplify how the structure of digital networks allows users to participate, and, when necessary, to regulate and control digital interactions. What is more, this technology was devised to circumvent copyright and intellectual property laws. In this context, I choose first to analyse TPB's trial to consider how the judges address the technicality of BitTorrent in the context of copyright law. Through a textual analysis of the court proceedings, I isolate the strategies used to successfully convict the defendants.

In the second part, I review TPB's position in relation to the discourse and philosophy of piracy and suggest that, in the absence of technological restrictions, TPB may have transformed file-sharing into a politics of resistance. Indeed, many users have claimed allegiance and defiantly embraced digital piracy politics. (6) My aim is to contribute to the debate regarding file-sharing, piracy and digital resistance by framing a creative practice that challenges the location of power within and beyond the law. While its abrasive aesthetics of opposition led to the conviction of its founders, TPB constitutes an effective, if temporary, space for a resistance that ultimately exposes the limits of law.

Abstract: Sexual harassment has been a significant problem in the United States and various countries around the world. While legislative efforts to curb or eliminate harassment in workplace settings have had some success, many organizations have gender-based power differentials that allow harassment to continue unchecked, unpunished, and, often, unacknowledged. In 2017, sexual harassment norms were aggressively challenged as women all over the world took to social media to tell their stories of harassment, using the hashtag #MeToo. The reaction was swift and enormous: organizations such as Uber, Google, and Amazon experienced important consequences after allegations of sexual misconduct that had been largely ignored were made public because of the social movement. Since #MeToo went viral, executives who had been protected from punishment were ousted from these and other mega-companies; legendary public figures were arrested and charged with sex crimes; and a nominee for a U.S. Supreme Court Justice was forced to testify in front of the Senate Judiciary Committee because of allegations of sexual assault. In our paper, we discuss the powerful impact of a single tweet, #MeToo, that began a social movement that united women worldwide. We suggest that #MeToo has been more successful in curbing sexual harassment than laws and organizational policy efforts have been to date. By changing norms surrounding the acceptability of and understanding of sexual harassment, #MeToo may help change individual, organizational, and societal responses to it. We use communication, management, and psychology literatures to support our ideas about the power and potential efficacy of the #MeToo movement to reduce the prevalence of sexual harassment, using a multi-pronged approach.

Title: Frames. emotions and stereotypes: : the media of proximity and the portrait of immigrants and refugees.

Session Type: Individual submission

Authors:

Name: João Correia

Email: jcorreia(at) ubi.pt

Country: PT (Portugal)

Affiliation: University of Beira Interior - Labcom.IFP

Name: Anabela Gradim

Email: agradim(at) ubi.pt

Country: PT (Portugal)

Affiliation: University of Beira Interior - Labcom.IFP

Abstract: The frameworks used by traditional media are based on a stereotyped image of refugees, which allows their association with phenomena such as crime, terrorism, and violence. There is a powerful association-of-ideas effect in which certain images awaken this relationship in which the refugee's image is framed to generate emotions such as fear, threat, and insecurity.

The counter-frameworks triggered by some regional or alternative media in Portugal (Fumaça, Região de Leiria) use a proximity strategy in which the refugee is approached at his daily lifeworld, identifying its unique course in the professional life, the school insertion, and the learning of the language and culture.

The newspaper Região de Leiria has demonstrated how it is possible, in regional and local media, to build a rigorous approach to the dynamics transposed by refugees and migrants into the regions and, simultaneously, describing the everyday life of these refugees.

The news site Fumaça builds a multimedia news coverage, powerfully using the audio medium to accompany stories of life carried out by migrants and refugees.

In both cases, memory is essential for obtaining an empathy that transcends stereotypes presented in the traditional media. Consequently, the Região de Leiria obtained several prizes that awarded the cultural diversity in journalism, attributed by the High Commission for Immigration and Minorities.

The news site Fumaça has obtained in successive years diverse supports from international Foundations that promote the cultural diversity in the media field

This paper intends to demonstrate, using a corpus composed by those proximity media how it is possible to oppose to a stereotyped framework, a humanized framework that awakens empathy and recognition, strengthen the dignity of the protagonists.

By proximity media, one understands those media that try as far as possible to express both the meanings that these agents attribute to their actions and the context in which these actions take place.

Theoretically, were used the concept of everyday life world, the reflection on memory as carried on by phenomenological sociology (Schutz) and by Cultural Studies (Hall) , and the concepts of reification versus recognition, inspired by the critical thought of Axel Honneth.

Methodologically, one uses Discourse Analysis to identify discursive strategies for framing refugees in the media. This analysis was carried by the Remedia Lab Project, which seeks to discover the importance of regional and alternative proximity strategies.

Keywords - refugees - proximity media - empathy - everyday life

Title: [Panel] Big Tech, Media Development and Journalism Philanthropy: Friend or Foe' Panel description

Session Type: Panel Submission

Authors:

Name: Susan Abbott

Email: susanabbott1 (at) gmail.com

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: Facebook recently announced it would donate \$US 300 million to support quality journalism. Google has made a similar commitment of \$US 300 million through its Google News Initiative. The Mozilla Foundation, Omidyar Network, Bill and Melinda Gates Foundation: many new foundations funded with profits from technological industries in Silicon Valley are offering philanthropy to help alleviate the financial crisis in news journalism. Such initiatives, however, are a subject of considerable controversy. Are these new funders using their philanthropy to shape the news agenda? Do these arrangements compromise journalistic autonomy and independence? Are these philanthropic efforts merely tokenistic, given the broader impact these firms are having on news media around the globe? The panel will explore the conceptual and research challenge posed by these questions, as well as the practical aspects of concern to activists, media actors, and others who are considering whether to engage with these funders.

Session Organizer: Susan Abbott, University of Westminster, susanabbott1 (at) gmail.com

Chair: Dr. Victor Pickard, Associate Professor at the Annenberg School for Communication, University of Pennsylvania

Respondent: Dr. Melanie Bunce, Senior Lecturer in Journalism, and the founding director of the Humanitarian News Research Network based at City, University of London.

Title: The key philanthropies funding journalism and media: How and why they do it

Session Type: Panel Submission

Authors:

Name: Marius Dragomir

Email: DragomirM (at) spp.ceu.edu

Country: HU (Hungary)

Affiliation: Central European University

Abstract: This paper is based on an ongoing research project on media and power run by the Center for Media, Data and Society (CMDS) at CEU. It aims to identify the key philanthropies funding media and journalism and to describe the mechanisms and principles used by them when making funding decisions. The paper will attempt to explain some of the key changes in media development funding during the past decade.

The paper aims to also shortly describe the context in which philanthropies operate, particularly the role played by other key groups in funding media and journalism. The role of governments, which have become a major player in the media market, is going to be analyzed, as funding disbursed by governments has a massive direct influence on journalism and media.

Specifically, Dragomir will present original research from Media Influence Matrix is a global research and advocacy project run by the Media & Power Consortium, a group of experts led by the Center for Media, Data & Society (CMDS) at CEU in Budapest. Part of the Matrix's chapter on journalism funding covers philanthropy funding. Marius Dragomir will speak about the main trends in philanthropy funding. Using data and information gathered in the project, he will aim to answer the following questions: Who are the key philanthropy funders in journalism? Are they mostly international/western foundations or governments? Are local industry groups and individuals funding journalism in their countries? What are the key initiatives philanthropies are funding? How does philanthropy funding in journalism compare with government funding or commercial revenues?

Abstract: Private foundations are an importance source of funding for many news outlets. It has even been suggested that they may offer partial solutions to journalism's economic crisis. But how does private philanthropy affect the practice of journalism? This paper looks at how philanthropic funding shapes the values and practice of humanitarian journalism - journalism focused on natural disasters, conflict, and other crises affecting human welfare around the world.

Title: Philanthropy-driven data journalism and implications for journalistic practices in Africa

Session Type: Panel Submission

Authors:

Name: Dumisani Moyo

Email: dumisanim (at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: Over the past decade, philanthropic organizations have poured millions of dollars into different specialized forms of journalism in Africa. These include health journalism, economics/business journalism, science journalism, data journalism, and more recently fact-checking journalism. Support for these specialized forms has come in the form of grants, paid-for trainings, overseas fellowships, seed funds for data journalism projects, and running of data journalism awards. In a context where newsrooms are shrinking and media organizations have less resources to sustain good journalism, this funding has in many places provided much needed relief to media houses facing closure. In some cases, this has led to the burgeoning of new reporting desks for these specific niche areas. While these new specialized forms of journalism are, on the face of it, aimed at addressing existing gaps in news reporting on the continent, not much scholarly work has sought to establish the motives/interests of the various philanthropic organizations involved, the choice of particular journalistic forms they support, and the general impact that such interventions have on the practice of journalism in general. This study explores the rise in philanthropy-driven data journalism and analyses its broader implications for the practice of journalism in Africa. Data journalism has gained significant visibility on the continent, popularized by organizations such as Code for Africa, HecksHackers and others, with support from leading foundations such as the Bill and Melinda Gates Foundation, the Omidyar Foundation, the Open Society Foundation and others. What implications does this have for journalism on the continent? How is data journalism perceived in African newsrooms? Do newsrooms find it useful, or do they just do it because it attracts funding?

Title: [Panel] Where's the "Development" in Media Development: A Critical Reflection on the Contributions and Outcomes of Media Assistance, Panel description

Session Type: Panel Submission

Authors:

Name: Susan Abbott

Email: susanabbott1 (at) gmail.com

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: IAMCR's newest working group, tentatively entitled the "Media Development Working Group," considers the efforts of actors around the globe to promote freedom of expression, strengthen the independence of the news media, and foster an enabling institutional environment for pluralism and diversity in the media sector. These efforts, however, are carried out under a staggering array of justifications, and are often influenced by radically different assumptions and ideologies pertaining to democracy and development. Equity of information access, communication power, cultural flows, good governance, poverty eradication, and citizenship are all variously posited as being at stake in efforts to build a better media system, with implications to how this work is approached. As part of the working group's effort to foster a more coherent scholarly dialogue connected to this field of practice, this panel explores some of the diversity implicit in the "development" of media development.

Title: Nigerian Newspapers and Foundation Funding: The Attractions and Drawbacks of Foreign Aid Funding

Session Type: Panel Submission

Authors:

Name: Mary Myers

Email: marysophiamyers (at) gmail.com

Country: GB (United Kingdom)

Affiliation: Independent researcher

Abstract: This paper explores the attractions and drawbacks of accepting funding from foundations, from the point of view of Nigerian newspapers. I describe how journalists who are recipients of philanthropic funding from the likes of Gates and Omidyar negotiate their relationship with these donors. I conclude that newspapers are rather more adept and muscular in their dealings with donors than might be supposed.

Country: GB (United Kingdom)

Affiliation: University of Oxford

Abstract: UNESCO and others concerned with the sustainability of the news media worldwide recognise that if this issue is to be managed, it needs to be measured and monitored (Schneider, Hollifield, & Lublinski, 2016). Several frameworks for media viability indicators have been proposed over the past three years (UNESCO-IPDC, 2015; Schneider, Hollifield, & Lublinski, 2015). However, calls for their implementation have not been answered - until now.

This paper reports on the creation of an ongoing, broad-based, quantitative tool to measure, monitor, map and model the forces shaping media sustainability globally. Data on 264 countries and terrestrial regions, from a range of global databases including the World Bank, Transparency International, OECD etc. and from panel data, were used to create a Media Sustainability Barometer (MSB). Structural equation modelling was used to estimate relationships between MSB factors (political, economic, social, technological, legal and media-specific indicators) and those United Nations' Sustainable Development Goals which constitute the focus for 2019 .

Testing the model using data on G7 (Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States) and BRICS (Brazil, Russia, India, China and South Africa) blocs, it was established that media sustainability was predicted by a number of UN SDGs, especially SDG No.16 (peace, justice and the right to information).

We anticipate that media leaders, policy makers and other development actors will draw on the MSB into their evidence-based strategic planning. Furthermore, the study will contribute to scholarly discourse into the changing news media ecosystem and the future of global media policy.

Affiliation: University of Leicester

Abstract: As the funding landscapes for media, journalism and development shift towards an increasing presence of private and philanthropic funding a chief concern regards the consequences for programming (Scott, Bunce, & Wright 2019; Schiffrin 2017). One of the identified shifts is the increasing blurring in practice between what scholars distinguish as 'media development' (strengthening media institutions and capacities) and 'media for development' (focus on educational messages and content) (Manyozo 2012; Scott 2014). In particular, many philanthropies interested in direct support to build local capacities for the production of content on specific themes (Kalathil 2017). Indeed, the broader wave of interest in 'instrumental storytelling' – or the 'storytelling turn' - has been argued as being driven by philanthropic foundations (Fernandes 2017). Additionally, direct support for journalism on specific themes is now also beginning to be placed in the context of 'fake news' and of combatting misinformation, as was highlighted in a recent op-ed by UK Foreign Secretary in his announcement of his focus on supporting press freedom (Hunt 2018).

The paper reflects on these trends in the broader landscape of media (for) development with reference to a recent audience research project undertaken with International Media Support (IMS), a media development organisation based in Denmark. The research project, including content analysis and audience focus groups, was undertaken in the context of one of IMS's programmes (funded by the Ford Foundation) supporting journalists to produce stories about local migration in four migration hubs in Africa (Noske-Turner, Twigt & Sajir 2018). The focus was on amplifying the voices of African migrants

The paper engages with Fernandes's (2017) concept of 'curated storytelling' first as a way of attending to some of the problems identified in the findings of the report in terms of a programmatic focus on 'voice' of migrants. In keeping with existing literature (Figenschou & Thorbjørnsrud 2015), the report found that the focus on individual migrant voices primarily through human interest frames, while intended to evoke sympathy, could also have the effect of reproducing representations

of migrants as helpless victims, under-interrogating structural and systemic factors. Equally, 'positive' stories of uplift could, in keeping with Fernandes' neoliberal critique, have the effect of responsabilising migrants to be successful, integrated entrepreneurs. Second, Fernandes' concept of curated storytelling is used to understand the audience responses to stories. While most stories elicited the intended sense of sympathy and understanding among focus group participants, some stories were dismissed as misinformation or with a distancing response, and still others with quite profound levels of empathy and enriched understanding. The latter can be analysed to understand the how important authenticity, complexity and 'thickness' are for breaking through the malaise of curated stories and provoking change through media (for) development.

Title: From media sustainability to vibrant information: Measuring the complex information systems we inhabit

Session Type: Panel Submission

Authors:

Abstract: Now in its 17th year, the Media Sustainability Index (MSI) studies the health of the media sector in 21 countries in Europe and Eurasia. International non-profit IREX, in collaboration with USAID, created the MSI as a tool to assess the development of media systems over time and across countries. It is different from other measurements and indexes in that it looks beyond free speech or press freedom; the MSI measures how effectively traditional and non-traditional sources of news serve their audiences. The primary source for the MSI score is a panel of local experts drawn from each country's media outlets, NGOs, professional associations, and academic institutions in each country. This approach is innovative and participatory; most international indexes are scored by a limited group of experts in global North countries.

While the MSI has yielded a significant depth of knowledge, the type of information it provides is still limited. In the two decades since the MSI was designed, the world has changed profoundly. Digital transformation, the blurring of lines between media producers and audience, the near collapse of the advertising-based media business model, and backsliding among countries that appeared to be moving toward democratization, are among the confounding challenges.

Additionally, while the MSI was always intended to yield practical recommendations for the global development, it largely unable to either provide root cause analysis for many of the problems it identifies, or adequately map the connections among different forces that determine the health of a media sector.

This paper analyzes the complex pathways that have been necessary to design a new index to replace the MSI: an Index that measures not just the media but the complex information systems which enmesh today's world. The new index, called the Vibrant Information Barometer (VIBE) looks at both traditional and non-traditional producers of information; analyzes power inequalities; and attempts to better understand the relationships between people, information, decision-making, and action. The VIBE framework has four 'principles:' 1) meaningful content; 2) accessible channels that facilitate information flow; 3) citizens who are dynamically engaged with information; and 4) citizens who ultimately use that information to take action for transformative positive change.

VIBE measurement draws on mixed methods, preliminarily including open source data, expert opinion, surveys, content analysis and web mapping. The index is being tested throughout 2019

using an MVP (minimum viable product) “agile” approach in 2-3 countries. By the time of the IAMCR we will be able to report on at least one VIBE pilot, especially vis a vis the extent to which VIBE can usefully measure complex information systems and the challenges in operationalizing the framework. Importantly, we will have a good read on how practical the VIBE analysis is to inform governments, civil society, donors, media and tech companies, and global development organizations, about how best to increase the vibrancy of information systems. The presentation at IAMCR will include a description of the journey to design VIBE, an analysis of the prototype testing, as well as designs for the way forward.

Title: De-westernising media development in Africa

Session Type: Panel Submission

Authors:

Name: Winston Mano

Email: w.mano (at) westminster.ac.uk

Country: GB (United Kingdom)

Affiliation: University of Westminster

Abstract: Historically media development has carried on as if it is an ideologically free enterprise yet it is conflicted by interests of the “developers”. Technical equipment, funding as well as training come with hidden agendas and values. Colonialism revealed that media development was offered in the service of power, especially to buttress systems of exploitation and to uphold power of colonisers. The colonising Western nations left in place media systems that are still constrained by colonial frameworks. The media development approach to postcolonial media systems will need to be rethought as over the years this has not created viable communication for Africans. De-Westernising media development entails decoloniality, to help undo the remnants of colonial frameworks, and to realign media development needs with contemporary needs in the Africans contexts. The digital media initiatives can succeed if their conceptualisation and policy frameworks avoid colonial tropes and incorporate African thinking. The paper evaluates literature and cases of media development in Southern Africa with a view to De-Westernising and rethink the media development efforts in Africa.

Title: Participatory Hermeneutic Practices: The Reflective Consumer

Session Type: Individual submission

Authors:

Name: Tony Wilson

Email: tonyjwilson(at) yahoo.com

Country: MY (Malaysia)

Affiliation: Visiting Senior Research Fellow, Media and Communications, London School of Economics, University of London (2015-2018)

Abstract: Research announced as structured by hermeneutic philosophy - or its intellectual genesis of practice theory - occupies a significant role in advertising studies as elsewhere in business schools. This paper presumes to discuss and dissect that role by (re)turning to core concepts in hermeneutic practices theory, so augmenting the analysis of consumer practices, their self-reporting of narrative from visiting malls to viewing television. It draws as exemplars on participatory response in shops or simply being mundanely in a mall - 'embodied meaning-making' (Wetherell, 2012: 4). In doing so, it distances itself from empiricism/ positivism, views of perception as passive.

The paper commences from the philosopher Heidegger's - and Hume's - concern with their foregrounding 'familiarity' of 'being-in' the material world as underwriting the very possibility of understanding everyday life. In lacking such an enabling recognition - experiencing 'surroundings' as fundamentally a hermeneutic 'homeland' - we could not actualise being-in-the-world as already meaningful mode of consuming, thereby enjoying 'a contrast between space, as tied to measurable extension, and space as tied to place, to that in which one dwells' (Malpas, 2006: 78).

Guided by its project of re-viewing reflection in marketing theory (critically assessing work by Craig Thompson), the paper advances spatio-temporal concepts of tacit generic practice, shaped by - or embodying - participant 'horizons of understanding' (Gadamer, 1975). It so considers 'what constitutes our core cultural constructs in consumer behaviour' (Giesler and Thompson, 2016: 497).

The paper draws on hermeneutic philosophy to further a practice perspective view of human behaviour as at its foundation a recurring process of constructing participatory meaning, regarded as presuming, projecting and producing narrative, where entities consumed are 'primordially' implied to be (dis)enabling 'equipment' (Heidegger, 1962). By laptop understanding-in-use virtual meaning accrues to materially significant equipment. Thus practices are tacit, tooled and customarily 'ready-to-hand'. 'Things matter, and some things matter a lot' (Turley and O'Donohoe, 2012: 1332, 1338).

From a hermeneutic perspective, for this paper, familiar, habituated activities, undertaken in the absence of reflective consideration but nonetheless producing embodied narrative, are practices - or 'ready-to-hand' (Heidegger, 1962) equipped action enabling 'being-with-others' (ibid). Using a hammer can produce - eventually - the house. Hermeneutics analyses how such narratives are built, with tacit anticipating resting on assumptions about the world (or in Heidegger's terms 'projection' from a 'horizon of understanding') and our integrating expectation with event. Having mapped this perspective on hermeneutic practices, it is used here as template in considering participants' power, celebratory and critical horizons of understanding emplaced within product enabled behaviour.

In short, the paper argues that consumers' (i) tacit understanding of practices (in which little self-monitoring occurs) be not conflated with (ii) a participatory yet transformative celebratory and critical reflecting. Both modes of their understanding need in turn to be distinguished from (iii) the

narrative contribution as participants to research focus group or interview as their later considering surfaces and (iv) researcher interpreting as 'secondary derivative' (Alvesson and Skoldberg, 2009).

Title: What are the outcomes expected from media and communicative actions in development for critical social change? A quest for social justice

Session Type: Individual submission

Authors:

Name: Srinivas Melkote

Email: melkote(at) bgsu.edu

Country: US (United States)

Affiliation: School of Media and Communication Bowling Green State University

Abstract: Development communication has evolved according to the overarching goals of the development programs and devcom theories during each historical period, starting with the inception of development as a strategic goal of a state, particularly in the newly-liberated European colonies in much of Asia, Africa, and the Caribbean. Communication was seen as the missing link in the development chain and it was considered the task of the media and devcom to inform and educate the masses. communication models tended to be linear, one-way, top-down and prescriptive from the change agency to the people. Much of this began to change, starting in the 1970s. Change now included a widely participatory process of social change in a society and included social and cultural aspects besides the economic. Participatory approaches such as the participatory rural communication approach, participatory action research, or the liberation theology of Paulo Freire were influenced by the social change communication model based on the interpretive/critical theory and methodology. While the participatory mode of communication for development programs and activities was a welcome addition to the devcom toolbox, the definitions of participation reflected a wide variety of approaches. In many contexts, the level of participation required by the people were low and perfunctory.

Toward the end of the 1980s, the concept and practice of empowerment expanded upon the earlier objective of participation in development communication models and practices. The concept of empowerment is frequently referenced in the disciplines noted above but was missing or inadequately explicated in development communication. Development communication in an empowerment paradigm has the goal of empowerment of the people, building of local capacity and equity. The objectives of development communication activities are now expanded to include the activation and the sustainability of social support systems, social networks, empowerment of local narratives, facilitation of critical awareness, and facilitation of community power.

As we entered the 21st Century, new challenges have sprung up. Today, we face grave risks and dangers to our ontological security. For devcom scholars and practitioners the greatest threat to progressive change is that the risks and dangers are differentially distributed around the globe between the privileged and marginalized individuals and communities. The overarching goal of change is now framed as a quest toward social justice in development and change. We need to broaden the scope of devcom. Scholars, practitioners, and administrators are putting an increased emphasis on social justice in directed social change. An important objective is to redefine how devcom could play a useful role to address and counter inequality and injustice in development and social change. Specifically, what outcomes are expected from media and communicative actions and what should be the principal communicative actions to facilitate the outcomes desired? This paper will explore a new avatar for development communication. It brings together the traditional

as well as radical communicative actions from areas such as participatory action research, community organization, action research, and other related models in a quest for social justice in the field of communication for development.

Title: Participatory Communication in International News Production (Video presentation)

Session Type: Video Submission

Authors:

Name: Sawsan Atallah Bidart

Email: sawsan-ghazi.bidart(at) etu.u-bordeaux-montaigne.fr

Country: FR (France)

Affiliation: University Bordeaux Montaigne, Research team MICA

Abstract: Research Question: How is international news production a form of participatory communication?

Theoretical Framework: participatory journalism (co-construction theories, amateur and citizen journalism) vs professional or traditional journalism

Methods: In order to find out whether international news production takes place in form of participatory communication, 252 news videos on the events of the Arab Spring produced by Al Jazeera English, France 24 English, euronews English and Press TV English, were analysed using a Grounded Theory approach and critical discourse analysis. Additionally, interviews with representatives from these organisations were also held so as to understand how news is produced using material from various sources. Various forms of contributed material were identified, ranging from interviews and citations to amateur and State TV content. The integrated content was identified and analysed so as to understand how it was presented for the final viewer. The findings of this study will contribute to participatory theory in the field of journalism and international news production.

Pre-recorded Video Presentation Format Proposal:

1 - 3 Minutes : Presentation introduction

4 - 8 Minutes : What is Participatory Theory? How can this be compared to the theories of co-construction?

9 - 12 Minutes : Theoretical Framework, Co-construction: Jacoby and Ochs, (1995), Brown (1977), Cross (1977), Diakhaté and Akam (2016), Ferguson (1964), Goodwin and Yaeger-Dror (2002). Participatory journalism: Vincent (2015), Radsch (2011), Rosen (2008), Bowman and Willis (2003)...

13 - 17 Minutes : Examples of participatory journalism in the Arab world during the time of the Arab Spring

18 - 20 Minutes : Conclusion

Title: Why Contemporary Democratic Discourses Impair Participatory Communication and what Ubuntu Can Do to Help

Session Type: Individual submission

Authors:

Name: Leyla Tavernaro-Haidarian

Email: lhaidarian(at) uj.ac.za

Country: ZA (South Africa)

Affiliation: University of Johannesburg

Abstract: Contemporary democratic discourses are frequently, though not exclusively, characterized by an attitude of ‘pro and con’ or ‘left and right’ where the aim is to persuade others, a jury or an audience of what is right and what is wrong. These divisive tendencies are reflected and heightened by the media, who, in turn, reduce what are essentially complex interrelated issues into over-simplified frames that boost ratings and make the consumption of information easier, thereby obliterating a wide array of diverse or gentle voices. As such, political debates, talk shows and many other forms of public discourse, even those that resist a commercial focus in favor of an ethos of public journalism, frequently employ agonistic modes of communication that systemically amplify authoritarian, violent, populist, nationalist, racist, misogynist and many other extreme voices, betraying deeply conflictual assumptions around the way in which we perceive human relations. Underlying this type of discourse, then, is the normative assumption that our affairs inherently clash and are best governed through struggles and contests. Yet, this prevalent adversarial approach obscures valuable insights, silences diversity and participation and fosters division where collaboration is possible and quite possibly desirable. The epistemological source of this phenomenon lies in our suppositions around power. Power (and the way in which we relate as human beings) is largely (and unconsciously) conceptualized in conflictual terms. Yet I argue that this conception of power is but one facet of a complex phenomenon and that alternative normative and epistemological approaches are worth considering. Of particular interest is the African moral philosophy of Ubuntu, which offers a deeply relational locution of power that significantly contrasts conflictual notions and can shape thoughts, actions and discourses towards non-partisan and participatory ends. Outlining what Ubuntu communication looks like in theory and practice, I argue that it provides the space to think and speak in ways that support harmonious and cohesive societal structures and practices. Its approach to communication rests on the premise that the various interests of individuals and groups, while richly diverse, can be conceived of as profoundly bound-up rather than incompatible. It sees power as immaterial force and as that which is between people rather than something to be had or held. Cutting through all parts of our socio-political realities, then, communication informed by Ubuntu enables broader lines of action and a wider scope for achieving diversity and common ground. When power is recast as mutual empowerment, communication becomes a deeply participatory process that allows for ordinary citizens to gain more control over their everyday lives, validates their humanity and dignity, and prevents them from being subjected to forces that cancel out their subjectivity. It provides the space to evolve discourses in ways that support cooperation and participation and promulgate dignity and justice.

Title: Communication brokers in new construction projects: Case study on participation discourses in Jätkäsaari, Kalasatama and Zeeburgereiland

Session Type: Individual submission

Authors:

Name: Annaliina Niitamo

Email: annaliina.niitamo(at) helsinki.fi

Country: FI (Finland)

Affiliation: University of Helsinki

Abstract: The demand to expand citizen participation in urban planning has been discussed in the sphere of urban planning theory from the 1980's onwards (e.g. Healey 1997; Forester 1989), but particularly widely since the early 2000's. There has been a paradigm shift from functionalistic planning to communicative planning in urban planning theory and the outspoken planning strategies of city organisations. (Innes & Booher 2004; Bäcklund & Mäntysalo 2010.)

As urban planning claims to take on a more inclusive and dialogical task, there is need for research that analyzes the depth of citizen participation in municipally led planning endeavors. There seems to be a gap between public discourse on participation and planning realities: how do participatory communication ideals take form in urban planning between municipality and its citizens? This article explores the concept of communication brokerage and a neighbourhood's communication resources in the framework of communicative urban planning.
